rated up and down with it on top of their heads, making fun of the Witch. But somehow I didn't feel much like laughing and talking. And after a while I took the lamp away from them and went home by myself. I didn't know what to do with the lamp, but I couldn't throw it away or break it. I sat for a while on the back steps with it. And I hid it carefully under the steps before going into the house.

After that when we'd see the Witch coming along Market Street with her rag bag over her back and that same old long black dress dragging along the ground behind her, the shame would be like a stain inside me. The kids would run after her, as always, yelling and

themselves. And I'd wonder if she was one of those mysterious eccentric recluses like people said, and if she was rich and had her hoard buried in the Greek's cellar. Or if she was just some poor unfortunate creature who had been born to nothing, was nothing, and would soon return to that nothing. But, gradually—you know how kids are—I was beginning to forget her.

And then one night after supper I picked up the paper and there was a small piece on the back page about a nameless old woman being found dead in a cellar on Market Street. That was all it said. But my throat gave a leap. The Witch was dead. I knew right away it was her. I stayed in the house for a while. And

lar. I spoke in an offhand way, not wanting to seem too curious about it.

The clerk seemed half willing to talk about it. "Oh, it seems," he told me, "nobody noticed her around for a few days so they told the cop on the beat. He went down and he found the old woman dead."

The clerk stopped. He didn't want to talk to me, but you could tell that he liked to talk about it.

After a minute he said, "Nobody knew who she was. They used just to call her the Witch. And everybody used to talk about how rich she was."

"She was laying in a corner of the cellar on some piles of newspapers she used for a bed. She had been dead two days already and her body was all dried out and the rats had gotten at her—" The clerk was a skinny guy with big eyes and he described it to me with an awed and gory relish.

There was nothing in the cellar to tell who she was. All she had was a few old pieces of junk and some brass kerosene lamps that she had kept, for some pitiful reason, for herself out of her years of scavenging. That was all.

"Except for one thing," the clerk said. "They found a cigar box." The drug clerk stopped. He seemed a little puzzled, as if he didn't quite know how it should be regarded.

"She had it all covered over with pieces of fancy cloth, and she had some old yellowed lace sewed on around the edges to decorate it. On top there was a card tacked on. 'For my decent burial,' it had written on it in pencil."

"In the cigar box, there was a little better than fifty-six dollars in pennies, nickels, dimes and some quarters."

The pitifully decorated cigar box with its fifty-six dollars and the few brass kerosene lamps and pieces of junk. That was all.

The drug clerk didn't seem to know what to make of it and he stared at me with his big eyes for a minute. Then he snapped out of it, and giving me a look of contempt to make up for having been bothered to talk to me, he went back to wiping his glasses.

I sat there for a while without drinking my soda. It was quiet in the drugstore. All that could be heard were the movements of the clerk and the sound of some kids playing up the street. Then I got up and I walked home in the growing dark. I thought of the Witch and her cigar box. Her pitifully decorated cigar box with its fifty-six dollars, and the few old brass kerosene lamps and pieces of junk. That was all.

THEY had a Mass for her at Saint Patrick's. She used to go to the early Mass there. They bought her a cheap casket, and the priest said a Mass for her and they buried her in Saint Patrick's cemetery.

The Mass was upstairs in the big church, and there wasn't anybody at the Mass except a few old ladies down in front who go to every Mass they have.

I don't know why, but without telling anybody where I was going I sneaked in and sat in the last pew. It was an eerie feeling—the casket in the aisle and the priest standing on the altar saying Mass softly in Latin in the big, almost empty church.

I knelt and I thought of the Witch. The way she had lived and what she had lived for. There she was now in her little, cheap wood casket in the aisle of that big, empty, vaulted church with the priest saying her Mass—the Latin words echoing softly in the hush, and the few pious old ladies with their heads bowed down up in front.

I bowed my head and I said a prayer for her quickly. And then I slipped out before anybody would see me.

Coming out into the sunlight, it was different.

THE END

taunting, and I'd run with them. "The Witch! The Witch! She's filthy rich!" we'd yell. "Hey, Witch! What have you got in the rag bag?" or, "Hey, Witch! What happened to your overcoat?" But I'd run on the outside edge of the crowd, and I could never bring myself to look up into the poor frightened old creature's eyes again. . . .

Then I moved away from Saint Pat's. My oldest brother got a job and we moved into a better neighborhood. I was going to a school uptown and I hardly ever went down around Market Street and Saint Pat's, so I began to lose track of the Witch. Except once in a while I'd happen to think of her. I'd think of the way that people treated her, walking on the outside edge of the sidewalk and turning their heads away with a look of distaste on their faces as they passed by her. And I'd think of the things I had done to her, alone and with the kids, and I'd begin to fill with shame so that I'd have to try to think about something different.

I'd remember some of the things I had heard the older people down around Market Street saying about her among

then I told my mother I was going out with the kids. But I took a walk down Market Street. The old neighborhood was pretty well run down. The houses were dirty and needed paint. The streets were dirty and they seemed narrower than I had thought they were. There were a lot of little kids around and they were ragged and had dirty faces. It smelled like a slum. I passed by the Greek's and he was closed for the night. But it looked to me almost like a different place. The lettering on the windows was faded and the paint that had seemed such bright grass green was chipped and peeling in places.

There was a drugstore on the corner of Hadley's block in where Malone's Market had been just a year before. I dropped in and ordered a soda. It was a dingy-looking little place with all second-hand fixtures. The clerk was alone and I tried to start up a conversation with him. But he was five or six years older than I was and he didn't seem to want to be bothered talking to a kid. Then I brought up about hearing something about the old woman being found dead in the cel-

Observation-lounge car on the fan-
PANAMA LIMITED

This luxurious Illinois Central train is powered by General Motors Diesel locomotives on its daily 16½-hour round-trip between Chicago and New Orleans. Other famous I.C. trains powered by GM Diesels are the I.C.'s other fan-club trains: City of New Orleans, City of Miami, Green Diamond, Night Diamond, Land O'Corn and Miss L.

"Ninety-five? I thought we were doing about sixty"

Unless you count the mileposts as they flash by, you can hardly believe the distance the Panama Limited is covering with a General Motors Diesel locomotive up at the head of the train.

The flow of power is so smooth that you get from here to there almost before you know it, at a hundred miles an hour a lot of the time.

The Panama Limited is just one example of how GM Diesel locomotives have stepped up schedules on American railroads.

Throughout the country, there are at least 96 different runs made from start to stop at 60 miles or more — a total of more than 7,320 daily scheduled miles. There are more than 23 non-stop runs of 102 to 325 miles in length covered at averages of 60 to 80 miles an hour.

This stepping up of schedules is one of the benefits which GM Diesel locomotives have brought to more than 150 famous name trains on more than a score of railroads — and that is just about all of the Diesel-powered crack trains in the United

States. And in addition, these GM Diesel locomotives are so reliable that so many roads report as high as 97% "on-time" arrivals.

No wonder more and more of the nation's trains are being powered by these General Motors locomotives.

In the thirteen years since they first came into their bow, they have helped the railroad reduce operating costs — and in the process, they have made passenger travel such a pleasure.

"Better trains follow better locomotives"

to be fifteen."

"Times change," Mother said. "They
were farm dogs getting lots of exercise
All I can do is to go by the most modern
medical advice. I bought a book on the
care of puppies."

It rained hard that night and was still
pouring in the morning. Mother went
downstairs to feed the dogs and found
that water was seeping in through one
cellar wall. The floor was wet and the
atmosphere damp.

"They'll get pneumonia," Mother
said, and a little later the dogs were quar-
tered in the kitchen. They were still
there when Father came home that night,
unsuspiciously opened the kitchen door
and was swarmed over by a deluge of
nine dogs. Lady, wanting Father's af-
fection for herself, sent her pups flying
with quick nips.

AFTER a certain amount of order had
been restored, Father said. "The
thing that is driving me insane is that
Lady doesn't even like these dogs.
They're her own flesh and blood and she
doesn't even like them. She goes off on a
tear and dumps the results in my lap."

"Dogs are that way," Mother said. "It
says so in the book. A mother dog brings
up the puppies to a certain point and then
sends them out to fend for themselves."

Father stared across the table at
Mother. "Sends who out to fend for
themselves?" he demanded. "How much
fending have you seen those puppies
doing?" Father tapped himself on the
chest. "I'm the guy that does all the
fending around here. But I'm through.
No one wants the dogs, we can't keep
them. I called Kinsey today and the way
he disposes of dogs now is quick and
painless. Shoots an overdose of nembutal
in a vein and in a matter of seconds the
dog is chasing rabbits in the Happy Hunt-
ing Ground. They go over tonight."

Dinner was a quiet affair, none of the
children asked for seconds. Frances
spilled her glass of milk and the fluid
trickled across the table and some ran
down onto Father's lap. He didn't say a
word.

After dinner, Frances, being the
youngest, went to bed first. Father went
up, as was his custom, to tuck her in and
kiss her good night.

"Don't wanna kiss Daddy," Frances
said, when he bent over her bed.

"What's this?" said Father, trying to
joke about it. "What's this?"

Blazing sun and soaking water
leave hair parched and brittle

18 holes on a bright, summer day can be rough on a man's hair. Sun
bakes scalp oils. Wind dries them. Your shower completes the damage.
And you fall heir to hair that's dull, brittle, unmanageable. Unless you...

Use the Vitalis "60-Second Workout"

At drug counters
and barber shops
everywhere.

1. 50 seconds to massage Vitalis on your
scalp. Feel that stimulating tingle! Vitalis'
pure vegetable oils go to work preventing
dryness, helping natural scalp oils. You get
hair that's *summerproofed*... safeguarded
against summer sun, wind, water. And you
get the most manageable hair you ever had!

2. 10 seconds to comb...and look at you!
You've routed loose dandruff, helped check
excessive falling hair. Now see that fresh,
natural lustre your hair has taken on! No
greasy look, either—Vitalis contains no
mineral oil. 100% handsome. 100% sun-
worthy...that's you, brother.

Keep hair handsome

"Won't kiss Daddy," said Frances, and put her head under the blanket.

Father came heavily down the stairs. "This is not my fault," he said plaintively. "The children will have to get used to the idea," Mother said. "It's hard for them. Fred, you go with your father and help him."

We rounded up the pups and carried them out to the car. Their bodies were not large, but they had long legs and tremendous feet. They took to the car like ducks to water. Father started out the driveway and the pups leaped back and forth, barking as they did so. One of them jumped on Father's head and shoulders, and I had a glimpse, as we passed beneath a street light, of Father's face set and stern, with a puppy draped over his head and neck, chewing his right ear.

We drove in silence to the vet's, Father driving the last mile at a cautious twelve miles an hour because one of the pups was entangled in the steering wheel.

Father stopped the car, brushed sundry dogs off his lap and lighted a cigar. "Say goodbye to them if you like, son," he said, and stared out the window. We sat there and finally the door of the animal hospital opened and old Doc Kinsey came down the walk.

"Just closing up," he said, peering in the window. "You wanted me?"

Father stared at him. "Hell, no," he said finally, "just taking a ride, just getting the dogs accustomed to the car." And home we went with the pups barking and one of them eating Father's hat.

We went into the house and Mother and the other children who had been very low jumped up in amazement.

"He was closed up," Father said.

My younger brother let out a war whoop. We knew then that Father couldn't do it. That is, we all knew it but little Frances. She took him literally and thought the puppies only had a reprieve from death until the next day. But we didn't realize how she felt until the following afternoon.

WE WERE all upstairs except Frances when Mother said, "I haven't heard a peep from the dogs."

"Maybe they all dropped dead," Father said hopefully.

"John," Mother said, "run downstairs and see if they got out the kitchen door."

John clattered down the stairs, and then came flying back up shouting, "The dogs are gone!"

We chased downstairs after him. Lady was sleeping under the kitchen table, but the puppies had disappeared.

"Where's Frances?" Mother said suddenly, and we started on another hunt. Mother came in from the back hall. "Norman," she said, "the leash is gone."

Father had rigged up a complicated leash for the pups so he could take them all walking at once. It made quite a picture, Father holding a rope with eight dogs attached to separate strands leading off from it.

"She's gone off with the puppies," Mother said.

"Take it easy," Father shouted. "You take the car. John and Emily, go off on your bikes. Fred, come with me. She can't have gone far. My God, with eight dogs. They're bigger than she is."

We ran up the street. "I will personally kill those dogs," Father panted. "I will strangle them with my bare hands."

"Then Frances will never speak to you again, Father," I said helpfully.

Father groaned and we ran around the corner and over toward Main Street. We were passing Mr. App's hardware store when he called out the open door to us.

"Your wife just phoned. Asked me if I saw you over this way to tell you she found your little girl."

We hurried back. Frances was there—but no dogs.

"She was down near the railroad tracks," Mother said. "The most disreputable part of town."

"Who'd you give the dogs to, honey?" Father said.

"Men," she said. "Nice men."

All that week end she acted as though she had saved the dogs from a horrible fate, and Father was the villain she had foiled. He tried to explain things to her and got nowhere.

"She'll never like me again," Father said gloomily.

On Monday, Mother spoke to me. "I suppose it will blow over in time," she said, "but right now Frances just doesn't like her father. She's too young to understand his viewpoint. Your father is terribly upset about it. He tossed all last night."

We expected Father home at five thirty, his customary time. When he hadn't arrived by six o'clock, Mother telephoned the man he usually rode with. "Dan," she asked, "did Norman ride with you or is he working late?"

Dan was apparently hesitant over the phone, and Mother spoke sharply to him. "Don't act so mysterious," she said. "Where is he?"

"Well," Dan said reluctantly, "the truth of it is he asked me to let him off at the Eagle Bar and Grill."

Mother hung up and stared at us. "Your father," she said, "has never loitered in taverns on his way home."

Another ten minutes went by and

suddenly the front door banged, and we heard Father proclaiming if somewhat thickly that dog was best friend. "Damn' tootin'," he said in a confidential tone as he strode along the hallway.

"You must act as though no wrong," Mother cautioned us, and we sat there with set faces.

THEN Father burst in upon us. I was on the back of his head, between his teeth, and his face flushed. And under one arm was a gling puppy.

"Norman Hooper," Mother said, "should be ashamed of yourself."

"What for?" Father said. "I look after the dogs, the dear little Had to stop in and see if they were mistreated. Can't have that, you know. Can't have anybody mistreat the valuable dogs."

Mother stared at him. "You Frances gave the dogs—" stopped, horrified by the thought.

"Certainly," Father boomed. "those dogs are owned by barroom a bottle of beer at each bar and after the health of the dog. I invest each dog personally. Can't have valuable dogs brought up on pret cheap gin, you know. Not after been brought up on—hic—scrape"

Mother compressed her lips and went to the telephone again. When she got the Eagle Bar and Grill she could hear a juke box in the background.

"Is Mr. Norman Hooper there?" she said coldly.

"He was," said a cordial voice, "but he ain't any more. Said he was going to stop by the Palace."

Mother hung up with a crash. "I don't believe it," she said. The Eagle Bar and Grill at least was reasonably respectable. The Palace was not. There was usually a fight at the Palace on a Saturday night. Mother looked at us, then called the Palace. "They said he went from there to Joe Mooney's. I never heard of that."

"Oh, sure," I said. "Everybody in town knows Mooney's. It's a bookie joint."

"A what?" Mother was mystified.

"It's a cigar store in front," I said, "but in the back room they make bets on horse races."

"We won't wait another minute," Mother said, and served up the dinner. She was shaken. After many years of being a faithful husband, Father had apparently run off the rails and become a drunkard and a gambler.

"It's Frances," Mother said. "Your father's heartbroken. She's made him a guzzler and a horse player."

We were solemnly eating dessert when

Nobody said anything. The wiggled and dropped to the floor. Frances jumped down to hug it.

"My very own favorite puppy," cried.

Father said, "The seventh dog owned by the fire house, and the one by one Joseph Mooney, a maker and a scoundrel of the first. He left the dog locked in his establishment for twelve hours. I ended to punch his nose and brought dog home. I guess we can manage puppy."

Father sat down in his chair, still on. Frances came over and up into his lap. She sat there lovingly up at him. "Want Daddy me," she said.

Father sat back and a big grin over his face. After a moment smiled too.

"Norman," she said, "I think the barroom pups will be all right. I think you need stop and inquire them every night."

No one needed to worry about dogs. They grew like weeds under summer sun and eventually acquired a reputation around town as dogs and pets. But Mother never recovered from the fact that amid local saloon set they were known as Hooper hounds.

THE END

CLEAN...means SMOOTH!

Yes! Your motor runs

Cleaner and Smoother

on **NEW** Improved

Veedol
MOTOR OIL

THE FILM OF PROTECTION

NEW magic in Veedol minimizes oxidation . . . checks formation of harmful corrosive compounds . . . and so keeps your motor running *cleaner*.

When your motor runs cleaner, Mister, it's bound to run *smoother*! With less friction, less bearing and piston trouble. With fewer costly repair bills. With many, many more miles of economical, effortless, trouble-free power. So look for the Veedol sign at a good service station in your neighborhood.

Drive in and give your motor the Veedol "CLEAN-SMOOTH" treatment. It's new! It's wonderful!

Mr. Homes (right) exercises his tongue muscles in class at the District Speech Clinic, Washington, D. C., where he overcame a speech defect which had made his life miserable for more than twenty years. Now he speaks clearly

I STOPPED STAMMERING

Defective speech is a tragedy for more than a million Americans, most of whom don't realize what modern methods can do for them

Susan Hurley uses a mirror to watch her tongue action which gives strength and agility in conversation

Dr. Richard R. Hutcheson, director of the speech clinic, gives voice instruction to one of his pupils, R. Brewer

**BY EUGENE
HOMES**

AS TOLD TO
GREER WILLIAMS

THERE are about 10 million stammerers in this country, and until a year ago I was one of them. I can remember riding in my family car in Staunton, Virginia, when I was five and asking, "How—how—?" My never-finished question is beyond recall, but I have clear memories of how my stammering grew into a misery of self-consciousness in the ensuing twenty years.

I stammered so badly that I avoided talking with anyone outside my family. Silence was the way out of my difficulty, and it continually led to more difficulty. The time a high-school kid, big as I was, told me to get out of his class, I couldn't talk fast enough to get away with him, so I just hit him pretty big myself and usually started fights, but not that one.

In the last year, however, I began speaking up to everyone. With help, I found a new voice and got much fun out of using it. I can stop. And the thing I'm most proud to talk about is the knowledge that helped me—knowledge that I put to work to help the whole world of speech cripples known as stammerers or stutterers.

Speech is man's Number One method of communication with his fellows. By our speech, people form their first impressions of our intelligence, education, character, personality and even the state of our life.

Yet our parents and teachers neglect our ability to speak mainly to children. Children learn to talk normally most entirely by imitation. So it is difficult. Others mimic the things. There's a good chance a child's speech habits, whatever they are, will become fixed in the first twelve years. Speech authorities say that eighty-five per cent of a stammering begins before the age of twelve and nearly all of it is established by the time of adolescence.

Because they don't have any help, they find the key to the locks as children, a great many stammerers wind up as maladjusted and easy marks for exploitation. I know, because I did it.

Like most stammerers, I don't know what started it. I was raised on my uncle's 200-acre farm near Staunton, with my two older brothers and a younger sister. My father, a professor at the School of Engineering at the University of South Carolina, died when I was two and a half years old. My mother went back to school. It was her wish that I should go to West Point and be an engineer like my father.

If his death or some other shock was responsible for my stammering, as is sometimes the case, I have no memory of it. I had it from boyhood. I did my chores on the farm, had my fist fights and spankings like the rest. While I was different from my talkative playmates, it didn't worry me or anyone else at the time.

An aunt taught me the first words at home, so I started to school at two. Naturally, my inability to talk freely set me apart at school. I couldn't recite Jack and Jill or

our to eight weeks. It was a
er, but I was in the Army.

August 9, 1947

It puzzled me a little that the school
ignored this fact in the letters to follow.
For three years, hardly a month passed
without a beautifully written "Dear Eu-
gene" letter from the school. One of
them cautioned me:

"You should get plenty of exercise,
sunshine and fresh air and, most impor-
tant of all, do not allow yourself to come
under any severe emotional strain, or
excitement."

The school didn't seem to realize that
the Army took good care of such things.
Always it told me of the next vacancy
in a class and held out such promises
as "You can definitely acquire the gift of
perfect speech." I was told that my fear
of stammering would end the first day in
the school. All I had to do was say to
myself, "I'm going to the school now and
not wait a single day longer."

Nor did I wait any longer than I had
to, without going A.W.O.L. When I got
out of the Army on points in October,
1945, my mind was filled with hope.
Certainly, I left no room in it for doubt
or distrust.

I was given a new diagnosis saying,
"Yours is a case of genuine stammering"
and repeating all the rest. I made a quick
trip by auto to the school. The head was
most cordial and said, "I'll make a new
man out of you." He had an impressive
office in a downtown building and I didn't
think to ask to see the school. I agreed
to start the course the next week.

When I got back to begin school, I
made my own way to the office, registered
and handed over \$300 from my savings
as a G.I. A big limousine took me to my
hotel. The hotel had a four-day limit so
I soon wound up in the school's board-
inghouse. The place was ramshackle, and
the food was pitiful.

The school was a disappointment, too.
It turned out to be a gloomy old hall.
There were thirty-five or forty in my class
and we spent four hours a day there. The
school's only teacher was a woman who
was nice enough, but the training con-
sisted of singing our words in syllables
while swinging our hands in rhythm. Our
main chore was to march back and forth
on the dance floor in platoon front
formation, swinging and singing.

We did have breathing exercises and
lines to practice, such as "Great thoughts
like great deeds need no trumpet." Then
there was "Never be fearful but happy
and cheerful," but it didn't keep most of
us from being utterly discouraged.

Disillusioned Students Quit

I felt like going home the first day. All
of us, however, found we had no choice
but to stick it out. The students began
dropping out fast, nevertheless, after
three or four weeks. I didn't hear anyone
say he had acquired perfect speech, but
at least three out of four stammered bit-
ter things about the school.

Where were all the happiness-ever-
after testimonials, such as the facsimiles
sent to us? In the boardinghouse we
found names and addresses of former
students scribbled on the wall. I wrote
to three of them, and so did some of my
roommates. The alumni replying to our
letters were unanimous in condemning
their alma mater.

After six weeks, without further en-
couragement from the school, I climbed
on the train. I never felt lower or had
less faith in my fellow men.

Of course, it was all my own fault for
having failed to investigate the school
in the first place. I have since learned
that this school is not accepted by the
American Speech Correction Associ-
ation. The Department of Veterans
Affairs has twice rejected the school for
participation in the G.I. Bill of Rights.

The next time I knew better. From a
fellow stammerer, I had heard there was
a speech clinic in Washington, D. C.—
the District Speech Clinic.

I went there with little hope that any-

If your car feels like *this*...it's time for
MARFAK Chassis Lubrication

THAT CUSHIONY FEELING LASTS LONGER WITH MARFAK!

Ever get a "grease job" — and then a couple of hundred miles

IN THE BATHROOM

FOR COOKING

FOR CLEANING

IT HELPS EVERY DAY IN MANY WAYS

Our soda, Arm & Hammer and Cow Brand Baking Soda, serves so many helpful purposes that it saves time and steps to keep two packages, one in the kitchen for cooking and cleaning, another in the bathroom.

This dependable product is not only the leavening which gives good cooks better results; as a cleansing agent, it makes refrigerators and other food receptacles safely clean. Pure bicarbonate of soda, it is professionally accepted as a dentifrice, and has many other hygienic uses. Keep two packages always in your home, it costs just a few cents a package.

thing would come of it. The director, Richard R. Hutcheson, asked me to talk to him without using my hand. I couldn't. He made a phonograph recording while I tensely labored through:

"M-m-my name is Eu-Eu-Eugene Crosby Homes. I a-a-a-m I am m-making this recording to hear m-myself talk and to uh-uh-uh-recognize what is needed for improvement of m-my voice."

Mr. Hutcheson played it back and I said, "Pretty buh-ad." He said yes. I asked if there were any chance for improvement and he said he wouldn't make any promises but there could be; it was all up to me. He suggested that before I decided about taking any training I take a look around the clinic.

I did, and saw various classes being conducted. I was impressed that everything was in the open.

The next day I returned to the clinic. I learned a three-month course would cost \$187.50. To my surprise, I was told I could get it under the G.I. Bill of Rights.

I started at the District Speech Clinic in February, 1946. The course of thirty hours a week was not easy, but it made sense. The speech therapist to whom I was assigned said that I had to be re-educated in speech from the beginning, using normal voice training as the basic method. The trouble was that I had a voice with a stammering defect built in, so to speak, and the object was to rebuild one not associated with this defect.

Building Correct Speech Habits

The first thing the teacher did was put me on a sixteen-day "silent period." During this time I was not to say anything to anybody except as she directed. A lot happened during this period.

Over and over, she hammered me on two points. Slow down. Relax. Speak slowly. Take it easy. At the same time, she showed me the correct positions for sounding consonants. I discovered that it wasn't the vowels—*a, e, i, o, u*—but the consonants—like *p, b, m, y, ch*—that gave me trouble. The way to say a word, I learned, is not to concentrate on the consonant, as a stammerer frequently does, but on the vowel sound. All you do is assume the correct position for the consonant and get on with the vowel. Take *p*. It's simply an *e* said with the lips touching.

I was like a baby just learning to talk—one sound, one syllable, one word at a time. I exercised my tongue to give it strength and agility. Some in my class were actually required to wrap paper toweling around their tongue and haul it about by hand. I learned what to do with my breath while speaking. It's a matter of controlling and timing the output of air.

The teacher drilled me on one tip that seemed more important than anything else when I became tired and nervous. If I felt that impulse to stammer, I was not to try to force the sound, as stammerers habitually do. I was to stop and wait it out, then continue in an orderly fashion.

"I see what you mean now," I told the teacher when I came off "silence." For the first time in my life I understood what happened when I opened my mouth.

From then on, normal speech was simple enough. The class got lectures on fear of stammering. "What is there to be afraid of?" demanded the director. "Go ahead and stammer. You've done it all your life." When you do it on purpose, just to analyze it, you get a sense of mastery.

To overcome my fear of talking to strangers, the clinic sent me out to strike up conversations. Timidly, but with increasing confidence, I became garrulous with bus drivers, waiters, ticket agents and the cop on the corner. Some were surprised at my questions. Standing in front of the Earl Theater, which has a

sign about fifty feet high, I asked the doorman, "Where is the Earl Theater?"

He probably thought I was crazy. I was—crazy with a feeling of pride and pleasure in my new-found voice. After eight weeks I was placed in a class for normal voice students. I noticed an amazing thing about the correction of my stammering. My voice seemed to have dropped from a rather tense second tenor to a good, resounding bass. I am convinced that, as the result of training, I have a better voice now than the average person who learned to speak normally, as it were, by ear.

As a result, my life suddenly became pretty full at the age of twenty-six. I continued at the clinic with a public-speaking course in the evening and began going to business college mornings. My administrative experience as a master sergeant began to pay off when the clinic hired me last summer to work afternoons as a sort of executive secretary. Virtually my whole job is talking. The telephone rings continually. It is a satisfying experience to pick it up and talk naturally to all comers.

"I think he loves me, but he never comes right out with anything I can put on my finger!"

COLLIER'S

FRED BALK

When a friend suggested that I had a story to tell, I first thought that I might be accused of becoming a sort of crusader—perish the thought. It happens, however, that I don't believe the real salvation of 1,400,000 stammerers—one per cent of the population—lies in the District Speech Clinic or any of the many professionally qualified speech clinics elsewhere.

These clinics have done much for individual stammerers and other speech defectives—places like the Institute of Logopedics at the University of Wichita, Kansas, and the National Hospital for Speech Disorders in New York City. Anyone should be able to obtain the name of the one nearest him from the American Speech Correction Association. It has an office at the State University of Iowa, Iowa City, and another at the Indiana State Teachers College, Terre Haute. With greater teamwork, more trained personnel and some national support, these clinics could do much more.

But Dr. Loren D. Reid, director of the University of Missouri Speech and Hearing Clinic, has pointed out: "Few will agree upon any list of so-called facts."

Many authorities, for instance, consider stammering and stuttering to mean essentially the same thing. Others say stammering is a hesitation in making a sound and stuttering a repetition of a sound.

One of the mysterious facts about

stammering is that it hits boys like six times more often than female speaks earlier, easier than the male," said Dr. Reid.

Scientists have searched psychology, psychiatry, neuropsychology, language, heredity, environment for the causes of and have developed many "Yet," said Dr. Reid, "fundamental agreement still exists."

Stanley Ainsworth, supervisor of Speech Correction at Indiana Teachers College, found that using speech clinicians used four different methods or combinations in correcting stuttering. They agreed that the patient should feel more secure, be persuaded his attitude toward his speech, how to rest and relax while speaking, be given voice training to break habits of speech. There seems great need for standardization known and what can be done in stammering.

But the real answer, it seems, lies in the early training of the parent and teacher. Parents well to heed Dr. Wendell Johnson of the Journal of Speech and Hearing professor in Iowa State's Psychology and Speech Clinic.

In a study of stammerers and stutterers, Dr. Johnson found that relatives frequently had stammered as stammerers before their hesitations and repetitions could properly be termed a speech defect of this came all manner of words, disapprovals, serving to make the self-conscious and to fix the habit.

Dr. Johnson observed, however, that parents of stammerers were perfectionists in table manners, toilet habits and other words, their children were to no great shocks, apparently simply too much pressure adult standards as babies.

A Word of Advice to Parents

"The child," said Dr. Reid, "must learn a vocabulary and acquire skill in using it. While so, parents should be careful, attentively, to participate in and in general to reassure him as a member of the family in doing. And this advice, coming from clinicians, is worth its weight in gold."

After the parents hand the child to the teacher, Mr. Hutcheson sized, "the real responsibility upon the public schools. Speech correction teachers and supervisors trained to help with the prevalent defects in our schoolrooms. In what way can these hundreds of thousands of children with speech defects be helped?"

"Speech defects can and should be corrected in the elementary school. It is at this time that the child is being molded into a semblance of what it will be ten years hence. The elementary teacher should have knowledge of voice production and of speech defects is a child welfare that has been neglected."

To that I can add, from my own experience, a profound amen. The departments of many states are in the problem, it seems, but able to do anything about it where it is of greatest importance. The lonely little guy who is defeated from his first social encounter with Jack and Jill. Why should he have to wait until he is a man to find someone to teach him the ABC's of normal speech? Why should all children be taught how to speak out of their voices?

Talk is cheap. But I'm biased. It's a precious skill.

THE END

Collier's for August

many "men" know
phone number?...

You can't help feeling proud when your home turns out to be headquarters for a 'teen-age' crowd. You can pat yourselves on the back for being good parents and for having a grand youngster. And you can congratulate yourselves for having bought your Stromberg-Carlson. It does such a whale of a job for the youngsters, and for your friends, too. Each beautiful Stromberg-Carlson is built to a single ideal. It must neither add anything to nor subtract anything from music itself, whether you listen to records, FM, or standard broadcast radio. That is the most you can ask of any radio or radio phonograph... and it is the most difficult quality to find.

BELOW YOU SEE THE "NEW WORLD," A STROMBERG-CARLSON RADIO PHONOGRAPH OF QUALITY AND MODERN SIMPLICITY. MODEL 1121M2Y

"New Freedom Gas Kitchen"... Clean, cool and "shipshape" — with its space-saving fold-up seats and sliding panels in the breakfast nook. But even more important are the many ways it saves you work! Saves shopping because a new Servel Gas refrigerator stores enough food for a week. Saves dishpan drudgery because a new automatic

Gas water-heater supplies enough *really* hot water for a do-everything. Saves cleaning — thanks to a special ventilating system that removes vapors at their source. As for the greatest work-saver of *all*... just look at the automatic Gas range! Make it the start of your "New Freedom Gas Kitchen."

10 reasons why it's America's easiest kitchen to cook in!

Here are just a few of the reasons why a new Gas range is the first thing to look for in this or any modern kitchen:

1. **It's Automatic** — Gas turns on and off by clock control. Cooks a complete oven meal when you're not even home!
2. **It's Faster** — high-boil heat available in a *second*!
3. **It's Flexible** — not just a few, but *hundreds* of top-burner heats!
4. **It's Cooler** — no long-lingering top-burner heat. Extra insulated *all over*!
5. **It's Cleaner** — burners are non-clog. Pan bottoms won't smudge!
6. **It Bakes Better** — ventilated oven browns "just right" all over!
7. **It Really Broils** — only the flame seals in juicy-rich flavor!

8. **It's Exact** — oven thermostat gives you any heat from 250° to 500°!

9. **It's Economical** — you can buy and operate it for less than any other new automatic range!

10. **It's "CP"** — Look for this seal of approval in your buying guide to the best modern features in any Gas range!

THE ACACIAS

BY JOHN BARRETT

HERE were two of them growing by the crossroads. The headlights shimmered in the distance, and then the closer and he saw the arching yellow blossom, and caught whiff of their perfume as they y. Acacias. Always it had connected with acacias—the acacias drifting across the the night.

"You going to get her at the?" Joe asked him. Joe was forward on the seat, cleaning with a match.

"Home already," Steve said. "I brought her and the baby noon."

"Is taking care of her?" woman who lives on Frank- t. I forget her name."

"Munsey," Joe said. "Yeah, right. Bea had her both times. nda old-fashioned, but she lot about babies."

"What's what Helen said." Steve the road.

the beginning the acacias had rt of it. from the night they really been alone. They had blaring music of the college d driven into the hills, and had shut off the motor, and stillness closed in, sealing in a private world, he had be- care of the faint scent of aca- ging in the air.

"I know, it's funny," Steve said. "It's funny?" Joe was carefully up his pipe.

way the weather's changed in week. When I took her to the it was winter. And now look. ss is getting high, and pretty : mustard will be blossoming."ushed tobacco off his paunch. h boy, don't I know it. Bea's unding me for days to pull the

One night, as they had lain whispering, cut off from ev- by the darkness and the si- Helen had sat up suddenly him. "Steve," she said, "do ell them?" And he realized night wind, moving over the s bringing the scent of acacias me unseen grove below.

the three years that followed, it n like that each time the aca- bomed. They had taken long the hills at night, saying little, us of each other, of being nd the world remote.

"By the way," Joe said, "Bea was asking me what color hair he has."

Steve studied the road. "I don't know," he said slowly. "I don't even know whether he has any hair or not."

Joe took his pipe out of his mouth. "You saw him, didn't you?"

"Only once, right after he was born. I was worrying about Helen just then. She didn't have such an easy time of it, you know."

"But didn't Helen tell you when you visited at the hospital?"

"I guess I wasn't thinking about it much when I was at the hospital," Steve said. "I went to visit her, not the baby."

"Well, I'll be damned." Joe sucked on his pipe. "Come to think of it though, I was a little that way myself at first. They're not really yours till you get them home." He looked across. "Do you feel like a father?"

Steve shrugged. "How does a father feel? I passed out cigars; I got slapped on the back, and listened to a lot of cracks about walking the floor."

Joe leaned back in the seat. "I guess it takes time."

"Maybe. I'm beginning to think this being a father is a kind of make-be- lieve state of mind that people think you should get into. It's like being 'the average taxpayer.'"

"Well, I don't know," Joe said. "I think it takes time."

Steve swung the car around the last curve, and saw the lights of the little town up ahead. "How long is it before they can get up and around and take drives and things?" he asked.

"Oh, a few days. It's not like an operation, or being sick."

A few days. Saturday night, then. They could drive up Canyon Road as they had done last spring after the noisy party at Bill Hannig's. The ranch above the lookout point had a grove of acacias. If only he could

bring her a blossom tonight, on her first night home. They came into the business district, and he peered into the windows of the flower shop. Did they sell such things in stores?

"If you're thinking of buying flowers," Joe said, "I wouldn't do it. Everybody brings flowers. How about candy? Have you bought her any chocolates yet?"

"No."

"Buy her chocolates, then. Bea was crazy for 'em after being on a diet."

Chocolates, he thought, are public. It was just what he didn't want. But if he said no, it would mean explanations.

"I guess I could get her some," he said.

They stopped at Arnold's and he bought a three-pound box.

At Myrtle and Bryant Street he let Joe out. He put the gearshift in low, but Joe kept standing there with one foot on the running board.

"You know," Joe said seriously, "I think the thing you've got to watch most with kids is not to spoil 'em. Now if he wakes up in the night, and it isn't time for his bottle, just let him cry. Of course you want to check first and see if his pants are wet, but if he's dry—"

He kept nodding. It had just occurred to him that there was an acacia in the hedge three blocks below the house. A sprig would be enough and it was almost dark. . . .

HE SWUNG into the gravel drive so fast that he almost hit the rear of Mrs. Munsey's car. Swearing quietly, he backed out and parked at the curb. As he hurried across the lawn, he hid the little sprig of acacia under the box of chocolates. Mrs. Munsey met him at the door with an upraised hand.

"He's asleep," she whispered. He saw she had her hat and coat on.

"You're leaving?"

"I was just waiting till you came. The bottles are in the refrigerator, and there's a bottle warmer on the kitchen table. All you have to do is put a little water in the bottom. . . ."

When she finally left he tiptoed to the bedroom door.

"Hi, Steve." Helen was sitting up in bed. Her blond hair, brushed and shiny, hung down to her shoulders. He slipped the acacia and the chocolates on the low bedside table, and came over and kissed her.

"Ten days." He sat down on the bed. "You know. I think I'd make a rotten bachelor." He drew her against him. Her comb and brush and pow-

der were back on the dresser, and the room looked right once more. Of course the crib was there on the other side of the bed, but that had been there before, too. The only difference was that now there was something in it.

"I brought you something," he said. He leaned over to pick up the acacia and she saw the box.

"Candy! Steve, you're a mind

reader. I'm literally starving for chocolates."

He gave her the box and a peculiar coldness spread through him as he watched her eager fingers slip off the wrappings. "There's something else, too," he said.

She looked up at him, smiling quizzically.

"This." He held up the acacia. She started to take it and a sharp cry came from the crib.

"Oh." She turned quickly to the other side of the bed. "Oh, good heavens, it's after six. Imagine it. The first night home and I forget to feed him." She leaned down and picked up the bundle in the crib.

"Look at him, Steve. Look at his legs, how long they are. Don't you think he's going to be tall, Steve?"

He nodded, but he wasn't thinking about it. He was thinking about the way the acacia had crumpled under the twisting bedclothes and tumbled to the floor. He was thinking that even though there might be rides in the early spring nights again, they would never be the same. And as he looked down at the clenched fists of this creature who had come between them, he knew one part of his life was over.

"Don't you want to hold him?" she asked. "Steve. Steve, what's the matter?"

He reached out. Carefully, like a man undertaking a strange and difficult task, he picked up the baby.

Everybody on Manhattan

Island not killed or maimed instantly by
the blast would have to be evacuated in
an estimated two hours to escape the
radiation. People entered Hiroshima
within a few minutes after the explosion,
without suffering serious radiation sick-
ness. Members of the Crossroads expedi-
tion bathed safely in the lagoon the day
after Test Able.

But after Test Baker it was five days
before some of the ships in the target
array could be boarded. Why? An air
burst shoves most of the fission products
more than 40,000 feet into the sky; a
water burst scatters them over the im-
mediate area.

There would be panic. (At Hiroshima
bridge railings were leveled, not by the
blast but by fleeing citizens.) Nobody
could tell exactly how much radiation
he'd taken. Radioactivity can't be seen,
smelled, felt, heard or tasted. Ticking
boxes and hard rubber tubes like fat
fountain pens—Geiger counters and
ionization chambers—can detect charges
in a given place but they'd be small help
in the initial frenzy.

Manhattanites would suffer two kinds
of radiation poisoning, direct and in-
direct. Those exposed to the explosion
would be penetrated primarily by gamma
rays, receiving what would amount to an
intense X-ray burn. Other survivors,
just by breathing the air, eating the food,
drinking the water, touching the door-
knobs in the area would absorb particles
giving off alpha and beta rays. A man
might pick up deadly poisonous plu-
tonium fragments through a cut on his
hand. (In present bombs only about
1/10 of the plutonium atoms explode; the
other 9/10 are scattered around with the
rest of the fission products.)

The odds would be fifty-fifty that
victims receiving 400 roentgens of radio-
activity would die within a month. (No-
body knows exactly what a 100 per cent
lethal dose is, but it would probably be
between 800-900 roentgens.) Death might
come in a few days or not for weeks.
There is no cure; no satisfactory way has
been found to expel radioactive particles
from the body once they get inside.
Gradually the victims would develop
headaches and mental depression. They
would become fatigued, lose their appe-
tites and begin to feel weak, as the radio-
activity gave them anemia, destroying the
blood-forming organs in their bone mar-
row, lymph nodes and spleen.

Survivors would of course get far
better care than in unprepared Hiro-
shima, where penicillin and blood trans-
fusions would have saved many who had
sublethal doses of radiation but died of
complications. The armed forces are
training a select group of officers as
"atomic firemen" so they'll know how to
detect radioactivity, how to move
through it with a minimum of danger,
what sort of protective clothing is best,
how to clean it or dispose of it and what
first-aid measures are best. Several uni-
versities, including Rochester, Chicago,
and UCLA, where Dr. Warren is now
establishing a medical school, are plan-
ning similar training courses.

Trying to decontaminate Manhattan
after a successful water blast would be
as hopeless as attempting to sweep away
the Sahara's dunes with an ostrich
feather. Say they took a block at Thirty-
fourth Street and Fifth Avenue and tried
to clean it. They might "cool" the street
by washing debris into the gutters and
then covering the pavement with a thick
layer of wet dirt to keep radioactive dust
down. But workmen entering the block
would track in more radioactive particles.
They might try to clean the Empire State
Building by "skinning" it—chipping
away a thickness of its outside surface.
As they chipped they'd get active dust on

themselves, on their tools, drive it on into
the stone—and scatter it onto the street
again.

Could it be that, ostrichlike, we've had
our heads stuck in the sands of disbelief
about the bomb and are just beginning to
realize its potency? "Remember," one
U.S. Atomic Energy Commission official
said, "we exploded the bombs in Japan
at a particular height to minimize after-
effects. Now we know what someone
could do if he set out to maximize them."
It took the brass hats at Bikini time to
grasp that fact, and some haven't grasped
it yet. Officers argued the point with
scientists. "How can it be so bad," they
wanted to know after Test Baker, "when
a lot of the animals are still alive?"

"Follow them around," one scientist
retorted, "and watch them drop."

One fine day before Hiroshima, a
junior scientist walked into the office of
Dr. J. Robert Oppenheimer, then director
of the Los Alamos laboratories of the
Manhattan Project, and suggested the
bomb be exploded near the ground so
fission products would mix with the dust
and debris, contaminate the city and kill
more people. Oppenheimer threw him
out.

The doctor's reaction betrayed an
anachronistic American attachment to
fair play, even in warfare. He was
wrestling in deep torment with the ex-
cruciating problem of how we could em-
ploy the bomb with fullest effect without
being accused by the world and ourselves
of surpassing the Nazis and the Japs in
barbarism. Before President Roosevelt
died, he stressed again and again that
bizarre aftereffects of the bomb must not
be exploited but shunned and that, if and
when the bomb were used, it must be
made to behave as much as possible like
any other bomb, only with more wallop.

Test Reveals Public Opinion

We've found out since that it has a be-
havior all its own, but we haven't con-
vinced ourselves that it's true, and as a
result Americans as a whole are floundering
in a mixture of complacency and
confusion. Recently the Social Science
Research Council released the results of
a nation-wide poll it conducted under the
sponsorship of Cornell University on
public reaction to the atomic bomb.

One question asked, "Do you think
the U.S. will be able to work out an
effective defense against the atomic bomb
before other nations can use it against
us?" Dated shortly after the Bikini tests,
56 per cent of the answers said yes.
Twenty-five per cent said, "Don't know,"
and only 19 per cent said no. Another
question was, "How worried are you
about the atomic bomb?" Fifty per cent
replied, "Not at all," and only one eighth
confessed they were decidedly worried.

When London was being mercilessly
punished by Nazi V-I rocket bombs, a
favorite story making the rounds con-
cerned a man from Limehouse named
Jenks, who was asked, a little petulantly,
how he managed to remain so calm under
the raids. "It's quite simple," he replied.
"There's always the chawnce the thing
won't get launched properly. If it does,
there's a good chawnce the R.A.F. or the
Royal Artillery or the barrage balloons
will knock it down. And even so, it might
not 'it London at all. If it does, it still
might not find my street. And even if it
does that, it remains for it to find my
'ouse. And of course, if the bloody thing
should by chawnce 'it my 'ouse, I shall
be down at the pub, 'aving a pint of
bitters."

A stouthearted stoic, Jenks, but that
won't keep his beer from becoming
radioactive next time.

THE END

THE THING

KISS

BY MARLISE JOHN

This is the story of the evening Millicent came

MILLICENT sat before the dining table, brushing her hair slowly, rhythmically. She looked out her windows the silver light of dusk. The small new leaves of the apple tree had always loved these trees. She was alone in the spacious, too-quiet room.

All that life in this room had changed over now. In four days she would be leaving school and then to college. She would never come back here again for long. Today had been graduation and she had gone to high school. Tonight she was going to the year party at Dodie Williams' with Buff.

Buff was tall and thin and nice in a way you never noticed. He had come here to live with his parents, two years ago, they had been everywhere together.

"The Salter grandson is a boy." That was what everyone said. "Dependable." Yes, Buff was dependable. Her family approved of him and her friends, which was more. She wondered, in a mood that was the color of the dusk outside, if she would marry him when she grew up. They would have a life of dignity and security together.

I do not want security, she thought fiercely, brushing her hair with whacks; I know security too well.

The chapel chimes began to toll. The chimes from the grandfather clock downstairs repeated the melody. It sounded every fifteen minutes, the roofs of the small town and near. They were like voices admonishing, saying that life was being fifteen-minute bites.

Millicent stood up, and the long, black net dress rested on the floor. The daring, low-cut dress her Cousin had sent her. Dark red sequins shined as she moved across the room.

There was a knock on the door but demanding as always, and her aunt came in. She had run this house for years, yet she always seemed like a intruder. "Buff is downstairs," she said sure to thank Mrs. Williams again.

Millicent picked up her evening bag and ran down the deep wide stairs. It was in the hall.

Millicent's father, an aloof, loved stranger, stopped playing the piano and came out and shook hands with her. He looked very pretty in that dress, she thought.

ILLUSTRATED BY WENDEL

Red drew her back and kissed her. Even to Millicent, greatly unknowing, it was not a young kiss

He always called Buff by his name in a teasing way. "Yes, sir," said Buff, crimson with embarrassment. Millicent smiled at him remembering the kisses he had given her. He had kissed her twice—once in the arbor on the night of the fall and once on the top porch steps that her father could have easily dismissed. Still, the memory was pleasing.

Millicent doesn't like this dress at all, she said, laughing. "But I just like it so startling. Do you really like it?"

"Yes," he said hesitantly. "But I like it." He would never like anything conventional, untried.

She brought her short white dress and her small new fitted suitcase—a present—and kissed her

When they were on the dark porch, she said apologetically, "At the time the Grandmother and Grandfather were scared about my driving the car, I told you it had to come." Harold was a young man, an old man who had acted on every drive they had taken together. The car was dignified, dark, a perfect car for old Millicent hated it. She spoke to him courteously, hating him, too. He slid into silence.

He slid slowly through the afterglow of the streets. The well-known landmarks of the town looked at him through someone else's eyes. In the corner where, when she was a child, she had fallen from her horse and had lain in the street, her head twisted and hurting.

The other children had parked their cars and come up slowly, helplessly. Red had thrown his bike overboard, the new bike he loved so much, run to her. And afterward, he couldn't walk for so long, it was Red who sat beside her during the races—Red, the best baseball player in the town.

Elm Street School, whistling and singing the new songs. He always knew all the songs. He played the harmonica and the piano better than anyone else could. He made music real and meaningful; not like the music she had to practice: To A Wild Swan. He had to practice: To A Wild Swan.

It was it since she had seen him. He had stood behind her this afternoon when they had all graduated. She had looked at him and spoken, but the words had been empty. He had become a stranger. He was no longer the boy who had walked home with her, the boy who had given her the biggest valentine in the box at school.

He had made her remember all these things she hadn't thought about for so long. As it that tonight was an ending, a time of saying goodbys? "You drive down Oak Street," Buff said to Harold. She knew he wouldn't want to go through town and see him with Harold at the Vell, she thought, why doesn't he go himself? Well, why don't you go on your own self? she asked fairly.

He looked over at Buff. He smiled and said, "It's a nice evening." He said anything meaningful or important? It was as if he were ashamed of himself.

"It's the new moon," Buff said, looking back beyond a haze of darkness. "Right for wishing." She looked at him and wished. "I wish you were here, Buff," she said. "If we were younger, we had fun." "I'd been here, too," he said. "I know you always."

It was the nicest thing Buff has ever said, she thought. It made her feel

for August 9, 1947

sad in a wonderful way. Maybe he did think things, but just couldn't say them.

She said quickly, "Our house was full of people then, all kinds of people. In the winter, after we'd been sliding, I could bring as many children back with me for cocoa and cookies as I wanted to." She was bragging now. "I used to know lots more people than I know now."

"What happened to them? Did they move away?"

"No, they're still here. I don't know what happened. I just don't see them."

Like Agnes and Rose and Nancy. She hadn't really been close to Nancy for years. When she was young, she and Nancy played dolls under the apple trees and made doll clothes up in the attic. Nancy made the most beautiful clothes—muffs, coats; and underclothes with lace, even buttonholes. She had given Millicent a whole set one Christmas for Virginia, her best doll. Nancy had stopped school last year to study dress design at the Industrial Arts. Millicent saw her now and then, but when they met they spoke across a continent of differentness.

The car passed the entrance to the street where Nancy lived—and where Red lived. It was a zigzag street, a place of many children. It was really not a street at all, but a crooked, hedge-bordered lane. The houses were tidy and incredibly small and wedged tightly close upon each other. They had tiny front porches, all with swings, and tiny front yards, two of them bare as a playground, the others lavish in spring with red and yellow flowers. She had loved that street so, as a child. She would often ride her bike down there at twilight, and walk slowly through the lane to hear the friendly shouting, the rich warmth of living. It was a gay street.

In Millicent's house, doors were shut softly; quietness was more natural than noise. In the zigzag street, neighbors yelled back and forth, women sang. And there were always voices talking as you went to sleep—not just the sound of chimes to accompany your thoughts.

HAROLD drove soberly through the town at twenty miles an hour. As they reached the town limits, he accelerated to twenty-five, as he always did. Buff looked over at Millicent and winked and whispered, "Speed demon." It was an old joke. They laughed companionably, and then sighed. They both wanted a low-slung convertible with the top down, which they would take turns driving as fast as it would go.

They passed the picnic grounds that had seemed so far from town when she was young. Those wonderful picnics... Even then, though, she had felt the lack of freedom and adventure. Most of the other children could eat all the hot dogs they wanted; they had pop instead of cocoa. They didn't have to wear rubbers, even when the ground was squishy. They could go wading even in March. No heavy sweaters for them; no carrying a blanket, in case the ground was cold.

"You'll be going away in two days," Buff said.

"Yes. It's like going away to summer camp, only I'll be studying all the time."

"Will you write to me, Millicent? I'd like to hear from you."

"Why, yes, Buff, but you'll have to write first."

"Of course, but I'm not very good at letters."

No, he wouldn't be, Millicent thought; he could never be easygoing and free about anything.

"Maybe I'll see you in the fall," he said. "My college is very near yours, you know."

Oh, no, Millicent thought. When I am away, it will be different. Then I will have adventurous things happen, and life will be dynamic; and Buff wouldn't know what to do. Maybe he wouldn't even like me, then. Maybe I'll be a night-club

19,293 DENTISTS ADVISE

Smoke VICEROYS!

The Nicotine
and Tars Trapped*
by The VICEROY Filter

CAN NEVER STAIN YOUR TEETH!

"YES!" advise 19,293 dentists, "Smoke Viceroy!" The nicotine and tars trapped by the Viceroy Filter can never stain your teeth. No unsightly bits of tobacco can lodge between your teeth, cause more stain. Smoke Viceroy! No other cigarette gives you such a blend of rich, mild, luxurious tobaccos. No other gives you this exclusive Viceroy Filter.

Only Viceroy...
no other
cigarette... has
this exclusive
Viceroy Filter!

*No filter can remove all nicotine and tars, nor does Viceroy make this claim.

singer and know gamblers and people like that.

"Maybe," she said aloud. A hurt look went across his face, absorbed by his pride almost before it was born. In that second, he seemed more alive than ever before, and very dear. She almost loved him, then.

The car drew up a small hill, and there was Lake Erie in the distance. This view over the meadows and beyond the woods was as well known to her as the look of her own hands. There was a freighter going by, far out on the lake—just as she always hoped there would be, and as there always was. She drew her breath in sharply, as if against all disappointments everywhere, and gave herself over to her inner happiness.

"Dodie is sure excited about her party," Buff said, making an effort at light talk.

"Yes, I know." She knew every detail of Dodie's party. They had planned it together and it had seemed important then. But it didn't seem important now.

THEY swung into the lake road. Now the cottages began, the lights, the resorts. Five miles up the road past all the garish lights and cabins, was the secluded place in the forest where the Williamses had their camp. Not for them Inlet Harbor, with the gambling house down by the shore. Not for them Camelot Beach, with its cottages set so close together, its pop stands, its noisy paths, its dance hall—forever forbidden, even for one dance. The dance hall was an open-sided pavilion with soft, many-colored lights and gay music—happy music, music that reminded you of old things and promised you new things, music you heard as you went by. For you had to go by; you could never stay.

The lights of Camelot Beach came near.

"Buff," Millicent said, seeking his hand, holding it, not as one holds a boy's hand, but as one holds a talisman, a lucky stone, "do you suppose we could stop at Camelot Beach for one dance? I've always wanted to so, and I'm going away in four days. Would Harold tell?"

"No, Harold won't tell. I guess we can. Harold, pull up here, will you, please? We're going to dance a dance." Harold smiled, as if he enjoyed being in a plot for joy. The car slowed, drew in, found a space beneath a willow tree. Millicent shrugged aside her coat and delved into her purse for powder and comb.

They went up the few steps, and Buff bought tickets. The lights of Camelot Beach Pavilion dimmed; there were just soft blurs of blue and rose and yellow now. Buff put his arm around her, and they skimmed out onto the floor.

Buff was a conscientious dancer. He did all the things at just the right times—the twirls, the dips, the regular waltz—but with no joy. It was correct, but not as dancing should be. She looked up at him and said, "You were nice to bring me in here. I've wanted to come for three years." Around them were the grown-up people from Cleveland, the girls in black dresses from the girls' college, the tall, wonderfully evil-looking boys from the men's school.

"That's my cousin Patsy over there," Buff said. "The girl in the blue dress. She's afraid I'm going to tell she was here." He laughed. The cousin and her date, a man in a tuxedo, came close. There were exclamations. A little knot formed around Millicent and Buff and the cousin and the boy named Mack.

"Come on back and meet the crowd," Patsy said.

Then the lights changed, blue-violet all over. The orchestra began to play Coax Me a Little Bit, quietly, persuadingly. Millicent looked across at the small, brightly lighted throne where they played. And there was Red—a different Red—at the piano. She looked at him:

he saw her, and waved, and went on playing. Patsy and Buff and the crowd began to edge over to a corner. Red stood up at the end of the number and said something to the man playing the drums. He seemed much more grown up than Buff, confident and competent. Then he came over to Millicent and said, as if it were just this afternoon he had double whistled for her, "May I have this dance?"

The lights changed, and disappeared except for the small spotlights that played around the room. Millicent and Red began to dance.

Millicent was not Millicent now. She was just part of the ever-changing lights, the breeze blowing in, the music and the dancing. She remembered suddenly, as one remembers summer is near at hand with all its old delights, that she had never danced with Red before. She had skated with him, long ago, on ice skates; she had played with him, back in the fourth grade.

Red edged up to the orchestra. "Play It Might as Well be Spring," he said. He was showing off now. She knew it and placed her arm more possessively on his back. They went round and round, not speaking. Millicent tossed back her hair

of the dancing, in the kiss. She backed against the porch and leaned up against him, and he again. They did not speak, but silence was not like Buff's silence were silent because there was to say.

Red reached up to a low bracket, tightened his fingers around it. He was tall and lean and free.

"It's good to see you, Millicent, good night for me. I think I'm getting the job. It's a damned good one." He was talking to her, but she talked to a woman. The way he looked, the way he was, was excitement. He lighted a cigarette and stood there looking at her. In the look he had had when she was a valentine. This was adult—a praising a woman and finding it able.

Someone came out on the porch and called to him. He leaned over the railing, and kissed her more, lightly, before they went in.

They were all there in that noise and music—all the girls from the zigzag street. Nancy was playing Sioux City Sue over an old record. "Hello, Nancy," Millicent

"What do you mean I can't play ingenue parts? I've been playing them for thirty years"

at the pauses; Red hummed with the music, but they did not talk.

"The half-hour intermission is coming soon," he said, finally. "Why don't you come over to the cabin with me and say hello to everyone? We've rented a cottage out here for the week."

"All right," she said, "I will."

"I'm being tried out tonight on piano," he added, looking toward the orchestra. "I have pieces now and then, but I want to show you the cabin. We're having a house party."

Out of a dream, she said, "I must go tell Buff." They danced up to the steps where Buff and his cousin and the others were standing, and Millicent said, "They're having a house party, Buff. I want to go over for a while. I'll meet you and Harold under the willow in a little while." Buff started to follow, but a dark-haired girl caught him by the sleeve. Millicent and Red were walking away, down through the grove that was overgrown with cottages and filled with the yelps of children and dogs, the high voices of people strolling on the beach. There were the friendly far-off sounds of guitars being plucked, the throaty, meaningless, but suddenly meaningful voices of women talking softly to men.

They went up steps toward a brightly shining doorway. Red drew her back, out of the revelry, under a quiet, new moon—and kissed her. Even to her, greatly unknowing, it was not a young kiss. There was something of the night,

"Hello, Millicent," she answered, pausing in her playing. But her ferretness was gone; they were again under the apple trees. The girl of one of the girls was there, with them, enjoying everything was there—Eleanor, who had been in the country with her when she was nine; and Bub, who had been a skater in the sixth grade; and who had told her that babies did not come out of suitcases; and Ned and

"Why don't you stay here Millicent?" Nancy said. "The extra bed. Mrs. Prentiss can and say you're staying." The mother leaned forward and said Aunt Harriet thought Millicent at Dodie's for two days. Mrs. wouldn't even have to telephor

THREE of the girls came and arms around her. "Sing for us the way you used to, Mill," they said. To Nancy's soft playing she began her favorite, Blues in the Night. She looked around at them as if wanting to be allied with them, part of their magical group.

"We're going to swim out to the island tonight," one of them said, "it's a silk."

"Some of us take off our shoes and other one whispered, 'the way is wonderful that way. Stay with'

Red was beside her, tall and unknown—unknown, yet familiar

Sweet music for Home-Loving Ears The New "Dutch Boy" Paint is **Blended**

In Colors or White
... It's Blended just right...
to stay Sparkling Bright

something to sing about...
new "Dutch Boy" Blended Paint!

From the dazzling Bright White... to the fresh, crisp Tints... to the gay, glossy Trim Colors... it's an exciting new kind of "Dutch Boy" paint for your home. In colors and white... it's blended just right to stay beauty-bright. Blended by the master hand of the "Dutch Boy" with all his years of experience in brush-away the years from American Homes.

Blends for 3-Way Beauty Protection

House paint is required to do three different jobs. And blending brings you three different kinds of paint... (1) Bright White; (2) Sparkling Tints; (3) Gay Trim Colors... each designed to do its job right.

No wonder the new "Dutch Boy" Blended paint stands just as it stands out.

No higher quality paint has ever carried the "Dutch Boy" label. It's backed up by over 30 years of continuous outdoor paint tests... the longest research project of its kind.

So remember... when it's time to paint... your home's best friend is the "Dutch Boy" blend.

1. Blended to Stay White.

"Dutch Boy" Bright White is self-permitting rain to wash covers exceptionally well; dazzling white exterior finish.

2. Tints Blended to Stay Right.

Crisp and lively are these "Dutch Boy" Tints... specially blended to assure lasting, uniform colors and keep their sparkling good looks.

3. Trim Colors Blended to Stay Bright.

"Dutch Boy" Sash and Trim Colors add the finishing touch to your home's protection. They're blended to hold their gloss and stay bright. Ideal for garden furniture, too.

Special "Dutch Boy" Blended Primer: An undercoat of great sealing and hiding power, that holds fast. When used under a topcoat of "Dutch Boy" Bright White or Tints you get a superior two-coat paint job, even on unpainted wood.

MADE BY THE MAKERS OF THE FAMOUS "DUTCH BOY" WHITE LEAD

Harmonize Your Home
at Your "Dutch Boy" Dealers...

Picture your home in the "Dutch Boy's" beautiful new blended paints. Preview your color scheme from this handy, miniature-house display at your "Dutch Boy" Dealer's. Choose from distinctive combinations of brilliant White, lovely Tints, smart Sash and Trim Colors.

FREE Color-Scheme Booklet! Over 40 full-color illustrations show you how to style your home for lasting beauty with the new "Dutch Boy" Blended Paint. For your free copy, address Dept. 17, care of the nearest office listed below.

MARGARET YOUNG
Glamorous Powers Model

How AO Polaroid Day Glasses Filter Reflected Glare!

- A Bright light from the sun strikes a surface.
- B Some rays bounce off as glare; others reflect to the eye as useful "seeing" rays, show color and detail.
- C Ordinary sun glasses dim both glare-light and useful light. Glare remains to hide detail, to dilute true colors.
- D AO Polaroid Day Glasses reduce annoying glare, reveal detail, transmit undiluted color rays.

multiplication tables they had learned from the same blackboard when they were young.

She thought, and knew the thought as another excitement because all that was happening to her was exciting. I could even marry him. I'm old enough. And we would go away and he would play in a band and I would come in and maybe sing all the songs, the way I've always wanted to. And we would dance and then I'd go back and just wait and wait for him. And he'd come home to me, to a cottage like this.

He drew her out onto the porch. The others went back to the piano and began to sing another song. He pulled her into his arms and kissed her again, a man's kiss, a knowing kiss. All memories, all loves, all little joys were there. There was bitterness, too, and yearning.

He could ask her to marry him now, and she would say yes. And they would live in a zigzag street someplace and wash clothes in hot soapsuds and hang them out to dry under a bright, hot sky of fat clouds.

BUT he didn't ask her. He just held her so close she could feel his heart beating. He took her face between his hands and looked at her again. "Millicent, Millicent," he said, as one learning a rhyme. "Millicent Hathaway Andrews." And then he smiled and kissed her once more.

She heard Buff's voice coming nearer, up the little stretch between the cottages, saying over and over, asking of the darkness, "Millicent? Millicent?"

A moth skittered across her cheek. Somewhere, out of the night, she heard a woman's low laugh—intimate, revealing. A man's voice answered, sensual as satin.

As if from a magnet that held her, she turned and walked slowly to the steps, saying, "Here I am, Buff." She could not leave him there in the dark, saying her name.

He came up the steps quietly, a set smile on his face, his hands at his sides.

"Hi, Buff," Red said. There was impatience, almost condescension, in his voice.

"Hello, Red," Buff answered. "How goes it?" And then, turning to Millicent, he said, "We have to go, Millicent. It's awfully late."

"Millicent's going to spend the week end with us, kid," Red said; and Millicent looked quickly at Buff to see if he would object to being called "kid." She saw the muscles of his jaw tighten just a little in the shadowy light, and saw his arms straighten just a little at his sides.

"Dodie's family would be worried," he answered quietly. "They're expecting us."

"Why don't you sort of run along and tell them she's not coming?" Red said.

"That wouldn't be very nice, Red," Millicent said. "I couldn't do that."

"You could if you wanted to," Red said slowly, waiting for her to answer. "Buff here," he went on, nodding at Buff and smiling in a way that suddenly annoyed her, "Buff here could tell them not to expect you—tell them you couldn't make it, or you changed your mind, or something. It's up to you."

"Yes, I guess it is up to you, Millicent," Buff said in a voice quieter than the skittering moth.

How Buff must hate this, Millicent thought. It's like a scene in a cheap movie. Buff stood perfectly still, isolated in quietness, waiting. Then he turned and started down the steps. "I'm going back to the car. I'll be there if you decide to come along," he said, simply. "So long, Red."

Red was swaggering a little, very sure of himself. Suddenly she felt very proud of Buff, marveling that she had not felt this pride before. He was alone among them—Red and Nancy and the others—but he asked no quarter in his loneliness.

Why, Buff was more her than Red would ever be. never known it before? against the porch railing whistled a bar of Blues in her. She stood for a moment thinking of the small gaiety, the joy.

THE BALKAN FOLLIES

Continued from page 22

"Danubia" would dominate the eastern half of the Mediterranean approach to Near East oil. It would run your cars, your planes, your trains, the Middle East today as Pennsylvania. Unification of the hard, essential core of the operating march west.

The supercolossal plot of the "Danubia" is being courted by the big ranch of the Baltic Sea. The partnership of Czechoslovakia. If Danubia and Baltica long hearts of all Central Europe as one. Both are tempted to aid to wedding—lent neighbor, and known in the states as a "shotgun"—adds chances. The fence of the Big Danubia extends from the Baltic Sea. Success of the match is a complete double fence, fenced at in these days of the courtship is frowned villain, a distant Uncle who good and business relatives here also are three obstacles before the wedding.

Characters in the Cast

"dem bums" of the Balkan and Turkey, who have neighbors—meaning us. The plot is a pair of pain-in-the-necks, Austria and Hungary, betwixt ranches that still and Baltica apart. Austria is the European gateway to the river; Hungary's Budapest, port. Neither of these is, or Balkan. Or, rather, *wanted* the overwhelming choice of the cent of her people, Hungary. A Hungarian official, told me this was because the labor was there with troops, while Uncle was there name only.

However, Uncle has guns, why top military and diplomat know that Austria has a lot of picking up her skirts and the Atlantic than she has of the treaty at the forthcoming meeting of the Big Four Ministers. You read that agreement scheduled for an Austrian treaty

is the day you will know the Big Neighbor feels ready to prove his immense kindness for the Austrian people by moving his Danube door farther westward and Europeanward, from Budapest to Vienna. But the dimming eyes of these two old ladies continue to peer anxiously out the back window of the Balkan Follies—still preferring cowboys to commissars.

And that introduces the third, or lalapalooza, obstacle. The Yanks—or nephews, whom the villainous Uncle sent over here to watch his affairs. Thereby, he unwittingly furnished the Master Director with the wow comic hit of the show.

Like most successful impresarios, those of the Balkan Follies are jealous of their stagecraft tricks and secrets. Our description of the action, thus, is necessarily based upon personal familiarity with the Balkans, firsthand observations of players and spectators, interviews with both, and official documents and records. The performance is continuous, varied, and dispersed according to sectional tastes. Something going on in each ring all the time. Purely for their own amusement the Yanks have named certain acts.

This one, for example, which takes place in Austria, they call The Galloping Poll! It is played by the Russians throughout their zone of occupation, with a male and female chorus that, faces washed and hair combed by executive order, every morning dances off from local headquarters like a merry flock of brush salesmen, humming, "Capitalism, Here We Come!" Each is armed with American Lend-Lease pencils and pocketfuls of questionnaires. Every Austrian family is questionnaired once a month. The Russian writes the answers. He never lets the questionnaire out of his grip.

The questions show the paternal interest of the Soviet Union in all good Austrians, like "Has your uncle in Linz an umbrella?" If some yokel wise guy remarks that nothing ever comes of these questions—except the uncle in Linz had his umbrella stolen a week after the questioner's last visit—he is laughingly told how the Russians do their best to make life easier for the Austrians, but the Yanks won't co-operate. Besides, haven't the Russians, on their own, restored local war-damaged monuments and works of art and culture? There is nothing like the sight of a reconstructed opera house to cheer and gladden families who live in brick-heap caves in what

KREML *does lots more*
than keep hair looking handsome!

ON HOT STICKY SUMMER DAYS...YOUR HAIR NEEDS EXTRA - SPECIAL CARE!

When broiling summer sun bakes and dries your hair—leaving it so stiff and hard to comb—so hard to keep attractive and neatly groomed—don't settle for just any hair dressing when you can enjoy the EXTRA ADVANTAGES of Kreml.

This highly specialized hair tonic gives you YOUR MONEY'S WORTH!

KREML NEVER SMOTHERS HAIR DOWN WITH DUST-CATCHING GREASE

Kreml contains a special combination of hair-grooming ingredients, which is found in NO OTHER hair tonic.

That's why Kreml keeps hair handsomely groomed longer throughout the hottest, stickiest summer day without ever looking or feeling greasy.

WHEN HAIR IS SO DRY IT BREAKS AND FALLS!

Kreml is simply great to lubricate a dry scalp. And if the sun dries and scorches your hair so that it breaks and falls when you comb it—Kreml helps 'condition' the hair in that it leaves it feeling so much softer, more pliable.

At the same time Kreml removes itchy loose dandruff and leaves scalp feeling so cool, refreshed and alive! Make Kreml a daily 'must' this summer for that handsome, clean-cut look from morn till night—for a more 'hygienic' scalp.

KREML Hair Tonic

A product of R. B. Semler, Inc.

For Better-Groomed Hair—A More 'Hygienic' Scalp

the cellar of the home they were to rebuild.

At the fourth question the man hesitates. "Ach, those pencils they sold to me," he says, half under his hand, passing the pencil over his shoulder to the street. He takes another, too, but repainted red. "Much better," he mutters. He works. When finished, he questions with both hands on table and says, "Your name?"—meanwhile telling a funny story about the man. He then puts the signed pencil in his brief case, presents it to the Austrian as a parting gift to the children—the wife, alone—and leaves.

He recovers the first pencil, resharps it, and resumes business at the next stop.

Under the Thumb

Austrians are not supposed to read the last paragraph on each page, but above the household, and usually covered by a cloth during the signing, is a "book." A typical one: "I swear to my property, or any part of it, was by other than me. I have been treated with respect, kindness, consideration by the members of the Army. Signed—"

Knowing how many things the man is to be absolved from. It is how many of these elaborate questionnaires have found their way into American Intelligence. The most amazing how many Austrians have come to know all about and enter into the signing "A. Hitler." Knowing favorite, also exchanged, is a slight-of-hand trick into Soldier. It is as much as the outlook, have difficulty keeping their expressions. In Austria when it is known they were occupation force to 60,000—100,000—you saw the Vienna among other centers, full of uniforms one night, and 80 per cent civilian. They are very same people.

More than 100,000 Red soldiers have taken off everything but their drawers and become old men in Rumania, more than 200,000 yet knows precisely how many of thousands of Red veterans salted into Austria. Hungary territory Czechoslovakia Hungary along the Danube's banks, or across Greece's wild borders. It isn't possible to know.

A reflecting monologue given by each member of the Russian, usually in bars or cafes, with information at the rate of a sentence. Telling how Russia has the C-47 plane and the C-47 plane and the production of same with the Allies. How the Brothers and Orpach Vritsky invented the first airplane at Kalamazoo, a lonely beach near a city on the Crimean shore of the Black Sea.

The American Army had German professors to teach the G.I.s. They've got a "kiss" stamp, and a knack for current events in the drollest of ways. The methods of gag in the United States the Russian press for the American press for the American press. The first picked up one of a Negro in Louisiana had been in the first because the first was and more "juice" than the Russians know the gulf-

low value of mixing truth with fantasy.

There is a story the Yanks tell. Who's Human Now—and How. The scenes are impromptu, not the kind in which the leading actor could bear the strain of more than one performance. For instance, an episode one Yank air crew got involved with at Matysfeld Field in Budapest. These Yanks customarily greeted the Red sergeant in charge of ground control there in a gaily way and gave him cigarettes. The sergeant never melted, but the Yanks remained amiable, knowing how dignified topicks become in such jobs. One stormy day the Yanks were late in arriving, by the time they were cleared for take-off it was dark, and the weather violent and wholly unyielding.

The pilot knew the Soviet rules. American planes not permitted to stay overnight at Budapest, or any other Russian or satellite Balkan field. But this was a dire emergency. He put it up to the Russian sergeant. The sergeant said no. For one solid hour he said no, while the pilot argued, yelled, gestured that he wasn't going to break his blank neck or the blank necks of his crew for any blank Russians. The sergeant had a face from which a magpie couldn't peck a smile. He wasn't a bad egg, though, in the end he agreed to let the Yanks stay.

surely be put-back back and forth, flying so low that the face is as well-known as Tully is the mess bartender. He looks his head out of the window as he owns planes, looks into hangars, examines the control tower. All the Yanks were so busy, some empty their pockets and hold up the contents for him to see.

The test is both audience and cast well known, is that if any Yank plane went socially over any Red field it would be shot down. If a Yank plane, lost or weathered, makes a forced landing within the Russian zone it is impounded, with crew, passengers and cargo, and there is a long nightmare before they can be pried back to their own coast. Several hilarious experiences of this have improved the quality of Yank imagination. Contrariwise, if Russian fliers, lost or just straggling, force-land in our zone we give them gas, service, food, bare likier and liberty to go whenever they please. Their reluctance to leave our bases and cars and return to the perfection of Soviet life is notable.

In Yugoslavia no civilian member of the United States Legation is permitted in excess of three miles from Belgrade, no Yank military machine is allowed to leave the city at all. Yet in Washington there are no restrictions on the staff of

missionaries. Individual permits issued for each flight from American Occupation Headquarters in Vienna to separate Balkan capitals and, in addition, distinct permits for the plane itself, each item of cargo, each crew member and passenger.

Permits may come through in six days, thirty or not at all. One for a Monday afternoon flight may arrive Tuesday morning. Or for the plane but not the crew, for the passengers, but not the cargo, for the plane to Bucharest, its military in Budapest. Or upon arrival in Belgrade, if one passenger is in a brief case listed for him, the whole flight may be shot back to Vienna to get it—and then have no permit to return to Belgrade. Horrors!—at both ends. Once, more than 50,000 pounds of vital supplies for our Bucharest mission back-logged at Vienna because no permits came through for a couple of weeks.

Once across the Yank soldier planes must fly along back alleys, or corridors, eight to ten miles wide, a light-gray line in soupy weather over terrain that hasn't had a path cut or a dirt road since long before Columbus sailed. By amazing coincidence the light-gray line is dog-eared to go over as many ridges and peaks, is few clear valleys, as possible. However the Russians provide ground maps to Yank navigation, look from mountainous barriers that are each mile. "Live" find, too, some of that harmless warning change that we shoot a Red arrow was accidentally to over Alaska to photograph our installations there.

Not is it without risks for Yank pilots up the middle of the alleys—usually Russian fighters making gun-scraping passes at them is a matter of routine. A while back—as you perhaps read—some Russians found this so annoying they chased Yanks right down to the landing strips at Tullin, shooting.

When the Spindles Challenged

There are British occupation forces and missions, are, leading some Balkanese or question why they have no roles in the Follies. Truth is—one likes to repeat this about such agreeable people—the British don't make good drivers. As illustration, the day news was flashed of the shooting down of an unarmed Yank transport and the killing of its crew by Jug fighters, the young squadron leader on the nearest field in the British sector of Austria immediately took off with 10 of his Spins, flew into Yugoslavia, crashed and buried the murder area, ready for action if Jug planes came up. None did.

Recently an R.A.F. transport was flanked by Jug fighters and compelled to land. The Yugoslav field commander almost had a stroke when he was confronted by a British pilot, who started to rip his ears off. But that Jug was amiable-brained. "We thought you were Americans," he snapped. All Yugoslavs present roared and clapped with delight, and the situation was solved.

Americans train-bound to or from their Occupation Force Headquarters in Vienna must pass through the Russian zone, and the entry points are magnets for spies as dogs used to be for small-town folk in Kansas. Something a Yank is going on—or coming off. Yanks. Nothing does not depend so much upon whether papers are in order as upon how played the Russian game ball.

Street-corner or roadside bus stops, and road blocks where vehicles must stop for checking the excellent work, also Yank cars are turned back. Yank bus-riders snarled off and made to wait peacefully on the curb. In the early days there were more Yank combat vehicles about, and liked snapshots and blurring better than any other "beatniks"—and they earned those "beatnik" guns were loaded.

The Jeep Treatment is another word-

The next two or three times this crew flew into Budapest the sergeant was not to be seen. The worried pilot finally went to the Soviet commandant and he was responsible for the incident, extolled the sergeant's good judgment and courtesy, and expressed thanks from one air force to that of an ally for a decision that conceivably had saved a plane and several lives. The commandant actually promised that everything the pilot said would be favorably entered upon the sergeant's record.

"But the sergeant?" asked the pilot. "Where?"

"Oh, him," said the commandant, "we shot him, as soon as you took off."

Quite a few such reports, turned in by Americans, are in the official records. Yanks read them carefully, in search of the universality of what they understand by "human nature."

The Unmasking of Superman feature is better understood by the Yanks, who know their comic strips. It waggishly demonstrates to the Balkanese that the self-fabled American superman are in reality plain old-sage. "Inquisitive Ivan" opens every morning, bright and early, rain or shine, when he comes in a recon plane—Piper Cub type—over Tullin Field, our base near Vienna. Let-

the Yugoslav Legation. In the United States, Yugoslav officials, like those of all nations, friendly or otherwise, with whom we maintain diplomatic relations, receive the courtesy of "diplomatic immunity" long established among civilized nations. In a later act you will see what happens to our diplomats in Yugoslavia.

American diplomatic and other missions scattered through the Balkans depend for their very lives upon our airmen. With the end of the war such missions became essential to restore and protect United States properties and rights, and to furnish bases for Graves Registration details in their task of locating bodies of thousands of Yanks who died to free the Balkanese. Native transportation was, and is, virtually nonexistent. Army planes offer the sole feasible method of sustaining our missions in food, supplies, personnel and contact with the outside world.

The Yanks planned to set up regular schedules, in accordance with American practice, for these courier flights. But "regularity" and "efficiency" are the last things the Russian spies managers want. Yank mission to pour over the Balkans. They have far more convulsive ideas for us. Red "red tape" They gave no long-term blanket authorizations for

SCIENCE BEATS WEATHER INSIDE WATCH CASES

Amazing new mainspring
completely overcomes
rust danger

When watches keep erratic time or suddenly stop and can't be wound, the cause often is *mainspring failure*. Steel mainsprings frequently lose power. Or, weakened by rust, they break.

Yes, mainsprings in closed watch cases can and do rust. High humidity weather with a sudden drop in temperature sets up a miniature rainstorm... forms a tiny pin point of rust. And there is where the spring breaks.

But now Elgin Watch Company scientists have developed "Elgiloy" metal and from it a miracle mainspring: DuraPower*. The DuraPower Mainspring eliminates 99% of repairs due to steel mainspring failures. It will not rust! And it retains its resiliency indefinitely, gives a steady flow of power for greater accuracy through the years. Only Elgin watches including Lord and Lady Elgins and Elgin De Luxe have the DuraPower Mainspring and at no extra cost. Look for the symbol "dp" on the dial. Also at repair shops for replacement in many previous Elgin models.

woo. It is staged whenever a Yank turns up the wrong garden path in pursuit of a whistle-fraulein, or jumps the wrong fence to swipe cherries—for, except at road blocks, zonal boundaries are not well marked.

The Russians don't toss a wandering Yank back over the line, though it may be only six inches away.

Instead, a Russian MP jeep is summoned to take him home in style—and time. He is given the conspicuous seat of honor. Sirens roaring, six or eight Russian MPs hanging on, he is given a jolly ride—not inhospitably direct to a Russian control station, but round and round the whole town or area, up and down the busiest streets—real interesting ones, half a dozen times—and through all the crowded market places. He sees all; is seen by all. The ceaseless siren makes sure that people on back streets come running.

Some observant Yanks noticed that many Russian sentries examine the "gray tickets"—the pass for the Red zone—upside down; evidently, being unable to read does not bar a man from guard duty in the Soviet army. Only color blindness does. So numerous Yanks who itch to go a-rovin' cut themselves a gray ticket, any old cardboard will do, write tributes to their Red buddies on it, sign their Social Security number—and set forth to see if something jolly will happen.

Records of Yugoslav Inhumanity

Probably the gayest time of all is had when our courier planes land in Bucharest, Sofia, Budapest or Belgrade. Of these, Zeman Airport at Belgrade takes first critical honors. Incidentally, Yugoslavs are the only ones, enemies or Allies, who since the war's end have with official deliberation murdered in cold blood Yank airmen in unarmed transports and Yank G.I.s in ambushes near Trieste; also there is abundant Intelligence testimony that more Yugoslavs have been killed or sent to lingering death in concentration camps by fellow Yugoslavs since the war than by Germans during it.

Yugoslavia: Lend-Lease aid received from the United States, over \$32,000,000; reverse L-L from Yugoslavia to the United States, 0. UNRRA aid received by Yugoslavia, \$400,000,000; about 75 per cent from the United States. Yugoslavia is a word meaning "country of the south Slavs." But to anyone who has slept both in its best hotels and on the floors of its village huts, as I have, Yugoslavia is the lower Slobovia of the Li'l Abner cartoons.

Zemen Airport is known to Yanks as "Hotfoot Field." For it is at Zemen the Yanks revel in the Balkan Follies equivalent of an old-time Minsky and Sliding Billy Watson, lathering with stable brooms, shaving with buzz saws, manicuring with chisels, shampooing with mucilage; while native railbirds line every vantage spot.

When and as the American plane arrives, it is surrounded immediately by heavily armed soldiers. Its door cannot be opened until the Yugoslav and Soviet High Inquisitors make their dramatic approach. This may not be more than an hour, unless they are having tea with girl friends, or unless it is one of those days of extreme temperature which the climate of Belgrade can produce. Once a crowded plane was kept sitting on the apron 4 hours and 20 minutes, with an inside temperature of 125 degrees Fahrenheit. The guards saw to it that no one opened the door for a breath of air, or that no mush-heart from the airport brought out cold drinks for the bakes.

After the Inquisitors have boarded the plane and minutely scrutinized all credentials while the Americans remain respectfully seated, action starts a-popping. Like the dangerous characters they are supposed to be, the Yank passengers are

driven out and lined up in one column, the crew in another. Each column is headed, flanked, tailed by tommy guns and bayonets. The sergeants yell, "Hep!" and off they march the crew to a control room, where they are fed an excellent lunch of U.S. Army or Lend-Lease rations—and kept under lock, key and gun until departure time. The passengers are marched into the Presence.

The Presence holds court in the custom shed and is usually a Yugoslav captain, who is changed from time to time—only partly to prevent his murder, mostly to reward aptitude or punish lack of it. One Presence who, on the coldest day Belgrade has known in recent years, kept a planeload waiting only 35 minutes, is learning a new trade in Rumania—how to dig salt from mines—by hand.

While the truly gifted Presence who thought up that four-hour scorching (a Captain Baum, who ignored with monumental good nature every crude Yank invitation to "step out from behind that counter and take off those seven tommy guns, you so-and-so!" and who once ran bawling to his office when a lad from Brooklyn reached over and socked him anyhow), is now an important minister of the government.

When the passengers are herded into the shed, and enough guards set in all doorways, the Presence strolls in to see if any of the arrivals merit his personal touch. Ransacking of pockets, papers and baggage of ordinary Yanks he leaves to apprentice Presences. Should there be a ranking member of the American Legation in Belgrade, or a big shot from Washington, the Presence does his star turn.

There is no such thing as "diplomatic courtesy" at Zemen—for Yanks. Diplomats' belongings are dumped upon the counter for a microscopic grubbing. Employees hurry from all over the building to witness the proceedings, because it is by his twitterings and chaffings over each

item as he turns it inside out, the insulting slyness of his of American VIPs, that a Presence hinges.

Most Yanks concede that marks the smash-hit climax of lies. Still, it must come as an American faith in our national learn that a few of them do not ate its monkeyshines. Like the who, in a secret report to W stated: "In no other country ness, anarchy, and the subject people to a regime of terror force so clearly evident as in Y. No self-respecting nation should submit to humiliation of its prestige like that imposed in Yugoslavia."

A far more engaging review Balkan Follies was voiced by chief of staff in Hungary, during view with ex-Prime Minister of United States had petitioned for landing rights for our aircraft in Budapest. Hungary is to grant them. Lesser of ting nowhere, the Prime Minister directly to the Red chief. It is interview. The marshal, depicting Hungarian's lack of a sense simply pointed out the pay-off him:

"It is utterly impossible for Union to permit the use of within five hours' flying time of and two hours' flying time of your main ones in Hungary a hostile nation!"

Mr. Ferenc Nagy is in Amer

But the Follies go on. For know their comic operas they hint, a sort of sneak preview, and better Follies to follow—a Director would like to do 'em. ing in the biggest of all. Its world. Its theme—the future. —Freedom: You've Had It!

THE END

A British noncom outlines the route each MP patrol must follow guarding Vienna's four sectors, Russian, British, American and French.

Air Travel Buys You Two Important Things

Air travel gets you to where you're going in the least possible time—comfortably and economically.

But there is a vastly important by-product of traveling and shipping and sending mail by air: the enlargement and maintenance of one of our strongest guarantees of peace—the nation's air transportation system, the greatest in the world.

The cost of maintaining such a system solely for readiness in a national emergency would be tremendous. Yet there *must be one*. That the cost is not on your tax bill is due to typical American enterprise and self-sufficiency—and the fundamental place of air transportation in the nation's everyday personal and business affairs.

THE SCHEDULED AIRLINES OF THE UNITED STATES

Air Travel Strengthens America

You get there quickly, comfortably and economically when you go by *scheduled* Airline. Fares as well as express and freight tariffs are now lower than before the war. Air Mail is only 5¢. So, travel, mail and ship—by air! Call the nearest Airlines office or your travel agent for reservations. This advertisement is sponsored by the nation's *scheduled* Airlines and leading aviation manufacturers.

een extinct in surround-
r decades. Beyond the
sty iron fence, stretching
pes as far as the eye can
nd, its thin green cover
weeds and bare reddish
posed soil.

had preserved the grass
ing had destroyed.

In the vast spaces of God's country
you can see other pieces of the "race
with catastrophe" in action. At the
corner of Fourth and Central in the
heart of the Albuquerque, New Mex-
ico, business section, for instance, you
can look up at a river bed. The river
bed above you is that of the some-
times mighty Rio Grande, and it tops
the town's business section by four
feet. In the spring some 300,000 gal-
lons of silt-laden waters churn over
the river bed each minute, and as the
district engineer, Hubert Hall, puts it,
"If the water ever gets through the
levees, it will go right down through
the town."

The river is lifting itself by its own
silt so fast—more than a foot a decade
—that Albuquerque and the valley are
beginning to wonder whether their
Rio Grande is becoming another Yel-
low River. The white man's treatment
of the Rio Grande Valley is "a more
complete example of regional suicide
than most people ever imagined," J.
Russell Smith, the geographer, ob-
served.

The race with catastrophe is sensed
also by New Mexico's neighbor, Utah.
So washed and blown away has that
state's limited usable soil become, so
widely have "gangster grasses"—poi-
sonous and other weeds—moved in on
the nutritious grasses of former years,
that scientists of the University of
Utah this spring raised the question:
"Is Utah Sahara-bound?"

In Los Angeles, in Phoenix, Ari-
zona, and in the many Western towns
and valleys nurtured by the river life-
lines that stretch from the mountains,
alarmed men raise another version of
the race-with-catastrophe question. In
the semiarid West, water is a resource
more precious than the gold for which
men crossed the mountains in the first
place. Someday the last newcomer will
cross the Rockies to make a home in
the West, because there won't be
enough water to support more people,
more factories and more irrigated
farms.

Take the case of Los Angeles.
When the town had a scant 50,000
population around 1900, it got along
nicely on water from the Los Angeles
River. Today 2,000,000 Angelenos
must look 200 miles for water, to the
Colorado River, impounded at Lake
Mead behind the Hoover Dam. Los
Angeles spent \$240,000,000 to tap the
water (and power) of Lake Mead, and
the federal government spent about
\$165,000,000 more.

Silt Is a Major Problem

Future generations will marvel at
this monument to the energy of our
times, but unless some changes are
made they won't derive water or
power from it. For lying behind con-
crete that will outlast the Pyramids,
Lake Mead is living on borrowed
time. Inexorably, day after day, the
Colorado River deposits some 14,000
carloads of silt on the floor of Lake
Mead. Each year the man-made lake
is filled with enough Colorado River
silt to cover 137,000 acres a foot deep.
At this rate the Lake Mead reservoir
will be so filled in 100 years that Los
Angeles and other towns will have to
look to other reservoirs for water and
power.

The lesson of the choking reser-
voirs, of the eroding grasslands and in-
creasing floods is plain: If education
is going to win that race with catastro-
phe, education had better get going.

But the Westerner who should be
the star pupil—the stockman whose
(Continued on page 80)

U.S. FOREST SERVICE

Poor range produces poor cattle, as demonstrated by this photo of stringy cattle
on an overgrazed cheatgrass range. Some stockmen have still to learn this primary
lesson of their industry. Overgrazing also threatens the West's water supply

U.S. FOREST SERVICE

Photos above and below are a lesson in cause and effect. Above is an overgrazed
range during a rainstorm. It shows how nibbled-off grass allows topsoil to wash
away. Below is Mt. Pleasant, Utah, after a flood of mud and rock, washed down
from eroding uplands, had moved down Main Street instead of a scheduled parade

SOUNDING BRASS

DEAR EDITOR: Re Buttering the Navy Brass
(June 21st): As an ex-Navy officer, I won-
der who died and left Lewis H. Conarroe
his commission.

To defend the few (?) as nice as our
author, it may surprise him that there was
an ordinary boot (Gene Henry) at Pearl
Harbor, who, upon being appointed for
Annapolis, became the academy's first six-
striper. He didn't get there because of
whom he knew, but what he knew.

LORRAINE J. SALVATORE, Bronx, N. Y.

... "Fearless" Lt. Conarroe! You can have
him! And I don't think there are 12,000-
000 or even 100 others who would stoop to
writing such trash.

Now I am an ex-Army sergeant and, of
course, I "hate the Navy" (like hell, I do).
They took us there and they brought us
back. They did a swell job. And the "brass"
helped plenty. Or did fearless lieutenants
do it all?
R. M. BAILEY, Dallas, Tex.

... I have been a member of the naval re-
serve for over thirty years and have been
through every rank and rate from a second-
class petty officer to my present rank of
captain. I served two years in World War I
and five years in World War II, and most
of this service was anything but "swivel
chair" within the continental limits of the
United States.

Mr. Conarroe would have us believe that
all the so-called "Trade School boys" are
indeed a special breed of cats, that they are
overpompous, overbearing, overproud
snobs, and that they spend most of their
waking hours, when not libating, in devis-
ing ways and means of (a) humbling junior
officers and enlisted men, and (b) crucify-
ing all reserve officers who have not had
the Congress-given privilege of graduating
from Annapolis.

While the article is intended to be a bit
of humor, I am sure it will impress the
average civilian with the conviction that
our Navy is in very bad hands indeed with
such "characters" abroad and with such
"goings on." No wonder Congress is to-
day chopping off needed funds from naval
appropriations at a time when there was
never a greater need for the public to have
confidence in our Navy and its officers.

PIERRE BOUCHERON (Captain, U.S.N.R.),
Fort Wayne, Ind.

THE FACTS OF LIFE

DEAR EDITOR: Nina Wilcox Putnam's Un-
masking the Mosquito (July 5th) says that
mosquitoes carry on their courtship in
much the same way as some people: That
is, the males hang around on the *Cilicidae*
equivalent of street corners, whistling at
trim-ankled females as they flutter past.

I seem to hear a mother mosquito's ma-
ternal advice to her daughter, setting her
straight on the facts of life before daughter
sets out on her first solo flight past the
neighborhood bog:

"Now, daughter, if those loafers whistle
at you, just keep right on going. Say to
them, 'DDT and Flit may give me a fit,
but whistles'll never hurt me.' But don't
go running off with any of those males.
What? How can you tell if a friendly mos-
quito is a male? Just invite her to share a
lifeguard with you. If she says, 'No,
thanks, never touch the stuff,' get on your
way. She's a he. All males are vegetarians.
Remember, daughter, before you have
anything to do with any male, first make
sure he's got a good-sized account in the
blood bank!"
Must buzz off now,
BOB HAWK, New York

Just eing pushed around had answers. d, "we'll get along." ftly, "We'll show them. m, Pete!" it, I was finished. There'd Waring kicking around, parties, making with the be finished. d. "We'll show them." ut in—Harry Wynne, it a minute I stood there in the swarm and I was up tching the big snowflakes ofly, slowly, in a thick nging to the silence. lvia and I had stayed up ave been different. It had the last, that we never saw pt at other people's cock- aybe up there we could of it and looked around. as on the trail of a new ake was chucking the yel- r the chin. And over close my neck prickled. She'd oat and she was standing n a white dress that went

in one sleek line from the top to the bot- tom, and her hair black and cloudy and a little frown between her eyes. My hand touched the square box in my pocket. Here it was. The kiss-off. I walked toward her, and when she saw me she smiled. "Pete," she said. I said, "Sylvia." I didn't smile back. It was the little smile she gave me, the one that said: You and I, Pete, we know something the others don't. The others were lucky—or maybe smart. "Old Sylvia," I said. "What's a party without Sylvia?" She said, "At first I thought I wouldn't come. But I had to." Her eyes were steady and dark and serious. "I—hope you'll be very happy, Pete." There was just a hint of hesitation in it, a kind of quiver. That girl wasn't an actress for nothing. Be brave, Sylvia. Smile with an aching heart. She was hitting it for all it was worth. FOR a minute she almost had me. I re- membered how it had been with us, right after we were married. I remem- bered that night in Ricardo's, with the red tablecloth and the platters of spa- ghetti and the red wine, and Sylvia in white then, too, and her eyes dark and shining. And I could hear her saying, "We won't be like the others, will we, Pete? We won't let it get away from us." We were in love then and we were happy and maybe a little bit crazy, and I said, "No. We won't let it go." And her eyes were dark and happy over the spa- ghetti, and she was wearing a thing that I'd given her at her throat, a kind of locket we'd got out of a popcorn box. I thought about that night, and for a minute she almost had me. Then I thought about later. Cham- pagne instead of red wine. Diamonds—

DOG CARE PRODUCTS

and even the diamonds not enough—she'd look at them and say, "They're nice, Pete," and that would be all.

I thought about Sylvia, the party girl, and I was okay again.

She said, "Do you remember Ricardo's, Pete?"

"Sure," I said. "How could I forget that wine? Like he'd drained it out of somebody's radiator."

Her lips got tight and I thought maybe she was going to slap me. I grinned at her.

THEN somebody grabbed my arm and it was Sam Lake. "Pete, my boy." He winked at Sylvia. "Run along and play, Sylvia," he said. "I want to talk to this boy."

I wanted to talk to him, too. I raised an eyebrow at Sylvia.

"I'll see you later," I said.

She said, "Yes. I want to talk to you."

The way she said it, it wasn't going to be a love scene.

I turned to Sam. "Well, Sam, what's on your mind?"

He moved closer and got confidential. "How you fixed for dough, Pete?"

In a mind-reading act he'd've been sensational.

"About four hundred, maybe, when everything's cleaned up."

"Pete," he said, "you are a careless feller. What do you do with it?"

"You know how it is, Sam. The money comes and the money goes."

There was this thing and that thing—and Nora's ring hadn't come in a box of popcorn.

Sam shook his head.

"You have not got sense about dough, Pete. You have got four hundred smackers. You are getting married. And you are quitting show business—"

Where did he get that idea? I said, "I'm going to write a play. Remember?"

He shuffled his feet and the cigar went over to the other corner of his mouth. He didn't look at me.

"You have told me about this play. On four hundred smackers you are going to be profound. Significance you have got to have. So how long will it take?"

I nodded at him and grinned. Old Sam. He was practical. He went to the heart of the matter.

"That's what I wanted to see you about," I said. "Four hundred isn't so much. I thought, maybe, a little advance—"

Sam looked hurt.

"Now, Pete. Could I take such a chance? For O'Neill, maybe, yes. But you are not O'Neill, Pete."

I stared at him. He was a practical guy, all right.

"No," I said. "That's what they tell me. I'm Pete Waring. I'm brilliant. I glitter so I keep myself awake nights."

"Sure. Every time you get up from your typewriter you have got a smash. You are a genius, Pete."

Anybody who made money for Sam was a genius.

He went on: "You see how it is, Pete. You must forget this nonsense. If you want to go to this—this bear place, I will advance you, say a couple of grand, and you can have a nice little vacation. Then you come back and do me a play."

He meant it. My hands were cold again, and there was a tight knot inside me. I thought about the play. I thought about the years I'd wasted already. If I didn't go this time I'd never do it.

I said, "You mean I've got to play it your way. You won't let me have anything."

Sam spread out his hands. "No dice, Pete. Such a chance I couldn't take."

The friends I had at that party I could count on one finger, with plenty of room to spare in case I met a new one.

"Skip it," I said. "I can get along."

Sam patted my shoulder.

"Don't be rash, Pete. You think it over. You do me another one like La-

dies by Request and we will both make plenty of tomatoes."

I felt myself trembling a little inside and my hands opening and closing.

"Skip it," I said, and walked away.

I saw Sylvia on the other side of the room and I started toward her. They were dropping away one by one, and the hell with them. I still had Nora, and I had the play. And whether it was four hundred dollars or a bag of peanuts didn't make any difference. I had to do it.

The party was cooling off. People I didn't know were leaving, drifting out in couples. A fluffy little babe in pink bumped into me, heading for the door.

"Leaving?" I said. After all, it was my party.

She gave me a look. She had clear baby-blue eyes and looked about nineteen.

"Who the hell is this guy O'Neill, anyway?" she said. "He sure gives lousy parties. This one stinks."

She went out with the curly-haired Joe

"Rumors?" I repeated.

"About you writing a

and I stood there looking after them. They were the lucky ones. They could leave.

Then I went to where Sylvia was standing. There was one more loose end to cut. Then it would be over.

I said, "How do you like the party?"

She made a smile you could have poisoned the soup with. "Oh, it's a lovely party, darling."

And for a while we didn't say anything. I wasn't thinking about the party, and I guess she wasn't either.

It was different now, and yet everything was still there between us. We'd been married and we'd been divorced. But no matter how final the decree was, there was something left.

And I kept remembering things. Like the time Sylvia'd gone away from the cabin and got lost and I tracked her in the snow. On our honeymoon that was, and after it was all over and we were sitting by the fire, she'd cried and I'd held her, with her hair soft and sweet-smelling against my face.

It was going to be funny, to be up there with Nora.

I looked down at Sylvia. "What's on your mind, baby?"

She said, "I've been hearing rumors. So I wanted to find out."

there was no point in talking. I shoved my hands into my pockets and leaned against the wall and waited for the party cool. I saw Ed Hanson and coat on and a blonde and What he wanted with the sp

me to the bears."

Witty to the end.

THERE were others going. Then I saw Nora coming out of the other room with Sam Lake. Sam and came toward us, her hair bobbing up and eyes were happy.

She stood there in front of me and was bubbling.

"Oh, Pete!" she said. "Darling, happy!"

"Fine," I said. "What party?"

"Well, it's—" She stopped and had to be flustered, I didn't start again:

How to give TIRED EYES a quick rest

MAKE THIS SIMPLE TEST TODAY

Eyes tired? You can rest them quickly. Put two drops of safe, gentle Murine in each eye. Instantly your eyes will feel soothed, refreshed.

WHAT IS MURINE?

Murine is a safe, scientific blend of 7 important ingredients. It relieves discomfort of eye-fatigue immediately—makes you feel ready for work or play in just a few seconds. Gentle, soothing Murine helps thousands. Let it help you, too!

MURINE

FOR YOUR EYES

minute I didn't get it. I was tired, I guess. A little slow on the uptake.

I said, "But we're getting married tomorrow. We're going to Maine."

She was shaking her head.

"Of course we're getting married, darling. But I can't pass up a chance like this, can I?"

I'd been in a fog, but it was beginning to break up. I looked around and saw Sam. He wasn't watching us. The cigar was cocked high and he had a pleased little grin and he just stood there alone being satisfied with himself.

A practical guy. He went right to the heart of the matter.

Nora said, "Anyway, I don't think I'd like it in Maine. With the wolves and all—"

I looked at her. "Bears," I said.

"Well, bears, then." She was looking at me without seeing me. She said, "I have my career to think of—"

Now she had a career. I glanced at Sylvia. I was a lucky guy with women.

"Hell, baby," I said. "You said you were through." I could hear my voice, thick and scratchy, with dust in it.

NORA was impatient. "That was different. Nobody ever even gave me a tryout before. But now—you see how it is, don't you, darling?"

I saw how it was. She made it plain enough. Something inside me kept getting tighter and tighter. I held it down.

"Sure," I said. "I get it."

"And it will be even better this way. We can have a nice apartment, with a study for you, and you can see all your friends—"

She was serious about it. It was all settled. I stared at her.

"Baby," I said, "you're a little confused. I'm going to Maine if I have to go on a bicycle."

I let a little of it out into my voice: "And if you're smart you'll go with me."

"What do you mean?"

I told her what I meant.

"You can't act, and Sam knows it. He just wants me to stay in town and do another play for him."

Nora's cheeks got pink. Her eyes had sparks in them.

"Well!" she said. "Of all the conceited—! Let me tell you one thing, Mr. Pete Waring. You think you're such a—such an O'Neill, but that precious play of yours will never see Broadway. And I wouldn't marry you if you were the last—"

"Skip it," I said. I shoved my hands down hard inside my pockets. "Just skip it."

She looked at me for a minute, very haughty. Then she sniffed, once. Then she went away.

I wished I could hear going to say to her.

But the party was over going now. They'd taken could, and now they were

part," I said.

er for August 9, 1947

She hesitated. Then she opened it.
The tissue paper floated down to the floor
and she opened the box and stood there
looking down into it, and something hap-
pened to her face.

"Pete," she said. "Pete." Her face
sort of dissolved and ran together.

I said, "Wait. I guess I've known for a
long time. But tonight it got clearer and
clearer. Even when I was mad, even
when I was chewing you out. And now I
know."

It was all there: the first year, the hard
year, the good year. And then, Ladies by
Request. Champagne. Diamonds.

And who'd bought them? Who'd been
the monkey on a stick?

Me.

"Sylvia," I said. She was still looking
into the box. "Listen to me. All the time
I kept trying to tell myself it was you,
something inside me knew different.
Champagne. Diamonds. I was the one
who went crazy, Sylvia."

SHE looked up then and she was smil-
ing that little smile, the one that said:
You and I, Pete, we know something
others don't. And the others I could only
be sorry for.

"I never wanted diamonds," she said.

I nodded. "I know. But I thought
they weren't good enough. So I kept buy-
ing bigger ones and more of them—"

She put a hand on my arm, lightly.

"All I ever wanted, Pete, was—well,
what we used to find in a box of pop-
corn."

She stopped smiling. She was serious
all over.

"I'm coming with you," she said.

"Wait, Sylvia." There was something
else I had to say. "Listen. About Nora.
It was different, it wasn't like at Ricar-
do's. Nothing was ever like that. It
wasn't—"

"Hush," she said. "I'm coming with
you."

"But I'm broke. I've only got four
hundred—"

She put her hand over my mouth, and
she was wearing white again and her eyes
dark and shining, like that night at Ri-
cardo's.

"I've always liked beans," she said. She
added, "Besides, I still have your damn
diamonds—"

And that's about all. Except that, be-
fore I kissed her, I took the locket out of
the box and hung it around her neck.
I'd had to buy fourteen boxes of pop-
corn before I found what I wanted. But
I'd finally found it.

Exactly what I wanted.

"UNBLOCK" *your* DIGESTIVE TRACT

And Get Genuine Relief That
Makes You Feel Really Good Again

Don't expect to get relief from headache, sour stomach, gas and bad breath by taking soda and other alkalis if the cause of your trouble is constipation.

In this case, your real trouble is not in the stomach at all. But in the intestinal tract where 80% of your food is digested. And when the lower part gets blocked food may fail to digest properly.

What you want for real relief is something to "unblock" your lower intestinal tract. Something to clean it out effectively—help Nature get back on her feet.

Get Carter's Pills right now. Take them as directed. They gently and effectively "unblock" your digestive tract. This permits all 5 of Nature's own digestive juices to mix better with your food.

You get genuine relief from indigestion so you can feel really good again.

Get Carter's Pills at any drugstore today. "Unblock" your intestinal tract for real relief from indigestion.

New Sulfa Drug Formula For Athlete's Foot

New Powder Preparation Highly Effective

At first sign of Athlete's Foot—itching, cracked or raw skin between toes or on the feet—use Dr. Scholl's Sulfa Solvex. It contains the miracle drug, Sulfathiazole. Quickly relieves intense itching, kills fungi on contact. Aids healing of red, raw, cracked skin between toes and on feet. Only 50¢ everywhere. Use exactly as directed.

MANY NEVER SUSPECT CAUSE OF BACKACHES

This Old Treatment Often
Brings Happy Relief

Many sufferers relieve nagging backache quickly, once they discover that the real cause of their trouble may be tired kidneys. The kidneys are Nature's chief way of taking the excess acids and waste out of the blood.

When disorder of kidney function permits poisonous matter to remain in your blood, it may cause nagging backache, rheumatic pains, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes, headaches and dizziness.

Don't wait! Ask your druggist for Doan's Pills, a stimulant diuretic, used successfully by millions for over 50 years. Doan's give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from your blood. Get Doan's Pills.

THEY KICKED US OFF OUR LAND

Continued from page 73

livelihood is threatened by deteriorating grasslands—is hard to teach.

When the son of a stockman brought home some of the lessons in range conservation that Colorado A & M was teaching him his father rose at a meeting of the West Divide Cattle Growers Association at Collbran, Colorado, to protest indignantly that the boy had come home with a "notebook full of radical ideas and figures on range management."

"We stockmen are free lancers, the lords of creation. We've done things as we pleased so long, it's hard to get out of old habits," a Grand County, Colorado, stockman told me.

In their drive to force the sale of 145,000,000 range-land acres to a closed shop of ranchers at 9 cents and up an acre, other stockmen insist that self-interest will prevent ranchers from harming their own land.

"True conservation comes from the individual, not from a government bureau," Bill Wright, president of the American National Livestock Association, said. "Self-interest will see that the land is taken care of."

This "self-interest" line had whiskers back in 1879, when cattlemen tried to stop Congress from establishing a cattle-inspection agency to protect the public against diseased meat. They argued that pleuropneumonia, then rampant among Texas steers, didn't exist except in the minds of horse doctors. And anyway, enlightened self-interest could do what bureaucrats could never hope to accomplish by regulation. (P.S. Congress disagreed, set up the Bureau of Animal Industry.)

Bill Wright runs some 9,000 cattle at Deeth, Nevada, and is a clean-cut, out-of-doors figure who talks with the straightforward, earnest air of a man laboring under a great wrong.

"Sure the lands are being depleted under the present setup (cheap grazing under Taylor Grazing Act permits)," he said. "But if a man owns land he'll preserve it. A man who'll spit in the gutter won't spit in his own living room."

Farmers Acted to Check Floods

Spit is an ugly word, but uglier still are some of the facts. So badly did ranchers misuse their own lands, their literal "living room," on the Wasatch Mountains in Davis County, Utah, that farmers in the valley bought out the lands and turned them over to government rehabilitation experts to prevent further devastating floods.

In Weber County, Utah, farmers have incorporated to buy out upland ranchers to protect their irrigation water supply, and many other towns, among them Salt Lake City, have taken similar steps to protect their watersheds. Should grazing lands now policed by the government be sold to private owners, dozens of towns would be forced to buy them back to protect their water supply, Governor Lee Knous of Colorado said. "It would be an impossible task," he added.

Many Western stockmen are conscientious about keeping up their ranges. Conditions on some private ranges in the northern Great Plains (eastern Montana, the Dakotas, northern Nebraska) are reportedly several hundred per cent better than they were in 1936 and, according to one government expert, are "probably better than at any time since the nineties."

In two outstanding instances, ranchers have pooled their resources to restore sick lands. In Fremont County, Idaho, wool-growers joined hands to put their grazing lands on a sustained-yield (restore what is grazed) basis. At Miles City, Montana, the Pumpkin-Mizpah (co-operative) As-

sociation of ranchers pooled 100,000 acres, took an inventory of forage resources and now administers the lands as a community range. And there are other heartening instances.

Under the soil-conservation program launched in 1935, farmers and ranchers can organize conservation districts and get government technicians to help preserve their land. Such districts have already been formed in three fourths of the total farm area. This, however, is only a beginning, since conservation performance varies widely from district to district.

But Americans are relatively late starters in applying conservation lessons that other nations learned long ago. When American soil experts raised the alarm several decades ago that our Western range lands were being destroyed by overgrazing, their warnings made a greater impression in Argentina than they did in America. Argentina sent for American experts to organize a rigorous system of government range control. Argentina wants no dust bowl on the Pampas.

But here in the U.S.A., we have much to do to save this richest of all continents for our children.

Most sorely needed is a unified government command in the fight against the forces of soil destruction. What we have now is a bureaucratic patchwork of seven major agencies and dozens of smaller units, often working at cross purposes. There are the U.S. Forest Service of the Department of Agriculture and the Bureau of Land Management of the Department of the Interior, both administering grazing lands. There are the Soil Conservation Service, the Bureau of Reclamation, the National Park Service, the Fish and Wildlife Service, and the Office of Indian Affairs.

In this setup, jurisdictional rows are a natural. Intent on intragovernment politics, the individual agencies sometimes are easy prey for minority pressure groups. For instance, so busy was Harold Ickes in trying to take over the Forest Service when he was Secretary of the Interior, that the big stockmen had no trouble in taking Ickes and his Grazing Service over via the advisory-board route.

Government reorganization looking toward a unified conservation command will take time. In the meanwhile, funds

slashed from conservation should be restored. We need to do no good to create controversies with one hand and taking money away with the other. The Taylor Grazing Act, which the Grazing Service to conserve lands, has been practically slashed in the Service's budget. The Service, one of the oldest of the conservation agencies, also taken a body blow with the passage of the Reclamation Act of \$11,800,000. Congress has huge sums for the Reclamation to cope with the effects of drought—floods. What about

An Unwise Congression

Eastern and Middle Western men have permitted the committees in the Senate to go by default to Westerners two things. It opens up a new territory to the toughest sort—that of their own constituents creates the illusion that one has an interest in public land concern the whole nation. It is not a Western interest, nor interest, nor a New Deal interest.

"We are tired of being bought by a bunch of Communist reagents. We don't want a slice of Russia," J. Elmer president of the American National Stock Association, protested.

A list of some of these "Communists" might surprise Presidents Calvin Coolidge and Hoover did the preliminary work within which led to the passage of the Taylor Grazing Act. President the groundwork for the National Service which was created in the Wilson Administration. Everybody knows. President Roosevelt was the "Karl Marx" whole conservation idea.

But some big stockmen have in a few years conservation decades to enact. On the public lands at least, they beat the grasslands into dust.

If, as the stockmen say, it can to conserve our forest lands, in a very few generations un-American to eat.

on hand to greet the couples as they enter, show them to their tables and generally to make everyone feel at home. Arthur Shaheen, eighteen, president of the senior class at Aquinas Institute, Rochester, explained some of the rules: "We don't allow stags or cutting in on the floor. Some of the fellows object to this but the way we figure it is that every- one will have a better time if he knows he can bring his best girl and not have to worry about any roughhouse stuff."

After each dance set the boys crowd around the self-service food and soft-drink bar, which is operated by a conces- sionaire. He keeps a crew of six jumping, stoking the furnaces that supply the energy for dancing. The kids consume prodigious quantities of French fries, popcorn and sandwiches. On an average night they drink 150 milk shakes, 60 bottles of chocolate milk, 480 bottles of soda and consume vast amounts of ice cream and sundaes.

Although plenty of free professional talent has been supplied, the mainstay of the entertainment is the kids themselves. Dave Lisk is in charge and he arranges for one high school a week to put on a show of specialty numbers. "The stuff is pretty amateurish," he says, "but they seem to like it."

All in all, the youth committee is getting excellent business experience running the night club. They are very anxious to get it on a paying basis as quickly as possible. The newspapers are under- writing the cost for the time being, but the committee is getting a percentage of the gross from the concessionaire. This is being set aside weekly and the commit- tee hopes the fund will be large enough within a year to provide the working capital needed.

What Rochester has done any other community in America can do. For a trifling cost, as such things go, teen-age youngsters can be taken off street corners and out of undesirable surroundings where they are now forced to go for en- tertainment.

THE TRAIL'S BLAZED, MR. TRUMAN

IF THE so-called Truman Doctrine is to be more than a collection of big, bold words, it cannot stop at merely wishful preventive measures in Greece and Turkey. The whole of Europe must be taken into consideration, not piecemeal, but as a *unit* no less compact and economically integrated than the United States. Only through some program of federation that will permit collective effort, and do away with trade barriers, blocs, spheres of influence and competitive armament, can the Continent be restored to health. Secretary Marshall knows this and says it clearly and honestly.

The one alternative is progressive pauperism and a steady increase in the mean, narrow nationalism that makes for hate and war.

The criminal stupidity of present-day Europe may be measured by imagining the existence of a similar situation on this side of the Atlantic. What if each of our forty-eight states maintained its own army and navy, its own currency, its own foreign policy, and had frontier regulations that barred the free movement of people and goods? What if this or that state claimed authority over the Mississippi, the Ohio or any other river that flowed along its borders? And yet New York, Pennsylvania and California, to mention only three, are

larger, richer and infinitely more self-contained than many European states.

The idea is not a new one; European union has long been the goal of the more unselfish Continental statesmen. The movement had great impetus after the first World War, but it was shattered by the opposition of Britain and France who figured mistakenly that a weak, disunited Europe would be a peaceful Europe. Had federation been achieved, 70,000,000 Germans could not possibly have imposed their unilateral will on 270,000,000 non-Germanic Europeans, and the German state would have taken its proper place in the Continental order as a partner, not a master.

The Charter of the United Nations recognizes the principle of nationalism. The Western Hemisphere and the British Commonwealth are organized in accordance with that recognition. With the creation of a United States of Europe, what might well follow would be a United States of Russia and a United States of Asia, all welded into a harmonious whole through the United Nations.

Under the eloquence of Winston Churchill, the Pan-European movement was near to being galvanized into new life. A few months ago the far-visioned Englishman said: "What is Europe now? It is a rubble heap, a charnel house, a

breeding ground of pestilence and ha nationalistic feuds and modern ideologies distract and infuriate the unhappy populations. Evil teachers urge the old scores with mathematical precision guides point to unsparing retribution way to prosperity. . . . Without a United States of Europe there is no prospect of world government. It is an urgent and indispensable step toward realization of that ideal."

Following Mr. Churchill, Prime Minister Churchill reiterated his statement that "Europe must or perish." In France, Blum, Herriot, and other leaders have taken strong position of the plan, and Count Richard C. Kalergi, head of the Pan-European movement, has secured favorable majorities in the parliaments of France, Italy, the Netherlands, Belgium, Ireland, Switzerland, Norway and Sweden.

President Truman, therefore, is not blazing new trails. A beaten road stretches before him. Not to take it means a continuance of floundering with its ill effect on public opinion. Taking it he faces forward to three great tasks: the initiation of a *real* American foreign policy, a curb on Russia's expansion, and an end to the depression in America's economy.

BURLINGAME, CALIF.

More miles with
B.F. Goodrich
FIRST IN RUBBER

Now at less than prewar prices—the tire that outwears prewar tires

Each Silvertowns in all popular sizes
than before the war. And yet they
ear tires. For several months, issues
one have shown, on this same page,
Car owners who have kept actual
mileages. Others are shown above.

Typical example No. 74: 42,375 miles in taxi
A. Howell, manager of the City Cab
Co., Fla., writes:

Thirty cabs in operation and several sets
each Silvertowns in service. To date we
single tire failure. The mileage record
is 42,375 miles, and we believe this set
is 50,000 before recapping. No other

tire in our experience has given us better service."

*Typical example No. 69: 23,304 miles in hos-
pital service—tires still look new!* Orrie Ewart, of
Port Huron, Mich., is employed by St. Clair County,
and his duties consist of transporting hospital pa-
tients. He says: "B. F. Goodrich Silvertowns don't
skid on wet roads like others. I've driven the set you
see in the picture 23,304 miles since last December,
and they appear as if they were newly purchased."

*Typical example No. 57: Best tires she ever
had in thirty-three years!* Says Mrs. Eugene Guest
of Lithonia, Georgia: "I purchased three B. F.
Goodrich tires last year. When these tires were put
on, the speedometer reading was 21,246. It is now

51,636, and there is a lot of good wear left in them.
They are the best tires I have ever had, and I have
been driving thirty-three years."

Not only do these tires cost less than before the
war, but your B. F. Goodrich dealer will give you
a good allowance on your old tires if they're still
good enough to be used or recapped. *The B. F.
Goodrich Company, Akron, Ohio.*

oh-oh, Dry Scalp!

"... IF HE PLAYED his cards right, I'd be more than interested. But that hair! Looks uncombed, dried out, and—sure enough, loose dandruff, too. He's got Dry Scalp, all right. I'd be a dummy not to tell him about 'Vaseline' Hair Tonic!"

*Hair looks better...
scalp feels better...
when you check Dry Scalp*

SAME MAN . . . BUT what a difference! 'Vaseline' Hair Tonic can do as much for you. Just use a few drops every day. Your scalp feels better . . . your hair looks better . . . stays neatly in place all day long. 'Vaseline' Hair Tonic contains no alcohol or other drying ingredients . . . is fine with massage before every shampoo. It gives double care . . . to both scalp and hair . . . and it's more economical than other hair tonics, too.

Vaseline HAIR TONIC

Used by more men today than any other hair tonic

KEEP UP WITH THE WORLD

BY FRELING FOSTER

America's oldest legend, still widely believed, is that the Pilgrims aboard the Mayflower made their first landing in this country on December 21, 1620, on a rock in what is now Plymouth, Massachusetts. Actually, they first came ashore on Cape Cod the previous November 11th. The rock story is not substantiated by any historical records and did not start until 121 years later.

A new system of odor analysis enables chemists to give any odor a fundamental formula number as identifying as a personal name. The testing kit has 32 vials, four rows of the basic odors—(A) fragrant, (B) acid, (C) burnt and (D) caprylic—in eight graduated strengths. Thus, an odor having the number 8-7-5-5 is a mixture of the 8th vial in Row A, the 7th in Row B and the 5th in Rows C and D.

Since first produced in 1919, Aaron Slick From Punkin Crick has been the most popular play among America's small-town dramatic clubs. Although few professional performers have ever heard of this amateur comedy, it has been staged in about 25,000 communities and seen by some 10,000,000 people.

The possible severity of hiccups is shown by a recent case in which an attack caused the death of a man in four days and twelve hours. In another case, a woman has had three attacks since 1941, each of which, after a duration of six weeks, had to be stopped by a phrenic nerve operation in order to save her life.

A comparison of the suicides committed in this country during 1921 and 1946 shows two important changes in the relative frequency of the methods employed. Of every 1,000 men and 1,000 women, the number who took poison decreased from 144 to 70 among males and from 325 to 204 among females, while the number who chose hanging increased from 171 to 276 among males and from 94 to 246 among females.

One of the incredible customs practiced by some of the Hla-speoples of central Africa is which obligates a woman, if to become the wife of the husband of a deceased of even when it means that she leave her own husband and

For more than a year, a pany allowed to operate in Russian zone has devoted weekly newsreel to picture scriptions of war-lost child 100 of the 350 shown so been recognized and claimatives.

Blood spots left at the crime are sometimes difficult to cover when they have fallen on paper or colored textiles. In such cases, the blood may so dye in them that the stains are the same color and, therefore, ally invisible.

Among the nine planets the only one that rotates from west, and the only one whose discovery in 1781 is recorded as having been known since the beginning of history.

When losing a daughter in marriage, native families not only require compensation for the loss of her services, but also demand a service payment from the bride for each child she produces.

The 88 chief ruling priests, or those who rate salaries, more guns, use a total of 100 titles, one of the favorites by many of them being King. Other modest titles are Son of the Earth, Noble, Wisest Man of the Land and Greatest Conqueror of the Land.

JOHNNY ON THE SPOT

The Farmer
Finds Out Why

PHILIP MORRIS

is so much better
to smoke!

The Farmer thought he had Johnny on the Spot. "Why," he asked, "is PHILIP MORRIS so much better to smoke?"

"Because PHILIP MORRIS is the ONLY leading cigarette scientifically proved far less irritating to the nose and throat," Johnny replied. "Less irritation means more enjoyment. That's why

the PHILIP MORRIS smoker really gets what other smokers only hope to get . . . better taste, finer flavor, perfect smoking pleasure!"

Yes, it's true . . . if every smoker knew what PHILIP MORRIS smokers know—they'd all change to PHILIP MORRIS, America's finest cigarette.

How to Purr-r-r LIKE A KITTEN Come Fall

You'll be mighty happy this coming fall if you buy your South Wind Car Heater this summer. You'll purr like a satisfied kitten, knowing you're ready for cold weather. Remember—last winter 400,000 motorists wanted South Winds and couldn't get them. This winter it looks like demand will again exceed supply. So, be smart! Get your South Wind, now!

Here's why:

- Right now, South Winds are available with or without defroster. Mechanics are also available to install them.
- You need not wait until you get your new car. Install a South Wind in your present car. It's easy to transfer later.
- A South Wind is ideal to take the chill off nippy summer and fall night drives. It's always connected—ready for use.

Hot Heat in 90 Seconds makes South Wind the World's Largest Selling Car Heater!

CREATES ITS OWN HEAT...
NO WAIT FOR ENGINE WARM-UP
... FITS ANY CAR
ONLY \$29.75

Plus small installation charge

2 MILLION USERS SAY... "90-Second Heat! That's up to 7 times as fast as ordinary heaters! It means quick comfort even on shortest trips—to work, to store, school, movies!"

NO OTHER CAR HEATER can use the exclusive South Wind "sealed flame" principle. Burns fuel from the carburetor in a patented, sealed metal chamber. Fumes go out the exhaust. Its safety has won the seal of Underwriters' Laboratories. Easy to install...no hose to cut...no extra thermostats to buy. Get your South Wind now! On sale at auto supply stores, car dealers, garages and service stations coast to coast. SOUTH WIND DIVISION, STEWART-WARNER CORP., INDIANAPOLIS 7, INDIANA.

Its safety has won for it the seal of the Underwriters' Laboratories. Proved on millions of cars and trucks!

South Wind

90-SECOND CAR HEATER

COMING! The New South Wind "Custombuilt"—a Luxury Heating and Ventilating System for Motor Cars and Motor Transports—\$99.50 Plus Installation.

THE WEEK'S WORK

Miss St. Petersburg,
Miss Florida—Miss
America? Eula Ann
(Mickey) McGehee

MR. DALE CLARK—who is really Ronal Kayser, of La Jolla, California—thinks the important things in a writer's life are those that never happen. "So the fellow is inspired to make them happen on paper," he claims.

It is hard to believe Mr. Dale's life is as prosaic as he insists. Born in a small Middle Western town in '05, he was a spindly nonbaseball kid, and soon turned to the printed page. Then he turned to the farm, to earn the money to turn to the city. In time he dabbled in teaching, lumber-yarding, reporting, special investigating, house-to-house peddling, with a side line of photography, gun lore, hunting, the Civil War, and the assassination of Lincoln.

"I seem to hang onto anything just long enough to dig a fiction piece from its background," he admits.

Mr. Clark illustrates with *The Long, Hard Grind*, p. 74: "I'm strictly a dub player, and also an official of a club that sponsors an annual West Coast tennis tournament. By neglecting my official duties entirely, I found enough in my chitchat with the various personalities of the game to root a story."

Mr. Clark believes an author's sufferings are in direct proportion to the noise his typewriter isn't making. Mr. Clark's machine, equipped with shock absorbers and blood catchers, is hardly rust-covered. Many short and long bloodletters, and a new novel, *The Red Rods*, have oozed from it and curdled human blood by the bucket.

To prove Mr. Clark's life is not entirely vicarious, a couple of years ago the San Diego, California, homicide bureau credited him with investigating and solving a real-life murder case: *The Canyon Skeleton Case*, as the papers named it. "It is perhaps something of a novelty for a detective writer to crack one in which he didn't make up the clues," he opines.

FRESH back from Hollywood trips, both the Messrs. Kyle Crichton (*The Coast Demands Long Pants*, p. 16) and Corey Ford report a serious threat to Mr. Samuel Goldwyn's title as Chief of Aberrations. The challenger is Bunny McLeod, attractive wife of Director Norman McLeod.

The best Mr. Goldwyn has been able to do recently was his gracious presentation of \$10,000 to Danny Kaye to start a bird's nest for Danny, Jr.; and his racing out on his tennis court crying: "Let's throw up to see who plays who!"

These malaprops pale in the daz-

zling confusion of Mrs. M. bunnyisms. "I may be wroth cried not long ago, 'but I'm from it!'" At a prize fight she out—"that fighter there—tha looking fellow!"—then when knocked out, she mourned: "T ble with him is he was muscle. While present at what she desc a "Wonderful party! Every the room was there!" during freshments, she was heard "This is the best salad I ever a whole mouth!"

It was only natural for M ton to receive a post card from cently, saying: "Miss you as if you were here!"

MMURRAY HOYT (No Small, p. 66) hung around home town of Worcester, Mass., from 1904 to 1922, the to give the place a chance and prosper. After graduation Middlebury in '29, he married coached basketball and basketball Waterville, New York.

"That took me nicely into pression," he recalls. "With logic, my wife and I gave paying jobs for most uncertain careers. We went in for a great suffering. In place of apartment, we had to accept on a Gulf beach of Florida and on Lake Champlain in had to be satisfied with swimming blue waters, sunning, fishing and golf—instead of night of

Recalling everyone has to troubles, Hoyt bravely pretends as he lead it was okay, and up from juveniles, through the fortune-founding magazine Hoyts have built a person since on Lake Champlain, Middlebury as a permanent show to show it pays to suffer.

and so-o-o to bed

There's a spot in the hills where the big bass bite and the air is cool with pine.

Get in a new Nash "600" and you'll be there tonight. Just snuggle down in the big soft seat and watch the road start flying backwards.

Look—!

The curves straighten out and the bumps un-wrinkle up ahead. The hills lie down and the huffy day turns sparkling fresh.

Look—your speedometer shows you're getting an incredible 25 to 30 miles on a gallon at moderate highway speed!

What's happened anyway?

Is the dust and the noise? The swaying wheel tugging?

What's happened—since you last bought an

automobile. And it's all happened here in the Nash "600."

This car is built a new way. *Welded* (not bolted together)—a single unit body and frame, free of dead weight and noise-making joints.

New, easier steering is here . . . and coil springing on all four wheels . . . new sound-proofing . . . and the famous Nash Weather-Eye automatic "Conditioned Air" System! And a Nash can even sleep you tonight with Convertible Bed equipment. Just yawn . . . and so-o to bed!

Is it any wonder the swing today is to Nash?

Smart people *like* this new kind of car—and the new kind of solid, friendly dealer who sells it. See him today about the brilliant new Nash "600" and the Nash Ambassador.

You'll be ahead

Home Town Folks

Wherever there is a Bell telephone office, you will find it operated and managed mostly by home town people.

For the Bell System is made up of many hundreds of local units, each serving its own community. So the telephone company isn't something big and far away but close to your home and your interests.

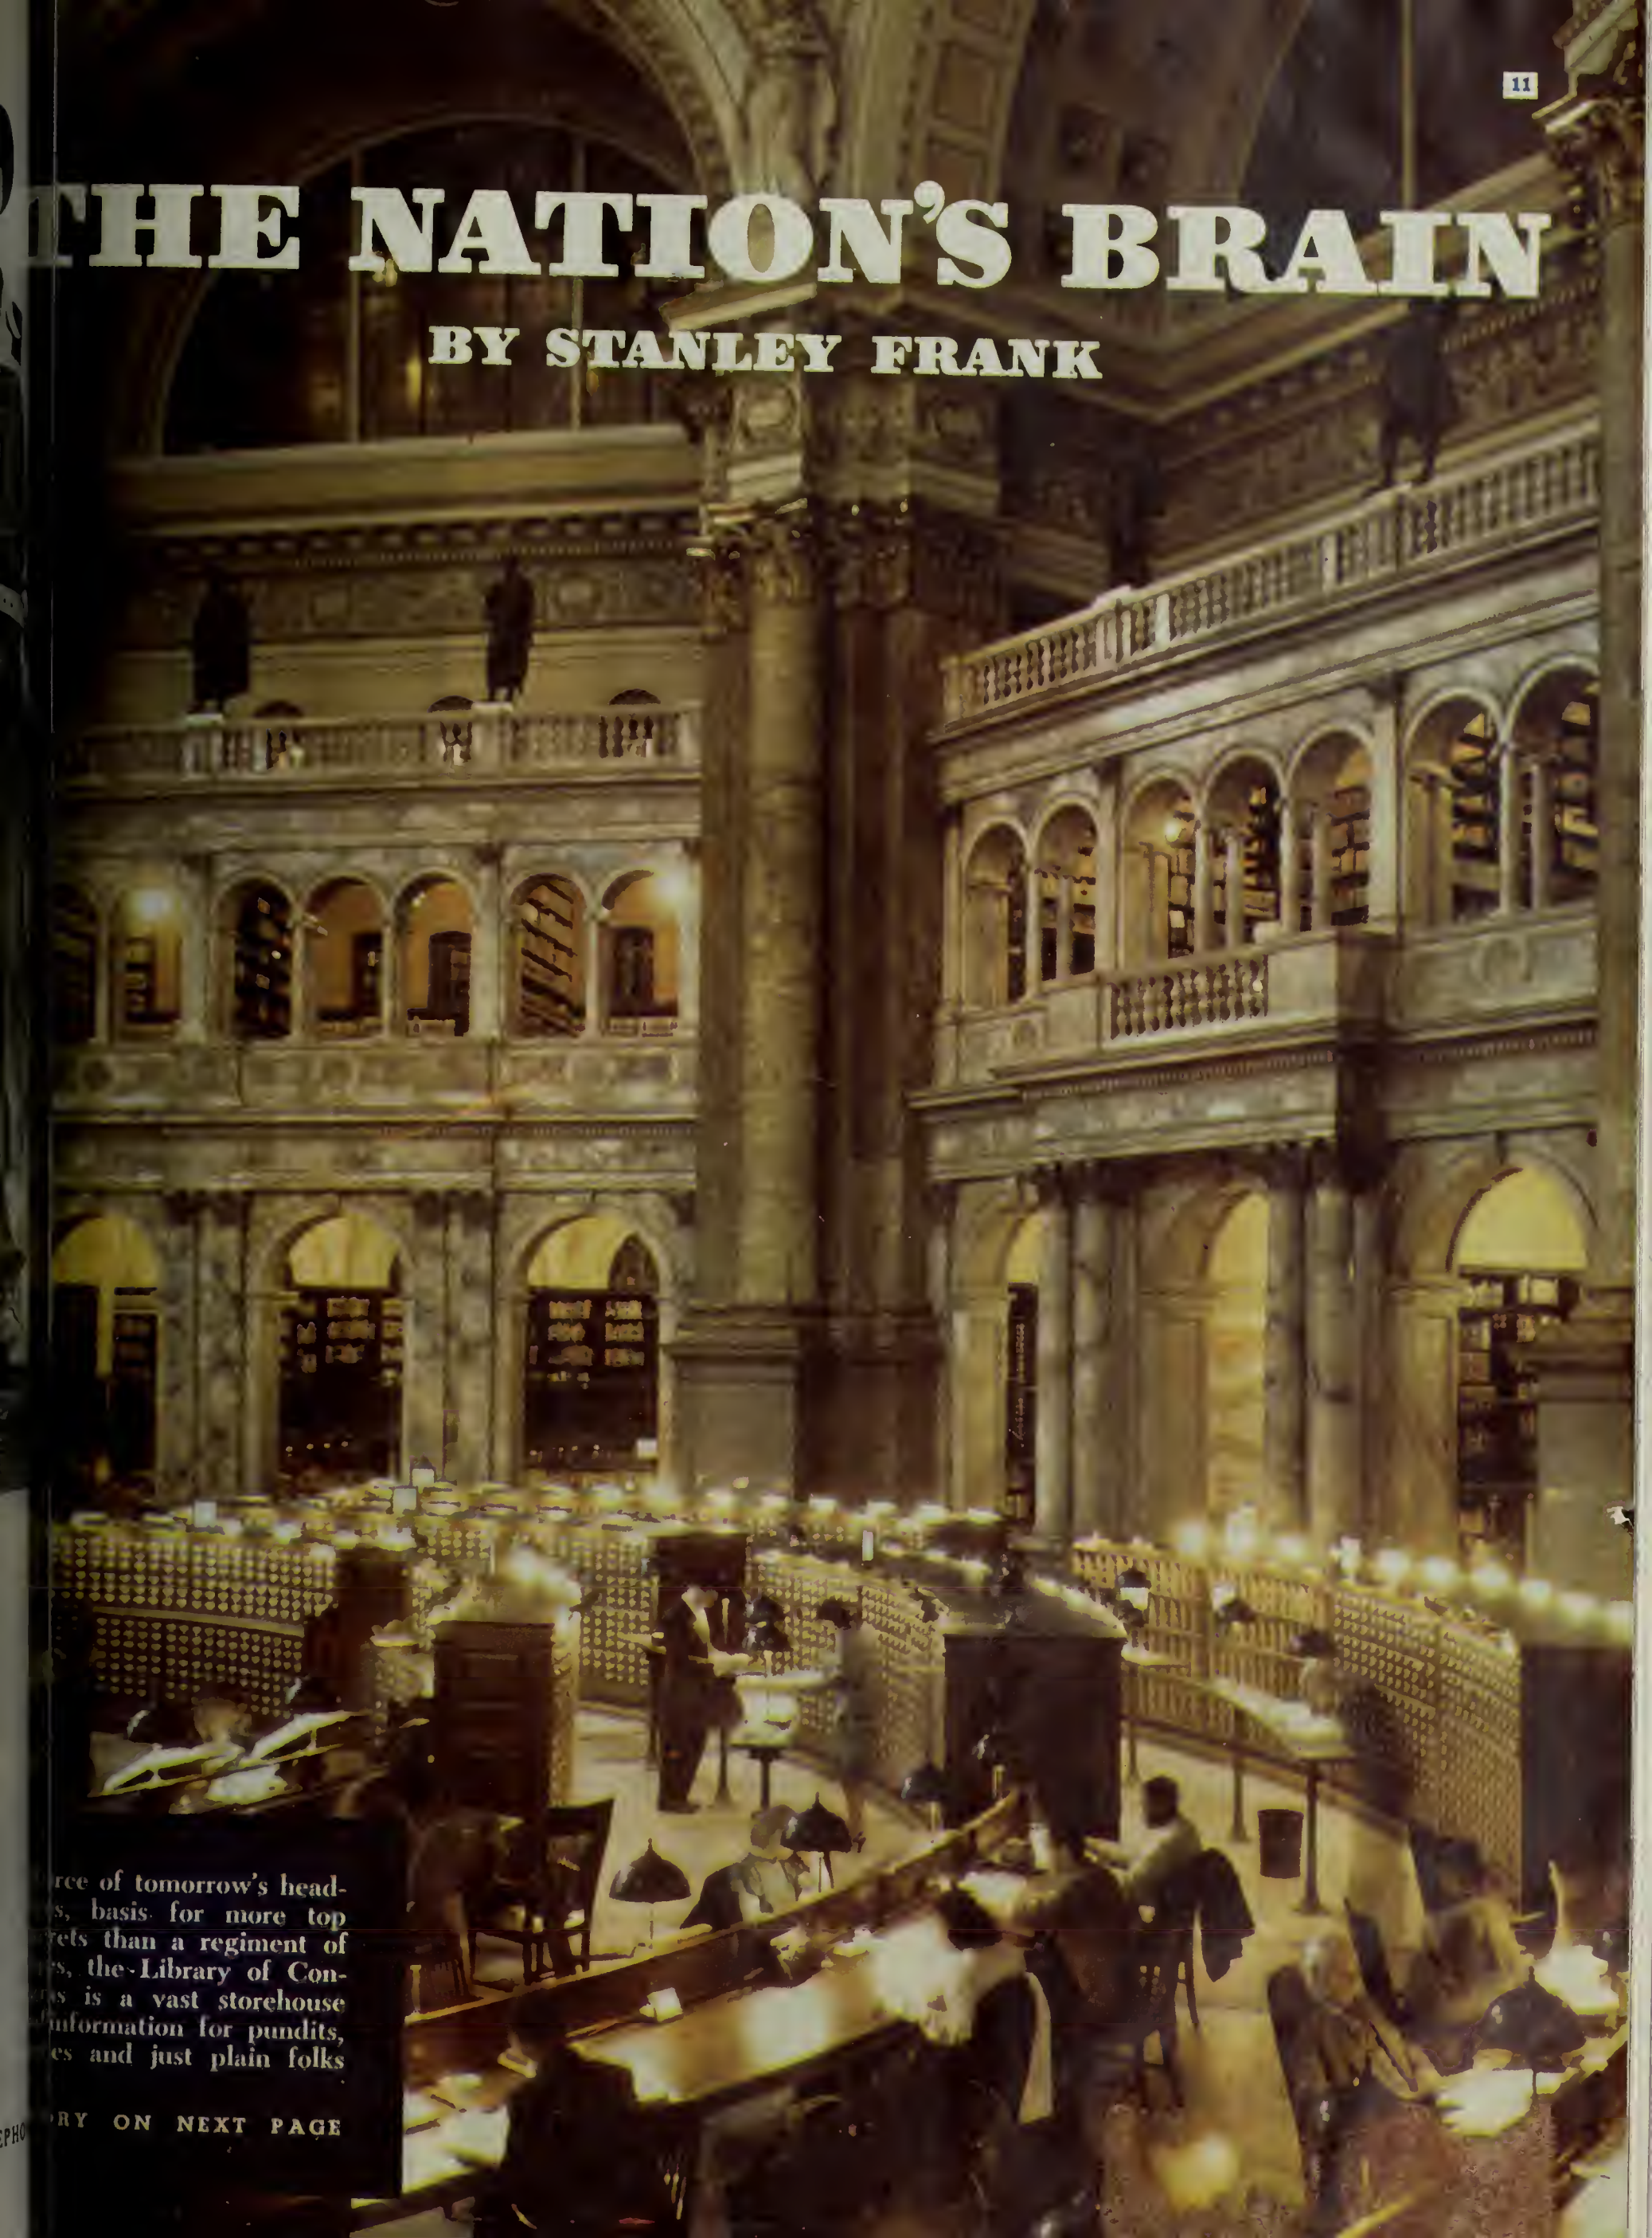

This means compact, efficient operation and it also helps to keep a friendliness and a neighborliness in the conduct of the telephone business.

The Bell telephone people in your community aim to be good citizens in all things, in addition to giving you good and economical telephone service.

THE NATION'S BRAIN

BY STANLEY FRANK

A large, ornate library interior with multiple levels of arched bookshelves and study tables. The architecture is classical, with high ceilings and large columns. The lower level is filled with study tables and bookshelves, while the upper levels are also filled with bookshelves. The lighting is warm and focused on the study areas.

orce of tomorrow's head-
s, basis for more top
rets than a regiment of
s, the Library of Con-
s is a vast storehouse
information for pundits,
es and just plain folks

RY ON NEXT PAGE

Chief Bear-on-the-Water, of North Dakota, records a Mandan tribal song for Dr. Duncan Emrich, head of the Library's Archive of American Folk Songs. Files hold over 30,000 blues, ballads, spirituals, etc.

"I feel I live here," says Pearl Kingham doing research on history of Scotland at the Library.

THE sheer weight of erudition turned loose upon the public daily from Washington is calculated to make the earnest citizen feel like a dreadful dope. Country lawyers whose contributions to the common good were once confined to diatribes against sin and the rascals of the opposition are elected to Congress and suddenly sound off with easy authority on cartels, atomic fission and the social implications of proletarian art.

Overeducated mental cases, unsuspected of having a thought in their addled heads, break out in a rash of scholarship that actually adds to the world's wisdom. Such performances make brooders wonder whether they are descended from a long line of lightweights. But despair not. You,

too, can be omniscient as all get out if you use the free, rich resources of the Library of Congress, the nation's brain and the most fascinating building in Washington.

Don't go away. This Library is not a bleak, austere monument to musty books. It is a lively squirrel cage that exerts a profound influence on next month's news. A prize crop of crackpot customers gives it a whimsical air, which is nurtured by a stream of crazy questions only Americans, in their infinite ingenuity, can dream up. The Rare Books Division counts among its treasures not only the Gutenberg Bible but also a complete collection of Horatio Alger and dime novels. The latest Betty Grable movie is an acquisition considered as significant culturally as a first-edition Beowulf, and

even low, low-down blues are recorded and kept on file.

More war secrets were discovered in the Library than a regiment of intrepid spies ever uncovered in the field. Here, too, baffling mysteries await solution. There is, for instance, the strange case of Gennadius Yudin and his incredible library. When Lenin was exiled to Siberia by the Czar in the 1890s, he wrote his epic, *The Development of Capitalism in Russia*, at Krasnoyarsk, an isolated village. Lenin's only reference sources were the books owned by Yudin, an obscure merchant. Nobody yet knows how Yudin, who was neither wealthy nor a man of letters, managed to acquire the 80,000 volumes the Library bought in 1907 as the basis for its extensive Slavic collection.

Before getting hopelessly lost among 26,636,804 items, 400,000 bookshelves and 15,000,000 cards, it would be well to explore the Library's origin and chief functions. Founded in 1800 to gather material for Congress, the library went along in pedestrian fashion more than a century, satisfied as a repository for books and documents. Little effort was made to catalogue or interpret the holdings.

All that was changed, suddenly and dramatically, in 1914, when the library became a forceful, busy scene adjunct of the government. The Legislative Reference Service was established to keep Congress abreast of the score in domestic and international affairs, which were

The Gutenberg Bible is always guarded by a policeman. Other rarities include a complete set of Horatio Alger novels. Nucleus of the present Library was Thomas Jefferson's collection of six thousand volumes

Leslie Dunlap, Assistant Chief of General Reference in the Bibliography Division, answers questions.

that no man could possibly touch with them. In effect, was saddled with Congress' work.

right idea—the inspiration of the "Old Bob" La Follette—made magically the ponderous of government. The L.R.S. is indispensable to senators and natives that they forgot particulars last year and joined to the core of the La Follette-Reorganization Bill, called in observers on Capitol Hill an important piece of legislation during that session.

its of government had been going for years that Congress was down by the archaic, uncommittee system. The Reorganization Bill reduced the 81 members to 15 in the Senate and the House. This was done by giving more responsibility and work to the expanded L.R.S., the man's best friend.

Senator in a Quandary

The Senator Klaxon is up to his hips in work as a hypomember of the Senate Judiciary Committee, when he gets a hurry for some fence-mending in his policy. A campaign manager calls a little personal-appearance that calls for the senator to give a speech at the opening of a factory in the morning, a four-hour-long discourse on national affairs at a chamber of commerce luncheon and an Onward-with-Knowledge address at a university in the evening, the day after tomorrow.

The senator's first impulse is to say "No" to it and take to the hills. He has not looked at a book since he's been in Washington. The trip home from his committee for two days and while his car has earned a zillion federal and state dollars, it will be passed. What does he know about new trends in canning? And as to international relations, the Russians holler blue murder. It happens to make a crack that he is not sensitive. May even be an international incident.

A great white light hits him. He has a cry of relief, he lurches forward and calls L.R.S. He explains the problem. He turns away, a furrowed brow and mixes himself up.

The senator boards his plane the following evening, three complete typed notes—one for each day—are delivered to him. From now on, the senator will be able to make comic tributes to the Good Neighbor Policy, the World Crisis and the Challenge to Education.

He is happy, the senator's car is ready and when he returns to his office he is caught up with his work. The abstracts of new federal laws L.R.S. periodically sends to all congressmen and the Supreme Court. An obscure reference L.R.S., having completed its assignment for the senator, is the next job.

The L.R.S. reflects more accurately the anxiety of our laws and the abundance of scholarship going into the annual calls Congress makes on L.R.S. In 1925 there were 2,000 requests for information and a decade later the count was 2,000, and last year there were more than 20,000. Senator Klaxon's anguished scream for help that could be tossed off by

a grossly underpaid staff worker. The government's study on cartels, a field demanding exhaustive knowledge, was done by a girl staffer earning the munificent sum of \$2,000 a year.

The best legal minds in the government, considering new legislation, get an analysis of the law from L.R.S., which investigates its constitutionality and ultimate effect. It may be added, parenthetically, that the opinion handed down is seldom disputed by the courts or the public. When the Reorganization Bill was submitted for appraisal, four researchers examined hundreds of clauses in 48 hours and came up with every objection—and a lot more—subsequently offered on the floor of Congress.

A typical long-range study made recently by L.R.S. was the effect of the atomic bomb on navies, with Professor Bernard Brodie of Yale, an outstanding authority on armaments, as a special consultant.

If the White House should call tomorrow asking for a comprehensive survey of the Palestinian question, L.R.S. within 24 hours would have on the President's desk a digest of Jewish and Arab historical claims to the Holy Land, going back to the Old Testament and the Koran. It would discuss the political aspects of the problem, the economic and cultural benefits brought by the Jews, the psychological impact of DP (Displaced Persons) camps and a confidential file on the Grand Mufti, the traffic in illegal immigration and the present military situation. It would be material for an authentic book.

Secrets Don't Leak Out

"We know what the news will be a month ahead by the nature of the requests we get from Congress and other agencies," Dr. Ernest S. Griffith, director of the Service, says. "A good many politicians, lobbyists and reporters would give their eyeteeth to get a line on what we're working on, but there never has been a leak in this department."

Some clients, like Senator Forrest C. Donnell of Missouri, prefer to do all their own research, but the majority of the People's Choices rarely see the special reading rooms reserved for their use, depending on the staff to do all their digging. It is just as well, perhaps, that the august congressmen do not appear in person. There might be some embarrassing cases of mistaken identity. For every library draws droves of odd characters laboring under the delusion that they are unappreciated geniuses, and since the Library of Congress is the largest in the world, it is a haven for queer ducks beyond compare.

A familiar figure to employees is an old man, well past 80, who is conspicuous for a flowing white beard, a gaudy bandanna around his head, pockets crammed with junk and a bulging knapsack. He comes every night and fills out interminable reference slips for a bibliography. The slips are then stuffed into the knapsack. The bibliography never will be published, of course. Then there is the Negro who claims direct descent from Hugh Capet and studies the genealogy of the French royal family for hours on end, against the day he will succeed to the throne.

The staff quickly learns how to handle readers who obviously are demented. There was a young man who appeared every day without fail and handed Lucian Herndon, an attendant

(Continued on page 79)

Most visitors are engaged in serious research, like Mr. and Mrs. Richard Yamamoto, of Hawaii. He is a premedical student, while she is studying English history. They are shown here in the Main Reading Room. Since anyone over 16 may use the Library, however, it has its share of crackpots and unsung geniuses

Many congressmen do their own research. Senator Carl Hayden of Arizona, for instance, has used the Library ever since his first term in 1912. Other solons prefer to let the Legislative Reference Service do the digging. This branch of the Library provides anything from notes for a speech to the history of cartels

PEACE AND QUIET

BY FRANK O'ROURKE

Rogers didn't know what he was getting into when he tried to buy the Svenson place—and he didn't know what was getting into him

JOE ROGERS dragged himself from bed at high noon, sloshed indolently through his ablutions, and after cooking and eating a lumberjack breakfast in the green-and-white-tiled kitchen and doing setting-up exercises consisting of scratching his ribs, he strode from his newly acquired cabin to the shore of Lake Lutfisk, prepared for sun, swim and swooning with delight over the magnificent peace and quiet of this Minnesota lake region. He gave the lake and surrounding woods a sweeping, panoramic look and thought warmly of yesterday's conversation with the real-estate agent in Brainerd.

"Mr. Rogers," the agent had said, "welcome to the lake region."

"Mr. Nordstrum," Joe said, "how come you haven't bought that last piece of property for me?"

"Now don't worry," the agent said placatingly. "It belongs to the Svenson family and I haven't had time to approach them yet. But I fixed that. We prepared the Sorenson cabin for your own use, and it's right next to Svensons'. You can get acquainted with them and buy it yourself."

"Everything else taken care of?" Rogers asked.

"Yes, sir," the agent said. "We have rented all the other cabins for the summer, up to September first."

"Right," Rogers said. "Now look, I want peace and quiet this summer. Nobody knows about this deal, do they?"

"Not a soul," the agent said. "Your lawyers bought all the land, as planned, without suspicion."

"Quiet up there?" Rogers asked.

"Quiet!" the agent said eloquently. "You'll go mad with quiet. You'll drive into Waniss just to hear people talk."

"Okay," Rogers said. "I'll get settled and close the Svenson deal. Then I don't want to be disturbed for the summer. Understand?"

"Perfectly," the agent said, regarding Rogers with admiration. "If you'll pardon me for saying so, Mr. Rogers, you are certainly a young man to be so brilliant in business and—to put it bluntly—have so much money. How old are you?"

"Twenty-seven," Rogers said. "To put it bluntly, I'm not brilliant. My father left me the dough. I'm trying to spend it before I get married and have a brat and have to leave it to him to waste. Our family blood is getting thin."

"Oh," the agent said. "I take it you don't like marriage. Why, I've been married—"

"You take it! Let's head north!" . . .

Rogers grinned happily at Lake Lutfisk and the land around it. It was all his but one hundred feet and one cabin. His plan was nearly completed and needed only a few days' acquaintance with this Svenson family, a little talk, the mention of hard cash, and then he would buy the Svenson land and own *all* the land around the lake. Then he would build his de luxe resort on the north side, and his twin camps for underprivileged boys and girls on the south side. Everything was working out beautifully. Rogers flexed his arm muscles and grinned at the blue water.

Then came the shots.

Rogers made a clean dive behind the nearest pine tree, and sat up owlishly a moment later. I've got no enemies, he thought. Nobody's potting at me.

He got up and peeked around the tree. He heard another burst of five or six shots, evenly spaced. A jay flew past, swearing fluently, and a squirrel ran up a near-by tree and sat on a limb, washing its front paws and cussing with the rapidity of a machine gun. Rogers lost his smile and most of his good humor. He said, "Peace and quiet!" and headed toward the sound of the gun.

He walked about fifty feet through the trees and saw the cabin loom up; and behind the cabin in a clearing he saw a girl aiming a long-barreled .22 revolver at a target. She was just reloading and facing the target—a cutout silhouette of a jackass propped against the overturned bole of a sawed tree.

She raised the revolver deliberately, assumed an excellent target position, squinted professionally at the silhouette, and squeezed off another string. Rogers was losing his temper but he watched the bullet holes appear in a nice shot group on the nether hip region of the jackass. Then he thought of his peace and quiet, and came from the pines and stopped three feet behind the girl.

"Target practice?"

She whirled, holding the revolver up, and glared at him. Rogers reached out and gently pushed the muzzle toward the North Pole. "Please, some other way," he said. "Target practice?"

She looked at Rogers slowly. She said politely, "Yes, target practice. Why?"

"I'm just north of you," Rogers said, equally polite. "I heard you shooting."

"Good ears," she said tersely. "Glad you dropped over to tell me. Come again sometime—next year."

She turned away. Exercising great self-control, Rogers said, through his teeth, "I heard you shooting. It makes a loud noise, your shooting. I'm up here for a rest. Peace and quiet, you know. Do you always shoot in the morning?"

She turned and faced Rogers again. She shook her head. "Yes, it does make a loud noise. I usually shoot much earlier—about seven."

Rogers frowned. She frowned right back. Rogers said, "I'm sleeping late, until noon. Couldn't you shoot in the afternoon?"

"I could," she said. "But I won't."

"You won't," Rogers said. "You couldn't shoot in the morning on some other lake, could you? Say, about a hundred miles from here?"

"No," she said. "I couldn't, say, shoot on another lake. Do you own this lake?"

Rogers said, "Well—no."

"Or this land and cabin?"

"No," Rogers said. "I wish I did. Then I'd—"

She was glaring at him now. She was a small girl with chestnut-colored hair that was tangled all over her head. She was stocky and square-shouldered—but that could easily be the camouflage effect of her coveralls which were five sizes too big. She was barefoot and her toenails were painted green; her feet were very dirty. She glared and then lost her politeness and said loudly: "Then you would do what?"

Rogers said, equally loud, "I would kick you fifty feet per jump. I would kick you clean to hell-and-gone off this lake."

"Why don't you just kick yourself the devil

right off my land?" she said. "A north where you came from, and s there about fifty years. I'm shooting at seven. Maybe earlier. What to that?"

"I say," Rogers said bitterly, "bought a lot of things. I wish I'd this stinking lake and all the stin quiet they don't have on it, in it."

"Get going," she said ominously.

"You wouldn't dare—"

She raised the revolver, consid the cold appraisal of a meat hun

"Well," she said. "Well."

"I'll go," Rogers said. "But I'll

THE COAST DEMANDS LONG PANTS

BY KYLE CRICHTON

Everybody agrees that baseball on the Coast is too big for its minor pants. But a lively debate rages on how to fit it into the major-league

At a game in Wrigley Field, between Los Angeles and Sacramento, baseball fan Eddie Bracken gives a bit of advice to Broadway Bill Schuster of the

WHEN Mr. Clarence (Pants) Rowland, president of the Pacific Coast Baseball League, first demanded that his circuit become a third major league, it was held in some quarters that Mr. Rowland symbolized a type who would insist that Terre Haute was necessarily larger than Indianapolis because it lay farther to the west.

It was felt, in short, that California had gone to Mr. Rowland's head. Few would deny that Los Angeles and San Francisco were amply large enough to be considered major-league cities but there was great doubt that such excellent communities as San Diego and Sacramento were capable of upholding such a reputation. Not to mention Portland, Seattle, Oakland and Hollywood.

But the first hoots of derision soon gave way to a conviction that Mr. Rowland might very well get his wish. The National Association of Minor Leagues gave its blessing; the directors of the Pacific Coast teams ranged themselves solidly behind the good man from Dubuque, and a committee of the majors was appointed to ponder the question. Just when it seemed the honeymoon was to be inaugurated with orange blossoms and organized shouts of delight, a shower of rocks, old shoes and insults fell on M. Rowland right in his own back yard.

"Thank you for this great load of

nothing," yowled indignant voices from Los Angeles. "It is decent of you to place us permanently in the company of Long Beach, Tacoma and Palo Alto but we should much prefer to do mortal combat with somebody our own size such as New York, Chicago, Philadelphia and Boston. We want to be either in the National or the American League and to hell with our dear friends in Portland and Seattle."

For years back there have been rumors that various major-league clubs were going to move to Los Angeles or San Francisco. Donald Barnes, when owner of the St. Louis Browns, stated publicly that it was his intention to shift his franchise to Los Angeles just as soon as the war was over and transportation by plane was feasible. Every month or two it is reported that Sam Breadon has intentions either of disposing of his St. Louis Cardinals to West Coast interests or of sneaking the club away under cover of night with the purpose of landing on the western shore himself.

That would be swell for St. Louis but if you took either L.A. or San Francisco out of the Coast League you might as well kick it into the Pacific Ocean; it would be killed.

It has been stated that when Mr. Rowland first came west to take over the Los Angeles Club for Philip Wrig-

ley, he got himself immediately suspect in other Coast League cities by observing that Los Angeles deserved big-league ball. He has now reported that he was grievously misquoted in the matter and what he had intended saying was that Los Angeles was *now* in a big league, meaning the Coast League.

"Major league, our eye," say his detractors. "Take away Frisco and L.A. and what have you got—Joplin."

Look at the Statistics

This is the sort of talk that got men filled with daylight in an earlier era and it is refuted in detail by Mr. Rowland and his defenders. The Rowland thesis runs in this fashion: In the strip from San Diego to Seattle live 13,000,000 people. In ten years it will be 25,000,000 (says Rowland!). In 1945 the Coast League drew more attendance than the American Association and International leagues combined. In 1946 the Coast League drew 3,718,653, with four teams (San Francisco, Oakland, Hollywood and Los Angeles) each drawing over 500,000.

Here are the population figures in the Coast League (estimated):

Los Angeles (including Hollywood and surrounding area) 3,675,000. San Francisco (including Oakland and surrounding area) 2,385,779. Portland 650,000. Seattle 631,000. San

Diego 481,000. Sacramento

"We're a major league right now," says Mr. Rowland. "There are 13 major leagues that have a salary of \$150,000 a year. The big league has been trying for years to get O'Doul but he's making more out here than the majors pay him. [It is reported that with bonuses and stock deals O'Doul averages around \$40,000 a year in San Francisco.] The major-league minimum salary is \$5,000. It makes that out here. As soon as we get major status and can get good players, attendances and salaries will grow. We will offer two hundred major-league jobs that aren't available now."

"In 1900 when this country had 75,000,000 people, there were 100 major-league jobs; now with a population of 100,000,000 the jobs have risen to 400. That means ambitious young fellows pour into professional football and baseball because they feel they have a chance before they get a chance."

The anti-Rowland faction is not without an elongated sneer. "It's dandy that everybody gets a nice minimum, no doubt," they say sardonically, "but why doesn't he also say that on the New York Yankees more than the entire team is

city? And what's this about growing and salaries growing? They had a crucial San Francisco Los Angeles series in May this year. Do you know what it was?—an eight-game affair played at Wrigley Field was jammed Sunday double-header with all over the place and they 35. What's big league about

couldn't that also blow up the fact that Los Angeles and San Francisco are ready to play with the New York and Chicago boys? Well, cry the anti-Rowlandites. There is the horse-racing and center of the world because about it in a big way. Get a major-league park in L.A., grab a major American League franchise, watch the mobs march in. Now a movement on foot to Coliseum, which seats 105,000 (all), but most disinterested feel the fanatics have gone away with that suggestion. They think that the Coliseum was not baseball.

Rowland and his followers insist the Coast is important enough and on its own feet but what behind the fight is the baseball. As it stands now the major league has the right to draft one player from each team in AAA class for a price of \$10,000. This forces the minor-league clubs to sell their best players. They can then or take the chance of being snatched in the draft for the \$10,000 price.

San Francisco was particularly hurt last year when they lost Ferris Fain to Philadelphia Athletics for \$50,000, and San Diego was not when the New York Giants took Lohrke. Fain was considered at least a \$50,000 property by San Diego and San Diego felt that if they had kept Lohrke another

year he would have been in the same class. San Francisco is worried now about losing Bob Chesnes, their sensational right hander, and Sacramento has similar thoughts about FitzGerald, their hard-hitting catcher.

"How can you build up the loyalty of the fans when you're always losing your best men?" demands Rowland. "If we had the forty men who were either drafted or we were forced to sell last season, we'd have the nucleus of a good major league. Look at the players who have gone up in recent years—the DiMaggios (Joe and Dom), Ted Williams, Bobby Doerr, Johnny Pesky, Joe Gordon, Vern Stephens and many other fine players."

This is a strong point and seems to place Mr. Rowland on firm ground but his opponents will have none of it.

"When the Coast League is on its own, how is it to get all these great players?" they ask. "It will no longer have a tie-up with the National or American League and accordingly will have to develop its own farm system. What prospect with any sense is going to fall for Pacific Coast allurements when he can get that big sugar in the present majors? It would take years before salaries on the Coast would permit anybody getting DiMaggio, Feller or Newhouser dough."

The Right to Invade

There is great public confusion on the right of the present majors to invade the territory of other leagues. Mr. Rowland states that the majors have an agreement that no team in the majors can leave the league without the unanimous consent of all the other clubs. That provision was put in at the time of the agreement between the National and American leagues after the bitter fight of Ban Johnson and the American leaguers to get recognition. Just to make things doubly sure, the Coast League now has a similar agreement by which unanimous con-

sent of all clubs is required before a Coast League team can consent to make a deal with a major-league club on territorial rights.

"That's a lot of phooey," say the anti-Rowlandites. "They can agree till they're blue in the face but it makes no difference. There is a cardinal law of baseball which gives the two present major leagues the right to draft territory anywhere in the limits of continental United States. If one of the majors wants to put a club in Los Angeles or San Francisco all it has to do is pay a 'reasonable' price for the local territory and move in."

"Donald Barnes wasn't just talking for effect when he planned to move the St. Louis Browns to Los Angeles. He knew what he could do. And did you notice that crack by Bill Vecck when he had the row with the municipal authorities about the Cleveland Stadium? He said he'd take his club somewhere else. Well, he knew what he was talking about, too."

Prior to 1946 a major league could enter minor territory by paying the minor league \$5,000 and paying the minor-league club "reasonable compensation for damage." The rule adopted last winter dropped the \$5,000 provision and established that both the minor league (all the clubs) and the minor-league club shall be paid. A seven-member board of arbitration was to set the damages and its decision was to be final. That might cost the invader a bundle of money but it will be noted that it doesn't prevent him from invading.

Old-timers recall that there was a revolt back in the twenties against major-league domination and for a period of about five years the draft law was not operating. Mr. Rowland refers to it as "one of the most prosperous periods the Coast League ever had," but others are not so certain. The minor leagues were finally starved out for lack of playing material.

However, this would have little

bearing in any case on the present problem because conditions are now much different. With the far-flung farm systems of the majors there is little material lying around loose in the minors. The Pacific Coast League, as a third major unit, would have tough sledding in the beginning.

"You have to crawl before you start walking," says Mr. Rowland. "We're not worried about the future. We're a minor league now because they drain away all our talent."

Five Years of Growing Pains

In line with this view Mr. Rowland admits that a period of five years or so will be needed before his circuit can get full major stature. There would be a marked reluctance on the part of the present majors to any proposition which allowed the Coast League to begin drafting players from the International and American Association leagues. With the partial exception of the Milwaukee club, the American Association franchises are owned outright by the majors.

"This would be a pretty picture," say the cynics. "The Coast League want to become the third major circuit so they can avoid the snatch of the National and American leagues and then they turn around and begin grabbing players from the AAA affiliates of the majors."

But Rowland is on very solid terrain when he endeavors to beat the major-league invaders to the draw before they can ruin the Coast League. Portland and Seattle can certainly not look upon any change with pleasure. The more hopeful Angelenos who yell loudest for competition with the present majors speak blithely of a new Coast circuit. However, if Los Angeles were taken out, it would seem to mean the end of Hollywood as well.

In the first place Wrigley's Los Angeles club is merely permitting the

STRONG BOY

BY D. D. BEAUCHAMP

The dog listened through two choruses of Lute's song and then bit him

Every time Miss Seymour came in sight Lute would be lifting something—maybe picking up an end of the bunkhouse, or sauntering across the yard with a bridge timber on his shoulder. But he wasn't much when it came to lifting his voice in song

MY UNCLE LUTE was the strongest man in Clearwater County, and when I was twelve years old I wanted to be like him.

I asked my father how to go about it and he told me. He told me to go out in the corral and pick out a calf that was little enough so I could lift it, and that every day I was to go out and lift it, and the bigger the calf got the stronger I would get, and by the time it grew up to be a beef steer I would still be able to lift it, and I would be as strong as my Uncle Lute.

That sounded logical to me, so I tried it. I picked out a calf I could handle easy to start with, and every morning for six weeks I would go out and lift it. Then I would come in the house and double up my arms and look at myself in the mirror. I could see I was getting strong all right. The only trouble was the calf seemed to be gaining weight faster than I was getting stronger, and the way things were progressing it began to look like by the time he grew up to be a beef steer I wasn't going to be able to budge him.

It was discouraging. I told my father about it, and he didn't have anything further to offer, so I finally took the matter direct to Uncle Lute.

He was working at the forge down in his blacksmith shop when I talked to him.

I told him what my problem was, and the trouble I was having pick-

ing up that calf. My Uncle Lute was a very understanding man.

"Any reason you want to get strong so quick, Bub?"

"I want to pick up a beef steer for Mary Louise Stacy," I said.

Mary Louise Stacy was in my grade at school. She was my girl except she did not know it. She had pigtails and freckles.

"You figure that will impress her?" Uncle Lute said.

"I expect if I picked up a beef steer for her she'd let me carry her books home from school."

"And I expect you'd be pretty proud of yourself, showing off for her like that," Uncle Lute said.

"I expect I would," I said.

"Bub," my Uncle Lute said, "right there you have touched on a very vulnerable spot, so to speak."

He picked up a horseshoe off the anvil, bent it out straight with his bare hands and tossed it into a corner. Then he spit on the floor. He was the strongest man I ever saw.

"Pride," my Uncle Lute said, "goeth before a fall."

Then he told me the story of himself, and Mr. Sheridan Corby, and Miss Corrinne Seymour. . .

At the time, Uncle Lute was working as foreman on the Emory Stevens ranch over near Moose Creek. It was a cattle ranch. It was also a dude ranch; and besides the dudes Mr. Stevens had a string of bucking horses and Brahman steers that he rented

out to rodeos. Uncle Lute earned sixty dollars a month and found. He was happy until the first time he laid eyes on Miss Corrinne Seymour.

Or maybe he was happy until the first time Miss Corrinne Seymour laid eyes on him, because Miss Corrinne Seymour saw my Uncle Lute before he saw her. She saw him the first day she got to the ranch. Mr. Stevens had brought her out from the train in the station wagon, and when they drove in the yard Uncle Lute was holding up the front end of a Model-T truck while somebody put a jack under it. It made his muscles stand out, and he was something to see. He was six feet one. He had shoulders on him as broad as the back end of a brewery horse, and he was holding up the front end of that car like it was made of cardboard. Miss Corrinne Seymour let out a squeal like she had sat on a tack.

"Who is that gorgeous creature?" Miss Seymour said.

Mr. Stevens looked around. He thought she was referring to a horse, or maybe one of the dogs.

"What creature?"

"The one who is holding up the automobile," Miss Seymour said.

"Oh," Mr. Stevens said, "you mean Lute Harkness. I have heard him called a lot of things," Mr. Stevens said, "but this is the first time I have ever heard anybody call him gorgeous."

"I think he is simply magnificent."

"He is as strong as a bull, if that's what you mean," Mr. Stevens said. "And I have even heard some people say that he is almost as smart."

"He is simply the most marvelous thing I have ever laid eyes on," Miss Seymour said. "I can hardly wait to meet him."

So Mr. Stevens drove over there and Miss Seymour met my Uncle Lute, and vice versa.

It sort of caught my Uncle Lute off base, so to speak. He shifted the Model-T to one hand and tipped his hat. Miss Seymour said she guessed my Uncle Lute was probably the strongest man in the world and she was simply thrilled speechless. My Uncle Lute was speechless too. He did not say anything. He just stood there holding up the front end of the Model-T and looking at Miss Seymour with his mouth open. He was still standing there after Mr. Stevens drove her on up to the ranch house, and his mouth was still open. He was sunk.

THE way it turned out he was not the only one that was sunk. Mr. Stevens had had lady dudes on the ranch before, but he had never had one like Miss Corrinne Seymour, and she almost disrupted the organization. She had big blue eyes and honey-blond hair, and she did not measure six ax handles across the beam when she was dressed in pants. There were sixteen men working on the ranch and Miss Seymour met them all, and after she met them they were all sunk. They took to wearing white shirts to work, and shaving during the week, and they hung around the house so much Mr. Stevens said the place looked more

like a country club than it did. Send a man out to mend a fence, he'd forget his hammer and wrench and have to ride back. Send out to move a herd of cattle, he'd forget his saddle blanket. It was full.

This state of affairs continued about two weeks, and Mr. Stevens was going crazy, and then the ranch rowed down to two people. There were them was my Uncle Lute. There was one was Mr. Sheridan Corby.

My Uncle Lute did not know Mr. Sheridan Corby. He did not know Miss Seymour came, she came he did not like her better than he had before. Mr. Corby was a dude wrangler. A mail-order dude. He wore embroidered shirts and pants, and he did not do anything around the ranch except loafing sitting on a horse when he was with the lady dudes. At night he played on the guitar and sang cowboy songs. He was not strong as Uncle Lute.

ON THE other hand Uncle Lute could not play a guitar. The only song he knew was one he learned in a saloon down in town, which he did not consider that a song you would sing to a girl. Miss Corrinne Seymour.

My Uncle Lute thought a girl seemed to him that maybe he could carry the battle into the enemy camp so to speak. Miss Seymour told him that she liked moonlight and music, and Uncle Lute figured nothing that Mr. Sheridan Corby could do that he could not do. He paid five dollars for a month in a pawnshop in Moose Creek. He took three lessons from the down in McKelvey's Saloon. He went to work on it.

He did his practicing away from the ranch, figuring to keep his ability as sort of an ace in the hole. Every night he would saddle up and ride two or three miles out into the sagebrush and sit down with his back against a rock to play an air guitar. It seemed to him he was making considerable progress until one night the ranch dogs followed him out and sat with him. The dog listened to Uncle Lute go through two choruses of The Cowboy's Lament and then bit him.

It was sort of disheartening the day Uncle Lute was working in the tack room and saw Mr. Sheridan Corby working out with a bunch of Indian clubs and a bar bell. It was likely that Miss Seymour was strong men, and Uncle Lute thought that maybe the best thing he would be to sort of stick to his last, so to speak, and utilize the strength he had given him. He decided his music and in the future he would pick up a heavy show how strong he was.

He took to staying around the house most of the time. Every time Miss Seymour came, Uncle Lute would be lifting something. Every day he would be picking up a corner of the table.

ing that anvil under one arm like a
loaf of bread, and while he was talking
he kept sort of tossing it back and
forth from one hand to the other.

"Isn't that anvil terribly heavy?"
Miss Seymour said.

My Uncle Lute looked down at it as
though he was surprised to see he was
carrying it.

"I had completely forgot about it,
ma'am," Uncle Lute said.

Miss Seymour squealed and batted
her blue eyes at him.

After that Uncle Lute carried that
anvil around until he almost wore it
out. Mr. Sheridan Corby was still
working out with his Indian clubs and
his bar bells and one day he was out
walking with Miss Seymour, and they
met Uncle Lute carrying the anvil.
My Uncle Lute could recognize an
opportunity when he saw one.

"I would like to roll a cigarette,"
Uncle Lute said. "Would you mind
holding this?" and he held the anvil
out to Mr. Sheridan Corby.

Mr. Sheridan Corby was anxious to
show Miss Seymour how strong he
was getting and he grabbed hold of
the anvil. It took him right down to
his knees. After that Mr. Sheridan
Corby gave up his bar bells.

SCHOOL FOR CHARM

BY CARL FRENCH

The traditional book-on-the-head method of teaching graceful walking is abandoned at the Charm School, and the girls balance Florida grapefruit instead.

s work out on the sands with multicolored plastic beach balls. These s, resembling free ballet, get the kinks out of the body muscles. graduates show the results of weeks of hard work at the school, as se in evening dress, which they carry with ease, grace and loveliness

ALL came about because a lovely girl who posed for a Florida publicity stunt didn't know what to do with her hands. She fluttered and she placed them everywhere, as the cameraman clicked. The director decided that something must be done about it. The school was the St. Petersburg Charm School, dedicated to teaching the sun-baked beauties the principles of poise and pose, and to easing the relations of the school's sponsor, Bert A. Ady, who is St. Petersburg's director of public relations. For training, the gals agreed to do Ady's publicity stunts and

into a stiff grimace and how to dress to hide bowlegs and to get more beautiful chest contours. And how to walk without bobbing about like a Mexican jumping bean.

In the latter the publicity-minded director demonstrated true genius. Some schools teach the sinuous glide by having the student balance a book on her head. Too much bobbing, and the book falls. That, reasoned the director, was out of character for Florida, which has gained little renown in book publishing. So the St. Petersburg girls walk about balancing home-grown Florida grapefruit precariously on their heads. It taught them how to walk and it advertised Florida's great citrus industry. Double play for publicity.

The hair-do and make-up experts found their greatest problem in eradicating teen-age affectations and mannerisms. And the director of photographic posing had to teach his students all the little tricks of displaying their best to the lens. Now, when a cameraman poses one of these Charm School graduates, she instinctively clicks her heel to opposite instep, bends the knee slightly, squares shapely hips and tosses a shoulder-back torso into position. Just like a professional.

At the end of the first course, everyone was happy. The girls, always beautiful, were now glamorous. Mr. Ady, once a nervous wreck, was calm and complacent. And cheesecake devotees were thrilled.

So the Charm School will open its doors again this fall, and a new class of awkward lovelies will learn how to be charming. ★★★

The obstacle course, lifted from Army conditioning exercises, puts the students through a maze of chicken wire on hands and knees. At a fast pace, too

MAN RUNNING

BY SELWYN JEPSON

CONTINUING A THRILLING ACCOUNT OF FLIGHT FROM THE NOOSE

The Story:

One night beautiful CHARLOTTE INWOOD, wife of wealthy Architect JOSEPH INWOOD, rushes to the London apartment of her new lover, JONATHAN PENROSE. Charlotte's evening gown is streaked with blood. Frantically she tells Jonathan that her husband has found out about their affair, and that she has just murdered him.

Jonathan, desperately in love with the woman, walks the short distance to the Inwood mansion. Breaking in, he obliterates possible fingerprints and takes money and jewels from the safe in the library where the murdered man is lying. Then, further to throw suspicion away from Charlotte and onto anonymous housebreakers, he races out of the house, throwing the murder weapon, a candlestick, into the gutter.

Rounding a corner near the house, Jonathan is recognized by a man, a wine clerk. Now he knows he will have to disappear, but his resolution to protect Charlotte is strengthened. Bringing her a fresh gown, he drives her to the apartment of a man named FREDDY WILLIAMS, who, she says, will take her to a night club, thus providing an alibi.

The police have discovered the murder and are looking for Jonathan; in the meantime, he checks a bag containing the bloodstained gown in a tube station. Meanwhile, in a night club, unbeknown to Jonathan, Freddy Williams, Charlotte's real lover, is registering amusement at Jonathan's noble action. "That's the first time," he tells her, "I've ever murdered a man with a candlestick."

Pursued by the police, Jonathan races down an alley and almost into the arms of EVE GILL, the "I" of the story. Eve is in London attempting to sell a valuable Rembrandt painting which her crusty old father, COMMODORE GILL, talked her into stealing from his wealthy sister-in-law.

Eve feels sorry for her fellow outlaw and decides to drive Jonathan to the Gill country house in Kessingland. When they arrive early the next morning, she hides him in the Commodore's boat, the Peacock, which is moored near the house. Eve goes wearily to bed.

II

THE bright sun of morning on my eyes awoke me. In his distant workshop Charlie, our man-of-all-responsibility, was banging a heavy piece of metal against another heavy piece of metal, but the clangor was muted into a musical sound by a quarter of a mile of marsh, trees and hedged gardens.

The noise which moved me, however, was the three knocks of Father's stick on the floor of his room. They meant he was ready for his breakfast; this was the first signal of his day, and there was always a briskness in it which sometimes meant merely that he was hungry, other times that he was going to attack the day with more vigor than usual.

Even on quiet days I do not spend

a lot of time getting up, but this morning eight minutes covered brushing my teeth, tidying my hair, putting on a bathing suit and sandals, and picking up a short towel coat from the cupboard as I made for the stairs.

I beat the Commodore's breakfast tray by several seconds. It had barely reached the first baize door from the kitchen in the hands of the newest of Mary's tryouts from Kessingland village when I reached the Long Room on the ground floor whence Father conducts the affairs of household and estate.

The Long Room was shining with sun, its ancient oak glimmering warmly. And the Commodore, sitting up in his bunk, along the panels of the east wall, eyed me sharply.

"Ah!" he said. Usually it was "Well?" or "Go away" or "Where the hell's my leg?" The "ah" showed me—I admit to my satisfaction—that he had been worrying a little about me.

"When did you get home?" he inquired.

"Rather late."

"I didn't hear you."

"I didn't want to wake you."

"Very thoughtful. I wasn't asleep. You know perfectly well I—" He stopped. Not for anything would he confess that he cared what happened to me. "—perfectly well I wanted to know what he paid for it."

He knew I had failed, of course. If I had succeeded, if K. Zimmer had turned out to be all that his friends had promised, I would have waked him up to tell him so, whatever hour of the night I had come home.

His breakfast tray arrived. I took it from the girl and put it on his bed table.

"You didn't leave it with him?" he asked.

"I did not. If I had left the picture with him you wouldn't have seen it again, or any money either."

"What did he offer?"

"Nothing. He said he never pays a penny for anything before he has a market for it."

"Nonsense!" He brought down his spoon with an angry crack on the first of his four eggs. "You mishandled it! I should have gone myself. Women!"

"I can see you climbing that ladder into Aunt Harvey Gill's gallery with one leg," I said.

"I'm not talking about ladders! You went to see this brute with a straightforward proposition and foozled it!"

Straightforward was not the word I would have chosen.

"Listen," I said. "He wasn't an art dealer at all. He's a cheap crook with ideas above his station. He wanted to get hold of it without paying for it. He wanted to know all about me, and who was I 'fronting' for, and who did the 'job,' and so on—"

"I hope to God you didn't tell him."

"I did not," I said. "I told him to mind his own business. He might

deal, he said, if things were put on a 'proper basis.' Must know who the principals were. Must have the 'goods' handy, so if a buyer came along he could show them. Mustn't be rushed—wanted a day or two to think it over. Come back at the end of the week and bring the 'goods,' to deposit with him."

"Hum," said Father. "You should have walked out on him."

"That's exactly what I did. But I'm worried. I think there is going to be an unpleasantness. Zimmer looked at me in a very funny way. He said he was of the opinion that the police were wrong in believing it was an outside job! They might be fooled by that ladder at the gallery window but he wasn't."

FATHER growled in his throat. He wished to wash out the false start with K. Zimmer and plan a new attack on the problem. "Rot. What does it matter what he thinks? The police are right. The ladder was the way it was done, wasn't it?"

"Yes. But it was used to make an inside job—in the sense it was family robbing family—look like an outside one. I think you had that idea."

"Don't quibble. I'll do without this Zimmer and think of some other way. Your Uncle Harvey meant me to have that picture when he died. It was a way of leaving me a bit of capital, and I shan't rest until I've fulfilled his wishes. Just because that bloody second wife of his tore up his will—"

I was sick of the story. "Father, will you please listen to me! K. Zimmer only has to ask anyone in the village at Pakenhurst a few questions about who was staying in the neighborhood that week end to spot me as having been there. It wouldn't take him more than a quarter of an hour to find where I came from."

"You mean—hum—that he would then be in a position to—ah—"

"Yes," I said, "to blackmail the picture out of us—out of you rather—and then where would you be? I've never seen a meaner-looking man."

"If he comes anywhere near here, I'll shoot him."

"Maybe. And—maybe you won't. For one thing your policeman friend Billy Bull wouldn't like it."

"Sink the rotter in the marsh mud—five minutes, and not a sign of him."

"All right, but don't forget his hat—it always floats." I made for the door and was outside before he realized it.

"You come back here!" he bawled in his quarter-deck voice. I know when to go back, even though I was in a lather to get to the Peacock and Jonathan.

"You know," he said energetically, "the insurance company might be persuaded into the market. With that woman's claim against them they'll want to recoup as much as they can. For instance, if they pay her twenty

"Drive over to Lowestoft and fix up a crew!" Father said from his bath chair. My first instinct was to argue with him but I had a second thought

thousand. Now suppose they could buy the picture at fifteen they could resell at twenty-five—they could go to a legitimate market with it—they'd only be ten thousand out of pocket. That's good business. At least it might be worse—"

I cried out in alarm that I refused to walk into any insurance company with that thing under my arm and nothing to save me from instant arrest but my parent's instructions to outsmart the managing director.

He stared at me without seeing me, and in the grip of another bright idea said with great conviction:

"We're fools. The place to sell it is abroad. France—Belgium. Or Holland. Why not Holland? That's where the fellow came from who painted it, wasn't it? Holland—"

I escaped finally from the room with the word "Holland" in my ears and with my heart in my mouth because one of the inevitable sequences in *that* plan would be to sail across the Channel in the Peacock. And it would not be easy to argue him out of it; in fact I wouldn't try, for it was the best he'd had yet. If there was one place where he had more "friends" than another, it was Amsterdam—the black-market people, in fact, who played when he felt like a little smuggling.

I went via the kitchen. Mary was making bread. I told her I was going to swim and would make my own breakfast in the Peacock afterward. For once she let me through into the larder without an argument. I began stocking the basket with a dozen eggs and a large chunk of butter. I could raid the chicken houses for more eggs later on. There was the tail end of an excellent ham; last week's bread would have to do. I nearly filled the basket and left the house by way of the dairy, scooping a pint jugful of cream off the top of one of the setting pans as I passed.

I HURRIED circumspectly through the kitchen gardens, detoured by the hothouse for a mixed picking of peaches and nectarines and made for the estuary beach along the wood path south of the house. The water blazed silvery gold through the trees and at last I came in full sight of the ketch. The Peacock sat there in the shimmering backwater, white and still like a bird resting.

I took the sculls from under the bank where I had hidden them last night, floated the praam dinghy and pulled out to the ketch. When I climbed the ladder and stood on deck listening, my heart's beating seemed audible outside me. The little ship was silent except for an occasional grumbling creak from the rigging.

Perhaps he wasn't in the cabin. Perhaps he had taken flight and fled, had swum the seventy yards to the bank and was now shivering in a ditch somewhere in the blue haze of Kessingland Marsh while he waited for the short darkness to come again to shelter his aimless flight.

No, dear God! Please let him be down there—I know so certainly that I can help him that it is like a thing already past and done, when he won't be running away because there is no need any more. . . .

(Continued on page 49)

They watched as I dialed the number. Hurry, I thought. It's getting warmer in here. The door will break soon

SIGNED BY JOE CRADLE

BY ROBERT RICHARDS

It was the best story he would ever write—and the last

MARY is a wonderful girl. They don't make many like her any more. "Call me up, Joe," she said. "Tell me about it, as soon as you know. It'll be a fine job. I'm sure of it."

If I had known what was going to happen that night, I would have. I would have called her in a hurry.

But of course I didn't suspect anything. I just closed the door, pulled off my shoes and flopped across the bed. The telephone was there, close to my ear, but I didn't touch it.

It was a fine job. It was swell—probably the best I had ever had. It paid good money, and there was a future to it. "You're all right, Joe," the sales manager told me. "We won't worry. You'll be one of our top men before the year is out."

I stared at the ceiling, rubbing both fists into my eyes. I was going to sell refrigerators. Okay. What was wrong with that? It was good dough. Plenty.

They were good refrigerators, too. None of this cheap stuff. The ice trays didn't stick; the cubes popped out.

There was something else even

more important. I could jump Al Spade now. I could tell him to go bump his head on a rock.

Someone knocked on my door. I knew from the steady pounding that it had to be answered. "It's unlocked," I called. "Walk in."

It was Jerry Lawrence, the bell captain, and he was grinning. I had lived in this narrow room for almost seven years, and we were old friends. Jerry had never put the squeeze on me, even during the times when stranded strangers were hitting his hand with twenty-dollar bills.

It was the last night that either one of us would spend inside the Grafton Hotel, but we suspected nothing.

"How about the new job, Joe?"

"In the bag. I'll start on Monday."

"A good job?"

"One of the best," I said.

"There was a girl here," Jerry said.

"A nice babe, Joe. She wants you to call her. She said, 'Tell him to ring me just as soon as he comes in.'"

"Did she have black hair and blue eyes?" I asked. "And a way of lifting her chin when she talked?"

"She had a way of lifting a man's blood pressure," Jerry said. "When she left, it was all that I could do to keep from running out the door."

"That's Mary," I told him. "That's Mary all over."

"Well, better give her a call, or I might beat you to it."

"I will," I answered. "Just give me time. Lots of time. I've got problems to think over."

That Al Spade. I wanted to decide just what I would say to him. It would be something mean, something that got under the skin.

Jerry Lawrence saw that I wanted to be alone and that he wouldn't be invited to taste my bourbon, no matter how long he waited. He slipped quietly outside, and closed the door.

I stared over at the telephone again. Mary was waiting on the other end of the line. Mary was sitting there, with a smile in her voice, ready to tell me that I had done the right thing. All I had to do was to pick up that pipe and get a shot in the arm. Her voice was like warm water, or Moselle wine. It steadied my nerves. After talking to

Mary, I would be able to

I looked at my watch. Al Spade had gone on the been working more than now, bent over his desk World Press. He was with his stylus, I knew it tight and terse.

I'll call Al first, I told then I'll call Mary. After the guy that fired me. I and say, "Okay, are you I'm in another racket."

I wanted to irritate laugh in his face. I had the telephone, but I wouldn't do it. I didn't Al Spade was a guy with straggly black hair glare in his eyes behind rimmed glasses. He World's night news man was tough.

I had gone to see Al after my trouble. I thought that I could straighten should have known he have turned around.

PEACE AND QUIET

Continued from page 14

with Hulda. Seems like I remember once last summer when some city guy—

"Listen!" Rogers said. "Are you in cahoots with the Svensons?"

"Me," the agent gasped. "Not me!"

"Didn't have time to close the deal!"

Rogers said. "Didn't have time, my hind foot. You knew they wouldn't sell, so you left the dirty work to me."

"But—" the agent said.

"I just wanted to tell you I'm wise," Rogers said. "And what's more, I'll buy their land if it takes all summer. And if you open your big, fat trap to them or anybody else, I'll come to town and beat out your brains with a ball bat. Understand?"

"Yes, sir," the agent said meekly. "Maybe I didn't explain all the details."

"Goodbye," Rogers said. "Go shoot yourself."

A CAR drove into the yard and large feet stomped on the grass—soul-shattering and immense in their weight. Rogers went to the porch and waited. A young towheaded giant was purposefully rounding the cabin. He possessed shoulders of unbelievable width perched on a barrel of a body, with legs like oak trees. Topping this display of the body beautiful was a round, moonlike face with a crooked nose, huge ears and blue eyes.

"Hello," the giant said. "I'm Lars Svenson. You the guy botherin' my sister?"

"I'm the guy," Rogers said.

This bland confession of guilt confused Lars Svenson. He said, "What's your name?"

"Joe Rogers. Speak your piece."

Lars noted that Rogers was only five and a half feet up but almost that wide, not in the Svenson class, but pretty well put together. Rogers' nose was crooked-er than Lars'.

"Your nose," Lars said. "How'd you bust it?"

"Fight," Rogers said. "With fifteen big Swedes, all of them meaner and nastier than you, all of them former Minnesota tackles."

"Ya?" Lars said. "What happened?"

"I killed thirteen," Rogers said evenly. "Ate the last two."

"Aw," Lars grinned suddenly. "You're all right, Joe. Hulda said to whack you but I think better I apologize for her bothering you."

"Well," Rogers said. "Well! Lars, come in and have a drink."

Over two beers in the kitchen, Rogers said, "I was a little nasty myself, Lars. I'm sort of nervous and when she started shooting, I lost my temper. Then I found she had a temper of her own."

"Bad one," Lars said mildly. "Against eleven boys the only girl has to have a temper to get along. Joe, I think if you came over and apologized, she would apologize and we could be good neighbors."

"I'll do that," Rogers said. "Uh—your other brothers around here?"

"We work in this area," Lars said. "I run a resort on Gull Lake across the highway. Come over any time."

"I will," Rogers said. "I sure will."

"You bought a nice place," Lars said. "I hope you have a nice summer."

"I will," Rogers said. "But I like lots of room, Lars, and trees. Have you ever considered selling your place?"

"Yes," Lars said thoughtfully. "The only trouble is, all of us own it and have to agree before we can sell. That was in Dad's will."

"Oh," Rogers said. "Well, we can talk about it later on."

Lars finished his beer and said, "Got to go," and Rogers went outside and said, "I'm glad we didn't act like a couple of fools, Lars."

Lars grinned. "Hulda likes to dance, Joe."

"Thanks for the idea," Rogers said solemnly. "I'll look into it."

When Lars drove away, Rogers made swift and cunning changes of plan, thought unhappily of Hulda Svenson, short and stocky in those dirty coveralls, and decided it was worth the time and trouble. He cut through the woods and knocked on the back door of the Svenson cabin. The door opened and Hulda looked at him and tried to frown, and Rogers grinned and then she had to grin.

"All right, Mr. Rogers. I apologize."

"It was my fault," Rogers said. "Let me apologize."

"Lars saw you, didn't he?"

"He sure did," Rogers said. "I was scared to death."

"He is big," Hulda said. "Come in, Mr. Rogers. We'd better start from scratch. My name is Hulda."

Rogers said, "Call me Joe."

Hulda brought beer and glasses and

tingizing female he'd seen in months. He hoped she would fix her hair and try to impersonate a woman when he took her out. Those coveralls could hide a multitude of faults in addition to the ones he could see.

"I'd better push off," Rogers said. "See you about eight tonight?"

"I'll be ready," Hulda said. "And I won't shoot this afternoon. You get some sleep."

Rogers was pleasantly surprised that night, and the next five nights. Hulda in coveralls, with floppy hair and dirty feet, was one thing. Hulda dressed for dancing was another. Hulda had her hair combed and brushed in thick, shining waves around her face, which was clean and pink with natural color and only a suggestion of lipstick. And Hulda in a dress was different. The coveralls were traitors, Rogers thought, when he saw her that first night. Hulda was short, that was true, but she was slender and certainly not a keg or a splinter. And her

By the fifth night Rogers sensed of pertinent information owned a big resort on Gull Lake. He needed more help when the season began, but the other brothers were extremely busy and Hulda seemed it her duty to act as watchwoman of the family cabin. Lars wanted her at the resort and Rogers knew that Hulda owed Lars and could repay it in no other way. These facts in hand, Rogers spun his web with care.

On the sixth night Rogers had a family party at Lars' and the beginning of his spadework. Rogers got the beginning of his spadework. "Hulda's a nice girl, Lars."

Lars grinned happily. "You, Joe. You make a nice girl."

Rogers changed the subject with finesse. "I hate to see herself in that cabin. You her over here, don't you?"

Lars nodded. "The guest comin' next week, Joe."

Hulda. "Lars sighed and drank." "Well, shucks," Rogers

"I've got plenty of money, I bought the cabin for a fair price. Hulda would more or less help you, wouldn't she?"

"Ya," Lars said, brightly. "She would, Joe."

"But maybe she wouldn't be here."

"Eleven of you," Rogers said. "One of her. Can't you in?"

"That's right," Lars said. "Joe. Would you do that?"

"Name your price," Rogers said. "I can always rent your cabin to people."

"Shucks," Lars said, equanimously. "You name a price."

Rogers reflected on prices of properties around the lake. According to my cabin, I'd say, sand, Lars. Is that fair?"

"Fair?" Lars said. "That's fair, Joe. Do you mean it?"

"I sure do," Rogers said. "I agree and I'll make out the thing to help a friend, Lars."

ROGERS walked to the back of the cabin and looked at the moonlight. "Three," Rogers said. "Hulda flies with you, Hulda."

"It does," Hulda agreed. "Fun tonight, Joe."

Rogers felt strange qualms. Hulda looked beautiful in the moonlight. He said, "Tomorrow night."

Hulda nodded dreamily. "You wanted peace and quiet, you'd better rest one night."

He was suddenly aware that he had not kissed Hulda. It was the sixth night. Rogers said, "If you don't want to—"

"I didn't say that," Hulda said. "I was thinking about you."

Rogers had her hand, know, and then he was enthusiastically and Hulda was in kind; and after a definition of the moon across the lake, he stepped back and said, "Good night, Hulda."

Hulda murmured, "Good night, Joe."

Rogers hit all the trees. Dancing with Hulda and Hulda were definite things. Hulda was something else. Once more, Rogers thought, refuse to buy the cabin. He refused to buy the cabin. He refused to buy the cabin. He refused to buy the cabin.

"No. Absolutely not," Rogers said. "And then the humor hit him, and he sat in the

BUTCH

COLLIER'S

"No, no, Slug—allow me"

they sat in the kitchen and said, "Skoal!" and grinned at each other. Hulda wore the same coveralls and her feet were just as dirty.

"Lars said you bought the Sorenson place," she said, "and you needed rest. I'm sorry about the shooting."

"You go ahead," Rogers said warmly. "I'll send for my guns and we can practice together."

"That would be nice," Hulda said warmly. "You'll be a good neighbor, after all."

"Uh," Rogers said. "Lars told me you enjoyed dancing."

"I do," Hulda said.

"Would you—?" Rogers began.

"I would," Hulda said.

One thing about Hulda, Rogers thought, she wasn't coy. She was studying him frankly and making up her mind; and he decided the scales were tipping his way. It was probably because he was a half pint like herself, lost in the midst of the towering Swedes.

"I like you, Joe," Hulda said. "I didn't think I would, but I do."

"I like you, too," Rogers smiled. "I know we'll get along fine."

What limits a man will drive himself to, he thought darkly, to buy a hunk of ground. Hulda was the most unappe-

legs were not oak trees like Lars', but rather on the order of saplings, and her feet were really small and neat in slippers.

Rogers said, "Well!"

"Let's go," Hulda said, taking his arm and going down the steps to his car. "I haven't been out for a week."

"What's the matter with the guys up here?" Rogers said. "Are they blind?"

Hulda smiled. "The coveralls fool a man, don't they?"

Rogers swallowed a grunt and nodded. "They sure do."

"Let's stop at the Rainbow first," Hulda said. "Then I'll show you around. We can drop by Lars' and meet some more of my brothers if you'd like."

"I would," Rogers said. "By all means."

Doing dirty work was so much nicer when a man had something presentable to dance with; and most of all, talk with through the long night hours. Hulda was a fine dancer and spoke authoritatively on an amazing variety of subjects. Rogers found himself enjoying the process more than was necessary, and by the fourth night was hating himself for his ulterior motives. But he didn't weaken. He would get that land and keep Hulda's friendship, he decided, if he was smart enough to pull the right strings.

**HERE'S THE
CARTRIDGE FOR
THE OIL FILTER
ON YOUR CAR!**

Compare the widely spaced openings of the standard oil filter cartridge with the modern MULTI-SCREEN principle. The multiple, precision perforations of MULTI-SCREEN expose 20 times more filtrant surface to the oil immediately.

Here's the Champion Oil Filter Cartridge that puts the whole surface of its high capacity, depth-type packing immediately to work, grabbing the sludge that causes motor trouble. It's MULTI-SCREEN—the cartridge with the faster flow and extra quality filtering medium that means more oil cleaned faster and better for you. You get this sludge-stopping, motor-saving efficiency in . . .

CHAMPLAB OIL FILTERS

Regardless of the type of oil filter on your car, you can put a swift action, long serving Champion Cartridge to work for you, and keep your motor free of the dangerous sludge that attacks rings, cylinder walls and bearings. There's a size and style in these precision perforated MULTI-SCREEN Cartridges for EVERY oil filter. Insist on one with your next oil change and get the improved clean oil mileage that keeps old motors healthy and new motors young.

**ASK YOUR
DEALER**

If your car does not have the protection of a motor oil filter, ask your serviceman about a Champion. There's one for your car, complete with bracket, fittings and oil lines for a swift, economical installation.

MERIDEN, CONN.

chuckled. The trapper had fallen into his own trap. He wondered if he ought to tell Hulda a few things the next day. And then he thought, better wait. She might think, when she learns everything first, that I was kidding her just to buy the property. And besides, think of those brothers. . . .

Rogers was awakened much too early and far too abruptly by shots that seemed to come from his front door. He leaped from bed, stumbled over the nearest chair and cursed groggily, threw on his bathrobe and padded unsteadily through the cabin and opened the door.

"What the—?" Rogers roared. "Why, Hulda. Now, Hulda!"

HULDA was standing spraddle-legged on his veranda with the long-barreled .22 revolver waving carelessly before her stomach. Hulda had no moonlight in her eyes, no softness in her mouth. She wore her dirty coveralls, her hair was floppy, and she was mad.

"You!" Hulda said. "You rat!"

"Hulda," Rogers said. "What's the matter?"

"What's the matter?" Hulda said. "You ask me what's the matter, you—making me fall—" Hulda sniffed and stiffened her voice: "Listen, Joe Rogers, a certain real-estate agent from Brainerd came by Lars' place after we left last night. He was a little tight. Lars mentioned something about selling you our cabin because—" Hulda laughed scornfully—"you wanted to help us out. The real-estate agent was a little mixed up, I guess, because he told us all about you, Joe Rogers."

"Hulda," Rogers said feebly, "don't jump to conclusions. Don't—"

"Why, you—" Hulda said. "I actually believe you would have married me to get our land."

"Why not?" Rogers said. "I was going to—"

"You would!" Hulda cried. "And all the time I thought you cared a little bit—and all you wanted was my cabin."

"Let me straighten this out," Rogers said desperately. "You've got it wrong, Hulda."

"No, I haven't," Hulda said thickly. "And let me tell you this, Joe Rogers. Don't ever come on my land again, and I wouldn't sell you a square foot of it for a million dollars if I was starving."

Hulda was close to tears. She stamped one foot on the porch and shot five times into the air. Rogers leaped two feet and came down digging for cover. "I hate you," said Hulda as she ran through the woods toward her cabin.

Rogers was awake now, wide awake. He was also mad. He went to the phone and called Brainerd, and when the real-estate agent's secretary said, "Hello," Rogers snarled, "Where's your boss?"

The secretary said nervously, "He—he had to go to Minneapolis on business this morning."

"He did, huh?" Rogers said. "All right, baby. When he gets back, tell him he could go to Australia and I'd still find him. Get your pencil ready. I want you to send some stuff out here. And I don't mean this afternoon, or tomorrow. I mean this morning. You ready?"

"Yes, sir," the secretary said.

Rogers muttered, "Turn me down, will she? One way to answer that. Only way. Fight fire with fire."

"I beg your pardon, sir," the secretary said timidly. "Five bundles of fire?"

"No!" Rogers roared, and started dictating. . . .

Rogers counted six carpenters and two big trucks filled with creosoted posts, the twenty-foot kind, spool after spool of barbed wire, kegs of staples, posthole diggers, and sacks of cement and plenty of sand and gravel. The carpenters placed a dozen smoke pots on the porch, and the foreman handed Rogers a shiny new shotgun and said, "Here's your gun, mister. Jim is bringing the shells."

"Fine," Rogers said. "Fine. Now, boys, I've got a little job. Where's that surveyor? You the one? Okay, now look, this is what I want you to do—"

At five that afternoon Rogers walked quietly through the trees and looked at a newly added piece of scenery. "Very nice," Rogers said. "Very, very nice."

The scenery was a fifteen-foot barbed-wire fence which not only ran from the water's edge to the road along the Svensons' line, but invisible to Rogers from where he stood, ran also on the south side of their property from the lake to the road. The Svenson land was cut off from the remainder of the lake with effective completeness.

Rogers tested the wind with his forefinger, estimated location and velocity, and placing a smoke pot on the ground, canted it toward the Svensons; then he pulled the tape and watched with great satisfaction as yellowish-white smoke poured from the pot and began creeping to the south. The smoke cloud spread and hung low, passed the fence and crawled sinuously toward the Svenson cabin. The cabin disappeared and Rogers heard a shriek of surprise, followed by loud cries of anger, followed by a car-

on our south line on the Wait till I tell them. You smart—"

"Tut, tut," Rogers said and quiet, Hulda. Remember and shoot your revolver at Let me play my little game

"Listen, Rogers," Hulda said. "For the last time, if you can come up here and tell me and start this sort of thing brothers—"

"Better get 'em all," Rogers said. "Lars was here. Haven't you?"

"I'll get 'em all," she said. "Better have those fences cut this smoke in about two.

"Or you'll do what?"

"I'll—" Hulda said. "I'll

"Exactly," Rogers said. "Do nothing and like it, but my fence and I'll have you the smoke, I'll play with please. Show me a law so a retarded pyromaniac, did that? Hit the road," Rogers said. "Remember you started this

"And I'll finish it," Hulda said.

Rogers gave Hulda enough home. Then he checked his gun, opened a box of smoke pots, and went outside falling. He started the shotgun at thirty-se straight into the air. He stood until eight o'clock, another twenty-five shots, fresh smoke pot.

LIGHTS gleamed in the Cars filled the yard. I lowered, surmounted by a voice from which a higher voice's plea seemed him up and throw him to ers found himself rather tenacity and spirit. At another twenty-five shot rest before making a f one a knock sounded. R the yard light, loaded the limit, and opened the doc

"Nope," Lars said. "I won't sell."

"Very well, boys," Rogers said. "Back to you. The war goes on until me and apologizes."

"Now you look here—"

"Goodbye," Rogers said

Lars looked at his fists balled up, then of order won the night. L you guys."

They crashed away. Rogers said, "Lars, wait got me wrong."

Lars hesitated.

"Look," Rogers said. "I'm kinda stupid. Lars, land around the lake, a dating Hulda, I was a to engineer the deal. But wrong, Lars. I fell in

load of husky coughs. Smoke-pot smoke was nasty smelling and eye-irritating and made everybody want to get about fifty miles away from any breath of it.

"Won't sell," Rogers said smugly. "We'll see."

Rogers returned to his cabin and waited half an hour. Then he carried another smoke pot close to the fence and got it fuming nicely. The sun was low and Rogers rummaged around his cabin and found the sawed-off thick end of an old pool cue which he hefted thoughtfully. He went to the front porch and waited. He didn't wait too long; the steps pattered down his driveway and rounded the corner.

She was coughing and her face was dirty, and her breath, plus the remnants of smoke, was coming in large, greedy gulps. She planted her hands on her hips and glared at Rogers.

"Hello," Rogers said politely. "Doing road work?"

"You skunk!" she said thickly. "That smoke! What's the idea? Stop it right now. Who do you think you are? I'll—"

"Hulda," Rogers said. "Whose land are you on?"

That stopped her for a moment, but only a moment. She said, "And that fence. I can't walk along the lakeshore any more. And building another fence

and then I was afraid if I told her and we made plans, and then she found out, she'd think I was doing it just to get the land. You see?"

"Honest?" Lars said.

"Honest," Rogers said humbly.

Lars was silent, and then he said, "We should kinda watch our tempers, Joe. We're both a couple of dopes. But what can you do now?"

"I'd like to tell Hulda," Rogers said. "You don't have to sell me the land, Lars. Just go over and hide her gun, so I can tell her without getting shot."

Lars said, "All right, Joe. But I don't think it'll do much good."

"Thanks, Lars," Rogers said.

"You got any ideas?" Lars said. "Anything nice and soothing to tell her?"

"Well," Rogers said, "maybe I can drum up something. Thanks for the tip, Lars. Now get over and hide that gat. I'll give you ten minutes."

ROGERS hesitated at the corner of the Svensons' front porch for a cautious peek, and drew back in alarm. Hulda was perched on the top step, armed with a five-foot club. She was snuffing to her self, "Hide my gun, will they? I'll get him with my bare hands—if it takes all summer."

Rogers swallowed hard. "Hulda?"

Hulda bounded from the porch and came running, flailing the tree limb like a hatpin, taking a wild swipe at Rogers' head. Rogers ducked and made the best tackle of his career, catching Hulda at the ankles and upending her, then twisting around and grabbing the club and throwing it far away as Hulda crashed on top of him with shrieks and a great deal of sudden fingernail work on his neck. Rogers got a hammer lock and turned her until she lay immobile.

"Hulda," Rogers said, "I want to tell you something."

Hulda stopped screaming and went limp. Rogers was not taken in by this. He said, "I know that one, Hulda. I'm holding you just as tight."

"Go away," Hulda said. "I hate you."

"I only wanted your cabin and land," Rogers said, "so I could own all the land around this lake. I own every inch now but your property."

Hulda said, "You can't hold me all night, you—you monopolist."

"I want to build a super resort," Rogers said. "On the north end. I'm going to build camps for underprivileged boys and girls on the south end. I've got too much money, Hulda, and no way to

spend it. I didn't mean it was going to tell you."

"Bah," Hulda said. "B"

Recognized movements were useless. Rogers thought. He held Hulda timidly, "Mother."

Hulda started telling Rogers the origin of his species.

Rogers sighed and said, "Hulda gasped, 'It's a legged—'"

"Cellophane," Rogers said. "Bellboy, melancholy, but"

"Are you nuts?" Hulda a little.

"Ah," Rogers said. "derness."

"You are nuts," Hulda said. "Tambourine," Rogers

ingly. "Lavender."

Hulda relaxed in his her head. She said, "A the language in terms of thought?"

"You cooled off a little

"In the face of such speechmaking," Hulda said, "damned good hammer otherwise?"

"They do work, don't they?"

"What works?"

"Those ten words I just Rogers said happily. "To

front of a taxi, or walked across to Holland's Bar for a quick one.

"I'll go up and explain it to Al, I said. That's all I need to do. What else? I'm a man, and he's a man. He won't club me. I'll just walk in and say, 'All right, Al, I missed the boat last night. I was drunk. I'm sorry.'"

It was a foolish thing, a hopeless plan, but I did it.

I had walked into the high white building, with its smooth floors and bronze-plated walls. The elevator man stared at me. It was almost midnight and the corridors were deserted.

"Do you work here?" he asked.

"I did," I told him, my heart was doing push-ups. "It's all right. I'm going to see a friend."

That was a lie; a laugh. Al Spade was no friend of mine. I was a nobody to Al. I didn't matter. I was less than an apple core shoved under a rug.

The elevator man punched the correct button, but he scowled.

"We ain't supposed to do it," he said. "The sign says if you come up nights, you gotta work here."

"They know me upstairs," I said. "You've got nothing to worry about."

IT WAS true. I had worked for Trans-World Press just the day before. I was one of their newsmen for almost ten years. Not in this great building. Not with a desk man's stylus in my hand, or seated close to the constant noise of the teleprinters. I had covered City Hall, and sometimes the police run.

I had walked inside only on Fridays, to pick up my check, but I was part of Trans-World just the same. You remember the Higgins snatch job? Well, I got a seven-minute beat on that. If anyone but Al Spade had been on the desk, I would have been signed to the story. Al gave it to his rewrite man. To Spade, all leg men were dirt. They were just nothing.

I stepped off the elevator and looked through the open doors into the big newsroom. It was almost empty. One rewrite man sat lazily scanning the early edition of a morning tabloid. A teleprinter operator slumped against his idle machine, his head pillowed on his arms, snoring.

Al Spade was seated in the slot, editing a book of copy. He never looked up, but he knew I was coming. Don't ask me how. Maybe he's equipped with personal radar, like a bat.

I didn't get to say, "Hello, Al." My mouth was open, the words were formed, but he beat me to it.

"What'd you want me to tell you, Joe?"

"Nothing," I said, sitting against the edge of his desk. "Nothing that you don't want to tell me."

The rewrite man put aside his tabloid and stared at me. The teleprinter operator quit snoring, but kept his head on his arms. The newsroom was almost silent. I had never known it to be so quiet.

Al Spade frowned and rocked back in his chair.

"You do," he said. "You damned well do. You want me to tell you that you're sick, Joe. That you need a rest. That's what you want. That's why you came up here. Well, I won't do it."

"I'm not sick," I answered. "I've never claimed it."

"And you weren't sick last night," Al said. "You were drunk, Joe. You were in somebody's bar, under the table."

"I was," I admitted. "I don't know why. It's the first time it ever happened, Al. The cork just flew up and hit me."

"It hit us, too," Al Spade said glumly. "It bounced so hard that we were unconscious for about thirty minutes. The mayor was shot, wounded in the shoulder. So what? So I didn't know anything

about it until I read the news was on the wires, of course. The AP—someone else's wire. The World didn't know anything.

"It was bad," I told him, claiming that it wasn't bad.

Al Spade slapped the desk side of his hand. "It was worse," he said. "As far as you're Joe, it was fatal."

The rewrite man had preternaturally turned to his newspaper. An off-nervously fumbled a wastebasket. Both were embarrassed, but had expected this.

Then Al Spade got dirty, tossing them in, low and hard out to hurt me. "I'm not s Joe," he said.

"No? And why not?"

Then Al let go. He had to for this, I guess. He had been there, with his eyes on the floor, it all stowed away, hoarded.

"I'll tell you why," he said. "You for your own good, Joe. Not a press-association man. I've known it. I've tried to tell them they're hardheaded. That's why signed you to a story. It's no Joe. You just haven't got it."

"I've been at it for ten years, him. 'That's a long time.'"

"It's too long," Al answered. "For your good, Joe, like I said. You ought to be happy that this way. Get yourself another out of this business."

"You're telling me all this to me happy?" I asked. "Is that Al? You want me to smile?"

"I want you to use your Spade said. 'You're smart. I know that. You just got a wrong snowball. Get another something else.'"

I WANTED to hit him. I done it too, I would have and clipped him, but then I that he had ulcers. You can with ulcers. I turned and v

had said. "No matter how late it is, Joe, be sure to call."

I looked at the telephone and then back at the ceiling. I didn't call her, but I didn't call Al Spade either.

I wanted more time; I had things to think over.

The telephone rang, but I didn't pick it up. I jumped away, as if it had fingers and could touch me. It was Mary. I knew it was Mary, but I couldn't talk to her. I didn't want to talk to anyone. I would wait until morning.

I walked into the bathroom and closed the door. The telephone kept ringing, as if determined to bring me back, but I refused to go. I would talk to Mary tomorrow. I pulled off my clothes and twisted the hot-water tap of the shower.

I stood beneath the needle spray, and the heat felt good. It almost relaxed me. After a few minutes, the telephone stopped ringing. Mary had given up.

I returned to bed then. I slipped into a pair of pajamas and crawled beneath the covers. Normally, I'm an uneasy sleeper. I lie in bed with one eye open. But that night I felt as if my head were tied to the pillow. I fell asleep as if I had been drugged.

EVEN now I don't know what it was awakened me. It wasn't a scream, I'm certain of that. It wasn't any noise at all. It was just a feeling. I opened my eyes and stared around. Something was wrong. I knew it.

I climbed out of bed and switched on the light. Then I smelled smoke, and sensed the heat. I heard a woman suddenly sobbing.

"She went to sleep with a cigarette," I told myself.

It was nothing too serious. Nothing to get all worked up about.

Then someone in the corridor, almost outside my door, screamed: "Fire! The whole hotel is afire."

It was a soprano voice, thin and frantic.

The voice was wrong. It had to be. This was the Grafton. A modern hotel in a modern city. It was fireproof. There was a sign, with neon letters at least ten feet high, that said so. I knew, because I used to read it when I was walking home from work. On a clear night, it was legible from five blocks away. The sign said: ABSOLUTELY FIREPROOF.

I ran to the door and pressed my hand against it. The wood was still cool to my touch. It meant that I could open the door in safety. I pushed it away from me several inches, and stared through the crack. Smoke was curling up the stair well, near the elevators. A corridor door had been left ajar, and I could see the orange flames, silently and patiently forcing their way out. In another moment they would be feeding on the bright rug that ran the length of the hall.

A woman stood beside the elevators, watching the flames. She kept pushing at the down button, as if she fully expected the cars to come. There was a small, curly-haired boy in her arms. He looked at me with his great, dark eyes but he wasn't crying. He was too stunned to cry.

An old woman and man leaned against the elevators' iron grilling. They apparently had run down from the floor above, and both were gasping.

"We can't make it," the old man said, but he wasn't excited. He just sounded exhausted. "We're trapped, Laura. There's no fire escape."

"Come with me," I called.

Even now, I don't know why. There was no reason. There was very little that I could offer. I had no idea of what might be done to save them. I think that I spoke because of the look in their eyes; I couldn't bear it.

"Come on in here!"

The old couple turned, like sheep in a pasture, as if they had been trained for this moment, and hurried inside my door.

Perhaps they believed, although I must have known that it was that I had discovered a fire escape.

The curly-haired child then, but his mother did not would not even look at me. stood there, pushing at the door. "They'll come," she told me. "They must come."

I walked over and gripped the door handle. I stepped quickly because the ready working its way up the floor. "Are you mad?" I asked. "The elevators aren't running. You've got to come with me!"

"And be trapped?" He was wild, like a rabbit's start in the middle of a country road, a little unsteady. It's odd, but I can't see her face now. I can't see her face. I see only her eyes. They quivered.

"No," she said. "I won't. You'll suffocate within a minute if you stay here," I told her. "I will die."

She reached past me, pushed the door down button again. I took her hand and forced her around. I started toward my door. She came with me, testing. The boy began opening the door. He pushed his face deep into the crack. The shock had worried him.

When they were inside, the door and hurriedly ripped the door from my bed. There was no escape. I worked almost without stopping. I wanted to keep out the flames.

The old man had recaptured me. "May I help?" he asked.

Together, we tore the sheet from the uneven strips. I soaked the sheet in the tub, while the frightened woman watched. The boy had stopped crying. He was cross-legged on the floor.

"It's simple," I told them. "Keep my voice calm. I'm not going to let these rags into the cracks."

I opened the door long enough to push it tight with the sodden cloth. I had no transom to worry about. The thick wood with my hand. The fire was gaining.

THEN I crossed the room to the two windows that looked out on the street. Down below, a car was beginning to gather. Several people were watching and shouting. I felt better just to know that they were there, although it was obvious that they couldn't help us.

"Lie down on the floor," I told those in the room. "We're going to be up, and they may get a ladder. Lie face down. Think they will. Lie face down. Your nerve. It'll be a long time before the flames break into us. I hope."

The blue-eyed woman beside me stretched out on the floor, her shoulders shaking. She was crying. She couldn't have been past thirty, pretty too, in a quiet kind of way.

I touched her softly on the shoulder and cried, "I said. 'Lie down.'"

The boy refused to lie down. He remained on his thin legs crossed. He was looking solemnly at the thick-skinned woman.

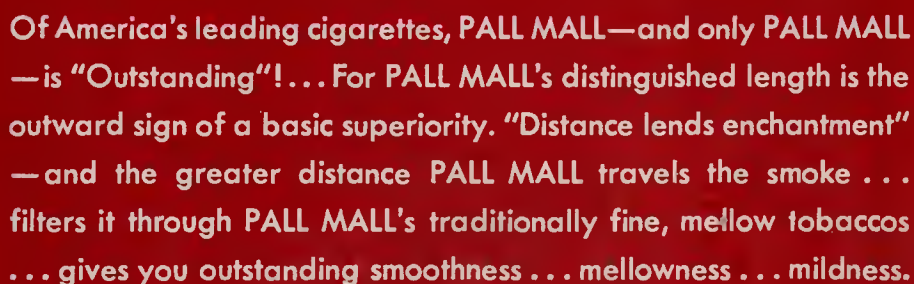

The old woman was touching her wits about her. She was looking at her husband. "We'll be all right," she said. "Don't you worry."

"Lie quietly," I told them. "Move around."

Then I saw the telephone table beside the bed. Al Spade was there. I must call Spade. He would help me.

It wasn't my worry now. I would be better to remain with my nose in the rug. I had consumed that way.

But I couldn't do it; I couldn't.

mild!

LIFE WITH MR. POWELL

BY JIM MARSHALL

This is Father to the life, as portrayed by William Powell in the movie version of Broadway's stage hit

At age fifty-five the well-groomed screen smoothie departs from play the lead role in Life with

ALTHOUGH the Oscars for the 1946 and so forth of 1946 have barred the wise boys and girls in Hollywood from picking a winner or two for 1947. One, say, will be Life with Father—and almost sure to be William Powell, who starred in the picture was made last year on the Warner Metro.

Also he has his hair back to normal—a redhead for several months while the picture was being filmed. Mrs. Powell campaigned for weeks to have her husband retain his hair permanently. He refused, on the ground it would make him look like Van Johnson.

Powell racked along for years at Metro, making about fifty pictures and becoming known as the Thin Man. Five years ago he asked Metro to make Life with Father for him, and was told no. Then Warners paid half a million for the picture plus a percentage of the box office. Powell was lent to Warners, and was.

Powell is the son of Horatio W. and Mary, both Pennsylvanians. His father was a accountant and Bill was born July 1, 1907, in Pittsburgh. He first saw the light of life 17 years later, when his parents moved to New York.

His first contacts with the stage were at the old Bijou Theater in Pittsburgh. The young Powell haunted the gallery and fell in love with the vision of musical-comedy stars. It had been understood at home that he was to become a lawyer and he almost got a split personality trying to decide whether to become an actor or an attorney.

In 1907 the family moved to Kansas. In 1917, when young Bill started in high school, his chief love interest in a school play, fell for his leading lady and told the family, he could become a lawyer. His father thought so, and he was kept at his studies, his mother's University of Kansas and condemned to leave college, plus three years of law school.

Contemplating this appalling future, Powell fell in love again and decided to revolt. He got a job at the Kansas City telephone company and started saving for an acting course in New York. He needed \$700 for this, and he waited a few months. After five months the boy discovered he not only had money but also owed his old man \$50.

A long but successful letter to a friend finally won him a \$700 check, and he went to the acting course in New York, his mother's casting that no good would come of it. Months of training—during which he and his Kansas City sweetheart forgot each other—ended in Rex Beach's The Ne'er Do Well. His salary was \$18 a week, and when the show closed shortly after, he was getting \$40 and was writing "you-so, Dear Parents" letters home.

Throughout his early stage career Powell made it a hard way—which was the only way.

"I remember one company I played in," he said, "that possessed only one silk hat. Several members in the cast appeared in the same hat."

"As the hero of the piece, I always came off at the left stage, stuck the silk hat in the vision of the audience and stood there for my time. In the meantime, the hat had slipped out of my hidden hand by a stage hand backstage to the opposite side just in time to slip it into the villain's hand. The villain came into the scene in the same silk hat a minute before."

"Also, we had a 'crossover beard.' In plays where it was impossible for a character to go around backstage to reach the opposite other entrance. We usually had to play different roles. I had to play the juvenile's father. I would make my entrance from the side of the stage. I had to get over to the other side immediately, to enter as the father, yet have time to run around the scenes before."

"Out of the audience's sight, on the other side of a rack of all sorts of beards that could be changed on by wire hooks over the (Continued)

Unlike some of the neighboring Indian tribes, the Bororos are friendly to visitors from outside and, though usually shy, willingly pose for the photo-

AT HOME WITH THE JUNGLE GIANTS

A veteran explorer calls on the primitive Indians of Brazil's Mato Grosso and witnesses their weird tribal customs. It's a trip through a land of nightmares

BY SASHA SIEMEL

AS TOLD TO GORDON SCHENDEL

Make-up time for two Bororo belles, who paint themselves with daubs of yellow and black for a tribal ceremony. Fish oil and charcoal are the cosmetics

AMONG the Bororo Indians of Brazil's Mato Grosso it is the man, not the woman, who suffers the pains of childbirth!

I witnessed this biological impossibility while visiting the tribe several years ago with my wife and a native helper, Rosando. The Bororo village—a collection of single-family conical straw huts grouped about the large community hall, which also serves as a dormitory for bachelor youths—was hidden in deep jungle on the bank of the San Lorenzo River. We were welcomed by its dignified, if naked, chief—clad only in his headdress of red, blue and yellow macaw feathers, a necklace of gleaming tiger teeth, and a head-to-toe red paint job—and as we dismounted from our horses we heard agonized moans and shrieks coming from a dilapidated straw hut. Indians rimmed the doorway, staring inside.

Noticing our immediate interest, the chief led us to the hut.

Just inside lay a male Indian in a hammock, writhing and jerking convulsively, and screaming at intervals; he was obviously in almost unbearable pain. The Indians standing about stared at him dolefully, murmuring and shaking their heads in sympathy. I could see no wound on the naked man. I asked the chief, employing a groping phrase or two of my limited Bororo, what was wrong. He replied in Bororo, and Rosando, at my side, interpreted:

"The chief says, 'The man is having a baby.'"

At that moment there was a slight commotion behind us. Three women had just come out of the thick jungle,

one carrying a baby. The Indians instantly broke into a hubbub of obviously clatory expressions, all directed at the man in the hammock, the father. In the meantime the timidly approached her silently exhibited the naked boy, then disappeared into the interior of the hut. There was a cited babble of laughter, a pressed gifts on the new father accepting them as his due, leaving his hammock, now quiet, exhausted and pale from the ordeal.

No one had paid the slightest attention to the baby's mother.

A half hour later I saw her newborn infant tied to her, silently serving supper to her who lay in his hammock, in a convalescing.

I later learned that when a woman feels childbirth near, she informs her husband, then slips out of the village to have her attended, in the underbrush, a couple of village women and the baby back.

In justice to Bororo men, I add the reason for their behavior. They believe they are made for birth easier for their wives bearing the pains for them.

The Bororos are giants, most over six feet tall. They frequently are beautiful. At a high level of primitive culture ethnologically they are a cause—unlike the score of other Mato Grosso tribes. Bororos have jealously kept their ancient culture and their traditions.

Dependable CHAMPION

AMERICA'S FAVORITE SPARK PLUG

Farming is America's greatest single enterprise. The welfare of the nation depends upon it. More people are engaged in it than in any single industrial classification. While farm workers are fewer than pre-war, farm production is at an all-time high. Mechanized or power farming has made this possible; has revolutionized modern farming; has increased and diversified the average farm's output, many fold. Here is where spark plugs play an exceptionally important part in the daily lives of the users. Particularly noteworthy is the fact that Champion Spark Plugs are the overwhelming favorites in cars, trucks, tractors, stationary engines and other power farming equipment, because they're dependable.

degree, there are several good rules of thumb.

If your worries and fits of temper and spells of depression come occasionally and then disappear, you probably have not too much to worry about. Especially is this true if you know why you hit these low spots; if there's a good reason behind them. After all, a guy whose girl has just jilted him or whose business has just failed has plenty of cause to feel down in the dumps.

But suppose you get these "spells" more and more frequently? Suppose you find yourself flying off the handle at little things, and then can't understand why you blew your top, once it is all over? Suppose you catch yourself taking offense needlessly or staying away from people or kicking your wife in the shins because she trumped your ace? If you're going that way, brother, then maybe you ought to see a doctor.

Imaginary Symptoms of Neuroses

Not necessarily a psychiatrist, however. In the first place, there aren't enough to go around. And in the second place, their labors have been complicated by the enormous number of perfectly normal people who think they recognize the symptoms of neuroses in themselves.

Sometimes the results are just plain silly . . . as when scores of two-beer-limit drinkers saw The Lost Weekend and came tearing into hospitals, calling themselves full-fledged alcoholics and begging for the cure.

Sometimes it is much more serious. In a Middle Western high school within the last year, it was found that an entire clique of young girls had been indulging in sexual adventures. Shocked parents demanded the prosecution of the young men who had led their daughters astray. But when school officials investigated, they found that it was the girls who had been the aggressors. One young lady suavely explained she had heard that psychiatrists advised that "a little sex is the best cure for your repressions."

Reputable psychiatrists, it should be quickly stated, don't give such advice. Yet this is one of the commoner public misconceptions that the good doctors have done all too little to disprove.

A rather beautiful young lady recently pitched herself into oblivion from one of our taller buildings. She left a note saying, "I'm too much like my mother to make a fit wife for any man."

Without question, she was a case for a psychiatrist. Normal people, by definition, don't commit suicide. But instead of getting guidance and insight from a competent professional, she picked up a whale of a lot of misinformation and brooded upon it.

Between such extremes lies a host of people who have been encouraged to complicate every simple problem of life by attacking it with psychiatric weapons. (These people differ vastly from those whose problems are deep and basic—such as those described in Collier's recent article on the Southard School, Spare the Child, August 2, 1947.) There is, for example, the mother of fresh little Johnny, aged six and about as naughty as any healthy six-year-old is capable of being. What Johnny probably needs is an occasional light spanking and a lot of loving and attention.

But Mama, whose name is legion, is too busy watching Johnny's reflexes to supply either need. Half the time she has her nose buried in tomes on child guidance. The rest of the time, when her energetic offspring finally manages to get her attention by slinging the Sunday china through the windows, she is des-

perately wondering whether to apply the methods described in Chapter Six or to follow the outline of Chapter Eight. After a few years of "psychoanalyzing" both herself and her little incubus, Johnny's Mama realizes that she has a full-fledged "problem child" on her hands.

When Mama doesn't haul Johnny off to a psychiatrist, she often goes herself. The head of one expensive private mental hospital has developed a neat formula for handling such cases. As soon as he can determine that they suffer from no deep-seated mental or physical complaint, he accepts them for treatment on the theory that the best thing for both mother and child is a short period of separation. Mama is then given an intensive course in how to handle her little darling. As soon as she has unlearned her collection of fancy and conflicting theories and learned what nature is reputed to teach most mothers via instinct, she is discharged and returned to her family.

For every amateur psychiatrist who "analyzes" himself into a breakdown, there is another who goes around seeking others as victims. These carriers, the Typhoid Marys of amateur psychiatry, are even more dangerous.

Consider, for example, the young lady psychologist (not a psychiatrist, mind you, but a psychologist) in a New York school. When an eight-year-old boy was reported by his aging and overworked teacher as "unmanageable" and "mal-adjusted," his case was sent to the psychologist. This young lady, steeped in her reading of Freud, proceeded to search for the cause of the lad's trouble. When she found that the kid cut the heads off paper dolls, she thought she had something. When, under her constant prodding, the obliging youngster confessed that his grandfather had cut the heads off several people, she *knew* she had something. "Obviously," she concluded, "the lad was burdened with guilt."

The kid's parents were called in and told that they had a "problem child." They immediately started running their vastly amused little brat around a course of psychiatric clinics. At the three-quarter-mile post, a sensible psychiatrist finally broke through the parents' anxieties to reveal that there was nothing very much wrong with their child except a perfectly normal impulse to tell a good story, and even stretch the truth a bit if it pleased his audience.

Dangers in Psychiatric Jargon

Almost every physician can certify to the dangers, the far from imaginary dangers, that arise when patients have swallowed a mess of psychiatric jargon they cannot digest. Many severe diseases first show themselves through symptoms such as headaches, stomach pains, nervousness, dizziness, nausea or insomnia. The normal patient avoids rushing to the doctor every time he notes a symptom. But continued attacks usually bring him around for a checkup.

Increasingly, however, physicians are coming across cases which have ignored these clear danger signs despite long persistence, simply because they have heard that they are the common physical complaints of neurotics who really have nothing "organically" wrong with them. When such people finally discover that their troubles are very real indeed, their disease may have advanced far enough to require prolonged treatment or an otherwise unnecessary operation.

At the opposite pole are the patients who have been so thoroughly sold on the deep significance of their slightest neurotic traits that they refuse to believe that they are only slightly off the beam. Such

—and under the headline Seen in Neurotic Ills"—Dr. words seemed shocking in- e same Dr. Menninger, three testifying before a Senate bout the psychiatric dis- the Army, was careful to e figures in infinitely more rms. "Many of these indi- then said, "are in better

health than when they entered the Army, a great majority are symptom-free, and few have required further hospital care. It is safe to assume that a high percentage of the individuals discharged from the Army for neuropsychiatric causes are working in civilian life and that, individually and collectively, they are essentially no different from other members of community life."

Psychiatrists shout about the 1,750,000 men rejected for service on psychiatric grounds—a figure six times higher in World War II than in the first World War. But they seldom add an explanation that the draft cut far deeper in this war than in the last, affecting older age groups and tearing husbands from families. Nor do they seem to make much allowance for the fact that most of the men drafted in the first war never were screened by psychiatrists at all.

They Don't Tell the Whole Story

Like grim prophets of doom they bring forth the shocking news that 327,000 soldiers and sailors were discharged during the war for psychiatric reasons. But one looks in vain for the further explanation that this was only about 2 per cent of the armed forces or that some men were in combat for periods longer than the entire span of America's active participation in World War I.

When consideration is given to these factors, the scare-figure of "8,000,000 mentally diseased Americans" begins to seem just a mite less frightening. For that gigantic total is not the result of a careful census. It is derived simply by extension of the draft statistics to the entire population.

Included in it are millions who hold down jobs, marry, raise children and live to a ripe old age without ever going off the reservation. They may all suffer from "personality disorders," they may be neurotic, overtimid, overbold, occasionally depressed, undersexed, oversexed or badly inhibited. But the vast majority of them will never end up in a padded cell.

If all of these people—including you and me, Dear Reader—could get some psychiatric attention, there is not the slightest doubt that many of them would be far happier, far more effective in their jobs and far less irritating to themselves and their families and friends and neighbors. But the realities of simple arithmetic make that impossible. In all America, there are only about 4,000 psychiatrists. Nearly 2,500 of them are holding down jobs in mental institutions. That leaves only 1,500 certified psychiatric special-

ists available for some 140,000,000 of the rest of us. Obviously, the psychiatric specialists cannot even see all of us, much less cure us if we need a cure.

It is true that there are 600,000 patients in mental hospitals—and there would be more if these hospitals were not too overcrowded to accept them. Yet a substantial and growing proportion of these patients are suffering from the diseases of old age—senile dementia and hardening of the arteries. A good part of the apparent increase in our mental hospital population is due to the fact that more people live longer nowadays—long enough to develop degenerative diseases of old age. Careful studies, especially in the Massachusetts State Hospitals, indicate that, except for the aged, there has been little if any increase in severe mental disease in the last forty years.

But when we leave the psychotics and turn to the people with emotional disturbances, the neurotics, what do we find? Once again, the figures can be made to give almost any answer you are looking for. If you spend your lifetime as psychiatrists do, interviewing and treating disturbed people, you tend to get a very special and very dismal view. You emphasize the 8,000,000 you *think* are sick. You tend to forget the 133,000,000 who never come to your attention.

As Dr. Burlingame has put it, "It's about time we told people that at least 90 per cent of them—maybe more—are within the normal zone. Sure they worry. Sure they have bad dreams, think evil thoughts, get pie-eyed now and then. But show me the man who doesn't have these troubles—ever—and you will be showing me a real candidate for psychiatric treatment."

It is precisely because so many of the symptoms of emotional illness are also the symptoms of physical illness that the scare campaign to emphasize our mental ills is so dangerous. Here is a list of sixteen most common complaints of neurotic veterans, compiled by Dr. Maurice H. Greenhill of Durham, North Carolina:

- Weakness
- Depression
- Irritability
- Sensitivity to noise
- Dizziness
- Excessive perspiration
- Dislike of crowds
- Fatigability
- Restlessness
- Anxiety dreams
- Loss of appetite
- Palpitation
- Tremor
- Insomnia
- Nausea
- Backache

All of these symptoms may be signs of neurosis, of deep-seated emotional maladjustment. But they may also be the warning signals of physical disease.

So take it easy, brother! Chances are

you're not headed for a bro. Even if you are, remember that not too many places in this country can see a psychiatrist.

But can a doctor, an ordinary help you? That depends on the doctor. There are still some doctors who emotionally disturbed patients brush them off as "cranks," "hysterics" or nuisances. But these are only in the minority. There is reason to think that mild cases of neurosis can get just as good a break (or a better one) from a general practitioner.

Dr. Denker Proves His Point

This was demonstrated recently to the chagrin of some psychiatrists by Dr. Peter J. Denker, a psychiatrist at New York's great Hospital. Dr. Denker carefully collected all the reports he could find of results achieved in treating neurotic patients by psychiatrists and psychoanalysts, and abroad. In several thousand cases he found specialists claiming a cure or improvement rate of between 50 per cent and 70 per cent.

Then Dr. Denker went to the Equitable Life Assurance Society and took 500 consecutive cases of patients who were receiving insurance compensation because they were incapacitated by neurosis and were unable to work. These were not border-line cases. They had been ill and totally incapacitated for at least three months before their claims were allowed, and they were treated by general practitioners.

Surprisingly enough, Dr. Denker found that 44.6 per cent of the patients were able to give up their insurance and return to work within a year. Another 27 per cent achieved a partial cure in between one and two years. Thus general practitioners were able to restore to normal life 71.6 per cent of these 500 emotionally sick patients. Only 28.4 per cent remained on the sick list after five years.

Such figures do not mean, of course, that there is no need for psychiatrists. Far from it. We need thousands of them as we now have. And a general practitioner worth his salt knows when he has done his best for a patient and when he must, if he only can, refer the patient over to a specialist. But Dr. Denker's figures do show that simple therapy, reassurance and treatment by a "family doctor" can often work. So relax, brother. Don't let the figures scare you.

The odds are all in favor of remaining just as normal as any one else. If you remain in a pretty wacky world, you do catch yourself head over heels in a breakdown, talk it over with your doctor before you buy your one-way ticket to the nearest lunatic asylum.

THE END

AT HOME WITH THE JUNGLE GIANTS

Continued from page 40

untainted by the white man. Shy of meeting white men, they nevertheless are friendly to the rare visitor, in contrast to the Chavantes and Yanayguas, who waylay and murder strangers.

But their fantastic tribal customs would convince a visitor from the civilized world that he had stepped into the land of nightmares!

The Bororos probably number no more than 2,000, scattered in a couple of dozen villages. Nomadic hunters, living on wild animals and fish killed with bows and arrows, plus wild fruits and roots, they construct their villages with no idea of permanence. When they have exhausted the game in the vicinity, they leave and seek an untouched part of the jungle, usually building on a riverbank. They make no attempt to grow food. They do keep dogs for hunting.

Conventional Native "Costume"

The Bororos daily daub themselves a uniform red from head to foot with the pulp of a wild fruit called *urucum*, both for decoration and for protection against insects. They cut their straight black hair in a long bob with bangs. They pluck out all other hair on their bodies, including their eyelashes. Each has his lower lip and the septum of his nose pierced for insertion of monkey-bone ornaments.

They consider themselves neither nude nor immodest. Once they have undergone the tribal initiation rites at puberty—rites not unlike a fraternity "hell week"—the girls don a two-inch square of cloth, suspended apron fashion from a string around the waist. And the boys wear a *ba*, a small strip of reed formed into a funnel; a "full-dress" *ba*, for ceremonial occasions, has a two-inch "flag" attached.

The two important men in a Bororo village are the chief and the medicine man. The chief is usually the largest and strongest male and the bravest hunter; he keeps his position only so long as he retains his physical superiority. The medicine man, however, is invariably the shrewdest person in the village.

The medicine man attends seriously ill members of the tribe and predicts the exact time when his "incurable" patients will die. To maintain his professional reputation, he then commits murder—and does so many times during his lifetime.

I witnessed one typical instance. The patient was a husky male Bororo, about twenty-five, who contracted pneumonia on a hunting trip.

With the sick man's family and friends, I watched the medicine man's first "treatment." A grotesque figure—his face painted black, gleaming white bones in his nose and lower lip; his feather headdress and skirt of loose palm fronds waving—the medicine man shook his gourd rattles and contorted about the sick man, who squatted glumly on the hut's earthen floor, his chin on his knees. The medicine man shouted and wailed at the evil spirits that had invaded the sick man's body, and blew in his patient's ears and spat in his face to force them to loosen their tenacious hold.

After nearly an hour of this, without any visible improvement in his patient, the medicine man halted his performance and came out of the hut. Dramatically he looked around into the circle of awed, waiting faces clustered about the doorway. Then he raised his left hand toward the sky:

"Meri, meri, meri . . ." he counted on his fingers. "Three suns he will see. Then he will die!"

There was a gasp from the sick man's wife, and then a low, howling moan. The others looked frightened.

The medicine man savored for a long moment the fear of the unknown which he had inspired. Then he strode brusquely through the group and disappeared into his own hut.

At sunset on the third day, the sick man, though flat on his back, was still alive. When the medicine man arrived, he was in the hut only a moment before the sick man's wife and children filed out, at his orders. In the fast-fading twilight, I made my way behind the hut and worked a small opening in the thatched straw—enough to see into the dim interior.

The medicine man muttered something and quickly squatted astride the man's chest. He slipped a rope under the man's back, tied it across his chest, and inserted a short stick under the knot. Then, raising his voice to shout at the stubborn evil spirit—and, incidentally, to drown out sounds of the sick man's cries—he quickly tightened the rope by turning the stick, tourniquet fashion. In a few minutes the medicine man came out

"See!" he exclaimed, as he exhibited the insects. "That's what made your knee ache. I got them out!"

The medicine man's cure for snake bite consisted of similar mumbo jumbo. And most of his snake-bite patients recovered. But this is due entirely to the law of averages. Only one out of four snakes that bite is poisonous, and only one quarter of the poisonous snakes discharge a dose large enough to be lethal.

The medicine man's racket naturally is well paid. No game brought in from the hunt can be eaten until he exorcises it of its evil spirit—in return for which he always selects the choicest cut for himself.

Bororos do not believe in any Happy Hunting Ground. Life after death for them is an unhappy, forced wandering about with the *hope*, or evil spirits, a wandering in which they successively inhabit the bodies of frogs, snakes and alligators, eventually progressing to become deer, the legendary ancestors of the tribe.

On one of my visits, I saw the funeral

in a horrendous painted mask. The male assistants went through a stamping dance, symbolically imitating the *hope* to show themselves.

As the dance progressed, the assistants withdrew and, dropping to fours, imitated the lunging and sliding of a tapir—thus becoming relatives of the *hope*.

The medicine man and the dancers now began, with much shouting, to drive the *hope* back to force them to resurrect the corpse. And the *hope*, snorting and lunging about on all fours, backed up toward the village. At a sudden signal, the *hope* caped into horses by dropping on all fours. The now eager *hope* jumped on backs and galloped back to the son's grave. They quickly dismounted, squatted about the little mound, clawed at it with their hands—moment, however, as it was maddeningly

While the dead boy's parents and relatives, together with the rest of the tribe, watched silently, the medicine man a large fire and flung into it the deceased's belongings, so that the happy spirit in company with the *hope* could not return to haunt the tribe. Then, with more incantations, the medicine man placed his palm-leaf cloak on the boy's grave, and

Early the next morning before the village had awakened, the five Indians represented the *hope* dug up the corpse, scraped off all the flesh (to be disposed of by vultures) and disarticulated the skeleton. They placed the bones in a little hut in the center of the village playground, topping them with the skull, and then, quietly, for the tribe always maintains the pretense that it doesn't know the fate of these five *hope*.

Rites Over a Prince's Burial

When the village awoke the next morning, all the bones were prepared, the dead boy's and her women relatives daubed their bodies with a black paste of charcoal and fish oil, and the men painted their faces with black arabesques. The women's bodies were red. They squatted about the dead boy's bones, blowing colorful feather headdresses on them and began the all-day *bakoro*, a general sing. They halted at sunset.

In the dark, the medicine man and his ten black-faced aides scrambled about the child's bones into a little basket, jumping into five canoes, paddled gently up the river into a quiet grove, walled by dark jungle growth. They maneuvered four canoes into a circle surrounding the fifth. The medicine man in each canoe raised an *aigwa*, a long, thin, roarer, the sacred noisemaker for burials.

Unwinding these—a bull-rug, thin-edged, two-foot stick attached to two yards of rope to a longer handle—the Indians, a few from the medicine man, simultaneously flung the edged sticks in the air by means of the handle sticks, beginning to swing them about their heads. First, the rotating blades made a roaring sound; then, as the tempo grew faster, the roaring became a high-pitched whirling. While one man whirled his stick, notes were of a deep, ominous, natural bass, another achieved a more angry note, a third became more demanding, and the fourth his tempo rapidly, so the voice whirling blade changed from a bass to a shrill scream and back to a

The men started wailing again in a lamenting tone, then the

"We look at things differently, I suppose. You can't forget that curly-haired sergeant, and I can't help thinking of those poor old American taxpayers"

COLLIER'S

HANK KETCHAM

of the hut and in a loud voice summoned his patient's relatives.

In an oratorical manner, the medicine man informed the gaping relatives that he had struggled mightily to oust the evil spirit: that he finally had succeeded in driving it out. However, just as he had predicted—and at this point the old rascal fairly oozed triumphant self-satisfaction—the sick man had lived to see only three more suns. He was now dead.

Executions are the province of the medicine man. He alone decides whether a baby is too weak to grow up into a strong Bororo, and he carries out his own decisions. A mother who gives birth to a child before her preceding child can walk must hand over the newborn to the medicine man to kill.

One baby, plus the entire family's household goods, is all she can carry when the tribe travels.

The medicine man uses spectacular trickery (and psychology) to effect his "cures." I once watched one treating a Bororo for a "pain in the knee," which was probably rheumatism. He first pranced around the patient, yelling and making menacing faces at the ailing knee in order to exorcise the evil spirit within. Then he squatted and applied his mouth to the knee. After vigorously sucking at it for minutes, he rose and spat out a mouthful of ants.

of the chief's son. The death, as usual, had occurred during the medicine man's final visit (and at the predicted hour). The funeral ceremonies extended over eight days.

Immediately after the medicine man had announced the boy's death and left, the parents and their relatives and friends grouped themselves about the corpse, and the wake began. To the accompaniment of wailing, snorting of wooden bass flutes and barking of calabash trumpets, the child's father—his hair cut close to his head to show his bereavement—recited his dead son's virtues, and the mother slashed herself with a sharpened mussel shell and smeared her body with her own blood, while women relatives jerked her hair out, a few strands at a time.

At sunset, the noisy wake stopped, and the corpse was wrapped in a palm leaf mat and carried to the public playground. There it was buried shallowly, under 10 inches of earth.

Each evening at sunset, for a week the dead boy's family chanted beside the little mound and poured water over the grave. The grisly purpose of this watering was to hasten decay and loosen the flesh.

On the morning of the seventh day, the *hope* were summoned with shrill blasts of a bamboo whistle. The medicine man,

Leadership Without Question

What is this Dodge leadership? Well, for one thing, it's the first car in history to give you the full combination of Floating Power, All-Fluid-Drive and Full Floating Ride.

Another leadership is the thing called style. People like the looks of the Dodge very much indeed. Even when there were only a few in the country, many folks thought they saw a million.

There's nothing for you to do but get the truth of these things for yourself. Dodge has been 'up there' for a long time. Come along with us.

rose and became angry, menacing, the tempo of their chant speeded, and the bull-throated moaning and the shrill screams of their whirling *aige* became more demanding, more threatening. And in the midst of this, the masked medicine man suddenly stood up in his canoe. Lifting the basket containing the boy's bones high in his hands, with a final scream of defiance at the waiting *bope*, he hurled it into the black water.

I have visited several Bororo tribes and always have been impressed with the craftsmanship the men display in making their weapons, ornaments and tools. They are painstaking. Using a chipped mussel shell for scraping and leaves of the *lixira* tree, which are like sandpaper, for polishing, they will devote two days to making a single arrow. They decorate their bows with colorful feathers, fur and inlaid mother-of-pearl. Their six-foot arrows have bone or hardwood heads, and they use several types—one with a device making it whistle in flight.

Women Skilled in Domestic Crafts

The women weave the cloth that is used for hammocks, their own little aprons, the shawl-like slings in which they carry their babies, and the base for the tribe's beautiful feather cloaks; and the women also do all the other work, including digging for roots, securing wild fruit, berries and palm hearts, collecting firewood and, of course, anything else necessary for the personal comfort of their lords and masters.

Bororo girls are betrothed early, often when only eight years old, although they do not marry until several years later. When a youth decides upon his bride to be, he calls on her parents with a gift and discusses the matter. If the parents consent, the couple become engaged. Whenever the young man wants to set up housekeeping, he calls again with another gift, and the girl's parents deliver her to his hut.

However, neither girls nor boys are required to remain chaste until marriage. And Bororo fathers have no compunctions about selling an unmarried daughter's virtue to a visiting prospector or cowboy. But if the girl should present the tribe with a blue-eyed or kinky-haired baby, the medicine man quickly disposes of it.

The average family has no more than three or four children, due to the high infant mortality rate and the tribe's ruthless custom of infanticide, eliminating the weak and the imperfect as well as the racially impure. However, Bororo parents are kind to their children, and a Bororo male is proud of his fatherhood and always ready to point out his sons.

I once witnessed a naming ceremony for a baby boy. (Girls aren't named; they are considered merely adjuncts of the men.)

Before dawn, the parents, their relatives and friends prepared the youngster, just able to toddle, by daubing him from head to foot with a resinous pitch, then coating him thickly with small, soft red and white breast feathers of egret and macaw.

Just at sunrise, the medicine man took the birdlike little toddler and sat him down facing the sun, with a circle formed by the Indians. Then he pierced the little boy's lower lip with a sharp, bone-pointed instrument decorated with bright feathers. Then he intoned, softly:

"*Piadudu . . . Piadudu . . .* I name you 'Hummingbird' . . ."

And the entire company, in a soft, gentle chant, repeated after him the name the medicine man had chosen:

"*. . . Piadudu . . . Piadudu . . .*"

One of the odd sights of a Bororo village is the domesticated macaws, the noisy, four-foot parrots whose brilliant plumage seems exotic even in the jungle. The Bororos keep these birds not for eggs or meat, but for their feathers, which

they use in headdresses and beautifully woven feather cloaks. And as sult the squawking macaws run about naked as the Indians, and as ugly as plucked, long-necked birds can be.

The Bororos are expert hunters though their only weapons are bow and arrows. Infinitely patient in the game, they often creep up to within feet of their quarry. They will wait hours on a riverbank until a big fish swims close enough to be impaled on an arrow.

I attended a big celebration one in honor of the slaying of a tiger. The women barbecued the carcass over a big fire, the men stayed their hands with palm beer. (When the hunter carved out of the clustered leaves top of a palm, the sweet sap collected in the cavity and fermented. The Bororo method of imbibing is athletic: shinny up the tree with a hollow dip this in the liquid, and suck down the tree.) I also passed around a bottle of rum, so by the time we were to eat, all the men were feeling happy.

Everyone sliced a chunk of meat from the carcass and gorged himself on palm hearts, cassava-root cakes and fruit.

The chief arose suddenly from squatting circle around the fire. In a sonorous voice he began reciting the important events of the hunt. Then he called on the other hunters, and gave his full-blown version of the inflating the part he and his dog played, of course. The women and children listened, awed, standing silent in the background. Afterward, the young men all rose for the dance.

The musicians assembled before the community hall—with bass flutes, bash trumpets and an odd-looking rinalike instrument of mussel shell.

Dramatic Action in Tiger Dance

The opening of the dance was by an Indian who suddenly ran from the edge of the jungle, imitating the tiger's mating call with an enormous trumpet. As he ran forth his spine-prickling roar, a Indian plunged into the firelight, holding the skin of a large tiger and a mask of the tiger's head.

Then, while the trumpeter continued roaring, the Indian in the tiger skin and ran in sudden breathless rushes about in sinuous, graceful movements that were an astonishingly close imitation of a tiger. The performance was climaxed by a re-enactment of the afternoon's hunt, in which the tiger skin repeatedly charged visible enemies, and bit at the "shot into him, and finally "died."

Abruptly the big bass flutes began to snort, the calabash trumpets barked the Indians with ocarinas bent shrill-voiced shells.

Twoscore painted and befeathered men, with gourd rattles, beaded hands and anklets and bracelets tling seed pods, began a slow, circling about the fire—stamping in crab fashion from heel to toe, circling from side to side—at the same chanting in a weird, stirring rhythm. Abruptly the women, outside the circle, began dancing an accompaniment of arms, striding forward six steps toward the circling men, then back. The Indian in the tiger skin, with a circle, still pranced and roared charged.

After watching for an hour I wearily sought my hammock on the edge of the village and crawled under mosquito netting. I woke up early near dawn. The big bass flutes still snorting, the ocarinas were and the barks of the calabash hoarsely staccato.

and spoke a name. But it came out of
 his sleeping and was not mine.

"No," I said as amiably as I could.
 "I'm Eve Gill."

Then the shock of full consciousness
 struck him. Memory with fear, all the
 dreadfulness of the night before flooded
 his mind, his face, his eyes. He moved
 violently, throwing off the rug and sat
 there in shirt and trousers looking very
 rumped but not at all unappetizing.

"You're the girl—" he began and
 broke off to look at me. He was seeing
 me, of course, only as a factor in the situ-
 ation, which irritated me almost as much
 as being called by someone else's name.

Then he was in a hurry wanting to
 know what had been happening while he
 wasted time in sleeping like that.

"Nothing at all in this part of the
 country," I told him, "but I wouldn't like
 to say the same about the parts you left."

"The papers—" he looked around the
 cabin a little wildly.

"Don't reach the house until after ten.
 It's now twenty to nine. We won't talk
 until we've had breakfast," I said. "You'll
 find a bathroom through there. There's
 a razor and so on in the cupboard over
 the basin. Can you shave in cold water—
 or would you like to wait until I've
 heated some? It doesn't take a minute—"

"Cold is fine, thank you." He was
 pulling himself together, deciding to take
 up life again in the best way he could,
 with attention to ordinary things. It was
 the right thing to do, of course, but there
 were people who would have taken
 longer to make a start at it. He had back-
 bone, even if his feet ran a shade too
 readily.

I left him then, and went to the galley
 where I was grateful for our rule that the
 Peacock's dry food stores must be kept
 up even in harbor. I made coffee, ome-
 lets, and large slices of toast for the
 honey, the salty heather honey our bees
 find in the wild flowers of the marshes,
 and without which I cannot feel the day
 has begun properly.

When I took the tray to the cabin
 Jonathan had finished in the bathroom,
 and looked better already. I was able
 to see him as he must have appeared
 before last night: a man of good back-
 ground, ability and assurance in what-
 ever his job might be, who dressed well
 but without too much attention to the
 affinities between tie and socks or shade
 of shirt in relation to suit, matters about

"Let's not mix our Geology with—er—ah—girls!"

NICK: Girls? Bu-bu-but, Sir! I wasn't
 doing anything wrong.

PROF: Perhaps not, my boy. But Nancy
 and er—that Jean devoted my lecture
 on Mesozoic Tectonics to observing you
 and discussing you—audibly. And favor-
 ably, I might add.

NICK: Ah—those kids! They talk-talk-
 talk-talk.

PROF: Quite so, Nick. But I dislike my
 discourses on Basalt structures to be
 broken by hoarse confidences anent your
 "good looks"—as they were. They ad-
 mired your shirt collar, too.

NICK: This? Why, it's just an Arrow Col-
 lar, Professor. All the smart dressers wear
 'em because they're the best lookers.

PROF: Is that so, now? But—er—as I

was saying: I was discussing igneous
 Basalt... You know, Nick, that IS a
 striking shirt, if I may say so. That
 waist, for instance...

NICK: Yeah! That's the Arrow "Mitoga"
 trade-mark design. Follows your body's
 lines, see? Another thing about Arrows,
 Sir: they tote that Sanforized label.
 Means "fabric shrinkage held to 1%."

PROF: Does it, really? Nick, perhaps one
 day would er—indicate the establishment
 where one purchases these fine shirts.
 What? You'll take me there yourself?
 GOOD! Thank you, my boy! Perhaps
 my girls will then pay a little attention
 to my lectures—

NICK: "Pay attention!" Professor,
 they'll CLIMB ON YOUR DESK! That's
 a promise!

"Psst! Comment on the new coat"

VIRGIL PARTCH

The snowman who came to dinner

He rolled in along about last January.
He was only going to stay for dinner . . .
But then he found out they always served
that *cool*, delicious Goebel Beer.
So he's been hanging around ever since.

GOEBEL BEER

Nationally famous for good taste

GOEBEL BREWING CO., DETROIT 7, MICHIGAN

men show considerable passion at the sight of food.

"I'm hungry!" he said, and I was the first entirely natural, everyday thing I had as yet.

I flickered over me with some thought, of me as a person, as the provider of the food badly. I felt, without need, legs were rather noticeably a feature of me. There were, in the towel coat being just as the bathing suit, which, I suppose, have been shorter. To my great pleasure he noticed my peculiar and particular alone would have been put him in the very small place for whom I feel affection.

about the bees and the house, about Father, the village, the backwater, and altogether generally it went on in this quiet corner. I did not dilate, however, on my occasional outburst of crime beyond saying that

"All right. It's like this. You asked me for a job and I had one going. They would have to believe it. The name you are calling yourself as far as I am concerned is, let's say, Singer—Alfred Singer. If you don't like Alfred—"

"It'll do," he said. "Go on."

"So however much the police describe you in the papers, and they can't publish a picture since there isn't one, how am I or anyone else to recognize you? Descriptions like that fit thousands of people. What motive could I have in sheltering you?"

He thought a moment, frowning.

"I wish I really knew what it was," he said, more to himself than to me.

My motive was the last thing in the world I wished to discuss with him, so I said briefly, "Let's stop moiling over my side of this. I told you last night we need help over this picture affair."

We ate nectarines. I could see what was in his mind now. It became too much for him to hold, and the words came out:

"I hope to God she's all right."

I said as casually as possible, "Why not talk about last night a bit? It won't hurt me and it may help you—getting it off your chest."

of his early days in South and again created excitement but I could see Jonathan was. The Old Woman in a and it difficult to reconcile places in which he had found with which he was now

pitly determined we were to know which darkened even which filled the cabin, its could not be denied much thought it best to turn to it

me with haunted eyes. "You do, except in the most case? I must get on, out of I can. Every minute I with you, you are more lived."

lightened. Wouldn't it take me? I would say you asked offered you a job and you

You mean to do with that That would be as bad as you."

nothing! This ketch has to look after it. You know but, don't you? Everybody

do. I've sailed a bit. as this." He looked at me

He looked at me; he was obviously by nature a reticent man.

But it was too late to distrust me.

"You see," he said, "she's all alone now. I've had to clear out and leave her to it. I'd meant to keep close, in the background, and see her through the worst of it. He wouldn't let her have any friends—his damnable jealousy was always taking care of that. His friends won't care what they do to her. And she's sensitive, terribly sensitive. . . ."

Selecting another nectarine, and again casually without looking at him, I suggested he should begin at the beginning.

After another pause he did so, and once started, the whole story came tumbling into words. The cabin, which until then had held only the two of us, filled with the presence of Charlotte Inwood and his absorbing interest in her, his devotion. I felt suddenly far away from him, as though the table between us widened swiftly like a vast plain, making me smaller and smaller in his consciousness.

I listened with all my ears, not daring to interrupt with questions lest I break the preoccupation in his recent past which enabled him to talk so unreservedly. He was so sure their love affair had not been noticed by anyone; he clung to this as the one straw to save her from the flood of their disaster even though he drowned for lack of one for himself.

"So you see," he finished, "how shockingly difficult things may turn out for her. Although I can't see how, they may find some evidence of my knowing her. As

things are I might have been doing so badly as an architect that I had to knock someone on the head for what he had on him—or in his safe. And being an architect I might logically have chosen a millionaire building contractor. That will be the police explanation."

"Are you—I mean were you doing badly as an architect?" I asked.

"Not very well. I've only been out of the army a few months—and I'm a free lance in a world of combines and government industry."

"I don't know you very well, of course, but wouldn't murder for profit be rather out of character? And apart from that, don't architects have a good deal to do with builders? I'm trying to reassure you about Charlotte. Won't the police be inclined to look first for a business connection between you and Inwood? He doesn't sound a pleasant type. You may have quarreled with him—"

"He was a perfect swine," Jonathan said. "He was asking to be murdered by someone."

"There you are. That will come out and I'm sure they'll decide there was a business connection. The chief point is, of course, that lack of motive isn't likely to be bothering them when there's such direct evidence against you—the wine merchant seeing you. It's when they can't see who did it that they look around for a motive which will lead them to the criminal."

"I see the point. You seem to know a lot about these things."

"Naturally," I said in my gun moll's voice.

"Oh, yes—" He looked at me, puzzled again because he could not reconcile me with a life of crime.

"Another thing," I went on. "If this Freddy Williams man is really a friend of hers, and he seems to be if she can rely on him to the extent of asking him not to give away the fact that she wasn't with him all the evening—well, she isn't quite alone. He'll see her through."

THIS thought, which should have pleased him, did not. I can't say I expected that it would; but I couldn't resist putting it forward. I was beginning even then to feel that Charlotte was not quite the helpless clinging vine he liked to think she was, and I suppose I was watching out for every opportunity to undermine his feelings for her. After all, I already knew I hated her worse than poison.

There was an interruption; the flat phut-phut sound of Father's motor-driven bath chair, which became louder as it neared the beach, meant he wanted me for something. I told Jonathan to keep quiet where he was. Father couldn't come any closer than the beach unless I fetched him in the dinghy.

I went on deck. The bath chair stopped at the end of the path, before the pebbled slope down to the water. He only wanted to say something. He said it in his best quarter-deck voice:

"Take the Daimler and drive over to Lowestoft and fix up a crew! I want to cross tomorrow or next day!"

My first instinct was to argue, but I had a second thought; this was really exactly what I wanted. I waved acknowledgment; he started up the little engine and phut-phutted back to the house, and I went below again.

"By tonight," I told Jonathan, "you'll be an accredited member of this ship's crew, and by the day after tomorrow, if not before, you'll be somewhere off the coast of Holland. On Saturday, when we're in Amsterdam, I'll find you somewhere to live. You can then jump ship. You'll have enough money to look around for a job and start a new life."

His reaction to the plan did not surprise me. He looked blank. Theoretically it solved his problem, if it came off. But on the other hand when faced with it he did not want to put himself out of

Can you fill them?

You're walking in proud shoes
when you try these on for size —
the boots that hit the beach at Leyte
and took the Rhine in stride.
Scarred by Pacific coral,
stained with the mud of France,
they got a cleaning and a polishing
before they swung high, wide and handsome
down Fifth Avenue.
Museum pieces? Not these shoes.
They're not in a glass case
for people to stare at.
They still have work to do.

If you're man enough to fill them
you'll travel far.
You'll know the value of good comrades,
discover what it takes to be a leader,
learn how to handle new machines
and — more important — men.
You'll teach the meaning of democracy
to people groping for it.
You'll help to keep your country
strong and free.
If you can fill these shoes
you're on the first team, Soldier.
You're a Regular Army man!

ould be his reward, if he lived

splicing was part of the act he put on to
convince people, including himself, that
he was a man of the sea. He sported
bright red, dangling mustaches and a
grating voice as dry as the oakum he had
never hammered beneath a caulking iron
(though one suspected he had spent a
considerable period of his early life pick-
ing it).

"Mafeking," I said presently. "Father
wants another crew. A week's trip."

"I thought your old man had settled
down for a bit."

"You know him."

"Yes, I know him. Of course I can dig
up something. . . ."

My view that Mafeking Bostock was
the right person to go to at this moment
was confirmed as the conversation pro-
ceeded. He carried most of it, and him-
self away with it, becoming increasingly
ready to admit that when it came to look-
ing for the man who really wielded power
in the town and harbor of Lowestoft, you
need look no farther than the bench on
which he was sitting.

Before he could pause and remind
himself that man is like to vanity, I put
the suggestion, heart in mouth, that if he
could provide me with a seaman's papers

Afterward I went shopping for John
Hobhouse. The chandler's shop in the
harbor district had all he needed for the
moment: secondhand but very clean
dungarees, a heavy woolen jersey and so
on.

I stowed it all out of the way at the
back of the Daimler, and bethought me
of my own needs. Miss Vandelte had
not made me any underclothes for ages.

It was this almost chance notion to go
to see her which I like to think brought
about another turning point in the story;
this and again the fluke of circumstance
that Sophie, Countess of Inderswick, had
not yet sent for her new nightdress.

I knew it must be Sophie's the moment
I saw it on its puffy silk hanger, cascading
its white satin against the purple flowers
of Miss Vandelte's workroom wallpaper.

Sophie was the only girl I knew who
went to Miss Vandelte and was both rich
enough and shameless enough to have a
nightdress like that, with the lace in the
places where the lace was.

While I looked at it, thinking the sort
of thoughts which it started off, I came
naturally enough to Charlotte again.
Charlotte in her white dress, her ruined
white dress. Stepping out of it in Jona-
than's flat, and Jonathan remembering to
bring her another one. . . .

The purple flowers on Miss Vandelte's
wallpaper were swimming together in the
queerest way.

No woman, and Charlotte was a
woman whatever else she might be,
would have failed to notice the state of
her frock, no matter how frightened and
upset she might be, and she would have
done something about it at once; she
would never have left the house in it.

And after all had she been so upset?
Hadn't she thought up the burglar idea
and been aware of her need for an alibi
before she reached Jonathan?

IN SHORT, she had not been consistent,
and I could explain it in one way only.
She had continued to wear the frock on
purpose.

Why?

Because, by appearing like that at
Jonathan's door, not only distraught
but bloodstained, she had deliberately
shocked him into acceptance of anything
she wanted him to believe.

I did not know why. But it was a
question to which the answer might
possibly produce quite a different picture
from that which Jonathan believed to be
true.

At the very best it suggested one most
important likelihood: that Charlotte had
not banged down the candlestick on
Joseph's skull with as great an innocence
of intention as she had led Jonathan so
readily to think.

The wallpaper refocused.

"You were saying, Miss Gill?" I heard
the dressmaker's voice.

"Look, Miss Vandelte. Would you be
very shocked if I said I wanted two com-
plete sets of everything in black. Black,
with pink here and there if you feel your
conscience pricking you?"

"But with pink it is *much* worse," cried
Miss Vandelte happily. "But you are so
young for black. And for the country,
with your light frocks, and summer just
beginning."

"I think I shall be spending the next
few weeks in London. I've a sort of feel-
ing I'm going to have to be quite sophis-
ticated and move around among people
where that sort of thing would be ex-
pected of me—" Yes, I would go myself
personally to London even if only to take
a look at Charlotte. I might find what I
expected to find; what I wanted to find.

The bank was within two minutes of
closing but I got inside before they shut
the door and had them transfer five
hundred pounds to my credit at their
Piccadilly branch.

I drove home faster than I had ever
driven.

After leaving the main road I turned

Gentleman's Agreement

CHAPTER ONE

ABRUPT AS ANGER, depression plunged through him. It
was one hell of an assignment.

"You'll find some angle," John Minify said.

"It'll need an angle all right." He squinted his eyes and
looked off past Minify's shoulder as if he were taking the
measure of some palpable thing there.

"Take your time on it," Minify spoke without urgency.

"I think you might turn out a great job."

Philip Green nodded, not in agreement with the com-
fortable words, but in affirmation of his own estimate of the

all, for once, they've followed the book exactly as it was written"

duovay, splicing a rope. He was
a the loose ends of rope as
his life depended on them. I did
er not, although I knew that the

for which the rightful owner had no
further use, it would enable me to raise
one member of the needed crew myself,
leaving only two to him. He accepted
the idea at once, with a wave of the hand
which implied that nothing was easier.
In point of fact, of course, nothing is
usually more difficult.

Twenty minutes later I had a neat little
packet in my handbag which would go
most of the way toward establishing
Jonathan as John Hobhouse, of 12
Station Villas, Hailsham, who had spent
the last twelve years, including the war,
on various ships of various lines and
companies, mostly in Pacific waters.
Judging by the dates in his certificate, his
home, if indeed it had not long ago
ceased to be that, could not have seen
anything of him for years. I wondered
where he was now, that he had been able
to part with these precious documents.

The remaining two men would report
to the Peacock at Kessingland this after-
noon, which did not give Mafeking much
time to pick out a couple of victims who,
being sufficiently in his toils by black-
mail or debt or whatever other lever
came to his hand, would serve on the
ketch without curiosity and leave her
without troubling their memories about
where she had been.

MERCURY—DIVISION OF FORD MOTOR COMPANY

road by a short cut along a marsh track which brought me to a hundred yards from the off which the Peacock lay. Out of sight of the house and safely in three trips to carry a new kit from the car to the ketch.

Glad to see me, and surprised, I found how far I had managed to impress him as a seaman. He passed by the John Hobhouse papers, which were of course important. The clothes fitted him, he showed signs of cheerfulness. I sense of urgency. I wanted more to get to London without first I had to have as much as possible from him about what he had left, while on my side I put as much as possible into the conversation. I told him about Charles, who was sailing as engineer, and the crew with the two further would be arriving this afternoon. I said, if asked why he had not boarded so soon himself, that I had him with Mafeking Bostock looking for men.

I realized suddenly that all this meant in being out of touch with the situation in the alarm came into his voice:

"Ship at Amsterdam, how can you communicate? You're the only person I can use."

"I write," I said. "Eve Gill, Suffolk. If John Hobhouse has an address on a post card, I can send the English papers and a chatty letter and then. It would be perfect."

"It would be fine," and he added, "If only you could see Charlie."

"Comment; my intention to see him as a matter entirely for myself again that he still did not know was doing all this for him. I get we made a bargain," I said, and I hung off the question.

The memory I took with me was of a man with sun shining on his face, the skylight, and troubled eyes, doubtful even to suspicion. It was the swaying of the dinghy across to the dock, but for the first time in my life I understood that I can really have a sinking feeling.

A few minutes with the Commodore to make sure he did not change his plans for Holland.

Now is fixed up. Bostock had the spot, so I brought him home. The other two will report tomorrow. I'll look after things here and be away."

"Where's he going?"

"Harvey Gill, for one. If we were on a trip at the same time after the picture was taken."

"Not stolen!" he scowled at me. "What she calls it—and no one takes the police."

"I'll see," Billy Bull rang up this time.

"It tightened. Billy Bull is a son of the East Suffolk Con-

"He has sharp eyes. 'What's the point I'm frightened of Billy Bull?'"

"I said, and did not add that I had more reason than he suspected."

"I said he was welcome, although I have to look after him—you are going to be here, you give him breakfast."

"I went upstairs to pack. I went at it slowly, even to the things I would need. It took less than an hour. I was on time until Father was on the road."

board the ketch. I decided on a small black hat dominated by a soft but sophisticated black ostrich feather, a hat which sometimes I felt had set me back too many guineas; at other times I did not, and this was one of them, for it was the kind of hat which might bolster up the ego when things were getting it down, a not unlikely situation as I imagined the problems with which I was tangling myself.

A hammering echoed from Charlie's workshop next to his cottage, and I remembered that he would be one of Jonathan's companions on the Peacock. I could spare the time to walk over there.

Charlie, whom no one ever calls Beddington, which is his surname, is a queer one according to the village, which does not understand him. He is an educated man, but taciturn even among the Suffolk people, who as a rule do not care for conversation. Also, he is twice the size of the biggest of his brawny tribe. When I was little he was like a mountain to me, and although I am now grown up and five feet six and a half inches tall, I

have to stand well back when I am talking to him if I want to look him in the eye without risking my neck. And he is thick the way an oak tree is thick. His other characteristics of note are an inventive genius, continuously devoted to useless ends of a mechanical nature, and a tenacity of purpose in anything to which he puts his hand, which most people end by calling damned obstinacy. He is on the Commodore's pay roll as "Chief Engineer," largely because both of them like to know the other is around, enjoying a great but silent admiration for each other. For me, I like to believe that Charlie will do anything in the world for me, and to start Charlie on something is rather like taking the brake off a steam roller at the top of a hill. You know it will get to the bottom all right, but you also know that the brake isn't going to be any good if it meets something on the way.

He was squatting without his shirt like an animated bronze in the doorway of the workshop, bashing a sheet of iron with a five-pound hammer, forcing it by sheer strength into a shape it had no wish

to be. Pieces of disintegrated tractor were heaped around him. Leaning against the bench was the canvas bag he always takes with him on the Peacock.

I had to shout his name above the din before he realized I was there.

"I'm not going to Amsterdam," I said, "but you'll have all the help you'll need without me. Crew of three. I've just put one of them aboard. He knows a bit about engines and small ships, and is generally intelligent."

"Bostock's men?"

"Yes. Hobhouse—the one I mentioned—is likely to be the best of the three, a cut above the others. He'll want to be friendly."

"Aren't I always?" he asked defensively.

"Well, he's an educated man."

"Which means that he'll assume the police are looking for me as well as him."

I HADN'T meant anything so awkwardly likely. But Charlie is very shrewd; it's no good trying to fool him.

"Maybe," I said, "but he'd never let you know he was assuming anything about you."

"You fancy this bloke?" Charlie lammed the hammer down on the piece of iron, not maliciously but to disguise his interest, which is constant, in my relationships with his sex.

"I like the look of him. He might do as a permanent member of the establishment. That is, if Father doesn't take against him for some reason. I'm going to London for a few days, but you need not mention that to Father. In case of emergency you can reach me through Aunt Florence."

He nodded, and I went back to the house a little comforted by the thought that I had probably succeeded in putting Jonathan under Charlie's faithful wing. It eased the tension a bit, and I realized it was nearly two o'clock and that I was hungry. I ate salad and cheese from a tray by the fish pool, feeding choice bits to a carp named Albert, the pool's elderly inhabitant.

The old house and the older wood, the flat marshlands and the wide hazy sky, this was my place and most of me. Far away to the south, London sprawled, man-made in another world, slowly building again where man had laid it in ruin; dirty, dangerous, nothing to do with me or my people, but where I had chosen to fight my very private war. I did not know the ground nor the hazards. I felt unarmed and unprepared for their unknown elements, and the more so when I had to sit still like this and could contemplate them.

I finished lunch, and took the tray back to Mary. I spent twenty minutes checking over the Daimler, filled the tank, and the time was still only three minutes past three. I was getting desperate, and began to toy with the notion that I would start now and chance trouble with Father.

I took a firm grip on the impulse and went up to my own room. I did my hair and put on the black hat and felt stronger and a little more patient.

At ten past three the motor of Father's chair started up. I ran to the end of the corridor where the window looks down on the courtyard. Father, accompanied by the two maids and Fred the handy man, all loaded with gear and equipment and odds and ends he would need for the voyage, was on his way to the beach. On his knees was a flat brown paper parcel about the size of Rembrandt's portrait of The Old Woman in a Shawl. . . .

At four thirty-one I swung the Daimler around the sharp corner of the turnpike on to the main London road and put my foot down hard.

I stopped at Saxmundham a little before five, to buy the noon editions of the three London evening papers. I could see the headlines from ten feet away. Joseph Inwood may have had only a little fame in the financial columns on the in-

he was alive, but he had certainly been on the front pages with the story of his dying.

Back to the car and digested the news of the same story. There were many differences between them, but having had little time to details, the "personal angles" were involved, and to do any in- of their own. At this early distance, the chief actor in the story, Inwood himself, was seen through the reference books. I interviewed the widow and the man of the Inwood Corporation, and he told me up to the time of going to the office which must have been around

accounts also agreed in saying that Inwood was prostrate with a doctor's orders.

In the stories was a paragraph that the police were anxious to see Mr. Jonathan Irwin Penrose, who appeared last night from his home from the scene of the crime; he had been discovered abandoned in a car near Hyde Park Gate. An intensive search is being made by the police throughout the city, but no trace of him has been found to the time of going to press. The police forces have been following Penrose's full description, and the following.

The first thing I could find anywhere was an unhappy story shone out from the description of Jonathan. Not a single one of his features could I recognize, except that he was of average height and that his hair was brown.

"Last night" editions were in the city to buy them at Colchester at six. They added what is missing to the story. Charlotte now "the beautiful Mrs. Inwood" known in café society, the stage of the arts has been the life of many struggling writers, musicians; and, in another: the same world has long acquainted with Mrs. Inwood the

well-deserved title of 'Mayfair's best-dressed woman.' But apparently no one had succeeded in seeing her since she had become a widow. Joseph came in for a number of wreaths designed in the best cliché manner for departed money men: "a powerful figure in the city" . . . "will be long remembered for his spectacular rise to fortune in the great building combine to which he gave his name" . . . and, "a businessman whose wide interests, both at home and in the colonies, made him an almost legendary figure" . . . "Certain industrials showed weakness, notably a marking down to 53/6 as against yesterday's price of 55/9 for Inwood Corporation's Ordinary A shares. This was attributed to the sudden death of the chairman. . . ."

Nowhere, as far as I could see, was Joseph Inwood referred to as a human being. None of it solved my problem; indeed, the complexity of the world to which these people belonged seemed worse than ever.

The search for Penrose, said all three papers, had been intensified, and now embraced the whole country; ports, sea and air, were being watched. The police were keeping the wine merchant's clerk away from the press. The case was simple; the young man's eyewitness evidence of the wanted man's flight from the scene, including the jettisoning of the murder weapon, the candlestick, was circumstantial but sufficient. Superintendent Jupp, "the man who solved the Doverside murders," was in charge of the investigation.

On the wider road below Colchester I kept up a high average as far as the London outskirts at Woodford. It took me half an hour by the northern route into town to reach Kensington and, after two inquiries, found Cary Gardens at exactly half past seven.

I parked the car near the Brompton Road end, locked it and made an unobtrusive approach on foot. I could see which was the "murder house," as the reporters called it, from a comfortable distance. Normally it would be a quiet road, the big houses respectably and solidly aware that they were sheltering

the best people. But this evening things were different with Number 4. People clustered around it, staring with expressionless faces. Five or six cars were drawn up at the curb, there were two policemen on the steps, and two more dealt with a steady stream of sight-seers.

The journalists were easy to identify. The police let them hang around the door, and most of them dangled dead cigarettes from their mouths; three had cameras hung around their necks, and all had tired but patient faces.

I crossed the road and joined the group of people who stood by the gardens where they were moved on less often. They stared at the house and discussed the murder. I was as much on the outside as they were but it was worse for me, worse even than for the waiting newspapermen who had their livings to make, for, in all this crowd, against the police, in the face of the whole country's certainty that Jonathan had killed the man who had lived in that house, I stood alone, the only one who knew enough of the truth to try to save him.

I knew Charlotte had killed her husband. I knew quite well, when I faced it, what I had to do. I had to make the police give up their Jonathan theory and think about her. That was all—except, of course, if I wanted Jonathan for myself I must never let Jonathan find out what I had done—if I wanted him for myself. If I wanted him? Did I? If I didn't, why was I standing on this pavement in front of Number 4 Cary Gardens?

I expect I could have gone on thinking round and round that question for some time, but it was just then the front door opened and four men came out. At the same moment the police car nearest the house moved up the few yards which brought it opposite the door, and the four men, about whom I had no time to notice much, because the reporters surrounded them instantly, started to climb into the car.

The reporters were being insistent. One of the four appeared to be saying a few reluctant words. Notebooks flapped open; they were not going to be allowed to get away easily.

I ran to the Daimler. The four, or at least some of them, were Scotland Yard higher-ups, and, as I saw it, they would have to get out of that car again sometime, somewhere, and while obviously I had no chance of getting near any of them in this crowd, I might have one at the other end of whatever journey they were making, probably to Scotland Yard; my main thought at the moment was the police and how to get close enough to put an idea into their heads, and it instinctively set me off in the main direction of these difficult and exclusive men.

BY THIS time I was in the Daimler, which, mercifully, was headed down the street the same way as their car, and when it pulled away from Number 4 there was only a gap of fifty yards between us. I closed it sharply, confident that no one had taken any notice of my dash away from the house instead of toward it. Or at least the detectives had not, and they were all that mattered.

We turned into Fulham Road, and drove sedately westward. There was plenty of traffic, without being too much, and I could safely keep a van and another car between them and me. I began wondering more anxiously about the likely difficulties at Scotland Yard. I had to find or create a way into the present situation which did not connect me personally with it. I must not have any visible or invisible and detectable link with Jonathan.

I felt a hot wave of panic and despair sweep over me, and I think it was at that particular moment I realized fully and completely, for the first time, how difficult this job was going to be. It was a peculiarly vivid and unforgettable real-

ization which even now I can still feel.

In the same way, I remember the next few seconds, when the panic wave subsided as suddenly as it had risen because the police car most unexpectedly turned into Sloane Avenue and stopped twenty yards or so down it. This caught me unawares, and I almost stopped too. I drove past them, leisurely. One man got out. I watched in the mirror as he touched his hat, and the police car drove on. Now I could stop, which I did on the opposite side. One of them alone in Sloane Avenue was a gift from heaven compared to any or all of them in some unbreachable Scotland Yard fastness. I let the police car go, switched off the engine and took a very deep breath, a luxurious in and out relaxing of tension. I had not the faintest idea what was going to happen next, but I did not feel as I had felt a moment before, that I would be quite helpless.

I DID not even have to move in my seat to watch him in the mirror. He was an ordinary man, in an ordinary dark blue suit, with a blue shirt and dark tie.

He was looking at his wrist watch and making up his mind about something. He started to walk. I let him reach the corner of Fulham Road, and then started up, picking him up again on the far side of Fulham Road. He was walking the way the police car had come, and I wondered a little if he had remembered something he had forgotten to do, or just thought to do, at the Inwoods' house?

But I was wrong, happily and thankfully wrong.

He went into the saloon bar of the Four Feathers. He went straight into it, not doubtfully after a look at the pub to make sure which door he wanted, but like a man who knew the place because he had been there before. I knew him better than ever. He lived at Sloane Avenue House, and this was his "local." A man in a pub at the end of his day's work was even better than a man alone in Sloane Avenue.

I took off my hat, for hats are not worn—particularly black-feathered nonsenses like this one—by habitués of pubs. I put it carefully on the seat by the side of me and slid out of the car.

He also had taken off his hat. He was at the bar, with a pint of beer, and the tables and sofas were three-quarters occupied. It was a warm evening.

There was not quite room for me on his left, but when I edged into the space, it widened and I was in; I was next to him. He glanced at me casually, and I did not look at him except so cornerwise that he could not have seen. He was about forty. He had a round, ordinary face, of the sort you would say people would not look at twice, which I thought was probably an advantage to him, for he could then more easily look twice at them. Against this, of course, was the possibility that among the people who did not look at him twice were the younger and prettier ones of my sex and things might be dullish for him in that sort of way. A disadvantage to him in his off-duty hours and indeed almost a danger, if it happened that one of such a kind wanted to get at him for her own purposes.

He was now looking at me for the second time, which was, no doubt, according to the book. But within four seconds, as I was ordering myself a glass of cider, there was a third time, and I kept my profile exactly in his line of sight.

I drank a little cider. He drank some beer. I fished a cigarette from the case in my handbag. It is, I'm afraid, a gold cigarette case with my initials in the corner in sapphires—very small sapphires. He reached into his pocket for his lighter.

Bending over the flame, I thanked him with my eyes.

"Lovely case," he said.

I trilled prettily. "Won't you have a cigarette?"

"Thanks, no." He seemed to search for something further to say.

"Since I've imposed to this extent," I plunged in, "could you tell me of a decent place to eat around here? I'm just in from the country, and my aunt seems to be out."

He hesitated, then took the plunge.

"I'm going to Carletta's, if you'd like to try it. It's Italian, and they give you a good escalop."

I hesitated the proper moment before I said yes, thank you, you're very kind.

Then he said that he had been waiting for the newspaperman who generally looked in about now, but there would be one on the corner by Carletta's.

Of course he wanted an evening paper to see what it said about the Inwood case, and in its last edition at that, and I should have known it. I said I was not so hungry that I couldn't finish my cider and wait till the newspaperman came, and added that I knew enough about the male inhabitants of London to understand his need to see an evening paper.

After a moment or so the newspaperman came and sold several copies of the Standard. My detective bought one,

I patted his hand lightly and told him that honestly it was as old as the hills and I only wore it for driving to keep the sun out of my eyes. I hoped he could not diagnose its ruins sufficiently to see it had never known a brim. . . .

I sat opposite him at a small table in Carletta's and allowed him to question me with simple curiosity about myself and what I did to occupy myself. This went on for nearly the whole length of the meal, with various depressions into superficial byways. I let him do it at the risk of allowing him to think that I was being a bit too ready, as a nice girl, to talk about myself to an almost complete stranger, but it was a risk worth the gain of having him thus put himself in a position where I could ask him questions if I wanted to. And I was going to want to.

In the meantime he filled out his view of me with clarifying details. It must have made quite an unusual picture, both pleasing and provocative, for it looked as though I had somehow escaped discovery by the vulpine, less-ordinary-looking males who seemed to abound in the neighborhood whenever he met a young woman who was not entirely repulsive to

is the particular instance?" the paper a little so that I headlines; looked at them him, adding: "Is it to do with here? You knew this man wood?"

"I only met him this time afraid."

"But—he was dead the You—you're working on the

He nodded, watching me fully, as though he feared that either lose interest in him I can a dull thing like a policeman, still, overwhelm him with the of "Do tell me!" To him neither, but said in an conversational sort of way that a big case and it must be a detective having to deal with

"Worrisome and a respect it's only a big case in the wood was an influential man it's simply a straightforward violence which happened murder. There aren't a 'social and domestic angle' complicate a case into a people like me. Mind you quickly, "I'm not in charge. I'm only his second spectator."

I picked up the paper, and read about it?"

"Of course you may," he public newspaper."

"I promise not to ask a it," I said, and wondered barefaced improbability notice. I read the story longer than the earlier editions such paragraphs as:

"At a detectives' conference afternoon several states considered, in particular by a man who knows J. rose well, a fellow architect expected to be able to the desperate state of m Penrose is believed to have lately, owing to his failure success of the profession returned after war service

I seized on this last one often that a man like this to burglary to keep himself special trouble."

He shrugged a shoulder. "The war taught a lot of people some unlikely tricks."

"Burglary?"

"I mean the use of physical solve difficulty, as a method "But an architect. . . ."

"Why less than a scientist?"

"An architect always sees the artist type—creative and in his approach to things."

HE DID not seem convinced him how many murder or robbers with violence, across in the artistic group

He admitted there was what I said, and added the exception to prove my rule

"I've got a feeling there in this case, all the same," the newspaper the way sounds so improbable. I yell, or ring for the butler, or something? What was he I asked innocently, for this in the papers.

"A candlestick," he said a slowing of his voice a quickened.

"Where did he get it from sitting?"

"Could he have failed to rose take up the candlestick? he was sitting at the desk.

"H'm," he said, and arched his eyebrow. "You're motive wasn't robbery? Just

"No, Hanky, you don't understand—the cowboy always wins"

COLLIER'S

glanced briefly at the headlines and, folding it neatly, put it away in his outside pocket. I caught a glimpse of the story on the right-hand side of the front page before he put it away.

"Shall we go?" he said. "It's only a short walk."

"I've got a car outside. I think we'd better take it."

His eyes widened a little at the sight of the Daimler, and I went around to the driver's seat while he opened the door on the pavement side.

As we settled and I turned the ignition key, he shifted, saying timidly that he thought he had sat on something.

"Oh, my God!" I said. "You beastly man!"

It is true I had brought that extravagant black hat with me in order that at a vital moment some gentleman might fall for my charms in it, but I had intended that he should use his eyes for the purpose.

He realized acutely what he had done, and I smothered my agony with the comforting thought that even in death it had probably achieved its object. No man who has sat on your hat can ever again regard you dispassionately. No, the poor thing had not died in vain.

the eye. He deduced that I was a successful farmer's daughter who still preferred trees to houses, sheep to miniature poodles, cider to gin, Brahms to boogie-woogie. And finally, he discovered that I was aware of how a man thought and felt about little things, which, of course, is the sort of discovery to make a man realize sooner or later that you are the pearl he has been looking for ever since he was born. This was when I said, as he put sugar in his coffee:

"I know you are dying to look at your paper. If it hadn't been for me, you would have been able to read it all through dinner."

"I wouldn't dream of it. . . ."

"Please, I'd like you to."

He hesitated, looked pleased and pulled out the Standard. I occupied myself with my powder compact, to show that he was really free of me, and he unfolded the paper. He read the story carefully. Twice he frowned.

"Has something gone wrong?" I asked.

He was just a little far away as he answered. "No, not wrong, but I realize now how these people will turn a guess into a fact if it makes the story go the way they want it to."

"You're being very mysterious. What

That's what I call *ridin' high!*"

each other. Quarreled about something, but not so loudly the servants could have heard. But there's not a shred of evidence of any previous contact between them. Nothing."

"Oh, well," I said, as if the point was of no real interest, and added, "What's Mrs. Inwood like?"

"We haven't seen her yet. She's completely knocked out by the business. The doctor wouldn't let us go near her. Anyway, she was out—she was at the theater and went on to supper afterward. She didn't get home until after the crime had been discovered. She won't be able to tell us a thing."

"I was only thinking that if I wanted to know about a man's friends and acquaintances, apart from his business ones, I'd ask his wife."

He smiled. "I do hope I haven't started up your female intuition."

"I don't think I've got any," I said. I knew that whatever else he did, or didn't do, about the Inwood case, he would ask Charlotte Inwood if she had ever met or heard of Jonathan Penrose.

But I had done better than I realized, for a few minutes later, when I was thinking that I was ready to call it a day, he reverted abruptly to the case. "These business and social big pots," he began, "can be pretty terrible people. The degree of tyranny over the small fry which people like the Inwoods manage to exercise is very considerable. You know, I don't believe one of the many people we talked to today really cares that Inwood has been murdered—for Inwood's sake. For their own, yes. You could see the worry behind their eyes about what the effect of his death would have on their own affairs and fortunes. His solicitor kept wanting to see Mrs. Inwood. It was most important, he said. He wanted to convey his condolences immediately. What he really wanted was to make sure she would let him go on handling the Inwood estate. Then there was Inwood's chief partner. He was in a hurry to get back to the city to watch the stock-exchange movements of the corporation's shares."

I HAPPENED then to say a very lucky thing. It had no thought behind it at all. I said, "I don't suppose the servants are worrying. They can always find just as good jobs if the staff is reduced or the house sold or something."

"Yes," he said, "and they aren't losing any time. Mrs. Inwood's maid is leaving tomorrow. It's true she gave notice a fortnight ago, but when I suggested she should stay on to see her mistress through a difficult time, she said she saw no reason to. She's a decent-looking girl too."

"Did you ask her why she gave notice?"

"I did. She answered by asking me if that had anything to do with the murder. I couldn't see that it had and let it go. She finally muttered something about murder or no murder she wasn't going to be treated like dirt. I shouldn't wonder if she had good reason."

"I've often wondered what it would be like to have someone to dress me and mend for me and do my hair. My father," I lied, "is always saying I can have a maid of my own. And she could do other things in the house that never get done, like mending his socks."

The dear man fell into it up to his neck; it gave him the chance to bind the beginnings of our friendship.

"As I said, she seems a decent friendly girl. She might do for you if she hasn't fixed herself up. Her name's Ellen Good—the Inwood telephone number is not in the directory, but I've got it here. I think if you say I suggested you should get in touch with her, she might play."

"Thank you very much," I said. "I might do that." I wrote the number he gave me in my little book. I said, perhaps too, he had better let me have his name if I was to mention it.

"Smith," he said, aware progressed a further step, for I gave him mine. So I said Eve Gill.

Inspector Ordinary Smith you are a darling, and d Sloane Avenue House, who with a promise that if I had without anywhere to go for tomorrow evening, I would Carletta's at eight.

His expression was not the one in whose breast hope was still and I did not say a word to But he need not have worried

THERE was a light in the eyes of Aunt Florence Webb of Thurloe Square, which was having her ten-o'clock evening tea. I hauled out my teacup and saucer, which I had looked up the car, which was no harm in front of the house at night, and dragged myself up to my room.

My Aunt Florence is a woman. She has a heart and not least of the virtues from it is her cheerful acceptance of only niece's bad manners.

I do sometimes try, before I go on her, to warn her by telling her my good intention is almost frustrated because she is either most of the time, or just like answering it, which I think the surest signs of her strength.

Tonight, she was unaffected to see me. She kissed me, and I drank that delicious tea and cup of that delicious tea and functioned after the Commemorative that he had gone to London a few days. Beyond remarking that he would bring her bag (which he never did, because she wasn't a reliable person), she too interest in the matter, nor was in London. She touched her sister-in-law's loss of painting, but not in any great way.

I wanted only to sleep for a few hours until nine tomorrow night. I could telephone Western to Ellen Good. I crawled into my spare room, and my head hit my pillow. . . .

Now and again some may complain the subconscious works by itself most of the time, away everything that comes from the forgotten mass and them to one as memory safely out of mind the usual and occasionally fighting the subconscious to remind it of some simply must remember.

It succeeded finally in reaching me at 2:30 A.M., when I had been asleep for three and a half hours. It got through with such a pat that I was waked up by myself half out of the bed, with the thing filling my mind with a clarity of fact and in Charlotte's bloodstained

Jonathan had put it in the box he kept his ear tools in, and I took it to Piccadilly tube station. What had he done with it?

That dress was evidence of a vital kind. It was the only direct evidence which existed linking Charlotte with her husband, which supported the true story he was killed and put the seal on Jonathan's story.

I must get hold of it. One day or later, it would have to be found by the police. I did not know what was to be done, but I went away of bringing Ordinary Smith's frock together. . . .

Had Jonathan still got the ticket? He might have thrown it up to cover all corners of the damaging object. But he had not told me so, and I

for his long story had been detailed, as an architect's be.

at this moment in his waist-in the Peacock, about to land.

my life I could not have stayed, telling myself that the moment I knew where he was I would send him the precious per. Between then and now it and destroy it.

ock would sail with the ebb, in four and a half hours would reach Kessingland in three if I drove like hell. Give me an hour and a bit in aboard, contact him somewhat arousing anyone's suspicion of the ticket.

owly on to the house and l until eight, trying to doze, ity that three and a half was not enough for a girl full and uncertain day be-

as no sleep left in me, and a bath and went down to for something to eat. If ticed how late, or rather, come home, she did not aving long ago grown ac-

customed to the Gill habit of treating day and night as interchangeable.

At a quarter to nine, I put through a personal call to Western 3012, for Miss Ellen Good. Jessie, at the post office, wrote down the number, her thin old voice full of curiosity as she repeated it, for it is not often that I make a call. And if I do, she likes to know something about the person I am going to speak to. Usually, to please her, I tell her, such as, "Jessie, I want to talk to my Aunt Florence." But this time I just gave her the name flatly, Ellen Good, and left her curiosity unsatisfied.

At ten past nine, she came on the line saying indignantly that the people at the other end seemed very stupid, and was I sure I had the right number.

"Let me speak to them, Jessie."

Rather grudgingly, she let me; but I knew she was listening in—and would continue to do so until I had finished.

"Hello?" I said. "Miss Good, please."

A rather thick male voice asked what I wanted with her.

"Who are you?" I asked sharply.

"What did you want with Miss Good, please?"

"That," I said even more sharply, "is nothing to do with you. Will you please fetch her. This is a personal call on a personal matter."

THERE was a pause. I knew by now that I had a policeman on the telephone and could guess the next question.

"Are you the press, miss?"

I was ready for it. "The press? You mean a journalist? Of course I'm not. What is going on? I was given this number as being one where I could get in touch with a woman called Good. I understand she is leaving her present job and may be able to take a place as lady's maid with me. I am Miss Gill, of the Marsh House, Kessingland. If Miss Good is available, I would be grateful if you would ask her to come to the telephone. This is a trunk call and the time you are wasting is costing me money."

"I beg your pardon, miss. I'll get her."

While I waited I could guess that Jessie, with a hand over her mouthpiece, was hissing a whisper at her daughter Milly that Miss Eve was going to have a lady's maid, and whatever next? And if she wanted one, why couldn't she find a local girl as would be only too glad to learn so as she could get a real good place in London after?

"Yes?" said a girl's pleasant voice suddenly. "You wanted to speak to me, madam?"

The policeman had obviously broken the ice for me.

"Oh, Ellen Good? Your name was given me—" I told her who I was, trying to make myself sound like an employer of lady's maids but not an oversuperior

Enjoy Life!

DRINKS HAVE *More Life* WITH PIN-POINT CARBONATION

Your tall ones are all prize catches... when they're mixed with sparkling Canada Dry Water. Why bother with ordinary club sodas...carbonated tap waters? It costs little or nothing more to enjoy the world's finest mixer. Here's why Canada Dry is your best buy:

1. *Pin-Point Carbonation* — means longer-lasting sparkle.
2. *Exclusive Formula* — makes your drinks taste better.
3. *Special Processing* — assures purity, balance, clarity.
4. *Superior Quality* — uniform the world over.

P.S. It's enjoyable as a table water, too. Try it.

Where there's LIFE there's

one, and said that if she hadn't found a
new place, I would like to see her. Her
answer had a note of doubt in it. She
wasn't sure she wanted a new place. She
was rather upset just now, what with
what had happened, and was going home
tonight, to Catford, to stay with her
mother. And who had given me her
name?

I did not answer that one, but said,
"I can quite understand you need a rest.
I would be in no hurry for you to
come, and quite willing to pay your
wages for a few weeks while you have
your holiday. It's a nice house, and you
would like the people here. They say
I'm easy to get on with." I laughed a
friendly laugh. "I gather that would be
a change for you."

"That it would," she agreed. "But
really, I don't know that I—"

"Look," I said with finality, "I shall
be near Cary Gardens just after lunch.
About half past two. I'll drop in and
we'll have a talk. I'm sure neither of us
will regret it, and you were so well rec-
ommended. And after all, you can still
say no. So, at half past two, then."

If she saw any impropriety in a
would-be mistress dropping in for a talk
in the very home of the mistress who was
being left, she did not have time to voice
it. She had no alternative but to agree.

"All right," she said, and no doubt told
the guardian policeman that she was ex-
pecting Miss Gill at two thirty and it
would be all right to let her in.

I PUT the telephone in its cradle; my
heart thudded. I had found a way into
the house and was a considerable step
nearer Charlotte. The plan forming in
my mind would be difficult to achieve,
with many snags at the beginning. But
they were at the beginning. Once past
them, I thought I would be all right.

I went to the living room where, after
several trials, I wrote (on the best Marsh
House notepaper) a letter from myself to
whom it might concern, to the effect that
Dorothy Simpson had carried out her
duties as my lady's maid for the last four
years with honesty, efficiency and sobri-
ety, and was only leaving me because she
wanted to be in London near her family.

I dated it a month back, and folded it
into one of the Commodore's thickest
crested envelopes.

Ordinary Smith had indicated, by talk-
ing about Ellen Good leaving Charlotte
in the lurch at such a time, that she had
not found anyone yet to replace her, and
I hoped desperately that this was so.

I went upstairs and packed another
suitcase, this time with the quietest and
dullest clothes I could find. A black,
rather long-skirted frock with a narrow
white collar and cuffs, a two-year-old
black coat and skirt, three plain blouses,
two pairs of low-heeled black court
shoes, both rather worn, and I had the
foundation of Dorothy Simpson's ward-
robe. Black stockings, aprons and sensi-
ble underthings I could buy when I got
back to town.

It was better now that I could feel that
I was making progress again, and I car-
ried the suitcase down to the car with a
sense of having a certain degree of con-
trol over the immediate future. I had
one more thing to do before I set off
again; to make sure that as little time as
possible was lost in establishing contact
again with Jonathan.

Mary was about to make cherry jam,
and was irritated by having to think
about something else even for a moment.
But I made her understand that I was
going to stay with Aunt Florence for a
little while, and that it was most impor-
tant that I should get any letters with for-
eign stamps which came for me. So,
would she please forward them to Thur-
loe Square as soon as they were delivered.
And I didn't mean only those in the Com-
modore's handwriting.

Then the blow fell.

"You'll get one from him all right,"

Mary said. "He was in one of his tan-
trums just before they left. But don't
you take no notice, ducky. He'll have
gotten over it by the time he comes
back."

"Something I'd done? I suppose he
wanted me for something and found I'd
disappeared."

"It wasn't you disappearing so much
as one of them men you'd got from
Lowestoft disappearing. Charlie came
looking for him, couldn't find him any-
where. I dessay he took one look at the
Commodore and didn't like the idea of
being locked up like in the same boat
with him."

There was a solid, unswallowable
lump in my throat. I tried to keep my
voice even:

"Oh, dear, Mary! One of them disap-
peared, did he? Which one?"

"I never heard Charlie give him a
name, but it was the first one, the one
you brought from Lowestoft. It seems
he slipped overside, and swam ashore
when no one was looking."

"Oh, dear," I said again, and managed

to get out of the kitchen before my knees
gave out completely.

I found a chair in the hall, and sat there
with my head swimming giddily.

He hadn't been able to do it—to leave
England and Charlotte. I could see him
thinking it out. I could even understand
it; the foolish, trustful idiot. His seaman's
papers would be the deciding factor. He
had a lot of money and a new iden-
tity—on paper at any rate.

He would make for London, of course.
The change of mind, the reversal of plan
—a plan which, after all, had been mine,
not his—would take him all the way
back. He would hang around where he
could watch the situation, ready to step
in should anything go wrong as far as
Charlotte was concerned. Just what he
could do, beyond giving himself up and
insisting on his guilt I don't suppose he
had considered. He only knew he
couldn't face the idea of hiding away in
Holland while the police might be stum-
bling on the truth.

I was quite sure I was going to be
physically sick; but the nausea subsided
and I went slowly to the car.

And I was not going to l

PROGRESS REPORT

YOUR reporter has just observed his silver jubilee "in aviation" by searching the nation for people and planes and things discussed in this department over the last six years and never finished. This review covers only the more significant events to which we devoted a lot of space at the time. Some have happy endings, some progressed beyond expectations, and others just folded up quietly. The following list of Wing Talk dates is accompanied by a synopsis of the situations, then and now:

August 2, 1941: A nice lady in the Navy Department is rounding out her sixth year at a job entitling her to wear from two to three stripes, if she were a naval officer. She is Mrs. Joy Bright Hancock and though twice widowed by airship disasters is Naval Aviation's most enthusiastic supporter and has been since 1918 . . . A year later she joined the newly organized Waves. Thorough and competent, Joy Hancock worked hard and today is four-striper Captain J. B. Hancock, entering her second year as director of the Women's Reserve of the U.S.N.

October 21, 1944: Three years ago, Stanley Hiller, Jr. (then 16), designed a small helicopter, which he named "The Hiller-copter." In August, 1944, he attracted nation-wide attention by making sensational flights from streets, stadiums and his Berkeley, California, driveway. Among the many who flocked to his workshop was Henry J. Kaiser, who made a typical Kaiser on-the-spot deal; joined forces and promised construction of a Berkeley factory with young Stanley to develop bigger types . . . Kaiser later withdrew. Stanley Hiller, Jr., is now president of United Helicopter, Incorporated, at Palo Alto, California. He emphasizes he has not abandoned his Hiller-copter program but due to the "economic situation" has shelved plans for production of a promised personal two-seater and is concentrating on a larger machine for industrial purposes. Stanley's father, a West Coast steamship company executive, is a member of his son's board of directors.

September 29, 1945: Irish, pretty and twenty-one, Priscilla (Pat) Handy makes good copy as the first and only woman helicopter flight-test observer. She has spent more than 100 hours riding in the

nose of Sikorsky helicopter for the AAF, and recording performance from treetop to Her announced ambition is helicopter pilot after the v Handy soloed on May 28th more than 22 hours at the c still works at the Sikors Bridgeport, Connecticut, her However, Pat isn't America

helicopter pilot. Miss Ann twenty-four, of Southport, a former Wasp with 1,50 hours, soloed a Bell helicopter previously. successor for the DC-3 has been tabled to await elpments in the jet-propul- le Mixmaster as an Army ropellers mounted aft the and driven by extension eed to two Allison liquid- ed buried up front in the eged 432 miles an hour on it from Long Beach, Cali- ington, D.C., late in 1945.

Despite this impressive performance and the more impressive money-making possibilities of a commercial version, Douglas saw jet propulsion on the way and plunged into building America's first jet bomber, the XB-43 Jetmaster; outwardly similar to the XB-42 but powered by two jet engines instead of piston engines, drive shafts and propellers. It first flew in May a year ago, but Douglas is dropping no hints yet of plans to make a DC-8 out of the Jetmaster.

Likewise tabled if not definitely dead in its originally-announced form (Dec. 22, 1945) is the Republic Rainbow air liner. Calculated by Republic engineers to fly 400 miles an hour with 40 passengers at 40,000 feet and 4,000 miles nonstop, the Big Four was under construction for American Airlines (20) and Pan American (six ordered; 12 optioned) when American suddenly canceled its contract on February 21st of this year due to "present conditions." That automatically shot the price out of bounds for Pan Am, as Republic just couldn't build six for the originally quoted price of \$1,125,000 apiece. The Rainbow was extracted from the AAF's experimental four-engined photo-reconnaissance plane, which Republic built and flew on February 12th last year. Army guys will get a good idea of what both the C-74 and the XF-12 might have been as the Globemaster and the Rainbow, minus, of course, the luxurious interior appointments required for passenger service.

June 7, 1947, Wing Talk (Where's Grandma's Airplane?) left North American Aviation with production suspended on its neat little four-seater Navion for business and personal flying (\$7,750 fly-away-factory at Los Angeles Municipal Airport). Late in May, the company decided to discontinue its production—in- sufficient demand—though it had built 1,110 Navions from April 1, 1946, when it was introduced, to April 14, 1947, when production was suspended and, as of May 20th, had delivered 841, mostly to the business-executive market. On June 24th, North American sold the design and production rights to Ryan Aeronautical Company of San Diego, it being North American's choice over a number of bidders.

Renowned for its wartime design and production of the Mustang fighter, Mitchell medium bomber and Advanced Trainer, North American happily returned to its contracts for jet combat aircraft. T. Claude Ryan also is happy, for his company is back in the commercial plane-building business again. In the past 25 years, Ryan has built air-mail and cabin planes, trainers and sports planes and Navy jet fighters, but his most famous of all is Lindbergh's Spirit of St. Louis.

"Grandma's Airplane" elosed with the report that the aircraft industry was considering the Commerce Department's offer to try to get \$5,000,000 from Congress to help finance technical problems which even collectively the manufacturers could not afford to undertake. Without industry backing, the Department stood little chance of obtaining the money. On June 23d, the personal-airplane manufacturers announced they had voted against participation in the proposed research program.

The airplane manufacturers have postponed until next spring the National Aircraft Show first held last November in Cleveland, scheduled this November for Chicago, and to be an annual event hereafter. The personal-plane producers felt that a postponement to next spring would provide more opportunity to plan a display of new models "not now in readiness for public showing."

Ad-writer's admissions

Abetted by my mascot, Tex,
I make my desk my throne—
The numbers that I often call
Are Texceled by my phone.

My boxes "in" and "out" are taped
So there'll be no mistake;
The Texceled frame of Penny's pic
Reveals no ugly break.

The wire that connects my lamp
Is Texceled to the wall;
The papers that I chance to tear
Tex mends for once and all.

I must admit my prejudice
(And that my Texcel's free;)
Yet Texcel's "stickums" bonded on,
As all good tapes should be.

NO SUM TOO SMALL

BY MURRAY HOYT

A heart-warming story for every man, woman and child who has ever wanted a particular thing more than anything else in the world

I used to watch old Duffer put his head down to be petted by Jeanie. Duffer never paid any attention to anyone else who came near his past

THE whole thing took place in two weeks during the year Jeanie Williams was thirteen years old. For her they were two hard weeks. By the end of those two weeks, when the letter came saying that the thing Jeanie had hoped for was to be given to someone else, she was changed. You did not see the change; she was the same quiet, polite, serious person. But you felt the change. She wasn't a little girl any more after that letter came; she was older, more mature. She was a small adult.

The first day of that two weeks I met her in front of my house. Her face was serious as always, trying to hide the way she felt, but her eyes danced and her step was so light it was almost as if she were dancing.

She said, "Look, Uncle Red—look at this."

She handed me a little magazine called *Horsemanship*. She pointed to an ad which said that a woman in Massachusetts wanted to find a home for a hunter she wanted to retire, where it would be cared for well and treated with kindness and affection. The woman could not keep it because she did

not have stable room and had acquired a younger horse to take its place. She did not want to sell it because she wanted the right to check carefully on the character of the person who got it, and to receive reports on how it was being treated. She also wanted to control absolutely any later transfer of ownership.

Jeanie had been reading the ad as I read it and she said very softly, almost reverently, "It says 'kindness and affection.''" Then she looked full at me and she added a little louder, "It sounds almost as if she was describing me. It seems almost as if I'm the one she's talking about."

I said, "Are you going to apply, Jeanie?"

She said, nodding eagerly, "Oh, yes. Dad and Mother say I can. It's the first time they've ever agreed to anything like that. I told them that if I got it, the money I've saved toward a horse could go for tack, for shipping the horse up here and for the expense of taking care of him. A year from now I'll be old enough to get a summer job that will give me the money to keep a horse another whole year."

I watched her walking away primly, to school. Under the primness I could see a terrific excitement that made me expect her second walk might become a dance.

I watched her and I thought that perhaps and Mildred Williams, her parents, could well have said anything but yes.

But I knew that it was a mistake. I knew the terrific hurt that was coming to Jeanie when she was given to someone else. That magazine in horse circles all over the United States was reasonable to suppose, even before then, that Jeanie would be the chosen one.

Kids long for things inexplicable to adults. In Jeanie's case it was a horse. Literally, anything else in the world, Jeanie wanted wasn't the "Daddy, buy me a pony," sort of thing that all kids go through; it started when she was very small, when Mr. Brown used to put Duffer's back to ride from the barn to the gate, and it grew and grew.

She believed that if you wanted a

enough and worked hard enough for it, you'd get it. And she never lost faith that sometime the good break would come. She was a religious little kid, as much as any kid thirteen years old is religious, and she believed that God would not let her down in this matter because He alone could know how much it meant to her.

We who lived near her were rooting for her because she was a nice kid, friendly in spite of being a little on the quiet side, and because I suppose Americans always root for the underdog.

We were practical and we'd seen an awful lot of people with a faith as clear and shining as Jeanie's taste the deep bitterness of disillusion.

She asked for a horse her sixth Christmas when she made out her list for Santa Claus. It was the only item on the list.

Joe and Mildred explained to her that a horse was a very expensive present, that Santa Claus probably knew they had no place to keep a horse, and nothing to feed one. They suggested that she ask for other things in case Santa Claus should feel it best to substitute.

She said, "But he won't do that, because a horse is the only thing I want."

THERE were some grand presents on Christmas Day. Jeanie was very polite and appreciative. But she grew quieter and quieter all the time they were giving out presents. When they were all through, she disappeared and they knew she had gone somewhere alone to cry.

Joe felt horrible. If there'd been any way in the world he could have swung a pony for her, he'd have done it then. But he was a college professor in the little Vermont college at Mead. During the depression, college professors took a cut and he just didn't have the money to swing it. In addition Mildred had had a lot of hospital expenses when the second child was born, and they were expecting another baby. Joe was paying for his house. And to add to everything else, that house was in a development restricted to household pets. It didn't help much to know that all those things were true when he also knew that Jeanie was somewhere alone bawling her eyes out.

She never asked for a horse again. In fact beginning about then she developed the habit of not asking for anything she wasn't positive she'd receive. She'd go to amazing lengths to hint around and find out whether the answer would be yes before she actually asked. She seemed to dread being refused. That first time must have been very bad.

Joe and Mildred sat back after that and waited for Jeanie to forget the horse business, and they thought this was happening until the tin box appeared on her bureau. It had a piece of brown sticker tape pasted on the cover and on that was printed HORS MUNNE. Inside were her two bankbooks, started by the two grandmothers when she was born, a dollar her grandfather had given her for Christmas, the quarter which comprised her last week's allowance, and a penny which she had found in the big chair after the insurance man had called.

Mildred called Joe in and showed it to him. He looked at it thoughtfully. He asked about the penny and she told him. He said, "No sum too small."

And Mildred said, "But, Joe, the amount is pitiful and absurd compared to what a horse would cost. She's so ignorant of what she's up against. She's going to be so bitterly disappointed. We've got to make her see just how impossible it would be for a little girl to save that much money."

They waited until the time was right, and then Mildred had a long talk with Jeanie. She explained that Jeanie could not buy a horse for much less than a hundred and fifty dollars. She tried to make her understand how many one-dollar-and-twenty-six-centses it would take to make a hundred and fifty dollars.

Jeanie listened to her and seemed to understand, but the box remained on the bureau, and the next time Mildred looked there was more money in it.

They didn't always know where Jeanie got the money, unless they asked her. But we neighbors knew. It became noised around that Jeanie would, at fifteen cents an hour, do practically anything after school and Saturdays within her strength and ability. And there were a surprising number of errands to be run, trips to the store, hickory nuts to be shucked—things like that. She'd take the nickel or dime, and she'd thank you primly and then she'd start to walk away. Only after a few steps it would be too much for her and she'd run, as if she could hardly wait to reach that tin box.

Mildred saw her put the money in, once. There was really a little ceremony to it. First she opened the box and stirred the contents a little with her hand. Then she held the new piece of money a foot or so above the box to make it clink satisfyingly when it dropped in. After she dropped it, she carefully closed the lid again.

She loved every horse within a mile of home, and some a lot farther away than that. This included several specimens of flea bait definitely not worth loving by any but Jeanie's all-embracing standards.

And all the horses loved her. When she was a little kid still, I used to watch her from my window make a beeline for old Duffer's pasture fence. And he'd trot right over and put his head down to be petted. She'd stroke him and lay her face against him, feel his soft nose. And when he grew tired of this, she'd follow him around and squat beside him to watch him eat. You'd see her lips moving and you knew she was carrying on a one-sided, animated conversation with him. When she was called back to the house, he would follow her to the pasture fence and stand looking after her as she made for home with that sturdy businesslike walk which is peculiar to small children. Duffer never paid any attention to anyone else who came near his pasture.

AS THE time passed between her sixth and thirteenth years, her character began to take shape. I believed, and Joe and Mildred agreed, that wanting this one thing as much as she did probably had a considerable effect in forming it. She was a gentle kid, never cruel. She was quiet, and while she had a grand smile and you knew when she was happy, she was never boisterous in happiness. In fact all emotion, especially hurt, she hid very successfully from grownups, seeming to prefer to fight it out all alone.

She had a lot of friends but no very close companion as most girls that age seem to have. She was extremely affectionate toward her parents than the average child, and the rest spilled out lavishly among the horses she knew, and among all other animals of her acquaintance indiscriminately.

The Fergusons' horse, Perry, Jeanie rode a lot and fussed with a lot. Mary Ferguson was afraid of it, and Perry was not always completely sold on Mr. Ferguson. The result was that occasionally they could not catch their animal and had to come to Jeanie for help.

Jeanie would walk out there into the pasture and she would call with that serious, grown-up manner of hers, "Perry, you've been a very bad boy. Now you come here this instant."

And Perry would come. He'd trot over with a happy little whinny and docilely allow the halter to be slipped over his head, though a few minutes before he had been galloping from one end of the pasture to the other with a great show of heels when anyone tried to approach him. This I saw with my own eyes. Why it was so, I don't know, unless a horse has some way of knowing who loves him and who doesn't.

ned away I knew that with g, the lessons, the having s horses come to her, was But there was a big, lonely a having her own horse to ver, could ever fill.

k her once in a while how l was coming along. Some- y, "Oh, pretty good." But e would tell me something I would know that she to someone about it. That t was during the war when e dollars to the Red Cross.

t didn't seem right that I ping all this money when s was giving plasma and ers. It didn't seem right." uld sense the sacrifice it a major setback to her hopes. he Red Cross three times

and she bought war-savings stamps. But the stamps could go into the tin box, which was very heavy now. It was the same box that she had used right along, but now the HORS MUNNE had been crossed out and over it written, in a little girl's hand, HORSE MONEY.

By the time she was thirteen she was official baby tender for the neighbor- hood. The money always went into the tin box.

In a way it was too bad she liked ice cream and all kinds of sweets as much as she did because if she hadn't, saving would have been a lot easier. There must have been some pretty hard-fought bat- tles behind that serious little face.

BUT always the tin box won out. There were only two things that she would spend money on; one was movies which had horses in them (and she saw all of those) and riding lessons at Helen's. Mostly she was able to get her dad or her mother to pay for the riding lessons but sometimes she could not, and then she very reluctantly tapped the fund. By that year when she was thirteen, she had almost one hundred dollars.

That was the year she began to grow tall. She had been a chubby little thing earlier, but suddenly she began to shoot up and all her hems were let out in a desperate effort to keep her properly clothed. I had expected she would be displeased at this sudden shooting up- ward, but I found her philosophical.

"It's much easier to mount now, Uncle Red."

That thirteenth year was when the pin-up boy appeared on her wall.

"It made me feel old," Joe said. "Here was my daughter starting to put up boys' pictures. It made me feel darned pe- culiar. So when the time was right I said to her, 'I was in your room today, Jeanie, and I noticed that Roy Rogers is your pin-up boy.' And she said, 'Oh, Daddy, that isn't Roy Rogers' picture. That's a picture of Trigger, his horse.'"

That was the year she found out about an old Morgan that could be had for one hundred and twenty-five dollars and she hinted around to find out whether Joe and Mildred would lend her the extra twenty-five dollars to buy it.

That was a fairly tough decision on all concerned. Joe could have stood the twenty-five without any trouble, but the upkeep he just wasn't financially able to handle. By that time inflation in the United States was a healthy urchin, and

"I'm a lost woman"...

SCREAMED THE BLONDE!

1. "I'M ON the wrong train," she told me. "There's no Bond Street on my line, yet I distinctly heard you tell that handsome young man to change at Bond Street."

2. "NO MA'M," I said. "I told him to change to Bond Street—Pipe To- bacco, that is—made by the Philip Morris folks. Gave him some of mine to try in his pipe."

3. "HE CERTAINLY seems to be enjoy- ing it," she said, watching his happy expression as he smoked. She sniffed the fragrant aromatic tobaccos. "Smells nice, too."

4. "I'D BUY SOME for my husband," she mused, "only" . . . "Only what"? I prompted. "Only I'm single!" And she said it loud enough for him to hear!

"It'll look better when we get the house built"

MILWAUKEE'S FIRST BOTTLED BEER

fixed salaries were pinched under such conditions. Joe and a piece of paper and write down the things they needed. Jeanie had an old catalogue looked up saddle, bridle, and other items which I know nothing about. Then he wrote down the expenses that owning a horse entailed. There was stable rental, bran, shavings for bedding, and a lot of other items like that as he wrote, Jeanie's face and more expressionless. The joy drained from it and it was cold.

He came to the conclusion that they would need at least seventy-five dollars a month (which Jeanie called tack) would cost about one hundred a year—at a conservative estimate take care of the horse.

How impossible it was once they were down on paper. She thought for going over it with her, but she didn't appear to care. They knew where she was, and Joe says he and she felt horrible. Jeanie was very seldom went away any more, the way she used to be something out of the way to make her do that now.

A few days later and I asked her if a fund was coming. That was the first time she told me something

about the cost of up-keep and everything. She said, "Sometimes, Uncle, I'm discouraged. I guess I'm an old lady before I get my money. It will be so late it won't be good."

You aren't going to give up,

she said, "No, I'm not going to give up. My jaw seemed to stick out a little when I said it, though that might be my imagination."

By the way things stood when the excitement appeared in Horse-land. I have said, by that time I knew about Jeanie and her friends. We were rooting for her. People brought her the advertisement. It was a nice straight-forward with only a few misspelled words. It had never been Jeanie's

business in the letter lay in the fact that she could not describe either the pasture, but had to say that the horse were given to her she would look around and hire each

other went off, everyone came back and waited. I'd see Jeanie at school and back and I could see the tremendous excitement in her. She always to hide any emotion but this was something out of the way so that I could see it in the way she moved along, in the way her face shone in every move she made. She went out to her because she couldn't win; I knew she was practical and figuring; they were many times against her.

She went to get together tack. She went to water the horse. She went to the feed store and found everything new in development for a horse. Everything is new in the world, but on Middle Street, where the houses have been for many of them, for over a hundred years. Some of them have large porches. She finally landed one. When she went looking for a horse she spent two or three days on the street, trouble finding one near the stable, but she stuck to it in the little way and finally she

succeeded. You went into her room and you found lists of horsey things she'd have to buy. The mail contained at least one catalogue for her every day.

You watched the excitement in her and your heart went out to her because you knew that she was building up to a disappointment which would shake her through and through, which would hurt her worse than she had ever been hurt in her life. You sensed that. You wished there were some way you could protect her, you could help her—yet you knew of nothing anyone could do.

When people talked to me downtown I found myself sticking up for her. One man said to me, "That is the luckiest thing I ever heard of. Sitting back and waiting for a horse turned over to you."

I said, "I don't call it luck. In the first place it hasn't been turned over to her and probably won't be. But if it should be, it still isn't lucky. She's fought for it for years. She's had some tough breaks. A good break should be about due her. If she doesn't get this particular horse in this particular way, she'll get another one in a year or so because she's working for it all the time. It's the same sort of luck you might accuse a prospector of having when he's studied and worked for months, even years, and finally finds the

came. It was a short letter. It thanked her for her application but it said that under the circumstances, since she had neither stable nor pasture, the horse couldn't very well be turned over to her.

You didn't have to ask her what was in the letter. She drew into herself, and before she finished reading, her face was a mask. She stood there with the letter in her hand for a little while and once Joe thought she was going to drop it. But then she very quietly handed it to him. She wouldn't let them see her eyes.

She said, and her voice was thin and high-pitched, "Well, I'll have all these things ready anyway, when I do get one." Her voice didn't sound very natural. She was around for the next few minutes but after that they couldn't find her for a long, long time.

I GUESS Joe felt almost as badly as she did. He came over to see me, ostensibly to get any ideas I could give him, but I guess in reality he needed to get it off his chest. He told me that Mildred had phoned Helen for the same reason.

After Joe went back home I sat in the living room thinking about it. I thought about the hours of baby-tending and the running errands, I thought about the money gradually growing in the tin box

she looked like, all the things I knew about her. I told her about those first rides on Duffer, about that first Christmas, about Duffer following her around, about Perry, about the way she mothered all animals, about the tin box and its slow, slow accumulations, about the money to the Red Cross, about the capacity to love some horse, pet it, make over it, more than any horse was ever loved or made over before.

I said, "You want care and affection for your horse; you can never find them in such quantity anywhere again." I told her everything. She didn't interrupt me much. When I got through her voice sounded a little different. She thanked me for calling and then she told me something about the horse. His name was Topper. He was a grandson of Man o' War—by Thunderer out of a range mare. He was thirteen years old but still very sound. The only strings attached to her offer were that he must not be hunted, or ridden for hire, and must never be sold. If the person who got him could no longer keep him he must be returned. She said that Topper liked to be petted and would stand for hours and be curried. If he liked you he would follow you around. I gathered that Topper was lonesome, now that his place had been taken by another horse.

I said to her, "They're two of a kind. Jeanie has been lonely for a long time, for a horse to love. And Topper is lonely for a mistress to love him."

After that I hung up. When I got the bill later, the call cost me eight dollars and thirty-five cents. I figured I never spent eight dollars and thirty-five cents that I begrudged any less.

I FOUND out afterward that Helen had called just ahead of me. That Massachusetts woman must have learned an awful lot about Jeanie in an awfully short time; though maybe we duplicated to some extent. If I had known about Helen's call I wouldn't have put in mine because I would have felt that as one horse woman to another, she could probably swing more weight than I could. I was just a guy who wanted to see a little girl get her horse.

Joe said that Jeanie was very quiet all evening. In the middle of the evening the phone rang and it was a telegram for her. It said: TOPPER IS YOURS. AM STARTING HIM OFF BY VAN YOUR EXPENSE EARLY TOMORROW MORNING. MAY I COME UP SOMETIME AND RIDE WITH YOU? And it was signed by the lady in Massachusetts.

Jeanie didn't mean to show how she felt any more when she knew the horse was hers than she had when she had thought it never would be. But she came tearing into the living room, her eyes big. Her whole face shone. Her whole body was light, as if she were hardly touching the ground.

They called me over and she had calmed down by then; but I have never seen anyone look so quietly radiant as she did. Joe said that all the next morning she whistled and sang. He said she was so happy that it was all around her like a halo. It wasn't that she had ever been unhappy; she had always been a happy kid. It was just that she had wanted something very, very badly and now she had it and she was so happy she couldn't begin to contain it.

It had to show itself somehow and so she hummed and sang and whistled all day.

At ten thirty that night Helen called and said that the horse was there and was grand; big and lovable. The next morning I took them out before breakfast, because Joe's car wouldn't start.

She got out there and she walked into the stall and up to his head, and he whinnied a little, softly, and nuzzled her with his velvety nose.

And she stroked him and held her cheek against him.

THE END

gold a little quicker than he expected. It's one of those breaks you make yourself."

The guy looked at me surprised. He said, "Okay. You don't have to get so vehement about it. If you say so, it isn't luck."

Maybe I was touchy because I hated to see it happen to her. Sure she would get a horse in another year or so. To an adult a year is not very long. To a child it stretches away endlessly. When you're thirteen, a year is a long, long time. I wanted her to have the horse now.

It was during this period that Joe heard her praying. He went in to tuck her in for the night and open her window, and before he stepped off the carpet he heard her talking. Her eyes were tight shut and she was asking God to help her, to guide her. She had done everything she could do; now she needed help. He tiptoed back downstairs without going into the room.

She didn't say much about the mail but she went down to the post office every time a train came in, if she was free. And when she came home from school her eyes always went to the table where Joe and Mildred left the incoming letters.

At the end of two weeks the letter

on the bureau. I thought about Duffer following her across the pasture. I thought about her catching Perry when nobody else could lay a hand on him. I thought about her first pin-up boy, about her seeing National Velvet five complete times and parts of two others. She was just a little girl who wanted a horse very badly. And pretty soon I didn't feel very good inside. This had been her big chance. She had had faith, and having faith she had dropped her guard. Now she was hurt as she might never be hurt again. For my money it was a damned shame and if nobody could do anything about it at least a try could be made.

I picked up the telephone. I put in a person-to-person call to the lady in Massachusetts. The operator said, "I am sorry, sir, there will be a delay. That same call has just been put in by another party."

So I sat around and waited and I began to feel no better fast. I knew Jeanie would be away somewhere alone by that time, and little pictures of Jeanie in the past five years kept passing before my eyes.

After a while the phone rang and they told me that they had my party.

I told the lady who I was, and then I started in. I told her about Jeanie; what

THE WEEK'S MAIL

Continued from page 4

21st), you stated that you had printed articles on what to do before. I haven't taken your magazine long but I have never seen any such articles. Maybe the youths (and we are) of America should spend their evenings in juke joints, bars and night clubs getting drunk on alcoholic beverages.

UNITED FAN CLUBS FOR TEEN-AGERS OF AMERICA, Shreveport and Bossier City, La.

We suggest the United Fan Clubs, etc., read The Kids Get a Night Club in the issue of August 9th.

POLES APART

DEAR SIR: In The Week's Mail of June 21st, Cartoonist Bandel Linn claims his Zzydd Corporation puts out an eleven-foot pole for use on people you wouldn't touch with a ten-foot pole. Didn't Ed Wynn use such a device on the radio years ago?

MARY ATHERTON, Arlington, Vt.

... Linn stole his pole from Colonel Stoopnagle and will be sued. ...

HENRY CREPÉT, Georgetown, Conn.

Linn disclaims lunatic infringement on the ten-foot pole. He says Wynn's pole was a twelve-footer, and was made of wood. His Pole is living and from Warsaw. Stoopnagle's pole is a twenty-footer and for use on people you wouldn't touch with a ten-foot pole—twice.

... Bandel Linn's Zzydd Corporation which sells Dull, Sickening Thuds for people to fall to the floor with has nothing on my outfit—the Aaabeco Co. which gets top billing in my phone book. My best sellers include: A Streamlined Incubator for Breeding Contempt; a Joke Merry-Go-Round Stopper for people who are always at their Wits' End; and a Collapsible Cage to store Wild-Oat Stocks. My Little Handy Set of Knitting Needles is just the thing for Eyebrow Knitters. We also have a summer sale on our combination Rod Sparer & Child Spoiler; Depth Plumbers; and Vest Pocket Scales, for those who like to weigh their words.

Our August Special is a reduced rate on our Interplanetary Telegraph, should you want to thank your lucky stars!

ROBERT Q. LEWIS, Aastoria, N. Y.

FLAG ETIQUETTE

GENTLEMEN: The flag on the July 5th cover is being carried backward. The American flag should always be carried in the direction of the Union Jack, as the blue canton containing the 48 white stars is known.

JOHN C. HARRINGTON, Brooklyn, N. Y.

... A flag is never carried flat—Never!

G. B. NUTTER, Bexley, Ohio

... On the cover of the July 5th edition the people in the picture do not salute the flag or remove their hats. On pages 18 and 19 there is a similar picture and they also do not remove hats or salute. They even ignore the passing of the flag in the parade.

PFC. WILLIAM SAUNDERS, El Paso, Tex.

HEALTH, HAPPINESS, ETC.

DEAR SIR: Have done hypnotic work as a hobby for a good many years but have never found anyone who dared to defend the marvelous possibilities of hypnosis in therapeutic work before. (Do As You're Told, July 5th.) I have proven practically every point brought out in the article which is most ably written.

I would like to add one observation of my own: There is no time nor space in mind which is Universal, and our subconscious mind, as a spark of the Universal, becomes what it knows itself to be. When the conscious activity of the mind is in sleep, thereby removing race ideas, inhibitions, environmental suggestions and evolutionary fear-creating experiences, the subconscious

mind can and does draw from universal, under the guidance of an operator, for all that it need feel health, happiness and pro knows itself to be and therefore

One ines, Iowa, wrote to Pow- ried life was unhappy and e When her husband mis- lated, she told him, "That illiam Powell would treat movies." To which her s replied, "Well, you're Lo."

Mr. Powell built himself o" in Beverly Hills con- own gadget. Every room

had a phone, and the master, by flipping a bedside switch, could hear what was being said anywhere on the premises. No one could get near the place without being sighted, and his arrival signaled by alarm bells. All the doors in the house were opened by electric motors, actuated by foot buttons.

The outside architecture was a combination of Regency, Beverly Hills, Gothic and early Chester A. Arthur. Inside, every room was in a different period, and William Haines, an actor turned decorator, nearly went nuts. His triumph was the master bedroom, done in wine red.

There were several bars, one of which could be converted, by pressing buttons, into a grill room, with a spit rising from the floor, charcoal burners popping out of closets and a pantry sliding mysteriously out of a wall. The salon was convertible either into a motion-picture theater or a guest bedroom—and occasionally, when the controls went wrong, into both simultaneously.

To open the gates into the grounds Powell had to work a radio-eye gadget in his car.

Sometimes the control wouldn't work, and all hands had to wait for a corps of electricians to be escorted to the scene by the Beverly Hills Police Department, with sirens screaming.

When the house was finished, it was discovered there were so many bars that there were not enough bedrooms. The master built an annex, with four complete bedroom suites. So many guests showed up that a bar shortage developed, and the whole thing became a vicious circle. Mr. Powell suddenly tired of the whole idea and sold it to a family with several small children.

Dislikes Best-Dressed-Man Role

In 1938, Powell underwent a serious operation and was out of the studio for seventeen months. This mellow period was interrupted soon after he went back to the studio and began to appear on lists of best-dressed men as the "suave type." He grew to have a dreadful hatred of the word "suave," and gave out interviews ridiculing male fashions.

"Anyone who steps out socially in Hollywood garbed according to Hoyle," he said, "only attracts attention to himself and is usually mistaken for a private detective."

He made a fetish for a while of going around in any weird assortment of clothing he happened to find in his closet.

He carried this to the extent, one afternoon, of turning up at a swimming party in a business suit, derby hat, gold-headed cane and spats. Nobody noticed. Peace of mind returned to Mr. Powell almost at once.

In 1939, back at work after his illness, Powell met a young actress, Diana Lewis, a New Jersey girl twenty-three years his junior. They fell in love and were married in Nevada, January 5, 1940. They live in two homes, one in Beverly Hills, the other on the desert.

In the early days of Palm Springs, Powell bought a modest home a couple of blocks off the highway and made pets of a small family of tarantulas, which were trained to menace strangers and visitors to whom Mr. Powell took a dislike. Palm Springs has since become a dusty desert Coney Island, and Mr. Powell, now mellow, has abandoned the little fellows to their own devices.

If he does win that Oscar, as the wise boys think, that still won't satisfy Mrs. Powell. She has other ambitions for him. She wants him to become the yo-yo champion of the world.

THE LONG, HARD GRIND

BY DALE CLARK

IT WAS the oddest feeling, running into Joe and Edith Conroy after all these years. Mary Haver came down the clubhouse steps the first day of the state tennis tournament, and cried, "Joe! Edith! You haven't changed a bit."

This was almost true of Joe. He wore white flannels and a T-shirt and carried a brace of rackets under a bare brown arm. He was only a little balder and thinner than the halfback whose ninety-yard run won the homecoming game in 1935. Edith, who had been the prettiest girl on the campus, had changed. She had grown heavier and, well—dowdy.

Mary Haver said, "Darlings, you're staying with us. Yes, you are. You know we'll love having you. Why, Charley would be furious if you two came into town and went to a hotel."

The Havers lived in a perfectly huge, but old, house on the hill above the Yacht and Tennis Club. Joe and Edith came up in a taxi, after dinner. Edith exclaimed over the house and the upstairs room, so large that a tester bed was insignificant in it. The window faced over the blue water and colored sails of the yacht basin.

"Oh!" said Edith. "It's marvelous. The view! It's perfectly sumptuous." Even the vine at the window was perfectly marvelous and sumptuous, and Mary felt that Edith was overdoing it. It was a relief to get downstairs with the men.

Joe was calling Charley "Chuck," and they were talking about Joe's ninety-yard run, which Charley had watched from the bench. He could not remember the name of the player whose forward pass had fallen into Joe's arms.

Listening to him, noticing his waistline, Mary felt a little pity for a husband trying to recapture a lost and gleaming moment, a moment that had been Joe's after all.

Joe turned and gave her his old slow grin. "It's been a long time, Mary. You'd be surprised what an old man I am in a fifth set nowadays. I have to beat these kids in a hurry or not at all."

Looking flustered, Edith said, "It's just that he's been so terribly busy. He wasn't sure he ought to take the time off for the tournament, and at the very last minute it was touch and go finding anyone to take the children." She rattled on and on about the two children.

Edith was tired from the train ride, and Joe remembered he had two tough singles matches tomorrow. Mary walked with them to the stairs. She came back to find Charley slumped in the study, brooding over *McIntyre vs. Hanwell, 106 Atlantic Reporter, 134 Maryland 315*.

"Charley," she said, "do you know I wouldn't have recognized Edith? If I'd just met her alone, I mean."

"You're absolutely right," said Charley with his lips; his eyes remained on the page.

Mary went upstairs and sat for a while considering herself in the mirror. She had never been a raving beauty in college. On the other hand, she had not let herself get, well, middle-aged. She actually did not look thirty-one. Wasn't it odd how things sometimes turned out?

JOE was to play at eleven in the morning. "We'll drop you at the club," Mary said. "I've some shopping to do. Edith, there's a simply breath-taking sale at Browley's."

Looking at Edith, she decided that exactly the right hat could still work wonders. She wondered how Edith had ever let herself lose interest in clothes.

"I'd love to," Edith said, flushing. "Oh, but I'd miss the match. No, I guess not."

Mary felt a twinge of pity for Edith Conroy; she was such a pale—almost negative—reflection of her husband.

Wearing a newly bought picture hat, she got back to the club in time to see Joe's final, sharply breaking service go past a helplessly

swinging opponent. Joe came over warm and relaxed and boyish under visor. Looking at him, Mary's temporarily blocked in her throat.

He was scheduled to play again; so they ate lunch on the clubhouse. Edith had disappeared down the stairs, suppose she gets nervous watching Mary said.

"She promised to get the kids shells. They started a collection sent back from the Pacific."

Charley Haver had spent the week in the Washington desk. "You were the worst of it, weren't you?" Mary said.

"My part wasn't so bad. We were in the courts at the base—crushed. I didn't want to talk about the war soon they were reliving college, the and the proms.

Little haunting lights came into as he remembered and laughed, wondered if he recalled kissing her of the junior prom. It hadn't meant the time, and it was before he had been steady with Edith, but she wondered

And she found herself thinking the tournament will be over tomorrow.

THAT night was dull. Charley had tickets for a show, but Joe being out late would be bad for his leg. He took the wives to the show, and best laughs by wishing Joe hadn't. "It's just a game," Charley said. "Why he has to make such a grind." "He makes contacts," Edith said. "He earned ten thousand dollars his first year of school, selling bonds, and it was football contacts."

"He isn't selling bonds now, is he?"

"There was a war. Contacts are a thing when you're getting started. That sounded almost as if Joe was terribly, successfully busy. Edith commented it that way. She seemed to like Charley's attitude.

He noticed and soothed, "Let's tact with a quick one on the Admiral."

There, in the dim glamorous light, he circled the floor with Charley, like nearly her pretty, campus self. Or, quickly, she hadn't danced for so long.

In the finals the next day Joe couldn't lose for a while; but the first two sets it was painful to watch the twenty-year-old boy across the net slamming away Joe's sharply bouled and undercut, skidding backhand. The youth won the third set handily five-all in the fourth, and Joe's face glared under his visor. Mary caught his arm. "He's got to do it now. He's in a hurry, or he can't win at all. Come on, Edith sat tight-lipped, saying nothing. On the court, Joe took to a man-kill house serve. He got forty-five, double-faulted twice, and lost that game the next.

It went on and on, agonizingly twelve-ten when at last he put the lob over the boy's head. Joe had enough stamina left to grin when he went to the side lines and put the big side line into Edith's arms.

"Come on," Charley said. "We're going into a hot shower."

But Joe was incredible. By the time he was driven home, Joe was able to go upstairs ahead of Charley. After the two men, and then she found Edith who was clasping the big side line in her arms.

"Aren't you proud?" Mary asked the other woman's middle-aging strangely reserved mask. After Mary said weakly, "I suppose you are. You probably have a whole lot of Joe's cups."

"Yes. I wish they'd give something for a change—like a new rug. God knows, we need one." She turned her face from her old shoulders trembled with sobs.

"Joe! Edith!" Mary greeted them from the clubhouse steps. "You haven't changed a bit"

A SHORT SHORT STORY COMPLETE ON THIS?

STRONG BOY

Continued from page 21

on, it developed into a lightaway competition, with Corby's music stacked Uncle Lute's weight lifting, tossup as to who was going the end.

came about was it was get- ward the end of the dude y that time it had got to a neither Mr. Sheridan Corby e Lute would let the other

one out of his sight for fear he would take some unfair advantage, like maybe proposing marriage. They did not have much time left to work in, and they were not taking any chances. Wherever Miss Seymour went you could see my Uncle Lute and Mr. Sheridan Corby going with her, and what caused the trouble was Mr. Sheridan Corby tried to double-cross my Uncle Lute and get Miss Corrinne Seymour alone.

Afterward my Uncle Lute said it was a dastardly trick, and he was sorry he had not thought of it himself. The way it was, Mr. Sheridan Corby and Miss Seymour and Uncle Lute had a date to go horseback riding one morning. That was all right, except during the night Mr. Sheridan Corby sneaked down and turned all the saddle stock loose except two horses, and when my Uncle Lute showed up at the corral Mr. Sheridan Corby and Miss Seymour were all ready

SPORTING ODDS

hen Hack Wilson first came up to the Giants he was a for a good curve ball. The pitchers soon discovered his ess and curve-balled him to death. One day, with men and third, one out. McGraw flashed the double-steal sign ack, at bat, missed it. The opposing catcher, however, it it and signaled for a pitchout. He grabbed the wide and rifled the ball to second base. The second baseman he put-out and fired the ball back to the catcher. But the ver got there. Hack stepped in and belted it out of the ounds.

McGraw, furious, went at Wilson as only McGraw could. istened meekly, and in a momentary pause he interposed vely, "Gee, Mr. McGraw, I couldn't resist. It was the first t ball I've seen in this league."

—Robert Farrell, Chicago, Ill.

ack shortly after the turn of the century, the semipro teams ar and Benson, Minnesota, battled through nine innings oreless tie. Then in the first half of the tenth Benson got

Thielman, the Willmar pitcher, slapped out a scratch single last half of the inning, and the next batter, O'Toole, d one into center. Thielman, exhausted by the tight staggered into third and collapsed as O'Toole dashed the bases close on his heels. Unable to pass Thielman, e lifted him in his arms and carried him to home plate. pire allowed two runs, giving the game to Willmar.

had been a fatal dash for Thielman. He was dead, of heart

*"people will say
I married you
for your money"*

"I don't see why. Everyone knows you married me for my charm, my manly good looks, my —"

"Be serious, Jim. You say that if anything happens to you, I won't have to worry because there'll be a regular check coming in every month."

"That's right, Sue."

"And that we can look forward to a permanent vacation some day, on a comfortable retirement income?"

"Absolutely correct."

"Well, people will certainly think I married you for your money, because it must take a lot of money to guarantee all that . . . doesn't it?"

"Not for your brilliant husband."

"Jim, please stop teasing and tell me what this is all about."

"Okay, honey. All those things are made possible by Mutual Life's 'Insured Income' Service. The Mutual Life representative showed me how to team up my life insurance with my Social Security, so we will get maximum benefits from both of them. And the plan just fits what you and I need. You're protected against first-of-the-month bills . . . and meanwhile we're building toward a comfortable retirement."

"Why Jim, that's wonderful. People won't say I married you for your money—they'll say I married you for your brains."

Why not have the Mutual Life representative in your community explain "Insured Income" to you? There is no cost or obligation for this service.

broke his arm, but in the end it was worth
it. When they got back to the ranch
Miss Seymour asked my Uncle Lute to
call on her that night, and she made it
clear that she did not want Mr. Sheridan
Corby along. My Uncle Lute was very
proud of himself.

That night after supper he went up to
call on Miss Seymour and they went
walking in the moonlight. It seemed
obvious to my Uncle Lute that he had
eliminated Mr. Sheridan Corby as a com-
petitor, and it occurred to him that it
might be appropriate to mention to Miss

Seymour the thing that he had had in
mind for some time. He had been saving
his money to get two hundred dollars for
a honeymoon in Yellowstone Park. One
more payday would make it, and that is
the thing he thought he would mention to
Miss Seymour.

"Ma'am," Uncle Lute said, "next week
is payday, and when I get the money in
my jeans there is a question I had in mind
to ask you."

Miss Seymour took hold of his arm
and snuggled up close to him.

"I cannot imagine a question that a
great big strong man like you would be
going to ask poor little me," Miss Sey-
mour said.

"It is somewhat personal," my Uncle
Lute said, "and it will have to wait until
after payday."

"I just simply don't know how I can
stand it till then," Miss Seymour said.
Then she reached up and kissed him. . . .

After he got paid Uncle Lute counted
his money and he had two hundred and
twenty-seven dollars. He sent into town
for five pounds of chocolates and a new
shirt, and that night he was down in the
bunkhouse combing his hair before he
went up and talked to Miss Seymour
about the honeymoon in Yellowstone
Park when Mr. Stevens came in.

"I understand," Mr. Stevens said, "that
you went out for an early morning canter
on one of my bucking horses last week."

"Yessir," Uncle Lute said, "I got to
admit I did."

"Have any trouble?" Mr. Stevens said.

"Nossir," Uncle Lute said, "I didn't. I
held his head up for six hours and he
didn't buck a lick."

My Uncle Lute was very proud of him-
self.

"I have some news for you," Mr.
Stevens said, "he still will not buck a
lick."

Mr. Stevens did not sound as though
he was very proud of my Uncle Lute.

"I shipped him down with a rough
string to Cheyenne," Mr. Stevens said,
"and do you know what happened?"

My Uncle Lute said he did not know
what had happened.

"I will tell you what happened," Mr.
Stevens said. "They put him in the chute
and saddled him, and Mickey Conley got
on board him, and when they opened the
gate he come out like he had spent all his
life pulling a milk wagon. He would not
even crowhop."

"Well, I'll be damned," Uncle Lute
said. "You mean I broke him?"

"That is exactly what I mean," Mr.
Stevens said, "and you are going to more
than be damned. You are going to be
sued." He started getting red in the face
and his voice got louder. "That horse
was worth two hundred dollars to me as
a buck. The way he is now he's not
worth the powder to blow him to hell.
If you get what I am driving at."

"I get what you are driving at," Uncle
Lute said.

He dug down in his pockets and
counted out the two hundred dollars he
had been saving for a honeymoon in
Yellowstone Park.

At the time Uncle Lute considered it
only a temporary setback. Since he did
not have the two hundred dollars he
could not mention what he had in mind
to Miss Seymour, but he figured that in
four months he could save up the two
hundred dollars again, and he would
write to her and tell her about the honey-
moon in Yellowstone Park, and they
would be married in the spring. The only
trouble was that two months after she left
the ranch Uncle Lute heard from her and
it seemed she had got herself married to
Mr. Sheridan Corby in New York. He
was playing and singing over the radio
there.

MY UNCLE LUTE stopped talking,
and I thought about it for a while.
It seemed to me that if Miss Corrinne Sey-
mour was the sort of a girl who did not
know her own mind, and would not wait
until Uncle Lute had saved up two hun-
dred dollars again he was lucky not to
have married her, and I said so.

"Do not jump to conclusions, Bub,"
my Uncle Lute said.

He walked over to the corner and
picked up the horseshoe he had straight-
ened out and bent it back into shape.
Barehanded.

"I found out later that she was worth
two million dollars," Uncle Lute said.

"Let that be a lesson to you."
The next morning I did not try to pick
up the calf. I talked to my father again,
and when I went to school I saw Mary
Louise Stacy and told her I was going to
start taking guitar lessons, and she let me
carry her books home from school.

Kinsey highballs can't be beat To take the edge off August heat!

Any highball will help get your mind off the heat. But a Kinsey Highball makes the process more enjoyable . . . because Kinsey is an especially smooth, delicious whiskey. And so rich in flavor that neither soda nor ice cubes can dilute its excellent taste. Here's how:

Pour one jigger of light, flavor-full Kinsey into a glass full of ice cubes. Add ginger-ale, soda or plain water . . . and get set to beat the heat!

Couldn't you go for one of those tall, tempting and terrific Kinsey Highballs right now? Well . . . what are you waiting for?

ur occasion a reader asked n Dutch theology written in ok had never been drawn h, but now it was gone. The tizzy until it was discovered

that another reader was studying it at that very moment.

The worst pests are those who bounce in jauntily, rattle off a string of false leads and expect librarians to know what they want. A youth recently asked Webb for a book entitled Confessions of a Confederate, written by a man named Smith who was secretary to Jeff Davis and made impertinent remarks about the boss. Webb put his hand on the book instantly—even though it was The Diary of a Rebel War Clerk, written by one Jones who never was Davis' secretary.

Every library inevitably is cluttered up with vast piles of literary rubbish that cries for the furnace, but the value of saving everything was highlighted during the war. In 1902 a Methodist missionary in Burma donated to the Library of Congress his diaries, which were filled with little more than dreary accounts of endless rain. They proved to be of inestimable importance when the Allies invaded Burma, the wettest spot on the face of the earth, and were scrounging frantically for any weather report.

The two huge buildings opposite the Capitol were such storerooms of vital information that the O.S.S. moved in for the duration as a time-saving measure. The Chinese air force consulted maps of its own country, a gift from the Emperor of China in 1840, that could not be duplicated anywhere in the world. European city directories, gathering dust in forgotten corners, saved hundreds of American lives in street fighting. Railroad time-tables, kept through sheer force of habit, spotted targets for air attacks on marshaling yards and depots.

Important German advances in the use of sulfa drugs were first made available to the Army through Library operatives attached to forces in North Africa. The Navy would have cracked up countless ships on unknown reefs in the Pacific if not for old navigation charts owned only by the Library.

Researcher Trailed by Gestapo

Few undercover agents came through with more top-secret stuff than Manuel Sanchez, who worked directly for the Library in Africa and Europe from April, 1943, to May, 1945. Sanchez was trailed by the Gestapo in Lisbon while he completed files of German technical books and newspapers.

"What good are old newspapers?" you may ask. Well, sir, during the last two years of the war, German casualties were so heavy that local papers were permitted to print death notices only of officers. The Allied High Command, working on the predictable proportion of officer casualties to enlisted personnel, could make an accurate appraisal of the man-power drain on the *Wehrmacht* that had a direct bearing on strategy. In all, Sanchez sent back 66,508 items, including the prized *Dizionario di Politica*, which was distributed only to high Fascist leaders.

The founding fathers never envisioned the tremendous scope of activities the Library was to embrace when they authorized its establishment in 1800. The nucleus was Thomas Jefferson's collection of 6,487 volumes. This he sold to the government, amid loud outcries against the cost, amounting to \$3.69 a book. The Jefferson collection was virtually destroyed in 1814 when the British razed the Capitol, where it was housed, and in the fires of 1825 and 1851.

When the influx of books threatened to burst the Capitol apart at the seams, the present main building of the Library was authorized and completed in 1897. It immediately was apparent that this was the most unique building ever erected in Washington. An appropriation of \$6,-

Sole U. S. Agent Canada Dry Ginger Ale, Inc., New York, N. Y.

200,000 had been given the Army Engineer Corps for the job—and \$200,000 was returned to the Treasury. Old brass hats and public watchdogs haven't stopped vibrating yet from the shock.

In 1939 a modern, air-conditioned annex, with more floor space than the main structure, had to be added to handle the overwhelming flow of material, which increases by 2,500,000 items annually.

Counting the \$787,715.06 the Library turned in from copyright fees and the sale of index cards, it cost the public less than \$5,000,000 last year. It would have been a bargain at twice the price. In addition to the duties it performs for the government, the Library of Congress saves all other libraries an incalculable sum by solving the profession's most difficult problem, the cataloguing and indexing of books.

Any library is only as good as its system for getting material into the hands of readers. A source that cannot be found in the index file or picked off a shelf quickly is worthless. In this highly technical operation the Library of Congress gives understaffed institutions a tremendous boost by cataloguing all books under 40,000 basic subject headings and selling the cards at three cents apiece. It has 165,000,000 such cards on file and also maintains the Union catalogue of 7,600,000 titles, which tells scholars and researchers where any material they need can be found in the United States.

Among the Library's most competent 1,500 employees are the fifteen men and women who process acquisitions. All have the equivalent of a master's degree, several have Ph.D.s, they have a reading knowledge of at least two foreign languages and they perform their highly skilled work for \$3,400 to \$5,200 a year. Like all their colleagues, they accept such meager pay because they are nuts about books.

Cataloguing a new work is a task that would make most of us whimpering wrecks. Let's assume someone has written *With Patton Through France*. An entry is made out in the author's name and another is filed under the W's. Additional cards are made for Patton, Geo. S., Jr.; U.S. History—Army 3d: Third Army; World War II—Campaigns, France. Suppose the book has an appendix giving officer rosters, casualty tolls and decorations. Each requires a separate heading. The book also contains a history and military evaluation of the Maqui resistance movement in support of the Allied armed forces. That will have to be listed under "Maqui," "Resistance" and "Underground." You wind up with twelve cross references for one book.

This nest of libraries within a library makes books only a part of its business. A staggering venture in talking books for the blind recently was completed when

Tolstoy's monumental *War and Peace* was recorded in its entirety. required 119 two-sided records, each side runs 25 minutes, it takes two days of uninterrupted listening to hear the book through. Library of talking books can be used by any blind person and charge except for shipping.

In this maze of astonishing things you can look at the rare-book, priceless collection of incunabula printed before January 1, early Americana, walk down a flight of stairs and hear hot jazz music would blow the fuse off a jukebox.

Preserving American Folksong

The Music Division is preoccupied not only for its manuscripts but for its recording of folk songs. More than 30,000 blues, ballads, hollers, hymns, tales and some never heard more than in the distant past have been saved from oblivion by John Lomax and Dr. Duncan P. Lomax, pioneers in the field of folk music. For some of the material, Dr. Emrich now in the Southwest to record old songs, they are taken to the grave people who remember them. 12,000 albums of authentic music were sold to the public.

It is inconceivable that a scholar will not visit the Library to consult its unrivaled resources. There are 500 special facilities for projects, including 222 projects where an author can keep his books and all necessary apparatus for his work, except a blotter.

Books are perishable, but the Library constantly is assuming a major function in government. free exchange of knowledge, stocking destroyed and looted libraries, distributing to schools surplus books used in war and compiling critical reviews and publications for circulation in foreign countries by the State.

"We must discriminate," says Evans, the chief librarian, "an impulse to rescue the literary past and the imperative need of the literature of the present."

One of those little incidents convinces the staff it is not isolated. In the turmoil of current events, September in Berlin. A rabbi, the Jewish New Year ritual, the villa of a former Nazi biographer, the first prayer books of his congregation had seen and said: "We will now open shema services by courtesy of the Library of Congress."

THE END

"I know they look perfectly harmless, but wait until you try to light them."

THE COAST DEMANDS LONG PANTS

Continued from page 17

Hollywood team to operate. Los Angeles controls the territory and can kill Hollywood off whenever it chooses. Even if it joined the National or American leagues and kindly allowed Hollywood to continue, the Hollywood club would have little success as a minor-league team facing the competition of the majors.

That means the Coast League would have to pick up two new members to replace Los Angeles and Hollywood. The same fate would probably overtake Oakland if San Francisco joined the National or American league. Who could Rowland recruit to make up the four teams lost?

So the race is on between Mr. Clarence (Pants) and his Coast League friends and the vultures who would like to descend on their little gold lode. If he can get his third-major-league status, a sigh of relief will chase all up and down the Coast among the magnates who are now making fortunes out of modest investments. Upon analysis, that seems to be the meaning of Mr. Rowland's endeavors. If the Coast League were not afraid of a territory raid it would be stupid to bother with major-league rating.

Small Parks Do Good Business

Hollywood sits in a little bandbox park holding around 12,000 and makes a mint. They make it whether the team is in third place or last place. Seattle and Portland do very well in parks that will never be pointed out to visiting foreigners as public monuments. Rather than have this little picnic ruined they are eager for major-league status although it will (or may) mean larger pay rolls. If they lose L.A. or San Francisco to the present majors, it will mean disaster.

"You fellows are always so interested in figures," complained Mr. Rowland testily, when mention was made of the matter of salaries. "You just hear the big ones back there, you don't hear the others."

That is probably true but a Bob Feller trapped in Sacramento would furnish one of the saddest pictures ever limned. There are many angles to the problem, and the fact that Philip Wrigley owns the Los Angeles franchise may be one of the most important. He has been quoted as saying that the third major league was an excellent idea.

Dom DiMaggio has chimed in with the following comment: "I have discovered no difference between the class of ball played on the Coast and in the majors. Both seem alike to me." Dom is a loyal native son and a great ballplayer but as a discoverer it is hardly possible he would ever have qualified as a Balboa. There is a difference, a great difference; the only question is whether the gap can be narrowed after a length of years when the Coast League travels alone.

The battle raged anew at the time of the All-Star game in Chicago when Mr. Rowland proposed his five-year provisional period during which the majors would agree not to draft Coast players, thus permitting them to build up a players' list and do work on the ball parks. Leonard J. Roach, Los Angeles County Supervisor, was there with another delegation saying, "Nuts to the provisional period and the Coast League! We want to play with the big boys right now." The baseball fathers held their heads and ducked, putting the matter over till December. And that's how it stands at the moment with Clarence (Pants) Rowland and his dream.

THE END

"SLEEP RIGHT — WAKE UP BRIGHT"

Spring Air "Controlled Comfort"

relaxes you from today... prepares you for tomorrow

When you select a mattress, make no mistake in this important purchase. Go to a good dealer in whom you have complete confidence... Ask to see Spring-Air. Examine it closely... look at the design, ticking, grips, tailoring. Sit on it, feel it... test it in any way you wish. Then ask your dealer to tell you the "real inside story" about Spring-Air "Controlled Comfort" and quality. It's the same as used by thousands of fine hotels and good hospitals. A good dealer knows bedding... be guided by his suggestion.

SPRING-AIR COMPANY • HOLLAND, MICH.

SURFACE COMFORT

High quality, precompressed cotton felt padding (upholstery) cushions body from spring contact, gives surface softness and luxury "feel" to a Spring-Air mattress.

CONTOUR COMFORT

The first 1½ turns of special Karr spring coils give soft, luxurious support to all body contours and special buoyancy to lighter parts of the body such as arms and legs.

SUPPORT COMFORT

Firm support to heavier portions of the body is provided by the middle section of the "hour-glass" spring coils, where spring tension and compression strength are greater.

SLEEP COMFORT

As many as nine different types of spring coils, scientifically located throughout, keep edges from sagging, prevent side-sway, maintain flexibility... give sleep comfort year-in, year-out.

BETTER HEED MR. HOOVER

THERE are writers and commentators who make more or less of a profession out of snooting and sneering at everything ex-President Herbert Hoover says for publication. What these Hoover-baiters' motives are, we wouldn't know.

His comments on the Marshall Plan for the economic rejuvenation of Europe seemed especially cogent to us. Evidently they struck President Truman the same way, since the President proceeded to name a total of three groups of prominent and respected persons to carry out the Hoover recommendations on the Marshall Plan.

The ex-President's position in the matter is simply this: With the best will in the world, a nation of 140,000,000 people cannot indefinitely feed, clothe and warm some 375,000,000 Europeans. We should do what we can to help Europe out of the postwar wreckage, but first we should find out what we can safely do. On no account should we bleed ourselves white, because in that event we would go down in a general crack-up with the rest of the world.

Mr. Hoover also wants the Truman Administration to be frank with the people as to just what this probable expenditure of 25 billions in the next five or six years will mean to Americans. It will not entail simply a lot of bookkeeping transactions with dollars, pounds, francs, etc. It will, more impor-

tantly, involve shipping huge amounts of food, machinery, clothing, fuel and so on out of our own country under a sort of peacetime Lend-Lease arrangement, with no prospect of ever being repaid anywhere near full value.

All this may necessitate voluntary cuts in our own consumption, especially of food.

We ought to get something in return if we can; and Mr. Hoover believes we can. He says it will give us a chance to stock-pile imported strategic materials—tin, manganese, mercury, chromite, nickel, for a few examples—in exchange for some of our relief goods. He urges that we seize all opportunities of this kind, instead of just softheartedly and softheadedly giving our substance away.

In contrast to these common-sense Hoover suggestions, we have the wild talk of Henry A. Wallace and his codreamers about throwing 50 billions to the winds in world-wide relief in the next decade, the recipients to include governments which will not co-operate, as well as those which will.

We hope the Truman Administration will string consistently along with Mr. Hoover's ideas in all this and will give the Wallaces the consistent brush-off. If we are to undertake this colossal job of boosting Europe out of the worst consequences of the worst war in recorded history, we should at least go about it in a businesslike way.

A MONUMENT TO THE BABE

BABE RUTH, perhaps the greatest and the most colorful baseball player of the past, is not feeling too well these days, and some things have been done in the way of helping him. Some compliments and such while he is in the hospital. Babe Ruth Day, celebrated in many of the nation's ball parks early this season, was one of the very nice things.

Wouldn't it be a good idea, though, to do more than that, and in a way which would please him above all other ways?

The erstwhile Sultan of Swat has received what is known as the Babe Ruth Foundation, a charitable outfit which its creator hopes will furnish a lot of baseball gear for youngsters who have lost their own, and will in other ways foster interest in the game.

Wouldn't it be feasible for organizations, major and minor, somehow to systematize their contributions to the Babe Ruth Foundation? The foundation could become well enough heeled to carry out the founder's dreams on an appropriate scale.

Perhaps a percentage of box-office receipts from the Babe Ruth Foundation could be set aside for the World Series takes. Or something of the kind.

We can think of no finer monument to Babe Ruth than this—and of no better builder of it than the will for professional baseball, which could do an extra good will at this stage of its fight against some action, soon?

GLOOM MERCHANTS PLEASE NOTE

THE Right Honorable Winston Churchill recently remarked that the Labor government was driving Great Britain to ruin. Conceivably there was a political impulse behind Mr. Churchill's remark—though we must say we can't see how the labor government has done Britain any good. Anyway, one R. O. Eaton, of Loudon County, read about the Churchill groan in the *Times'* famous letter column:

Remembering Mr. Churchill's recent utterance, it is interesting to note what other great men have said. William Pitt: "There is scarcely anything but ruin and despair."

Wilberforce in the early 1800s: "I dare say the future is so dark and unsettled."

Lord Shaftesbury (1848): "Nothing can save the British Empire from shipwreck."

Disraeli (1849): "In industry, commerce and agriculture there is no hope."

The Duke of Wellington on the eve of Waterloo (1851) thanked God that he would be "sparring the consummation of ruin that is gathering about us."

Your correspondent, come to think of it, has been hearing for several decades now from persons that the world and particularly the United States were headed for the dogs for a variety of reasons. Things aren't too bright at the moment with the prop wash from the late war swirling around our ears.

But the dogs, on the other hand, are waiting for the world to get to them, and may be hungry by now.

WHAT OLYMPICS?

DEAR SIR: It's all very well to for chances in the 1948 Olympics. I know what vision does in Olympic Fever (1) but it seems to me the more question is will there be any 194 pics, and if so, what will be the

The way things look now, do know if Russia will veto the Olympics herself and the teams of her "banned" nations? If Russia does decide to will the atmosphere resemble the last unhappy Olympic games held in 1936?

Instead of foot races and field events atmosphere might be more concerned with such events as Vaulting Iron Cup Hop, Skip and Sidestep, the Atom Race, Swimming in Blood and the Atom Bomb. Obviously, the will dominate the Walking Race.

In the past, the Olympic games their numerous battles on and off the playing fields, have often acted as a safety valve to let off international steam. Having the '48 games serve the same purpose but I wouldn't want to be held responsible for what would happen if an javelin thrower's spear should accidentally strike a Russian athlete in the shoulder.

B. F. PHILLIPSON, Remsen

PALESTINE

DEAR EDITOR: To solve the Palestine problem painlessly, let the Jews of the United States subscribe \$500,000.000 or \$1,000,000.000 and buy part of Palestine from the United States bought Lower Alaska. Let the Jews and Arabs divide it out between them. No bloodshed, just a bargain sale. My only suggestion is to keep Russia out of it.

F. NORTHRUP, Elm

HYPNOTIC WAR

DEAR SIR: Mr. Mannix's absorption on hypnotism (Do As You're Told) could well be expanded to include an explanation of Communist ruthlessness. Surely the Germans, and their in ruthlessness, will not have the possibilities of such a hypnotic treatment. When people of intelligence and normal judgment can be given a drink of rather insipid explanation sometimes travel over several shouting they are pixilated—no explanation?

And as action cannot be taken against moral convictions, the hypnotic apparently sound and upstanding are a bit wormy after all.

K's PIC-TOUR OF THE MONTH

"REMEMBER MAMA"

TO PLAY MAMA is all important topic when IRENE DUNNE and George Stevens huddle on the set of Mr. Stevens' production, *Remember Mama*. Screen version of the Broadway stage hit co-stars BEL GEDDES, OSCAR HOMOLKA, PHILIP DORN.

"TYCOON"

THIS LOOK from the beautiful, beckoning eyes of LARAINÉ DAY costs JOHN WAYNE his heart in RKO's Technicolor production, *Tycoon*, stirring saga of conquest in the Andes. Miss Day appears as a South American aristocrat who is irresistibly drawn to a man she should not love.

"YOU KNEW SUSIE"

NGOUT, comedy stars EDDIE CANTOR and JOAN DAVIS make every night clubbers give in, in this scene from RKO's forthcoming *You Knew Susie*. Based on the song made famous by Cantor, *Susie* has a bumper crop of good lookers, hit tunes, and a riotous story.

"MAGIC TOWN"

BEING FUNNY is serious business. JAMES STEWART and Producer ROBERT RISKIN map playing of comedy sequence in *Magic Town*. Script girl sits in to make notes. JANE WYMAN co-stars in Mr. Riskin's independent production, which has had Hollywood preview audiences cheering.

**THESE BIG RKO PICTURES WILL
SOON BE SHOWN AT YOUR THEATRE**

KEEP UP WITH THE WORLD

BY FRELING FOSTER

One of the few animals able to deceive humans to achieve a purpose is the elephant. Being susceptible to stomach cramps, for which it is given a bucket of gin and ginger, the animal, after one or two cures, often develops such a liking for the liquor that, hoping to get more, it will feign cramps as many times as it can fool its keeper.

The recent film, *Caesar and Cleopatra*, pays particular attention to historical accuracy. For instance, in the moonlight scene, beside the Sphinx, the hundreds of stars in the sky are shown in the same positions, according to astronomical calculation, in which they were seen above the Egyptian desert in the year 45 B.C.

Under a British law, a private individual is permitted to sue those involved in promoting certain kinds of public entertainment on Sunday, and also to keep the amounts awarded by the court. As this law is ambiguous and little understood, many unknowingly violate it and thus are sued. In a recent case, the plaintiff received \$4,000 from a man who had staged several wrestling bouts and \$3,400 more from a newspaper which had carried his advertisements.

America's oldest fire burns today in the fireplace of a log cabin near Saluda, North Carolina. Started 166 years ago by a couple who found it easier, in those days before matches, to keep a fire alive than to kindle new ones, it became such a local institution that succeeding generations of the family have kept it burning ever since.

Not long ago, the death of a woman in Guanajuato, Mexico, disclosed her strange obsession—to collect and thus rid the world of innocent objects that had caused death. Upon learning of such a tragedy in any country, she would purchase the article, which might be, for example, a rug that had caused a fatal fall or a picture that had dropped on and killed its owner. Over a period of 50 years, she collected some 15,000 of these items, which cost her about \$125,000.

Although the first ten amendments to the Constitution of the U.S. were submitted to the states in 1789, they were not ratified until 1939 by Connecticut, Georgia and Massachusetts.

By 1798 in Philadelphia, the horse and buggy on the street had caused such a decline in attendance that the clergy tained, and held for 33 years permission to stop all Sunday traffic by hanging lanterns across the city's principal streets.

Buddy Kerr, shortstop of the New York Giants, holds the record for fielding in professional baseball between July 26, 1946, and July 26, 1947, he played in 68 games and fielded 384 balls without an error.

Australia's independent roads now plan to adopt the standard gauge, which means re-laying 18,000 of the 24,000 miles of roads that are using other gauges, a chaotic situation, which requires passengers and freight to be transferred from one system to another as often as four times between cities. This has existed for 94 years, at an economic loss of \$2,400,000, and will cost to correct nearly \$100,000,000.

Lidice, Czechoslovakia, after being rebuilt on its old site, was destroyed on June 10, 1942, the Nazis leveled the ground, murdered its 19 citizens, boys and deported its 301 women and children in the belief that the town had harbored the assassin of Reinhardt Heydrich.

Deducting invalids, the poor and children under five, the population of this country is about 100,000,000 potential patrons of motion picture theaters. Of this number, 100,000,000 rarely if ever go to the movies.

Since 1925, some fault lines have been discovered beneath Jerome, Arizona, this 5,000-population town is more than eight feet below sea level.

While recently exploring the underlying Dent de Crolla mountain in the western Alps, Frenchmen descended 2,100 feet to the greatest depth ever reached by geologists.

Whose youngsters are going for a drive?

Are the children of some well-known people... see if you can identify their parents.

Melinda and Stephanie are the daughters of a dark-haired screen star who was born in New Jersey, and first appeared on the stage as her father in a play called "Jarnegan." You probably remember her best for her roles in "Private Worlds," "The Woman in the Window" and "Scarlet Street." Her newest is "The Macomber Affair"—a Ben-Hur production released through United Artists.

She now lives in Holmly Hills, Calif., with her daughters and famous actor husband, Walter Wanger. She drives a new, bright green convertible and always gets her gasoline at the "Ethyl" pump because, "If you expect your car to run its best, it's just common sense to use the best gasoline."

Charlie's mother has made good in Hollywood by playing tough in such pictures as "Murder, My Sweet," "Stagecoach" and "Angel." She started out as the leading lady of B pictures, but established as a top-flight A-picture star—and her newest is "Kill," a feature production of RKO.

She shes back and forth from her home in Hollywood to the studio—managing to combine a successful career and motherhood. When asked if she uses "Ethyl" gasoline, she replied, "Is there any other gasoline I've used 'Ethyl' so long and it runs my car so well I can't imagine using any other gasoline."

2. This bouncing baby girl is the pride and joy of a man who studied law, but became known to millions of radio listeners as the "Ole Professor" of the "College of Musical Knowledge." He is heard each Saturday over NBC—9:30 P.M. EDT.

Born in Rocky Mount, N. C., he was cheerleader at the University of North Carolina. His present band of twenty-five members is a far cry from the small group that toured from town to town for eight years looking for a break. Now he lives in Coldwater Canyon, Beverly Hills, Calif., where you might see him driving his gray sedan most any day. He uses "Ethyl" gasoline because, "I want my car to run in the groove."

Read this to see who their famous parents are:

If you are able to name even one of these people, you are doing very well. Children rarely resemble their parents closely enough for positive identification... and certainly the knowledge that papa or mama uses "Ethyl" gasoline is not much of a clue.

Today millions of car owners prefer "Ethyl" gasoline... among them the parents of the children pictured above. They are: 1. Joan Bennett 2. Kay Kyser 3. Claire Trevor.

These celebrities look for the "Ethyl" trade-mark when they buy gasoline for the same good reasons that millions of other car owners do. They want to get the most out of their cars.

So they watch for the yellow-and-black "Ethyl" emblem which oil companies place on pumps containing gasoline stepped up with "Ethyl" antiknock compound—the famous ingredient that improves performance. Ethyl Corporation, New York, N. Y.

Former sun salesman Frank L. Harvey cuts himself a piece of nostalgic Florida cheesecake

**THE
WEEK'S
WORK**

EVEN though he now lives in Morristown, New Jersey, and writes ad copy and stories in New York, Frank L. Harvey thinks he ought to start running toward the arctic the minute his breezy account of hurricanes, *Demon from the Dol-drums*, p. 28, hits the stands. Being an ex-Daytona Beach publicity man, Frank knows how Florida Chamber of Commerce men react to big winds.

Oddly, despite his daring, Mr. Harvey is still sensitive regarding his Florida sun-selling days, especially gibes about them. He bitterly denies having (a) a press-agent personality that would turn Cab Calloway's brass section green with envy, (b) a slightly myopic squint from peering into the bottoms of Martini glasses, and (c) a tendency, should anyone mutter "cheesecake" under his breath, to snatch a camera and shout hoarsely: "A little higher, please, Miss—ah, that's much better." Harvey insists that he (b) can see quite readily into any kind of cocktail glass, (a) that he is decidedly shy, and that (c) if he had in the past photographed young ladies in the scant, it was purely to satisfy Northern editors.

Less defensively, Mr. Harvey admits there are ways to trick the tourist. Among Handy Floridian Publicity Gadgets were (a) the Constant Thermometer, which registered 75 degrees (in summer it was a cool breeze off the sea; in winter, off the shore), and (b) the Hurricane Moderator. "This trusty device hangs from the walls of all Florida hotels, tourist cabañas, chambers of commerce, and real-estate offices," he reminds us. "Its electronic cells, microswitches and secret pacifiers turn the strongest wind into a Cool and Bracing Breeze. Should anything more emotional come along, naturally it never hits during the Incomparable Winter Season. Besides, the New and Completely Modern Florida Hotels are proof against anything except A-bombs." Even though he has renounced cheesecake, the photogenic Mr. Harvey is madly saving ulcers and gilt-edged annuities. He hopes someday to return to his hometown Daytona Beach.

SINCE authors these hot dog days are off vacationing, Miss Peggy Mann (*Smiling Girl*, p. 71) got away for Stratford on Avon to take the Shakespeare course before we could buttonhole her. Her father, Harvey T. Mann, however, informs us she left for Plymouth swamped in hurly-burly

and baggage. He believes landing at Plymouth must be a lot simpler.

Mr. Harvey further re-first detected his daughter come a writer when at a hammer which he was nail, completed the job back, smugly remarking, "my hand up, I do it right." manner of speech struck most expressive.

With Miss Mann seven miles away, Mr. Mann al Peggy Mann verse, written

*When we dance round the tree,
Of course it gives us good
But those who have no C
Haven't any good glee.*

Understand Rivalry and you understand America

RIVALRY is Dad forgetting his stiff back to grow the best tomatoes in town. Rivalry is Mom's determination to make a better cake than Mrs. Brown. From county fairs to quiz contests, from baseball games to business, rivalry is in America's blood... a thrill and a challenge. We've outdistanced the world because we like to outdistance each other.

Take the American Oil Industry, made up of more than 34,000 individual firms of all sizes. In this competitive business 1,250,000 men make their living in oil production, oil transportation, refining, research, marketing.

Here rivalry spurs progress—finds ways to provide Americans with finer petroleum products at the lowest prices in the world... better gasoline, lubricants and fuel oil... better things from petroleum in a hundred fields—chemistry, medicine, farming, manufacturing.

The result—better health, a chance to go more places more easily, more comfort... more... *constantly* more, for you.

THERE'S A PLUS FOR YOU

IN PETROLEUM'S PROGRESS

"Drilling," oil wells deeper underground. Such as this, production companies tap America's oil reserves.

Today's tankers speed at a rate 50% faster than 20 years ago. 650 companies engage in oil transportation by tanker, barge, pipe-line or rail. Result—better service, lower costs.

Keen competition in refining techniques has developed finer fuel—for planes like Jet P-80 and your car. Some 400 refiners are responsible for over 1200 different oil products.

Over 20,000 distributors and jobbers compete to serve you. Example: fuel suppliers chart daily temperatures, forecast your needs according to weather, work to keep you supplied.

225,000 service stations compete for your favor. Each vies with his neighbors in serving you. Over half a million people are engaged in this familiar phase of the oil business.

JAZZ BROTHER JAZZ

THE STORY OF EDDIE CONDON

kid from Chicago Heights now plays guitar in his own restaurant in New York. The others in this jam session are: "Pee Wee" Russell, clarinet; "Wild Bill" Johnson, trumpet; Johnny Blowers, drums; and Morey Raymond, bass fiddle.

On November 16, 1905, Albert Condon was born in Goodland, Indiana, where his father had to conduct a saloon. The boy's ear never grew or had a drum. He grew up with music. He could play Turkey in the Straw before he could say mama. Most of his three brothers and five sisters sang or played an instrument. By the time he was in high school in Chicago Heights, he had taught himself to play the piano, the ukulele and the

banjo. He was with the banjo that he got his first professional job with a jazz band touring Iowa, Wisconsin and Minnesota. That was in 1922. Ever since then, Eddie Condon has been a jazz musician, working first chiefly in hot groups in Chicago and later, in 1925, moving to New York, where he now has his own club.

Jazz had been in and out of New York for years before Condon and other Chicagoans arrived; it was considered of no value. It could not be used in trade; its appeal was local and its margin of profit nar-

row. It went to Harlem and remained there.

In New York, Condon by instinct and interest became a free-lance jazz missionary; he talked executives of recording companies into dates; he selected and rehearsed the musicians himself and played with them. He was responsible for the first recording by a mixed group of white and Negro musicians; he knew Harlem as he knew the South Side of Chicago, he listened particularly to the Negro pianists, James P. Johnson, Willie the Lion Smith, and Thomas Fats Waller.

He was unswervingly devoted to jazz; with quiet, stubborn fanaticism he proselytized for it. He stayed away from the contamination of big bands; sometimes he made a living, sometimes he didn't. "We bled to death," he once said of those years. "We gnawed at one another's wrists."

Prostitution mothered jazz in New Orleans; prohibition fostered it in Chicago and New York; repeal threw it into the street—Fifty-second Street. Its name was changed; it was

called swing, a term used by jazz musicians to describe the growing pattern of intercommunicative, interdependent, spontaneously created music which builds up, as a band improvises chorus after chorus on the basic chordal structure of a standard tune or theme; when the pattern is clear and exciting the band is swinging.

Swing was played on Fifty-second Street in small, dark basements for people who drank watered whisky, inhaled bad air, and considered themselves the patrons of a fresh fad. It began in Adrian Rollini's tap room, on Forty-eighth Street near Eighth Avenue, where Wingy Mannone played Isle of Capri. It spread to the Onyx on Fifty-second Street, where the Spirits of Rhythm and Stuff Smith played, and where the ropes had to be put up when Maxine Sullivan moved in and began to sing Loch Lomond.

Louis Prima opened at the Famous Door across the street from the Onyx with "Pee Wee" Russell; later Count Basie came to town. Then swing hit

the entire nation; it was a fad, it could be exploited.

The bands got bigger and bigger, the music was more carefully arranged, more mechanically "hot." Jazz was more forgotten, more neglected, more a luxury for those who liked to play it than ever before. It was then that Eddie Condon began to work seriously and persistently for the music in which he believed. With the help of a few friends he set out to win recognition and respectability for jazz. He succeeded. He talked, he argued, he pleaded, he demonstrated; he organized, rehearsed, and led some of the finest white jazz groups ever heard. He won serious critical acclaim for the music; he built a concert audience for it; he labored patiently and constantly for it; he even gave his identity to it. People referred to him as "Mr. Jazz."

This is Eddie Condon's story, but it is also the story of jazz music; and there is no better place to begin it than with Eddie Condon's first meeting with one of the immortals of jazz—Bix Beiderbecke—in 1922.

EDDIE CONDON AND THOMAS SUGRUE • STORY ON NEXT PAGE

At Nick's restaurant, "Muggsy" Spanier (above) takes a hot chorus while Ernie Caceres, Freddie Ohms and Irv Manning (rear) look on. Crowds are large (right) though there is no dancing. Other regular players include Joe Grauso, drums, and pianist Charlie Queener

Jazz music began in Basin Street and took almost two generations to become respectable. The first of a series about the men who fostered its remarkable rise, living—and playing—pretty much as they pleased

THINGS hadn't changed in Chicago Heights; the Condons continued to make a lot of noise, most of it in 4/4 time. One day Pee Wee Rank, a drummer, called me from Davenport, Iowa. "I've got the greatest band you ever heard," he said. "You can't miss playing with us in Syracuse. Meet me at the LaSalle Street Station in Chicago tomorrow night at eight o'clock."

He sold me. At eight o'clock the next night I stood in the station and watched Pee Wee come at me with three other guys. One was a kid in a cap with the peak broken. He had on a green overcoat from the walk-up-one-and-save-ten district; the collar was off his neck. He had a round face and eyes that had no desire to focus on what was in front of him.

Pee Wee introduced us. "This is Bix Beiderbecke."

I've made a mistake, I thought. I'm stuck with this clam digger for two months.

"Hello," Beiderbecke said. He was shy. Great talker, I thought.

The other two guys were Wayne Hostetter and Johnny Eberhardt. Eberhardt was the saxophone player; Hostetter played clarinet and violin. Nobody said anything about Beiderbecke's instrument; I was sure he hadn't intelligence enough to play anything but a comb.

"We have a couple of hours before

the train leaves for Syracuse," Pee Wee said. "Bix wants to go to the College Inn and see Louis Panico."

The College Inn was in the Sherman House, a smart hotel. Louis Panico was playing trumpet in Isham Jones' band. He was only eighteen, had written Wabash Blues, and was getting \$350 a week. They'll never let us in, I thought. This corncobber probably has heard Louis on a record and hasn't any better sense than to think he can march in wearing that cap. I fell back and walked with Hostetter.

"Is Beiderbecke our cornet player?" I asked.

"By way of understatement, yes," Hostetter said. "Wait until you hear him play. You'll go nuts."

I can believe it, I thought. What kind of music have these guys heard? What is their standard? How can a guy in a cap and a green overcoat play anything but a Boy Scout bugle call?

We walked right into the College Inn. Pee Wee and Beiderbecke pushed their way to the band stand. I spotted Panico about the time he saw Beiderbecke. His face lighted up like a drunk on Christmas Eve.

"Bix!" He leaned over to shake hands, and the boys in the band looked around as if free drinks had been announced. Beiderbecke must be something, I thought. But what?

Louis played his Wabash Blues and Hot Lips. My eyes were just getting

used to the glare when Pee Wee said, "Bix wants to go to the Friars' Inn."

Well, I thought, they let us in here, why not the Friars' Inn? The Friars' Inn was a flashy cabaret for big spenders. For music it had the New Orleans Rhythm Kings, the famous white jazz band. If any of the Rhythm Kings spoke to Beiderbecke he was somebody, cap and all. We walked in and kept on going again, right up to the bandstand.

The players fell over themselves greeting Beiderbecke. I thought: Have I got to buy a cap to make good?

"How about sitting in, Bix?" one of the players said.

When Bix Made Piano Magic

Beiderbecke smiled like an embarrassed kid. Then he got up on the stand and walked over and sat down—at the piano. "Clarinet Marmalade," somebody said. Bix nodded and hit the keys.

Then it happened. All my life I had been listening to music, particularly on the piano. But I had never heard anything remotely resembling what Beiderbecke played. For the first time I realized that music isn't all the same, that some people play so differently from others that it becomes an entirely new set of sounds. That was the first time I heard the New Orleans Rhythm Kings, but I actually didn't hear them

at all; I listened to Bix Beiderbecke.

When we rushed out to the train I was completely confused. I was thinking: What about the next? Can he play that too?

The next day we got up and came into Cleveland. I began again about the cornet. My banjo and began to practice. I dug up his saxophone and doodled along with me. Beiderbecke took out the most cornet I had ever seen. He played and blew a note. The sound was like a girl saying yes.

Eberhardt smiled at me. "About Panama?" he said. I was shivering and licking my lips in the last of the note.

"All right," Beiderbecke said. "All right."

By itself, so it seemed,

Collier's for August

the rhythm. At last I was playing so far as I was concerned, on forever. Because, I was the happiest kid in the neighborhood. Every night I played with the Alhambra; when I heard his playing could possibly bother me at ten o'clock each morning I got him out of bed to play the piano. Bix," I would say, "just for a while. Then you can take a nap as amiable as a pup. He sat at the big grand piano and played for an hour—Eastwood Lane's Sketches and McDowell's Sketches. He played his own way, with his own phrasing. The way he voiced the D7 chord was the joy and the despair of my life. The way he dressed his wardrobe consisted of two suits, a dark robe for the job and a baggy outfit

to wear in between. He had one pair of shoes, a few shirts, and a couple of four-in-hand ties. The green overcoat and the cap with the broken peak completed his ensemble. Nothing new was ever added. Bix couldn't be bothered. He had other things to do.

At the back of the Alhambra Ballroom there was a ski-ball concession. Bix decided that it was his destiny, during intermissions, to beat the game. He put a large part of his salary each week into trying; he ended with two Teddy bears and a box of chocolates.

We were paid forty-five dollars a week; we found a speak-easy where we could get beer for ten cents. This was the most economical deal in Syracuse—ten beers for a dollar.

Hostetter figured it out by calculus. "We can get loaded every night," he said, "but Bix will have to cut down his contribution to the ski ball."

"Oh, I can lick it," Bix said. "I've almost got the system now."

On payday we visited some of the other bars. Hostetter, who was a chiropractor, had charts of all the parts of the body, including a blowup of the eye. This he took with him when we visited strange speak-easies. After the first drink he put it on the bar.

How to Embarrass a Bartender

Invariably the bartender became interested. Hostetter explained that it was a system for telling fortunes by examining the eye.

Pretty soon the bartender asked Hostetter to have a look at his eye. Dave leaned over the bar and stared for a long time. Finally he said, "H'mmm, I see that you have had a social disease."

That was the end of the examina-

tion; we got drinks on the house for the rest of the night.

There were a lot of canals in Syracuse; one night Hostetter and Bix stopped as we were crossing one of them on a bridge.

"Let's throw Eddie in," Bix said.

"Sure," Hostetter said. "We can always get another banjo player. Besides, his spine has too few vertebrae in the cervical area and too many in the lumbar. He'll never grow and will live to be past ninety and become a burden to his family."

They grabbed me—I was five feet six and weighed a hundred and ten—and held me over the bridge.

"Will there be any punishment for this?" Bix said.

"Not unless it can be proved that he is a human being," Hostetter said.

"He sings," Bix suggested.

he understood how im-
e two facts were to the
his office, how they secretly

searched him, and weighed his casual words and gestures, and matched themselves with him, and matched him with others, and tried to detect in him some preference for one of them, until all this was a mass of cobweb cords around him. Probably he didn't, though men had many techniques, one of which was to pretend they knew utterly nothing about women. He liked to play the punchboards in the lobby, he smoked something called Old Nestor, and one of the girls of the office had seen him coming out of a shop with an outboard motor in his hands; he had been dressed in a sweat shirt and faded overalls.

She thought these things while she typed. She felt damp and fretful and unbecoming; a small ache in the center of her back made her lift her shoulders and she discovered that Jim Daniels had turned from the window and was watching her. She gave him her automatic courtesy smile and put her eyes on her copy. It was a curious thing; she typed for the better part of ten seconds and began to feel the sensation running over her, the delayed shock, the growing strangeness, the rough sudden piling up of something that was like fear or excitement. She ignored him but she had his image in the corner of her vision and when he left the water cooler and walked toward her the sensation gathered in her again.

He stopped at the corner of her desk, his hands still in his pockets. She noticed the flakes of hazel in his otherwise brown eyes, the soberness on his face, the small pressures around his mouth. Impulse hadn't brought him here, she thought; he had been thinking about her.

"This," he said, "is one hell of a day."

"What's wrong?"

"That office was built for an Indian sweat bath."

"It's just summer," she said.

"It's just a lot of things."

"You'll get back into the swing of it again. It takes a little time."

"There's not that much time, Margaret."

He watched her with his quiet insistence; his intention was a message coming out of him to her, and when she identified it she felt the plain sensation of fear. He must have noticed it on her face, for he checked something he quite clearly had intended to say and walked back to his office.

A small guilt went through her and it was a hard thing not to look toward Gordon McVeigh's office. He had seen this. Everybody had seen it. It was nothing, of course, nothing at all. She finished her letters, closed her book, and, at five o'clock left the building, walking the twelve blocks to her apartment. She put a potato in the oven to bake while she took her shower.

GORDON came at about eight to take her for a ride. He looked relaxed, in good humor; he took good care of himself and it was a matter of pride with him to maintain an even disposition, to accept both good and bad luck with something of a sportsman's indifference. They drove out to the Butte, followed the looping road to the summit, and parked with the auto faced outward toward the town six hundred feet below. Long dotted lines of lights marked the crisscross streets; the over-town area was a solid glow, with a searchlight idly swinging back and forth to scan the starred sky. A small wind came through the windows. She kicked off her shoes and rested back on the seat. Gordon bent over and kissed her and withdrew, letting well enough alone on a night such as this. He had nice judgment.

"Hot in your cubbyhole today?" she asked.

"I sweated off two pounds."

"You don't need to lose weight," she told him.

They were comfortable with each other, never under the strain of making talk. He took her hand and held it with the gentle way of a man wanting to savor the pleasantness of her near-

ness and yet not wanting to force it. She sat quite still and the strange vague thing which was not quite terror jumped unexplainably through her. She was thinking of Jim Daniels, not of Gordon.

She said, "Jim seems to be having a hard time."

"He's changed since he's been away," Gordon said. That was a brevity she understood, for Gordon's kind of man was smooth and casual and never out of key. He didn't like Daniels, who could be rough and blunt, and cared nothing for finesse. Yet he would make no comment; during all their engagement he never had become possessive. She closed her eyes and, with the touch of Gordon's hand on her hand, she tried unsuccessfully to put Jim Daniels out of her mind. It was as though she stood in a wide field and watched a black cloud rolling toward her so swiftly that she could not run; it came against her, and its raw, windy blackness surrounded her and she cringed and yet felt strong.

Gordon said, "You're tired tonight."

"Yes."

He switched on the engine and turned home. When he brought the car to the front of the apartment he bent toward her and waited for her face to come around. She delayed that turning for the briefest of moments, which was a thing she had never done before. She was sorry for it and knew he had sensed it as he bent to kiss her; the kiss was one of those perfunctory things which had no magic in it and when she got out of the car she had the depressing thought that there never would be magic any more for them. He said, "See you tomorrow."

The air within the apartment was a stagnant pool of unpleasant odors. She undressed, pulled a sheet over her, snapped out the reading light and stared into the darkness. She had been so pleased with the sort of life she'd arranged for herself. How could it be that she, never wanting more than she

HOW TO HAVE ANCESTORS

BY JAMES DUGAN

You, too, can own a Founding Father on easy terms. Go to your corner genealogist now for a demonstration of these practical, useful forebears—but don't be finicky about skeletons in the closet

THE Founding Fathers of the nation made a sad blunder at Independence Hall. They clean forgot to set up an American peerage. It was a cruel disappointment to some of the people waiting outside to see the new rules and regulations. They predicted that the United States would be a flop without dukes of Hoboken and hereditary barons of Brooklyn. They had been touting George Washington for king.

To get even for this deliberate slight, the frustrated monarchists invented genealogy. If the infant republic wouldn't hand out any titles, they would find ways to make themselves into home-made peers.

The new knighthood got under way with the Society of the Cincinnati, founded in 1783 by retired officers of the Continental Army. The idea was to keep the family brass hat polished by passing membership from fathers to sons forever.

When the story broke, the ex-enlisted men blew their tops. They founded a strictly nonhereditary club named the Society of St. Tammany to give com-

bat to the officers. The issues of this remote feud have been lost, but Tammany is still in business.

Next to the Chinese, who practice it as a religion, Americans are the leading ancestor-worshippers in the world. They are not only eager to acquire ancestors, they can hardly wait to become ancestors themselves. The Cincinnati became Revolutionary ancestors as soon as the last shot was fired. The Native Sons of the Golden West was founded in San Francisco in 1875, before most of its prospective charter members were out of three-cornered pants.

Ancestor-transference fell on lean times between the Revolution and the Civil War. Not until 1876, on the centennial of independence, did citizens reawaken to the importance of being well descended. In that year the Sons of the Revolution was founded.

The Sons aroused a slight wave of genealogy, but the trouble with organized ancestor-worship was that it was still a stag party. The bottleneck was broken in 1890. In that year the Society of the

Daughters of the American Revolution was founded. The ladies had crashed the business.

The D.A.R. was an instantaneous smash. Within a dozen more distaff ancestor regiments were organized in the nineties. By 1900 there were many ladies wearing Revolutionary medals. They had been troops in the Continental Army. The Daughters had tripled Lieutenant George Washington's peak strength of 3 and were issuing cards as fast as the genealogists could process them. Today 150,000 Daughters, and the organization has scratched the surface.

Over 45,000,000 living U.S. women are for the D.A.R. The historian Edward C. Loring estimated that there were 1,200,000 "rebels" in the Revolution out of a population of 3 million. But only about 75,000 men actually fought against the British.

However, an ancestor didn't have to fight to get a lady into the D.A.R. The organization

descendants of almost everybody who lived in the American colonies between 1776 and 1783. The official membership qualifications of the D.A.R. admit progeny of cops, town councilmen, contractors, patriotic preachers, confectioners (in the case of Quakers), village tax collectors, deer wardens, judges and tax makers and gunsmiths, "observant surveyors, draft-board members, "patriots, plain "patriots," hog watchers and so on. The D.A.R. also admits daughters of men who were too young to go fight for them. One such daughter of a Connecticut citizen who paid to let a 10-year-old boy fill his place in the town volunteer. The lad marched off and was killed in battle at White Plains. The patriot who had seven sons, of whose female descendants the D.A.R. rushing material and some of the boy who fell at White Plains did not

live to sire any Daughters of the American Revolution.

The lineage claims of the Daughters are printed in 165 volumes of Revolutionary genealogies, drawn from the D.A.R. master files in Washington, which contain over 200,000 pedigrees. The thumbnail biographies of the ancestors in these lineage books make instructive reading.

For instance, the great grandfather of a D.A.R. member from Georgia is credited with having sold "powder and flour to the troops." Another non-belligerent ancestor was "a patriot and juror." One ancestor got his daughter admitted on the strength of his record as "a constable and sealer of leather in Chesterfield, Massachusetts." A Boston progenitor "assisted in raising troops for the defense of the city." He would be called a draft-board member today.

The daughters of Peter Tufts belong because "he was a patriot and aided in erecting fortifications of Dorchester Heights." Another forebear was "Judge of the Court of Common Pleas." Stephen Bean

was "a surveyor of highways and a constable." One ancestor tossed neutrality to the winds by signing "the Declaration of Independence of Albemarle County, Virginia, 1779," three years after the national Declaration. One Daughter belongs on the record of a gent who stuck to his duty as "hog reeve of Bridgewater, Massachusetts," throughout the seven-year struggle. "Reeve" is the old word for keeper.

The D.A.R. charitably overlooks mistakes in tracing the family line. It gave an early membership to a lady who was pridefully descended from Hezekiah Royce, a volunteer at the Battle of Bennington. Genealogists later turned up with the news that there were two Hezekiah Royces in that part of Vermont. The second was a malignant Tory. He was the one who was related to the lady. The Daughters chuckled over the revelation and did not court-martial the impostor.

Many Daughters have hitched up big teams of ancestors. This tendency toward safety in numbers is practiced by some (Continued on page 46)

"Business is only pretty good now. It should be better this winter. I came from Finland ten years ago; most of my customers are Finns and I like it here."

KUSTI MAKELIN, BAR AND GRILL

"Business stinks. I don't seem to get any breaks, and people are so unreasonable. I just have no luck. Look, I burned my hands at home using lye in the sink."

SILVESTRO CONTI, TOY AND NOVELTY STORE

Unemployment, small-business failures and layoffs are hitting veterans harder than the rest of the nation. Even a mild recession will double the pressure on them and add ammunition to the arsenal of demagog

BY JOHN KORD LAGEMANN

READJUSTMENT for G.I.s means just one thing: jobs. Two years, one boom, and seventeen and a half billion Veterans Administration bucks after V-J Day, how well are our veterans readjusting? The answer is like a sock on the jaw.

Well over 1,000,000 employable veterans are without work of any kind.

This is an improvement of about 500,000 over March, but 2,500,000 more who are now in schools and job-training will soon be competing for jobs against an increasing number of older and more experienced job seekers.

About half of the 1,000,000 G.I.s who became their own bosses (in business or farming) will be out of business by next Christmas. Two million, possibly 4,000,000 job-holding veterans are marked for the ax in case of general employment cutbacks. No slight intended; just lack of seniority.

Altogether six to eight million—roughly half the total of all World War II veterans—are in danger of becoming what Veterans Administrator General Omar N. Bradley calls "economic DPs."

The evolution of G.I. Joe into Citizen Joe is a

service, the experience they did have was half forgotten, and seldom related dire problems of actual management. As for experience, success in war had little to do with cheap and selling dear. After all, the Army and Marines weren't in business for profit.

"You sit here and watch 'em come in dreams," sighs a loan counselor at one regional V.A. offices. "It's the infantry center all over again. Not more than two G.I.s in a hundred know what they're getting. Only this time they're asking for it."

But if most ex-G.I.s didn't know what getting into, they soon found out—the Army man whose previous business experience consisted in selling goods over the counter didn't help him juggle inventory, keep accounts, hire efficient help, or wrangle credits from banks, wholesalers and manufacturers. New expenses kept cropping up, too: hadn't figured on like advertising, special spoilage, insurance and lawyers' fees.

Small business, they discovered, has a gamble. Even in "normal" days before

THEY'RE STILL

matter of time on the job. A veteran out of work may become a veteran with a vengeance. A veteran making a living becomes a lot of other things—a breadwinner and taxpayer, a union man or employer, a barber, banker or farmer, an ordinary guy taking his chances with everybody else. Success or failure in the readjustment of 14,500,000 veterans—almost a third of the population when you include their immediate families—boils down to these simple terms:

How many veterans have employment now and what are their chances of making it stick?

How many veterans are unemployed now and what are their chances of getting jobs?

Of the 12,000,000 veterans who are listed as "gainfully employed," 10,500,000, or slightly over two thirds of all World War II veterans, are holding down full-time employment. The other million and a half work part time as students or on-the-job trainees. Can these 10,500,000 hang on to their jobs?

"When the storm breaks, it's going to rain veterans," one employer says. General Bradley is more specific: "Veterans are the least secure of all job holders today. Even a mild recession could add a million or more to the unemployment rolls."

Why? Many factors enter into the final answer, but the common denominator of them all is time—time to make up on the job the 1 to 6 years they lost in seniority and experience. Similarly, lack of experience among veterans who went into business for themselves has been a determining factor in at least 90 per cent of their failures.

Being your own boss had a great attraction for men living under military discipline. In the Army, one out of every three, in the Navy one out of every five, said on entering civilian life they wanted to go into business for themselves—despite the fact the majority had never had any experience.

Considering their age and the time they spent in

third of new firms survived less than half lasted less than four years.

Today, the number of firms has soared since the pre-Pearl Harbor high of 3,500,000, but the excess of actual need or chance of profit. The rate of overloading began to show this spring. Business failures doubled last year's rate. The rate among veteran-owned firms, always per cent more than the average, is rising.

The smaller the business, the slimmer the chances. Four out of five failures are in ventures with one or less employees. Veterans, with an average net capital of \$4,000 or less, fall into the vulnerable majority.

No Quick Road to Fortune in Trade

Of all veteran enterprises, trucking was the costliest flop. Plenty of veterans who thought they could save or borrow into a business found themselves out of business really got started. Profits seldom paid repair bills. In Pennsylvania, a veteran to beat repair bills by buying only the cheapest parts sank his entire savings and loan trailer truck. On his first haul, he blew the engine and went into the hole while he tried for a new one.

Scarcity of merchandise also hit the veteran. "Half the G.I.s in our area who started appliance stores have either gone out of business or are having mighty hard sledding," says of Elliott and Evans, wholesale distributor of appliances in 20 northern Ohio cities. "Our old customers get special rights to new merchandise. We can't give special rights to new customers."

As latecomers in the scramble back into business, veterans also have had to take

choice of locations, distributorships, and must pay higher rents and higher prices for victories.

like climbing upstairs on an escalator go- said a California veteran who sold his before going in so deep he couldn't pay C. loan. In California, there are 36,000 strants today than before the war.

ess, the veteran found, the unexpected happens—and with his small capital, he when it would throw him. During the age, veterans swarmed into the frozen- ss where meat was still available. For a they cleaned up. But the lifting of OPA d the flow of fresh meat wiped them out o man. Few had enough capital to con- lar meat or grocery stores.

ography can upset the best-laid plans. n, a Middle Westerner who married a nd girl, borrowed a thousand dollars to hoeshine and repair shop near her home. t fine during the summer. But receipts oost nothing during the winter months. Yankees," the veteran explained to the ey put on their rubbers in November, ke them off till June."

ash, the G.I. was usually long on inge- bright ideas often backfired, too. A w services to make life easy for the rang up in door-to-door deliveries and ces. In almost every large city, veterans oping services which would save the ne trouble of fighting her way through res. But these conveniences began to ve, once the novelty wore off. Besides, wives found that shopping wasn't such a ter all. They missed those crowded n the thrill of spotting a "bargain."

that figure from V.A. for a total of 12 months, and this enables him to hang on a little longer. So far 600,000 in business and farming (mostly the latter) have tapped these benefits, and 155,000 have run through them altogether. In May the National Association of Credit Men predicted that business failures would soar as soon as more veterans ran through their self-employment allowances.

In the normal course of events, then, at least two; possibly three, out of five veterans who set up shop for themselves will be out of business by next Christmas. As A. M. Sullivan, associate editor of Dun's Review, points out, "Thousands of new concerns are untested under competitive stress and have yet to fight their way through a bad season or two." It wouldn't take much of a recession to knock the bottom out of most of them.

Farm Subsidies Won't Offset Price Slump

As for the million veterans who went into farming, very few have been able to make ends meet so far without drawing heavily on government benefits. When high farm prices drop, even these subsidies won't suffice to "keep 'em down on the farm."

Congress, however, has been more than liberal in encouraging the movement back to the land. Over a period of five to ten years, a veteran who has served three years or more may qualify for \$4,320 on-the-farm subsistence allowance, \$1,040 self-employment allowance, and \$160 guaranteed interest on a farm loan—a total of \$5,520 of V.A. funds. This doesn't include V.A. and Department of Agriculture guarantees on money the veteran may borrow to buy a farm.

How much this contributes to the veteran's lasting readjustment or long-range chance to earn a living is doubtful. Eighty-five per cent of the V.A.s'

EXPENDABLE

to find success stories, too, among veterans who went into business. But almost invariably among the older veterans who merely left off during the war. To many G.I. loan provision has given a boost of credit on longer terms. But this does not mean the government is "backing the veteran's business" as many nonveterans have as-

an still has to be borrowed from a bank or way; on business loans up to \$4,000, Administration merely guarantees the loan. So far, under the Bill of Rights, the Government made only 72,000 such loans averaging \$1,000 each. This represents a very small percentage of the total of half a million or more who have gone into business—as distinguished

ers were considerate and frequently liberal—within the accepted standards of "justice," says a V.A. loan official. "They gave any veteran from getting into something he had no chance of success."

thousands of G.I. loan applicants who were turned down—for perfectly legitimate business reasons—many whose old feeling of estrangement from civilian life was hardened.

ers say they handle other people's money. "I can't take too many risks," was one veteran's reaction. "But the generals handled the lives, and they took risks—plenty." The logic of reasoning sounds plain silly to the veteran who managed to do all right. But it's another arsenal of demagoguery if the veterans are the cards are stacked against them. The Government has, however, made self-employment available to all, whether they managed to get a G.I. loan or went into business without it. The difference between his earnings and

self-employment benefits are claimed by farmer veterans, most of them in nine Southern states where farm income has always been lowest and the outlook least promising. Many of these veterans have been running through their self-employment benefits first, then switching to on-the-job training payments—a practice which suggests to V.A. experts that many of them "are receiving \$100 a month to remain idle."

"Veterans (with little or no farm experience) should be informed that agriculture has been overmanned," reports a survey by the Committee for Economic Development. "In a developing economy, it has been shrinking and will continue to shrink." As it shrinks, the veteran will be the first to feel the squeeze.

After two years of peace, veterans are still the youngest and least experienced, and therefore the most vulnerable of businessmen and farmers. The same applies to wage earners. Two thirds are in their twenties. Their average age is twenty-seven. Less than a third returned to civilian life with re-employment rights that bound employers to rehire them for a year. By now, most of these legal rights have been exhausted. Almost half of the G.I.s had never held a real job, and wartime skills seldom paid off in getting one.

For most wage earners, that meant starting at the bottom of the ladder as unskilled or semiskilled labor at low pay. For many a veteran with G.I. notions of the fabulous ease and affluence of civilian life, the letdown was hard.

In many cases, there was a more substantial reason for the veteran's restlessness: the disheartening contrast between his heroic achievements as a fighting man and his limited prospects as a wage earner.

In any case, veterans in industry have been none too happy in their jobs. In Detroit, personnel managers representing most of the city's industrial plants estimated that "67 per cent (Continued on page 80)

"Business is bad now in summer, but it probably will pick up in the fall. Who's spending money on a dog today?"

JOSEPH LENIHAN, PET SHOP

"With fur sales coming, business has picked up a little. Everything is sky high . . . I lost five years in the Army and it's rough getting started all over again. But on the whole, I'm satisfied."

HYMAN MERNICK, FURRIER

FEVER

BY SAMUEL W. TAYLOR

The woman was to be a pawn in a passionate game. Winning it was the end that had consumed the prospector's life

A GAIN, that day, he struck a pocket, and the fever came over him, tightening his chest until his breathing was labored, causing his hands to quiver, and bringing to his mind hot ideas which made him ashamed of himself.

He was cutting at the gravel face of the tunnel, following the ancient creek bed between the overlaying sandstone above and the original granite bedrock below. Shoveling the gravel into the wheelbarrow to take it out to the sluice box, he felt the point of his shovel sink into the granite floor. There was a round hole in the granite, worn millions of years ago by a rock circling around and around with the motion of the water. And he knew what he would find in the hole, for gold is heavy; and in tunneling under the hill the past summer and fall, following the gravel of the ancient creek bed, he and Dresderlein had found two others like it.

He scooped the pit out carefully with his hands, picking out the pebbles and putting the gravel and black sand in a flour sack. The pit was about eighteen inches deep. At its bottom was nugget gold, gleaming dully among the sand and pebbles in the light of his lamp. He resisted the impulse to pick this out by hand; he wanted it to show in the pan. He cleaned the bottom of the pit carefully with a teaspoon, scraping every loose grain from the smooth granite. Then he tied the sack, dumped the wheelbarrow in the tunnel, put the sack on it, and trundled it out of the tunnel.

It was getting dusk, and raining steadily as it can do day upon end in northern California as winter closes in. He was glad of the cold rain on his face. It quenched the fever and washed away the thoughts that made him ashamed of himself. Water dripped from the live oaks overhead, and ran down the twining trunks of the wild grapes dangling jungle-like from the trees. Carefully cut back from the trail was the poison oak, thick and solid on both sides.

On rounding the shoulder of the hill he saw the cabin in the little grassy hollow. There were a few orchard trees about the cabin, pruned by deer and the trunks scarred by bears. The cabin and the poison oak had combined to keep Dresderlein from the gold for twenty-seven years.

There are many little grassy hollows in the mountains of the Pit River watershed, and one looks much like another. In coming back, trying to find his lost mine, Dresderlein had seen the cabin; he knew Harry Gorman had built it since the mine was lost. And Gorman, fencing the land and protecting it from being burned off, had allowed the brush and the poison oak, of which Dresderlein had a superstitious fear, to take over. Dresderlein, prowling the mountains year after year in his quest, had often stayed at the cabin, within a stone's throw of his goal, without ever penetrating the poison oak around the shoulder of the hill. Ironical, too, that Harry Gorman had gone broke and moved out without knowing he could have been a rich man.

The command car wasn't back, and the man with the wheelbarrow muttered, "The old fool," aloud. He eyed the yellow road winding steeply into the live oaks across the hollow. It would be tough going from the highway, even with the command car. Water was eroding a gully down the left-hand track of the road; there were nine miles of it—unimproved dirt road ravaged by the elements since Gorman went broke and moved away—from here to the highway. Even in dry weather it was impossible for anything but a military vehicle with high centers and four-wheel drive. This would be the last trip before

spring. He hoped Dresderlein wouldn't forget the salt again. The old fool, chasing after Effie Pound, at his age.

At the front stoop, the young man shouldered the sack of gravel and went into the cabin. Of course Dresderlein would make it back okay. Even after dark. Dresderlein had spent half a lifetime after that mine, he deserved his share. It was good that winter was closing in; the old fool wouldn't be able to see the girl again until spring; he might come to his senses—if he had any to come to. Dresderlein wasn't normal; who would be, going through what he had?

The young man eased the sack to the plank floor and lighted the oil lamp. He was just under six feet tall, and solidly built. He brought in a washtub, full from the eaves' drippings, took a copper gold pan from the shelf above the stove and began panning the gravel from the sack. The fever rode him again, the hot gold fever, as with each pan he washed the sand away from the heavy gold. He could have sluiced this gravel from the pit, but he wanted to do it the slow way, picking nuggets out of the pan with his fingers. When he was through he weighed the gold; the fever was riding him. *What if Dresderlein never knows about it?* he thought. And then, shrugging, he put the gold with the rest of it, in the honey can behind the stove. The can sat there day in and day out, awaiting the time the two partners should divide it equally. If you couldn't trust your partner, then the very word had no meaning.

The young man realized he was wet and chilled through. He made a fire, stripped, put on dry overalls and shirt, hung up his wet clothes behind the stove and began making supper, listening for the command car. He was eating when he heard the whine of the engine. His spirits lifted; he didn't like to think the price of his honesty was in that honey can. When he went out he realized he'd heard the engine because the rain had stopped rattling on the shakes. It was snowing.

THE lights of the car swung into view from the live oaks, dipped into the hollow, and the vehicle pulled up before the house.

"Damn' near thought I was going to be a rich man!" he called, crossing to the car. Then he stopped in surprise as the figure got out the right-hand side. It was a girl. Dresderlein walked around from the other side.

"You know Effie," Dresderlein said, a bit defiantly. "We was married this afternoon. . . . Effie, you go on in. Ray will help fetch in your stuff."

The girl lowered her eyes as she crossed to the open door. The young man shouldered the steamer trunk in the back of the command car. Dresderlein took the yellow suitcase and the hatbox. "I guess you're surprised," the old man said. "I been seeing her all summer. Met her at church."

"Yes, I know." One thing a man couldn't do, in the mountains, was conceal his doings.

"And never mind what people say about her," the old man said defiantly. "She's my wife. The Lord brought her to me."

"Congratulations. Did you bring the salt?"

Dresderlein guffawed. "Did I bring the salt? Ray, I had plenty else on my mind!"

"I'll go in for it tomorrow."

Later, the young man lay in his sleeping bag above the single room of the cabin. A ceiling had been built over half the room to provide storage space above. For a while, after supper, there had been the unspoken question of what the sleeping

arrangement would be. The young man gestured the overhead storage space for him to the obvious relief of the bride and had shifted the provisions to one side to a for the sleeping bag, and tacked two she to the rafters to hang over the end.

Lying above the room on one elbow he wondered why Dresderlein had married the old man's fanaticism; the girl's past. Light came through the cracks from below could see her, most of her. The mirror behind the table they used as a washstand, and sitting before it, brushing her hair. Was he amazed at the way her hair caught

amp. He'd thought her hair dark, but it loosely it was a deep rich red. Watch-
 ection in the mirror, he wondered what

 eced sidewise, timid, uncertain. Her hus-
 e droned on in prayer. She looked about
 of privacy in that single bare room. She
 of the vision of the man above, and
 eappeared below the crack she wore a
 which molded her figure.
 efore the mirror, she began plaiting her
 braids. Her bare arms gleamed white
 the light. When she moved out of his
 n, and there came the soft crackle of

wild grass ticking from one of the bunks, the
 young man mashed the glowing end of the ciga-
 rette between thumb and finger and lay back on
 the sleeping bag. "You dirty rat," he said to him-
 self, slowly and viciously.

The old man's voice droned on for half an hour
 more, and then there were stifled groans as he got
 up, chafing his cramped knees, and the lamp went
 out. . . .

There were eight inches of snow next morning,
 and it was coming down steadily. Effie went to the
 mine, wearing waist overalls and a man's shirt. The
 young man mucked the gravel in the tunnel, the girl
 wheeled it out and the old man ran it through the

HE CLICKED FOR 30 YEARS

BY HARRY EDWARD NEAL

George William Harris, only 25 years younger than photography itself, has taken pictures of Presidents and newlyweds, kings and housewives for more than half a century. Here are the high lights of his career

SHORTLY after George Harris opened his photographic studio at 1313 F Street, Washington, D. C., in 1905, President Theodore Roosevelt summoned him to the White House and said, "Mr. Harris, can you make a picture of me with members of my Cabinet all in one group?"

Harris hesitated. "Well, Mr. President," he said, "I'm not sure. You see, it would be a pretty big group in a small room, and . . ."

"Mr. Harris!" Teddy interrupted. "I'm amazed! That's no kind of an answer. When anybody asks you if you can do anything in photography, tell 'em 'Certainly I can!' Then find a way to do it. Then do it!"

George Harris says that has been his motto all through the more than 50 years that he has been taking pictures of the great and the photogenic.

He made the picture, the first of a President and his Cabinet in the Cabinet Room. When he printed it he discovered that the President had sat farthest from the camera, so that perspective made him the smallest figure in the group. Harris later took other photos in which Teddy was more prominent, and profited by this lesson in composition. He also learned something at firsthand which changed some of his ideas about T. R.

"At that Cabinet meeting," he says, "ten of the greatest men in America sat around a big, long table. The President turned to Elihu Root, his Secretary of State, and said, 'What's on your desk?' Mr. Root told him. Then the President asked every man around the table for his opinion on the matter, and by the time they gave their advice the President told the Secretary what to do. Until then I always had the impression that Roosevelt did everything without asking anybody's opinion.

"I was very impressed with that Cabinet meeting because Mr. Loeb (the President's secretary) told me I was the only outsider who had ever sat through an entire Cabinet conference. I went back to my studio, bought an oval table, and once a week we have the heads of our departments gather around and discuss the problems of the week!"

Over the years the problems discussed at that oval

table have been varied. For, as spark plug for the firm of Harris & Ewing, George Harris has traveled over the world to capture on film the wrinkled, the smooth, the weary, the bright, the famed and the unknown faces of humanity. For more than 50 years his clicking shutters have caught history on the wing. Today he has more than six million negatives in his priceless files and as a craftsman he has earned the admiration and respect of photographers around the globe. Master of his art, Harris is also a top-notch businessman, employing 120 men and women in the studio where he started with four.

In the early days Harris' technical problems were tougher than a 50-cent steak. There were no flash bulbs, no photoflood lamps—only daylight, and sometimes very little of that. Speedy shots indoors were practically unheard of. One day he was called to the War Department by William Howard Taft, then Secretary of War. Taft wanted Harris to make some new portraits in his office. Harris had taken several shots when the telephone rang and Taft answered. As he talked, Harris made five pictures.

Preview of a Presidential Smile

In the fifth shot Taft gave the photographer one of his famous grins. When he hung up, Harris thanked him, and Taft said, "Why shouldn't I smile? That was Mr. Roosevelt telling me I've been nominated for the Presidency. I guess you'd smile, too, young man!"

Harris treasures the pictures, which he calls "The evolution of a Presidential smile." They were probably the first "candid-camera" photographs.

Presidential faces appeared frequently in George Harris' view finder. He has filmed them all from Teddy Roosevelt to Harry Truman, and considers Teddy the most dominant personality he has ever photographed. Calvin Coolidge was one of his most friendly subjects. Coolidge used to walk down F Street every evening. On one of his strolls he noticed the new building just nearing completion on the site of Harris' original studio. Harris was enlarging the business. A few days later he asked Har-

ris when the new building would be open. told him and added jokingly, "Why don't you be in as my first customer?"

The President surprised him. "All right, time?"

An appointment was made and Mr. Coolidge promptly with Colonel Edmund Sta the Secret Service. Harris took 50 exposure President, 30 of which Coolidge approved ally, something never done before by a Chief, Harris says.

As he left, Coolidge paused in the entrance to be photographed with Starling and Harris. treasures that picture.

The most-photographed man, according to Harris, was "Uncle Joe" Cannon; the best Presidential subject, Franklin D. Roosevelt. Among the others he has photographed he considers Mme. Kertine Dumba, wife of the onetime Austrian ambassador to the United States, the most beautiful woman he has ever photographed. Calvin Coolidge was the most gracious. "Anything to help you," he says. "She'd as liked her dress, and if you didn't she'd go on. She was the easiest to photograph—a love. The First Lady who did most to boost toward his place as king of the camera was Woodrow Wilson.

President Wilson invited him to attend the Peace Conference after the first World War. Harris was one of a big group of photographers; the others he made pictures of various notable people. He alone decided it would be a good idea to take portraits of all 86 delegates to the conference. "I was soon found myself so enmeshed in mastic red tape that it began to look as though I would never go back home without the photographs.

Remembering Teddy Roosevelt's advice, "If you can't do it, then do it!" he asked Mrs. Wilson for a way to do it, then do it!" he asked Mrs. Wilson. She would like an album of pictures of all the delegates. She was delighted with the idea and set the way for him. The job took six weeks, but he visited the homes and offices of all 86 a home with a prize collection, most of which have been used in newspapers all over the world.

The first candid camera shots: William Howard Taft was hearing Theodore Roosevelt tell him he'd been nominated for the Presidency. "You'd smile, too,"

net was autographed by the delegates and by Harris to Mrs. Wilson. Harris had a chance to pay back her kindness. Wilson had become ill and the capital was rumors that he was in no condition to be Chief Executive, that he was paralyzed, couldn't even manage to write his name. Harris went to the White House and made a picture of the weary President at his desk, an official document. The picture showed Wilson's left arm was useless but that he held a pen firmly in his right hand and could write. Mrs. Wilson was shown standing beside her husband, steadying the paper with her own left

was offered \$1,000 for publication rights in the photograph. Mrs. Wilson asked that he not do it. He turned down the offer and held the picture. Subsequently Mrs. Wilson prepared a book of articles for a national magazine and asked Harris for the photo. Of course he gave it to her.

Prince's Aide Wasn't Too Helpful

Harris always gets a kick out of photographing the most interesting royal subject was the Prince of Wales, later King Edward VIII. "I remember very well an experience I had with his aide. I had a camera in the old Belmont House and I asked the prince to appear. When he came he walked into a room where there was a picture of the prince. I told the aide I'd like to pose the prince in a room where the light was very good. The aide said, 'No! You'll photograph the prince where he is. You can't order him around.' The aide ended the conversation. He said to the aide, 'The photographer knows where he can best make a picture. I'll go wherever he wants me.'"

Harris remembers the fact that he never took a picture of the king's father, George V. He had more opportunity which he passed up for no reason. He first met the ruler when President Wilson visited Buckingham Palace in 1919. One of some sixty newsmen and photographers was in the party. By the time they reached London, en route to London, the reporters had no food and no time or water to shave. In London they rushed to the palace looking for an angry mob than a crowd of newsmen. A British general led them to a side door, where President and Mrs. Wilson went through. The side door was locked. The general sent two policemen, lined up some of the reporters and gave the command, "Break down the door!" They lunged against it. The door opened. The bronze doorknob fell at Harris' feet. He kicked it away. Montague Glass, who was with him, let out a howl.

"Glass yelled. 'This is probably the first time a bunch of American reporters have broken into Buckingham Palace—and you know it's the way the best souvenir of the whole

was lined up to meet Their Majesties. As they approached the king, said, 'Your Majesty had no water to shave and I want to see your appearance.'"

The king smiled, stroked his beard and answered, 'That's all right. I haven't shaved today my-

the friends Harris made at the Versailles Conference was David Lloyd George, then British Prime Minister. The Harris eyes twinkle when he talks about Lloyd George and Prime Minister Hughes of Australia, who was quite deaf. Like other hearing persons, Mr. Hughes frequently said things at the wrong time. One day, in a serious conference session, Hughes said to Lloyd George and in a loud voice asked which had happened the previous day. It was the first time Hughes had raised irritations at inappropriate moments, and Lloyd George, who sat next to Lloyd George, was very upset.

"Don't you straighten him out?" Wilson

Lloyd George nodded. At the close of the day he said, "Mr. Prime Minister, I'm having a list prepared for you, to give you a description of everything that will happen at the conference tomorrow, hour by hour. I hope you will

Lloyd George thanked him and the next day he reported quietly as (Continued on page 68)

THE FIVE DRESDEN ANGELS

BY ERNEST L. MEYER

The story of a humble miracle

ILLUSTRATED BY JOHN VICKERY

MY FATHER'S career as newspaperman had taken him to numerous cities in several states. Our family moved from Chicago to Milwaukee, then to Denver, back to Chicago, then to Dubuque, back to Milwaukee, and in between there were sojourns at Appleton, Wisconsin, and Lincoln, Nebraska. Mother had packed and unpacked the family furniture at least a hundred times. Because even when we lived in the same city for years, we rarely stayed long in the same house or apartment. During one stay in Chicago, we moved early each summer from some cheap flat on the far North Side to a stone house on a fashionable boulevard. The house, which still lives in my memory as a mansion, was owned by a wealthy friend of Father's. Each summer this friend traveled abroad for four months and turned his house over to us. We would move in each June, storing our own furniture, and in October move out again to some humble home on the outskirts of town. Moving and storage costs were low in those days, and Mother figured that she saved a tidy sum in rent, and also that we ought to be happy in so grand a home where each of us—think of it—had a room for himself. Yet I do not recall that we three children were ever at ease in the mansion. We called it the Mustn't House, for we mustn't dirty the walls, mustn't handle the rare books in the library, mustn't touch the cut glass, or the scores of tempting curios. It was always with a feeling of release that we escaped each fall to a flat and our own battered belongings. Even Mother, I am sure, must have relaxed, for it is no easy thing to play the everlasting watchdog.

These endless upheavals plus other worries left their mark on Mother. When she was still in her thirties her hair was snow-white, though she never lost the fresh, pink smoothness of her cheeks. Her own aging did not, I am convinced, disturb her nearly so much as the wear and tear on the household furnishings. A large part of them, especially the linen tablecloths and a great assortment of silver and china, had been her mother's. Each of our many movings, no matter how carefully we packed, took its toll of breakables, and each breaking seemed to cut, painfully, just another little thread that tied Mother sentimentally to the old country. The linens and drapes, of excellent quality, came through the ordeals in fairly good condition; even the mendings and patchings of later years did not totally destroy the original essence. The patches were like new shoots on an ancient tree; the root, the core was still there, and that—to Mother—was what mattered most. A bit of the old life had survived in the new.

The five Dresden angels caused her the greatest anguish. They were so fragile; they had none of the immortality quality of angels at all. They were made of Dresden china, and each angel had a pair of golden wings. Although none of them was any larger than a man's thumb, they were exquisitely fashioned and tinted, and very industrious. One was playing a harp. The second, an instrument that looked like—though it couldn't be—a banjo. The third, with stylus in one hand and white tablet in the other, was inscribing something which one hoped, piously, would be the Ten Commandments. What the other two were doing I have totally forgotten, yet I am positive, knowing a little about Dresden though nothing about angels, that it was something entirely orthodox.

The casualties among the angels during our journeyings were terrifying. One had lost a hand and another the best part of a foot. Little chips were missing from the others' anatomies. Each maiming made Mother sigh and shake her head mournfully. The set of little angels had been a wedding present, and she had discovered after quests in the stores of many cities that they were irreplaceable. On our last removal from Chicago to Milwaukee, Mother discovered that the harp player had lost an entire golden wing. Mother's stricken face, plus her promise of a dime if I found it, made me lug the barrel of excelsior, in which the china had been packed, to the basement. I scattered the heap on the floor, and went through it patiently. Though I worked an hour I found nothing, perhaps because a dime is really too small a price to set upon an angel's golden wing. Heaven, no doubt, has its own rigid scale of values.

THE five Dresden angels, chipped and maimed though they were, now occupied Mother's perch of honor on the parlor mantelpiece. It was during this summer that the miracle happened.

I recall that on the afternoon of that day there had been no portents at all of the wonder to come, though there were, to be sure, indications of a delightful evening. Early that afternoon I heard Mother answer the telephone, and when she had hung up she called me.

"Go into the cellar, please, Ernst, and find a sack. Then go to Steinmeyer's and see if you can buy some

red cabbage. I need at least five firm heads. Meyer's have no red cabbage, then go to all stores on State and Chestnut streets until you find five heads."

"Five heads of cabbage is an awful lot," said.

"Herr von Pagel is coming," Mother said. "He arrived in town this morning and would have supper with us. He is bringing everything but he was unable to find red cabbage because it was too early in the season, though I have seen it and there. And that, as you know, is *gericht*."

Fritz von Pagel and his favorite dish! The thought of the coming feast lent agility to my feet as I dashed for the sack, remembering that gentlemanly but mysterious man. He was enormous, oddly with a bulging middle and long legs. I had seen him that many years ago in the old country, a student, he and his three brothers in a great landed estate. The sudden opportunity of luxury after years of stern discipline won four brothers' heads. They bought regalings and blooded horses. They entertained lavishly. Money flowed like sand through their fingers. Soon they had spent everything, down to the last copper. They sold what remained of their estate and sailed to America. In the next two years one of the brothers became an important government official. Another committed suicide. The third ended as a sheepherder in Montana. And the fourth?

Well, Fritz von Pagel was sometimes down. He was a promoter of great estate enterprises. Sometimes they failed, and during one of his lean seasons that he boasted of, he fell in love with Mother's cooking. When his speculations succeeded, he lived flashily in the grand hotels. Yet occasionally in these grand

With infinite care Fritz von Pagel placed our old sets of angels before my mother. "Herr von Pagel," she said joyfully, "I do not know how to thank you"

us for the sake of old times and Mother's. At the moment Fritz von Pagel must be. His visit tonight implied affluence, for he came to us without hamper bulging with gifts.

ed a sack in the cellar and joyfully took the Steinmeyer's. But they had no red cabbage went to Schultz' on State Street. Schultz precious heads, and he took a personal inquiry quest when I sketched for him briefly the plight of a millionaire without enough to eat.

heads? Well, I'll give you these two, and I'll aun and Zwilling. You just wait a minute." ne back from the phone triumphantly. d two heads of red cabbage and Zwilling I thanked him and dashed away. At last I ve cabbages, large and firm and shining, added the trolley again with the sack over der.

IN I got home, Fritz von Pagel had just ven up in a taxi; Mother was helping him heap of things. I took the cabbage into the ame back, shook hands happily with Herr and helped disgorge wealth from the cab. uge baked ham. A great frosted *torte* and narzipan cookies. Cans of caviar, *Sardel*-moked goose breast. A strong cheese, a Roquefort, and a round brown crock of . A hamper of assorted fruits. A bottle of d a gallon of old port. A couple of huge kels. A box of cigars.

for an army, I thought. But Mother er. Fritz von Pagel used to board with us. e *Rotkraut*?" asked Fritz von Pagel anx- en we had carried everything into the

"I got it downtown," I said proudly. "Five heads. I went to three stores, for it is not in season."

Fritz von Pagel beamed at me, rubbing his hands. His shaved head, set atop great shoulders and prosperous paunch, looked like an egg balanced on a pumpkin.

"*Famos!*" he said. "You have done well. I have just come from a long trip out West and for months I have dreamed of your mother's red cabbage, which melts in one's mouth. So, then, here is something for you."

He fished into his coat pocket and handed me a package. There was a belt in it, made from a rattlesnake's skin. I thanked him and ran out to show it to Willie Eckhardt, who had nothing half so astonishing.

When Father returned from the office he came stamping in from the porch. "Anna," he said in pretended fury to Mother, "this is really too much. These things cannot go on. Even in the street I could smell such a symphony of fragrance, including *Rotkraut*, that presently you will have the whole neighborhood besieging us with their tongues out. And all the dogs in the world, too."

"One of the dogs is already here, Georg," said Fritz von Pagel, rising from his chair in the corner and coming forward. "Though he has the appetite of a horse."

"*Ach*, Fritz! This is splendid. What a surprise," said my father, shaking his hand. "Something tells me, Anna," he added shrewdly, "that with our cabbage tonight we shall have a tiny morsel of meat, perhaps."

"A whole ham," Mother said. "Herr von Pagel came loaded down like Santa Claus with a moun-

tain of gifts. And I have asked Dolfec to come downstairs and share supper with us."

"Then," my father said, "one ham will not be enough. Ernst, my son, run quickly, buy an ox or two, and—"

"Nonsense—an eighteen-pound ham!" cried Mother. "There will be plenty. Besides, Dolfec's wife and his son have gone to Elkhart Lake for a week. He is all alone, and I thought—"

Fritz von Pagel groaned dismally and said, "Say no more, Frau Meyer. Maybe if you search the cupboard you can find a dry crust or two to save me from collapse. I shall gladly starve myself for the sake of that lovable devil, Dolfec."

"And who is it that takes the devil's name in vain?" said Dolfec, who had come quietly down the back hallway steps and into the kitchen. "Well, well, Fritz von Pagel. What a happy reunion! And unless my nose fails me, your *Leibgericht* is simmering nicely on the kitchen stove. That divine aroma, Anna, wafting up the hallway, made me realize suddenly that heaven is not a throne room but a kitchen, and all the cherubim are chefs."

The men went to the front porch for a sip of cognac, a rare treat in our home, while my sister Else and I helped Mother set the table. We used the very best linen tablecloth, a thing of glory from the old country, with only one mend in the middle, which could be neatly concealed by the centerpiece of fruits.

"And napkins for the guests from the lowest drawer in the bureau, the good ones," Mother ordered. She struggled with herself for a second, and added, "You can put a clean napkin in Papa's ring, too." (Continued on page 45)

I passed Mr. Groves on the stairs to my room. Then hearing him knock on Charlotte's door, I sat down and waited to see what would happen.

MAN RUNNING

CONTINUING A THRILLING ACCOUNT OF FLIGHT FROM THE
BY SELWYN JEPSON

The Story:

One night in London CHARLOTTE INWOOD, beautiful and wanton wife of wealthy JOSEPH INWOOD, rushes to the house of her newest lover, JONATHAN PENROSE; her dress is covered with blood. Frantically she tells him she has just murdered her husband. Desperately in love with the woman, Jonathan goes to her house and takes steps to make the murder seem the act of anonymous housebreakers. However, on leaving the scene, he is recognized. Chased by policemen, Jonathan literally runs into EVE GILL, the "I" of the story, who is in London attempting to sell a valuable Rembrandt painting which her crusty and eccentric parent, COMMODORE GILL, had talked her into stealing from his stingy sister-in-law.

On an impulse, and because they are both outside the law, Eve drives Jonathan to the Gill home in Kessingland and hides him on the family yacht. She is suspicious of the story he tells, rightly suspecting that Charlotte had an accomplice and is using the love-blind Jonathan quite ruthlessly.

Already growing fond of Jonathan, Eve drives back to London where she manages to scrape up an acquaintance with a detective on the Inwood case named SMITH. Returning to Kessingland, Eve finds that the Commodore has taken the yacht to Holland, where he plans to sell the painting. Jonathan,

whom Eve had fitted out with seaman's papers, has jumped ship—apparently unable to bear the thought of being so far away from Charlotte.

Having found out from Detective Smith that Charlotte's maid is leaving the supposedly grief-stricken widow, Eve calls the maid and arranges to interview her. Eve's plan is a daring one. Signing her own name to a letter recommending the services of a mythical lady's maid, "Dorothy Simpson," she packs her bag with plain clothes and sets off once again for London.

III

IRANG the bell marked VISITORS of Number 4 Cary Gardens and stood there; it was like the moment when the dentist's secretary comes into the waiting room and you know you are next. I occupied myself by looking at the broken window through which Jonathan had thrust his elbow. There was no one to interfere with me. The outside police guard was no longer on duty, and although there were two or three sight-seers passing the house slowly, the reporters seemed to have given up, or had not yet come back from lunch.

A policeman opened the door. I addressed him in a confident tone.

"My name is Simpson," I said. "I've

come to see Miss Good, from Miss Gill. She telephoned this morning and arranged the appointment."

"Miss Gill?" he said. "That's all right." He eyed me carefully just the same. The old black suit and the somber hat I had bought provided him with an innocent-enough picture. He stood aside and I was in the hall with the grandfather clock which had marked the fatal minutes Jonathan had spent in the house.

"Mrs. Inwood's maid is in the basement sitting room," said the policeman. "Through that door there, down the stairs, first room on the right."

I walked the length of the hallway, past the wide staircase which led upward to the first floor and Charlotte, in seclusion after her emotional storm, avoiding people, and keeping the police at a distance just in case they asked her any uncomfortable questions. This door on my right would be the room where she killed her husband, and where Jonathan had worked so efficiently to disguise the fact. . . .

Yes, I was inside now, at the heart of the thing, almost one of the small group intimately concerned in the drama. Almost. It depended on Ellen Good.

I opened the door of the servants' sitting room with just enough of a conspirator's air to startle her. She

had pleasant eyes, and I knew that it was going to be all right.

"Ellen Good?" I started. "I'm sorry I had to deceive you on the telephone this morning; we had to get past these men. I'm from the London Police."

She was even more startled by my goodness! Madam said count to talk to the reporter.

"I don't want you to. The idea at all. It's Mrs. Inwood to talk to. And I want to. We're prepared to pay for the morning I said I was ready for your wages for a few weeks which it's only right you should have after the shock you've suffered."

"It isn't only the murder of Ellen Good. 'She's quite kind make you want a holiday never want to maid another long as I live.'"

Her eyes were on the pound notes I had taken from her bag. I put them in front of her.

"To get an exclusive story of the kind we don't rely just on the view. One only gets their own—mine. I thought of a way to get it, you'll help a bit."

"It depends," she said. "I won't do anything wrong." (Continued on page 27)

How to make two wishes come true

THE FIRST wish—the world with a fence around it—is easy. Here it is. The second wish—a cocktail as gloriously flavorful as a Four Roses Old Fashioned—is next to impossible to make true...unless you make your cocktail Four Roses.

Or, only by endowing your Old Fashioned with the distinctively mellow and

delightfully *different* flavor of Four Roses can you achieve the perfection which places this cocktail in a niche above all other Old Fashioneds!

AMERICA'S MOST
FAMOUS BOUQUET

DEMON FROM THE DOLDRUMS

BY FRANK L. HARVEY

Spawned in the quiet of the doldrums, the infant monster begins to whisper, to moan, then to roar with insane glee. The hurricane, a whirling devil, is loose. He lurches westward, and heaven protect whatever is in his way

ACME

As the twister approached, winds of nearly hurricane velocity whipped the trees and surf of the bay-front residential district. Miami got set for t

ONE day last fall Florida was suffering from the worst case of hurricane jitters it had experienced since the 125-mile-per-hour killer flattened Miami in 1926.

A big twister had been spotted in the Caribbean and was boring in on the mid-section of the state, where \$150,000,000 worth of little green oranges, tangerines and grapefruit clung precariously to the trees. As everyone knows, there is a very limited demand for green oranges the size of golf balls, and if the wind hit as advertised, that Florida gold would never reach Northern breakfast tables.

But that wasn't all.

This hurricane was no midget. It was the kind you read about in books by Nordhoff and Hall—a real stem-winding, breech-loading hellcat. It had been cooking for nobody knew how many days in the lower Caribbean and now—while it was still 500 miles offshore—Navy reconnaissance pilots reported the winds had reached 125 miles an hour. By the time the storm hit the coast it would be whistling Dixie and maybe lugging a couple of million tons of sea water in the giant suction cup under its evil “eye.”

In the morning, reporters arrived and began putting out the feverish word. One enterprising gentleman of the press flew into the center of the whirlwind and broadcast a play-by-play description of its antics. If anybody entertained hopes that we were dealing with something less than a jet-propelled whizzeroo, the broadcast laid them to rest.

“Listen to her bellow!” the newsman shouted. “From where I sit the ocean looks like frothing milk. I can't even hear the engines. Frankly, friends—I'm scared stiff!”

This made people on the Florida

west coast feel just dandy—particularly the citizens of Tampa—for the Weather Bureau followed immediately with an announcement that the hurricane was headed straight for that city and would arrive about midnight.

Tampans promptly dived for cover. Two thousand folks on Davis Island in Tampa Bay slammed their storm shutters in place, grabbed the family heirlooms and took off for high ground. All sorts of wild rumors began to circulate. The hurricane had jumped to 200 miles an hour, had lifted a large fishing boat out of the water and carried it several miles through the air. A mammoth tidal wave had been sighted which would sweep fifty miles inland. The death toll would certainly reach at least 50,000 by morning.

As night fell, Tampa braced itself for the worst. The town was jam-packed with doctors, nurses, state troopers, national guardsmen, salvage gear, jeeps, sulfanilamide and canned soup. Every Floridian who amounted to anything was present, except Governor Caldwell, and he was issuing hourly benedictions over the Tallahassee radio.

And then, as the hands of Tampa clocks crept to the zero hour of midnight and citizens gnawed feverishly at their fingernails, the hurricane hit—with all the devastating force of a lightly thrown cream puff!

“The tropical hurricane,” mumbled the radio self-consciously, “has reached Tampa Bay. It is not so violent as was expected. The wind velocity is 50 miles an hour.”

To call this announcement an anticlimax is an understatement. The people of Tampa felt very much as a boxer might feel if he climbed into the ring expecting to meet Joe Louis and

discovered Baby Snooks in the opposite corner.

Nobody will ever know exactly what happened to the “powder-puff hurricane” of 1946. At four o'clock in the afternoon it was roaring like a million tigers, but by midnight it was meek as a kitten. That's how it is with a hurricane. You can never tell. The savage killer that ripped into Miami in 1926 was practically the twin of the Tampa twister—eight hours before it arrived. But the Miami hurricane didn't fade out. It literally tore the city to pieces, killed 450 people, seriously injured 5,000 more, caused \$85,000,000 in property damage and left 20,000 persons homeless.

Most Terrible of All Forces

No other force in nature can rival the power of a tropical hurricane. Floods, earthquakes and volcanic eruptions rolled into one can't match the destruction that these whirling juggernauts have left behind in their age-old forays on land and sea. At peak velocity a tropical twister builds up 1,000,000,000,000 pounds of pressure. Shortly after the Bikini test, W. J. Humphreys, retired U.S. Weather Bureau official, computed that a full-fledged hurricane generates more energy than 1,000 atom bombs exploding simultaneously!

The blast that hit the Florida Keys in 1935—the most vicious wind ever recorded in the Western Hemisphere—blew all wind gauges away, but scientists estimated by formula that it was traveling more than 200 miles an hour! The '35 blow sliced off everything in its path like a giant razor—trees, light poles, houses, railway tracks, bushes—everything. As a newsreel man described the aftermath

on the following day: “All of the houses were bare spots of ground. There wasn't even a stick left!”

Where do the big winds go? Their principal spawning ground is that vast stretch of windless known as “the doldrums,” in the Atlantic Ocean between Cape Verde Islands and the equator.

All through the blazing summer doldrums glitter like a mirror on a peaceful sky. The cries of the trade winds carry for miles in the equatorial sea. And then, in autumn, a change occurs.

Yellow cloud mountains appear on the horizon. Haze films the sky. The sun glares through it. Sudden thunderstorms with moisture. And then, on the edge of the stratosphere, the wind begins to blow. The doldrum period is past. The ground is ripe to hatch its devil.

Over thousands of square miles, lukewarm ocean a column of heated air begins rising—slowly—leaving behind a partial vacuum into which cooler, heavier air gushes. The wind at the updraft, washes it away. The air rushes to take its place. The vacuum has become a giant chimney, greedily sucking air from miles of empty ocean.

Now a delicate pressure balance is exerted by the earth's rotation—gently nudges the spiral of the chimney. Rising air begins to twist, to move in a downward spiral which quickens its momentum. Gradually the spiral draws tighter. The swirling

INTERNATIONAL CRAWLERS

QUARRY THE *INDISPENSABLE*

• In quarry pits all over the world, rugged, powerful International Diesel Crawlers help produce one of civilization's indispensable materials... *limestone*. They move millions of tons of it to shovels, conveyors and loading ramps. Because Internationals lead in dependability, durability and operating economy, men who move the earth ask for more and more of them each year.

Just as limestone is *indispensable* to the industrial arts, to agriculture, to construction, to our way of life... power-packed Diesel crawl-

ers and engines are *indispensable* to building and maintaining the physical foundations of our civilization.

You'll find International Crawlers working in cities and towns, on the highways, in the forests, mines, oil-fields... wherever heavy work needs doing. And they do this work at ever lower cost to you, your neighbor, your city, your state and the nation.

AFFAIR'S END

Continued from page 15

had, and never knowing there could be more, now felt the keenest regret for an excitement she now understood she had missed? She knew nothing about Jim Daniels, nevertheless he had touched her with his discontent, tearing her own illusion of contentment apart.

She was motionless and uncomfortable and seemed to run a temperature. She had lost her security, she had lost her way and was confused. There was a feeling in her—such a strange, chaotic and eager feeling—that some great thing was to happen; yet her mind, always practical, warned her that this was only an illusion. People got tired, even of security and pleasant routines; they rebelled and dreamed of a world full of wonders. But they always came back to what they had. She told herself this, but couldn't make herself believe it. Her thoughts were restless and vivid; heated images flashed through her mind. Her body felt heavy and strange. She was afraid of herself.

SHE woke with excitement, she sang a little in her shower, she brought a gay mood to the office. It was as if she were living on her toes, looking forward; she was happier than she remembered being in a long while, and now, to keep her eyes on Jim, she found herself going through those little evasions and subterfuges that other women used on other men: He was restless throughout the morning, he made his frequent trips to the water cooler and she sensed—because she wanted to sense it—that he was actually aware of her. But he ignored her, and as the afternoon wore on, her feeling of some good thing about to happen wore away and she grew irritable at him and at herself. Indecision rocked her back and forth; she thought herself foolish and inconstant and she decided she had misjudged him entirely yesterday; he wasn't interested in her. . . .

Shortly before five he came to the water cooler again and paused there for his drink, and again looked through the window with his abstracted manner; and then with a brusque swing he left the window and came directly to her desk. She drew a deep breath, every short-tempered impulse fading before the return of a sweet and keen excitement. She had visualized this scene and had de-

cided how it ought to go. She was casual, she would go on with her moment, she would look at her with her courtesy smile. In that way. She lifted her head and dropped her hand so obviously waiting for him didn't come; she couldn't bring her face.

He tried to keep his voice low, she noticed the unsteadiness in it, you have dinner with me?"

"Yes."

"Tonight? I could pick you up at six thirty. I know where you live."

"Yes," she said and, knowing she would be watching this man's face, she looked at her copy work with a little impatience, hoping he would be enough to understand it. He gave a casual nod and turned away, she looked forward to read what she had for a moment she couldn't bring her attention to it; she had to go to her power not to look across the street. At five she got out a crowd; she didn't want to miss him. She had only a half hour to bathe, dress, put a comb through her hair and to take care of her nails. She worked swiftly, with the purposes to arouse this man's challenge to her, he put her to a summons up in her the morning's desires to please him, to make herself equal to whatever danger or might offer her. It was another yet she felt no weariness as a buzzer sounded she went quickly to her door and opened it.

There he stood.

"Would that restaurant on the river be all right?"

She said, "I'll get my bag from him in the doorway while she's in her bedroom. She started to look at her before her mirror, then she changed her mind and carried it back to her room and stood in front of her dressing table adjusted it. She said, "Is it all right?"

He nodded and watched her straight-on inquisitive interest got the strongest feeling there was a far quicker man than he was. His mind caught the subtleties she attracted him and she knew what he saw. He showed it, he put his arm and turned her out of the

closed the door behind her. "How do you manage to look so well, after such a day?"

"It can be arranged, if it seems desirable."

"That encourages me."

"I have the idea you don't need encouragement."

They got into his car and drove through the town's condensed heat and its heavy, ill-tempered traffic. They turned down to the river road and idled along it, with the cool breeze from the water coming upon them. He said, "The office is a gossip mill. I was afraid I might embarrass you when I stopped at your desk. Did I?"

"No. But if you were bothered about it you could have called me on the phone at home."

He said nothing for a short time. She turned to look at him and noticed he had his attention fixed on the road, that his expression seemed again to take him a long distance away. She had never thought him a handsome man; he was of the rough and direct sort, she guessed, who valued the deed more than the reason and who probably had too much impatience to care for long thoughts. Yet in profile he revealed a trace of uncertainty; he seemed to be both aggressive and doubtful.

"No," he said, "I wanted to do it openly. There's Gordon."

The shock came back and little streamers of fear traced out her nerves; the keen excitement had returned. He had thought about her, and wanted her to know how much he had thought. She looked down at her folded hands and wondered if she were ready for any of this. She sat quite still with her wonder, with her own gentle scheming.

He turned in at the tavern built at the edge of the river and found a table on a porch overlooking the water. The sun had fallen over the hills, the early shadows of the river were changing from a misty lavender to an opal gray along the willows. They ordered, they had wine, they ate.

"This is comfortable, Jim."

"I tried to think of a place you might like," he said. "It's all been carefully planned. I worked it out at the water cooler."

"Oh," she said. "Then I'll have to ask the usual question. Why me?"

He made a small gesture with his hands, shaping up a thought. He had been quiet, with no great amount of

expression on his face. It posed, a hard face to read. She relaxed and she saw the beginning of a smile, and the flash of deep eyes. She said quickly, "I don't think there's anything in this man-and-woman thing."

"I don't think there's anything in this man-and-woman thing," she said, "I look at the you—and then there's nobody seen many women's hands. Nothing. I see yours and ever thought about women there, in your hands. What you and makes me want to know? What comes across between us? Nobody knows—but there it is. I feel it. I feel it."

"If you hadn't seen me, there would be another woman where—and you'd see in her what you wanted to see. You'd have all this to her. There's no other just two people meant for the world without end."

"Then you don't feel you are the only two people?"

She looked down. She thought of herself and she avoided the question. "It could be something else. We've nothing to go on. We're each other. This—this sort of thing is much too fast."

THEY said very little else, but her lifted spirit went wonderfully on—the well-kept pact upon her whetted senses, the flavors and sounds about her, the thickness of emotion. She was hungry, she was gay—forgetting of the end of this, and of the end of caring. They went on and drove idly along the winding through the hills. They spoke in the shortest phrases, and long and none of the talk seemed to come from anything that had been said before. They reached a high clear point, looking the city and drove it. He said, "Is this all right?"

"Yes."

He snapped off the ignition lights and settled back. He lit cigarettes and offered them.

She shook her head, and packed away, forgetting that to smoke.

He said, "I'd like to kiss you."

She had looked forward to it. She had thought she would

DANMASTER* high note in fall pajamas

College man, you're going to need a couple or three pairs of these Danmaster pajamas. They're good, comfortable all cotton broadcloth, Sanforized to keep their roominess, vat dyed to keep their woven stripes. And if your roommate doesn't swipe 'em they'll last forever (well, anyway, almost). At good stores everywhere.

"I wish people wouldn't leave just one hunk. I always feel like..."

Cheeselovers... feast yourselves!

here's the Kraft American you've hankered for!

For the first time in five summers America's favorite "sandwich cheese" is plentiful. Kraft American with the cheddar flavor is not mild, not sharp but *just-right-now*! The American pasteurized process cheese that always melts velvet-smooth! Back the half-pounder of Kraft American in the picnic basket. Keep a two-pound loaf of Kraft American in the refrigerator for cooking and snacks. Or, after you've seen the name Kraft American on your dealer's big five-pound loaf) sandwich-size slices.

This summer, cheeselovers, you can let yourselves go—have all the mellow Kraft American Cheese sandwiches you want. Have 'em cold, have 'em hot, have 'em now that there's plenty of your favorite cheese to be had!

PREPARED OPEN-FACE SANDWICH. Toast a slice of bread (crusts trimmed) on one side. Spread un-toasted side with Kraft Mayonnaise, cover with a slice of peeled tomato, then a slice of Kraft American. Top with two strips of partially broiled meat. Place sandwiches under low broiler heat or in moderate oven, 350°, until cheese is melted and meat is crisp.

Copr. 1947 by Kraft Foods Company

ALL 3 GOLDEN KRAFT VARIETIES ARE PLENTIFUL AGAIN.

"Old-English", the smooth-melting pasteurized process cheese with the delightfully *sharp* cheddar flavor is back! And there's plenty of the children's favorite, too . . . the famous cheese food . . . rich yet mild Velveeta. Like Kraft American, they come in ½-lb. and 2-lb. sizes. Dealers also have Kraft American in the 5-lb. loaf for sandwich-size slices.

IT'S GREAT TO HAVE
A WHOLE KRAFT
SHELF AGAIN

THE WORLD'S FAVORITE CHEESES ARE MADE BY **KRAFT**

facing the problem and arguing over it; but there was neither argument nor delay. She turned and met him as he came along the seat; she fitted herself into his arms and raised her mouth and took the stinging shock of the kiss and felt it surge along the receiving channels of her body, and in the single detached place of her mind she heard her inner voice saying: *I hope—I hope so much.*

She wanted it to go so well—she wanted to think good of this, she wanted him to think good of it. She hung to him, her tissues soaking up the moment; somewhere a solitary warning made its faintest sound in her head. She tried to ignore it, but the sound kept on and finally she drew away from him.

She touched her hat; she reached for her purse. She murmured, "This gets pretty fundamental."

"Yes."

"I think I'm afraid."

JIM started the car at once and backed around the meadow to come upon the road. She laid her hands in her lap and the glory faded before a doubt and her thoughts, struggling back to their cool place, gave rise to a quick self-hatred. She was shallow, she was cheap. On their first meeting she had waited to be kissed, knowing nothing of what was in his mind, knowing nothing of her own lasting desires. She had been greedy and had let it sweep her away; she who had scorned the casual affairs other women sometimes talked about now found her own standards falling apart. She was angry at him for the easy way he had asked for his kiss, and at her own readiness to give it. She was shocked by her eagerness, and by the discontented wanting he left within her.

She had these thoughts all the way home; she was locked silently within herself. When he stopped the car before the apartment she opened the door.

He said, "You know, of course, I'm trying to break it up between you and Gordon."

"You're doing all right," she said. "But what do you think about? Only this sort of a thing? I mean—who does the work, who worries over the world, who believes in the things in the copybooks? Is this all—just you and I trying to fill ourselves with something for one night, trying to pretend nothing else matters ever, and that this is all right because it's us?—And that it will go on forever—one sensation after another, one delight after another, until we're dead?"

He said, "There's time later for all the tears you and I are going to shed."

"You said there wasn't time enough for anything."

"Tonight's been short, hasn't it? Any happiness is short. We're afraid of it. We think there's something wrong with it."

"Is this happiness? There must be more to it than this."

"Why do we always ask questions when it comes? Why can't we take it as it is and believe in it?"

She said, "Your mouth—here's lip-stick on it," and left the car.

She brewed herself a cup of coffee and got ready for bed, and sat on the edge of her bed and drank her coffee. The phone rang. She let it ring, knowing it would be Gordon; she didn't want to hear his voice now. She put aside the coffee cup, rolled into bed and turned out the light. She tried to bring Gordon close to her. She summoned all his good qualities and she searched him for those things which had meant much to her—so much that she had been willing to marry him. But he didn't march out of the growing mist; he was unreal, he was fading, he lost force to her and became only another man. Quite unexpectedly she found her eyes wet; she had to tell him, she had to hurt him.

But what was to be said? She lay on the bed with tremendous things unlocked

and ungovernable within her, feeling her hopes and her loyalties swinging toward a man of whom she knew so little. He had promised her nothing and she hadn't asked for anything. Lying with these strange new anarchies in her head and these new pains running through her—pains that frightened her because she waited for them and was proud of them—she wondered at herself and didn't know herself.

Gordon came to her desk somewhat before twelve. "Lunch?"

"Where?"

"I'll meet you at the Dorchester in twenty minutes."

He was in the lobby waiting for her with his smile and his nice courtesy, but there was difference enough in him to be noticeable to her. She knew he felt something was wrong. They found a table in the middle of the large and crowded, noisy dining room. She noticed how neat and how precise he was in his dress, and found this a less admirable trait than it had seemed before. His mouth was smaller than Jim's, his whole face was gentler and more considerate, but when she looked at the lines around his eyes and lips, she thought she saw a dryness of sentiment, which caused her to wonder

and I would still be wrong for each other."

"You're entirely certain?"

"Yes. You know I'm not impulsive."

He said, "This isn't a good meal—not at all a good meal." He caught the waiter's eye and got the check and paid it. He looked over at her, much too proud to wear his feelings openly. "I'm sorry. Nobody knows about those things, do they? Is there anything I could do about it?"

"I'm so terribly sorry."

"No," he said, "I don't think you are. This thing fills you up so much you've really got no room in you to be actually sorry for me." He was tired and restless and he gave her a critical glance, trying to understand her. "Everything seemed fine," he said. "It just went on as far as I could see. It would have been wonderful." He made several small lines on the tablecloth with his thumbnail and stared at them. "How do you know you love him?"

"I don't know."

"Then what have you got?"

"I don't know that either—but it's something we didn't have."

"You're sure it's good?"

"No," she said. "I'm sure of nothing."

"I was young once myself, always been sort of ashamed of it, though"

COLLIER'S

JOHN MILLIGAN

if her old loyalty to him had made her blind, or if her new loyalty to Jim made her unkind.

He said, "You look nice. What are we eating?"

They ordered and they went on with small, fencing talk. He had something to say but he waited for her to create the opportunity for him to say it. He liked smoothness, he hated to press, he had a deep feeling against immoderate display. But when he saw no easy opening, he asked his question direct:

"Is it Daniels?"

"I don't know. But it's us anyhow. I mean, for us nothing's possible now."

The food came and the waiter hovered over them a moment and went away. Gordon said, "Would you like some of this sauce on that salad?"

"No."

He said, "When did it happen?"

"Last night."

"You were out with him last night, I suppose. Could I say something, Margaret? Your conscience isn't hurting you for anything that happened, is it? If that's all it is, I don't mind. Well, I mind, but people make mistakes."

"I don't think I have a conscience."

"You've got a very good conscience," he said, with a degree of sharpness.

"I don't know a thing about him," she said, "yet if I never saw him again you

He rose and drew back her chair. Walking to the lobby with him she knew he would never again quite feel the full trust he once had had in her. She had meant certain nice things to him, but this raw change had come upon her and he disliked it and drew back from it. She thought: I wish it would come to him—then he'd know. She stopped in the lobby and quite unexpectedly she got an impression from him that gave her self-confidence and took away from her the feeling of being adrift. It was such a brief thing, but in that flickering of a moment she saw on his face a preview of what he would be when old—that smiling, courteous expression of a man looking upon a world he didn't understand, feeling no heat, remote from passions he never had experienced. She turned from him quickly.

She walked up the stairs to the mezzanine and along it toward the powder room. Women sat on the mezzanine lounge chairs, alone or in pairs, and as she went by them she looked at them with her deep-stirred curiosity. For whom were they waiting and what did they want—and were they strong, or weak, and what price did they put on themselves, and how lonely were they, and did they dream, or simply sit as unlighted candles, and were they afraid of what they were, or did they wait in open re-

billion for the first man's a eye?

"There were two girls in the room, and one of them had many cocktails. She was a with a milky skin and a soft would soon be fat. She stood long mirror, slightly swaying, stared at herself and cried, whimpering gusts. The other politely exasperated. "My put a cold towel on your face. you home this way."

Margaret got out her compact; she watched the crying her deepest interest.

The crying girl said, "I do don't go home."

"Yes, you do," the other girl said. "George will say I got you in he'll give me hell."

"The apartment's stinking," the crying girl, "and there's no and all I've got to look forward dinner, and he'll come home I want to go out he'll crab we'll go to bed and lie there another. Don't do it—don't even."

"Put a cold towel on your face."

"I mean it. A girl traps to be old and sloppy in a couple thought it would be wonderful not. You'll get fooled too. sight—you know there's no You know what fools you, Don't let it—don't ever let."

"You're a tramp. Get together. I wish I'd never been."

"I'm not a tramp."

"You're a tramp. Put a cold towel on your face."

Margaret left the room. I silly scene, this girl and her But it wasn't really silly. As a tragedy.

She was back in the office one and worked steadily through the afternoon and pulse to look toward Gordon whose thoughts had been so who had waited for his glance thought of him possessive wanted to be thought of possessively, no longer cared. The was broken. She found her to look toward Jim's office impulse angered her and she go home at five o'clock.

IN HER apartment, cooking I wondered if a woman was swinging toward the stronger was a hard thing to believe, that no woman would ever would always be swinging. meal, both legs folded beneath alcove seat; she was loose her house coat and she felt was more than freedom from was more like a freedom to herself. It was strange what came out of this break. She Gordon and maybe—and she it with a livelier interest—she Jim Daniels. The little cry be right. It could be a trap walked into because she passion would bring every sary thing with it.

She washed and put away. She walked idly around the picking up things and putting. She looked at her clothes in washed out a pair of stockings a magazine and settled herself stuffed chair. She tried to in the magazine but present aware of the street noises window and of the loud electric clock's ticking. She magazine and looked about and suddenly fear went through its painful sharpness. She She couldn't be free. She was waiting for the phone.

It was the house buzzer that walked to the wall and lifted and heard Jim's voice coming

with its fuzzy unnaturalness. "I took a chance," he said. "Come for a ride?"

She said, "Wait ten minutes and come up."

She was excited again and the same rapid scheming came to her; she dressed, she touched up her hair and her lips. She stood before the mirror and stared closely at herself as she made her small last changes. She walked to the middle of the room and stood there with so many puzzled, candid thoughts running back and forth through her head. I'm confused, she thought. I've lost my way. How can I know what it is I'm going through? Does anybody ever know?

She opened the door for him when he knocked. He stood in the hall and seemed something like a stranger who doubted he was at the right address. He gave her a close glance, and for a moment he reminded her of herself—the same need in him, the same rebellion, the same wonder. He passed her and stopped in the room and looked around. His voice was entirely matter-of-fact. "It's a nice place."

"Sit down."

"I thought," he said, "we might take a ride. It will be cool."

"We had a ride last night."

"Have we got a rule against two rides?" he asked.

"Look," she said, "I don't know you. You make me a terrible woman. You touch me and I break up with another man overnight. I can't help it, but what are we to call that sort of thing? I don't even know what you're after—I don't know if you're honest, if you want me for one day or forever. I don't know, yet I threw over a good man. I don't like myself, Jim, and I don't like you. What can we be proud of? We're just hungry people kicked around by something bigger than we are and it's making fools of us. If you can do this to me now, maybe another man can do it a year from now, and I'll ditch you as I did Gordon. I ought to send you away."

HE WATCHED her with his intent steadiness. An expression moved over his face and lighted his eyes for a moment and he turned and went to the window; he took hold of the cord on the Venetian blind and idly switched the shutters up and down. His back was very broad and he recently had been to a barber, the new edge of his scalp white against the otherwise brownness of his neck. "What are you afraid of?"

"It's too much, too strong. It came too suddenly, it knocked me over. Where are all the nice little things—where's the security—where's the faith we ought to have in each other?"

"You want it proper and right," he said. "You want the copybook rules you asked me about last night."

"Everybody does. Even the wildest people wish they had the copybook rules. We've got to break it up, Jim. You've

got to keep away from me. pulled down into something

He still had his back to her in the slowest and gentlest of the same things, Margaret. right. Everybody walks a dark. It's like a black night into one another and slide sees anybody. Then I told something warns me to run. I lose you." He turned around many trips do you think I water cooler before I had to come to your desk?"

She looked at him with rushing through her. "You too?"

"I was," he said. "It can fast for me—just as it did for so skeptical nowadays, so educated and smart that we don't comes like that. We think something else and we suspect. We put a funny name to it and it look bad."

The answer was so simple, its so instant and so close was in his hands and at his was he in her hands and a She smiled, she believed in lied in herself. She touched was sweetly insolent with her. He was nice—he was deceiving. "Do you suppose ever through this? Is it the way it pens?"

"You ought to know. Gordon."

"Oh, no," she said. "It was never. It was like a war. This—this is pretty rough."

"I know," he said. Then he said something that she and left its warm glow her to him completely. He the same softness, almost reluctance. "It's real. That's us afraid it isn't so. It's the dream it ought to be, a dare believe it will happen. moved toward her and looked this all right now, Margaret."

"Yes," she said. She was be kissed, to go tumbling a lent stream again. Every complicated when people simple things apart—things the tide rolling in. He anxious not to be misur knew he had shaken her in a man had done; the knowledge so clear in his eyes. He was and proud of her, but he discipline upon himself because

THE END

"Paw's makin' a rockin' horse for Junior"

COLLIER'S

*"Ahoy there mate, I see the sign
That tells the world of Ballantine
Three rings, three cheers, we're headed right
For home and Ballantine Ale tonight."*

*Great favorite since 1840...it's
America's largest selling Ale*

Back in 1840, when his ale had ripened, Peter Ballantine took one drink to judge its PURITY, a second for BODY, a third for FLAVOR, and chose for his trade mark the three moisture rings left by his glass on the table.

Fill up a glass yourself—and enjoy ale that is at once agreeably light and thoroughly satisfying. As for flavor, Ballantine tastes like no other ale you have ever tried. "Wonderful!" Look for the 3 rings; call for Ballantine Ale.

ALE

You can Pull more than you can Carry!

OLD DOBBIN of today is a motor truck—a "MECHANICAL horse." The modern wagon is a Fruehauf Trailer. "Hitch" them together and you at least TRIPLE the work your truck can do.

Loads go up tremendously when you adopt the Truck-Trailer method with no increase in driver costs and with very little more expense for fuel. Maintenance cost on a Fruehauf is negligible—and it will outlast several motor trucks.

Most important, your truck and driver need never stand idle for loading and unloading—the Trailer is quickly detachable.

There is a Fruehauf especially for your type of hauling . . .

Get the Trailer Story Before You Buy a Truck

THE LAST WORD IN HAULING ECONOMY

Only with Trailers can you save the trip. One Trailer is left at the loading point, another at the unloading point, while the truck is en route with the load. In some operations, one truck handles as much as six Trucks. It's a sure way of making your truck work steadily—the last word in hauling economy.

BROTHER JAZZ

Continued from page 13

"Irrelevant, inconsequential, and incompetent as evidence," Hostetter said.

"He still has two dollars in his pocket," Bix said.

"A point for the defense," Hostetter said.

"He makes forty-five dollars a week and we can borrow all but his room rent," Bix said.

"Reprieve granted," Hostetter said.

They lifted me back over the bridge and set me on my feet.

"Give us the two dollars," Dave said. I handed it over and we went back to the ten-for-a-dollar place and split twenty beers among us.

We ate in a self-service restaurant, where the customer paid a fee, and was free to eat anything that didn't eat him. The napkins were of good quality and rather dainty in size; we didn't buy any handkerchiefs while we were in Syracuse. Just before Christmas the band broke up; Johnny Eberhardt and I went back to Chicago; Bix Beiderbecke headed for a job in New York City.

After a Rugged New Year

I was at home for the holidays. After a quiet New Year's Eve with several thousand people, I boarded a train for St. Paul nursing a hang-over. I was rejoining Peavey's Jazz Bandits, an outfit I'd played with before.

Peavey, the perfect man, met me at the St. Paul station. With him was Johnny Lane, manager of the Arcadia Ballroom; they had a hired limousine; I got between them in the back seat and tried to shake quietly. Lane pulled out a pint of whisky.

"Better have a drink on the New Year," he said. "That is, if you drink."

"Well," I said, "I don't mind breaking a rule for a special occasion."

Sixty seconds later I was alive. I began telling Peavey about Bix.

I kept it up for weeks until Peavey finally surrendered. "I'll write and offer him a job if you'll promise to stop talking about him," he said.

"I don't want to be a bore," I said, "but what is the point in playing instruments four or five hours every night unless we have a musician in the band?"

Bix finally answered Peavey's letter. He wrote in pencil on the back of a penny post card. "I will come to work for you for \$75 a week." Originally he had put down sixty-five; there was a smudge where he had erased the six, but it was still plainly visible under the seven.

Peavey handed me the card and watched me fidget. "I don't think I want him in my band," he said.

We toured all that summer through Minnesota, Wisconsin and Ontario, then took a job at the Roseland Dance Gardens in Winnipeg. Our music wasn't bad, but I couldn't forget Bix. I kept thinking of the New Orleans Rhythm Kings, too, and of Louis Panico's cornet. Chicago was full of hot music; King Oliver's Creole Jazz Band was playing at the Lincoln Gardens; every cabaret on the South Side kept an outfit worth hearing.

"I think I'll go South for the winter," I said to Peavey.

"To Florida?" he asked.

"No," I said, "to Chicago."

"Remember me when you go to confession," he said. That was the last I saw of the Jazz Bandits.

Back in Chicago, I played high-school and college party dates and got work in some clubs. That summer I took a job with Wop Waller at Lake Delavan, Wisconsin. We were housed in a bowling alley converted into a dormitory; I slept in Alley 4. The food was good, the swimming was excellent, the canoes were seaworthy. It was Lazy through Dinah that summer. I never slept less or felt better.

As I packed up to leave Lake Delavan a new idea nudged me. The one I had met during the summer was not they had a different mind. "Who is Proust?" I asked day.

"What does he play?" Wop

That was it. Education was what you couldn't see, but it was something able to throw a curve. I got some for myself. It does bottles, I figured, so it can't be

Back in Chicago, I went to Allerton House. My brother had a banjo now and was ready dates. We found two other boys and formed a quartet, doing numbers with bands. One of them was Herbie Kaumyer; later his name to Herbie Kay, star

Bix Beiderbecke

chestra and married his sister named Dorothy Lamour.

I started studying at the University of Chicago. I met Reid, a retired professor. Sixty dozen boys and girls in addition; I was due at nine in the morning. I had to take a bus to get to the dorm, but I had something to say. Who was Proust?

I began with French, English, and some other stuff. I had time to do homework and time to sleep. I arrived at the dorm with my eyelids taped. When questions were asked, and the boys began writing their answers into the kitchen, lighted at the pilot of the gas stove, at the window. "What am I?" I asked myself. "I can stay some sleep, and be just as stupid." But I kept going ahead of me was Proust.

That winter I ran into a row, who was addicted to the Mezz knew the leader of Ike Bloom's Rendezvous Street. He got jobs for both

steady and pleasant work. Everyone was friendly with the band, and the band was friendly with everyone else. We did our best to help the tone of Mezzrow's saxophone. We put cigarette and cigar butts, ash trays and damp paper napkins into the bell, but they didn't help.

Bix came to town that spring. Charlie Straight hired him to play at the other Chicago Rendezvous, on North Clark Street. Every day he walked to the Allerton House and played the grand piano. Jim and I sat listening to him by the hour, as hopped up as if we had been blown through an opium pipe. My schoolbooks stayed on the table, unopened.

One day Bix saw them. "What are these?" he asked.

I explained that I was getting an education. He looked perplexed.

"What are you going to do with it?" he said. "If you can't read music, why do you want to read books?" He sat down at the piano.

"By the way," I said, "who is Proust?"

He hit a chord, listened to it, and then said, casually, "A French writer who lived in a cork-lined room. His stuff is no good in translation."

I leaned over the piano. "How the hell did you find that out?" I demanded.

He gave me the seven-veils look. "I get around," he said.

He was having the usual trouble with his pivot tooth: it was in front, upstairs, and it frequently dropped out, leaving Bix unable to blow a note. Wherever he worked, it was customary to see the boys in the band down on the floor, looking for Bix' tooth. Once in Cincinnati at five o'clock in the morning while driving over a snow-covered street in a 1922 Essex with "Wild Bill" Davison and Carl Clove, Bix shouted, "Stop the car!" There was no speak-easy in sight.

"What's the matter?" Davison asked.

"I've lost my tooth," Bix said.

They got out and carefully examined the fresh snow. After a long search, Davison sighted a tiny hole; in it he found the tooth, quietly working its way down to the road. Bix restored it to his mouth and they went on to The Hole in the Wall, where they played every morning for pork-chop sandwiches and gin. It was natural for Bix not to get the tooth permanently fastened; he couldn't be bothered going to the dentist. It was easier to look for it.

He ran into some of Jean Goldkette's boys while he was at the Rendezvous. They were playing a prom date at Indiana University; Bix had a strong following there, led by a piano-playing student named Hoagy Carmichael. Bix was asked to go down and play the date with the band. He turned up at the Allerton House in the usual dilemma—no tuxedo. Jim and I put him together: Jim's jacket

and trousers and shirt, my studs and tie. For good measure and the cool spring nights we gave him a topcoat and a hat.

A few days later he returned and brought us the borrowed articles. There was a tuxedo, complete with studs, tie and shirt. But the tuxedo was not Jim's, the shirt was not his, and the studs and tie were not mine. The topcoat and hat were also different from those we had given him.

"Did you have a good time?" we asked politely.

"I don't know," Bix said.

That spring, Bessie Smith also came to town: we went to hear her at the Paradise, a battered joint which had been slept in by everyone but George Washington.

Once I turned to Bix and said, "How do you think Bessie would sound in that cork-lined room of Proust's?"

Bix didn't hear me. He was leaning on the table, eyes glazed, listening to Bessie. His pivot tooth had fallen out. I picked it up and handed it to him.

Between midnight and dawn in those days, you met all sorts of people in Chicago. You might be sitting quietly in a speak-easy and be informed that for the rest of the evening, drinks were on the house; Capone, the owner, had wandered in, ordered the doors closed, and settled down to enjoy himself.

Drummer Too Good at Crosswords

Once Dave Tough played in a cabaret which had a clientele composed almost exclusively of baseball players, gangsters and detectives. It was managed by an ex-prize fighter named Jake, who weighed three hundred pounds and was addicted to crossword puzzles.

One night in the bar Dave helped him with a couple of words. From then on, Jake grabbed him every night and asked him *all* the words. If Dave got stuck, Jake would reach across the table, put his six-pound hand on Dave's shoulder, and say, "Come on, think!" So Dave worked the puzzles at home in the afternoon and went to work prepared; anything else for a drummer weighing 108 pounds would have been suicide.

One night after finishing the puzzle and grabbing a double rye at the bar, Dave was hurrying to the bandstand. An inconspicuous-looking man standing in front of him didn't move.

Dave put both hands against the man's shoulders. "Get the hell out of my way!" he said.

One of the boys on the bandstand looked at Dave with admiration as he sat down at the drums. "I guess you don't care how long you live," he said. "Or aren't you afraid of Bottles Capone?"

Bottles was Al's kid brother. Dave

First Gin

played the set involuntarily; he shook
enough to beat the drums in perfect time.

Once when Jim Lannigan was playing
at the Friars' Inn, some of the Capone
mob came in and took the place over for
the night. The other customers left and
the doors were closed; the band played,
and the hoods drank.

One of them noticed Jim's bass fiddle.
The bulge on its underside caught the
light and made an attractive target.
The hood kept looking at it, measuring
the distance and cocking one eye. Finally
he took out a revolver and fired at it. The
bullet hit the fiddle on the seam and the
whole back opened up. The band kept on
playing; the hood asked Jim how much
the fiddle cost, and stripped off enough
from his roll to buy a new one.

In all of the joints, the bands kept on
playing no matter what happened,
though sometimes the drummer would
hold his bass drum over his head to keep
it from being smashed. Mugsy Spanier
saw two people killed in front of him
one night; he kept on playing but he was
so nervous that afterward he couldn't
remember what tune it was. His clothes
were so drenched with perspiration he
had to change even his shoes.

All this was educational, but North-
western did not accept such credits. When
spring came and Bix arrived, I got to Mrs.
Reid's later and later, and finally I did not
arrive at all. Next year, I said to myself,
I will find out about Proust.

For about a year, Bix played with
Frankie Trumbauer at the Arcadia Ball-
room in St. Louis. Then he went to Hud-
son Lake, Indiana, with a combination
of the best hot men from the Arcadia
Ballroom and Jean Goldkette's band at
the Graystone in Detroit.

Three Old-Maid Moonshiners

He and "Pee Wee" Russell, a tall,
mournful-looking kid, lived in a cottage
near the lake with three other guys. The
place was always a shambles. The only
commodity kept in sufficient stock was a
local whisky, purchased in large quanti-
ties for five dollars a gallon from three
old-maid hillbillies fifteen miles away.

Bix and Pee Wee were without a car.
It bothered them; they couldn't visit the
old maids when they wanted to. One day,
having received some pay—usually they
owed it all—they went to La Porte to buy
an automobile. Bix found a 1914 Buick
which could be had for eighty dollars. It
ran around the block well. "This is it,"
Bix said to Pee Wee.

They drove back to the lake and hid
the car in a side road. Just before starting
time that night they sneaked off, got into
it and drove to the pavilion. As they
reached the entrance and caught the at-

tention of the boys on the sta-
motor stopped. It refused to start.

Next day they got it going and
to visit the old maids. Halfway to
the Buick went dead. They had to
farmer and hire him to tow it by
a garage.

The car was delivered next day
cottage. "Park it in the back yard,"
said to the man who towed it to
garage. It never ran again. It had
mirror, and the owners used it when
ing.

Ten years later, Pee Wee was down
the Coast with the Louis Prima band.
He detoured to reminisce at Hudson
and found the cottage. The car
in the back yard, on its wheels but
with rust.

Pee Wee pointed it out to the
boys. "I own half of that," he said.

In 1927 I was singing at the
Inn, and Bix was playing with
Whiteman, who had an outfit as
as himself. Late in the fall the
Balaban-Katz circuit, opening at
Cago Theatre for a week.

After the show I met Bix and
to a speak-easy. Bix played there
and some of the other Whiteman
joined in. There was some singing
by the Rhythm Boys—Al Rinker,
Barris, Bing Crosby. They were
looking lads, slightly young.

One night I called for Bix and
and he said, "We are going to a
in Cicero. Some big shot has
Crosby. He is going to send a
e."

The three of us stood outside
ater and waited. Finally a long
drove up to the curb, and we
get into the back seat. At the Gr
we were greeted with open arms
bulging hips. There was a lot of
and talking, and pretty soon Bix
the piano and Crosby was singing
the time I began to worry about
drowning, the long black car
and we were put into the back seat.
The guests waved us off with
open arms and bulging hips.

As we drove along, Bix said
"Lovely party."

"Lovely people!" Crosby exclaimed.

After a while I said to Bix, "Remember
the guy you kept telling me to shut
him down?" Bix said, "Why didn't
I thought you'd like to name."

"The hell with his name!" Bix said.
"His name is Capone," I said.

"Capone?"

"Lovely people!" Crosby repeated.
Poor Bottles! He was always
pushed around.

(To be continued next week)

"This time we brought the salt, pepper, ketchup, chili sauce, Tabasco,
Worcestershire sauce, pickles, olives, and toothpicks. We forgot the salt."

recalled how you cherished those figu- rines. So tonight Dolfee's remark about angels made me wonder whether you still possessed the charming group. I prowled in your parlor and, sure enough, there they were on the mantelpiece. It was really like meeting some old friends. And what pleased me was that after all these years they are in such excellent health, so wonderfully preserved. But then, to be sure, angels are indestructible."

Mother shook her head. "There you are wrong, Herr von Pagel," she said. "If you had looked closely you would have seen they were badly chipped, with pieces missing. It was only a few years ago that the harp player lost a wing."

Fritz von Pagel opened his eyes wide. "But *lieber Himmel*, Frau Meyer, I did examine them closely. And I assure you, you must be suffering from a queer delusion. There was no wing missing. Of that I am positive."

"In another moment you will have me believe that I am totally blind," Mother said. "I shall fetch the harp player just to show you."

"No. It was no miracle. Such things do not happen," Mother said, looking fixedly at the angel. "It was a little trick played by one of you here tonight, for I dusted the angels only this afternoon and they were my old damaged set. Oh, I know very well that the one who played this trick meant it kindly, and I should be grateful. Yet I beg whoever it was—please, please give me back my old set of angels."

"But this is fantastic," my father said. "I know that for many years you have searched in vain for just such another set, and now you . . ."

"I agree. There is no logic at all in it," Mother nodded. "But there is something besides logic, Georg. It is hard to explain. The five Dresden angels were a wedding gift from a dear sister. Yet they were more than a gift. They came to be a sort of daybook, a journal of our many queer adventures in the New World. Oh, this all sounds very foolish."

"Please go on," Fritz von Pagel said gently.

"Well, then, it is like this. When I look at the angels, many things come

And you quickly opened it, and you cried loudly and happily: 'Anna, wonderful news! That position as editor in Dubuque is mine. . . And they are wiring money immediately for all our moving expenses. Anna, think of it!' And I stood there so weak with sudden joy that I dropped the little angel I was just dusting. The angel with the writing tablet. Its left foot came off, and in all the excitement I stupidly stepped on the fragment and crushed it."

"That is how it was, Georg. And ever after when I looked at that angel, even in the bad days, I felt cheered, for the memory of that happy moment came back. Well, little angel, I said to myself, it is sad that you lost a foot—but how much sadder if we had lost heart."

MOTHER stopped; her eyes were still lowered. She had spoken as if she were in some sort of trance, and I looked at her in astonishment because never before had I known her to make so long a speech.

My father patted her hand and said, "Go on, Anna."

"There is really nothing more, Georg. The memories are not all so happy. There was a day when I dropped another angel and a hand came off. That was in Denver, and I was really not to blame, for I worked in a kind of mist. It was the time our baby Meta died. . . No, Georg, that is not a happy memory, and I do not dwell on it, but there are others, so many others. Good and bad, because that is the way it has been with us. All that I want you to understand is my silly feeling about those old Dresden angels. They have been so tied up with our lives, so much a member of the family, you might say, that it is like losing a living part of oneself. . . Now call me a silly old woman."

Fritz von Pagel blew his nose. It sounded like a trumpet blast. "Frau Meyer," he said, after clearing his throat, "I confess it was I who played the trick, but my intentions were kind. It was last year, when I was abroad, that I chanced to be in Dresden. And it was there, in a very old shop where I had gone to pick up some trifles for my wife, that I saw in a dusty corner the exact duplicate of your set of angels. And I thought to myself: This is splendid. Those are the figurines that Frau Meyer had in Milwaukee when I boarded there, the very ones that were so chipped and broken. Someday, I know, I shall return there, and I shall perform a miracle. And I bought them. . . Ah, what a sad miracle this was tonight! But I did not know. . . *Gott sei Dank*, I have preserved the old ones."

He reached into his coat pocket and carefully extracted a handkerchief. In it were the chipped, the footless, the handless, the wingless five Dresden angels, and he placed them with infinite care on the tablecloth.

"Herr von Pagel," my mother said joyfully, "I do not know how to thank you. This—this—"

"This calls for a fresh glass all around," said Dolfee, reaching for the port. "And a toast to the angels, the recording angels, who keep diaries of even the little things in the lives of the humble. *Potztausend!* I am babbling like a friar of the Faith."

After the toast we all made a great ceremony of restoring the angels to their perch. Mother placed the five old angels in a circle on the mantelpiece. And around them, in a larger circle, she placed the five new angels. The new, the shining, the strong, guarding the old, the weary and battered. Perhaps that is as it should be.

THE END

COLLIER'S

GARDNER REA

She got up and went into the parlor. There was a silence, then something like a little scream.

Presently Mother stood in the doorway, the harp player in her hand. Her face was bewildered.

"It is true what you say," she said in a whisper. "The wing is there. And the missing parts of the others, too—the foot, the hand. All the little chips vanished. I cannot—"

"A miracle!" shouted Dolfee. "An authentic resurrection. Never have I heard before of the resurrection of an angel. That makes it a double miracle, and I shall write a story on the heavenly magic in the Meyer home that crowned a mundane feast of ham and cabbage."

"I have heard somewhere," my father said, "that when a certain kind of lizard or salamander loses its tail, the animal promptly grows a new one. If a simple salamander can perform such a feat, surely it would be no trick at all for an angel."

Mother walked slowly over to the table and sat down. She set the tiny harp player in front of her, and the new wing gleamed bravely under the light from the chandelier.

back to me, good and bad. Do you remember, Georg, when the little cherub with the writing tablet lost his foot?

"Yes, I thought you had forgotten. That was almost fifteen years ago when Ernst here was still a baby. That dreadful, hard year in Chicago. You had been out of work for months, and it was April, and your birthday, Georg, and nothing in the house. So I took one of my finest tablecloths, of pure linen, and went out and sold it. It would never be missed, I knew, for you never notice such things. And there was enough money for a decent noon meal and a small bottle of cheap wine and two cigars, my birthday gifts to you. And we tried to be festive. I will say you tried very hard, Georg. But in the afternoon when I was cleaning house and you were just sitting there, waiting, waiting, I felt a great fear. How many tablecloths were there to sell? How many pieces of silver? And the simple jewels that my mother left me? If they all went—well, what would follow later? So I thought as I went stupidly, blindly about my work.

"And it was then—oh, you must remember, Georg—that the doorbell rang, and there was the boy with the telegram.

HOW TO HAVE ANCESTORS

Continued from page 17

ancestrophiles of the Mayflower Society. There were 50 Mayflower passengers who had children; they have about 90,000,000 living descendants. In self-defense several Mayflower families have set themselves apart from the thundering herd by legally proving that they are descended from all fifty Pilgrim Fathers. This is as distinguished as you can get in pedigree circles.

The Victorian English ran high genealogical fevers when they came into money. The record for pedigrees was scored in the 1850s by a *nouveau riche* Scots family named Cowtart. They repelled it "Coulthart" and christened their new stately home the same, so that they became the Coultharts of Coulthart. Then they hired a genealogist to get them into the next edition of Burke's Peerage.

According to his account, the family had originated in the third century, when a Roman legionnaire named Coulthardis signed a marriage contract for the daughter of a Pictish chieftain. The promising young warrior had been mentioned in the writings of the Roman historians, Tacitus, Livy and Suetonius.

From this take-off the Coultharts began begetting. One of their menfolk was an artillery captain at Bannockburn. Another Coulthart was a Royal Navy officer at the destruction of the Spanish Armada in 1588. So it went down through history.

Exposing a Phony Family Tree

A bemused pedant read the Coulthart epic in Burke and his brows ascended in amazement. Some time later a little book devoted to the Coulthart genealogy came onto the stalls. Among its points were: (a) Marriage contracts were unknown until the thirteenth century; (b) Tacitus, Livy and Suetonius had not mentioned any Lieutenant Coulthardis; the scholar had read all of their works to make sure; (c) Artillery was not in use at Bannockburn; (d) There was no Royal Navy in 1588. The Coultharts switched back to Cowtart and began all over again.

In America the bull market in ancestors leveled off after the female invasion of the nineties. The next high came in the 1920s. The pedigree prospectors of those bonanza days tried to sink their picks into William the Conqueror, who had a hundred million descendants by 1925. He had operated widely in France and Britain, so that scores of authenticated lineages were all ready to be plugged into the customers.

The Conqueror is still the champion ancestor of them all. Some genealogists were disappointed that they could not peddle Harold of Wessex. He had an even bigger potential market in the United States because he had lived in East Anglia, from which came many of the original English colonists in North America. But Harold had a fatal lack of sales appeal; he had been the English leader against William the Conqueror's invasion in 1066, and had lost. Nobody wanted a loser.

If William I is the Most Popular Ancestor, then Brigham Young is the Ancestor Most Likely to Succeed. The Church of the Latter-day Saints has the most nearly perfect lineage archives in the world in its Salt Lake City church office building. There are 5,000,000 card-indexed names which lead to files of millions of family charts.

George Washington disqualified himself in the ancestor stakes by having no children. Franklin and Jefferson had children, but for some reason or another, never became popular as ancestors.

The case of Abraham Lincoln is unique in genealogy. Lincoln has only

two living grandchildren, making it impossible to crash his direct primogenital table. But thousands of people are pleased to claim distant cousinship to the Great Emancipator. This is a breeze for a genealogist. If the researcher can't splice you into the Middle Western Lincolns, he may be able to tap a bloodline running from the Linkhorns of Norfolk right into your veins.

World War II launched 14,216,097 future ancestors. In two generations it will be almost impossible to avoid being descended from the brave girls and boys of '41. By the third generation, it will take the massed research institutes of the land to prove that none of your eight grandparents served.

The most unsociable ancestor club is the Order of the First Crusade, 1096, confined to those descended from "the seven leaders of the First Crusade, 1096." A lawyer named Howard Kellogg James founded it in Alameda, California, in 1934. Up to then, the deepest dive that any group had made into genealogy was that of the Runnymede Order, a Phila-

in the now defunct Evening T was the Winchell column of . It was started in 1876 by Oliver Holmes. Here and in the agon of the Register, ancestor hun pounded their riddles of lineal cent insertion in the Register w Sarah (Ring) Berry was the thi Moses Cass, Sanbornton, N. H. the Sarah Ring, born 10 M daughter of Miriam (Jones) at Ring?

Virginia is second only to M setts in pedigree collecting. really to matter among the fir of Virginia you should have strung all the way back to a manor house. Revolutionary a too commonplace in Virginia nial lineage has an annoying originating with indentured se felons.

An old spoilsport named

delphia bunch who traced themselves from the Magna Charta barons of 1215. James crowed, "I went 119 years behind the vaunted 'Barons of Runnymede.'"

Eighty-three men and 154 women produced their ancestral visas and \$20 to join the Order of the First Crusade, 1096. All the names on James' mailing list were direct descendants of Richard Warren, a Mayflower boy. James had traced a clue off Richard Warren back to Robert of Normandy, the frivolous Godfrey of Bouillon, Edgar Atheling, or another of the seven knights who had hightailed off to Jerusalem after they had heard Peter the Hermit preach the First Crusade.

By a literal interpretation of the Malthusian theory of population, the Order of the First Crusade should be open to about 500,000,000 direct descendants of the seven knights, or about one fourth of the human race now alive. Unfortunately Howard Kellogg James didn't have all their addresses.

Boston is the national hotbed of genealogy and the home of the trade paper of the industry, The New England Historical and Genealogical Register. At one time Boston even had a daily newspaper gossip column about the long dead and gone. Notes and Queries, a department

s get to be worldly and
e. When they throw open
es, skeletons are likely to
eves and murderers thrive
of a lusty family tree. Un-
ers are a persistent problem

if the descendants are squeamish. In such cases, genealogists have been known to invent a father and a marriage date, but this changes family names and makes untidy work for the scrupulous researcher.

One of the greatest American families is descended from a great-great-grandparent who had no father of record. The descendants have not tried to cover up this eighteenth-century oversight. They have a fine time laughing at the undistinguished descendants of the respectable branches of the tribe. Genealogists must be very careful about putting such discoveries in a lineage book because they can be sued by all the descendants who want to profit by Great-great-grandma's frailty.

Daughters in a Dilemma

Personal matters are touchy and so are many historical truths about colonial ancestors. D.A.R. members do not like to be reminded that most of them with military ancestors are descended from paupers. But they must establish eligibility by showing a name on a Revolutionary pension roll. In order to get a pension in those days a veteran had to prove that he was "indigent."

The Mayflower passengers are another historical scandal. They were not Puritans, but Brownists or Separationists, and they believed in public owner-

ship of property and equal shares in the product of labor. W. E. Woodward, the historian, says, "If they were here today we would call them Communists."

Genealogy is a tough profession. Going down into the ancestor mines is cold and dirty work. An ancestor detective's happiest moments are spent in genealogical libraries. Today no proud city can do without its local genealogical collection. The ancestor sleuths are very chummy; they help one another run down suspects. They write hot new discoveries in the margins of old library books, and every so often a genealogist will spring into the air and rush across the reference room, carrying an ancestor to a colleague.

One of the most brilliant American genealogists was the Reverend Aaron Thorneycroft of Scituate, Massachusetts. When he retired from his pastorate in 1887 he devoted all his time to finishing the Thorneycroft lineage, which was already the talk of the pedigree world. The reverend was rumored to be forging direct links between Adam and Eve and the Thorneycrofts.

As his notes appeared each evening in the Transcript, the Back Bay teemed with excitement. Thorneycroft had long since driven past John Tilly of the Mayflower and was rampaging in Tudor England, unearthing ancestors with masterful ease. Thorneycroft was the Babe Ruth of genealogy; he called his shots in the Transcript each evening and the next day knocked out another ancestor.

The reverend was momentarily checked at Runnymede. Wiseacres on Beacon Hill predicted that he would never get past the thirteenth century. But Thorneycroft called the signals for an end run and carried the line through an old family across the Channel in Caen. He stiff-armed the early Egg Kings and broke into the clear on Watling Street, the Roman road in the west of England. The generations sped by under his nimble feet as the reverend made his epic backward run. The clergyman raced through Spain and came in sight of the Holy Land. Lights burned late in the Back Bay as his fans opened their evening papers and realized that Thorneycroft was only ten yards from his goal.

Then silence.

The next word came a few days later in the Globe. The police had detained a demented old man from Scituate, who had been found haranguing an idle mob in Warburton Street. He had been quietly remanded to the custody of friends for removal to a nursing home. The police said he had been laughing uncontrollably and crying over and over, "Everybody is descended from everybody else!"

THE END

CAN YOUR SCALP PASS THE "FINGER-NAIL (F-N) TEST?"

TRY IT! Scratch your head. If you find signs of dryness, loose ugly dandruff, you need Wildroot Cream-Oil hair tonic. Grooms hair... relieves dryness... removes loose dandruff! Contains soothing Lanolin, an oil resembling the natural oil of your skin.

YOUR HAIR CAN LOOK LIKE THIS WITH NEW WILDROOT CREAM-OIL

A LITTLE WILDROOT CREAM-OIL does a lot for your hair. Keeps your hair well groomed all day long. Leaves no trace of that greasy, plastered down look. Makes your hair look and feel good.

NON-ALCOHOLIC CONTAINS LANOLIN!

AGAIN AND AGAIN the choice of men who put good grooming first—that's Wildroot Cream-Oil. No wonder 4 out of 5 new users from coast to coast said they preferred it to any other hair tonic they had used before. Ask for it at your barber or drug counter.

IMPORTANT: Smart women use Wildroot Cream-Oil for quick grooming and for relieving dryness. Wildroot Cream-Oil is excellent for training children's hair.

Cousin James caught Mama as she came down. He was laughing. "Carrie," he said, "a woman don't take a whip to a man unless she loves

A GOOD WHIPPING

BY JOHN RANDOLPH PHILLIPS

AFTER Papa died, Cousin James came down from Sugar Creek to live with Mama and me. Folks considered this proper enough, because Papa and James Pedigo had been double first cousins. Some folks, though, remembered that Cousin James had courted Mama, too, before Papa cut him out.

Grandpa Pedigo told Mama that James would be our salvation if we could keep him sober.

Well, Cousin James turned out to be a caretaking fool. He made our little river farm bloom with better crops than Papa had ever managed to grow; he had more and fatter hogs for butchering, and he raised more veals for the market. At this time he was thirty-two years old, just the same age as Mama, and he was one fine-looking, great big man, the biggest in our county, the strongest, the nerviest. And the hardest worker. Cousin James was understanding, too: He understood Mama and he understood a twelve-year-old boy like me. And he stayed sober for a year and a half.

Folks said he could hold more liquor than any two men in the county, but Cousin James told Mama and me that, with him, drinking was a thing of the past. Just didn't pay, he said. A man was a fool. Especially, he added, a man who had been blighted in love.

"You talk so foolish," Mama said. "The chestnut trees got blighted, but they didn't start drinking."

"Funny thing," said Cousin James. "I was talking to a dead chestnut tree the other day. A boy chestnut tree, and seems like once he was in love with a girl chestnut tree on the next ridge. But another boy chestnut tree moved in and he had a river farm and—"

"Jackie," Mama said to me, "run shut up the chickens for the night." She was a slim, trim little person and when she blushed she was lovely and she was blushing now.

"That's what started the blight," Cousin James said, as I went out.

"This chestnut tree I'm talking about sickened and died and all the others caught the disease and now there ain't a living chestnut tree in all these hills."

The next Saturday Cousin James disappeared and did not show up again until Tuesday. He was as high as a Georgia pine as he came singing up the road.

Mama waited for him grimly. "You need a good whipping, James."

"Sure do, Carrie. Sure do. But I'll work like hell the rest of the week to make up for it."

And he did. You never saw a man pitch hay the way Cousin James pitched it. By nightfall Wednesday he had worked the poison out of his system, and from then on he went through that hay like a brush fire in the foothills.

"A man's a fool," he told Mama on Friday. "I'll never touch the stuff again."

"I'm so glad, James," Mama said warmly. She looked very pretty that night, with a ribbon in her hair.

BUT Cousin James disappeared again the next day and we didn't see him again till late Monday. All day Sunday and all day Monday, Mama kept telling me that when he came home Cousin James could just take his foot in his hand and get back in the road. But when he showed up, she fixed him a hot supper and gave him half a gallon of cold buttermilk to drink. I guess I realized then that Cousin James could do just about as he pleased and that Mama would never run him off the place. I realized that Mama was in love with him.

That summer was something. I tell you! Every Saturday, Cousin James disappeared and didn't come back until late Monday or early Tuesday. Then for the rest of the week he punished himself by doing the work of two men. By the next Saturday noon he had worked the remorse out of his system and considered himself a good citizen again and off he'd go.

But Mama quit fixing hot suppers

and cold buttermilk for him. She got mighty grim about the whole business. I felt something was going to break and I was right. It almost broke one hot Tuesday noon when Cousin James came rollicking up the hill.

Once again Mama said, "You need a good whipping, James!"

He stood before her, big and tall and strong, proud of his strength and proud of his reputation for strength and looked down at her. An eagle looking down at a sparrow. He chuckled, that amused, tolerant chuckle he had when he was drinking.

"Yes, Carrie, I need a whipping. But, Carrie, who will give it to me?"

Mama whirled on her heels, her black eyes flashing, her cheeks red as fire. Cousin James turned to me. "Come on, boy, we've got work to do. I'll be all right before sundown."

And he was. We did more work that week than we'd ever done before. Cousin James swore off again. A man was a fool. I must look at him and take warning.

Saturday, right after breakfast, Cousin James disappeared again. Mama and I went to town to buy groceries. And while I loaded the car, Mama went to Fayette's Hardware Store. In a few minutes she came back with a tightly wrapped package under her arm. I noticed then that Mama had a grim look about her.

Cousin James was jolly and full of himself when he came home Monday at noon. He had brought me a cap pistol and Mama a box of candy. Mama let me keep the pistol, but she threw the candy in the kitchen fire.

"James! You need a good whipping, James!"

He was mad about the candy, but he could still laugh. He was still the eagle. "You mentioned that before, Carrie. I know I need a whipping. I need the boss dog of all the whippings that ever were. But, Carrie, who is going to give it to me?"

"Meet me in the back yard," Mama said, "if you're man enough to stand up to a woman."

A moment later she was in the yard herself with that hardware package in her hands. She opened it apart and out came a blacksnake whip. In her hands it was a living, beautiful thing with a symmetry in every one of its curves.

"I'll show you who can give a good whipping. You're already a coward and a liar, and if you run away you're a coward!"

"Stop it!" Cousin James shouted.

THE blacksnake whip flashed and grazed his chin. Cousin James backed up. Anger and indignation blazed in his blue eyes and in an instant he was cold sober.

But he didn't retreat and he didn't flinch. He just walked through the yard and the lashing of that whip had the butt of the whip in his hand now and she cut the shoulder of his shirt to shreds, but he kept on. The whip sang again. Blood oozed over Cousin James' brow and down his shoulder and ran down his naked chest. And still he kept on.

Then he caught the whip in his hands, and flung it. "You finished, Carrie?" he asked gently.

Mama began to cry. Cousin James picked her up, tossed her in the air, caught her as she came down, and was laughing.

"Carrie," he said, "a woman don't take a blacksnake whip to a man unless she loves him. Lord, I feel good!"

"Who'd even think of laying a hand on you?" Mama cried. "But I showed you how to give you a whipping."

"You sure did," said Cousin James. "Lord, I feel good!"

That was twenty years ago. Mama and Cousin James lived in my house. I offered him a room.

"No," he said. "Guess I'll sort of get out of the house in twenty years. Little bitty with my blacksnake whip. You know that, Jack?"

nged that she should tell her out me the moment she had and telephone to me at once. Dorothy Simpson" and the are number on a piece of ave it to her. I told her I by the telephone until she promised she would not be ve, because she planned to atford about then. She was

all packed and ready to go, but she agreed to break her journey at Thurlow Square to spend half an hour coaching me in my duties.

She had no doubt now that I would get the job.

"You see," she explained naïvely, "you can think quick, you're nicely spoken—but not too la-di-da—and you look quiet. People like her, and in fact all those as think they can't look after themselves, always look for a maid to be quiet. And speak only when spoken to."

I left the scene, more than content with the progress I had made, and picked up the car where I had parked it out of sight of the house.

I WENT straight to Thurlow Square, and lay on the couch in the living room with the telephone on a table at my elbow. Aunt Florence had gone to Har- rods for the afternoon and the house was silent; but I did not sleep in spite of having so much to make up.

The cloakroom ticket went on worry- ing me. If I saw Jonathan before the police did, which I doubted, I might get hold of it—provided he had managed to keep it.

The telephone rang suddenly, making me jump. My heart was thudding so loudly I thought Ellen Good must hear it at the other end.

"Madam," said Ellen sedately, "will see you at ten o'clock tomorrow morn- ing. She will be expecting you."

"Thank you, Ellen. It's very kind of you to have spoken to her. I'll be there punctually. You've told the policeman?"

"Yes," and she added, "see you later," with just enough casualness to rob it of any significance.

When she arrived I told her to keep the taxi, as she had her luggage on it, and that I would pay for it. Her first words were encouraging. She thought Mrs. Inwood would take me on. She couldn't manage for herself and she needed someone to fuss over her—"as part of the act," said Ellen.

"Act?" I seized on that. "What act?"

"Bereaved widow, at the moment. You see, she's always playing a part, mostly for her own benefit, but she loves an audience. You see, she's that selfish."

"Surely she loved her husband? It can't be all put on?"

You Can't Find A BETTER-WRITING PEN

Compare an Esterbrook with the right point for the way you write with any other fountain pen. Once you do, we believe you'll never again write with any- thing but an Esterbrook.

Esterbrook Fountain Pens are different. Esterbrook Pens concentrate on points . . . offer more point styles than any other. With Esterbrook you choose the one point that matches your handwriting *exactly* . . . and fit this personal point into your Esterbrook Pen yourself.

Should you ever damage the point of your Esterbrook Pen you can duplicate it and replace it yourself . . . with an Esterbrook Renew-Point of the same num- ber . . . available at any pen counter . . . no delay.

THE RIGHT POINT FOR THE WAY YOU WRITE

I don't see why you don't play with Morton. I think he's a nice lit-
tlesoy. Besides, I was almost his grandmother instead of yours!"

JOHN RUGE

Ellen came as near shrugging her shoulders as an English girl could and remarked that her late mistress wasn't one to neglect the buttered side of her bread.

"He is—that is was—stuffed with money. She always needs money. She's got seventy-three dresses, five fur coats, a dozen suits, and more nylon stockings than anyone in London. Each pair in its own Cellophane box. And underclothes! You've never seen such lovely things. She's got a Frenchwoman in Acton who works for no one else."

And for twenty minutes, while I made tea and we drank it in the kitchen, she gave me a picture of Charlotte Inwood as seen by her maid.

SOMEHOW it failed to tell me any more about her than I knew already, which was little enough. I realized that this was due more to Ellen's limitations of interest than of opportunity for observation. Clothes filled the girl's mind; she knew much more about that vast wardrobe than the woman who wore it. I tried twice more to find out what she knew of Charlotte's relationship with her husband and met the same rather vague belief that she knew "how to manage" him and get money out of him when necessary. She had "lots of friends" and went out and about continuously, had a "smart, society life," and did not discuss it with her maid. In short, Ellen's attitude toward Charlotte was one of sartorial envy uncomplicated by curiosity.

Hopefully, however, I brought the conversation to the fateful night.

"You were there, of course, when they found him?"

Yes, she had been in bed when the night bell began ringing in the passage outside Mr. Groves' bedroom on the top floor. It rang and rang all the time Mr. Groves had been putting on his dressing gown and going down to open the front door. At first she had thought it was Mrs. Inwood who had forgotten her key.

It had been a policeman at the bell. She had looked over the banisters and had seen him. He'd had a silver candlestick in his hand. She had recognized it at once as one of those from Mr. Inwood's desk. He'd looked funny, carrying a candlestick. She'd known for certain then that something was wrong. A few moments later they had found Mr. Inwood dead on the floor of his room, the back room where he worked when he wasn't at the office.

"They wouldn't let me in, so I didn't see him myself." She was regretful. "But Mr. Groves told us his head was terrible. Thank God I'm going home. They don't murder millionaires in Catford."

She drank two more cups of strong tea while she told me as much as she could think of about the job of being Mrs. Inwood's lady's maid. I listened carefully. It sounded tricky in places. Finally, Ellen went on her way, bubbling with excitement at a proper holiday in prospect, assuring me with her goodbyes that even if I found Mrs. Inwood a bully I would surely have a wonderful time with all those beautiful clothes.

Aunt Florence came in shortly afterward and hoped I had had a nice time, but hadn't I started the day rather early, without any breakfast too? I realized that I would have to give her some reason for using her flat as a hotel, even more than I usually did, and said that I was starting a job tomorrow. She was pleased. It would make me less involved with the Commodore. "I'm so glad, dear. I know you don't need the money, but you're quite right to want to be independent. If you're working he can't keep rushing you off in that dangerous boat of his, and so on. What sort of job is it?"

"Well, it's difficult to give it a name. It's a sort of research job. I shall be able to tell you more about it once I've started."

"I do think science is so useful," said

Aunt Florence comfortably young man in the drug department working for his B.S. in the enterprising. I've written to Briggs about him . . ." And again. I was able, however the conversation the news to be out to dinner and starting probably tomorrow. . . .

At twenty past eight, which be about the right amount, I'd been upon Detective Inspector Carletta's.

His round cheeks went pale as I saw me. He got quickly to his feet, looking a little troubled with his chair, as for starting his meal without me.

"Quite honestly, I didn't know you'd turn up."

I opened my eyes at him, went gratifyingly pinker still, and you I would if I wasn't doing else. And I wasn't.

"Even so," he said, arranging himself, "I didn't think you would."

any real reason," he added modestly, "why you should."

I did not propose to spoil my purpose, by giving him a reason.

We discussed what I should decide on wing of roast potatoes and a green salad. bottle of wine, quite a good one of '43, which the German sumably overlooked at the coffee I said that I wanted a brandy for him and a liqueur, a Benedictine for me.

I found no difficulty at all to the man and letting him as the evening went on that danger to Jonathan had increased times since last night, like the uneasy haste yesterday to get him to the case.

And when he said with a smile, "You know, I am very grateful for bothering to waste your time on this," I did not, as I might have done, despise him a little for his "grateful for small favors" which I do not believe any likes to have around, even to put her on that pedestal always leading herself to be to be.

If this goes on, I told him, begin to have a bad corner making use of him.

MY REWARD for knowledge of the Inwood family finally came. He began on neither now or ever after came of trying to pump him.

"We nearly caught Pennington."

Luckily I had just swallowed my Benedictine, and I neither looked as startled as I felt.

"Only nearly?" I asked.

"Can you keep secrets?"

"I got used to them during my time in the Ministry of Food."

He nodded and said that women did not see same urge as men to bolster their inferiority complexes by when they got hold of power. He proceeded in principle to put me in the same category by telling Jonathan had been seen in Romford. Unsuccessfully.

"He got away, but not for long. We have a better chance now. He seems to be changing of clothing."

"You're sure it was he?"

"Yes. And we're not worried, because we don't want to see him. He's constable in Romford food. The constable was curious about him in a room, strolled up to have a

doing, mightn't it spoil your judgment in
seeking the right wrongdoer?"

"I don't follow."

"I would be afraid of reading facts
wrongly in anxiety to satisfy my anger,"
I explained. "Afraid of trying to prove
guilt at all costs, even to punishing the
innocent."

"Anything for a prosecution? No,
your sense of justice doesn't disappear
with the anger. Once you've caught your
criminal you find yourself wanting to
give him the benefit of the doubt. Natu-
rally, you get the careerists, as in every
other kind of job, who think the more
successful prosecutions they are responsi-
ble for, the quicker the promotion. But
it doesn't work, thank God. . . . We are
being serious, aren't we?"

More serious than he thought. But I
did not come down to cases. There would
be a time for that, and it was not now.
In the meantime I had learned what I
had hoped and believed I would learn:
that he was an honest man.

He would not shut his eyes to the pos-
sibility of Jonathan's innocence if I ever
managed to bring him evidence of it.

"Inquest tomorrow morning," he said.

I HAD forgotten the inquest; of course
there would be one. Tomorrow morn-
ing? I had a moment of panic. I tried to
remember about inquests and what hap-
pened at them. There had to be a verdict
as to cause of death. A coroner sitting
with a jury could find that Joseph Inwood
had been murdered and name the mur-
derer—couldn't he?—if the police had a
strong enough case.

"What will happen at it?" I asked as
casually as I could.

"We shall ask for the usual adjourn-
ment, after formal evidence of identifica-
tion. That way, cause of death won't be
gone into until the coroner sits again on
the case. It's no good going off at half
cock, even in an open-and-shut case like
this one."

"I see," I said. "So Mrs. Inwood will
be well enough by tomorrow, you think,
to deal with things?"

"I doubt it, from her doctor's ulti-
matum that she mustn't be disturbed for
at least a week."

I toyed for a moment with the attrac-
tive thought of asking him if the doctor
might not be exaggerating Mrs. Inwood's
condition, if she was able to interview a
new maid tomorrow morning.

It was time to break up the party. He
wanted to pay the bill for both of us, but
I insisted on paying my share. He wanted
to be masterful, but did not quite know
how; he gave way to his fear of doing the
wrong thing, and the moment passed.

We stood on the pavement outside.

"The Daimler's around the corner," I

y question of nervous
riven over five hundred
ess than nine hours in the
ast forty eight. But no

daughter of Commodore Rupert Gill
should have cried herself to sleep on ac-
count of the sound of a word.

But I was young and healthy. I woke
up at half past six to a bright morning
with a rested mind full of practical con-
siderations. The wheels were at last going
to revolve, and the guessing and worry-
ing would be easier once I was at grips
with the thing. I had one major thought.
I had not given "Dorothy Simpson" the
right sort of start-off as far as her appear-
ance was concerned. She was still too
much like me.

I could see in the dimness of the fu-
ture a possibility looming that one day I
might have to become Eve Gill among
the people who had seen Dorothy Simp-
son and that it might be very awkward if
they recognized me as the lady's maid.

So far only two people had seen me as
Dorothy: the policeman who had let me
into Number 4, and Ellen Good. The
first would shortly drop out of the picture
and would be unlikely to reappear in
it, and the second knew the secret anyway
and, being a party to it, would not give it
away. And she had left the scene.

First of all, clothes. This would be all
right. I had begun on the right principle
of ordinariness. Second, general appear-
ance; I thought I could get into the habit
of stooping a little, keeping my head
forward, allowing it to droop a little, and
let my arms hang rather limply with
hands away from my body. I would alter
my normal stance without straining mus-
cles which might get tired. Third, facial
appearance.

I set to work. I scraped my hair back
into a low bun, flattening it and straight-
ening its curls by dampening it; as long
as the bun was well pinned together it
could not escape easily. Next, I soaped
my face well, rubbed it until it shone,
and then applied a thin dusting of Aunt
Florence's white-mauve powder. By
slightly compressing my lips, which with-
out lipstick almost disappeared in any
case, I completed the dullest and most un-
attractive face imaginable. It seemed to
me to look like fifty thousand other faces,
and that no one would favor it with a
second glance.

Fourth, I searched the many odds-and-
ends boxes which stood about on pieces
of furniture all over the house until I
found what I was fairly certain of find-
ing, a pair of Aunt Florence's steel-
rimmed reading spectacles, probably
discarded years ago as her eyes came to
need stronger lenses. Apart from the
further great change they gave my face,
they made my eyes look larger and rather
blank. At the same time they made ob-
jects farther than a yard away become
blurred enough to cause me to peer rather
than look at my surroundings, which
would match the drooping head effect.

LOOKING at myself, I was reasonably
sure that if Aunt Florence or the
Commodore were in the same room with
me, I could count on their not recogniz-
ing me. Unless, of course, I spoke.

I experimented. I could whisper, or
croak, or put my tongue in my cheek as I
spoke, but none of this seemed right.

Finally I tried talking through my
nose, at the same time pitching my voice
high. The result seemed very satisfac-
tory, a series of squeaky and extremely
adenoidal sounds which were, however,
still perceptible as words and sentences.
Moreover, they matched the droopy,
dopey appearance.

In the meantime, Aunt Florence's day
was beginning. Her daily "Irish Peggy"
was letting herself into the basement
door, and there would be breakfast and
getting Aunt Florence off to Harrods.

I dressed in the black suit, put the
spectacles straightly and primly on my
nose, drooped, and knocked on Aunt
Florence's door with proper timidity.

She stared at me and asked at once if
I was Peggy's daughter Iris. I clenched
my nose muscles tight and said that that

What happens in the red caboose?

YOUR passenger train conductor is a familiar figure...
but did you ever think about a *freight train* requiring
the services of a conductor?

From his "office" in the red caboose, the freight train conductor
directs the handling of as many as 100 freight cars that make
up his train. He makes certain that cars are dropped from the
train at their proper destination and others picked up, that
the products they carry arrive safely and in good condition.

The Erie Freight Conductor gets a quick, concise picture of
his train from a teletyped control sheet. This list tells him the
contents, consignee and destination of each car. The same
information is flashed by teletype to stations ahead, and to a
central office in Cleveland.

With this teletype control system, the Erie can quickly tell
shippers the present location and scheduled arrival of their
shipment.

Modern, up-to-date methods such as this are responsible
for the Erie's reputation among shippers everywhere for
efficient handling, dependable service.

I was to see that she was fighting bravely
to avert complete collapse.

"I must have someone. I'll try you
for a month. I think I pay £160. Mrs.
Marshall will arrange that."

"Thank you, Madam," I said through
my nose.

"You may start at once."

"At once, Madam?" I pretended to be
a little flustered.

"I told you I can't go on like this.
Your friend Good showed a very great
selfishness in leaving me at this moment.
The least you can do is to realize it and
make amends for her."

"Yes, Madam, I understand. If I could
have a day off next week, perhaps, to
fetch the rest of my things from Suffolk?
I have only a suitcase in London."

"I don't care what you do or where
you go next week as long as you're here
now. Ring the bell—twice. Mrs. Mar-
shall will show you your room and ex-
plain things to you. What did you say
your name was?"

"Simpson, Madam." The bell push on
the end of its cord lay on the bed a foot
from her hand. I pressed the button twice.

"Simpson. I must try to remember it.
Come back immediately. I have to get

up. At least into negligee," she sighed
profoundly and I thought she was going
to burst into tears. "Some awful police-
men are coming. As if I could possibly
be any help. They're so inefficient.
What's the time?"

She could see the white crystal clock
on the bedside table much better than I
could; I peered at it, however, and told
her that it was ten minutes past eleven.

"He's coming at twelve. Well, he'll
have to wait, that's all. I shall never be
ready. I'll see him in my sitting room.
That's through the door over there. The
other door is the bathroom. I like the
water at a hundred and four degrees.
Tell Groves to keep him in the hall until
I send for him. Mrs. Marshall, this is
Samson. She's a friend of that girl Good,
and I only hope she doesn't prove as un-
grateful. Oh, and, Samson, I forgot to tell
you. There is one thing I will *not* in any
circumstances tolerate. I will not have
people trying on my clothes—any of
them, you understand?" Her voice was
much stronger.

"Of course, Madam." I hoped my tone
was the proper mixture of humbleness
and surprise that anybody should imag-
ine me capable of such heinous imper-
tinnence.

Mrs. Marshall led me out. Her atti-
tude remained formal during the next
quarter of an hour while she was show-
ing me my ten-by-six bedroom under the
roof and generally inducting me into the
belowstairs life of Number 4. Finally
she said, "I hope, Samson, you'll be com-
fortable—and give satisfaction."

I tried to tell her my name was not

Samson but Simpson, but she merely ob-
served that as Madam preferred to call
me Samson, it would have to do.

In the meanwhile I was thinking that
my first impressions of Charlotte were
much what I had expected them to be; in
short, I had expected to find that she was
two-faced and able to get away with it.

Downstairs, however, after I had been
introduced to Groves, Molly the house-
maid, and a parlormaid with the stern
name of Havelock, I found myself alone
in the back part of the hall at the door of
Joseph Inwood's room. This time it was
half open, and since the constable on
duty at the front door was sitting with his
back turned to me, I went in; I was im-
mediately struck by the way a portrait of
Charlotte seemed to dominate the large
room.

I took off my glasses and stood for
several moments studying it, the cool,
assured beauty of the exquisite face, soft,
folded hands on the black velvet dress.
There was a small plaque at the bottom
of the frame with black lettering on gold:
The Actress, by George Elmhurst,
A.R.A.

I realized at once, although I had real-
ized it upstairs but with much less force,
that Charlotte's performances of the
stricken widow followed immediately by
the spoiled society darling engaging a
new maid were of very considerable vir-
tue, but they had revealed nothing of
the real Charlotte. Her hands, according
to Elmhurst, were just as soft and small
as I had noticed them to be, but with the
strength and ruthlessness of character
and personality he had discovered in her
eyes. Not "Mrs. Charlotte Inwood" but
"The Actress"—she became infinitely
more formidable than I had realized.

Jonathan, for instance, crazy about her
to begin with, would have had no chance
against her.

I saw vividly the kind of woman he
had told me about, the clinging, desper-
ate, haunted girl who had flung herself
into his arms that night in blind flight
from the consequences of a momentary
outburst of violence.

My mind reverted to the impending
visit from the police. It would be either
Chief Inspector Jupp or my Ordinary
Smith, and I wanted very much to know
how it went. She must be worrying her
head off lest they had caught Jonathan;
the number and condition of the newspa-
pers around her bed told of more than a
mere interest in the world's obituary on
Joseph Inwood.

LUCK continued with me. After I had
drawn her bath, making sure with the
thermometer that it was exactly a hun-
dred and four degrees, and had helped
her out of bed, she said, "It's not fair of
them. I shan't be able to stand it. Oh,
why do I have to *talk* about it—a need-
less torture. Samson, I want you to stay
in here, near the sitting-room door, and
when I cough twice—like this—you will
knock and say that the doctor is here.
The man will have to leave then."

I thought that it must be the first time
in history that a would-be eavesdropper
had been so neatly made respectable.

While she bathed, I tidied up the bed-
room and arranged the sitting room so
that she could lie on her cream and gold
Empire sofa and have the policeman's
chair with its back to the bedroom door.
As an afterthought I put another chair
close to it in case there were two of them,
and was pleased, although a little scared
when Groves came through on the tele-
phone (I realized that it must be linked
with some internal system) to say that
Chief Inspector Jupp was in the hall,
accompanied by Inspector Smith.

I told him that I would let him know
when Madam was ready to see them, but
that she was still in the bathroom.

I watched her at work on her face in
the triple mirror of the white dressing
table. It was an instructive moment.
Her hand hovered over the lipsticks and

Sludge, gum and varnish
clog your fuel lines, foul rings and pistons,
cause valves to stick and power to sag.

Holidays, Business or... IN ANY EVENT WIRE FLOWERS

Say "Happy Birthday" with

Flowers By-Wire

left them with reluctance; she ignored the rouge pots, and used a minimum of powder. She was torn between a desire to be a beautiful woman condescending to permit two strange men a glimpse of her stricken soul, and a slightly less attractive woman who was in the hands of her doctor and ought not to have this intrusion inflicted on her. I saw her decide with good sense on the latter, and helped her to find a small jar of brown eye shadow which she used with a precise and sparing finger tip under her eyes as well as on their lids. Anybody could see now that she had not slept since the tragedy.

She chose a black negligee, straight and high-necked, which made her skin paler than ever.

I left the sitting-room door an inch ajar, and picked up the telephone by the bedside. Groves answered somewhere below, and I said Madam would see them now.

CHIEF INSPECTOR JUPP had a small, growling kind of voice. He was sorry to break in upon her at a moment like this, but if there was the faintest possible hope of help in shortening the murderer's days of freedom—

Charlotte replied so faintly that I could scarcely catch the words.

"First, then," said Jupp. "Can you tell us what money and valuables were in Mr. Inwood's safe? Was any of your jewelry kept in it, for instance?"

Charlotte was afraid she had no idea what was in it.

"I have my own wall safe in my bedroom, hidden in one of the wardrobes. My jewels are intact."

"You see," Jupp explained, "we often trace a man by the stolen property he tries to dispose of—"

Charlotte sobbed in an anguished voice, "I shan't rest until the man pays for what he has done—for this awful crime. . . . Oh, Joe, my poor, poor Joe—"

There was a moment of sympathetic silence.

"We're doing our best, Mrs. Inwood, to bring him to justice," Jupp told her. "You may be assured of that."

"But how long will it be—?" Charlotte's voice indicated clearly that she would not rest until vengeance and punishment had been exacted.

"A few days, perhaps hours," said the chief inspector with a certainty which made me shiver; it must have shaken her too, for she was silent.

Detective Inspector Smith spoke for the first time, and what he had to say made my heart turn over.

"Although so far we haven't gone into the possibility," he began in his quiet way, "it seems not unreasonable to suppose that Penrose may have had some connection with Mr. Inwood. Do you remember Mr. Inwood ever mentioning the name?"

That was almost exactly the thought I had been at pains to put into his head at dinner last night. I waited for Charlotte's reaction; it was not a line of inquiry she would care about. It may have been my imagination, but was there a very slight edge in her voice?

"Again, I am afraid I can't help. As I told you, my husband did not discuss his business affairs with me."

"Penrose," Ordinary Smith went on, "you are quite sure you had not heard the name?"

"Quite sure," said Charlotte and to my ear she should have answered a little less firmly and after a pause for memory-searching. But were the detectives' ears as sensitive to these nuances as mine?

Then Jupp came in with the second of my carefully planted seeds. "It's a bit puzzling, not knowing as much about Penrose as we would like at this stage, to find a man of his education and calling committing murder like a common housebreaker who loses his head, or even being a housebreaker in the first place."

Charlotte did not join in on that.

"The more I think about certain I feel that there is no connection," said Ordinary.

"But it was robbery with violence," said Ordinary.

"That's how it ended. But it might have begun differently."

"He broke into the house."

"With another motive, I suppose he had been refused."

Suppose he imagined he had some injury by Mr. Inwood?

"You seem to be supposing a deal," Charlotte put in, "but there was no doubt about it in her voice. It could have been attributed to the impression of her poor Joe. 'I feel just do that he had never heard of it.'"

Did they notice the change? Two minutes ago she had been a great deal about his husband had not talked yet now she claimed to have had not known a particular detail.

But if they did not notice it, surely did, for I had scarce discussed this interesting possibility when she coughed twice.

I knocked on the door to handle with a rattle as though I had been engaged, and put on my shoes.

"I beg pardon, Madam, I am here."

The broad backs of the chairs turned, but neither looked at me. I felt I could stand up fairly closely by Mr. Smith absolutely necessary.

Charlotte reverted to state, murmuring: "Oh dear, yes—the doctor must forgive me."

I moved back into the sitting-room so that now I could see them. They stood up. Neither of them had any reason for prolonging their stay but it seemed to me that they preferred to leave at their own time.

Charlotte professed to have had this talk with the chief inspector, all the while for her pale grief.

"I know now that poor Joe will not escape as long as you are capable hands. It's true you could have brought that something is being done."

THIS speech recoiled on me. In order no doubt that she was really coming to the secret about the robbery.

"So we have been able to find the search, to concentrate in a comparatively small area, said it would be perhaps of hours, you see, I mean wood. And may I again disturb you. We police this part of our job, I think, too, we can with from the front door."

"Yes, yes—" breathed Charlotte. "You can find your own way out, can show you. Samson—"

But Jupp hastily affirmed that he knew the way, and must not trouble.

The door of the sitting-room closed quietly after them. I stood watching her as she lay of my interest. Her eyes were closed. I could see the unspoken thoughts. She had been a before, but the situation had changed. The police were for a motive other than they were far more sure expected that they would find it.

Also I could see now, for with my own eyes, the Elmhurst had painted. Still, I thought, but she was not. Her nerve was intact. I must try to break it down.

"Are you there?" Charlotte
 "I am." I went to the door.
 "I'm gone?"
 "I'm not the window. 'There's a

"I thought I would look deeper into his
 disapproval. 'I see,' I said. 'And with
 the plug left in the socket like that, a
 newspaper, for instance, could get
 straight on to Madam before it could be
 stopped. Surely that's wrong, Mr.
 Groves?'"

"It is not *our* place to question the wis-
 dom of Madam's wishes," he said stiffly.

"I had a feeling that questioning the
 wisdom of Madam's wishes was one of
 the butler's chief preoccupations.

"I am so sorry for her," I went on.
 "It's impossible to imagine such grief.
 How can she go on, alone, without him?
 Such a terrible, terrible death! Oh, Mr.
 Groves, she's making such an effort—I
 think she's wonderful!"

Mr. Groves was not looking at me.
 All he said was "Yes."

At this moment the switchboard bell
 uttered a small tinkle. We both looked
 at it, and both heard the very faint noise
 in the diaphragm of the earpiece, the
 sound of a dial being swung, seven mini-
 ature clickings of different lengths. These
 were almost immediately followed by a
 faint ringing tone.

Mrs. Inwood was ringing a number.

THE butler's lips disappeared alto-
 gether. He regarded the earpiece with
 what seemed to me to be an extremely
 disagreeable expression in which there
 was also thwarted curiosity.

If I had not been there he would have
 picked up the earpiece and listened—
 with difficulty, because it would be very,
 very faint—listened to whatever conver-
 sation took place between Charlotte and
 whomever she was calling.

And if *he* had not been there, I would
 have done exactly the same thing.

Secretly, separately, our curiosity in
 no way appeased, the significant ques-
 tion was in both our minds.

Whom had she wanted to talk to, and
 why had she seen fit to try to obtain the
 number herself rather than ask someone
 to get it for her?

We went decorously downstairs to
 lunch. It was a serious, ample meal in
 the basement room where I had had my
 first talk with Ellen Good. Mr. Groves
 sat himself at the head of the table, Mrs.
 Marshall was at the other end. I was
 placed at the butler's right hand, and
 properly deduced that as personal maid
 to the mistress of the house I ranked
 third in belowstairs society.

Cook, Havelock the parlormaid, and
 the housemaid Molly were by no means

HANK KETCHAM

SCIENCE WINS BIG BOUT ON WATCH TROUBLE

Newly discovered alloy
now used to make
a miracle mainspring

Always the mainspring—"powerhouse"—of a watch has been a major source of trouble. For the best steel mainsprings ever made frequently "set"—lose power. Or, weakened by rust, they break.

High humidity with a sudden drop in temperature can cause condensation of a droplet of moisture inside the case. A tiny pin point of rust starts. Soon—"ping" goes the spring!

But now comes the Elgin Watch Company's discovery of an alloy far superior to steel for mainsprings. Elgin's new DuraPower Mainspring* eliminates 99% of repairs due to steel mainspring failures. It retains its original resiliency indefinitely, gives a steady flow of power for lasting accuracy. And it will not rust! Only Elgin Watches including Lord and Lady Elgins and Elgin De Luxe have this miracle mainspring, and at no extra cost. Look for the symbol "dp" on the dial. Also at repair shops for replacement in many previous Elgin models.

colorless women, but it seemed that they were not expected to contribute to what little conversation passed between the head and foot of the table. This could with advantage leave me out also.

There were two roast chickens between the six of us. The housemaid got two drumsticks.

While I ate, I tried to think up a way of getting closer to Groves. Apart from the fact that Dorothy Simpson was not the sort of girl to stir a man's heart, even an elderly man's, he had an ingrowing reticence which came probably from his long habit of discretion as a "good servant." It was tantalizing to sit within a yard of his head knowing that in it there was probably more knowledge of Charlotte in relation to the dead Joseph than could be found anywhere else in London. I needed it badly.

I would value his opinion, but I did not see how on earth I could ever get it except by revealing my identity, purpose, and indeed the whole complicated business. And I was not prepared to go to that extreme; I did not know anything about him, or whose side he was on.

No, if there was any confiding done, it would have to come from him, and that looked very difficult to start. I studied him and could see no chink in his armor.

Mrs. Marshall was the first person to mention the crime. She observed that the inquest this morning had been adjourned.

"Naturally," said Groves, and Mrs. Marshall subsided. The others, momentarily brightened by the turn of the conversation, went back to their plates. Groves seemed a stern man, but why the censorship? I thought I would try to find out, and said diffidently, "I'm glad I'm new here. I wouldn't like to have had to give evidence in a murder trial."

"Begorrah! And who's going to give evidence?" squeaked the housemaid in alarm.

"Well, Mr. Groves for one," I said. "He found the body."

Mr. Groves took notice of me at last. He was frowning at me crossly. "That will be for the prosecution to decide. The police constable was actually the first to go into the study. His evidence should be sufficient. In the meantime, Samson, we do not discuss this very terrible affair any longer here."

"Oh, I'm sorry, I'm sure," I said. The rest of the table looked covertly at the butler, disliking him for his refusal to let them talk about the only thing in the world they wanted to talk about.

I decided I could risk his displeasure in the chance that he had an inkling, at least, of the truth and might betray himself.

"My trouble is that crime is so interesting. I wasn't meaning to be personal, so to speak. I say to myself: Why should an architect, a well-educated gentleman like this Penrose seem to be—why should he, of all people, want to break in and kill Mr. Inwood? Just for money, for valuables in the safe?"

THERE was a hush of pleasurable anticipation in what might prove, if it was allowed to continue, a deliciously speculative and exciting discussion; but the butler snorted at me with a mixture of anger and something else. It was the something else I wanted to know about.

"A most ridiculous theory!" he said crossly. "We don't wish to hear it. Get on with your lunch, Samson."

I bridled as I thought a timid person roused might bridle.

"My name's Simpson," I said, very much through my nose, "and if it's so ridiculous, why is Inspector Smith asking the same question?"

That got him.

"And how, may I inquire, do you happen to know what questions Inspector Smith is asking?"

"I heard the inspector mention the idea to Madam this morning. It was only an idea, I'm sure. He wanted to know if

she knew of anything to show the murderer was a friend of Mr. Inwood, or had some personal connection with him. They thought it was funny too, for an architect—"

"Eavesdropping!" said Mrs. Marshall in a voice of ice.

"That's a very cruel and unjust thing to say!" I protested. "Mrs. Inwood told me to listen at the door, in case she couldn't stand it any more, poor lady, so I could come in and interrupt. I am not in the habit of eavesdropping! If this is the sort of thing I'm to expect—really!"

I was watching Groves carefully. He was concentrating on something other than my bad behavior; he had heard neither Mrs. Marshall's accusation nor my rebuttal of it. He looked at me.

"And what did Madam say to the inspector's suggestion?"

"She said she had never heard the name of Penrose in her life, from her husband or anyone else," I said.

He nodded slowly, and I thought I must be imagining the faintest of quirks which moved the corner of his mouth.

"Of course not," he remarked with sudden amiability. "The police are all the same. They're never satisfied with simple explanations. And now we'll finish our lunch, please."...

"Yes, Madam," I replied.

I did not summon Groves to restore the switchboard's I did so myself. I waited two minutes later had my c. She tried the num. COLLIER'S

"Before we know it you'll be promoted to university president or Secretary of State!"

Afterward I explored the house in a circumspect way, marveling at the costliness of everything, but found little of interest or importance so far as my purpose was concerned. All was quiet on the Charlotte front and she was presumed to be resting.

Speculating about that telephone call she had tried to make, I went up quietly to the telephone cupboard. The plug was still in the socket of "One" extension. Had she managed to get through? In the hope of finding out, I pulled out the plug and moved the switch to the perpendicular.

Nothing happened just then but after about ten minutes I heard the switchboard bell ringing and dashed to it.

The white disk over Number 1 was down. I picked up the receiver. Charlotte wanted angrily to know why she was no longer connected to the exchange and who was that anyway. I told her it was Simpson. "I mean, Samson, Madam."

"Have you been using the phone?" she demanded.

"No, Madam."

"Well, get Groves and tell him to give me the outside line at once."

"Very good, Madam."

"Have you fetched your suitcase yet? Then fetch it and be back by six."

b n instep."

for August 23, 1947

"Yes, Madam." But I stayed at the
window, and made my back more intent
than ever. I could feel her eyes on me.

"I'm sure he can't be," I said. "He
wouldn't mind being seen if he weren't,
would he? At least, he wouldn't hide in
those bushes like that, I'm sure. He'd be
on the pavement, not in the gardens."

I felt rather than heard her moving be-
hind me, and I went on quickly:

"There! Now he's gone altogether!"

Charlotte stood behind me; she did
not come to the gap in the curtains.

"For God's sake, Samson, you're giv-
ing me the willies!"

"Oh, he's gone," I said. "He went off to
the left. It's too dark to see." Then I
added, as if in afterthought, "A tall man."

"A tall man?" she repeated. Her voice
was low.

"Without a hat, Madam. A detective
would wear a hat, wouldn't he? Quite a
tall man. Just one of those snoopers—
I think it ought to be stopped."

I turned to look at her. Her self-con-
trol was again remarkable. The moment
I turned, she did also, and went back to
the dressing table.

"If you're a neurotic," she said, "you'd
better say so, and I'll get another maid."

"But, Madam, I'm sure there was a
snooper—"

"Brush my hair—"

"Yes, Madam."

I went over to her and she handed me
one of her gold-and-tortoise-shell hair-
brushes.

"I'm sorry, Madam, if I scared you,
but he looked—"

"I said brush my hair, Samson!"

"Yes, Madam." I brushed it, wanting
to twist it around her fair neck and stran-
gle her with it. I waited a few seconds
before I shot the bolt finally home. Then
I dropped the hairbrush with a crash on
the glass top of the dressing table and
half screamed: "Oh, Madam—it *must*
have been him! They say they always
come back to the scene of the crime!"

That broke through her defenses, if
only for a moment. She snatched up the
hairbrush and whacked me across the
front of my thigh with it in one furious
movement.

"Shut up," she said through her teeth,
"and get out of my sight before I lose
my temper with you!" In the same in-
stant she took hold of herself and her
voice quietened: "My nerves are quite
enough on edge without having a hysteri-
cal girl on my hands. I'll ring for you
in the morning when I want you."

"Yes, Madam," I said, and cowered

out of her room, closing the door. I
stood holding my breath in the thought
that if the police visit this morning had
made her want to get in touch with some-
one outside, this new alarm might make
it more necessary to her than ever.

I ran downstairs. The hall was empty
and I was able to get into the cupboard
and shut the door without being seen. I
switched on the light in case anybody
came, for to be in there in the dark would
be more than suspicious.

I picked up the receiver. She had not
wasted a moment; the dialing tone was
already muttering its secret summons.

This time it was answered. I glued
the earpiece to me until it hurt. But I
could just hear a man's voice, thin and
far away: "Yes?"

For a bad moment I was afraid I was
not going to be able to hear Charlotte's
end of the conversation, but I realized
she was probably recovering from relief
at having managed at last to establish
contact, and it was like her not to want
to show it.

"I've been trying all day to reach you."

It was his turn to pause. I realized aft-
erward that those two hesitations were
almost more significant than what they

known. Then, as I listened, I realized
she must have told Freddy—wasn't his
other name Williams?—must have told
him quite a lot more than seemed either
necessary or safe.

After his swift reaction to her use of
even his first name, she promised him
that the telephone was perfectly secure,
because not only had she got his number
for herself, but she was alone in her bed-
room and all the servants were down-
stairs at their supper. She went on to
insist that she must see him, that some-
thing had happened for which she had
not been prepared.

"Nothing can have happened which
hasn't been foreseen," he said.

"How can you say that? You know me
well enough. I wouldn't insist if it weren't
necessary."

"My dear, what a woman regards as
necessary—"

"Let's not argue. I shall come, say,
between midnight and half past, after this
house has settled down. I can come and
go without anyone in the world knowing.
Your downstairs door is locked at eleven,
when the porter goes for the night. I'll
ring your street bell and you can come
down and let me in."

"No," he said. "I told you. Not before
I am satisfied all the song and dance is
over."

"Oh, for God's sake!" Her voice, small
as it was to me, was full of urgency.

"Quietly does it," said Freddy Wil-
liams. "You say the telephone is safe.
Go ahead. What's eating you?"

"No telephone is as safe as that—"

"You're losing your nerve. You've
shown plenty so far. Now you're panick-
ing. I know the signs."

"All right," she said. "Listen. *It is*
certain now that they will catch him."

He paused before speaking.

"They promised they would, I sup-
pose."

"And he's making it as easy as possi-
ble for them."

"I don't believe it. He's damned in-
telligent, according to everything you've
told me."

"In every respect except one—he can't
keep away from me."

"He hasn't much choice about that.
He'll have to."

"So you'd think. But then you aren't
his type, darling, and you don't know
what it feels like."

"I think you're getting windy."

"Am I? Now I'll tell you that he is
outside this house *now*, or was, five min-
utes ago."

That shook him into momentary si-
lence, then: "But *why?*"

"I just said you wouldn't understand.
You haven't one of those things in your
breast which beats and throbs and is sup-
posed to provide normal people with the
emotion of love."

"Quit fooling, Charlotte!"

"Who's to shut up now?"

HE SWORE at her. She laughed. "You
mean he's hanging around to see
if you're all right, or something?" he de-
manded.

"Or just to see me."

"He must be crazy!"

"About me. And that is no condi-
tion to be in when he has his sort of
problem."

"And you have *your* sort of problem."

"Ours," she said.

"So what?"

"So, I want to see you. I think we
ought to do something about it."

"All right," he said. "Tomorrow night.
At half past twelve, as you suggested."

"No. Tonight."

"I said tomorrow," and he rang off.

She said, "Hullo! Hullo!" and jiggled
her receiver so that the bell in the switch-
board tinkled. Then she hung up. I
waited, but she did not dial again. I put
down the receiver and left the telephone
cupboard to digest what I had heard.

It was, in effect, of considerable im-

said to each other. I did not think that
his was one of relief, however.

"Are you there?" she asked anxiously.

"Is this—sensible?" he said.

"I'm the best judge of that. In any
case, *they* have gone. They had a man
keeping out undesirables, but he went too
this morning, after I'd seen them. I
thought I had better get it over."

"It went all right?"

"Yes, of course. They wanted, natu-
rally, to know if Joe or I had any deal-
ings with him. Of course I said I hadn't,
even if Joe might have."

"They did, did they?" He was not
very concerned. Charlotte, however, re-
assured him to reassure herself. "It wor-
ries me a bit, but it's quite logical that
they should have noticed it wasn't a *typi-
cal* thing for someone like him to have
done. Look. I'm sorry, but there's some-
thing else—a reason I *must* see you."

"Not yet."

"Freddy—"

"Shut up!" he said sharply.

Freddy? This was the first clue, and in
a moment I had identified him. He was
the man she had gone to after the murder,
the man she had told Jonathan would
support her alibi for the critical time, if
she were ever questioned about it.

My first reaction was disappointment:
I had expected some factor I had not

portance and it looked as though, all things being equal, I now had twice as good a chance of forcing the truth into the light of day as I had had ten minutes ago.

Freddy Williams. I had almost forgotten him. It was difficult to imagine what he was like from that miniature voice in the earpiece, but one thing was fairly clear. Even if he was ready to help her out of the worst hole in which her kind of widow could find herself, he was no Jonathan to fall a bedazzled slave at her sainted feet. He sounded as if he was accustomed to giving as good as he got.

In the meantime I was elated. I had forced a situation. Charlotte had not doubted for a moment that I had seen Jonathan, and listening to her while she told Freddy Williams about it I had almost believed it myself.

What would she do now? Freddy Williams refused to see her until tomorrow. Would she wait? She had said they ought to do something about it. Was that a vague thought, rising from her anxiety, or had she some plan to counter the danger of Jonathan's imminent arrest?

I would be around at midnight, just in case.

I went down to supper, which had started in the servants' room: kippers, bread and cheese, and cocoa. Compared with the midday meal it was livelier, except of course for Mr. Groves who was dissecting a kipper with characteristic precision and taking no interest in the conversation between Havelock and Hewson, the chauffeur.

I was able to wonder if kipper and cocoa would make me as ill as seemed likely and how Mr. Groves was getting on with his problem. I could see that it was still with him. Twice in the course of one kipper he stopped, with knife and fork idle, to stare unseeingly in front of him. I was impatient. I had not the sort of mind to be content with this method of gradual accumulation of small facts in order to build a big one.

After perhaps ten minutes, the butler wiped his mouth on his napkin and with the air of a man who has made up his mind about something, left the room. Mrs. Marshall watched him go.

"Poor Mr. Groves," she sighed. "He's taken it to heart, I'm afraid. He was very devoted, as a good servant should be."

The others, none of them particularly anxious to be good servants and thus run such risks, agreed with conventional murmurs of approval, got on with their suppers and began to talk about the funeral, which was on Monday. The chauffeur wanted to take bets on the number of cars in the cortege, but Mrs. Marshall was quick to reprove him.

My mind was on Mr. Groves, however; it had no room for anything else.

THE best excuse to leave the table I could devise was to say I was sorry but I wasn't hungry, it must be because I was overtired, and without waiting for Mrs. Marshall's permission I went out after Mr. Groves with the feeling that it was a moment of crisis, and if I could get at him now and somehow make him talk, I would find out what he was up to.

But it was not going to be so easy as that.

The light was on in his pantry and the door was half open. Mr. Groves was brushing his hair at a long narrow mirror fixed to the back of a cupboard door. I stood in the half darkness of the passage between the servants' room and the kitchen, and watched him. He had not much hair, and what there was of it always seemed like the rest of him, to be in a state of utmost orderliness, but he nevertheless brushed it now with slow, smooth strokes until he was satisfied that each hair lay with inescapable exactitude in its proper place. He rubbed the toes of his patent-leather shoes with a yellow duster, straightened his tie, and stood re-

garding himself critically in I was fascinated. This was a decision he had made at the time, and I could not guess to leading. If he were going out wouldn't he have changed clothes?

Then as he looked at himself began to move as if he were which in fact he was doing; sound. He stopped, adjusted his position to an even sterner gaze began again. I realized that he was hearing.

He raised himself to his feet, pushed out his narrow chest, the butler and became the man whose speech flowed on, his forehead into a heavier frown. Suddenly he raised his right hand, forefinger and came to the final point of range of accusation. That was the end.

His hand dropped. He went to what the other said, the other. . . . He made a gesture, eloquent hand, a complete answer to his accusatory dismissal, for he knew the truth was no possible denial of it.

Now he was listening again a series of expressions from his face, through surprise to a final thoughtful, careful attention in which he put his left chin and nodded slowly in a reluctant agreement with a which was being made to relax his forbidding expression, he smiled with a look of his shoulders which said words: "Oh well, in the course—"

AT LAST, the rehearsal was over. He was satisfied with it. He closed the cupboard and quickly into the empty room waited for him to leave the room. I knew Mr. Groves' section to his problem. He was the police.

No, it was really quite simple. Mr. Groves was no longer Charlotte Inwood's butler; her particular and private butler.

I had a faint feeling of something on Mr. Groves' account on which I had not put a finger, but I had a feeling of pleasure. This was better than an imagination in the bushes, better than Ordinary Smith's speculation. This was tangible. I would deal with it, of course, other, probably by paying a price, for she was rich enough. Mr. Groves was no fool. I knew exactly how much he would turn the screw.

But it would shake her to its roots to know, and she would go on knowing all the time. It was yet one more person in her link with Jonathan.

I saw Mr. Groves go downstairs. I passed him on my way to my own room. I saw him knock on Charlotte's door on the stairs leading to the kitchen. Quietly I sat down close in the shadows. They hid me from Charlotte's door to see Groves come out without being seen.

He was with her nearly an hour. It seemed an age as it I was on tenterhooks for others come up the stairs to have to leave them at the door.

At last he came out. He went quietly, his face away from the light of the wall bracket in the bedroom and sitting room, templating the future. He showed in a wide grin, a grin, for his face was not

to a cheerful, slightly more
le, and he went downstairs
whom fortune has suddenly

she was going to talk to
the telephone. I ran down-
a time, but on this occa-
self balked. Mrs. Marshall
at inconvenient moment to

weed out the faded flowers from the big
bunch in a bowl on the Elizabeth chest
in the hall. The sight of her brought me
to a standstill, breathing fast and feeling
rather silly.

"Well, well," she said, "I thought we
were overtired."

"I feel better," I replied weakly. "I was
hoping there was some bread and cheese
left over."

"Ask Cook."

I HAD to go downstairs and eat bread
and cheese I did not want, while
Charlotte had another argument with
Freddy Williams to which I was not able
to listen.

But I worked it out that even if he
went on saying, "No, tomorrow," there
was a likelier chance than ever that she
would try to see him tonight. She had
had a bad evening, and I could under-
stand her almost physical need to see him.

I finished my bread and cheese and in-
spected the locking arrangements of the
basement door. Two bolts and a lock;
the lock could be held back by pushing
down a button. The bolts moved easily.
I would not be able to leave the house
until after Groves had locked up, about
half past ten. However, I would still
have ample time before Charlotte
thought of moving. . . .

At a quarter to twelve I was at the
wheel of the Daimler parked up the street
from Number 4. The car was far enough
away from the house to be unconnected
with it, but not too far for me to be able
to see if anyone came out.

While I waited I loosened and combed
my hair, put away the spectacles, and
treated my face generously to rouge,
powder and lipstick. I spoke a few sen-
tences aloud to get my voice back to
normal, and went on waiting.

At ten minutes past twelve I saw Char-
lotte appear on the pavement in front of
the house. She was dressed in black and
seemed to be wearing a black scarf over
her head and tied under her chin; she
made an inconspicuous figure.

She walked away from me toward Ful-
ham Road. I let her reach the corner
before I started the car and went after
her.

(To be continued next week)

by HOWARD SPARBER

anky, the words are for people who can't read the pictures"

Absorbine Jr. kills Athletes' Foot "Bugs" on contact!

Before

This picture, magnified hundreds of
times, of the parasitic growth which
causes Athlete's Foot was made
before contact with Absorbine Jr.
This growth lives on stale perspira-
tion products and dead skin . . . the
real cause of the pain and misery of
Athlete's Foot.

After

This is a picture, same magnifica-
tion, of the Athlete's Foot organisms,
after contact with Absorbine Jr. See
how this parasitic growth has wilted
and died. No longer can it irritate
delicate nerve endings and cause
that maddening "itchiness" and ex-
cruciating pain!

Cracks warn of danger

Warmth and excessive per-
spiration between your toes
invite Athlete's Foot! This
common summer condition
irritates the tender skin often
to the point where it cracks
and flakes away in moist
shreds. Then the ever-present
organisms which are the
cause of Athlete's Foot, mul-
tiply and attack the raw flesh
through the open cracks!
Every step is agony!

Drench those cracks

Apply Absorbine Jr., full
strength, night and morning,
at the first sign of cracked
skin between the toes. It
kills the Athlete's Foot or-
ganisms on contact. To guard
against re-infection: Don't
share towels or bath mats.
Boil socks at least 15 min-
utes to kill the organisms.
Disinfect your shoes. In ad-
vanced cases consult your
physician.

Absorbine Jr. also benefits you four other important ways:

1. It dries the skin between the toes, discouraging future attacks of Athlete's Foot.
2. It dissolves the perspiration products on which Athlete's Foot organisms thrive.
3. It cleanses and helps heal broken tissue.
4. It relieves itching and pain of Athlete's Foot.

Daily hygiene! You can help ward off Athlete's Foot
by applying Absorbine Jr. to your feet every day! Cool-
ing and refreshing after bathing. Absorbine Jr. has also
been famous for more than 50 years for relieving mus-
cular aches and pains. At all drugstores \$1.25 a bottle.

W. F. Young, Inc., Springfield, Mass.

HE CLICKED FOR 50 YEARS

Continued from page 23

the business progressed. Lloyd George was congratulating himself on the success of his idea when Hughes suddenly blurted out another question. President Wilson blew up.

"I thought you told me you had straightened him out?" he said.

The Prime Minister went to Mr. Hughes, slapped him on the shoulder and shook his head slowly. "Mr. Prime Minister," he said, "you won't read, you can't hear, and I don't know what the hell I'm going to do with you!" That, says Harris, made everybody laugh, including Hughes, who got the point.

Later, Harris was allotted five minutes to photograph Lloyd George. They talked for two hours. The reason: They discovered they were both born in Wales.

George Harris came to the United States in 1881 from Dowlais, Wales. He was then nine years old. As a youngster he went to work in a Pittsburgh steel mill and joined an amateur theatrical troupe. One day the troupe visited a local photographer for a group picture. When the man arranged the actors, Harris objected that the picture would look stiff and unreal. The photographer sarcastically suggested that Harris pose them himself if he knew so much about it. Harris did. The picture was a humdinger. The photographer was so impressed he hired Harris to get subjects to pose in more natural positions while the boss clicked the shutter.

Followed the Trail West

In 1889, when Harris was 17, he had learned enough about photography to take a photograph of the Johnstown flood for newspaper publication. Shortly afterward he went to Arkansas and opened a small studio. But everybody was heading west in those days, so he soon pulled up stakes and joined the trek to San Francisco, where he landed a job making news pictures for a studio.

In 1902, when the Hawaiian volcano, Mauna Loa, was due to erupt, the San Francisco Examiner sent Harris to get pictures. "It didn't really erupt, but it boiled over," he says, "and I got the shots."

When he returned to the Examiner offices he found the editor pacing the floor, mad and disgusted.

"What's the trouble?" Harris asked.

"Trouble! Old Senator Hoar just kicked off. I've sent wires all over the country trying to get a picture of him and I can't even get answers!" He paused and shook a finger at Harris. "Look," he said, "if you want to make some real dough, go out and take pictures of all the famous people you can find and sell 'em to the newspapers."

Harris didn't take the advice immediately, but he remembered it. He went to New York and worked for nearly three years as a photographer on Leslie's Weekly. When he had some capital laid aside he communicated with Mrs. Martha Ewing, a color artist in the San Francisco studios where he had worked. He suggested that they go into partnership in a new studio. With Mrs. Ewing he made a survey of several big cities, including Washington, to decide which promised the most business. One evening at dinner in Chicago, Harris tore a menu in two and gave one half to Mrs. Ewing.

"You write the name of the city you've selected, and I'll do the same," he suggested.

They exchanged halves. Each had written "Washington."

They visited various locations in the capital, counting the number of people who passed given points during the day. They settled upon 1313 F Street as the

most likely spot. The studio opened on February 17, 1905, and from that time wherever there was news in the city there was Harris.

In 1911, he got a marvelous Model F Wright airplane and flew it on the White House lawn. Harry Atwood, who had just set a record 550-mile cross-country flight in an Aero Club medal flight. In 1912, the great Indian athletic wonder, Thunderegger, came to bring Carlisle a victory over Georgetown and to give an outstanding football action. Harris stepped-up life of Washington. America entered the first World War. Harris recorded through the Harpers jamming the streets, the rooms, houses, meals and the just as they would be doing years later.

The studio today is a national Washington institution of its historic pictures on display at the Smithsonian Institution. Ewing lives on a ranch in

and is no longer associated with the business, though she and Harris still have ant reunions now and again. Harris' pictures flow through a photo syndicate, which supplies thirty U.S. newspapers and magazines. His studio rooms are occupied by brides-to-be, Army and Navy officers, and Sunday-clothed children, men, senators, Cabinet officers, government clerks and housewives.

In 1921, Harris broadened his business to include oil portraits from which he wanted them. He hired a famous painter named Schlereth, a German portraitist. Each year Schlereth spent three months vacation and many. In 1939 he sailed for Europe and Harris has not heard from him since. The portrait work is now performed by a New York artist.

George Harris says, "Photography has gone beyond me." His staff, however, say that Harris' photos now and then—which for artistic effect and beat most of those taken in the light.

George William Harris is 70 years old. Photography itself is 100 years older. He is wealthy but above all he is happy that he has done a good job of it, but he doesn't have to. His pictures for him, are symbols of the man who has clicked for 50 years.

RICHARD WILLIS, New York, N. Y.

. . . Every year, shortly after Decoration
Day, I start to look and feel like the guest
of honor at a cannibal picnic. On July 4th,
it has long been a family custom for the re-
latives to gather round and peel me like a
banana. From then on, each year, I zeal-
ously store up vitamin D until, come Labor
Day, I'm fit as a fiddle and twice as brown,
secure in the knowledge that no cold germ
can touch me in the coming winter.

This year, I'm tanning as usual, but the
old esprit d'epidermis is gone. If I catch
pneumonia this winter, blame it on those
busybodies, Pfeiffer and Herrick. They had
to open their big mouths! In a brown study.

PEGGY MURRAY, New York, N. Y.

THE OLD HA-HA

DEAR EDITOR: Thanks for the editorial One
Laugh—\$2 (July 12th). I've read the facts
of this instance (in which a man was fined
for laughing) but your publication has been
the first to express an opinion of this fla-
grant disregard of our unwritten, highly
prized right of any American doing what
he, or she, wants to do, like breathing, snor-
ing or even (tsk, tsk!) laughing.

I'm glad no one got arrested for crying.
It could have happened a couple of times
while I was overseas if there was such an
ordinance.

M/SGT. JAMES F. KUNZE,
Barksdale Field, La.

. . . One Laugh—\$2 missed the point en-
tirely. If you will underscore the quoted
words of the police chief "—when there
was nothing funny to laugh about—" I be-
lieve you will have the crux of the situation.

Our Federal Constitution guarantees
every man the right to make an ass of him-
self but it does not bestow upon him the
right to annoy others with his braying.

WILLIAM A. BELL, Decatur, Ga.

PESKY CRITTER

DEAR SIR: After your Hal Newhouser
cover (July 19th) I understand why he
baffles so many batters. Obviously the bat-
ter can't see the ball—or Newhouser for
that matter—behind that big foot he sticks
up in front of himself before each pitch. He
didn't by any chance get that stance from
that half-pint photographer I thought I saw
giving Hal advice on a proper pitching pose
before making the cover down here last
spring?

JOE GONZALES, Lakeland, Fla.

It is not unusual for the modest Peskins to
give athletic lights instruction in How To.
Inepts like Johnny Lujack and Stan Musial
think they Know How until the Peskins
show up—with their cameras. In this case,
Hy Peskin had every qualification to give
Newhouser a pitching lesson. At Brooklyn
Evening High this one-man gang was man-
ager and member of the baseball, football,
track and soccer teams. Climax of his daz-
zling career was a 7-0 shutout he pitched
for the N. Y. Daily Mirror over the Brook-
lyn Eagle at Ebbets Field.

you going, hon, when you get to New York?"

Alicia, startled, said she did not quite know.

"The Music Hall is nice," the lady said. "They got a swell show there. I seen it twice. Maybe he'll take you to the Music Hall," the lady said. She chewed a while busily on her chewing gum. Then she added, "If he don't have much money, you know, you could go to one of them Chinese places to eat. You get dancing and stage show and everything. And plenty of food."

Alicia said that was a very fine idea. But privately she did not plan on the Music Hall at all. Or a Chinese restaurant either.

A small place, rather. Secluded, and French. With checker-clothed tables, and candles. And piano music coming from the back. They would sit and hold hands, in love. And drink wine. A small bottle of red wine, with wicker weaving around the bottom. She would take the empty bottle home.

And when the place began to crowd, he would say, "Let's go, Alicia." Helping her into her coat he might squeeze her shoulder a little. Sometimes he would do that. Then they would walk outside together into the warm autumn evening air. Autumn and evening. And they would sit on a bench in Washington Square Park while night drifted in. They would sit there together, and talk together, and then stop talking. . . .

"Would you care to look at my magazine?" the lady said.

Alicia jumped a little. "Thank you. I prefer to look at the scenery," she said.

Actually she did not look much at the scenery at all. She had made this trip so many times, Boston to New York and back, that the scenery all looked the same. She had stopped seeing it.

But when, suddenly, the train slowed down beside some stretch of water, and stopped, Alicia saw the scenery again. Directly below was a beach, a sad and rocky little strip, but a beach, with gray-yellow sand and a smooth old twisted tree trunk, skeleton-bleached. Very little waves came slipping over the sand. Ashamed little waves, with a faint mustache of foam.

BUT Alicia's imagination began to take hold. The beach became long, and white and empty. And the waves rolled in, green and crashing wild. And then, running down the sand, she came. Her hair flying back with the the wind caught in it. And, of course, he was behind her. Running. And caught her. Caught her, and of course, kissed her. Kissed her.

When the train began to move, Alicia looked back as long as she could, and it seemed that she saw herself standing there, with his arms around her.

"What's your boy friend like," the lady said, "if you don't mind me asking?"

"He's—very nice."

"Tall?" the lady said. "Tall and dark, maybe?"

Alicia looked straight ahead, frowning.

"Or maybe blond?" the lady said.

Alicia said, "Excuse me." She got up, holding her coat like a child in her arms, and walked down the aisle toward the cubicle at the end of the car which said: WOMEN.

Women. Looking into the mirror then, bracing her feet in the shaking car, and combing her hair, she saw herself not as a girl at all. But as a woman.

The face staring back at her out of the mirror, plain. A plain girl. A pity. But, remembering him, she smiled, and there in the mirror, smiling, was suddenly—woman.

Always before when she thought of herself, thought of herself in his arms, or walking along on the street beside him, always before she was—girl.

Carefully she combed her hair. She felt tall inside, being woman.

After a while she unlocked the door

and went back up the aisle, walking tall. She saw how the men looked up at her. All the eyes of all the men in the car, it seemed, were staring at her. A strange excitement rose within her.

She walked on past where the lady sat, reading her magazine, chewing her gum, and went instead to the end of the aisle where a seat was empty. She folded her coat very carefully, placed it beside her, and turned to the window, smiling.

The smile stayed with her until the train reached the station, then it sank away.

The lady passed by her and bent over. "Have a good time," the lady said.

"Thank you," said Alicia.

"Your fella be 'at the train to meet you?" the lady said.

"Yes, he will," said Alicia softly.

"I'd like to get a look at him," the lady said, warming a little. But Alicia sat there, saying nothing. The lady shrugged and went away.

When the car stood empty, Alicia rose,

through her, shivering, delirious, the train rolled on, out of the city.

The conductor came by with ticket. "Have a good time, miss?" the conductor said.

Alicia, startled, looked up and nodded.

"I knew, the way you were," the conductor said. "In to friend, I'll bet."

"Yes," said Alicia pleasantly.

The conductor winked. her return-trip ticket back away.

Then he moved on.

And Alicia sat there all

But soon she got up and the aisle to the cubicle at the car. She stood staring up WOMEN.

Then she went inside, looking behind her.

She started to comb her hair, she combed it, trying hard to chase away the chilliness which was creeping

"I wish some feeble old millionaire would take me away from

and, walking tall, she went down the aisle, out of the train, up the long and crowded ramp into the station.

She went straight to the information booth.

"When does the next train leave for Boston?" she asked.

"Five minutes, miss, track thirty-two." So Alicia walked over to track thirty-two, down the steep flight of stairs from the station, and into the train.

Smiling, she went up the aisle, walking tall, seeming not to notice the people around her. She found herself a seat alone, folded her coat very carefully, placed it beside her, and sat there staring out of the window, smiling.

And as the train started to move, she began remembering, sweetly remembering. How he had kissed her there at the station. Right in front of thousands of eyes. Kissed her. And the smile spread

for like the rain on a quiet night, the chilliness carried tears.

She looked into the mirror. Alicia, softly smiling. But the mirror was Alicia no longer.

Then, from the girl looking in the mirror, there came a soft sob.

"No," said the girl looking in the mirror. "No," and she began to cry there for a long time. She rolled on, back to Boston, the cubicle, softly crying.

But it seemed that the wind, cleaned as after a while she wiped her face in cold and dried it on a rough paper.

Then Alice unlocked the door. She went out among the people who sat in the train.

Believe It or Not! by Ripley

A MILLION TONS ONE MILE EVERY MINUTE!

That's the size of the job
American Railroads are doing today!

Railroads are moving...
more grain than ever before...
more tons of freight more miles
...*than ever before in peacetime*
...AND EVEN BREAKING SOME OF
THEIR WARTIME FREIGHT RECORDS!

are moving an almost unbelievable
ight across the nation. In the first four
year they topped even their wartime
ords! And more tons of freight are
miles than *ever before* in peacetime!
e carrying this greater tonnage with
though thousands of new cars have
vice, and 100,000 are still on order,
oming fast enough to replace those
artime.

This record-breaking volume of freight is being
hauled at charges which average just a little more
than one cent for carrying a ton of freight one mile.
This is less than 15% above 1939 levels.

But railroad wages are more than 50% higher
than in 1939. Fuel and material costs are 60%
higher than before the war.

As a result, in this year of biggest peacetime
business, railroads are earning an average return
on their net investment of only about 3%.

That's just about half the earnings the railroads
need if they are to keep on making the improve-
ments in cars and engines, tracks and terminals,
signals and shops, which will keep freight moving
at a rate to meet the nation's needs...to bring
better service to you!

"Mrs. Crandall, down the street, wants you to play the Blue Danu

COLLIER'S

flashlight and opens the honey can and just sits looking at the gold. The look on his face. The first time, it sort of gave me the creeps."

"I didn't know that; I guess I'm a heavy sleeper. Say," he asked, "do I snore?"

"Sometimes, a little. And you talk in your sleep."

"Do I? What do I say?"

Her eyes lowered. "Oh—just foolish stuff."

He knew, then. "I talk about you."

"I didn't say that."

"You don't have to. I dream about you." He drew a deep breath. "Well, good night."

"Good night."

He sprang up and caught the rim of the ceiling edge. But instead of swinging his legs up and over onto the shelf, he hung there by his hands a long moment, then released one hand and swung slowly around toward her. "Then he's heard me talking about you, at night. He must have, if he gets up."

"I suppose so," she agreed. "But what a man says in his sleep doesn't mean anything."

He dropped to the floor, staring at her with such intensity that she moved back a half step. He said with slow certainty, "He killed Walser!"

"What do you mean?"

"It adds up. The whole thing makes sense, finally. Why did he bring you here, except for me to fall in love with you? He hasn't touched you. You were bait for the trap. He knew it had to happen, with us marooned here for the winter. He's watched us falling in love. He's heard me talking about you in my sleep. And tonight he left us here together."

"Ray, I—think we'd better not talk any more tonight."

"He left you here with me!"

"He can trust me. He left the gold here, too."

He put his hands on her shoulders. "You know how I feel about you. And you feel that way about me."

"Please, Ray," she pleaded. "That's unfair."

"You do!"

"If I do, there's nothing to do about it. Maybe that's why I told you about myself. I didn't want you to have the wrong idea. I'm his wife."

"You've got a piece of paper which says so. You were married to the soldier without the paper. You've never been his wife."

"He trusts me, Ray."

He laughed harshly. "Like hell he does! That's why he married you, because of what people say about you! He wanted a girl who was easy, stranded for the winter in a cabin with a young man. I tell you it's all part of it!"

"Ray, I don't like to hear like this. There's no sense to

e old man brought the his temple. Moving his arc, Brighton knocked it ot blasted loudly in the

single room. The young man put the weapon in his waistband.

"That's no way out," he said. "But there is a way. There's one way to clear yourself and get peace. Confession. Admit the whole thing, if only to yourself. Get it off your chest. That's something good for the soul. It isn't so much telling others as it is facing yourself. You wouldn't let yourself admit you were consciously planning my murder. You arranged the circumstances and refused to think about the inevitable result. You knew I loved your wife, yet you insisted on leaving us together overnight. Yet how did you justify not going to town? You refused to face things. The fever was on you. . . . Effie, get him that notebook and pencil. I think he'll feel better when he gets it all down."

While the old man sat at the table, writing, Effie said to Brighton, "What are you going to do?"

"I'm pulling out, with my share."

"Could you make another pair of snowshoes? I'm going, too."

"Will you want—this?" asked Dresderlein brokenly, indicating the paper.

Brighton looked at the girl, at the pain in her eyes. "I think not," he said. "You keep it."

WHEN they left, late that night, the old man was on his knees praying happily, out from under the burden of his secret at last.

Ray Brighton and the girl pushed awkwardly through the snow on the homemade snowshoes, following the brushed strip indicating the road. An hour later they were on the ridge above the hollow. The lamplight showed yellow in the windows of the cabin below.

"I think he can live with himself a little easier, now," Brighton said.

"I was glad you didn't take his confession, but—why?"

"He's paid quite a price all these years. As long as he's admitted to himself that he as much as murdered Walser, the thing is washed clean so far as I'm concerned. Let him get whatever it is he wants out of the gold—it's already cost so much." They trudged on through the soft, dry snow.

"Are you going to divorce him?"

"Of course." Then her eyes came up. "Do you want me to?"

"You know I do. It will take a year, but I can wait. I'll do that much penance for some of the thoughts I had. The gold fever is a terrible thing."

They pushed on together toward the highway.

JACK MARKOW

How to make

CROQUETTE GLACE A LA BELLEVUE

as served at

The Bellevue-Stratford
PHILADELPHIA

CROQUETTE GLACE A LA BELLEVUE

- 1 pint vanilla ice cream
- ½ cup macaroon crumbs
- ¼ cup Royale Anne black cherries
- ¼ cup cherry juice, brandy or kirsch

Use your favorite brand of ice cream. Shape into the form of a croquette. Roll in macaroon crumbs or place in serving dish and sprinkle with crumbs. Make a groove across the center of the top. Place a few cherries in the groove and more around the edge of the dish. Pour on a cherry juice or liquor. Serves 4.

Let this luscious dessert give your next party a smart "caterer's touch." Use the local brand of quality ice cream you like best—the kind you usually find packaged in the sanitary, convenient Sealright container.

For other ice cream specialties of famous dining places, ask your dealer (or write Sealright) for folder, "Smart Tricks with Ice Cream," by Mabel Stegner, nationally known home economist.

DEMON FROM THE DOLDRUMS

Continued from page 28

to moan, and then, as the gale itself around a definite vortex, the monster roars with insane glee. The whirling devil

westward by the trade winds ed to fury by the earth's rotation, the monster lurches through the air, weaving and bobbing like a drunk boxer. He smacks an is- his wanton fist, scattering palm fronds and people like dry leaves. That area of low-pressure calm is a maelstrom—sucks up a great mass of green water and sends it thundering, and heaven protect what- ens to be in the way.

For the past 60 years, during which ac- cords of hurricanes have been recorded by the Weather Bureau, some 380 hurricanes have been recorded. In the doldrums and in the sec- ondary off the coast of Yucatan, only about half of the hurricanes have reached the United States active force.

Hurricanes Strike Hardest

Hurricanes—those which occur in the Caribbean or off the coast of Mexico. The most dangerous hurricanes, however, are those which form in the doldrums in August or September. These storms swerve northeast- ly drift out of the clutch of the trade winds and meet the prevailing west- wind. Their average pathway cuts through the Florida Keys and hits land near Pensacola—one of the most densely populated cities in the nation. The winds blow wander vaguely about the coast, on rare occasions, make a landfall. Cold, high-pressure air pushes them off. Warm, low-pres- sure attracts them.

At the vicious speed of its cir- culation, the hurricane travels very fast. The average forward motion is only 12 miles an hour, whereas the revolving funnel may rotate 200

times a minute. It is known how many thousands have been killed due to the physical make-up of a hurricane.

After the first half of the storm passes over and the eye brings a stifling, windless calm, the people come out of their houses, and the hurricane has departed—only to be struck by the second half of the revolving funnel, from the other di- rection.

is the danger from high wind and debris, the hurricane's most serious danger is the "storm wave"—a great mountain of water which blows under the center of the blow pressure at the eye. This is referred to erroneously as a "tidal wave" (tidal waves are caused by earthquakes, not wind), races toward the coast.

Great Hurricane of 1780 which swept over the island of St. Vincent, killing 50,000 people. In the Gulf of Mexico, hurricane water boiled on the coast of Texas at Galveston and receded 6,000 people were

ly, the big wind always loses its force soon after striking the sea-born monster and gen- erally is powerless by feeding on moist atmosphere which it turns into the whirling wind. Once the storm is broken up by land the hurricane begins to die.

all fearsome things sometimes however, before the monster is destroyed. During the last century a

tropical cyclone pushed all of the water out of the northern reaches of Florida's Indian River, held the bottom bare for hours while inhabitants scabbled busily in the mud gathering stranded fish, lost anchors and gear from sunken hulks.

Maxwell Hall, a veteran U.S. weather- man, writes of a hurricane he observed in the Lesser Antilles which drenched the countryside with hot water—a phenomenon which Hall attributed to the terrific temperatures built up at the vor- tex of the gale.

Buys Ballot, a Dutchman, formulated the rule by which all hurricanes operate. It is called the Law of Storms and is based on the fact that any person stand- ing with his back to the wind in the Northern Hemisphere will find the pres- sure slightly lower on his left. For this reason all hurricanes north of the equa- tor spin in a counterclockwise direction. You can observe this phenomenon your- self by watching water swirl down the drain or smoke rise from a campfire (they twist counterclockwise).

Another old-time hurricane specialist describes the law in a slightly different way: "Any body moving on the earth's surface is deflected toward the right." The basic force which makes both of these "laws" operate is none other than the rotation of the earth. Since rotational forces in the two hemispheres cancel out at the equator, no hurricane has ever been known to cross over "the line."

The hurricane is a ubiquitous creature, with hatcheries in various parts of the globe—but always within the hot calm zones close to the equator. Carib Indians call the monster *Hurakan*, God of the Great Wind. Filipinos call it *baguio*, Australians *willy-nilly*, Chinese *tai-fung*—the word from which our modern "ty- phoon" has been derived.

Wherever you find this revolving mon- ster or whatever you choose to call him, he operates in the same way. He is borne over water in the shape of a giant invis- ible doughnut. The low-pressure center, or eye, is a calm windless hole which varies from 3 to 50 miles across. The rim of the doughnut may be 50 or 400 miles thick, with wind velocities between 75 and 200 miles an hour. The wheeling winds rise 30,000 feet above the earth's surface.

Sitting snugly at home in Chicago or Buffalo—far out of the path of the big breeze—you can't get very excited about a hurricane. But if you were living on a lonely Caribbean island you would know what a Miami woman meant when she said: "Waiting for a hurricane is like sitting in an electric chair for hours, wonder- ing when the current will be turned on."

If your island retreat didn't happen to have a radio, it would pay you to study up on hurricane lore—or you might wake up one morning and find the monster breathing down your neck.

First come the storm swells, powerful oily undulations which roll out swiftly, many miles ahead of the wind. They cross the horizon in long unbroken ridges and strike the beach with ponder- ous slow-spaced crashes, often in the midst of a calm. Storm swells come every 20 seconds, thus differing from ordinary ocean waves, which break only 5 seconds apart.

After the arrival of the swells the tide begins to overflow its normal limits. Strange flotsam clots the beaches.

The actual coming of the storm is heralded by torn-up scraps of cirrus clouds, which come winging over the horizon at great altitude. A luminous gray haze builds up underneath, grows dark and coppery as it approaches, and the sun turns smoky and red.

This is the hurricane! You are lucky

indeed if you can observe it from a snug cellar on a high ridge, safe from the screeching wind and the boiling wa- ter.

Fortunately for people who live on the United States coast line, the U.S. Weather Bureau has organized the most perfect hurricane warning defense in the world. Their matter-of-fact promise that "no tropical disturbance of serious pro- portions will ever reach our coasts with- out being reported well in advance" has always been fulfilled.

During the hurricane season—June to November—meteorologists send up ra- dio-equipped balloons from strategic is- lands which bracket the path of any possible storm. These balloons carry deli- cate instruments which transmit temper- atures, pressures and humidities aloft by dot-dash code. When indications of trou- ble are detected, the word is instantly flashed to a network of weather stations from Brownsville, Texas, to Washing- ton, D.C., by teletype.

If the disturbance is not severe, or if it wanders out to sea, the Bureau wisely confines its public statements to routine "advisories." But if the low-pressure area creeps across the weather map toward the U.S. coast, the trackers instantly spread the alarm. Newspapers and radio stations are given precise information on the intensity, rate of forward motion, and extent of the storm. Citizens who live in its path are urged to take all possible pre- cautions. Storm warnings are hoisted by the Coast Guard. Red Cross units are alerted. Weather planes are dispatched into the storm area—or even into the eye of the monster—to collect data of value to coastal defenders.

Phone Rings and Rings and Rings

And then, just as the harassed weather- man is practically cross-eyed from star- ing at his isobars and barographs, the telephone begins to ring.

"This is Miss Ida McTutty," bleats an anxious voice. "I live in Sandcrab Junction and I was wondering if I would have time to take my dog out for an—er—air- ing, before the storm arrives."

A moment later another befuddled character calls up to inquire if there is any way of tying on the roof of his house so the wind won't blow it away.

From now on, the phone jangles like a fire alarm.

Finally, mercifully, the wind blows the telephone lines down.

Meanwhile, in cities, villages and farmhouses for hundreds of miles around, the populace goes on a whole- sale wing-ding. Bars and liquor stores do a sellout business. Flashlights, lamp oil, candles and groceries disappear like magic from shelves and counters. Enter- prising salesmen scurry around shanty- town peddling "hurricane pills," which, for a dollar a bottle, are guaranteed to produce immunity to any sort of at- mospheric disturbance.

Some people fear hurricanes as they would the devil—particularly newcom- ers who've been filled full of horrendous yarns—but the great bulk of Florida folks really get a kick out of the big breeze. They wouldn't admit it, of course.

But when the radio begins to crackle its warnings, and the red flags with the black centers go up, you don't find Flor- idians weeping and gnashing their teeth. You find them peeking expectantly through their storm shutters. They've grown used to the old demon from the doldrums. He scares them and some- times ruins them, but they can't deny he's a great showman. Nobody has ever yet complained that the old hellion put on a dull performance.

THE END

It's time for a dog-to-man talk.

THERE'S nothing wrong with a dog's life as long as he stays well, but lately I've been feeling lower than a dachshund's knee. My difficulty is worms, and I need your help.

My pals tell me that the fast, reli- able way to clean out those critters is to use Sergeant's SURE SHOT Cap- sules. They're thorough, safe—and sudden death for worms.

Puppy Capsules are specially made for worming pups and small dogs weighing less than 10 pounds. They are another of the 19 dependable dog care products made available by Ser- geant's continuing clinical research.

• Do you have a copy of the new Sergeant's Dog Book? It's full of good ideas on dog train- ing and care—and it's FREE. Get it at any drug or pet store, or write to Sergeant's, Richmond 20, Va.

Sergeant's DOG CARE PRODUCTS

Sonny seems to know already what Mother's known for years. He's getting the toilet bowl clean the quick, easy, sanitary way—with Sani-Flush. A clean toilet bowl simply can't have an odor. Sani-Flush removes stains and film that harbor germs and cause odors. It disinfects—works chemically. Just sprinkle Sani-Flush.

Good in hard or soft water. Won't hurt septic tank action. Sold everywhere. Two economical sizes. The Hygienic Products Com- pany, Canton 2, Ohio.

THEY'RE STILL EXPENDABLE

Continued from page 19

of veteran job holders are dissatisfied and don't know what they want to do."

The result has been a long siege of "job hopping" which further weakened the veteran's security in his job. One automobile plant reported recently that out of 14,000 veterans it processed over a two-year period, only 2,300 remained on the pay roll, and 85 per cent of these had been company employees before the war. Last year, industry as a whole counted 1,500,000 veteran "quits"—a turnover rate 2 to 30 per cent higher than among other workers.

Now that new employment is getting harder to find, job hopping is on the wane. But its effects will begin to show as the labor market contracts still further and foot-loose employees find themselves automatically the first to be laid off. When this happens, many a veteran will have few special benefits to fall back on.

Already 7,500,000 have drawn on the unemployment allowances they're entitled to at the rate of \$20 a week for 52 weeks. Over 300,000 veterans have exhausted them altogether, and expirations are now running as high as 40,000 to 50,000 a month.

The million-odd unemployed veterans are about 7 or 8 per cent of the total veteran labor force—not bad at first glance. But it's 2½ times the unemployment ratio for other workers, and the difference is costing taxpayers over half a billion dollars a year in extra unemployment benefits.

The nearly 2,000,000 veterans now enrolled in school are working hard, but they haven't begun to earn a living. Since the war, prospects for college graduates have been excellent, and this has encouraged many a veteran to postpone present employment in hope of better jobs later.

Many large corporations who prefer to hire college-trained beginners for executive and managerial jobs have been filling openings that accumulated during the war. These first two years, they've scooped up just about everything that flowed from our fountains of knowledge. But their cups are filling and near to running over—just as graduating classes are beginning to swell with ex-G.I.s.

Employers Demand Experience

As early as last March, the Veterans Administration reported employers were requiring more experience and were "particularly reluctant to hire recent school graduates." Only top honor men or specialists had their pick of jobs last June. Placement bureaus in most colleges and universities reported the rest had to take what they could get, and average or below-average students were beginning to find the pickings pretty slim.

Most of the G.I. students still enrolled in schools will hit a labor market already saturated with college graduates—many with a year or more head start in job experience. Even if good times continue, they'll be lucky if more than half are absorbed within a year after graduation.

Another great pool of potential unemployment is the 750,000 veterans taking on-the-job training in farming and industry. Officially, they're counted among the gainfully employed. Actually, they're still candidates for regular jobs. For not less than three months and not more than two years, the government adds up to \$65 a month to the pay of single trainees, \$90 to trainees with dependents. The most a trainee, single or married, can collect from both the government and his employer is \$175 or \$200 respectively.

The idea, of course, is to ease young and inexperienced veterans into a regular job. But the employer is under no legal obligation to keep him on at higher

wages, once the government checks stop coming in. The assignment of trainees to employers is in the hands of state, not federal agencies, and their zeal in protecting the trainees' best interests has been uneven at best.

Often they have been used as "cheap labor." Veterans assigned to learn the cleaning and dyeing business have been found still pressing pants after months in "training." On farms, trainees out to learn farm management are often used as mere hired hands.

The Veterans Administration keeps no record of how many trainees finally wind up on the regular pay roll, but research experts doubt that more than half of them do. For the rest, job training has merely postponed unemployment.

The real unemployment, then, hidden and apparent, is not a million-odd but closer to 3,000,000. How to provide jobs for these men, how to keep the employed veterans working, that is our readjustment problem. It is, by all odds, the greatest postwar challenge to "free enterprise."

So far, we've been lucky. With business booming and jobs plentiful, there didn't seem much to worry about. There

drain the tears, sweat, and bills spent on readjustment, of turning veterans into "economic DPs," and the country into political fact could make a shambles of our race. "We cannot," he has warned, "let the veteran fall economic disaster without risk of results."

These words reflect the sinking experienced throughout the Administration at the very moment the word "recession." After the precarious position of the business, industry and agriculture of General Bradley's top economists reported: "It would seem especially before the widely a recession sets in, for V.A. to aid of other interested agencies than bear alone the public on having solved the veterans' employment problems."

May Ignore Ideological L

Right now, it is performance, that interests the veteran danger is that he may not care whether the label reads "democracy"—so long as it works. Most grew up during the first decade. About the time they were struck out on their own, the political "Greetings from the President" wonder they griped.

"Many objected to the Army first place because they never they were in it," says General who ought to know. "Democracy" was simply a political economic expression of life."

Those same men came out with very little savings, and they spent every cent of it on food and furnishings and the accumulation of civilian life. Since they've been living, high prices have more than with their earnings. They went to the hilt to buy homes, businesses, often at twice their cost. It's not going to make any sense to be asked to go on meetings on these inflated homes, businesses out of reduced income at all.

Federal spending is not the Already the V.A. is costing 1,000,000 a year—about the same national budget in 1939 and every tax dollar we pay. Even a recession would hike this tax bill billions.

"We cannot appropriate for veterans," says General Bradley welfare and their readjustment directly to the economic well-being of the whole country." Nor would a government benefits bribe a man to take the brunt of the war. The maximum we could expect taxes to dole out among six million veterans could never give them more than bare subsistence. It could for them the kind of living they earn for themselves—and can given more time without a economic setback.

Economically, many veterans found "you can't go home least not in two short years. integration into the national economy can be measured by facts and these breadwinners for a third of the population are still on the outside. Give them time and the chance to try and to fail and they'll do all right. So only gotten one foot through the door is suddenly slammed shut. THE END

BY

DICKSON HARTWELL

wasn't either—up till a few months ago, when people began talking "recession" so hard it became an obsession. About the same time, veterans' centers all over the country began reporting a growing sense of disillusionment and frustration among veterans, a reopening of old wounds between ex-soldier and civilian. "We go away and the country is a hell of a lot better off without us," gripes one G.I. whose filling station had just gone on the rocks. "When we get back they say nothing is too good for the boys. What they mean is 'Try and get it, sucker.'"

Over at the Veterans Administration, General Bradley, who does not panic easily, admits the very idea of a recession, "mild" or otherwise, scares him to death. In a recession he sees the very palpable danger of throwing down the

AMERICAN AIRLINES, INC. • AMERICAN OVERSEAS AIRLINES, INC.

THE VITAL STABILIZER

NO DOUBT about it—a new era in American capital-labor relations began when Congress overrode President Truman's veto of the Taft-Hartley labor bill and thereby made it law. Already you can notice a change in the economic and social weather.

We think it will prove to be a change for the better. What the new law does is to put employers and labor on an equal footing when it comes to bargaining about wages and working conditions, and to cut down some of the powers given to labor leaders by the Wagner Labor Relations Act of 1935—powers which too many of their possessors had taken to abusing.

Now that the atmosphere has been cleared to this extent, how can all of us best adjust to the new era?

Nobody that we know of is suggesting that the labor moguls and their lobbyists and attorneys haven't a perfect right to fight for repeal, revision or court weakening of the Taft-Hartley Act. We're glad, in fact, to see them putting up these fights, while forgetting the wild talk about general strikes and civil wars with which they peppered their conversation before Congress voted on the bill.

That gives a cue to all the rest of us, we think. How about letting the new law have a fair chance to prove that it isn't an overly harsh piece of legis-

lation; and, more important, how about getting rid, as rapidly as possible, of the notion of the class struggle which has been preached in this country for so long?

This idea that there is an irreconcilable conflict between employers and employed has done more than any other one thing, we'd guess, to impede production, foment and prolong needless strikes, and stir up senseless hatreds among Americans.

The worst of it is that it is a false notion. The truth is that the interests of capital and labor are identical at almost all points.

Capital craves profits, true. But capital must have profits if labor is to get better and better pay and working conditions. On the other hand, it is to capital's life-and-death interest to keep labor well paid, so that labor can buy capital's goods.

The class-conflict idea is an ancient Marxian importation from the Europe of 80 years ago. It is now preached most enthusiastically in this country by the Communists. The more enlightened labor leaders realized its falsity and danger long ago, as did the more enlightened employers.

In this new and, we think, healthier industrial climate brought in by the Taft-Hartley Act, let's do ourselves the supreme favor of giving the class-conflict hokum the final boot. We'll never regret it.

LET'S HAVE BRIGHTER BANKS

WE HOPE the banking fraternity seriously certain goings on at the Square, Long Island, New York, National City Bank.

This institution, which does family distinguished from business banking, in some startling innovations. The old-time dreary and awesome was thrown overboard. In its place, the Square Bank installed, among other things, a children's department, featuring a lollipop child making a deposit; a parking lot for baby carriages; carillon music to cheer customers; and a television hookup, for signature confirmation, between book tellers.

Our reaction is: Why not similar reforms in family banks everywhere? Should any bank have a funeral airpuss tellers and officials who make you were committing some kind of sacrilege by proaching them for a loan?

We aren't bankers, but we have a hunch that kind of stuff has scared huge amounts of profitable business away from many a bank, down the generations. Stores of customers by bulldozing them, or making them uncomfortable, or by pretending that barbering is some kind of art.

We can't see why banks shouldn't be themselves, too, and get informal—which is remaining as shrewd as ever in the commercial affairs.

TAXES AND THE URGE TO WORK

A MR. E. B. TILTON, president of the Manufacturing Company of Michigan, said something sensational the other day. He said he was paid a combination salary and bonus that paid him a total of about \$36,000 for the last two months of 1947.

His reason: "Additional compensation where a large portion of it must be paid over to governmental agencies where it will be wasted."

Warming up to the subject, Tilton then said this dance:

Too large a portion of the income of the taxpayers is being used for governmental purposes.

For example, under present tax regulations, a man with two dependents who earns \$5,000 a year must pay one month each year to support the political and dead beats of the entire world.

We have to have taxes, and we have politicians. Not all politicians are loafers, and by no means all government is wasteful or unnecessary.

Nevertheless, we think that Mr. Tilton said something which needed to be said dramatically.

Taxes can go so high that many a man begins to feel that it is useless for him to expend his energies to the utmost. Society loses some able man comes to feel that way, and himself loses.

In vetoing the recent tax-cut bill, President Truman got off some remarks about how just piecemeal tax reductions, but an overhaul of our entire tax system. Let us hope that Congress and the Treasury Department will take this job they will bear the E. B. Tilton consistently in mind. Incentive-crippling around the corner in this country—if it is not already here.

Picture OF THE MONTH

Metro-Goldwyn-Mayer presents

KATHARINE

PAUL

HEPBURN • HENREID

ROBERT WALKER

in "SONG OF LOVE"

A CLARENCE BROWN PRODUCTION

with

LEO G. CARROLL • HENRY DANIELL

HENRY STEPHENSON

Screen Play by Ivan Tors, Irmgard Von Cube
and Allen Vincent and Robert Ardrey

Produced and Directed by CLARENCE BROWN

This month finds us in a romantic mood, for the screen has given us a brilliant and sensitive enactment of one of the most wonderful (and certainly the most lyrical) love affairs of all time.

In "Song of Love" M-G-M brings us the story of the devotion of two young and ardent composers for the loveliest and most gifted piano virtuosa of her day. She was Clara Wieck (played by Katharine Hepburn), and the young composers were Robert Schumann and Johannes Brahms (played by Paul Henreid and Robert Walker).

For her ears both geniuses wrote immortal music; for her heart, both men would cheerfully have given their lives. Yet their three-way friendship was often incredibly gay.

When you get a vital threesome like that together in an absorbing triangle, you're very likely to have something exciting, something touched with greatness. This has it.

Katharine Hepburn is sincere and convincing. Paul Henreid is at his suave and continental best. Robert Walker does a superb job.

"Song of Love" would be a triumph even with a minor cast of supporting players, but M-G-M largesse has given it Leo G. Carroll, Henry Daniell (as Liszt), Henry Stephenson and many others.

Possibly other directors or producers might have done great things with "Song of Love", but M-G-M gave it to none other than Clarence Brown, whose sensitive and beautiful talent was so wonderfully evidenced in "The Yearling".

To the quartet of screen writers—Ivan Tors, Irmgard Von Cube, Allen Vincent and Robert Ardrey—go our felicitations.

"Song of Love" is far and away the Picture of the Month—and that makes this the most romantic month of the year.

You'll have
the news
before
the flames
burn out!

Speed is a creed with newsmen. They flash the news to you as fast as it happens.

The Bell System helps make that speed possible. It provides the local, long distance and radio-telephone, telegraph, teletypewriter and wire-photo facilities over which the news is channeled to presses and microphones.

Keeping these facilities in top condition is the job of skilled telephone company technicians. They work 'round the clock and the calendar with the newsmen in order that you may have a "front-row seat" for the passing parade of world events.

BELL TELEPHONE SYSTEM

For radiator
PURR-FECTION...

Clean out rust with
DU PONT Cooling System CLEANSER

Here's a safe, sure way to clean out rust and scale—to avoid engine overheating. Just pour a can of DU PONT COOLING SYSTEM CLEANSER into your radiator, run the engine for 30 minutes or more, and drain. No reverse flushing needed. No fussing with the hose or flush gun. A clean cooling system paves the way for top engine efficiency.

Then keep out rust with
DU PONT Acid and Rust INHIBITOR

After cleaning out the radiator, you can keep it free from rust all season by pouring in a can of DU PONT ACID AND RUST INHIBITOR. It prevents rust forming, and keeps out acid, too.

Avoid radiator leaks with
DU PONT Cooling System SEALER

You can stop leaks quickly and securely—and make the cooling system LEAK-PROOF—by pouring in DU PONT COOLING SYSTEM SEALER. It will not clog the radiator.

KEEP UP WITH THE WORLD

BY FRELING FOSTER

To attract tourists as in prewar days, Scotland is reviving the tale of its Loch Ness Monster, a giant dragon-like animal said to inhabit this Highland lake. Since its "discovery" on May 1, 1933, a thousand persons have claimed to have seen the monster. Yet an organized group of 20 men spent six weeks in a fruitless search for some trace of it. Today, a circus still offers \$100,000 for its capture, and a newspaper will still pay \$500 for a genuine photograph of the alleged creature.

The covered wagons in pioneers of the West began to make the continent in the 1840s made obsolete, as composed, by the coming of the automobile. In fact, until 1924, the sale of "Wagon Covers" was enough to justify their inclusion in a catalogue of a Chicago house.

Owing to the method by which they were sealed, bottles found in tombs have sometimes lost much of their original liquid. Among recent cases, a bottle discovered in a 1,700-year-old tomb in Germany was one-third empty. A bottle of honey found in a 2,000-year-old tomb in Egypt had undergone change whatsoever.

A baby weighing seven three ounces (3,259 grams) weighed, during its fetal development, two grams at the end of the first month, 30 grams after the second month, 180 after the fourth month, 875 after the sixth month, the seventh and 2,375 after the eighth month.

The most decorated man in the Army is Colonel Edgar E. Snodgrass, who is connected with the Division of the War Relocation Authority. Since 1914, he has received 11 decorations—United States and 44 from other nations.

Since 1874, the mints of the United States have been making coins for foreign governments. The mints have at times been ordered to produce the volume of domestic coins. For example, during January our mints produced 190,460 per cent of which were for foreign countries.

At the present time, including the United States, some 125,000 scientists are engaged in atomic-energy research, costing about \$500,000,000 a year.

Ten dollars will be paid for accepted for this column. Contributors may be accompanied by their own photographs. Address: Keep Up With the World, Collier's, 250 Park Ave., N. Y. This column is copyrighted. Items may be reproduced with permission.

The magic mirrors, which distort images—making short people tall, thin people fat, etc.—and which are found in amusement parks and penny arcades, are complex optical instruments. By the scientific arrangement of numerous curves on their surfaces, they are made to produce hundreds of odd effects, the most incredible being that of one such mirror when two people stand before it. One is reflected normally right side up, while the other is cut off at the waist, the upper part of his body being replaced by a second pair of legs extending upward.

As late as 150 years ago, England considered suicide a crime as serious as murder and, therefore, a person found guilty of an unsuccessful attempt to take his own life was liable to execution by hanging.—By Pauline Hathaway, Pelham, N. Y.

What you should know about keeping *your car Safe*

STATE reports indicate that a defective vehicle is involved in at least 15 per cent of all fatal motor car accidents.

The way to keep your car out of this "danger class" is to have a complete safety check—*now!* Brakes should be checked and adjusted, brake linings inspected, and the hydraulic system put in good order. Headlamps should be properly aimed, with replacements made on all worn or defective parts. If shock absorbers are causing a rough, uncontrolled ride, they should be serviced.

Safe drivers know they can depend on United Motors Service stations for automotive service at its best . . . *competent mechanics, approved methods, original-equipment parts.* Look for the friendly United Motors sign in your neighborhood. Make it your service headquarters.

Selected independent automotive service stations are authorized by

Keene Crockett assumes the role of Knight in Armor

THE other day the Collier's typists were typing at summer speed, the editors editing, and Miss Maggie Miles, Mr. Walter Davenport's most able secretary, was on the phone saying sorry, Mr. Davenport was filled up on articles about the Mean Rainfall in Ethiopia, when in clanked a knight in armor. There was a scream, contributed by Miss Miles, and the great publishing wheels ground to a stop, while everybody took a delayed double-take. What the disappointed contributor talking to Miss Miles said on hearing her scream is not known.

When everybody gathered around, it turned out the gentleman in the iron pants was Keene Crockett, an actor, and he was modeling the very latest in Middle Ages metallic cloth, so Mr. Jumbo Karger, the photographer, could get some contrast shots for our magnetic article on the twentieth-century variety: Good as Gold, p. 34, by Ruth Carson.

It seems that Mr. Karger had rented the Personal Tank, which weighed 50 pounds odd and was worth \$1,700 (cheap considering its wearing qualities), from a theatrical costumer. He chose Mr. Crockett to model it because of Crockett's knightly patience, humor, and husky 185-pound frame. It took him over two hours to install Mr. Crockett in the glorified tin can, the armor having nine pieces, which fitted over a 10-pound suit of chain mail, which in turn fitted over Mr. Crockett's unmentionables. "There were no zippers," Karger explains.

Proudly, Mr. Karger then decided to show Crockett to the boys at the office. He hailed a cab. When the cabby got his eyeballs back into place, he assisted in pushing and shoving Crockett aboard, no mean feat since modern cabs aren't built to lug knights to the lists. Crockett crashed in finally, sprawled catty-cornered across the cab. Karger sat on the floor.

Followed a long series of passers-by registering double-takes and fleeing for Bellevue, and a battle at 250 Park Avenue with an unarmed elevator man who insisted Crockett would have to ride the freight lift. "A freight elevator for Sir Lancelot?" snorted the statuesque Karger. "Nuts!"

Crockett, while he did find the clostrophobic confines of armor like a Turkish bath (he lost 5 pounds on the job), cited advantages. He sees armor excellent for elbowing through crowds; and the helmet can be removed to make coffee in. The entire ensemble might house a homeless vet-

eran, after attaching a helmet for stormy weather. A helmet should be carried to avoid a helmet. Armor might be just the thing for Joe Louis in, provided an escape hatch is cut in the helmet. In any way, Joe can be kept swimming without knowing he has fled.

IT IS only natural that Captain Heinlein and Lieutenant Heinlein should lot you on that Flight in by space ship on p. 18. By planning such a trip even hood, talked it over as Annapolis ('29), and are in the subject of rockets.

Heinlein started dreaming up to Mars in his book Butler, Missouri. Since ridden everything earth a breeches buoy to a boat was disabled and retired Navy before this war. GENERAL BRADLEY IN THIS ONE?

JACKSON HARTWELL

After two years as boss of the Veterans Administration, General Omar N. Bradley has won several campaigns, lost some battles and is now being sniped at from the rear. A report on his successes and setbacks

V-J DAY, mounted on the white charger of public opinion, with the backing and of Congress and the President-star General Omar Nelson charged headlong into the Administration to attack. It was the finest examination breakdown seen. Bradley was hailed as the G.I.—the veteran to

be. A man of courage, integrity and brilliance, he was a top field commander in Europe, and one of but three names on President Truman's list—the others were Marshall and Eisenhower—with sufficient prestige to undertake the task.

Today, two years later, king-size Bradley has been cut down to a man-size, harassed administrator who has been struggling with a job about as

impossible as teaching a herd of elephants to ice skate. No longer is Bradley so apparently the heir apparent to our highest military post: Chief of Staff. Congress still believes in him, but with some reservations. His prestige with the ex-G.I. is still inspiring high—except among those thousands who have been caught in the V.A. snafu. His personal staff is still loyal; if he resigned in protest or disgust,

three fourths of the key V.A. personnel probably would leave with him.

But the honeymoon is over. Glory, honesty and a chest covered with fruit salad are no longer enough. There is now forthright and mounting criticism of his handling of the affairs of 18,300,000 veterans, who with their dependents are one fourth of the people. And even more significant are
(Continued on page 28)

PHOTOGRAPH FOR COLLIER'S BY ALLAN GOULD

OLD SNAIL

IT BEGAN on a warm, sunny morning. The commodore was sitting on the yacht porch looking over the delightful sparkling water and trim sailboats stirring the moorings. He sighed with deep content, followed the club launch plowing out to the thirty-foot cutter and he nodded approvingly as the man brought his launch neatly alongside.

The commodore knew that the tall figure on Slick Chick's deck talking to the launch was Jerry Downes, a sound young man who thought that there was no purpose in devoting any time to business than was necessary to support his More young men, the commodore felt, should get into a business that was only an occasional executive decision and then a man more time afloat. How was it then that he worded it? Men must go down to the sea where there was a clear call that could not be denied. Basic, the commodore mused. Absolutely mental.

A puzzled expression came over the commodore's benign features as he saw Jerry jump the launch. Now why was he coming ashore? It was like Jerry to forget anything that would get him away for the day in his cutter. The launch came to the float beneath the porch and the commodore saw a scowl on Jerry's face.

"Forget something?" the commodore asked.

Jerry looked up and nodded. "Linda from the office to remind me that I have to meet some people interested in the Home Dammit."

"Farm?" the commodore snorted in disbelief.

Jerry sighed. "When I'm not there Linda has anything."

"Indeed? Then get rid of her, my boy. Get her immediately. A yachtsman cannot have a girl who keeps him too busy ashore."

Jerry looked as if he had just been stabbed. "Get rid of Linda?" he bleated. "If I can ever make a human being out of her, I want to sign her up as mate for life!"

The shock of Jerry's words on the commodore was considerable. He did not believe in the compatibility of women and boats. Because in his younger years the commodore had also been with and engaged to a beautiful girl. A lovely girl named Clarisa. At the time the commodore had also owned a very lovely yawl. He went to recall in reverent detail the fine lines of that yawl, the sweet turn of her bilge, the way she showed her heels to larger craft and seemed she would almost try to slip her under and sail up to the float when the commodore appeared. The commodore had loved his man should love his boat. Nothing more natural than to try to teach Clarisa to sail a yawl too.

So he had persuaded the girl to help with the fitting-out. Clarisa had mended one of his thumb twice with a caulking mallet, fallen freshly varnished deck and otherwise just get the feel of the varied richness of a yachting life, when, to the commodore's amazement, she told him in words not altogether customary for a young lady of the period to take a boat and go marry a sailmaker's daughter. He wanted a briny honeymoon. The commodore, had made the only decision a man could make. In vindication he could say that Clarisa had subsequently married a lawyer, who had been compelled to devote his life to an everlasting struggle to become a prominent attorney in order to support the commodore. Clarisa had borne him. To clinch his argument

Linda balanced dangerously against the yacht motion. "Hey!" Jerry said. "Where are you?"

Collier's for August

THE GRASS

BY JAY WILSON

The power of love being what it is, 'tis a wonder there are any sailors left on the seas. Or any women left waiting on shore

more always emphasized that this unfortunate considered himself completely happy. proof of the fool's paradise in which a could keep a man was unnecessary, he con-

the commodore looked down into the up- face of Jerry Downes and felt a vast pity cern grow within him for this fine but mis- young man. He spoke softly and gently, as ld to avoid further unbalancing an already mind.

is a very great surprise to me, Jerry. Uh . . . aware of your sentiments?" "The only owl returned to Jerry's features. "The only t girl is aware of," he growled, "is that life t and life is real. Early to bed and early to es a man healthy, wealthy and . . ." "To kill a man," the commodore said. "I could only get her to come sailing," Jerry . "It would open her eyes to what living ke."

p sadness came over the commodore as lked away. He, too, would have liked to da go sailing with Jerry—but for an en- erent reason. Land was a woman's ele- a woman could keep a man ashore she snare him and mold him to her way. But man got a woman on a boat, all the flaws ne nature came to the surface and he could she really was.

the commodore would have been the first nt it he would have been the last to deny a had eye appeal. She was diminutive and She had soft brown hair and wide gray filled a sweater so pleasingly that one was erlook the firm set of her small chin.

Jerry arrived at his office. Linda greeted a smile that was almost bleak. The com- could certainly not have accused her of at- sorcery or subtle wiles.

ght you'd try to slip away again," she said. ch thing," Jerry muttered. "I just forgot." orget everything except that damn' boat." ghed. "We're doing all right here at the n't we?"

ak smile became a little bitter. "We're right? When are you ever here? The sign ay say that you're in the real-estate and business but it should have a little one eneach it that says, 'Ha-ha!'"

are the Williams arriving to go out to the lace?" Jerry asked hastily.

Williams phoned that he couldn't make it orrow," Linda said sweetly.

headed for the door. There were times man needed to be alone. "In that case," I think I'll . . ."

ad him by the coattails. "Oh, no you u'll sit right down at your desk and go eed to the Ferguson place. Then you'll see Mr. Fuller; he wants to review his life

After that you'd better drop over to the e and see if they've recorded the Hodge- yet. And this afternoon you can check ose fire insurance renewals to see where d recommend increases."

ng, Jerry sat down at his desk. In a mo- la's typewriter began to clatter trium- erry glanced sideways at Linda. Her lips pressed in a complacent, self-righteous . She sat quite erect in the approved typ- re: both feet square on the floor, spine ith both her stern and her bosom thrust e in their respective directions. She was fetching. Jerry sighed heavily. If only ild relax a little. If only she would see easant chap who only wanted to enjoy ay that harmed no one.

opped typing and frowned. Her eyes h length of Jerry's lean, disconsolate figure te finally on his rumpled, sandy hair. For a t he weakened. For a moment she thought: l with it, I'll take him the way he is. Then

her lips compressed again. She wasn't going to make the mistake Beryl Whitaker had made.

Beryl had been soft and had taken Freddy Whitaker along with his boat. It hadn't been long before Beryl's warm, buoyant nature had changed. "There's a patented galley ventilator on the piano, a spin- naker under the desk, and nine miles of Manila rope in the clothes closet. It's like having him bring his mistress home," Beryl said bitterly, "except that I can't shoot her." Two months later Beryl, coming home from an afternoon bridge party, had tripped over a hatch cover Freddy had left in the front hall during her absence. When Freddy returned home a little later that evening Beryl had gone. Arranged to resemble a human body under the covers of her bed he had found the galley ventilator, the spin- naker and the rope. The note on the bed had read, "Try sleeping with these, too. Forward mail to Love's End Hotel in Reno. Beryl."

A girl, Linda thought grimly, had to be practical. Love was love and fun was fun but there were also such things as eating and a home to be built and security for the future. She wanted her small feet planted firmly on solid ground, she didn't want to bounce around on something that stood on end every time the wind blew.

At this moment the commodore entered the office.

To all outward appearances he was a genial old gentleman with not a care in the world. Linda could not help but return his smile. Jerry regarded him curiously.

"Jerry, my boy," the commodore said, "I've decided to sell Smugglers Reach. Will you handle it?"

Jerry grunted and shook his head. Smugglers Reach was a desolate stretch of shore some twenty miles down the coast. "Sorry, Commodore. We couldn't touch it."

Immediately Linda bristled. "Why can't we handle it?"

"What would be the use? No one would buy it . . . at least not at a price that would make it worth the effort."

Linda sniffed. "In real estate today," she pointed out, "there are very few Louisiana Purchases. Small agencies that are successful take what they can get and as much of it as they can. I think we should accept the listing."

"Look," Jerry said, "there isn't even a road to the place so you can get a prospect out to it to show him around."

"Still, someone might be interested if you adver- tised it," the commodore interrupted. "And you could sail the prospects down on Slick Chick, couldn't you?"

Slowly Jerry smiled. "Why—yes. I could at that, couldn't I? I hadn't thought of it quite like that."

LINDA was regarding the commodore thought- fully. She thought she could see what this was all about. Snide, that's what it was. And Jerry sitting there making believe he hadn't known the commodore would come in and then gilding the lily by putting up a little resistance. It would be the easiest thing in the world to get phony prospects to say they would like to see Smugglers Reach and then sail them down . . . or say he had sailed them there. As if Jerry didn't have enough excuses to go off in that boat as it was.

"On thinking it over," Linda said, "I think prob- ably it wouldn't be worth our while to accept the listing. It probably would be just a waste of time."

Jerry grinned. "In real estate today there are very few Louisiana Purchases. Small agencies that are successful take what (Continued on page 71)

WHO TIED A KITE TO FOOD PRICES

"Not I" says the food processor—the packer and canner.

"Not I" says the middleman—the wholesaler.

"Not I" says the storekeeper.

"Not I" says the farmer.

The Yankee dollar buys less than half the pork chops and roast beef it bought before the war, and about two thirds of the bread and milk. The American market basket (food for three based on national average prices) now costs \$635 yearly as against the \$340 of prewar. How come, since the land swims in abundance—more beef, more wheat, more dairy products than in the best war years—the sort of abundance that should, according to the rules, spell lower prices?

Let's call the middlemen and the farmers on the carpet and find out.

The meat packer speaks up.

"Suppose we start with a thousand-pound steer. In Chicago last June, it cost me 26 to 28 cents a pound on the hoof. But I don't sell all of the steer as meat. I dress out (i.e. reduce to meat) about 55 per cent of the carcass. Of course I sell the hides, and glands, everything I can, even the fine hair inside the steer's ear—for paintbrushes. But when I'm through, believe it or not, I'll be getting about \$44 per hundred pounds for meat which cost me (after dressing out) about \$45 a hundred. No, I don't lose a dollar on every hundred pounds of meat I sell. My returns from hides and by-products make up the difference and give me my profit.

"The profit? About 1½ cents on each dollar of sales. Here's proof: Last year Swift and Company sold \$1,300,000,000 worth of meat and other products and made, after taxes, \$16,000,000—which means 1½ cents per dollar of sales. It isn't my profits that put your prices up," the packer concludes, "you do it yourself when you bid against others for the farmer's supply of meat."

Let the middlemen speak up.

"We're going to show you who got those price rises of the last year," they say. "Take butter, for instance. In January, 1946, the average cost of a pound of butter was 54 cents. Of this, 47 cents, or 77 per cent, went to the farmer. Last May, the price of butter was up to 68 cents a pound, a 14-cent rise from January, 1946. Where did most of this advance go? To the

farmer. He got 10 cents of the increase, and we got four. And if you're good at figures, you'll probably see that he was still getting 77 per cent of the price. The 23 per cent of the dollar we middlemen got covered the cost of assembling the butter or milk, transporting it to market, delivering it to door or store, all of which required a variety of increasing wages.

"Let's take some other price increases," continue the middlemen. "The retail price of milk rose from 15 cents to 18 cents a quart from January, 1946, to May, 1947. The farmer got 2½ cents of that increase. I got a quarter of a penny. Want to look at some more? Meat prices, for instance? The price of pork products, including lard, rose 18 cents a pound between January of last year and May, 1947. Who got most of it? The farmer, of course. He got 12 cents of that 18-cent rise."

How about the storekeeper?

"Look at me," says the A. & P. in ads in 2,000 newspapers. "My net profits over the last five years haven't averaged more than a cent on the dollar."

But many dollars make many cents. So huge is the dollar volume that profits for storekeepers, packers, bakers, middlemen are the largest in history. Here and there some wholesalers and storekeepers are making a killing with the highest prices the traffic will bear. Yet, on the whole, the food distributors can defend themselves against charges of profiteering.

Can the farmer?

Retail food prices have jumped about 90 per cent since 1939, but the prices the farmer gets have leaped 150 per cent. Of the dollar you spend in the grocery store, the farmer got 40 cents before the war and the middlemen and retailers, 60 cents. Now the farmer gets 55 cents.

The farmer has never had it so good, not even during the high-cost-of-living days of World War I. His net cash income is more than three times that of 1939. Since 1940, America's farmers have been squirreling away

money in the bank at the rate of a billion dollars a year, and now have deposits of 10 billions plus some 5 billions more of savings in government bonds. Soaring rural real-estate prices have doubled the value of farm property. The farmer has less to fear from the sheriff than at any time in his history, for in addition to these higher farm values, he has sliced \$1,500,000,000 from his mortgage debt.

And besides, the farmer has the peace of mind that comes from knowing he can't lose—no matter what—for another 17 months. To encourage the farmer to produce without stint and without fear of price collapse, the government pledged itself to support basic farm prices for two years after the official end of the war. (The support program has resulted in at least one screwball situation. When farmers used several hundred thousand dollars' worth of DDT to blitz potato bugs last year, it cost the government \$80,000,000. So great was the potato yield, that the government had to buy up 100 million bushels to support prices. Then it destroyed part of what

it bought. On most other farm products, prices are so high above support levels that a repetition of the potato episode in corn, wheat or hogs is unlikely.)

Here the farmer comes to his own defense.

"Why pick on me when the good old law of supply and demand is going my way? What do you expect me to do when 60,000,000 employed Americans and hungry foreigners bid up the prices for my products? And besides, you know darned well that war or peace, we farmers dance to the tune the government plays."

Here the farmer has put his finger on a basic cause of the postwar food debacle. If you watched government officials handle our food during the war, you wouldn't have to be a stargazer to predict a clean-up for the farmer and trouble for everyone else during peace.

Boiled down, wartime food handling came to this: Officials so feared a

food glut and tumbling prices after the war (remember World War I that they kept their eye on oil to end the war with empty bare shelves.

Looking back, it can be seen four grave strategic errors committed which, added up, led to the wartime aftermath of high prices in America. Worse still, war bungling forced us to make promises to feed allies and peoples after the war and to callously spiked our chief political food—in the nonshooting war—being waged to save western Europe from Communism.

Fear of surpluses was the calculation from which the errors stemmed. They were:

(1) We failed to build stocks to carry over surpluses from wartime production of meat, tables and other produce.

(2) We waged a great drive to up our unprecedented grain by feeding them to hogs, calves and chickens.

(3) We failed tragically to plan postwar relief needs would be less than those during war and for them.

At Atchison, Kansas, there is a cave. As a scenic wonder it is class all of its own, but not of its stalagmites and its stalactites. The cave's scenery consists of storage lockers and rusting machinery—\$2,000,000 worth. Desperate War Food Administration officials started to make a box of the cave in 1944 when a time flood of fruits, vegetables and meats swamped private facilities. But they started today the cave is a monument of the great food bungles.

The cave-icebox was the result of the following device. With Pearl Harbor, some government food officials urged that the thing to do was to build more storage to prepare for the great war production that was to come. Private storage and warehouses were remembered (like all other things) the great surplus of stocks.

**BY
LESTER
VELIE**

prewar days, and being practically quelled these planners as loggish and theorists." When the country's farmers put their sleeves and began to record quantities of meats, products and vegetables in 1943, there wasn't enough storage to carry over surpluses for a year. There was nothing for us to do but store the food in silos. Which they did. Even hundreds of cars of eggs and other things were left over—and were used as fertilizer. After the war we couldn't fulfill our obligations to our allies. Desperate, the British sent Herbert Morrison to America to scrape up meat for a hungry country. But when he opened the cupboard was bare. A national committee reported: "One of the fundamental mistakes of our food program was the failure to expand cold-storage space in proportion to the increased production of farm products. Farmers were asked to make more, but the cold-storage bungle, costly and wasteful, was a minor-league boner in the big-time food program of the war: the studied, sin-

gle-minded determination of wartime food administrators to use up all our grain, all our meats as we went along and to finish the war with bins and shelves as nearly cleaned out as possible.

Tables of statistics, particularly on farm production, don't make best-seller lists. But to the sleuth who's trailing the villain who made food prices what they are today, the wartime farm figures provide fascinating clues.

Take wheat. In the fall of 1942, our bins groaned with a record "carry-over" (surplus left over from a year's harvest) of 630,000,000 bushels. This was a precious nest egg, the size almost of a normal prewar harvest. Conserved, it could have provided postwar food for the hungry abroad and a drag on price inflation for Americans. What happened to the nest egg? In two years it was cut in half, and by 1946, it had all but vanished. All this, while a phenomenal run of good weather was providing us with the greatest wheat harvests in our history (well over a billion bushels yearly).

Where did the wheat go? Shockingly

enough in the light of the later need, the wheat went down the gullets of livestock and poultry.

Livestock are usually fattened on corn. I asked a leading government livestock expert why wheat was fed to cattle during the war.

"Impossible!" he said indignantly. "Wheat is never fed to livestock."

Cattle, Hogs Feast on Wheat

And yet government statistics now disclose that in 1943 we fed almost half a billion bushels of wheat to cattle and hogs. And in 1944 and 1945, about a third of a billion bushels went down animal gullets yearly. (We built up huge numbers of livestock during the war, 40 per cent more hogs and 30 per cent more cattle.)

How did this gorging on grain by animals come about? Government officials planned it that way.

Farmers were subsidized to feed grain to cattle to provide more meat. From the fall of 1943 almost to V-J Day, the government bought wheat at the going market price, and sold it at 50 cents a bushel less to farmers to encourage such feeding. Farmers also

received a price premium for producing bigger steers and hogs.

In vain a minority of food officials pleaded, "Spare the grain. You can feed four to six times as many human beings with grain, as grain, as you can with grain as meat—and you'll need grain after the war."

Policy makers paid no heed; instead encouraged civilians to eat more meat with subsidies which kept prices down. (The government spent \$2,000,000 daily when price ceilings were on to absorb higher livestock costs and keep retail meat prices stable.) The result was that Americans ate more and more meat, consuming 150 pounds per capita as against 123 pounds before the war—when the American diet was already the envy of all the world.

From this bare-shelf policy followed the third great miscalculation: "Relief after the war? Why, there'll be so little need for it, we'll be able to do it with our leftovers. And anyway, where's the money coming from?"

But postwar relief needs went beyond anything our food administrators dreamed. This time it wasn't only

(Continued on page 62)

One of the reasons food prices are high today is that we wastefully fed grain to cattle, pigs and poultry during the war. That's what happened to this stack of wheat, 75 feet high, 175 feet in diameter at the base and worth \$1,000,000. Today American animals are fat; European people starve

STORMY WEATHER

BY ANN MAULSBY

The skies were dark above their marriage

• **T**HEY remembered the island as a perfect jewel far out in the ocean, all sparkling sapphire water and golden sand. They loved islands; they told everyone there was nothing like an island for a vacation. Nowhere else could one get such a complete sense of isolation. And this was their favorite island of-all, completely unspoiled. They had spent two weeks there three years in a row, but last year Charles' brother had got married and they'd gone to Wisconsin for the wedding, and the year before, they had gone to Canada.

So this year they were returning to the island full of happy expectation, almost as if they were going to a dearly beloved home. It was a disappointment,

of course, that the Brookses had backed out at the last moment; the Brookses were such fun. But perhaps it was just as well, Helen thought. With the Brookses along, they'd be staying up late every night and drinking too much, but alone—oh, it would be like a second honeymoon. Helen pictured them lying languorously in the sun all day, communing silently together, their city-white bodies drinking in health and vitamin D. Charles would go back to New York full of renewed vigor for his work, more in love with his wife than ever. . . .

It was a pity that it wasn't fair weather when they left New York. Helen never boarded a train without vague thoughts of possible collisions; signals

could get out of order, she thought, as early as the first of her household gadgets. The day they left was pouring down. It lashed at the window of the train, and the lush green countryside could be seen only through a translucent curtain. Helen, of washed-out culverts and short circuits, would naturally have considered her fears so she kept them to herself and began a crossword puzzle, although she found it difficult without her reference books.

The rain was almost a cloudburst when Helen walked from the train to the boat, and she stepped into one corner of their stateroom. For years they had been with congenial company.

Collier's for August

Helen hoped that working the puzzle together, they might be able to recapture the thing that had gone

Helen had a sudden impulse to make a drink for herself, just out of irritation, but the thought passed quickly, and she looked at her husband fondly, thinking how too bad it was that the weather wasn't fair, poor Charles deserved better weather than this for his pathetically short annual holiday.

There was a kind of pact between them that either could interrupt the other's reading at any time. Charles often interrupted her to read a paragraph that had particularly amused him, and Helen always put down her book to listen, even if she were in the middle of a sentence. And sometimes it was Helen who found something she couldn't resist passing on to Charles. So when she now spoke to Charles, it was with no sense of being tiresome.

"I just can't wait to get there," she said brightly. "H'm," said Charles without looking up.

HER remark, she realized, did not deserve an answer, but she did wish Charles would talk to her. She wanted them to be gay and merry together on this first day.

"I wonder if those cute people from Connecticut will be on the island this year," she remarked some time later.

He looked up this time and shrugged his shoulders. Why was it she couldn't think of anything more fascinating to say to her own husband?

Years ago, before she had even dreamed of being married, she had wondered what two people could have to talk about together year after year. She had an appalling thought that she might run out of conversation after she'd been married a week. But she'd forgotten about it long before she married Charles, and had remembered it only some months later when she realized with what pleasure she and Charles read together, Charles stretched out on the sofa, she curled up in the big wing chair. Why, it was easy!

Of course these evenings of reading had become more and more infrequent during the last few years. This was the sixth year of their marriage, and during the last two their social life had doubled and tripled and quadrupled as Charles went up in the firm and spent more time with the partners. So-and-so would invite them to dinner, and they would invite So-and-so back, and they would meet new people at the dinner parties and would be invited to more dinners, and their circle of acquaintances had thus grown larger and larger like the waves made by a stone thrown into a pool.

In odd isolated moments it occurred to Helen that it would be pleasant for them to have a little more time to themselves, but she was so busy with little things all day that there wasn't much time to think about this. Besides she was rather proud that Charles was so popular, and that she perhaps had helped him. In spite of the fact that she had no special gifts—she played the piano a little—it was evident that other people liked her, and the fact that they did made her feel lively and gay when she was with them. The men liked her liveliness and gaiety, and their wives liked her because they saw in her no threat to their homes. She was no glamor girl, and besides it was clear that she was in love with Charles and had no designs on their husbands.

She loved Charles, and he had the most wonderful disposition in the world. It was actually true that they had never quarreled, even at the bridge table where she must often have tried his patience—for she was timid about bidding and never dared go to slam unless she had all four aces and practically all the kings and queens under them. Neither of them played tennis or golf; neither of them was a strong swimmer. All their tastes were sedentary. Of course Charles liked popular music better than any other kind, and on the radio preferred dance bands to symphony orchestras, but he was a darling about asking her to play the piano—even sometimes when they were alone. She didn't practice much any more, but she could still perform *The White Peacock* and some Brahms waltzes quite well, and Charles was obviously proud of her when people complimented her. He could never get it through his head, though, why she couldn't play a popular song and make it sound like Cy Walter or Teddy Wilson. She tried, but she had no talent for improvisation, and her attempts always sounded flat and dull.

Charles finally put down his book and smiled at her. She smiled back lovingly.

"We must be almost in," he said, looking at his watch. "We're three quarters of an hour late."

"I suppose it's all this rain."

"It's certainly been a dismal trip. We'd better fly back when we go."

"But it used to be such fun! It would be different if it were a nice sunny day. Let's go out and see if we can see anything."

The island was there, straight ahead, and Helen had a small perverse feeling of elation, of imminent joy in the two weeks ahead. But the little island which had always seemed to hold out its arms to them in welcome stood forlorn, dour and drenched in the downpour. No little bright-sailed boats scuttled across the harbor; they were tied drearily to their moorings. No dungaree-clad vacationers stood on the Point waving to friends on board.

Helen and Charles went soberly back to the state-room and put on their raincoats.

"Nice weather for ducks," said Helen laughing, in an effort to strike a cheerful note. She had a way of repeating bromides deliberately, putting them in quotation marks to make sure it was understood that she knew they were bromides and was saying them to be funny.

But, although she had been doing this for years, she realized only now, from Charles' perfunctory laugh, that it wasn't amusing at all. It was a poverty of language, an inability to think of a new comment to make, that made her repeat these old saws.

The hotel room was small, and everything was damp and cold to the touch, but Helen flew around unpacking the suitcases, hanging up clothes.

"Maybe they're getting all the bad weather over today," she said hopefully.

"That trip was an awful punishment," Charles said, coming over to her and putting his arms around her. "It got me down for a while."

She knew he was apologizing for his mood on the steamer, and the cloud lifted from her spirits. She hugged him.

"It's the weather, too," she returned. "Let's go over to the Oceanside bar before dinner."

"Right. Maybe a drink would cheer us up."

THE Oceanside had been their favorite bar in the other years. There were many more attractive bars on the island, and several less expensive. They could never have explained the charm the Oceanside held for them, but after trying most of the other drinking places they had returned there for good; it had been the scene of many a merry evening with the Brooks and the Coverleys and dozens of other people. Lee (for Leonora) Brooks had, in fact, told them just before they'd left New York, "Go straight to the Oceanside and have a drink for me!"

You walk down a ramp from the street to a dank, airless room which, when they had last seen it, had been decorated like the cabin of a whaling ship. But this year they found it unpleasingly redecorated. The walls had been painted a garish Italian blue, and there were "cute" touches in the lamp shades and the bar itself, and on the doors of the retiring rooms were painted the words *His* and *Hers*.

"Never mind," Helen comforted. "It still smells the same."

The Martinis weren't as dry as they used to be, but Helen didn't care. She was excited. She and Charles hadn't been in a bar alone together in years, and with the warmth of the Martini she felt that the two of them were bathed in a sweet, loverlike intimacy that made her want to tell him all kinds of things about herself that they had never got around to discussing. The trouble was she couldn't think of anything just yet; it would probably come.

"Isn't this fun?" she asked him delightedly.

"Yes!" The enthusiasm might be spurious, but she appreciated his trying.

They looked around at the other people. One young man at the next table—he couldn't have been a day over twenty—was holding forth on the subject of the bringing up of children. At another table a mother was fishing a piece of orange out of her old-fashioned glass and giving it to her four-year-old daughter. There were several tables of girls with no men, and Helen's heart went out to them.

"Darling," she told him, "every time I see groups of girls taking their vacations together, I want to jump up and down because I have you!"

Charles squeezed her hand.

"Now look at those three over there." She nodded toward a table in the corner. (Continued on page 69)

There is one odd uniform aboard and you have trouble placing the wearer's accent. His uniform actually means "Ph.D in physics"; he is an in- spector for the U.N. Atomic Com- mission.

The Jupiter was doing a mile and a half per second when she went into free flight. After that she slows—you can't feel it—as she rises up to the change-over point where the pull of the moon eases and the earth takes charge. From there on she falls toward the earth—and you still can't feel it; you continue to float "through the air with the greatest of ease." By the time we are close to the earth, we are doing about five miles per second. You feel heavy again, for short bursts only, while the captain uses his rocket jets to bring her into a circular orbit around, and only a few hundred miles above the surface of, the earth.

Radar recognition has been ex- changed, both with the ground sta- tions and with the U.N.S. Saturn, the ship we are to relieve. The Saturn goes on her way, accelerating from her orbital speed of about five miles per second up to a speed of seven miles per second necessary to make the long, hard climb up to the moon

Calm scientists report this is no fantasy, that within our generation a space ship, based on the moon, could be used by the United Nations to patrol the world and stop future wars before they start! Here is a preview of such a patrol.—The Editors.

base. The Jupiter takes over the rou- tine of patrol.

Her main job is to service the free- orbit, guided missiles which circle the globe just outside the atmosphere. These guided missiles are unmanned rockets, looking much like the Ger- man V-2s of World War II but carry- ing in their war heads atom bombs instead of TNT.

The Jupiter is atomic-powered; these atom-bomb rockets are not. Their jets are fired with old-fashioned chemical fuels, possibly liquid oxygen and wood alcohol, for they need less power and cruising range. Their jets are fired only in testing, in minor corrections of course and speed, or— God forbid—should the Security Council find it necessary to order them to blast an aggressor nation off the face of the earth.

These rockets circle through the sky *without power of any sort*. This may seem strange, but they are actu- ally artificial satellites, tiny moons of

the earth. What holds the moons up? What power drives them? Once in place, with proper heading and speed (about five miles a second near the surface of the earth, less as you go far- ther out) a body will circle the earth indefinitely without using power.

These rockets are the "prowl cars" of the peace patrol. As few as a dozen of them can form so tight a network over the globe that no spot on earth is ever more than an hour away from the swift punishment of the Security Council.

The shortest time in which a satel- lite can circle the globe is about an hour and a half, but we can select any longer period we wish by placing the satellite—or "prowl car" rocket—far- ther out (higher "up" from the point of view of people on the ground). Let's consider a rocket with a two- hour period and let's arrange it to circle north and south from pole to pole, instead of around the equator.

BROTHER

THE STORY OF EDDIE CONDON

Jazz had a hard struggle in New York. Amid high jinks in Harlem and falderal with the 400, the McKenzie-Condon Chicagoans managed to stay alive—but it was a perilous living even with the help of Fats Waller

BY EDDIE CONDON
AND THOMAS SUGRUE

II

RED MCKENZIE, of the Mound City Blue Blowers, brought me to New York in 1928. We lined up a night club job and sent for some of the boys we'd used on records back in Chicago; Frank Teschmacher, Bud Freeman, Jimmy MacPartland, Joe Sullivan and Gene Krupa. We called ourselves the Chicagoans. But the club job never materialized.

We didn't realize how little chance we had in New York. Violins and soft saxophones were the fashion. The only place we could play was in our rooms, at our own request. Krupa set up his drums and we played every night until the complaints began.

One day Pancho, a society band leader, said he was sending Jolly Coburn to interview us about a job.

Coburn arrived and seemed glad to see us. "Pancho is going to Newport to play for the debut of Princess Miguel de Bragança's daughter," he said. "He'd like you to come along as an alternate band; he thinks it would be an interesting novelty."

"I think it will," McKenzie said. "It will be the most interesting novelty Newport has ever had."

The Eastern seaboard must have been drained of blue blood for the Bragança party. Every name was a foot long; I was surprised that anyone ate with his own hands. The affair was held in the country club; the only common things there were champagne, caviar and musicians. Even the servants were pedigreed.

The Bragança guests were all out-of-towners; those born in the United States were pretending it was a sordid mistake, an unhappy mischance. The musicians were supposed to help the pretense with Viennese waltzes. I looked around; Krupa was adjusting a tom-tom. The artillery was ready. "Well," I said, "let's give out with some of that old-world atmosphere—Clarinet Marmalade."

Eight seconds later every room was staring at us. Pancho was smiling; he liked it. So did the guests. They couldn't talk but were playing too loud; before we pushed them out of the room at the champagne. "Extraordinary demonstration of the freed libido!" heard one matron mutter.

"Lady," I said, "will you get some caviar while I get some champagne?" "Extraordinary creature but she took the glass and I got some eggs."

Next day I met Pancho in the lobby. "How did we do?"

"You were a hit," he said, smiling. "One of the ladies was just like having the town again."

"She was old enough to be she was talking about," he said.

Back in New York our out. Musicians came to brought liquor but never found then I discovered a simple modern society: You can self to death on your first for one thing—you'll die of it first. When you're brought all the whisky you want anywhere you go, but don't eat sandwich; it lowers the social friendship.

Five nights a week I went to the club, early or late, whether playing or loafing. I stumbled called Pod's and Jerry's, at 133d Street and Seventh, which specialized in fried piano players.

One night I went there to see Tough, who was in town. "Who's the piano player?"

"Joe Sullivan," I said. "Sullivan, sitting between us, recently at Tough. Tough arm. "Every light has he said. "I like both."

then I introduced myself to Fats. "Earl Hines told me to look you up," I explained.

"Ol' Earl?" Fats said. "Well, that's fine. How's ol' Earl? I'm so glad to hear about him. Sit down and let me get a little gin for you. We'll have a talk."

He was so amiable, so agreeable, so good-natured, that I felt ashamed of my mission; but I performed it. A recording date? He'd be delighted, he'd be proud; just any time. In four days? Fine. At Liederkrantz Hall? Wonderful. At noon? Perfect.

I telephoned Mr. Adams.

"Very good," he said. "We shall expect you at noon on Friday. You had better stay close to Waller."

I did, but every time I opened my mouth to say something about getting the band together or discussing the numbers to be played Fats said, "Fine! Wonderful! Perfect!" and handed me another belt of gin. We were in perfect accord on everything. Nothing happened.

At the end of the first day I was not overly worried except in the matter of my capacity for gin. Obviously it was suicide to match Fats drink for drink. I began to duck and sidestep. All during the second day and the second night I kept trying. "Fine! Wonderful! Perfect!" Fats said whenever I mentioned the recording date. "Now let's have a little gin and talk about it." The third day I was desperate; as night came on I kept talking and Fats kept handing me drinks. There was still no band. "After we get the band together what shall we play?" I asked Fats.

"Why, we'll play music," Fats said. "Now let's have a little drink and talk about it."

Things grew faint and finally dark. When I woke I was lying on the wall cushions at Connie's Inn. It was half past ten in the morning. On another cushion Fats was curled up. I staggered over to him. He opened his eyes and smiled.

"It's half past ten," I croaked. "We're due at the studio at noon."

He sat up, stretched and yawned.

"That's fine! That's wonderful! That's perfect!" he said. "Now we've got to see about that band. Look around for some nickels so I can make that telephone go."

Fats Finally Gets Busy

He went to the phone booth and made three calls. By the time we finished washing and straightening our clothes three musicians had arrived: Charlie Gains, a trumpet player; Charlie Irvis, a trombonist; and Arville Harris, who played clarinet and alto saxophone.

"What are you going to play?" I asked, though by now I figured it didn't matter. Mr. Adams would throw me out on arrival.

"You mean what are we going to play?" Fats said. "Man, you're with us. Where's your banjo?"

"But I'm not supposed to play with you," I said. "I only came to make the date and help you get the band together."

Fats looked hurt. "You mean you don't want to play with us?" he said.

"I would love to play with you," I said. "My banjo is at the Riverside Towers."

"We'll stop and get it," Fats said. "Charlie, get a taxi."

We piled into a taxi and headed down Seventh Avenue.

"Now here is what we are going to

(Continued on page 56)

Jack Teagarden, trombonist, and "Hot Lips" Page, trumpet player (above), share a really joyful appreciation of jazz music. Teagarden was one of the group which made the first mixed recording date on any national label, using both white and Negro musicians. The rhythm section (below) often takes solo breaks when a man like Johnny Blowers cuts loose on his drums. His accomplice in this paroxysm is Morey Raymond, who plays bass. Both are regular players at Condon's night club

The quiet English countryside was to play host to an appalling murder that afternoon

MAN TO MAN

BY JULIAN WARD

Johnny usually commit murder because it is the only thing left that they can do. They do everything else first and murder is a last resort.

Johnny Cooper certainly tried everything first, but it was no good. There was only one thing left to do. He had no choice. Tom Willett said, "Well, I have to go over to Hillbourne. Johnny Cooper felt his heart beat. He knew now that he had committed murder. And so he got into a chair and said, 'I'll walk with you, Tom,' and took up his window seat where it was new then, at that moment, the sun set he would be a man. And it meant nothing to him. It was nothing left for him to do. It was something he could do."

Tom Willett said to him, "That's a good boy," and took up his seat. "Well, thanks for the tea. I'll be seeing you around these days. Be good."

"Lucy," said Johnny. "The tea."

The two men went out of the house into the afternoon sun. They walked side by side down the lane with the scent of cabbage and drying hay sharp in the air.

Johnny Cooper walked, Johnny Cooper thought: If he had not said go to Hillbourne I might have done it. But now I shall not work out that I do it. A thin, slight man, perhaps a man an average, and about as tall as Tom Willett, though much lighter. He was a thinker, he liked to read books better in a deck chair in the garden. He liked to hear violins on the radio. He was, in fact, usually too good ever to make much of the world. He was not at all of a man you would expect to commit murder. . . .

Down the lane, Tom Willett said, "What time does the train come? Seven, isn't it?" And Johnny Cooper said, "Yes, seven. These days."

As they walked on side by side through the high, dusty hedges, Johnny Cooper noticed tall foxgloves like patient onlookers on the edge of the road. He noticed, as there were blackberries, that they were out to Tom.

Tom Willett said, "Yes. A good boy. I'm very fond of you and apple pudding. I

usually make at least one each year."

Johnny Cooper nodded. He said, "I'm very fond of them myself."

He was thinking about his feelings for Tom Willett. He decided that he did not hate Tom Willett. At least, he did not particularly dislike him for what he was or for what he did. He was all right in his own way.

But he hated him for being there. It was his presence there which made Johnny's life impossible. He thought: Why can't you go away? You don't belong here. Why can't you go somewhere else and leave me alone?

The two men walked on down the lane and Johnny felt Tom Willett walking by his side and hated him for it. He felt the hatred burning like a small fire of red-hot coals inside his mind. At the end of the lane the two men climbed a stile and took a footpath that led away upward into the hills.

As soon as they were clear of the road Tom Willett began to sing in a loud baritone.

"Oh, Shenandoah, I love your daughter—ter! A-a-way, you rolling river," he sang—and, in a clear, thin tenor, Johnny Cooper joined in; he had a good sense of harmony. They slowed down their steps until they beat the time of the slow tune, and Tom Willett swung his stick and slashed at the heads of the wild flowers as they passed.

He was a big man, with heavy arms and legs, and a big, barrel chest which seemed to make him walk with a heavy, pounding, slightly bowlegged strength as though he were crushing down the ground beneath his feet. He had a plump, reddish face and a brown mustache which gave him a sporting, horsy air. His expression was contented and seldom showed any change.

By profession he had something to do with engineering. It was a good job and he seemed always to have enough money in his pockets, and to be able to take Friday or Monday off to make a long week end whenever he felt like it.

He walked up the hillside now with an untiring, steady tread which spoke of determination and capability. Johnny Cooper, a little out of breath himself, was aware of it. He felt Tom Willett made him look a bit of a dope—perhaps one might even say a failure. But he said to himself, there was a way of wiping that out. When they reached the place on the hill he was going to make things equal once and for all. He said to himself: I will do it. I've got to do it now.

When he thought about doing it he

felt his stomach contract into a hard knot inside him. It was a terrible thing to do. It was a terrible and amazing thing to do to take another man's life away from him. It was the most terrifying thing that anyone could ever do. It was one of the things which towered above ordinary living like a great, cloud-topped mountain. It was as huge and terrible as Mount Everest. Death and Mount Everest—two vast, majestic things which soared beyond the sight of man, unknown, unknowable, and magnificent. Johnny Cooper saw himself standing far above the earth, the world spread out far below his feet, alone, remote, and powerful. He held death in his hands.

They walked on, climbing higher and higher up the hillside. There were no fields here, but only spiky grass, rabbit warrens, and small wind-swept bushes, bent and twisted by the gales of bygone winters. Tom Willett said, "Jackson, the baker, wants to sell me a pup from his litter."

Johnny Cooper said, "Does he? What are they—spaniels?"

Tom Willett said, "Yes, spaniels. But I don't want a spaniel. I want a mongrel. Mongrels make the best house dogs. I had one once, a cross between a collie and a terrier. It was a wonderful house dog. But of course mongrels are a tossup."

"Yes, I suppose so."

JOHNNY COOPER thought: I shall come back down this hill alone—walk back down this slope alone. There will be no one with me. I shall leave Tom behind me and he will never come back, and I shall never find Lucy talking to Tom again. Lucy will talk only to me after tonight.

He began to make his arrangements inside his head. He knew exactly the spot where he was going to do it. He could see the spot in his mind. He could see it as clearly as if he had a photograph enlarged to an immense size in front of him. He could see the gate which led to it, and the pathway, and the stiff grass growing up between the loose stones. If he concentrated he felt that he could even count the stones themselves. There was no detail which he did not know.

He knew the time too, the precise moment at which he must do it. He knew it to the smallest thousandth part of a second—the one swift, isolated instant at which he must shoot out his hand and finish it, finish Tom Willett forever.

As he thought of it his legs trembled and the sweat stood cold upon his forehead. He took off his hat and

walked with it in his hand, letting the wind blow through his hair and breathe upon his flesh.

He thought, then, of what he must say afterward. There would be questions—hundreds of hostile, traplike questions. But he knew what he would say. He had only one thing to say. It was an accident. He would just keep on saying the one thing. It was an accident.

They would say he had a motive. That was true, but a motive was not proof. And there would never be proof. No one would ever be able to say for certain what had happened up here in the hills. Only he would know, and he would say that it was an accident. He would say that it was an accident as long as he lived.

They plodded on up the hillside. They were nearing the top now and the wind beat upon them and pushed against them so that they had to walk leaning forward against it. They passed scattered groups of moss-grown rocks which seemed to have pushed themselves up through the earth like great lizards seeking for air. Higher up a soiled-looking sheep looked down at them, seeming lost but uncaring. No doubt one place was much the same to it as another.

Tom Willett looked at his watch. He said, "I shall take the bus back, I think. It gets dark earlier now. I shall have walked far enough—I don't walk enough these days."

Johnny Cooper looked down from the hilltop over the countryside below. The village lay there, sheltered by elm trees. The trees lifted their feathery tops above the slate roofs and hid them. Only the church tower stood out hard and square among the soft leaves of the trees. The road wound between the open fields and disappeared in among the trees and houses and emerged again like a snake on the other side. There was a market square in the village, but from the hillside it was hidden. Johnny Cooper worked in the market square. He worked in an office on the first floor of an old building facing the church. He sat there every day writing out details of life policies, and fire insurance and annuities and what have you. It was a good job in its way, quiet and steady, but it got you nowhere really. There was no quick money in it, and life was a little disappointing sometimes compared with what he had once thought it would be. But then there were always books for consolation.

A few minutes later the track that they were following turned round the

(Continued on page 63)

THE GEESE ARE FLYING

BY HANS GROENHOFF

PHOTOGRAPHS BY THE AUTHOR

Armed with his camera, a photographer flies to James Bay for a rendezvous with the greatest concentration of wild geese in the world

WHEN the brief arctic summer draws to a close, great flocks of blue geese rise from their nesting grounds on Baffin Island, north of the Hudson Strait, and begin the long migration across Canada and down the United States to their winter quarters in the delta country of the Mississippi.

So far as naturalists know, they make but one stop; they drop down by the thousands at James Bay, at the southern end of Hudson Bay, and feed for several weeks in the lush marsh grass of the open tidal flats. During this period the James Bay area has the greatest concentration of wild geese in the world. Most of them are blue geese, or "waveys," as the natives call them, but there is also a large sprinkling of the more common white Canada goose.

Canadian and American sportsmen have long known of this gunners' paradise but did almost nothing about it because James Bay is uninhabited and virtually inaccessible except by canoe in the summer before the geese arrive, and by dog team in the winter after the geese have gone. No one hunted there except the Cree Indians who spend their summers near the Hudson's Bay Company posts.

A couple years ago, however, Tom Wheeler became interested. Wheeler operates a small fleet of airplanes out of St. Jovite, Quebec, about 80 miles north of Montreal, with which he flies hunters, trappers and prospectors, with their equipment, in and out of the Canadian bush. When he has spare time, he's out in the bush himself on hunting trips. Wheeler decided to have a go at the geese in James Bay. He loaded food, sleeping bags, guns and ammunition into a seaplane and with two friends set out for the north. Five days later they returned with a planeload of geese and thrilling tales of their hunting adventures.

Last year Wheeler set up camp of three tents on Goose Lake, six miles upstream from James Bay and far enough inland to be out of reach of the tidal floods. A stove, sleeping bags, canned food and other supplies were flown in. Forbell, an experienced hunter, and Palma Denis, an experienced hunter, and a camp cook, were placed in charge. Four Indians were brought from Rupert House, a Hudson's Bay Company post 40 miles away. Indians became guides for only because they were his and were not to be treated as slaves.

They were proud hunters of their race, and whatever game they would keep.

The party I accompanied included two other New Yorkers besides myself—Dr. Galvin, a noted surgeon, and Post, a Wall Street banker. I was after geese; I was after pictures.

From New York the trip was easy. We made Montreal our headquarters. We reached St. Jovite from Montreal in two hours. One of Tom Wheeler's planes was waiting for us. Tom's brother, Wheeler, a serious hunter, was at St. Jovite, and at dawn next morning we took off in a seaplane. We landed at Lake Deserren, deeded bush, and again at Val d'Or, an ing gold mining camp on the frontier. After two more hours of flying, during which our pilot followed the course of the Harricana River, we set down on Goose Creek at high tide.

Next morning before dawn Harry Wheeler aroused us to get ready for the six-mile trip to James Bay, which can be made by canoe at high tide. While the others loaded their guns and stuffed their traps with shells loaded with num-

The Indians nd Harry Wheeler yelled, must have moved." I care-

fully put my camera back on the one dry spot on my lap.

"You see," said Harry, "when the geese answered the Indians' call they came in high to look the place over. But someone moved and they were scared away. Besides, they were much too high when you started shooting."

The Indians ducked into the grass again and began cackling and hooting, and another huge flock of geese appeared, coming in low from the north. Somebody fired, and two birds were dropped. The others wheeled, but the Indians broke out in a perfect frenzy of yapping, hooting and cackling, and thrice of the birds turned and glided in over our blinds. I snapped my camera like mad, the others shot rapidly, and all three geese were added to our bag.

This sort of thing went on all morning. There was never a long interval between flights, and enough birds were on the wing to satisfy any hunter.

All of us except the experienced Harry Wheeler thought we had had an excellent day, but Harry said no, the wind had been from the south, which doesn't make for good goose shooting. The best time is when a cold wind blows from the north under an over-cast sky. We had that on the third day of our stay. Flock after flock of birds came in on the norther, some flying in the undulating V formation so familiar to goose hunters, others flying in a long single file. Thousands sailed overhead in a never-ending procession, cackling and hooting.

Toward the end of the day we saw what all hunters of wild fowl long to see. A great throng of geese rose from the marshes and swept low over our blinds like a howling storm. To a man the hunters stood up in the grass and fired shot after shot until the whirlwind had passed.

This single day well repaid the discomforts we had undergone. Geese hung high in the trees around the

camp, and we were ready to return on the plane, which was scheduled to pick us up at high tide next day. But the airplane failed to arrive, and for five days we paced the short stretch of dry land between our camp and Goose Creek, while the cold became more penetrating and our spirits sank lower.

Finally, on the fifth day, the plane appeared. A fresh party of hunters emerged, well dressed, clean and eager for the shooting. While our plunder was being loaded we grabbed at whatever cigarettes they could spare and gave them a lot of expert advice.

We landed first, on the return trip, at Rupert House, the Hudson's Bay Company post only 40 miles across the marshes from the camp on Goose Creek. There we refueled and took off for Val d'Or. And when we arrived at St. Jovite to spend the night in Tom Wheeler's popular but unpretentious hotel, Gray Rocks Inn, the little town looked like a metropolis and the hotel like a palace. That night we feasted on some of the wild geese that had fallen to our guns, roasted by Mrs. Wheeler according to her own recipe:

"Skin the birds, don't pluck them. Stuff them with a dressing of dried bread crumbs, salt, pepper, butter, finely chopped onions, some raisins and some chopped walnuts. Fit the birds into as small a pan as possible, and sprinkle lavishly with chopped bacon. Place the pan in a hot oven and cook for 15 minutes at 500 degrees. Then pour in dry sherry until you can see it between the birds. Cover the pan, reduce the oven heat, and cook for 45 minutes. Use the pan juice for gravy, and serve the birds with this orange sauce, cold: Take six tablespoonfuls of currant jelly, two tablespoonfuls each of orange juice, lemon juice and port wine, three tablespoonfuls of sugar, and the grated rind of two oranges. Add salt and pepper to taste." ★★★

Two of the Indian guides display a beautiful specimen that was bagged at James Bay

Wheeler has a small fleet of with which he ferries Goose Creek. They usually loaded down with geese

MAN RUNNING

BY SELWYN JEPSON

CONTINUING A THRILLING ACCOUNT OF FLIGHT FROM THE NOOSE

The Story:

Crusty, eccentric COMMODORE GILL prevented his lovely daughter EVE from stealing a valuable painting which he feels should belong to him—from his sister-in-law. Attempting to sell the painting to a dealer one evening, Eve encountered PENROSE, who is fleeing from the house of JOSEPH INWOOD—and from the police. Jonathan, murdered in his library; a witness has seen him leaving the house. Actually, Jonathan had been gaged in making the murder seem the work of a stranger in an effort to shield Inwood's wanton daughter, LOTTE, with whom Jonathan is in love. On the night Eve drives Jonathan to the Gill country property, he is killed and hides him.

Finding no market for the stolen painting, the Commodore takes it aboard his yacht, the *Holland*, where he believes he can sell it. Jonathan, who was to go with him as a seaman, disappears.

Rightly suspecting that Charlotte Inwood is a complice in the murder of her husband, Jonathan, quite ruthlessly, Eve poses as a "Miss Simpson" and, disguising herself, goes to wangle a position as lady's maid to Charlotte.

While the hunt goes on for the lovesick Jonathan, Eve learns more of the truth concerning the murder of her father and his wife's character. On an extension, Eve overhears Charlotte talking to one FREDDY WILLIAMS; Eve realizes that the cold and heartless man, is Charlotte's real lover. GROVES the butler, suspecting Charlotte's infidelity, threatens blackmail, Charlotte pays a midnight call on Freddy Williams, and the door of the house and her disguise; her car is seen down the street. Slowly she follows Charlotte.

IV

CHARLOTTE walked quickly for she was prostrate with shock. After she had haled a taxi, got in and she set off at a fair pace, with me after her. I had a mental note of its number, ADP 995, and several times to make sure I would remember it in case it might be useful one day.

Brompton Road, Park Lane, and right distance, then left into North Audley Street, stopped at a small block of flats. She the driver as I drove past, turned the car round, pulled up, and a moment later put an eye to the edge of the wall of the corner house.

She stood on the pavement in the light of a lamp looking up at the flats; then she put out her hand to ring the bell—for the first time, I decided. If Freddy was expected, he was in no hurry to open the street door. Of course, his flat was near the top and I was sure he would come down.

The next moment she went right in and out of my sight. I waited, but she did not reappear. I walked briskly past the long windows on the third floor had lighted and one single one on the top; the room at the front of the place was concerned a dark. I strolled back to the door and with a few managed to read the names by the side of the door or ten bell pushes in a brass plate set in the arch of the door, the name "T.F.W." appeared against Flat 3. Well, I knew I had lived. But otherwise I had come to another inconclusive moment which so irritated me. I was up there discussing matters which were of much my concern while I had to stand on the pavement in a state of ignorance.

Just as I was about to turn away from the door the latch clicked, making me jump, for by the surreptitious way the door began to open it was Charlotte already on her way out.

But it was a blonde who stepped in and out, an angry, sobbing blonde.

It is queer how quickly one's mind sometimes it knows a thing for certain. I had real evidence to support it; I knew I had been with Freddy Williams when Charlotte arrived and spoiled her evening; she had turned out, to hide in a passage somewhere. Charlotte had been safe inside the flat.

I did not make way for her, so she came at me. She glared. I said (Continued)

I was listening to their conversation when an alarming shaft of light froze me again.

Look at it this way

through knotholes is one way to save money. But to buy trucks, there's a better way.

Trucks that fit your job . . . "Job-Rated" trucks built for proof, look at the facts:

Each Dodge "Job-Rated" truck (175 basic chassis) is designed to fit a specific hauling or delivery job. It's built to carry the loads it will carry.

To insure performance with economy your Dodge truck will have "Job-Rated" power . . . the right one of seven Dodge truck engines.

For safety, and for long brake life, your Dodge truck will have "Job-Rated" brakes of the right type and size.

For lasting dependability your Dodge truck will have a "Job-Rated" frame, transmission and clutch. Axles, gear ratios, and tires will be "Job-Rated." All will fit your job.

These facts add up to benefits you can't afford to overlook: long-lasting operation . . . and dependable, longer-lasting

trucks. And, to enjoy these benefits, see your Dodge dealer now . . . for the truck that fits your job.

TRUCK SERVICE, TRUCK PARTS . . . IMPORTANT, TOO!

Your Dodge dealer is interested in your continued satisfaction: *First*, by selling you a truck that fits your job; *Second*, by giving you dependable Dodge truck service; *Third*, by

providing you with truck parts that are identical with original Dodge "Job-Rated" truck parts. This is the Dodge way . . . your protection against costly delay.

Remember

CAN GENERAL BRADLEY WIN THIS ONE ?

Continued from page 11

the small, backbiting anti-Bradley stories which now fly unchallenged around the Washington buzz-buzz.

Because he is head of the biggest agency of our government—disbursing seven billion dollars a year, 20 per cent of federal income—Bradley is on the hot seat automatically. No man in such a position could avoid criticism even if he had not inherited the effects of a thousand mistakes—some almost calamitous. Indeed, the remarkable fact is that until a few weeks ago Bradley was rarely censured. Then suddenly it began to snowball.

Recently Bradley has been accused by the House Appropriations Committee of presenting sloppily prepared, "unrealistic" budget estimates. He has been criticized for not providing better arms and legs for amputees; for inability to get rid of bumbling bureaucrats who infested the old V.A.; for failure to streamline clerical work with modern office equipment; for his unwillingness to let the American Legion "help out" with his problems; for failure to build new hospitals; for not sending checks to thousands of G.I. Bill college students; for creating a blizzard of paper work and for "criminally mishandling" the vital records of hundreds of thousands of veterans.

Less often now do you hear Bradley praised for the magnificent improvements he has made in V.A. medicine, and for withstanding heavy political pressure from everyone but President Truman.

The V.A. is big and rambling and hard to control. Figures illustrating its size and complexity could be used to frighten junior statisticians. There are now about 1,300 offices staffed by more than 200,000 employees. Last January, an average month, the V.A. received 12,927,522 pieces of mail. That month 4,000 V.A. contact representatives held 2,394,786 personal conferences and kept an additional 178,000 outside appointments, a total average of more than 30 a working day. In addition they answered questions on 928,727 phone calls. One day 17,000 veterans came to a single office to ask questions.

The V.A. is so immersed in paper work, as Bradley's critics like to point out, that there are 15,000 separate forms on which information can be compiled. If each form could be filled out in five minutes it would take a competent worker a month to get them all filled in. "It's the world's greatest paper pachyderm," said one circus-minded critic.

Good Record in Tape-Cutting

To speed service to the veteran, Bradley and his deputies have done some notable tape-cutting. It once took two weeks to certify a vet as eligible for education or on-the-job training; now it requires two days. The paper work required every time a patient entered a hospital has been reduced from three or four hours to 60 minutes or less. Dependents of World War I veterans entitled to death claims formerly had to wait months for an exhaustive investigation before receiving any payments. Now minimum payments are made within a week and additional payments made retroactively if investigation proves they are deserved.

Tops among Bradley's achievements is the V.A. medical program, which is so revolutionary as to be unbelievable. Three years ago V.A. medicine was a joke in the profession. In one Army hospital a poll of the medical and surgical staffs failed to secure a single affirmative reply to the question, "Would you take a postwar position in a Veterans Administration hospital?" Today every one of these men would be proud to practice

V.A. medicine. One Minnesota specialist recently remarked, "If I don't get tied up with the V.A. I'm going to lose professional standing." This miracle was wrought by the considerable persuasive powers of Major General Paul R. Hawley, V.A. medical director. He crusaded the medical profession and convinced it that Bradley had the green light from President Truman and Congress, that he was willing to set medical standards as high as the profession would provide personnel for, and that he and Bradley would cut their own throats before they would cut those standards by so much as one degree. Physicians were at first skeptical, but gradually they were persuaded that this was a real opportunity.

Here is the way Bradley's program works: The V.A. employs as part-time consultants leading specialists and pays them \$50 a day (peanuts for many of them) with a \$6,000 annual ceiling. When one of these consultants visits a V.A. hospital he examines the patients in his field

have built new hospital facilities for these additional patients would have cost \$17,000,000. The average V.A. general medical and surgical patient used to be hospitalized 40 days; now it's 20.

The part-time consultant is the key to the extraordinary care which the V.A. is able to provide. To provide them costs \$10,000,000 a year, or around fifty cents per year per veteran. But to replace these specialists with full-time but run-of-the-mill doctors would cost at least \$14,000,000 annually. Despite this there are ominous signs that already this medical program is in danger.

Each co-operating medical school appoints a Dean's Committee of prominent physicians to supervise without charge its relationship to V.A. Among other functions these Dean's Committees screen and select the young physicians who are to have the advantage of a year or more resident work in V.A. hospitals.

In June, the Dean's Committee of Vanderbilt University sent an emissary

a year to administer. But rate in his T.B. hospitals d able comment from the Life Insurance Company; had racketeering concess nurses and doctors were cyr brutal in treating patients, o of whom was cured.

When the U.S. had 1,000 pre-Pearl Harbor training warned that these soldiers day be veterans and that h pare to provide hospitals fo replied that he wasn't going building for a war he wasn late as October, 1943, Hine proposals that he take steps backlog of work piling up charge of servicemen. W took office it wasn't appa neath the surface the entire the V.A. was in danger of l

As Hines was a master evitably the V.A. was run v gard for politics. Jobs w anyone unrecommended people. Personnel was not out due regard for the w organizations whose poli was desirable. Most of this ley has wiped out.

It was, therefore, som tionary when Bradley ann new medical and surgical V.A. would be constructe cal schools—or at most 20 from them—where the be tors would be available to When this intelligence was the Capitol, one Sou warned Bradley if he put where in his state withou approval, the V.A. app would "never come out c The senator was ignored.

Surprisingly, this was a pork-barrel reaction. So s Congress backed Bradley senators and three congre tempted to high-pressure

and instructs the hospital staff in his diagnosis and the reasons for his prescribed treatment. In addition he gives lectures to the staff on recent medical developments, using patients—to the great delight of the vets—as subjects.

Key V.A. institutions are large enough to include a wide variety of cases, and the hospital staffs thus have access to advanced medical knowledge which heretofore was available only to a limited number of doctors in the largest cities. With such instruction our younger doctors should become among the best equipped in the world.

A great surgeon said the other day, "A doctor can learn more medicine in one year in a 250-bed V.A. hospital than he could in five years in general practice." And there is a further important dividend. When these clinical sessions are held by the selected consultants, practicing physicians in near-by communities attend. Thus the results of improved knowledge are immediately translated into hospitals throughout the country.

The results of Bradley's medical program have occasionally been spectacular. In Minneapolis, for example, with 1,800 beds the pre-Bradley regime treated some 4,900 patients annually. In the first year under Bradley, through better and more efficient care, 12,527 patients were treated, a jump of 250 per cent, with exactly the same number of beds. To

to Washington to inform Dr. Paul B. Magnuson, head of V.A. medical research and education, that they wouldn't deliver a single resident doctor for the 500-bed Thayer Hospital in Nashville on the agreed date, July 1st, because the V.A. was not living up to its bargain. The 500 beds required for the projected resident program had shrunk to 370—because the hospital staff had been cut from 700 to 540 and thus could not handle 500 beds. This was the result, said the V.A., of essential economies. But rather than compromise with its standards Vanderbilt abandoned the project.

Today the V.A. has 6,500 such beds, which it says it is unable to operate and it claims to have no staff for 7,878 new beds which soon will be ready.

Congressional economy drives pose the greatest threat to the V.A. program; politically it is more important to see that a lot of people get something than to insure that a smaller number get something worth while.

Conditions charitably described as unpleasant are not new to the V.A. When President Harding, in March, 1923, picked Bradley's predecessor, Brigadier General Frank T. Hines, to run the Veterans Bureau, he cautioned Hines to watch the pennies. Hines was conscientious to a fault.

In 1939 Hines was boss of a \$600,000,000 program which cost only \$87,000,000

pital program. This is a remarkable record, marred only slightly by the personal intervention of President Truman in changing several proposed sites.

There is, however, a constant show of political pressure, and it cannot always be dissipated. In the vast reaches of New Mexico is a town named Silver City where there is located an old Indian outpost, Fort Bayard. Here, with great reluctance, the V.A. operates a T.B. hospital. Nurses refuse to work in such an out-of-the-way place, and the V.A. is able to keep it staffed only by promising that no tour of duty will exceed 30 days.

Political Heat Defeats Plan

The V.A. is enlarging its T.B. facilities at Albuquerque and recently announced that it would close the hospital at Fort Bayard. Immediately there was turned on a blast of political heat which caused Bradley quickly to change his mind about the undesirability of Fort Bayard. This hospital will continue to be operated, under the most difficult of conditions, until things cool off. But Bradley doesn't often lose.

Where critics find Bradley really vulnerable is in his handling of veterans' insurance. Here Bradley is caught in the middle between loyalty to a subordinate and the inheritance of what proved to be the biggest paper-work snafu in the history of government. If there is any single factor which could shake the confidence of World War II vets in the ability of the V.A. it is the handling of National Service Life Insurance. For most of them it is their single lifetime hope of safe-guarding the economic security of their families.

There are scores of thousands of vets at this moment who have been paying premiums regularly but who have been notified that their insurance has lapsed—some, like John C. Berron of Greenwich, Ohio, after paying a full year in advance. There are men who have died and whose beneficiaries have been paid but who are still being dunned for premiums.

There are thousands upon thousands of men who have written asking what the hell, and then waited two, three, and four months without receiving a reply. These conditions prevail today, two years after Bradley took over! The latest available figures show that the V.A. has piled up 1,187,262 separate payments from vets which haven't been identified or matched with any known insurance policy. This could mean that some \$6,000,000,000 worth of insurance policies was balled up.

A few veterans are screaming bloody murder, but not threatening—not yet. Indeed some of their most piercing yells lay bundled in the unanswered letter files of the V.A.—where they are aging into mere burps of indignation. On May 15th, letters, other than current correspondence, which were waiting to be answered totaled 358,719.

The manipulator of this singular enterprise is Harold Walker Breining and he has been in the insurance end of the veterans' organization and a civil servant for twenty-six years.

Breining has been unkindly described by one of his detractors as a "plush-bottom bureaucrat." "Plush-bottom" is an unnecessary slur on his *embonpoint* and does not reveal the heartily cheerful disposition beneath. His standing as a bureaucrat, however, is without peer. As one observer put it, "He has that essential faith which enables him to rise above a crisis, knowing that if he hangs on long enough eventually everything will come out all right." Recently Breining gave typical reassurances to a reporter who was inquiring with some concern into what he believed to be the most unholy governmental mess of all time. "It isn't as bad as it seems," Breining smiled. "We'll have it all cleared up in a few months."

If everything goes well, Breining will

get it cleared up, of course. Between March 15th and May 15th, with the aid of a special and intensive effort, the national backlog of unmatched records was reduced by some 200,000. At that rate they should certainly be out of the way fairly soon, if it wasn't for the sad fact that improvement isn't universal. In New England, for example, instead of gaining on the pile in two months of effort, they somehow fell behind by 3,000. This unhappy circumstance occurred in a number of centers. Only amazing efficiency, such as shown in New York, where the backlog was reduced by nearly 50 per cent, made the national picture one to which Breining could point with optimism.

To listen to the V.A. apologists, the blame for this and other conditions of snafu rests in large part on the Army and Navy, which in response to pressure from parents and wives stepped up planned discharge rates from between 300,000 and 672,000 a month to 10,000,000 in a year. In addition, the armed forces did such a thorough job of informing discharges of the rights of veterans that practically every man dis-

pany to help him solve his problem but he does not do so. He has two committees of insurance executives but he has been largely content to admire the imposing names on one, the insurance advisory committee. He has utilized the second and smaller committee—a group of actuarial specialists—to assist him in preparing mortality tables.

When the American Legion proposed in the fall of 1945, and again in January, 1947, that a team of experts from insurance companies advise local V.A. installations in the handling of their vast insurance problems—with insurance companies bearing the entire cost—the idea was turned down. The V.A. had its own specialists in the field.

What really throws insurance operations into a tail spin is the receipt of payments from veterans who send a money order with a letter reading, "I'm enclosing \$7 for my insurance for June," signed, Bill Smith, with no other information. Bill Smith may even have moved several times in the past year and sent such payments to different V.A. offices. Without knowing the policy number and other simple data it is a difficult and in some

man tried for seven months by mail how to go about it, killed in an auto accident and three small children poorer today because of V.

Such occurrences are but a tragedy, though, is that because insurance muddle the confidence of a veteran is being shaken, not an important asset he can get—the insurance itself—but the hopeful structure of the administration. He is still General Bradley won't let he's beginning to wonder if he isn't in over his head.

Not the mildest of Breining are the service organizations: the American Legion, the Veterans of Foreign Wars, and the other smaller ones of which are effectively all veterans get their due, and more. The largest of these are against Bradley fund cause they don't want a general—or any other general service—running the V.A. civilian—a veteran, of course, one whom they would choose in nominating.

The American Legion believes that the V.A. is in its hospitals on a division of services, through which are co-ordinated the work of the teen, post exchange, club and entertainment and patient services. It includes of co-ordinating the effort of volunteer groups as the Red Cross, Women's Voluntary Service, Aid societies and a half-dozen organizations that stumble themselves to "serve" the veterans with whatever they think him. The American Legion is willing to operate this for would permit it.

How Legion Supervises

When the V.A. was headed by Hines the Legion supervised hospitals—in fact, ran some to the point of deciding that tory patients would be given to attend movies.

The Legion assisted some one Southern hospital was a single medical officer central office in ten years visited only twice in ten years active did such assistance post commanders—and other veterans' organizations would dictate the medical given some patients. The to Legion headquarters but it happened just the same. When Bradley took that a post commander let out a surgeon in front of cizing his technique. But the veterans' organization would be no more of that. Under heavy fire at Bradley's hospital-construction. The record is bleak. It's past two years construction on only seven of 74 hospitals.

Only one hospital has and that was begun before over.

If all Bradley had constructed some buildings for operating rooms, laboratories such as kitchens and didn't care in whose care them, he could have had hospitals running by now. Over he found a belated program under way. Plans institutions were based on dated ten years ago. Hospitals changing rapidly with developments. A decade rooms were used mainly

"A table near the waiter, please"

charged came out hollering to the Veterans Administration to give him his due—one out of four filed a pension claim, for example. Another reason—and this is certainly valid—is that the bottom of the man-power barrel had been scraped several times before the V.A. got around to hiring personnel—what was left wasn't much and wasn't good.

Bradley's famed decentralization program is also blamed. When Bradley took over he broke up the country into thirteen branches, which he compared to Army corps commands, and declared that henceforth his deputies in those branches would have complete operating authority within their areas. The Central Office in Washington would be responsible only for policy making and supervision. It seemed like a great idea but snipers inside and outside the V.A. unfairly contend that all Bradley did was to create thirteen more places for papers to accumulate. Nevertheless the insurance inundation was so great that it had to be decentralized or face a breakdown.

The problem of veterans' insurance is complex beyond belief, not merely because it involves records for some 20,000,000 people but because it is different from ordinary insurance in that premiums usually are paid once a month instead of once or twice a year, a fact which magnifies the work, and the chances for error, beyond ordinary comprehension.

But, experts maintain, it could be improved if Breining would permit changes. He could call upon any insurance com-

panies an impossible job to match these payments up with the policy and properly credit them.

When told of this situation, one of Breining's insurance-committee members, an official of a large private company, snapped back with: "Just put such payments in an envelope and return them to the sender with a card saying that the V.A. will accept no remittances which do not include complete data. That will show vets you mean business. Then they won't treat you like a piggy bank."

What Breining did was somewhat different. He devised a four-part form with three inserted carbons. Two of these pieces of paper go to the veteran telling him politely that the V.A. has his money but doesn't know where to put it and requesting that more information be returned on the second form. The third is an index card and will, if the vet complies, be used eventually to match his remittance with the master premium card. The fourth form the V.A. appropriately calls a dummy card. It is placed in a special file as permanent evidence that the V.A. on such and such a date received a payment from one Bill Smith.

More than 10,000,000 veterans have dropped their insurance—not a few because they feel the V.A. is too inefficient to entrust with money. Recently the V.A. has been urging these vets to reinstate their insurance. The American Legion has disclosed cases of men who have repeatedly tried to get their insurance reinstated and have received no reply. One

tively brief surgery such as an appendectomy.

Today, perfection of surgical techniques makes possible single lifesaving operations which tie up an operating room four or five hours. One of the most modern hospitals in New York has only half the operating space it needs; when it opened, it had more than enough. The use of streptomycin, penicillin and scores of new compounds and tests requires much more elaborate laboratory facilities than were considered necessary even five years ago.

So Bradley courageously scrapped the old plans and organized a committee of architects and doctors to establish criteria for the new hospitals. He called on the help of Army Engineers, who proved to be unduly optimistic about pushing through the building program. Meanwhile, he got caught in an ascending price spiral and had to ask Congress for more money. To get reasonable bids he had to advertise as much as three times with four months elapsing between each ad.

But the most serious delay was caused by the fact that to design and draw the plans for a major modern hospital takes ten to twelve months.

Alibis Don't Build Hospitals

The mumbo jumbo of official explanation covers these facts, of course. It doesn't build any hospitals. But this is not so serious as some of the veterans' organizations might have you believe. The Legion has loudly complained that many thousands of vets are without medical care because Bradley's construction program has bogged down. That isn't true.

Latest available figures show that 106 veterans with service-connected cases were waiting to get into hospitals on April 1st, along with another 5,000 whose cases were presumed to be service connected. Many of these were waiting, not because there were no facilities but because they wanted to enter a particular hospital. Nevertheless, Bradley could care for all of these hapless vets if he were willing to cut quality. Rather than do this he is taking the rap for construction delays.

Rumors that Bradley has spent millions on impractical artificial limbs are false. One really encouraging aspect of the V.A. program is the invention and perfection of new prosthetic devices—artificial limbs—which will be of great value to vets. Most people have the impression that a new arm or a new leg is in fact just that. It isn't at all. Artificial limbs become helpful only after long and patient schooling in their use; they are invariably cumbersome and often painful. Only the most rudimentary progress had been made in their development in the last generation.

Financed jointly by the Army and the V.A., and starting from scratch, a committee of the National Research Council has been co-ordinating and supervising experimental work involving, among others, Northrop Aircraft, Incorporated, University of California, and University of California at Los Angeles. After less than two years—at \$1,500,000 a year—the tangible results appear negligible. But much of the essential and undramatic basic research is completed and the next twelve months will likely produce developments which will be hailed as miracles.

For the first eighteen months Bradley operated the V.A. with the freedom of a man who has been given a blank check on an unlimited treasury. The only thing he didn't have to worry about was money. But with the new Congress he was abruptly checked. He was asked to explain why he was spending what. This abrupt shift has caused considerable whimpering among Bradley men in the V.A. Suggestions of inefficiency, of failure to meet scheduled goals, are an-

swered with dark but v the “economy wave” blame. This is only part

GOOD AS GOLD

BY RUTH CARSON

This new thread looks like real metal but is much better for dresses, bathing suits and draperies. It's rather expensive now, but watch for the gold rush

ROSE MARIE REID, a popular California designer of bathing suits, has a man-bites-dog story about a movie star and one of her suits. The star is Rita Hayworth, and the suit is plenty glamorous, too, looking like spun gold and making even an average figure look divine. The news about it is that Miss Hayworth's movie studio telephoned Mrs. Reid's design studio and said, "Please, may Miss Hayworth be photographed in that suit?" thus reversing the usual order of requests, since stars are constantly besieged with pleas to pose in this creation or that.

The thing that made this suit desirable above all others is simply a thread. But such a thread! It is as golden and beautiful as the gold in the most perish-

able evening brocade you ever owned. But it isn't gold. It takes to water like a fish, it can be dry-cleaned, it can be used in a hundred different things from tablecloths to bathing suits. It's still as good as gold; in fact, better—for it doesn't tarnish.

The gold mine from which this thread comes can also yield silver and copper, or any color, for that matter. The trick is a thin strip of aluminum foil, coated on both sides with clear plastic, stuck to the aluminum with an adhesive tinted in any of these precious colors. The results are threads that look like metal, though the only metal thing about them is an aluminum core that doesn't show. They're touching up a lot of things with glamor, but they came about in a most unglamorous fashion.

"Times have changed!" says the knight he admires the golden background and ladies of today. He is fascinated by the uses of this new nontarnishable metal

A firm named Dobeckmun (for the go that its three founders were the Mess Becker and Munson) specializes in making material from films like Cellophane like aluminum foil. Having worked their plain cigar pouches through gaily print hold anything from your moth balls to y they invented the zip tape on your cigar age. This involved laminating, or press films together.

Experimenting further, they discovered aluminum foil, sandwiched between two transparent plastic film, could be slit into narrow as 1/64th of an inch, making an metallic-looking thread for weaving. Besides the silvery look of aluminum, produce gold or copper with no more coloring the adhesive used to glue the together. So they added metallic threads to ness, selling them for embroidery work making braids that went into belts, trim such.

The war slowed further progress for a since the war, designers have snatched ball and started running in all directions. Rose Marie Reid was one of the first. Besides the gold thread for embroidery, she it was seaworthy enough for bathing, promptly talked a manufacturer into her twenty yards of gold cloth and twenty at equally fabulous expense. The results suits, making you glimmer like a minnow fish as you slither through the water, as headlines, as well as the figures of such Rita Hayworth and Lucille Ball.

Several movie studios have stocked the first suits sold by the hundreds even at \$89.50. Now at a mere \$25 per, Mrs. Reid is in volume business, making suits of fabric overlaid with gold.

It used to be that anything with a metallic was strictly for winter and for formal wrapped in black tissues between wear be prayed over on opening, in the hope to be no tarnish. Metallic fabrics had other too. They were expensive. They had unpleasant odor. The metal threads in abrasive to the other threads, and they in weight.

The new miracle yarn having wiped handicaps, even to lowering cost somewhat, have become light-handed with it for son of the year. Fleck a white tweed if you have a handsome color for winter. Put a fine hair gold in a beige cotton, the material for a lovely sunning dress, or a distinctive any time. Clare Potter Simpson, Howard Greer Capezio—name a Who American designers, and most of them gilding something whether it's slippers, nightgown or dinner gown.

Your house can have glitter, too. Twenty or thirty years ago furniture makers have used it in their new fall upholstery. Years ago Dorothy Liebes weaver, and setter of fabrics has used gold, silver

threads in her weaving, mixed with it. "There's nothing new about that," "Through the ages, metals have been fabric. Look in any museum. But I have appetite for gold in my stuff. I've spent France for metal yarns, only to have them I've even written to China, trying to get

So when Dobeckmun asked her to be for them, bribing her with a guarantee metal thread she could use, she took was like putting candy in a baby's hand.

The refurbished Royal Hawaiian Hotel has Liebes shades at the window colored half-round slats of wood lacquered with brilliant yarns of (Continued on

KENTUCKY STRAIGHT BOURBON WHISKEY, BOTTLED IN BOND, 100 PROOF,
BEHNHEIM DISTILLING COMPANY, INC., LOUISVILLE, KENTUCKY

Each time the rocket makes one lap the globe turns through one twelfth of its daily rotation. If it passed over New York at noon, by 2 p.m. it would have gone completely around the earth and would then pass over Kansas City; two hours later it would pass over Salt Lake City. In the same four hours it would have patrolled over portions of Siberia, China, Burma and India, not to mention Little America and the North Pole.

We can select orbits of longer periods by using, for example, 24-hour, 12-hour and 6-hour satellites. The 24-hour orbit rocket has the amusing trick of staying always on the same side of the globe! It lives a life of permanent frustration; if it starts a lap over Ecuador at noon, then at midnight it will be on the far side of the globe—only to find that Ecuador has swung around there to meet it!

Moon Base Could Direct Rockets

These prowler-car rockets can be directed by remote control from the space cruisers, from ground stations or even from the base on the moon. Security doctrine calls for them to be controlled by the space cruisers, under the orders of the Security Council's military general staff chief.

The Jupiter is now in an orbit just outside the orbits of a spaced group of prowler-car rockets; her speed is a trifle slower than that of the rockets. One of them slowly overtakes and passes her. The space ship captain uses his jets to increase speed slightly. He jockeys his ship, using radar, automatic pilot and sheer talent, until the speeds and courses of the ship and the rocket missile are perfectly matched, with the rocket a scant hundred yards away. The general alarm sounds and the loud-speaker shouts, "All hands! Recovery stations."

They are about to bring the rocket into the ship. Space-suited men in fish-bowl helmets float in a cluster around the air lock. One of them, carrying a sort of crowbar, enters the lock. Outside—you watch him through a viewport—he doubles up against the side of the ship, then shoves off, as if from the side of a swimming pool, and dives toward the rocket. There is a line on his waist, the other end fastened to the ship.

The man inserts the crowbar gadget in the war head of the rocket and locks it in place. There is now a mechanical obstacle stopping the sequence of events necessary to trigger the atom bomb. Then he hauls over a heavier line and makes it fast to the rocket. He waves and reports "Ready" by walkie-talkie radio built into his suit.

The bomb-bay doors are open; the rocket is warped inside. The bomb bay is itself a giant air lock; once the rocket is inside, men can work on her without space suits. Apparently there isn't much to be done. Some of her fuel has escaped through relief valves and must be replaced; there are routine checks and tests of all her gadgets, mechanical and electronic. This is an "honest" rocket; her radar ground checks have shown her to be on time and on station since her last inspection, save for minor variations easily attributable to the disturbing pull of the earth's tidal bulges. They prepare to cast her adrift again.

When the bomb bay is open, a giant lazy-tongs nudges the missile away from the ship until she floats free, and clear of the Jupiter's jets, secured to the ship by one line. There is a wait, until the navigator assures the captain that the rocket is tracking on station in her proper orbit, then the line is cast loose and hauled in. The Jupiter's jets are fired briefly and she drifts away, to rendezvous with and service the missile in orbit B-16.

Let's leave the space ship to earth, and to 1947. Who space flight—who is now de What are the U.S. Air, C Naval Forces doing about it

For that matter, why h corps at all? Why not let alone, leave such things to The answer is curt, inescapab have space ships to preserv

In a period in which space nically possible it is also in we don't develop space shi else will. Once developed, can and will be the source military power over this over the entire solar syst is literally no way to strike ground, sea, or air, at a whereas the space ship arme weapons can wipe out any globe.

The proof lies in the phy gravity. Space—space here does not permit detailed tect sion, but consider an analog one at the bottom of a 200-f at the top, each equipped jagged rocks. Who bashe head?

ve job at White Sands
is a preview of the first
st. Its story starts in
g held at the Naval Re-
y to discuss uses for
a rockets. Some alert

Army Ordnance officers, picking through
the debris of German factories and
dumps after V-E Day, had found enough
parts of V-2 rockets to assemble a goodly
number. When they examined the clev-
erly engineered jet engine, they realized
that we were years behind the German
rocket experts; we had whole new tech-
niques to learn before we could build
our own first long-range rocket. The
Ordnance officers promptly shipped a
hundred V-2s to White Sands.

Progress in Conquest of Space

Army Ordnance hired General Electric
to do the engineering of assembly and
firing, thus neatly and quickly educating
one of the country's major engineering
staffs in the subject of big rockets. Then
they invited the brother services to join
in the firings. The empty war head, or
cargo space, was offered as a high-alti-
tude research laboratory, and Dr. E. H.
Krause, head of rocket-sonde develop-
ment at Naval Research Laboratory,
with its 20 years of high-altitude pionee-
ring behind him, was asked to organize the
joint effort. Krause called in scientists
from universities all over the country to
meet with officers of all services, their
civilian scientists and contractors.

This collaboration enabled the Army
and Navy to proceed along comple-
mentary lines in developing the super-
rocket leading to the conquest of space.
When we run out of V-2s, sometime in
1948, the Navy will be ready with a
better rocket, the Neptune, built for re-
search—not bombardment. It will have
a top speed of better than a mile and a
half per second—enough, you will re-
member from the account of the mythi-
cal U.N.S. Jupiter to make the trip from
the moon to the earth. It will carry
scientific instruments twice as far out
into space as the best the V-2 will do.

Thus the joint operation started only
two years ago has already produced a
better rocket than the V-2. Following
the Neptune, the Air Forces can be ex-
pected to offer a still better space prober.
Each service is developing and testing
guided missiles, at Wendover, Nevada,
at Point Mugu, California, at Wright
Field, at the Naval Air Material Center
at Philadelphia and in the laboratories of
many contractors. From the 3,000-mile
missile, we progress to the ocean-span-
ning missile, then to the permanent-orbit
round-the-world missile—at which point
these lines of development also converge
on the space ship.

THE END

THE FLAVOR LINGERS LONGER

FLYING MIDGET

NEXT Saturday, Sunday and Monday (the Labor Day week end) something new in aviation will be born at the 21st annual running of the National Air Races at Cleveland, Ohio—genuine midget airplane racing. The races were carefully planned and will be carefully controlled; they are under capable, experienced management and high-class and dignified sponsorship. They are intended to fulfill the need for more thought for light-plane design and to provide spectators with the opportunity of witnessing skillful piloting at its best around a tight, two-mile course.

Programmed as the Goodyear Trophy Race and carrying a total of \$25,000 in prizes with \$8,500 as the winner's take, the contest, since its announcement last fall, has liberated pent-up talent all over the nation. Through the winter, spring and early summer, pilots and engineers, obscure and prominent, have been at work in back yard and cellar designing and building sleek, tiny 200-mile-an-hour single-seaters. At least 20 are due to show up at Cleveland. Another score, planned for the event, couldn't be finished in time. The inducement stands for at least three years, however, and the sponsoring Goodyear Tire and Rubber Company doubtless will extend the trophy's life if the initial objectives appear to be in sight at the end of that period.

The Professional Race Pilots Association is working closely with Goodyear in preparing the specifications for eligible planes and pilots and exercising control so that the midget-plane development program will be constructive as well as entertaining.

Art Chester, of Los Angeles, an old hand at building and flying small racers, is president of the outfit and is right in there with a homemade midget of his own named the "Swee' pea." It weighs 520 pounds, cost \$5,000 to build, and is 15½ feet long, with a wing span of 17 feet 5 inches. It has a butterfly V tail like the new Beechcraft Bonanza executive plane eliminating the need for a rudder and it cruises at 120 miles an hour. Art, like other builders in Wisconsin, Michigan, New York, Ohio, North Carolina,

Iowa, California and Maryland, is shooting for 200 miles an hour.

Art and his group have laid down hard and irrevocable rules for the midgets. Right off, they specify the engines must be government-approved types and must not exceed 85 horsepower. Furthermore, they are not to be monkeyed with. This keeps out the "hot rod" artists. The PRPA doesn't want engines flying to pieces in the air before, during or after the race.

While dubbed by one segment of aviation as wild men for risking their lives for a prize, racing-plane builders and pilots are credited by racing fans with having brought about many innovations and refinements in their never-ending quest for more speed.

For the further development of landing gear design, the wheels and struts must be fixed, not retractable. This eliminates weighty mechanism that sometimes fails and necessitates a precarious landing on one wheel or no wheels at all. To prevent some pilots from using office-chair casters to cut down weight and resistance, wheels must have a minimum diameter of 10 inches. To preclude any possibility of a pilot skimping on his fuel supply, all contestants must have at least 10 gallons in the tank at the start.

Pilots must carry parachutes, safety belts, shoulder straps and crash helmets, little items left out in the past by some skippers because of weight and space problems. And to prevent courageous but inexperienced prize-money seekers from giving the new little "industry" a black eye, no one will be allowed to compete if he has less than 200 solo hours. Further, all midget-racer pilots must have had at least two hours in the ship and must have made at least five take-offs and landings. If the midget-plane pilot has never raced before, he must fly his plane at least eight consecutive laps of the prescribed course.

The midget race, to be spread over three days with four 20-mile heats on Saturday, two 30-mile semifinals on Sunday and the final 50 miles on Labor Day, is limited to men only. This was regarded as "discrimination" against women pilots

by Miss Marge Hurlburt, of Painesville, Ohio, about whom we wrote in the May 17, 1947, Wing Talk in reporting her world's speed record of 337 miles an hour made in a Navy Corsair fighter.

Marge had ordered a mosquito built for the race and, if prohibited from flying it herself, would have designated a male pilot and would have continued to work for women participation or for a separate race for women midget-racer pilots next year. But Marge was killed on the Fourth of July at Decorah, Iowa, while stunting before a holiday crowd as a member of an aerial circus she had just joined.

DOWN in Santiago, Chileans and foreigners are welcoming "home" the *Caballero de los Andes*. It has been several months since big American Warren B. Smith has been seen in that attractive South American metropolis or at his favorite fishing spots where he was usually to be found when not in the pilot's chair of a trans-Andean air liner.

In 1942 the Chilean government bestowed upon Captain Smith the title "Knight of the Andes" on completion of his 1,000th crossing of the Andean Cordillera. Then on April 17th last year, another big crowd gathered at Santiago's Los Cerrillos Airport to hail "Smitty" on the completion of his 1,500th flight over the highest mountain range in the Western Hemisphere. But in March of this year, after his 1,608th trans-Andean flight, Smitty went North to get acquainted with the new Douglas DC-6s his air line, Pan American-Grace Airways (Panagra), had ordered and also for a long overdue vacation.

Now he's flying the new Sixes for Panagra out of Miami on the new through service to Buenos Aires via the west coast of South America, but his stay in Santiago is short. He must keep the 21-hour schedule established for the Sixes between Miami and Buenos Aires and get back home in Miami to Mrs. Smith, even though, after twenty-one years, she is now used to the life of a wife of an air line pilot.

Once upon a time, the crossing of the Andes was a high aeronautical achievement for both machine and man. Under clear skies and in calm air, it can be made at 14,000 feet if you know your mountain passes and don't turn up an inviting canyon like some less alert and less fortunate airmen of the past. In turbulent air or on a cloudy day it meant and still means the crossing is made at around 19,000 feet, but for many years now both man and machine have been well equipped to meet and overcome the challenge of the terrific Andes.

For passengers, too, it used to be a great adventure. Flying in trimotored Fords, the east-west crossing, in particular, had its limitations. Head winds of more than 100 miles an hour often caused Captain Smith's Ford not only to stand

still but even fly backward. It happened, Smitty just turned around and sat down at Mendoza, Argentina, the winds relaxed to a reasonable velocity.

Smitty has hauled more than 100 fare-paying passengers between Buenos Aires and Santiago (your repository of those statistics, having ridden Smitty eleven years ago in a line since he always made it a practice to oxygen on every crossing, he has consumed more of the stuff than any other pilot. The only noticeable trace to the abnormal (oxygen) bottle has been on it being his theory that he spurred on to produce a bump in cavities.

A high trip over Andean clouds is a great loss for a time passenger. If the weather is calm, he'll go through the clouds and there will be unfolded a panorama equaled on any established map of the world. Almost as awesome as Aconcagua reaching 22,835 feet, the sky is the statue of El Cristo de la Cruz at a pass 12,500 feet above sea level. An impressive work of art stands at the border of Argentina and Chile and of the Andes proclaims a coming of age on a peaceful life for the people of those two nations.

Warren Smith, now forty-one, is a native of Minneapolis, the foremost authority on mountain phenomena in an area of the world much closed to the surface of the earth to forget his being the champion flier airman and a respectability on fishing.

He is a survivor of that group of resourceful, desperate, nomadic band of barnstormers peddled rides in stick-and-wheel for whatever the people would pay. At the end of the other war, who developed a common sense in their flights and lured the morbidly curious on the village outskirts with the promise of a crash and a broadcast that someone might get killed in commercial aviation then; the only way flying could produce clothing.

When it no longer became a risk for him to risk his life for the entertainment of the public, Smitty joined out to be a short-lived air line in Latin America to compete with the expanding Pan American Airways. That line was acquired by Panagra in 1930, Warren was taken over as one of the assets and later installed down in Santiago, where he flies the Andes almost daily for Pan American-Grace Airways a few months ago.

About 10 miles west of the Andes, as you fly from Chile, is a waterfall, a very high one that drops about 1,500 feet from its origin at 11,000 feet. In hours it falls normally, but at noon the high wind whips and the water is picked up and blown back higher than its source.

This phenomenon occurs in the South American summer (November, December and January) and the remainder of the year the fall over.

When taking a new copilot familiarization runs, Smitty asks the youngster at the end of the flight if he saw the "Upside-down" The copilot never does; he's bewildered by the grandeur of the scene. So Smitty explains that it's a thing. The copilot invariably has a fishy eye, but is respectful of the Old Man of the Andes. Usually a matter of hours before word comes back to Captain Smith that the pilot had confided in a flier that Captain Smith has been flying for a little bit too long." F

An Andes crossing in a Ford trimotor was grim

JOHNNY ON THE SPOT

The Director
Finds Out Why

PHILIP MORRIS

is so much better
to smoke!

The Director thought he had Johnny on the Spot.

"Why," he asked, "is PHILIP MORRIS so much better to smoke?"

"Because PHILIP MORRIS is the ONLY leading cigarette scientifically proved far less irritating to the nose and throat," Johnny replied. "Less irritation means more enjoyment. That's why

the PHILIP MORRIS smoker really gets what other smokers only hope to get . . . better taste, finer flavor, perfect smoking pleasure!"

Yes, it's true . . . if every smoker knew what PHILIP MORRIS smokers know—they'd all change to PHILIP MORRIS, America's finest cigarette.

PHILIP MORRIS

MAN RUNNING

Continued from page 26

softly: "So our Mr. Williams has been up to his dirty tricks again?"

Her blue eyes would have blazed if the melting mascara would have let them.

"What d'you mean?" she demanded sharply. "Who are you?"

"Oh, nobody in particular," I said, "except I've had my disappointments, too."

"Maybe you're another of them? Who was that woman?"

I shook my head. "I'm not one of the party. She was no friend of mine."

"She is of his, all right. The moment he looked out of the window when she rang and saw her, he went into a positive jitter—for him, that is. He doesn't show what he's feeling, much."

"That's the first thing a wolf has to learn."

"Threw me out like last week's washing. Oh, for heaven's sake, why am I talking to you!" she said, returning to her anguished heart and outraged vanity. "You go to hell," she added and strode off down the street with her head in the air and her high heels smacking down on the pavement. She had magnificent legs.

The main point she had made for me during that brief encounter was Freddy Williams' interest, and the kind of interest, in our sex. I had used the word "wolf" almost without thinking; it seemed to me I could not have chosen a better one.

I DROVE the Daimler back to the garage, spent a few minutes in the scullery at Aunt Florence's getting rid of make-up (which always goes on easier than it comes off), and reconstituted as Dorothy Simpson, returned to Number 4. The basement door was as I had left it; once inside, I released it and shot the bolts top and bottom. No one could know the new lady's maid had been anywhere but in her attic since bedtime.

Passing the first-floor landing on my way up I saw that I had a better opportunity than I would get again to search Charlotte's rooms.

The obvious point of interest was the bureau in the sitting room, a modern but delicate piece in some smooth-grained whitewood. Its flap was down, as I had last noticed it. I pulled the heavy inner curtains as quietly as possible and lighted the reading lamp on top of the bureau.

I went through the papers methodically, drawer by drawer, keeping them in their original order. And in order they were, which told once again of the organized mind behind her exhibitionist temperament.

Unpaid bills, paid bills, broker's letters about investments, personal letters, insurance policies on jewelry, passport (which told me she was thirty-two), a small packet of letters dated two years ago from a woman called Elise.

Only one drawer, at the bottom of the right-hand pedestal, was locked. Without much hope, I pulled the drawer above the locked one completely out, to find to my delight that there was no division between them and that the contents of the lower one were as accessible as if I had the key to it.

There were, I suppose, about fifteen to twenty bundles of letters of different thicknesses, tied neatly with the traditional ribbon, each a love affair, each a record of this or that period in her career as an attractive woman. I went quickly through the bundles, taking out the top letter or so of each for a clue to the writer's identity, and closer reading. "Joe's" bundle held only five. They were short, and more businesslike than loverlike; they came to the point without any nonsense. The shortest said: "Dear Charlotte, if you will not live with me without marriage, you had better marry me." Occasional paragraphs in letters from other packets

suggested that she had not often insisted on that condition. Poor Joe! He had married her and look where it had got him, besides her bed.

Finally I came to a thin packet of four letters from Jonathan. My fingers trembled as I turned it over and then put it in my pocket. I could not, of course, read them. Silly of her not to have destroyed them after the murder, such complete evidence of the one thing she was trying to hide; Groves would have liked them. Well, when she remembered them and looked for them, she would think he had got them and they would have an acrimonious discussion on the question.

I checked the bundles once more for anything from Freddy, but if it was that way with him and her, and I thought it probably was, he had not so far—sensible man—written to her about it.

I left the bureau as I had found it and turned to the rest of the room. There was nothing more of any interest.

Natural enough. Habit. Or had the car made me think I was? . . . Yes, it had.

I knew that car. It was my car. It was the Austin. That slight rattle of a brake rod or something which even Charlie hadn't been able to trace, and the ticking of the valves when the engine is idling—of course I knew it!

By this time I was out of bed and putting a dressing gown over my pajamas in the dark. More or less feeling my way, I barefooted it along the passage, down the stairs, and into the late Joseph Inwood's bedroom which I chose because it had long windows and a balcony above the street.

I opened one of the windows without making too much noise. The light was not good, but it was not so bad that I could be mistaken about the car. It was the Austin all right. It stood there perhaps fifty yards away, almost to a foot where earlier I had waited in the Daimler for Charlotte.

I said so. When had he taken Austin's stall in the stable garage have been empty for days—

He was standing down there up at Charlotte's windows at end of the balcony. If I had his name in the quietness he would have heard me. But I thrust down the balcony. His reaction to finding a house would have been intense watch, but Charlotte's, if and discovered he was here, would so. What was he going to do come all this dangerous way just at her darkened windows?

He had not. He had even had sight to bring small stones with took one from his pocket now it accurately upward. It hit the a sharp click which must have way toward waking her. Jonathan another stone, then after a short third. Nothing happened.

It suddenly occurred to me might not have come back yet midnight outing. It was beginning light; people would soon be about.

Jonathan threw the fourth taxi stopped at the bottom of the dens. We both heard the pilot flag going up, and a moment later one began walking quickly up the ment, a woman by the sound of

Now Jonathan had stopped stones; he crossed the road into the of the privet bushes on the gardens, and Charlotte in her and head scarf came in sight.

I would have appreciated the situation more under other stances. My fictitious Jonathan bushes had suddenly become crouched below the balustrade watched between the stone steps.

He recognized her and called the privets as she reached the door did not scream; her nerves were perhaps. I heard her startled voice. They were out of my sight under the porch roof. I also heard voice, low and indistinct, there of her latch key. It was risky to him into the house, but she was tentative; she certainly could not view him on the steps. I made landing and the top of the stairs not turned on any lights yet. bring him up to her rooms? crept down the first flight, to the looked cautiously over the balcony.

THE hall was dark, but I again; they seemed to be sitting inside the closed front door, chance the danger, which I thought past for the moment, that she on a light; putting my weight on the thick carpet of each tread to it, I went down half a dozen Charlotte was saying something which I heard the end:

"—no, darling, no. I promise must know where I can find you; get in touch with you if necessary."

"I don't know where I sit long," he whispered. "But I've place at the moment, really. More important still, that you functioning if ever you need manage to come, somehow. I'll be the personal column of the paper addressed to 'John' making a I must be able to see you—"

"Ssh—not so loud, darling! It's dreadful to know you're all right graph—addressed to 'John.' But so sure you will be able to catch

"Only one thing can stop that happens, I dare say it will papers. . . ."

"—so frightening, all this suspense you, all those policemen and darling! You mustn't take

"You mean you've stuck it out here for three years just to get material for a book? My dear—prepare yourself for a shock!"

Satisfied that I had searched the rooms as far as my amateur methods would take me, I went up to the attic, taking off my shoes at the top of the stairs, where the carpet ended and the linoleum began. That was at twenty-five minutes to two. . . .

I woke up, not completely, at four (a church clock struck a few seconds later) listening to something, not in the house but outside in the road—the sound of a car. So far as I could tell, it had just driven past the house as I became aware of it. The sound receded, then the car turned at the corner; I heard it reverse once, and come back, again passing the house, and halt with the engine running, some way up the road. Then the engine stopped, and I lay there in a kind of half-asleep state, wondering why that engine had sounded familiar. I knew I was not in my bed at home, but at the same time was not quite alive to where I actually was. For a moment, that is. When I realized this was Number 4 Cary Gardens, I decided the car might have brought Charlotte home. If that was so, she had had a long session with Freddy. But she knew where she lived, and while the car might have stopped at a discreet distance from the house it wouldn't first have been driven up and down the road like that. And anyway, why had it waked me up? A dozen cars must have passed since I went to sleep. Had it a familiar sound? Lots of cars sound alike, don't they? But why had I thought I was at home?

First of all I thought it must be Charlie, looking for me. Something had gone wrong. So much could, while the Commodore still lived the way he did, with things like the Rembrandt occupying his nefarious mind. But if it were Charlie, he must have done some remarkable detective work to have found me. No. Couldn't be Charlie. Couldn't be.

It wasn't. It was Jonathan.

Jonathan, after a period of circumspect waiting, began getting out of the Austin, my Austin. First his long legs swung out on to the curb, then the tall, thin rest of him. On the way his hat was knocked back from his bony forehead and if I had been in any doubt, that was the end of it in the brief moment before he pulled it over his eyes.

"Oh, my God!" I said almost aloud. "Now what?"

I watched him come slowly along the pavement toward the house while my heart thumped and thudded. He looked over his shoulder only once on the way; in his cautious, indirect approach he had satisfied himself that the road was empty. He seemed to be wearing clothes I had not seen before. He was not at all the figure of a fugitive I had been imagining, the exhausted, bedraggled, hunted sleeper in ditches. In fact he looked almost natty. A new suit, a car, papers as John Hobhouse. I thought if the police could see what I was seeing, they would not be so confident that they were going to catch him. True, it was a stolen car, but only if

Rickey vs Fizz vs Collins

a short story about tall drinks

Reading time: 20 seconds • Pleasure time: all summer

Why wonder which is best? *It's a long summer... so try them all!*

But for a smoother, more delicious, more cooling rickey, fizz or collins, be sure to use Kinsey Gin. Because Kinsey is the *genial* gin...superbly smooth. The dry gin... yes, dry as fine champagne. And 94.4 proof...brimming over with extra flavor.

Happy beginning...happy ending! That's the story of summer drinks when you make them with Kinsey Gin.

KINSEY GIN

IT'S 94.4 PROOF

coming like this. Promise me, never again. But when I think it's safe—"

"South America!" I heard him say.

"Why not?" she said softly. "Now, please dear—"

She opened the door, letting in an alarming shaft of predawn light that froze me against the wall of the stairs. But neither of them was looking in my direction. Jonathan looked up and down the road and went out. She began to close the door very quietly while I leaped upward into the harboring gloom of the landing and my place against the banisters at the foot of the second flight of stairs. I waited until she was in her bedroom before I went down again to the telephone cupboard.

The dialing tone was loud. After a moment Freddy answered it in a filthy temper. She had waked him up. What the hell was it this time?

"I've seen him," she said. "I know how to reach him."

"Then that's going to be all right too," he said with a swift change to amiability. "It's going to be all right."

"Yes. I thought you'd sleep better for knowing."

"I shall."

"Good night again, darling."

"Good morning, you mean—and it is a good morning."

They laughed, both of them; a small, distant laughing together to confirm their certainty and relief that it was going to be all right now.

Going to be all right now, was it? All right for Jonathan, so she had told him; and all right for Freddy and herself and all concerned. I did not quite see, though, how it would work out; it seemed too general a state of all rightness to be quite practical. However, nobody could deny the excellence of her playing in the hall scene. It had had verve, attack, and never once had she let control pass from her hands. Jonathan had not even asked how she came to be out and about at four o'clock in the morning.

Jonathan . . . ! I twisted in my narrow iron bed and consigned him to perdition. I never wanted to see him again! He could go to South America with her for all I cared. Pinching my car to come to her, facing capture and a rope just to make sure she wasn't worrying!

A damnably irritating brute of a man. . . . It was a good thing I didn't really care for him and only wanted to see justice done. How could I care for him—wrapped in her arms in the darkness of the hall? A fine reward for all I had done and was trying to do for him.

South America! She hadn't the faintest intention of going to South America or anywhere else with him. He was like a child in a happy dream which must become a nightmare before he awoke.

I wondered where he had managed to hide himself so safely. . . .

THE next morning about eleven o'clock, Groves had another private session with Charlotte. This time he was a bare five minutes with her, and he left the house almost immediately, his bowler hat at a jauntier angle than suited either him or it.

As for Charlotte herself, in Mrs. Marshall's acid tones, she was "becoming more herself." She rang her bell often and made everyone, including me, jump through their various hoops.

Mr. Groves did not come back until a quarter to one; he was so deliberate in the way he mounted the stairs, as if he were walking through long wet grass, and so definite was the smell of whisky in his wake, that I felt he must have spent quite some while celebrating the sudden rise in his income. Indeed, only a fairly drunken man would have chosen so unoriginal a hiding place as under his mattress for the large Manila envelope containing two hundred pounds which presently I counted (very roughly) while he was at lunch in the basement.

After lunch I helped Charlotte survey her wardrobe, bringing out frock after frock.

The only comment Charlotte made in the course of this which could be said to have had anything to do with the death of her husband was, "Thank God I've enough black to see me through."

If she had any contact with Freddy Williams that day or the next, Sunday, I did not know about it.

The next day, Monday, the day of the funeral, she remained incommunicado all day, saw nobody, ate sparingly, and in short resumed her stricken widowhood for a while.

I EXPECT Groves was disappointed with the will, which gave him a measly fifty pounds after ten years' service, but since Charlotte was the residuary legatee to the tune, according to belowstairs gossip, of nearly half a million pounds, I did not suppose he was worrying.

So they buried Joseph Inwood with suitable pomp, drank a noticeable amount of his liquor, and life went on. For Charlotte this meant another afterbedtime outing. I did not learn about it until next day, when I found a pair of

ing just to substantiate my Dorothy Simpson character was a waste of precious time.

How wrong I was!

Before I left London I rang up Detective Inspector Smith at his flat; it seemed a long time since Eve Gill had had dinner with him, and I did not want him to forget me.

We had a friendly talk, which began with an earnest plea on his part that we should meet at Carletta's, and ended by my saying that perhaps before the summer disappeared he might like to come up to Kessingland for a week end, if he could spare the time. He thought it a wonderful idea but wouldn't count on it, because nice things like that didn't happen to him. In between these two points I said I hoped he was not working too hard and it was remarkable, wasn't it, how long that man Penrose was keeping out of sight? But perhaps the papers weren't fully in the picture?

"I'm afraid they are," he said. "I wish we could publish his picture."

"Can't you find one anywhere?" I asked sympathetically.

"It isn't that. We've constructed a fair enough likeness, but we aren't allowed

Mary was still up. Her f brought me to a mental stand.

"There! I knew you would Mr. Bull said you had forgot me he was coming, you bad gi all right—he rang up this mo said the Commodore had said be able to give him breakfast."

By this time I was remem promise to look after Billy Bu came over to shoot snipe on V—which was tomorrow.

"Can you manage fresh b for him?" I asked her. It was I did not want to have to cope Bull or anybody just now.

They say he is very efficie they judge him by the amoun perceptible in East Suffolk, th right, or again it may be that E has lost its capacity for crim know whether he is a simpl genius—or both.

Until that morning I had no to decide whether his month weekly trips to see us were attractiveness of our marshes shooting or were part of his trol duties, he knowing more Commodore than he let on or modore realized. The third reason I was always doubtful though he announced sometin fifteen-year gap between twen forty is not too wide for among modern men and wom never given him encouragement

HE CAME punctually at eig much too small for him, big man. With him was a dog seen before.

He shook me warmly by the ing, "Good morning, good r smell grilled bacon how are Eve you look lovely in white th dore's away I understand but no matter at all. . . ."

He sat down opposite me at stood disrespectfully just insid dow, staring at us. Billy Bull's sit," whereat it curtsied slightl tained to stand, no less disre To be named Fido cannot have its disposition.

"If," said Billy Bull, sudd rupting himself in a recital o hunting experiences in Kur would content himself with sional case of brandy, a bolt a few dozen pairs of nylons— dropped as he saw mine revu prehension I could not hide.

"He?" I said very stupidly. "Please don't try, Eve. I have a swine of a time with hi sort of thing. Look, I'd get they knew I was talking to y —if they knew what I know."

I waited patiently, not look If I did not yet know much ab Superintendent Bull, I thoug at least that he could not be long. But I was wrong again. quietly as I did. So finally I s

"I know when I'm being sta "That's good," he commen don't as a rule. Tigers always "I'm no tiger."

"And no dove either. Ever look like an angel."

"Who has gone wrong, of c I look very depraved?"

He broke cover at that, an me not to try to be clever-clev it didn't suit me, and anyway did I want than a plain hint?

"Am I to tell him 'All is di fly at once?'" I asked.

"You can."

"Don't be a silly Billy Bull be take the slightest notice."

"All right!" he said energet him that my chief constable letter from Lady Harvey Gil hurst in the County of He Tell him that the chief consta it over to his chief superinte

black lizard court shoes under the bed which had not been there the night before. Also she slept soundly until noon. I felt safe in assuming she had spent some of the night with Freddy Williams.

In the meantime Jonathan was still news. The police were "redoubling their efforts." There was a second leader in the Morning News on their lack of success. Were there too many constables in motorcars and not enough on their feet, pounding the pavements? And so on.

The only other point of interest worth recording for that day was a little piece of information I learned from the housemaid, Molly. Molly's Irish nose was out of joint because Mr. Groves had suddenly taken against the way she made his bed.

"I told him in that case, why, he could make it himself, maybe, and he said he would indeed, and that's what he is doing—making it himself. Now what do you say to that?"

I did not say anything to it; the real reason for the butler's fussiness was his secret; and mine, of course.

At last the evening came, and with Charlotte's permission and the rest of the household's knowledge, I went off to fetch my trunk from Suffolk on the understanding that I was to be back not later than six o'clock tomorrow, Wednesday, evening. I left the house a little reluctantly, afraid I might miss something and feeling that perhaps this trunk fetch-

to do more than circulate it to police stations. You see, if a person sees a picture before identifying a man in the flesh, his evidence wouldn't mean much. The defense would say he was recognizing the man from the picture, not from his memory of him."

"Oh, I see," I said. "You've got a witness who saw him near the scene of the crime? I was being very dense."

I heard Mr. Smith catch his breath.

"Dense!" he said. "If the criminal classes were as dense as you are, my friends and I would be out of a job. Will you please forget what I said, and you said, about witnesses?"

"Of course," I promised, and we said goodby.

I had taken a risk, but the jolt I had given him removed any danger there may have been that he would forget me. I still had a strong feeling that I would need him; the Kessingland week-end idea had been more than a casual piece of conversation.

AS EVE GILL again, if only for a day, I drove home, arriving just after eleven that night. This time, since I put the Daimler away in the stable instead of leaving it in the covered yard, I saw the empty stall where the Austin should have been. It reminded me most uncomfortably of Jonathan. But what did I care? Somewhere, he was managing quite well without me.

WEAREVER

William Bull, O.B.E., D.S.O., M.C.—that's all me—with instructions which went: 'I dare say the woman's mad but you'd better look into it for what it's worth. You know Gill, don't you?' I said, 'Yes, I know Gill and of course the woman's mad.' But I didn't tell him how well I know Gill and how likely it is the madwoman has hit the nail on the head. And I didn't tell him either that I like Gill very much indeed and his daughter better. I suppose he has taken the damn' thing to the Continent and is selling it for as near twenty thousand quid as he can get. That's what they say it's worth."

I FELT sick but I managed to say it had always been regarded as a mistake on my Uncle Harvey's part to marry again, and it was generally felt that in doing so he had found himself in the family vault sooner than might have been expected; so soon, in fact, that he had not had time, apparently, to make a will.

Billy Bull interrupted me:

"In which will, according to Lady Gill, his brother Rupert—according to his brother Rupert—might have been bequeathed The Old Woman in a Shawl, by Rembrandt van Rijn. It seems," he went on, "that this point of view has been expressed by the Commodore on more than one occasion since his brother died; regretfully it is not shared by Lady Gill. The reluctant conclusion must be reached that stealing the picture would be precisely what he would do after cajolery, importunity and threats had failed to achieve his purpose."

"All very good evidence," I said, "to prove all over again what a horrible woman my poor uncle died of."

"An absolute shocker," Billy Bull agreed, "but in her P.S. she wonders why her niece Eve should spend the night of June twenty-second in Pakenhurst village in secrecy, for that niece did not consider it necessary to pay her respects to her aunt at the Grange during the time she was there."

"I was staying with Nanny Brown! I never go near Aunt Harvey Gill if I can possibly avoid it. Anyway, the picture was taken on the twenty-third."

He looked at me and shook his head.

"You oughtn't to have known the date," he said.

"I've got a good memory. I read the papers."

"Won't do, Eve, won't do. I know you, and you're not much different from other women when it comes to dates. But apart from that you were in Pakenhurst on the twenty-third if you spent the night of the twenty-second with your Nanny Brown. There were fingerprints on the metal reinforcing plates at the top of the ladder—and on the window."

"Not my fingerprints," I said.

"No," he agreed, smiling amiably at me, "you wore dark brown doeskin gloves. The local man found a few fibers from them in rough places on the rungs of the ladder. Wonderful thing, modern microscopy."

My mouth was dry. Brown doeskin gloves... yes. Where were they now? I felt dizzy with the dangerous implications of this thing which I had practically dismissed from my mind with the coming of Jonathan Penrose. It had seemed so unimportant... doeskin gloves. Oh, my God, I said to myself. If he arrests me, what will happen to Jonathan? I shall be absolutely finished. . . . Please, no!

"Shall I answer it?" asked Billy Bull conversationally.

What was he saying? I stared at him. Then through the turmoil of near panic, I heard the telephone ringing in Father's room.

"No—it's all right. I'll answer it," I said, and added with a miserable attempt to appear able to continue the fight, that I wouldn't try to escape.

At first I did not register what the exchange was saying. The words did not

convey anything at all, until I heard "Rotterdam." I came to, and said I hadn't quite understood, would they please repeat what they had said. My heart was in my mouth.

A personal call for Miss Eve Gill from Rotterdam—was Miss Gill available, please? I said she was speaking. Would I please hold on. I held on, turning to look into the other room. Billy Bull was lighting another cigarette.

Father seldom uses a telephone unless he has something important and immediate to say. I hoped he was at his brightest and quickest, for he would have to do a lot of reading between the lines of what I would be able to say with Billy Bull within earshot.

"Eve?" exploded his voice in my ear. He might have been telephoning from the village, so clear was it. "Can you hear me?"

"Yes."

"Are you alone?"

"No." My relief was heartfelt; he was in a security-minded mood.

"Billy Bull?" he asked. "All quiet?"

"If you had it to do all over again, would you still marry me?"

COLLIER'S

CHAS. MACDONALD

"Yes," I said. "No."

"What?"

"No."

He paused, then said: "Is it bad?"

"As can be, I think."

"Guesswork?"

"More than that."

"Well, it doesn't matter," he said.

"I'm glad you think so. I don't. From where I am it seems quite the other way."

Then he said something which made me gasp, and the blood began to circulate in my limbs again.

"I see," I said. "Would you like to leave the next bit to me?"

"Why?"

"Oh, just because. I like to see a thing through to the end."

"Just as you like, my dear. Give my regards to Billy."

"I shall do no such thing," I said roguishly. "Someone's listening."

"I thought he might be. Well, there it is. Head him off. You'll know how." My parent's tone held that characteristic note of carefree confidence which is particularly noticeable when I am meeting his troubles more than halfway.

On this he rang off, and I addressed the dead telephone with: "Well, goodbye, darling, and I meant what I said at the dance, you're too young and I'm not old enough."

I went back to Billy Bull, hoping that my end of the conversation had sounded sufficiently innocent to have put out of his head any notion to check the call.

"I've been thinking," I said, "about brown doeskin gloves theory. It may be that you have a case, what with that and other things."

"I'll finish where I began, and repeat what all this has been in aid of: he shake him out of his belief that he can get away with any jiggery-pokery he happens to think up. As things are, he'll come unstuck one day, there'll be a mess, and you'll be somewhere in it." He paused, and took my hand. "If that happened, and I was officially involved as I certainly would be since you live in my division, I think I—well, I—"

I could not do much more after that than hold his hand tightly to me and promise him I would do my best with the Commodore.

"I'll tell the chief that one can't be certain of anything but I think he's right in assuming Lady Gill must be nuts."

We went out of the French window toward the car, Fido reluctantly making way for us.

"Or," I said, "would it be possible for the chief constable to write to my father and say that he has looked into the legations—that's the word, isn't it?—finds there is another explanation which he feels she should have given weight before committing libel to paper?"

"He might say something like that there is such an explanation," said Billy Bull cautiously.

"Oh, I was going to give it to you. Suppose, for instance, my father had come sick of her constant refusals to let the picture examined by expert valuers and decided that he had the right to put his mind put at rest, and so took the picture into his own hands and submitted it to the three best judges in Holland?"

"That's quite silly, I'm afraid. It would put his mind at rest, or make him less likely to be guilty of stealing."

"I know it was worth eighteen, instead of twenty thousand? It might turn out worth twenty-five."

"But if he found, as he had suspected, that it was worth ten?"

"Ten thousand is a hell of a chunk of money. He would still cry his eyes out, surely."

"I didn't say thousand. I said ten thousand, or perhaps thirty. I don't owe what a Rembrandt fake is worth. Not as much as a good copy of an actual picture, I dare say."

Billy Bull had stopped in mid-sentence. "A fake? Why should the Commodore think—"

"Rembrandt," I said, with the Commodore's words still in my ear, "put altogether about seven hundred pictures in the course of his life. There are a thousand of them in America alone. What sort of thing would make me suspicious wouldn't it you?"

BILLY BULL swore fiercely. "The damned ingenious cock-and-bull stories I ever heard! The only possible chance he'd have of getting away with that would be if it actually did turn out to be a fake. Pipe dreaming on my help. You haven't a thing to laugh at."

"But I have. You see, it is a fake."

"What!" He glared at me. He was relieved, glad, but felt somehow he had been tricked. "How did you know I swear you didn't know when I began you. You—that was it—the telephone."

He shook me. I could not control about that.

"You deceitful, beastly girl! What he tell you?"

"That three of the best men on the subject have just agreed independently that if Rembrandt had ever done a picture of an old woman in a shawl, which he doubted, that certainly wasn't it."

He dropped his hands from my shoulders and then laughed. He looked

dog, he looked at me and then at the marshes stretching away to the estuary and the sea.

"Snipe!" he said.

Fido watched him with foreboding while he took his things from the car. I said I would walk as far as First Mile with him.

We set off, Fido drooping along at our heels.

You would have thought that that had been enough for the morning but something else came up.

Billy Bull, of course, took no notice of the sound of hammer on metal coming from Charlie's workshop by the side of his cottage. Billy Bull didn't know, as I did, that Charlie was on board the Peacock in Rotterdam harbor, and that the noise was odd, to say the least of it. No one but Charlie ever used his workshop.

FOR a moment I thought Charlie must have stayed ashore, but in the next realized that even without a man short in the crew, he was essential to the engine room.

Billy Bull was telling me about a new member of the Watch Committee to whom the chief constable objected as an intellectual with too great a fondness for planning; I was listening half to him and half to the hammering. It was a noise so typical of Charlie that it continued to make me uneasy.

When we were level with the cottage, and about sixty or seventy yards from it as we walked along the dike toward the broad track called First Mile, I caught sight of the back of a car through the half-open double doors of the workshop. I do not know how I kept on walking when my impulse was to turn round and start running to the cottage. But I was with Billy Bull, I was with the Chief Superintendent of the East Suffolk Constabulary. I had to continue in outward calm by his side.

There was not the faintest chance I was mistaken. It was the Austin.

I managed to keep my eyes off the cottage, but I could not shut my ears to the sound of hammering nor my mind to the significance of the Austin being there instead of in its stall in the garage.

It was like walking on the edge of a precipice, with soft ground crumbling at every step. Very vividly I could imagine Billy Bull's reaction if he ever found out what I, whom he thought he was rescuing from a parent's evil influence, was doing. I wondered if the Commodore had ever reached such heights, or depths as this—had taken an important police official within fifty yards of a murder suspect for whom the whole country was searching—and said no word.

I had an idea the Commodore would

be envious if he ever heard, but that was no comfort at all.

At the beginning of First Mile I stopped and said, "Well, good hunting." Billy Bull took my hand affectionately and said he would be back by half past one, not a minute later.

"I wish," he said, "there were more like you, Eve."

I tried not to flinch.

Somehow I managed to keep my feet from running, and approached the cottage as nonchalantly as I knew how. Between my shoulder blades I could feel Billy Bull's suspicious eyes as he watched me, as he cunningly allowed me to betray not only my guilty knowledge but the man they hunted. . . .

At the workshop door I dared to look back. He was a distant figure almost lost in the haze which still lay like white muslin on the green velvet of the marsh.

I stepped inside. The Austin's near-side front fender was perched on the bench while Jonathan in overalls was straightening a large dent in it with a round-headed wooden mallet. He was whistling a tune just recognizable.

He looked up, saw me and dropped the hammer.

"Good morning," I said. "Did you hit something?"

He muttered vaguely about a gatepost, and went on looking at me guiltily. I wanted to burst into tears, either because I was so furious I could scarcely see or so relieved to find him here.

"I owe you a lot of explanation," he said. "I couldn't find you anywhere. I didn't like to question Mary about you. She would have wondered what business it was of mine. Charlie said he was sure you would approve of my staying here instead of the Holland idea."

"Oh," I said. "Charlie did, did he? I presume he's in a position to judge?"

"Yes. I think so. I—well I told him about—er—"

"About everything?"

He actually laughed. "I had to. He said if I didn't he would strangle me and drop me into the estuary and no one in the world would give a damn. I saw he was concerned about your part in it; otherwise I think I would have let him go ahead. He's a very good friend of yours, you know. He said that since you had made up your mind to help me, he wouldn't question the sense of it."

Charlie had been right, up to a point. But he had not realized the extent of Jonathan's weakness where Charlotte was concerned, had not known he was likely to try to keep in touch with her. I could see how easily Jonathan must have agreed with this change of plan which allowed him to stay in England.

"You do understand, don't you," I

"My, it's thirsty! This is the third cupful!"

Two for the Show...

A horse-show might or might not be *your* idea of the best way to spend a day...

Only you can say—for your tastes in entertainment are quite properly your own.

And so are your tastes in whiskey! That's why Hunter's very *different* flavor might not taste "best"

to you. For no whiskey in the world can possibly taste "best" to everybody.

Yet you *should* try it! Its very difference may be exactly what you're after. For thousands of men who have tried Hunter once, have liked it instantly—and today prefer it to all others.

HUNTER

SINCE 1860

First over the Bars

said, "that *her* safety depends on no one discovering that she knows you, and you know her?"

"But of course. That's the essence of the whole thing."

"Will you promise me something?" I asked, and at once wished I had not; it is a bad line to take with anyone.

"I owe you more than a promise."

"Call it a suggestion from me. Look, don't do it again. You might hit something larger than a gate post—and it would take more than a mallet to straighten out the damage."

He was standing close to me. I met his eyes as steadily as I could.

"How did you know?"

I countered with a question, a question of more importance than any I had asked anyone since the thing began.

"Did you ask her where she had been at that hour, whom *she* had seen?"

He stared at me; a jaw less firm than his would have dropped. "Good God!" he said. "What *don't* you know?—I—well, I assumed she couldn't sleep, had gone for a walk. Most natural thing to do. But what do you know about this? About my seeing her?"

"Much more than I wanted to know, or your sake, and very much less than I hope to know before I've finished, for nine," I said, and realized that I had brought our relationship to a point of danger which I had known from the beginning must one day come.

He sat down on the running board of the car and looked at me as if he were seeing me for the first time.

"What *have* you been up to?" he said.

"I'm not going to tell you—yet."

"You're interfering in something that doesn't concern you! I know that! And won't have it! You—you—"

"My name's Eve—"

HERE was a pause. If I was not red in the face, I felt I was. He was, certainly. "I'm sorry," he said. "I don't pretend to understand. But I've a right—" "And I've none," I spoke quickly. "It's only that I think I see something, the truth of something, more clearly than you do—more than anybody else does, at the moment. Of one thing, though, I am absolutely sure. You won't hold it against me in the long run, although between now and then you can and will hate me, but there it is. I'm working for you—"

"As long as you're not working against Charlotte."

There came the flat faraway bang of a shotgun. He glanced questioning to the marshes.

"That's a policeman," I said. "He's had breakfast with me and is now shooting snipe."

"Snipe? A policeman!"

"Exactly. And he has no more idea who is staying in Ship Cottage than the sun in the moon."

"Charlie said you generally know what you are about."

"What else did Charlie say?"

"Quite a lot. Among other things, that you had decided to lend me a hand it's no good trying to stop you."

"Then you have no further objections?"

"I have a thousand, but I realize I'm in a position to raise them. You've got all that can be done for me."

"I'm glad," I said.

I felt better still when a few moments after I had left him I found the cloakroom ticket I wanted so badly. It was where I had hoped, in the waistcoat of the suit he had been wearing that night which now hung on a nail behind the door of Charlie's attic. The date was not it, too, scribbled in pencil but perfectly legible.

Jonathan was still busy in the workshop, but I left the cottage by the back door just in case he saw me.

I was learning some perfectly horrible bits.

Sam Page was coming along the road from the village with our newspapers; he saw me, stopped and asked if I would mind taking them with me if I was going up to the house. His rheumatism was better, thank you. There was one paper still in his basket—the Telegraph. He rode on to the cottage with it.

I unfolded the Marsh House copy of the same paper; there was no message for Jonathan in the personal column, but one day there would be, one bright morning like this she would send for him.

IF I had not come straight from Kes-singland, from home, and known that Jonathan was securely hidden away in Ship Cottage there, I would have been alarmed at the sight of the police car outside Number 4.

As it was, I was only acutely curious. The house was in a buzz of excitement about something. I heard Havelock's voice raised higher than was seemly, and Mrs. Marshall's only a shade quieter in tone, coming from the kitchen. Somebody, a woman, was shouting on the telephone in the front hall. I wondered what Groves was thinking of, to let such disturbance run riot unchecked. I pulled off

would be more suspicious for me to be in there with it shut, and slid my hand under the mattress. I explored from top to bottom, first from one side and then from the other.

But the Manila envelope was no longer under the mattress.

As I stood there, wondering, I heard quiet footsteps coming along the linoleum of the corridor.

I went to the open door in two strides, and stood a few inches inside the room, with my back to whoever was coming, as if I had just arrived there myself and had gone no farther in.

To my instant alarm, a voice I recognized said:

"Who are you and what are you doing here?"

I swung around, keeping my back to the window, which faced west and was full of dangerous sunshine. I blinked at Ordinary Smith through my spectacles and said adenoidally: "Oh! You made me jump, you did! I'm Mrs. Inwood's maid—I—I was just standing here, thinking he'd never sleep in that bed again, poor man, or brush his hair in front of that mirror—" I sniffled and put a handkerchief to my eyes and nose.

my hat, made sure my hair, encouraged by twenty-four hours' freedom, had not crept loose, and went into the kitchen.

"Suicide—!" I heard Havelock saying. "What troubles did *he* have, I'd like to know? An' he didn't love the old boy all that much, if that's the idea."

Four white faces turned to me; Mrs. Marshall's, Cook's and the two maids'. Mrs. Marshall had been crying. I looked from one to another.

"She doesn't know," said Mrs. Marshall.

"I've just got back—"

It seemed to me they all spoke at once, each wanting to be the breaker of the tragic but nevertheless dramatic news, and out of the spate of words I seized on a few which made sense, which told me why Mr. Groves was failing to keep order in the household.

Mr. Groves was no longer here. Mr. Groves was dead. Mr. Groves had fallen in front of a train at Leicester Square station. Last night. At half past ten. He'd seemed so much more cheerful the last two days—The police had just been able to identify him, with Hewson's help. Madam had notified the police just after lunch that he was missing, when everyone was so worried he hadn't come in last night, hadn't slept in his bed . . .

"I feel awful," I said, and left them.

"Haven't slept in his bed," had given me a thought. I hurried up to Groves' room, leaving the door open since it

"Sit down and tell me about it," he said with a dreadfully put-on sympathy, undoubtedly a vital tool in his trade.

"Sit down *here*?" I said. "Oh no, sir, not here, I couldn't!"

Thank God he was not looking at me with any particular interest. Perhaps my disguise was really good; perhaps he was thinking hard about something else, about Mr. Groves, of course.

I dared to interrupt:

"Surely it—it wasn't suicide—the police—you *are* the police, sir? You know it wasn't suicide—"

"Do we? We haven't had much time to find out about him."

"No, of course not—what with the first murder still on your hands, as it were."

He looked at me now.

"First murder? Is there a second one?"

"Oh, dear, I didn't mean that—" I sniffed hard and long, keeping the handkerchief busy. "Of course, it must have been an accident if it wasn't suicide, mustn't it? There have been cases, though, haven't there, sir, of people being p-pushed under trains?"

"Why on earth should anyone want to push this wretched man under a train?" he demanded.

"Perhaps he knew too much about Mr. Inwood's murder. I thought—I—oh, sir, don't take any notice of me. There'll be lots of witnesses to say how he fell, won't there, sir?"

"There's only one man who could tell us anything worth while—" He stopped again.

"I don't think you can help us," he went on, dismissing me.

"Thank you, sir," I said, and escaped, my knees so weak that I was glad my room was near. I locked the door and sat on the bed, lighted a cigarette and tried to calm myself.

That sudden meeting with my Mr. Smith on top of the news about the butler had nearly broken my nerve. My heart felt as though it would never beat normally again.

That money. The envelope had gone with remarkable rapidity considering that the news of his death had only been known a very short time.

It looked as though Charlotte had known earlier than the rest of the household that her butler was dead.

I was shivering. Of course she had had to get the money back. She could not leave it there for anybody—Mr. Smith, for instance—to find.

She had not written that check until the second interview with Groves, the day after he had first shown her what was in his mind. Between those two interviews she had seen Freddy Williams. Even as she wrote it, she had known how temporary would be the inconvenience and expense of being blackmailed by her butler.

The muscles of my jaw were tight and aching. I had wondered, hadn't I, what they had meant by their phrase, "It's going to be all right?"

Well, I thought I knew now.

But how sure was I, from the police point of view? Evidence? They would say, "Where's the *evidence*?" A man rehearses a speech in front of a mirror, but of course you don't *hear* what he says. He spends fifteen minutes with Mrs. Inwood and comes out looking pleased. Next day he sees her again. He goes to the bank with the check. He puts two hundred pounds under his mattress. Did he? Where is it? It would be my word against hers. And when all is said and done, who are you? I fancied someone asking. Not "Dorothy Simpson." Oh, your name's Gill? What are you doing here, pretending to be a maid?

I dared not imagine what they would say—and do to me when I tried to explain *that*. I would be nearer the dock of the Old Bailey than either Charlotte or Freddy Williams, and Jonathan would be in it with me.

I realized with an awful frustration that to know a thing is not necessarily to prove it, and in spite of everything I had done so far to pull Jonathan's chestnut out of the fire, it was still in it, hotter than ever, and my fingers had already been badly burned.

The fact that in Groves' murder was promise of the same fate for Jonathan himself was beginning to put me into wild alarm. Charlotte had told Freddy Williams, hadn't she, that it was *going to be all right* about Jonathan because now she knew how to get in touch with him?

A KNOCK on the door set my overstrung nerves in a jangle; I asked in a strangled voice who was there. Mr. Smith answered, there was a word he wanted to say to me.

"I'm all undressed!" I cried, nasally, and pulled off jacket, blouse and skirt in a frenzy. I could not face him.

"I won't come in," he said. "I can say it from here just as well."

"Yes, sir—"

"It's this. I am giving you advice as a police officer. You might find yourself in trouble with us if you go about spreading rumors with regard to the way this man met his death. It was either suicide or accident. There is no possibility of foul play."

I had a spark of satisfaction. If there was no possibility of foul play, why this heavy warning?

We shook a chandelier...
and look what dropped out!

YOU'VE SEEN what striking colors emerge from the prisms of a chandelier when the sunshine hits it?

Well, sir, we've scooped up those magnificent colors and stirred 'em into a sparkling new group of Arrow Ties, which we call (appropriately enough) "Prism Prints"!

Included in this moiré all-rayon group are a wide variety of patterns. Colors are bright, lively as a new yoyo on a string!

Like all Arrows, these new ties knot perfectly, drape superbly, and resist wrinkles as Willie resists Castor Oil!

COLLIER'S

HANK KETCH

"Yes, sir," I said. "I didn't mean any harm, I promise. I quite understand."

"Be sure that you do," said the voice of the law, through the closed door.

I sat in my underthings and stared at the wall while it dawned on me that although I might not have exhausted the possibilities of close contact with Charlotte, I might be spending the precious time in other ways to greater profit.

For one thing I must keep watch over Jonathan—and the personal column of the Telegraph.

And there was Freddy Williams, looming so largely now that his shadow lay everywhere I looked. It was no good pretending to myself. If I wanted to get quickly to the heart of the business, it was through him now, rather than Charlotte, that I might do it.

It was obvious from every point of view, in fact, that Dorothy Simpson had done her job.

This brought me to Dorothy's trunk, still sitting by the unpaid taxi driver outside, and I hurriedly put on skirt and jacket again. I was glad that in my eagerness to find out the meaning of the police car I had delayed paying off the taxi. Having decided that Dorothy Simpson must go, she could go now, instantly, in a matter of moments.

I GATHERED up the few bits and pieces of her modest belongings, threw them into the suitcase and ran out of the attic, along the passage to the stairs. Mr. Smith heard the commotion and put his head out of the butler's room.

"I'm not staying in this house another minute!" I shrieked at him hysterically. "People dying right and left! It's not safe!"

"You know best," he said, and returned to his searchings.

Relieved to know that he meant what he said about my being unable to help in their inquiries, I hurried down the stairs, banging the suitcase now and again against the banisters to emphasize a panicky departure. I hoped Charlotte heard me; it would lend color to what she was told about it later.

I burst open the kitchen door. "Mrs. Marshall," I cried shrilly, "I'm giving notice here and now and I'm off, and if you girls know what's good for you, you'll do the same! Who's going to be next? Have you asked yourselves that? Personally, I don't care because it's not going to be me! House of Death, that's what it is! A House of Death!"

I slammed the door before anyone could do anything about it, and ran out of the back door and up the stone steps to the pavement. The taxi was still there, the driver seeming glad I had returned.

"Liverpool Street!" I said loudly, case anyone had followed me to the ment door, and jumped into the cab. The back of my nose was hurting abominably on account of having had such noises forced through it while half asleep. I put the spectacles in my handbag.

When we were safely in Fulham Road, I told the driver I had changed my mind and gave him the Thurloe Square address.

"Don't blame you, miss, clearing it out there."

I realized that the tragedy of Gordon would be in the evening papers by now, and that Dorothy Simpson's views on spells and "houses of death" were shared by large numbers of people.

The taxi driver helped me up the steps with the trunk.

A minute later Aunt Florence gave me home from Harrods. She said, "Well, dear, don't tell me you've lost the job, though I'm not surprised. I felt sure it wasn't you." I said I was afraid I had lost it and here I was again to use her old like a hotel.

"Eve, I think you are splendid taking so bravely, with such unconcern!"

But am I splendid enough? I wondered.

I had some sort of a plan formed.

After dinner I dressed up to the best of my ability, in my nice gray evening gown, over one of Miss Vandelte's frilly arrangements. I shook a pair of gloves from their Cellophane wrapping and added luster to my legs. My hair, after its twenty minutes' brushing, had recovered nearly all its natural effervescence, in fact it was a little beside itself and let out once more, and produced an aureole effect that I had not noticed before.

I quite liked the look of my face, that it had been brought out from the veil of mauve powder and given a little assistance in the matter of color.

It was getting on for ten o'clock, and I would have to be moving. I tried to get a glass of cognac. The trouble lay in the fact that there was any bliss in my ignorance about Freddy Williams. I knew that was definite. I tried to add it to my nocturnal habit in that I loved and killed butlers and gardeners seemed to be more active after dark than before. He lived in a bachelor flat, North Audley Street and he could be quite without consideration for his finer feelings.

That was about all. It was not a picture, even through the gold of cognac; however, if I chanced to see him and my few last shreds of virtue, I probably manage.

I went upstairs for my evening

and purse, kissed Aunt Florence good night, and walked around to the garage or the Daimler.

I drove to North Audley Street and parked in the same place as before, just round the corner.

Lights showed that the room on the third floor which I believed to be his sitting room was tenanted. The two windows were wide to the summer night, the curtains undrawn. I could only hope that he was alone; if he were not, then the whole plan would fail.

The fatefulness of the moment was incalculable. The musical pings as I dropped two pennies in the public telephone across the street were like the first signals after zero hour of the first battle of my small war.

I dialed the Inwood number, and hoped Charlotte would answer it herself. I was working to a close timetable. At last I heard Mrs. Marshall's voice.

"This is Simpson, Mrs. Marshall. Please put me through to Madam."

"Mrs. Inwood is unable to speak to you, I am afraid, Simpson, and certainly not to you. She was very upset when she heard about your exhibition this afternoon."

"I'm sorry to hear that," I said, "but it is important that I should speak to her." Mrs. Marshall sniffed.

"I suppose you've changed your mind about leaving. Well, I'm sure I don't know what Mrs. Inwood—"

I cut her short, saying in Dorothy's sweetest, nosiest voice: "I don't care what I know or don't know, and I haven't changed my mind. Connect me with Mrs. Inwood—"

"Really!"

Don't bother to go off the deep end, I put the plug into the socket marked 'e' and tell her I have something very urgent to say. Very urgent. And I shall be ringing her up until she *does* speak to me, see?"

Well, I've never heard—such a way of talking! You'll be in serious trouble if you dare to threaten us!"

Not as serious as you'll be in if I don't speak to Madam at once."

She muttered angrily, and I heard the click as she held my call and spoke to Charlotte on her extension. After a moment she came back on the line.

"Madam will not speak to you," she said with satisfaction, and rang off.

I cursed her, although I was not unprepared, and had two more pennies ready at the top of the box. I put them in the slot

and dialed. She had to answer it. I gave her no time to ring off again before she heard enough to make her think twice about it.

"It's a police matter concerning *her*," I said, "which she might prefer to talk over with me."

She digested this indignantly, but spoke again to Charlotte. There was a click, and then Charlotte's cool voice, "Yes, Samson?"

"I can't talk as long as Mrs. Marshall's still in the telephone cupboard."

"Oh? And why not?"

I explained very briefly about the switchboard's weaknesses and added, "Poor Mr. Groves knew about it."

THIS produced the desired effect; she paused, before she said, "I have rung for Mrs. Marshall. Well, Samson, I suppose you want to apologize for your ridiculous—and selfish behavior."

"Yes, Mrs. Inwood, in a way. I was never one to shirk my duty, I hope. You see, it's about that Mr. Penrose."

"About—whom?" she said calmly.

"You know who—Mr. Penrose."

"Oh, of course. The—the murderer—" she said the word with the right amount of horror.

"You see, I feel I ought to go to the police—"

She interrupted to speak away from the telephone, "Mrs. Marshall, I wanted to tell you not to wait up any longer. I am quite all right now. You go up to bed." After a pause she said, "You were saying, Samson?"

"I thought it only fair," I said, "to let you have a chance of deciding for me what I should do about it."

"About just what?"

"About knowing how they could find him."

"Good heavens! That is important information, isn't it? Surely you should tell the police at once, instead of discussing it with me?"

I had never admired her so much.

"Yes," I said. "I suppose I should."

Thank you, Mrs. Inwood. I'm most relieved, really I am."

If I had been she I would not have dared leave it so long before I took up the conversation again. Suppose I had left it at that and rung off? But she knew I wouldn't, and even she would want a moment to recover from the discovery that she had a second blackmailer to deal with.

Finally she said, "As a matter of inter-

More and better aluminum products — today... with

Kaiser Aluminum

a Permanente Metals product

THESE ALUMINUM PRODUCTS are not just idle fancies—manufacturers are making them right now.

They're better products—better looking, longer lasting—because of light, strong, weather-resistant aluminum.

And helping to speed them your way is Permanente Metals' integrated aluminum operation ... which controls the production of quality aluminum

through huge processing plants at Baton Rouge, Louisiana, and Spokane and Tacoma, Washington. In but a single year of operation these plants have accounted for 175 million pounds of plate, sheet, and strip aluminum. Almost as much as the entire industry produced in the most productive year before the war!

Under the spur of such vast production—and a management which welcomes challenges and in-

vites "the jobs that can't be done"—the aluminum products you see here, plus hundreds of others will come to you in greater volume, better made.

Samson, how will they be able to find him, in your opinion?"

"Well, I think if they advertised in the newspaper—in the personal column. Of the Telegraph, for instance. A message, mean, addressed, say, to 'John,' asking him to be at a certain place at such and such a time. I think he'd turn up all right the sap."

There was another pause.

"I see," she said. "What am I supposed to say to that?"

I laughed as unprettily as possible.

"It's rather for me to say, isn't it? Mrs. Inwood, I've been thinking. You remember you said how you hated other people wearing your clothes? I thought at the time, it's easy for her. For why? Because she's got all the nice frocks and coats and suits and underclothes as anybody could possibly want. Now I'd like to be in that position, Mrs. Inwood, I really would. Then again, Mrs. Inwood, when you hit me with that hairbrush, I thought, if that was my hairbrush, my lovely gold and ivory hairbrush with my crest on the back and all, I wouldn't use it for beating my can't-answer-back maid—but then, I had to laugh to myself, even if my leg was hurting cruel, because after all it wasn't my hairbrush."

I went into the street. He pulled the curtains across both windows and came back to me with his thick black eyebrows drawn together. He looked at me a moment, then said quickly, "I am afraid it's a night for us. I'm very sorry. It's awfully rude of me, but you'll have to go along."

He handed him my glass and got up from the settee; he put down the glass by the side of the other. I said nothing, making my expression blank. He stared at me a moment. I picked up my coat and purse. "If it weren't that a very large sum of money is involved," he explained, "the loss of money one could use to put on the shows and not notice it, I wouldn't mind this to you."

"Or to yourself?" I asked brightly. "In your mind, you forget I shouldn't be at all."

He was returning my brandy glass to the cocktail cabinet.

"That's nonsense," he said. "Will you give me a telephone number or some-thing?"

"I'll have yours in case," I said, and

But she hung up before I could finish. I took it as a good sign.

I had to move quickly. She was still connected directly to the exchange line and would not have to go downstairs to the switchboard before being able to ring Freddy Williams, but she would give herself a few minutes to collect her thoughts and decide how to handle him. One thing she would be quite certain about, he would raise all kinds of hell; a man who is just recovering from one murder is not in the best state of mind to hear that he may have to commit another. I thought I could bank on that.

However, I did not walk but ran across the road, and slowed down only for the short time it took me to get past the porter of the flats, which I did with an assured but friendly, "Good evening," conveying the impression that not only did I know to which flat I was going but that I was expected there. The clock in his little office pointed to ten minutes to eleven.

I stepped into a small self-operating elevator and pressed the third-floor button.

It arrived with a grunt at the third floor and I crashed back its doors with relief and found Freddy Williams' door kept waiting."

I STARTED off for the top of the stairs, he just behind me to the elevator, leaving the door of the flat open. His arms came around me, his lips seeking mine. I kept my head back.

"Telephone me at ten o'clock tomorrow morning," he said, "and if you forget the number you'll find it in the book. When I said this was a matter of money, it was absolutely true. I might be able to do a show."

He stepped into the elevator, closed the doors and rattled downward. I turned and went quickly back to the flat, through the door, across the hall and the width of the sitting room and stepped behind the drawn curtains, squeezing myself flat against the wall in the corner by the side of the open window.

I heard the street door below open and close. The first sounds of them came from the elevator, and then, startlingly near and sudden, Charlotte's voice ten feet the other side of the curtain.

(To be continued next week)

important than any other subject or combination of subjects.

"You mean, this isn't Izzy Brown's?"

"It is not." His voice was a heavy voice, like the rest of him, and it reached into me as I think it was supposed to do.

"Oh, my God!" I said, turning from him abruptly. "Not Izzy's? But this is Flat 3—22 North Audley Street?"

He shook his head. He had decided, I saw with great relief, that I was the sort of girl whom he didn't mind making a mistake about an address.

"Not 22," he said.

"But, oh dear, what must you think of me, stamping in like this!"

His eyes and his rather full lips smiling assured me that he was thinking I was a nice piece of goods. He had the cruellest mouth I had ever seen.

"Well, now," he said, "I wouldn't think badly of you unless, of course, you felt you couldn't wait even a minute before you set off to find Number 22 and Mr. Izzy Brown. If you did that, without even a short drink for the road as it were, I should immediately think very badly of you."

While he was making this little speech of welcome he brought a cocktail cabinet into action by opening its lid, so that an intricate array of glasses, bottles and decanters sprang into the ready position.

"Oh, my!" I said. "What an elegant affair!"

"Neatly accepted," he returned. "What shall it be?"

I STOOD by his side, close by his side, and surveyed the battery. "I see a beautiful bottle there," I said, pointing, and turned my head to smile at him in a friendly fashion.

"I expect Izzy Brown hides his best cognac when you're around," he said, and laughed.

"Izzy Brown," I replied, "is a very rich, kind gentleman and if a girl wanted his fine maison of even eau de vie de Danzig, as a short one for the road, he would give it to her—but with an almighty roaring noise, for he is a very mean, rich, kind gentleman."

"Which makes me wonder why you should be bothering about him at this time of night."

"That's quite a story," I said.

He poured fine into two balloon glasses, and as he put the cork into the bottle, the telephone rang. The smile left him.

He walked across to the table by the fireplace, picked up the receiver, listened, and said, "No, tomorrow"; listened a few moments longer and then repeating, "No, tomorrow," with great firmness put the receiver back on the cradle. He returned for his brandy.

"Quite a story, is it? Let's sit comfortably on that settee, and you tell it to me. I don't know Mr. Brown, so it won't hurt him, and it might help you. How do I know you loathe Mr. Brown's insides? Well, it's the sort of thing I do know, and besides, there's a very good sign of it in the fact that you made a mistake in the address."

"Oh?" I said, looking up at him as a girl does when she knows she is in the presence of her mental superior.

"You see," he explained, steering me to the settee, "we have a machine in our minds, in the subconscious, which works overtime at making us forget what we don't like consciously—all the unpleasant things."

"Oh, dear. I shan't do very well on the stage if my subconscious makes me forget where people like Izzy Brown live, particularly when they've said how much they want to help me. You see, he's going to put on a show, and—"

The telephone rang again. This time Freddy Williams frankly scowled at it. It went on ringing.

"Why can't business people learn to stop work at six!" Reaching out a long arm he took off the receiver and put it

it was silly me thinking what and not I'd be doing with it. But that didn't mean I wouldn't like more than anything to have a brush like it, and another to match, and a mirror and little vases and pots all the same, with a pretty dining table to put them on—and a bedroom, a pretty bedroom, and the bedroom in an elegant house instead of a run-down cottage my mother left me, but not enough money to mend the shoes, they're that old. It's always money, Mrs. Inwood, it seems to me. I can't do anything, can't buy anything, can't have anything, can you, without being useful?"

"See," said Charlotte again, and then, "suppose you'll be wanting to discuss this with me in person?"

"Yes indeed, Mrs. Inwood," I agreed. "I would like to very much."

"Tonight?"

"No, not tonight. I am very tired."

"Well, so am I, Mrs. Inwood, and that's the fact. I don't sleep well at the best of times. The slightest noise wakes me up."

"I gather," she said. Under the sarcasm of her tone I could hear the

"Well, I'll ring off now, and call you tomorrow, maybe. You mustn't forget, because I'm sure we shall be able to arrange—"

ten yards along the corridor. I put my finger on the bell in two short jabs, which I hoped would indicate the arrival of someone expecting a welcome.

The seconds sped on leaden feet while I listened in a horrible anxiety. If his telephone rang now—before he opened the door, before I could get inside—or had it already rung?

I did not hear him come to the door. Suddenly it had swung back and there he was, a big man with pink, heavy but regular features and tight, curly black hair.

I smiled at him as dazzlingly as I knew how and at the same moment stepped quickly past him, saying, "Thank you—where's Izzy?" And I continued a rapid and undeviating course toward the open door of a sitting room across the small hallway.

"What's all this?" he said behind me. "Izzy? Who's Izzy—and who are you?"

Well into the sitting room now, I turned around on my heel so that my skirts swished and swung, and faced him with wide and puzzled eyes.

"Why, Izzy Brown, of course! This—this is his flat?"

He was looking at me carefully; his eyes left my face, traveled downward then upward again, missing nothing of me; they were the eyes, if ever I saw them, of a man to whom women were more

No harsh laxatives for me

If you have trouble keeping regular, think twice before you resort to harsh laxatives—which irritate the digestive tract and impair nutrition!

Lemon and Water keeps you regular

Most people find that the juice of a lemon in a glass of water—when taken daily *first thing on arising*—insures prompt, normal elimination day after day. Not a purgative, lemon and water simply helps your system regulate itself.

—and it's healthful!

KEEP REGULAR THIS HEALTHFUL WAY!

Lemon and water helps the system function normally. It gives best results when taken every day. Give it time to prove its value and establish regularity for you. Not sharp or sour, lemon and water has just enough tang to be refreshing—clears the mouth, wakes you up. Take it every morning—*first thing on arising*.

It aids digestion—
supplies vitamins—
and alkalizes too.

Lemons are among the richest sources of vitamin C; and they also supply valuable amounts of B₁ and P. Over 12,000,000 now take lemons for health.

on the table. It cackled futilely. I could not hear what it said, but I was as near certain as I could be that it was a woman's voice. Freddy ignored it, and began talking easily about how wrong it was that the show business could not be run decently, without all these off-stage intrigues. Personally, when he came to put on a show he would make sure things were arranged differently. A girl with talent would have her chance without having to discuss it with men like Izzy Brown at eleven o'clock at night. He stopped abruptly, and said accusingly:

"I don't believe there is such a chap as Izzy Brown! You've heard about my show and you thought you'd try a new method of approach."

I jumped to my feet and blazed denial at him. How the hell did I know he was putting on a show? I didn't even know his name! And if he didn't believe there was an Izzy Brown, "here's the telephone—you ring Mayfair 8754!"

HE TOOK the receiver away from me quickly, made sure the line was dead, and put it back on the table, not on the instrument. It was eleven. Could I play him for another twenty minutes?

"Let's forget Izzy Brown," he said placatingly.

aluminum furniture . . . or work in the yard with aluminum too

"You're positively frightening," I said. "Do you practice clairvoyance professionally? No. I know what the trouble is. You know more about women than most men, and you don't bother to hide the fact. If the women don't like it, they can lump it. But you're safe really, because none of them believes you know about her."

"Please go on," he said. I thought it must be quite a week since he had seduced anybody, he was so pleased with himself.

"You can be gentle and diabolically cruel," I said, "but neither because you can't help it."

"If only more people would understand that," he remarked, as much to his brandy as to me, and then looked at me. For a moment his eyes were naked and he was not smiling. I had got under his skin a little.

"Shall I tell you some more?" I asked. He nodded again.

"You never have the slightest difficulty in making any woman you want let you make love to her. You have proved it so often to yourself that it's a bore. And when I came and said I would stay for a drink instead of going off to Izzy Brown's straight away, you knew I would fall too. Of course you were quite right. Probably it would have gone according to form if I hadn't begun pulling you to pieces—

and myself together, saying, 'No, my not even if he really is going to show.'" I finished the brandy and handed him the glass. "So now for Izzy Brown and my poor neglected career."

I started to leave the settee. He put a hand on my wrist and held me. I looked at it, at the black hairs and the smooth knuckles between.

"You don't need Izzy Brown," he said. "If you can interest me in ten minutes' casual conversation, you can do better than that. I can give you a note to the glass."

"Finglass!" I cried. "You know the glass?" I took off my coat and threw it on a chair; I straightened my frock, and came down as close as possible to him, and sighed the word "Finglass" again.

"Who was pulling herself together?" he asked with a laugh which was more like a giggle; it frightened me more than anything else about him with its self-assurance.

"I said you could be exceedingly interesting. Why don't you just beat me? Finglass! My God!"

"Time enough," he said, and his mouth came down on mine. I let him kiss me while my stomach turned over and over in a fretful nausea. When he stopped, I looked at my eyes and said, "I thought

I nursed the brandy glass in my hands; he sat down close to me again, his thigh against mine and told me in his understance the downstairs and upstairs names was the same. His friends called him Freddy.

MEANWHILE I felt I could remember his hot leg pressing against me moment longer—so I did a turn around the room, getting to know its shape and contents and talking about her troubles. It was to be ambitious, and did he think Felicity Cunningham was good stage name or should I change it and on and so forth, while he sipped brandy and watched me as he might a horse in a paddock.

"Felicity," he said, lingering on the name, "do you know you're the first one I think I've ever met?"

I resisted the wish to comment oddly enough I would also be the things went the way I was planning should. I was not enjoying myself ever. Charlotte might have been infuriated with him for hanging up that she had decided to leave his calculations; my reading of her behavior pattern—that she could her scene alone and this man was the only person in the world with whom she could play it—might be terribly

in which case I was going to find some difficulty in getting out of this flat with all my clothes on. . . .

"Your caged tigress is most attractive," Freddy Williams broke into my babbling; "but you're making me dizzy. Sit down. We can still talk about your career."

I threw myself on the settee in what I hoped was careless abandon and laughed at him. "Nobody has ever told me so point-blank that I was boring him."

"A number of things seem to be happening for the first time tonight," he said, and put his arm around my shoulders.

A bell rang. My heart leaped. A doorbell, in this flat. I watched his reaction. His brandy glass in his other hand dropped halfway to his mouth.

"Who the devil can that be?" he said, and put the glass on the table. Even if I had been a disinterested onlooker I could have seen he knew perfectly well who it was. He was very, very cross.

The bell rang again, two long rings followed after a pause by a short one, a signal he was expected to recognize and answer.

"Blast it to hell!" he said under his breath, and went across to one of the open windows from which he looked down into the street. He pulled the curtains across both windows and came back to me with his thick black eyebrows drawn together. He looked at me a moment, then said quickly, "I am afraid it's a bad night for us. I'm very sorry. It's awfully rude of me, but you'll have to run along."

I handed him my glass and got up from the settee; he put down the glass by the side of the other. I said nothing, making my expression blank. He stared at me anxiously. I picked up my coat and purse. "If it weren't that a very large sum of money is involved," he explained, "the sort of money one could use to put on a show and not notice it, I wouldn't tell this to you."

"Or to yourself?" I asked brightly. "Never mind, you forget I shouldn't be here at all."

He was returning my brandy glass to the cocktail cabinet.

"That's nonsense," he said. "Will you give me a telephone number or something?"

"I'll have yours in case," I said, and

bent down to read it on his dial. Now he must, *must*, say the thing for which I had planned so carefully. Surely he was not going to let her see me? At last, to my infinite relief, he spoke:

"I think if you don't mind, the tactful thing would be for you to avoid being seen. The front door is closed, and I shall have to go down to let them in. I shall bring them up in the elevator. If you could wait at the top of the stairs over there until you hear it start to come up, and then walk down, you won't have to meet them."

"I hope there'll be room for them all in that little box of a thing."

"Please don't tell me, Felicity, that you nag?"

"Well!" I said. "What do you expect? How about Finglass? All my hopes dashed to the ground for the sake of some shameless girl with a late night date—like me."

"Don't you trust me?" he asked in a shocked tone. He was wonderful in his belief in his ability.

"Not an inch."

The bell rang again, just over our heads.

"She's wild about something, isn't she?" I remarked. "Not used to being kept waiting."

I STARTED off for the top of the stairs, he just behind me to the elevator, leaving the door of the flat open. His arms came around me, his lips seeking mine. I kept my head back.

"Telephone me at ten o'clock tomorrow morning," he said, "and if you forget the number you'll find it in the book. When I said this was a matter of money, it was absolutely true. I *might* be able to do a show."

He stepped into the elevator, closed the doors and rattled downward. I turned and went quickly back to the flat, through the door, across the hall and the width of the sitting room and stepped behind the drawn curtains, squeezing myself flat against the wall in the corner by the side of the open window.

I heard the street door below open and close. The first sounds of them came from the elevator, and then, startlingly near and sudden, Charlotte's voice ten feet the other side of the curtain.

THE GRAY HAIR

BY
LOUISE LEE OUTLAW

Like a loose thread, it could commence unraveling the fabric of Lillian's marriage

WELL, this is the end. I know it now, with this gray hair in my palm. Someone ought to write an essay about gray—"the subdued arrogance of gray." That's a good phrase. Maybe I ought to take up writing. "Lillian Carstairs' book was spun of heartbreak." No, that's hammy. Bill would say that's hammy.

But it won't matter what Bill would say—after tonight. Not after I tell him: "Bill, I want a divorce." I won't tell him why; I'll never tell him that one gray hair made me leave him.

Usually it's a blond hair. Will I be the first woman in history to ask for a divorce because of a gray hair—my gray hair?

I know how he'll take it. He'll walk up and down, wave his hands, look at me with his dark, green-flecked eyes. He won't believe me. He'll argue, he'll plead, he'll swear he loves me—

He loves me, all right. He's never stopped loving me, even through all the other loves. That's why it's best for me to go now, while I'm fairly well preserved—

How arrogantly this damn' hair cut its way through my top wave! Arrogantly—as if it knew it would soon increase and multiply. Beget. It plans to beget. To beget a falling stomach? Heavy hips? Crow's-feet? A double chin?

Yes, they'll come, the demons, because they have to come. Even to Nonnie. Even to Felice. Yes, even to Marcia.

But Bill won't see me growing old; he won't look at me and remember how I looked when I was twenty. I'll never give him the chance. Let him watch Nonnie or Felice or Marcia grow old. Maybe he'll marry one of them. And then he'll be old first—

Of course, it doesn't matter with a man. I've got to be honest with myself. A man like Bill can lose every bit of his hair, and (Continued on page 60)

BROTHER JAZZ

Continued from page 21

play," Fats said suddenly. He hummed a simple, basic pattern of rhythm and melody. When we had it memorized he explained what each of us was to do. "You got that, Charlie?" he said.

Both Charlies said yes. They had it. We stopped at the Riverside Towers and I got my banjo. At ten minutes before twelve we walked into Liederkranz Hall. Mr. Adams was waiting for us.

"I see you are punctual," he said to me. "Congratulations." To Fats he said, "Well, Mr. Waller, what is it to be this morning?"

"Well, Mr. Adams," Fats said, "this morning I think we'll start with a little thing we call Harlem Fuss. It's a fast number. Then we got a little ol' slow thing for the other side we call—he hesitated—"the Minor Drag."

"Excellent," Mr. Adams said. "Let's begin with Harlem Fuss."

We set up our instruments and Fats repeated his instructions. He played the theme for us; as soon as I heard him I knew why we didn't need drums—his left hand would take care of the bass. "Ready?" Fats said.

"Let's go," one of the Charlies said.

The warning lights flashed, and we took off, every man on his own, with Fats holding us together. When we had finished, Mr. Adams came out of the control room. We listened to the playback.

All's Well That Waxes Well

I had a difficult time believing what I heard because it sounded wonderful. I looked at Mr. Adams. He was smiling. "You see," he said to me, "what careful rehearsal will do? You have performed your job excellently."

I walked over to Fats. "What are we going to play for the other side?" I whispered. "What is the Minor Drag?"

"We drag the same thing in a minor key much slower," he said.

So we did. When the masters were cut Mr. Adams was delighted.

"I wonder, Mr. Waller," he said, "if we could have some piano solos now?"

"Wonderful!" Fats said. "Perfect! We'll have some piano solos." Without moving from the bench he made Handful of Keys and Numb Fumblin'. Handful of Keys turned out to be the most popular of all his recorded piano solos.

"We must have some more of these dates," Mr. Adams said. "This is an excellent example of the wisdom of planning and preparation."

After that, the Southern Music Company, with careful planning and preparation, brought out the record on a Victor label with the titles reversed: Harlem Fuss was called Minor Drag and Minor Drag was called Harlem Fuss. I got my seventy-five dollars plus recording fee.

The panic was on for us early in 1929. You could make a million dollars in anything but jazz that spring. We ate from hand to mouth and it was somebody else's hand.

Red Nichols said he wanted to take a band on tour through New England during the summer. Would we be it? We said we would; Red couldn't spoil our music all by himself, and he was going to pay us \$125 a week. We got Bud Freeman in from Chicago and collected Pee Wee Russell. Dave Tough agreed to play the drums. We got Max Kaminsky of Boston on cornet. Mezzrow and I completed the outfit. While we were rehearsing, Bert Lown, who had an agency in partnership with Rudy Vallee, asked us to play a club date at the Gedney Farms Country Club in Westchester.

"Are you sure you want us?" I asked. "This is a hot band; we don't play society slop."

"They'll love it," Lown said. "It will be a novelty."

The day of the date we spent the afternoon listening to Fats Waller and missed the train. We piled into two taxicabs and eighteen dollars later by the meters arrived at our destination. We were an hour late and in bad shape.

The entertainment committee met us and escorted us to the locker room. We were supposed to be dressed in tuxedos and we were, except for the accessories. Kaminsky wore white socks; I had on a red four-in-hand tie. Nobody had a drink left and none was offered us. We were beginning to shake. Tough went to the entertainment committee.

"I'm sorry to tell you this," he said, "but unless we have a drink we cannot go on. We have had a harrowing experience; our lives were, nearly lost in a taxicab while coming here."

Without a word the chairman of the committee went to a locker, took out

Like the Negro of the same name, Joe Sullivan is a jazz pianist

a bottle of gin and handed it to Dave. "Thank you," Tough said, "your kindness will not go unrewarded."

We ducked behind the lockers and gulped. Then we went upstairs and played. The complaints began at once. There were three generations of Westchesterites present; the kids wanted Tiger Rag, the middle-aged group wanted Alice Blue Gown, the old folks asked for Strauss waltzes. One committee chairman came up and said, "I used to play drums at Yale. Trouble with your man is he doesn't syncopate enough."

"He didn't go to Yale," I said.

Nothing pleased anybody—the music was too fast, too loud, too slow, and where was the melody? Finally we decided to turn our backs on the audience, and enjoy ourselves.

After a while McKenzie and Josh Billings came in. They joined us on the stand. We began playing the blues, Billings picked up a megaphone and sang, improvising as he went along. It was a final insult to the audience:

I crashed this party thinkin' I would have a good time,

I crashed this party thinkin' I would have a good time,

I'd sell it for a nickel and a high price would be a dime.

We finished and went back to town. I waited a few days before calling at the

Lown-Vallee office to collect. I figured there had been complaints and I wanted to give Lown a chance to consider them objectively. Finally I walked in and asked his secretary to announce me.

Lown started talking as I entered his office. I managed to sneak in a word about pay.

"Go to the union and try to get it!" screamed.

I reminded him quietly that we were jazz band and that I had explained this to him before accepting the job.

"You are a gang of hoodlums!" he shouted. "You have no relation whatever to music! No band in his has ever drawn so many complaints! You insulted every decent person in Westchester! What's more, you lost their count for us!"

"We played for dancing," I said. "That's what we were asked to do. Insulted nobody."

"Your appearance was an insult—"

Some of Fats Waller's best performances were almost impromptu

who were the two Chicago gangsters you brought with you?"

I met McKenzie later on at Plumtree speak-easy.

"Lown won't pay us," I told him. "I lost the season's contract for him. Besides, he says we brought two Chicago gangsters with us."

Red put down his drink and stood me.

"You and Billings," I explained. "Wait for me," Red said. "I'll be back."

I followed him into the street. "You don't know where the office is!" he yelled.

He stopped and waited for me.

"Point for me," he said. "Just lead him to the office. He walked to the receptionist, found Lown and gave him a lunge for him."

"Who am I?" he yelled.

Lown retreated. "I don't know," he said nervously. "I never saw you before."

"Then how do you know I'm a Chicago gangster, you mango-head?" McKenzie screamed.

Lown tried to say something but McKenzie hit him with two hundred a minute. He ran the total inf figures, ending with, "And the next you call somebody a Chicago gangster get it straight! I'm from St. Louis!"

We were all the way back to Plumtree

...eak-easy before we realized we still
...dn't collected any money for our work
...Gedney Farms, not even the eighteen
...llars spent for taxi fare.

"I guess people just don't like jazz
...asic," I said.

"Don't worry," Jimmy Plunkett said.
...ook what happened to water. For
...ousands of years people wouldn't drink
...or fear of getting poisoned. Now they
...nk so much of it they think they can
...along without whisky."

"Who thinks that?" McKenzie said.
...was still looking for a fight.

"The people who voted for prohibi-
...," Jimmy said.

"Plunkett's was at 205½ West Fifty-third
...et, under the elevated. All sorts of
...ness was transacted there; the tele-
...one rang constantly, bands were or-
...gized at the bar, and everybody drank.

Mr. Dorsey Gets a Shave

One day Tommy Dorsey came in dur-
...the afternoon. He had a radio pro-
...m in half an hour.

"I'll have to drink in a hurry," he said
...immy Plunkett. "I need a shave."
...Maybe you need a drink more than
...need a shave," Jimmy suggested. He
...a practical man.

Tommy looked in the mirror. "I need
...ave," he said. "I'll have to skip to
...barbershop."

Standing quietly down the bar was
...my O'Connor, a former wrestler
...gnarled fingers and an 18½-inch
...He was from the Dorsey home
...in Pennsylvania.

"Nothing of the sort, Tommy," he
...said. "You'll not have to stir from this
..."

"I need that shave," Dorsey said.

"It so happens that I myself am now
...the profession you intend to patron-
...O'Connor said. "I am a barber."

He reached into a vest pocket and took
...a straight razor.

"It will take but a minute," he said.

"My, run some of that draught beer."

Tommy ran some beer, and O'Connor
...some salt into it. A fine head of
...formed. O'Connor scooped suds
...and put it on Dorsey's face.

But that bar rag around his neck,
...y," he said to Plunkett. "I don't
...to soil his shirt. Now, Tommy, just
...our head back and relax."

A few minutes it was over, and Dor-
...stunned, bleeding, but shaved, was
...ing upright with another drink in
...and.

"Just one thing, Tommy," O'Connor
...said. "Give me a shot of that gin,
...y." He poured the gin over his
...and rubbed Tommy's face.

"Best after-shave lotion in the
...," he said.

Dorsey finished his drink, had time for
...er, and left for Radio City in ex-
...t condition.

Chelsea Queely, a steady patron, came
...e night with two black eyes. Jack
...y, another jazz man, studied them a
...then he said, "Chelsea, what you
...are some leeches. I'll get them for
...ut the drugstore." Bland returned
...y with a small box.

"Everything is set, Chelsea," Jack said.

"Clean your head back against the
...and I'll put one on each eye."

Chelsea was amiable. He leaned back
...Jack took a leech from the box and
...ed it on his right eye. Chelsea tried
...e. Jack kept him against the wall
...ached for the other leech. Chelsea
...his mouth to holler.

At his point Jack dropped the other
...He miscalculated. It fell in Chel-
...south.

"St it out before it dies, Chelsea!"

Chelsea treated his eyes for the rest
...evening with alcohol.

"And then we went on the road with
...a Chicago
...from St. Louis
...way back to
...for August 30, 1947

State, then returned to New York City.
There was no doubt about it, the East
was not ready for jazz.

McKenzie was around. "Let's get a
drink," he said. "I have plans."

We went to the nearest speak-easy.

Red tasted his drink. "Would you
wear a jersey and a cap and play for
Mrs. Vanderbilt's dinner parties?"

"I'd rather play in a jazz band."

"Jazz is a luxury. Too bad it's such
good music. The poor man likes it, but
only the rich man can afford it."

"I guess I wouldn't mind a cap. Bix
used to wear one."

"A jersey and a cap. A jersey has
horizontal stripes. I hate them but the
society folks think they are cute. They
won't let you play at parties without
them. So you'll do it. Good!"

"At last I've reached the gutter. I'd
never have known it except for the com-
pany."

"Blow your nose and order another
drink." Red grinned. "We're going to
play jazz. It'll be disguised so the dudes
won't know it, but it'll be jazz."

Rome had a fiddler while it was burn-
ing. New York in 1929 had the Mound
City Blue Blowers. We played for cock-
tail parties, dinner parties, parties at
night, and parties in the early morning.
Our hosts were Jimmy Cromwell, Mary
Brown Warburton, Mrs. Graham Fair
Vanderbilt, Larry Doyle, George Preston
Marshall, the various Munn families,
Billy Leeds, Marjorie Oelrichs, and a lot
of week-end millionaires who were broke
or dead a year later.

Making Society Jazz-Minded

One night we played for a party at
Mary Brown Warburton's, across the
street from a church. An orthodox mu-
sician was entertaining at the piano.

"Mary," McKenzie said to the hostess,
"would you like to hear somebody really
play that instrument?"

"Isn't he playing it?" Mary asked,
looking at the pianist.

"He thinks so," McKenzie said.

He called Joe Sullivan at Riverside
Towers.

"I can't come," Joe said. "I haven't
subway fare."

"Jump in a taxi and we'll meet you
outside," Red said.

Thirty minutes later McKenzie lifted
the incumbent from the piano stool and
Joe sat down. He went into Sweet Lor-
raine.

"You're right," Mary said to Red.
"Where did this man come from?"

"I made him up," Red said.

The guests gave Joe an ovation and
crowded around the piano. Billings took
the opportunity to snatch a few bottles
of champagne. He walked across the
street to the rear of the church and hid
them behind a wall. McKenzie was horror-
stricken.

"How could you do such a sacrilegious
thing?" he said to Billings. "Don't you
realize that is sacred property? What do
you want to do, get all of us sent to hell?
Are you an agent of the devil?"

Billings was shaken. When we left the
party he retrieved the bottles from behind
the wall. I thought McKenzie was go-
ing to break them in the street but he
didn't. In the taxicab he gave Billings
another tongue-lashing. I have never
heard such language. Billings began to
weep. By the time we reached Riverside
Towers he was on a crying jag. He left
and went to his room, sobbing and mut-
tering repentance.

"I don't know what the world is com-
ing to," McKenzie said, opening one of
the bottles and pouring himself a drink.
"People have no respect for sacred things
any more. Imagine stealing champagne
and hiding it behind the church!"

He drained his glass and filled it again.
"This is the best wine I ever tasted,"
he said.

(To be concluded next week)

**Finest Tone System in
RCA Victor History**—This

Ever wish you were Aladdin?

You remember him . . .

He was the lucky fellow who found a magic lamp. It gave him everything he wished for—from diamond-crusted palaces to a sultan's daughter as his bride.

You've probably wished a lot of times for a miracle like this to happen to you. Maybe not for out-of-this-world treasures, but for something that will take care of the things that are bound to come up.

Like medical expenses, or college for the kids. Or maybe just for the nice, safe feeling it gives you to have some extra money put aside for the future.

Though no magic is involved, there is a way to give you this security. The Payroll Savings Plan. Or, if you're not eligible for the Payroll Plan but have a checking account, the new Bond-a-Month Plan.

Either way, it's almost unbelievable how quickly your money accumulates.

Where else can you get such a *safe*, generous return on your money (\$4 for every \$3)? It's so simple—so easy, you hardly miss the money that you're saving.

And don't forget at the same time, you're *making more*!

Next to a magic lamp, there's no better way than this to make sure your future is secure.

**Save the easy, automatic way
...with U.S. Savings Bonds**

THE GREAT EXPERIENCE

BY WILLIAM FULLER

A SHORT
SHORT STORY
COMPLETE
ON THIS PAGE

ELMO YOUNG sat at the bar and nursed his beer. The pay-off, he was thinking. If it ain't the pay-off! You spend your long years in the Army thinking how swell it's going to be to get back to the old hangout. You don't let the ink on your discharge papers dry before you drop by the old place for a slap on the back, then some good rousing talk with your old side-kicks. What do you find? You find a bar as mesmeric as a preinvasion beach except for some lush moping in his bourbon at the far end. You find a new bartender with a puss looks like he'd swallowed a green apple. You find a seventeen-cent beer. You find a chromium fittings now, and a plate-glass window with Place de la Concorde written all over it, like the sign was some fancy clip instead of honest, neighborhood gin mill. Other! The pay-off. That's the way Elmo's thoughts are running when Herbie Shultz comes into the bar. "Herbie!" he shouted, happily looming beside the old man and shoving forward a large hand. "Old Herbie!" "So help me," Herbie said as Elmo pumped his hand. "Elmo! I haven't seen you in—" "Four years. Four years and three months. Quite a little war we had. Quite a little experience," he said modestly. "We used to say in the Army, we'd say—" Herbie rubbed his fingers. "Yeah. The guys were telling me. Most of 'em have been back a year or more." Herbie sat down at the bar. "A beer, Marv," he called to the bartender. Elmo sat beside him. "Boy, it's good to be back. I remember one night on Leyte, we're sitting around a C.P. and—" "Say, Marv," Herbie said. "Wilbur gets three for four today. I've been telling you?" "A flash in the pan," said the bartender. "An erratic character. They don't make 'em any more like they used to. You take George Sisler, there was a boy." "Sisler!" Herbie said. "Cobb leads the league seven years and you give me Sisler!" "By Cobb ever hit four one five, Sisler?" "What about Fitzsimmons?" the bartender at the end of the bar asked. "Old C. My boy." "Baseball, jerk!" Marv shouted. "El, not fighting!" "Is this a free country or isn't it?" the man asked. "I'll take bourbon and water. Easy on the water." "George Sisler never hit four one five," Herbie said. "Nineteen twenty-two. St. Louis," Marv said icily. Herbie turned to Elmo. "What do you say, Elmo?" He spoke to Marv. "He's a man, Marv, used to settle all the baseball arguments. A walking encyclopedia. Old Mister Baseball. What do you say, Elmo? Does George Sisler hit four one five in nineteen twenty-two?" Elmo shifted uncomfortably on his stool.

"I wouldn't know," he said. "Elmo," Herbie said. "What's the matter with you, Elmo?" Elmo felt the story of his great experience welling up inside him. He knew that now the time was ripe for the telling. Now, among familiar things, among people who spoke his language, was his big chance to make someone understand how it was with a guy in war.

"It's like this," Elmo said slowly. "A guy changes. A guy changes all of a sudden, sometimes, in war. All of a sudden, sometimes, he gets slapped in the face with the truth, and he changes. Maybe the stuff is coming over thick and the guy next to you gets his. Maybe it comes to you then. Maybe you happen to be watching a handful of kids—their bellies swollen and their legs thin and spindly—holding out tin cans for the leavings from the company kitchen. Maybe you look at their eyes. Maybe it comes to you then. With me, it came like this: We come ashore at Ormoc, see—and we're moving up the Valencia Valley, fast. Two regiments abreast and one in reserve. My outfit gets the word to look over the terrain on our flank. We move out—"

Marv cleared his throat. "You in Manila?" he asked Elmo.

"I was there," Elmo said. He felt his hands growing clammy as he relived his great experience. "We move out to the flank," he said hoarsely. "A couple of miles out we run into this barrio, this village—"

"I hear they had a pretty fast league in Manila after the war," said Herbie, "what with all them pros they had out there in the Navy and the Air Force, and all."

"I guess so," Elmo said. "The point runs into fire on the outskirts of this barrio. The old man brings up his heavy MGs. The—"

"It must've been tough, boy," Herbie said. "It must've been quite a little war." He turned to Marv. "I tell you what I'll do, Marv. I'll give you a chance to break even. I'll give you Philadelphia and two points tomorrow and take the Red Sox."

Elmo stared at his beer. He was conscious of a frightened, choked-up feeling in his chest.

"I'll take a fin's worth of that," Marv said.

ELMO'S great experience was a livid, painful thing within him. He moved next to the man at the far end of the bar. "The old man calls up his heavy machine guns," he told the man. "He lays his base of fire. He sends for me. He tells me to take my squad wide to the right."

"This is a lousy joint," the man said. "This joint is from hunger. Bourbon like after-shave lotion and a barkeep that don't know baseball from the ring. Place de la Concorde. Place de la Residue!" The man scooped up his change and left.

Elmo stood. He felt the muscles in his cheeks knotting. His legs felt numb. He walked stiff-legged through the door. He walked ten yards along

the sidewalk, then turned into the alley between the bar and the adjoining building. Halfway down the dark and littered alley he stumbled over a brick. He picked it up and went back to the Place de la Concorde. He stood behind Herbie. Herbie and Marv were arguing about Sisler and Cobb again. Elmo stood there and listened for a moment. Then he said, "You want to watch this. You might enjoy it."

He took a long, slow windup and hurled the brick at the plate-glass window at the front of the room. The brick hit dead center. There was an entirely satisfying shatter of glass as the window completely collapsed.

Elmo sat down and finished his beer while Marv called the station.

THE cop was over in five minutes. "All right," the cop said wearily, "who's pressing charges?"

"Him," Elmo said, pointing at Marv. "I just tossed a brick through his window." The cop thumbed through his notebook. His feet hurt and he was very tired. "You got anything to say before I run you in?"

"Yeah. I'd like to explain why I tossed a brick through that window."

The cop sighed. "Go ahead." "I'll have to start at the beginning," Elmo said.

Herbie said, "I'll be running along." "Oh, no you don't," the cop said. "You was here, weren't you? You're a material witness, ain't you? Have a seat, brother."

"We're moving up the Valencia Valley, see?" Elmo said. "Two regiments abreast and one in reserve. We're moving fast—" He felt the clamminess come into the palms of his hands again as he got into the story. His voice was hoarse with his efforts to give them the great experience so they might live it as he had lived it—and understand its importance as he understood its importance.

Then the story was over. No one spoke for a moment. Elmo looked around the Place de la Concorde. Except for the shattered window, Elmo suddenly realized that the old joint looked pretty natural. Seventeen-cent beer, maybe, and a little new eye-wash, but hell—Elmo figured—things change. They change and there ain't a thing a man can do to keep them from changing.

"You pressing charges?" the cop asked Marv.

"I got to have a new window," Marv said.

"How much you figure that window is worth?" Elmo asked him.

"It's worth forty-five bucks."

Elmo reached happily in his pocket. He counted off five tens and tossed them on the bar. "And four beers," he said.

Marv drew the beers. He slid three of them down the bar to Elmo, Herbie and the cop. He took the fourth one himself. Elmo raised his glass. "Here's to Rogers Hornsby," he said. "Cobb, .410 in nineteen twelve. Sisler, .420 in nineteen twenty-two. Hornsby, .424 in nineteen twenty-four."

The four of them drank to Rogers Hornsby.

"You want to watch this," Elmo said. "You might enjoy it." He took a windup and hurled the brick at the window

THE GRAY HAIR

Continued from page 55

women will still crane their necks and stare at him and do everything but drop their handkerchiefs as he goes by. It'll be the same when he's eighty.

There's nothing worse than being a woman. Nothing in the world. When you're twenty, when you walk down the street, and the men whistle and watch your legs, you think the world is a full-length mirror, reflecting only you. You toss your head, and a man comes running. You stamp your foot, and a man kneels before you. You say, "Yes" or "No," and a man quivers. You deny him, and he cries.

You don't think about the days that will come after, the days when you will dodge the sunlight because it shows—too clearly—the gratuitous lines, the dulled eyes, the wrinkling neck. When you're twenty, you don't know the demons are waiting for you.

I hate everyone who is twenty. Because I'm thirty-eight today and I have a gray hair in my palm which I've plucked from my head. . . .

I AM thirty-eight today. Now all I want to do is go somewhere and be quiet and grow old. Perhaps Arizona. Last year in Arizona—what peace! The quiet got on Bill's nerves, but it soothed me. It made me able to face another year. The green, green grass, the fanleaf palms against the salmon skies, the scrolled clouds that made you want only to lie and look at them.

Yes, Arizona would be nice. I might even take a typewriter with me, try to write something. But writing's introspective. . . . Maybe plastics. . . . I could make plastic cigarette boxes. . . .

Daft—absolutely daft—the women will say. They'll be thinking of this place—this big, cream-colored, shaggy-rugged duplex. They'll be thinking of the view of the river from the bedroom and the smug-faced doorman outside. They'll be thinking of my clothes, and they'll won-

der what will happen to the mink. "You can't wear mink in Arizona, my dear," they'll tell each other.

How they'll ache to know what will become of my clothes—my big warehouses of ammunition!

God, I'm tired of ammunition! I'm tired of rushing to Carnegie's for the latest in alligator umbrellas. I'm tired of silk gabardine bustled suits. Bustles! Bustles are for the young, for the small-waisted, bright-eyed, unwittingly flirtatious young. Last year's fashion was off-the-shoulder dresses—the year before, short skirts. Oh, I can go back fifteen years and tell you what the fashions were. I've been tied to them; I've been a check-signing slavey to them, even while I was using them to fight off this day, this moment, this gray hair.

If Bill had stayed in Florida—if we'd stayed in the blue-and-white bungalow on Orange Street, right in back of the crocodile farm! There's a snapshot of us somewhere—Bill looking like a country editor: shirt sleeves rolled up, limp cigarette in hand, green eyeshade over his scowling face. Me in a nice little \$5.98 mail-order percale. Me, with my hair just washed, loose and glossy, and no lipstick on my mouth. . . .

If we'd stayed there, we'd be comfortable, middle-aged people now. We'd wear bedroom slippers in the evening and put the milk bottles on the porch. We'd have children to worry about. . . .

But that's not getting me anywhere. Bill wouldn't have stayed put. He was too charming even then, before he had the whipped-cream suavity. He was impatient with Orange Street. He wanted me to have things. Things—1935's ermine cape—1938's pink Cartier boxes—1940's duplex. The hand-tooled books, the original Renoir, the French lingerie.

I've got plenty of things, but I've got a gray hair, too. I'm tired.

Can I hold out another year? No... This is the last. This is the year of

"Hello, Alice—er-r—are you sure it's all right for me to come in?"

BARNEY TOBEY

"This is the way I like to sail: right side up"

Marcia. And next year it will be Sophia or Claudia or Barbara. I've got to be honest with myself.

That time last year, before we went to Arizona; that could have been the end, too. It was Denise, that time. Denise, white-skinned and curving and red-headed. Dimpled knees in a bathing suit, dimpled elbows in an evening gown, dimpled cheeks when she smiled. And all the dimples for Bill.

"Good Lord, I don't care a thing about her!" That was what he said, while I sat there cool-eyed and looked at the tug-boat on the river. My tongue and my head were wise; only my heart was a corkscrew.

"Are you sure, Bill?" I said. "Would you like a divorce?" It was the first time I'd ever said the words. I was tired that day. I was tired of having Denise "pop in" for cocktails, for dinner, for the umbrella she "forgot" the week before. I was tired of watching Bill watching Denise.

"I love you, Lillian," he said. "I've always loved you—and I always will. Denise—she's just—"

Yes, he loves me. And Denise was "just." And now Marcia is "just."

WHO was it the year of the ermine cape? It was Hallie, blond, brown-eyed Hallie. That was the year I began to go to the beauty salon twice a week. Then, as Hallie was followed by Connie and Connie by Laura, I knew there would be no growing up for Bill. I knew, but I was ready to fight for him. I had the strength then; I could almost enjoy the battle. Oh, I can't say watching him at a cocktail party was much fun. Watching his eyes get that yearning look. But I had ways of fighting, in those days. I got svelter and smarter. I had to; there was so much competition. I found that little Hindu man who taught me all about relaxation; I wonder if he kept the wrinkles away—or was it nature smiling at me? Anyway, I did a good job. All the Swedish masseuses did a good job: all the manicurists and permanent wavers and facial experts did a good job. And it paid off, in little ways. Bill saying: "You're the loveliest woman here." Little, important ways.

How I prayed there wouldn't be any more Hallies or Connies or Lauries. I hoped he'd start to grow old. Oh, not too old—but more subdued. I hoped he'd get a paunch, a little, unobjectionable man paunch. But he didn't. Here he is in his latest photo, smiling from my dining table, and when I look at him I think, There's a man whom I could fall in love with.

I know that through all the elements of slender thighs, piquant and curving cheeks, he loves me. But I got to be honest with myself. Would he love me if my waist were thirty-two instead of twenty-seven?

AND I mustn't forget Marcia. She's twenty-two and she is dark and a little bit of a tomboy. She has auburn hair and wears pixie hats. Her cheeks are a rosy wine-sap red and her eyes are like polished mahogany. I can see her coming in the door every day. I know why Bill is playing Tristram Shandy and over on the phonograph.

No, I can't fight nature any more. Maybe I'm a fool to give in. But the most women are permitted to grow old with their men. To sit on front porches in Orlando or Milwaukee or Philadelphia and rock and rock.

A gray hair. Hello, gray hair. Hello, you are in the palm of my hand and because of you I simply can't go on as if you belong to me. I don't find a svelte young woman. I can't give another cocktail party. I can't smile gently and watch Bill watching me. I can't look at another "creative" designed to make me forget my birthday. I want to be thirty-eight, and not thirty-eight. I want to be free of you. I want to forget to cream my skin at night.

The telephone. Bill saying I can't make it for dinner? Bill speaking from his booth in some little Westchester inn? Well, does it matter? I'm free now.

Hello? Hello, Maurice? Yes, Maurice, I want it for three o'clock. I don't care if it's the Queen of Heaven, I tell you, it must be today. It's the matter of life—what? Yes, a tint. I found a gray hair today. Carstairs can't stand gray hair, Maurice. I've got to be honest with

THE END

JUST IMAGINE! See them all together
in one hilarious full-length picture!

There's Mortimer (Hayseed)
Snerd vs. Donald (The Temper)
Duck. Timber-r-r-r!

Edgar Bergen...Charlie McCarthy...
Mickey Mouse...Mortimer Snerd...
Donald Duck...plus three rollicking
new Disney characters...all together
in one of the funniest feature-length
pictures you'll ever hope to see.

There's Mickey in his most hair-
raising adventure.

There's radio's favorite
blockhead - Charlie
(I'll mow 'em down)
McCarthy.

There's Bongo,
the frustrated circus bear
who wants to get away
from it all...

1400 MILES FOR \$12!

CONVERTIBLE

Choose any model of CROSLEY you wish and you'll get a car that weighs about 1/3 as much and operates for about 1/2 as much as heavier, more cumbersome and expensive automobiles.

Miss Helen Hermanson, 659 Washington St., New York City, drove from Florida to her home (over 1400 miles) and spent only \$12 for gas and oil!

In the Convertible (or Sedan) you get a really modern car with ample room for four husky people (like its 6'4" producer) plus luggage. Designed to be "the safest car," requires less than your half of the road.

The CROSLEY PICKUP (left) offers the most economical transportation for service calls, light deliveries, country

places, farms, etc. Has full quarter-ton capacity; all-steel construction; roomy cab; full drop tailgate. And every Crosley has the startling COBRA (Copper BRAzed) 4-cylinder, valve-in-head steel engine that weighs only 59 lbs., yet delivers 26.5 horsepower, 35 to 50 miles per gallon, 50 miles per hour cruising speed.

Sedan lists \$849 at factory . . . taxes extra

WHO TIED A KITE TO FOOD PRICES?

Continued from page 15

Europe that lay in ruins, but Asia as well. This time Europe's factories and fields had taken so bad a beating that recovery would be much slower than after the first World War. Besides, after World War I, unscathed Asia, Japan, Korea, the Philippines and French Indo-China swung into action with food shipments to Europe. This time the Far East shipped no food. It pleaded for it.

With the war's end we shed all rationing (except sugar) and settled down to unrestricted eating. In February, 1946, our unpreparedness for peace caught up with us. President Truman disclosed that "more people face starvation and even actual death for want of food today than in any war year and perhaps more than in all the war years combined."

Former President Herbert Hoover, chairman of the President's Famine Emergency Committee, pleaded with Americans to make sacrifices. In words echoing his immortal "prosperity is just around the corner," he predicted that the famine would be over by July when crops were harvested.

More than a year later in its "Food Report" of June 21, 1947, The American Institute of Food Distribution said:

"We are now up against a Europe in an even worse fix than a year ago, to say nothing of Asia which is in such a mess that no one is paying any attention to what foods will have to be sent there."

Less for Europe's Hungry to Eat

During Europe's 1946 ordeal we welshed on promises to ship wheat and meat, because we didn't have it. Equally bad, we killed OPA so that soaring prices here forced the governments of starving people and private relief agencies to cut down food buying. The United Jewish Appeal estimated early this year that its relief costs had advanced 40 per cent since last summer, which meant that they could distribute 40 per cent less food to hungry people unless they raised additional money here. And the Army came to Congress for more in occupation funds for the same reason.

Because we failed to do our share of the feeding job last year, Europe's recovery has been delayed, and the political situation has gone from bad to worse until, as Secretary Marshall's plan indicates, only a large-scale relief offensive costing billions of dollars will do the job that adequate food alone might have done earlier.

"We're trying to hold the political line in Europe with food—with belly diplomacy," one Washington official said, "and it presents a problem in food logistics, the problem of getting food supplies to the political front. There's an ideological war going on, and we must make decisions of the same general character as if it were a shooting war."

"Where do we want to concentrate our resources? Trouble is, we're planning to ship out just enough to fight a good one-front war—but we'll scatter it over several fronts: Europe, Asia, India."

"We could fight a good two-front war without any nutritional danger to the American people, but it would take a food dictator to do it."

"If I were that food dictator, here's what I'd have to do:

"First, I'd decide that we could step up our last year's grain shipments of 16,000,000 tons by about 50 per cent. Where would the additional 8,000,000 tons come from? I could pick up two or three million bushels by ordering the milling industry to use wheat more intensively in making flour. The flour would be a shade darker, and the millers would want to shoot me. Then I'd whack the distilling industry, cut down on their corn and barley and probably pick up another million tons that way. The remaining three or four million tons I'd simply have to bid away from the American housewife, and that would mean higher prices."

"We need rice badly for Asia; and I'd have to battle the cereal manufacturers and the brewers to take about half a million tons away from them. It would be necessary to cut down our use of fats and oils as well to send more abroad, and this might mean some food rationing again. And to get more grain to the ports we'd have to take freight cars away from American manufacturers and slow up the deliveries of iceboxes, baby carriages and many other goods."

"Where would the money come from for all this?

"Well there's \$350,000,000 of post-UNRRA funds available. Greece and Turkey have a loan of \$400,000,000. We're paying the bill in occupied countries. France, England and other European countries have loans from us, and some other countries have the cash to buy, if we would only sell to them." (Foreign governments can only buy the food we allot to them under a system of export controls administered by the Department of Agriculture.)

"Chances are we won't have a food dictator," the official went on. "But if we don't fight an effective food war of some sort, the alternative is a Communist Europe. And that means we ourselves might become an armed camp—with all the costs in money, lost liberties, and food restrictions, that might involve."

So much for what we should do. What are we doing?

Actually we may ship less food during the next 12 months than we did during the last crop year. Government crop experts, tallying up the damage done by spring floods, flashed the news on July 10th that our phenomenal run of luck with bumper crops had run out. The basic corn crop on which the production

of livestock, poultry and dairy products depends would be 675,000,000 bushels lower this year than last.

Although the corn carry-over from last year is over 400,000,000 bushels, meat may have to be diverted to feed livestock and poultry. This would leave less for shipments abroad. As corn prices rose, farmers would send their hogs to market. The flood of livestock this fall would lower meat prices temporarily, but 1948 meat prices could be higher than ever.

This summer, food prices were booming a hot political potato and promising to become even hotter in next year's campaigns.

Republicans, alarmed at public rebuffs over the death of OPA at the high prices that followed, have launched a counteroffensive. "It wasn't the OPA that sent food prices spiraling," they say, "it was food shipments abroad," they claim.

The Administration Viewpoint

To charges that foreign shipments keeping prices up, Administration spokesmen have two answers:

(1) Sixty million employed Americans and their families are eating 26 per cent more beef (per person) and 21 per cent more pork than before the war. They are consuming 28 per cent more chicken, 10 per cent more milk and cheese, 10 per cent more oranges and lemons, 10 per cent more canned juices and vegetables and 30 per cent more coffee.

(2) Most of this huge new eating habit comes from increased food production. Shipments abroad are relatively small. It's true we shipped one third of our wheat production abroad last year, but only 2 per cent of our meat was shipped, and of the 23 billion pounds of food we produced, exports took only 1 billion pounds, a modest 10 per cent. Curiously enough, government spokesmen point out, our food exports are just "normal." They make up approximately a quarter of all our exports, the same they did, say, in 1929.

Administration spokesmen could have added a third argument. The food shipped abroad provides a strong pro for our own economy, maintains farm prices and delays the recession that economists have been predicting.

"Think of the terrible drop in food prices if food shipments were cut," Administration official pointed out.

"If exports were cut you'd see how congressmen would come running to boost exports to keep prices up," another said.

No matter who wins the political argument one thing is certain—it looks like high food prices for another year, says the American housewife in her grocery bills.

THE END

GOOD AS GOLD

Continued from page 34

chenille, hemp and wool spiked with copper and gold—a magnificent, tropical-looking business. She's working with manufacturers of casement cloth, making an airy, silvery screening for windows. There's stiffened, gold-shot fabric for radio grilles; brilliant-colored, tweedy cottons flecked with gold for upholstery and draperies; and more coming up.

Many creators of fabrics are working with the stuff. We've seen taffetas striped with it; gingham given enough body to become upholstery and drapery materials; an exquisite, airy length of white rayon gauze banded with gold, copied

from a museum piece and as lovely as anything out of India. In fact these metal threads have roused interest in India, for possible use in saris. Many an altar cloth is untarnishable, now, because of them. Someday, maybe, the same can be said of an admiral's gold braid.

Various kinds of metal threads have been devised, from broad strips to elastic yarns wound with a coating of metal. There's a bouclé yarn twisted with gold that would make a knitter's mouth water. The yarn makers' mouths, in turn, are watering over the fact that there are an estimated 10,000,000 home knitters in the

land. They promise them such things speedily as possible. Meantime, one big manufacturer of white cotton coming out with some beautiful colored and flecked with metal. You have three hundred bucks, you can have a whole suit custom-made.

MAN TO MAN

Continued from page 23

der of the hill and the village was
en from view. They were divided
the village by the swelling slope of
ill, and from where they stood there
nothing to see but the wide spread of
try, russet squares of plowed earth,
green oblongs of pasture, with here
here in the middle distance an occa-
farmhouse with its yard and its
ly road running in between untidy
es.
t these were far away. They were
here on the hillside, shut away from
and Johnny Cooper saw that it was
time to do it.
dog barked and soon they saw it, a
retriever running down the hill
above them. For a moment Johnny
er thought someone would appear,
ving it.
had not counted on meeting anyone
re in the lonely hills. His plan was
n if there were anyone walking in
lls when he came to the place he
osen.
the dog yapped excitedly and ran
wn the slope, crossing their path
of them. It was obviously alone,
ly after rabbits, and not con-
with people. It ran on and dis-
ed lower down the hill among
ubs.
ny Cooper walked on. They were
3 very close to the place now. He
at Tom Willett, tramping along
his empty pipe pointing upward
between his teeth, his stick gripped
h his arm, and his hands in the
s of his flannel trousers.

M the back of his mind, like an old
tograph reached down from a
a cupboard, Johnny brought out
re—the memory of the first time
Tom Willett.
ny had been sitting reading the
a the bar of the Crown in the mar-
are, and the stranger, Tom Wil-
me in through the swing door
stained-glass pattern. He had his
d stick then, just as now, and he
to the bar without hesitating, as
he knew his way—not only there,

but anywhere else he might chance to
find himself.

Johnny Cooper had watched him then,
wondering who he was. He was notice-
able in the bar. He had a townsman's
air among the country people, wearing
his clothes for show and pleasure and not
simply from necessity.

He spoke to the barmaid with his pipe
still gripped between his strong teeth, and
the barmaid smiled and let her eyelids
fall.

Johnny Cooper found later that
women always looked at Tom Willett
like that, staring at him for a moment
with interest and then looking away with
a tiny fear.

Lucy did it, although she told Johnny
that she was not interested in Tom. She
said, "He's all right. I hadn't thought
about him much, but he's all right."

She insisted that that was all Tom was.
She kept saying it every time Johnny
asked her. "Oh, he's all right, I suppose."

But Johnny watched her and doubted.
Once he said to her, "Now look here,
Lucy." He took pains to make his voice
sound stern. He said, "Now look here,
Lucy, I won't stand for any nonsense
with Tom Willett."

She put her hands on her hips and
looked at him. She said, "Oh, dear! Won't
you really?"

He said, "No. I've told you; I won't
stand for it."

She said nothing but stood looking at
him. And then she turned around and
went into the house and slammed the
door, leaving him alone in the garden,
knowing that he had done no good and
feeling a fool. He knew that he had done
a foolish thing—not in what he had said,
but in pretending to a strength which he
did not possess. He knew then, perhaps
for the first time, that he was a weak man
and he was ashamed.

He hated her for a long while after
that, but in the end he went back to her
humbly because he could not live with-
out her. He despised himself for it but
he could not live without her. . . .

He was still angry with himself and
ashamed as he remembered it now,

"Will you play with us, Daddy? We need a horrible ogre"

Memo for Mothers

"With youngsters back in school," says Tex,
"This lesson starts the term:
Some Texcel Tape is swell for books
To hold their covers firm."

"You're troubled when the children tack
Their pin-ups to the wall?
Well, if there's Texcel in the house
They'll need no tacks at all."

"It's fine for loose-leaf binder holes,
For pages torn in two;
It's also great for Mothers who
Have mending jobs to do."

25¢ size shown. Also comes
in 10¢ and 15¢ sizes.

"The 'stickum's bonded to the tape,
So Texcel's well-behaved.
It's strong and so the need for strings
Is consequently saved."

"So when you're shopping and you see
This Texcel Tape display,
Why, get a handy roll or two—
You'll use it ev'ry day!"

BORN IN CANADA (1840). NOW GOING GREAT IN THE 48 STATES AS A PRODUCT OF U. S. A.

ding up the steep path behind Tom Willett. The thin grass had given way to rock and loose stone now, with only a few of dirty, sick-looking weeds sprouting here and there. The path passed between two isolated rocks and came to a gate which had once been painted white but was now a drab and blistered yellow.

Tom Willett unchained the gate and opened it. Johnny Cooper watched him do it. His plan started with the opening of the gate, for on the other side of the gate was the place he had chosen to do what he had made up his mind to do. Tom held open the gate to let him pass through and Johnny asked himself whether Tom could have guessed what he intended to do. Perhaps he knows all the time and intends to walk behind me. Perhaps he has known all along. But Tom closed the gate, chained it, and again took the lead as was his habit. The path here no longer climbed the hill but skirted it and was level, and Tom Willett began to walk briskly along and again:

and when I told them,
"dah dee diddy dee"
they wouldn't be-lieve me,
they wouldn't be-lieve me."

even kissed her and that was good fun too.

But then things changed suddenly. She no longer wanted to play tennis all the time. Instead she lay in a hammock and smoked and watched him. And one day, when he kissed her, he felt her body cling close to him with a sudden fierceness, and, for a moment, he was frightened, and after that he could never see her, or even think of her, without wanting to touch her, and when he touched her sometimes she would pull herself away from him and laugh, and sometimes she would press herself against him with all her strength and search for his mouth hungrily with her lips.

And from then on he knew no peace, no peace at all. He longed for her all day and all night, and his mind went dizzy when he thought of her—the smooth roundness of her shoulders, and her waist which had the sad, slender strength of a tree still young and still thrusting eagerly toward the sun, and the rich, womanly swelling of her body. And as he looked at her his heart pounded and his tongue dried up in his mouth.

Thinking of her now he drew in a sharp breath as though he had felt pain.

Tom Willett looked around and said, "What's that? Did you say something?"

"I don't think that lake was any mirage"

VIRGIL PARTCH

talked and sang with the contented man in good health, who doesn't mind worrying, and who has had a real. He sang, not so much for himself but out of good humor.

Johnny Cooper walked half a pace behind him, as was his plan, and watched the thought of Lucy, too, and his teeth tight against his teeth and his hands trembled afresh. With his eye he measured the distance left to the spot he had chosen. It was a matter of a few feet. It was only the distance that a few steps would cover—a hundred or two hundred maybe.

He walked along, watching the distance grow less and less with every step, thought of Lucy and pictured her long yellow hair falling thick over her shoulders. Once he and Lucy were merely good friends, almost brother and sister. Indeed there had been a time when, like a brother, he had been down impatient and resented her dragging along wherever he went. He had grown accustomed to having her with him and never made the effort to get rid of her.

It was useful too, always ready to do as hard and quick as a man, and always eager to walk or argue, or simply to listen. And sometimes, at dances, he

Johnny looked down at the ground before his feet. "No," he said. "I didn't."

Tom Willett walked on. "All right," he said over his shoulder. "You don't have to bite my blasted head off." He took his stick from beneath his arm and began to twirl it round his fingers, round and round like a drum major. "They didn't be-lieve me," he sang. "They didn't be-lieve me."

Johnny took a quick pace and came up closer behind Tom Willett. He said to him in his mind: The trouble with you is you want everything. And you push people down if you can't get it.

As soon as he said "push" he felt his throat contract as though the word had hurt him. He walked on behind Tom Willett, close enough to touch him, and he could see now the place he had chosen lying ahead, no farther than he could toss a stone or a pebble.

He said to himself: In a moment—by God, in a moment. . . . He clenched his fingers into the palms of his hands and felt his knees jerking loosely beneath him.

In a moment—

He thought of Tom Willett's car going past him in the evenings with two faces glimpsed for an instant before it was gone. He thought to himself: Why should he have a car when I haven't? He thought

of Tom Willett's car coming late to Lucy's little house and standing there for a long while, the headlights off and only the side lights bringing the hedge out living green in the purple darkness, standing there while time went on and on, and then at last the headlights flashing on again and sweeping in a yellow fan across the countryside as he drove away, leaving the light burning in Lucy's window in the dark house.

He thought of the many nights when he had gone to Lucy's house, tormented by desire to see her and touch her and speak to her, only to find the house empty and Lucy gone out.

And he thought of how he had gone home and up to his own room, from the window of which he could see Lucy's house standing dark on the hillside, and how he had sat there night after night, watching the house and waiting for the lights of the car bringing her back, and hearing the church clock strike time after time as the hours went by, and knowing that each time the clock struck, the watching and the waiting and the wondering would grow worse. Often as he sat there he would tell himself to go to bed and not be a fool, but the dark house on the hillside drew his eyes and he could not look away. He must know when she came back to the house. He must see the car come and the headlights burn out, and he must sit watching while the church clock struck the quarters, each with its own small tune, until at last the car drove away and then he must watch the light in Lucy's window until that too went out in the end, and only the moonlight lay silver on the sloping tiles. And then, and only then, could he turn away and lie down upon his bed and nurse the wound in his heart that was like a long knife stabbing through and through.

HE THOUGHT of those nights; he thought of the days which followed them when he went to her house angrily and she would sit smiling at him, and Tom would be there too, sprawled in a chair with his thick legs stuck out before him and his pipe in his mouth—Tom Willett with his huge shoulders and his good-humored thoughtlessness. "That's right, old boy. What about organizing a pint, old boy? Old boy—old boy—"

Johnny Cooper looked about him. This was the place.

The path here ran along the edge of a quarry for a matter of twenty yards. There was no wall and no fence, but only the sheer drop of jutting rock far down to the quarry below. A string of railway trucks stood like a small toy train on the siding below in the quarry. Johnny Cooper raised his hands and pushed Tom Willett with all his might.

For a moment Tom Willett's heavy shoes scrabbled on the loose flints of the path, and then, with outstretched hands, he toppled slowly outward.

For a moment his body seemed to hover in mid-air. And then he started to fall, sprawling, reaching for the safety of the rock with his hands. Quickly, Johnny Cooper drew back from the gaping edge.

As he fell, Tom twisted himself in the air and his chest hit the stone edge of the path. For another moment he remained checked, and then the weight of his body hanging below the ledge dragged him down and he began to slide down into the emptiness below. His outflung hands trailed palm downward through the loose stones on the path. Johnny Cooper shrank back against the hill and watched the hands with their bent fingers dragging through the shifting stones like small rakes furrowing the ground. He saw them turn up the flints and he saw the flints fall back and lie still behind them. He saw Tom Willett's head slip out of sight below the sharp rock of the path's edge above the quarry.

And then the fingers stopped.

The hands clamped upon a narrow

ridge in the rock's surface and stayed still. He watched the knuckles grow white with the strain of gripping and he shrank back against the hill.

The hands stayed still. Only the hands and an inch of wrist were there, reaching up over the edge of the quarry. He stood stock still and sweated and watched them.

"Johnny! Johnny!"

He heard the voice come back from the empty space below the ledge. It was shrill and stifled. He stood frozen and terrified, his head sunk between his shoulders and his eyes staring with the whites showing.

"Johnny, for God's sake—"

He saw the fingers bend tighter against the ridge in the rock and the knuckles grow whiter and whiter as though the bones were bursting out through the flesh.

THEN, slowly, he moved forward and knelt down on the path and leaned forward until he could see over the rim and down into the quarry. He could see Tom Willett hanging there. He looked down into Tom Willett's face. He saw Tom Willett's mouth open and twisted like a crying child's. And he saw Tom Willett's eyes looking back at him. He felt his own heart turn over and beat against his ribs like a thickly padded hammer.

Tom Willett looked up at him and screamed, "Johnny! Johnny—"

Johnny Cooper closed his eyes. He could not bear to look either at the quarry below or at the face looking up at him.

And then he opened his eyes and reached down and took hold of Tom Willett's collar and began to pull.

He bent his arms until the muscles cracked but he could not lift the weight beneath him. He could not raise it an inch. He knew he could not. He shouted to Tom, "Pull!" But he saw that Tom's grip upon the rock was not sufficient. The clutch of his fingers on the rock gave him no leverage and he could not help himself. Johnny Cooper let go of his hold on Tom's collar and pulled himself back from the edge. He heard Tom Willett gasping, "I can't hold on—quick—I can't hold—"

Johnny Cooper stood up and looked around him for a rope, for a plank, for anything.

There were only the bare rock and the flinty stones.

He looked down at the gripped fingers at his feet. He said to himself: Why should I do anything? Why? WHY—?

But he knew at once that he could not watch Tom Willett fall. He knew that he could not watch anything fall—not even a dog or a sheep or a dying bird. He said to himself: Weak! You fool, you weak fool! You weak, helpless, stupid fool!

He began to sob in terror and tears started to his eyes. He took a wild step without purpose or direction. His foot hit something hard and metallic. He bent down and saw a piece of iron standing up a quarter of an inch from the loose stones.

He scrambled round it with his fingers, flinging back shingle like a dog digging in the earth. He saw a small iron rod driven into the rock. Once it had been part of an old railing, but it had been broken off a few inches from the rock and bent back close to the stone.

Tom Willett screamed, "I'm going—I'm going—"

Johnny Cooper shouted, "Don't let go! Hold on!" and put his hands around the iron rod. There was just room for both his hands with the fingers overlapping like a man's grip on a golf club. He tugged at the iron rod and it was as firmly embedded as the rock it sprang from. He shouted, "Hold on, Tom. Hold on!" He saw one of the fingers gripped on the

"They've got some wonderful fur sales in the city tomorrow!"

COLLIER'S

BARNEY B.

ridge of rock slip a quarter of an inch. He shouted, "Hold on! I'm coming. Hold on!"

Stretching out on the path, he slithered his body along, feeling with his feet until he found the edge of the rock. He pushed his feet out over the rim and began slowly to lower himself.

As he felt himself without the strong support of the rock, fear struck like ice through his brain. He began to whimper with terror, his cheek pressed against the sharp flints.

But the iron was strong and hard between his hands and he pushed his body out and over the cliff. Panic clutched his throat like a rope strangling him.

He was hanging over the edge of the cliff now, close beside Tom Willett. Only the top of his head and his arms were above the ledge. He gripped the iron rod with all the power of his hands. The iron bit into his fingers but it was strong and immovable.

He looked at Tom Willett hanging from the rock close by his side. He said, "Tom—Tom—"

Tom Willett turned his head toward him, and Johnny saw his face was purple and the veins stood out like worms beneath his skin. He saw Tom Willett's lips writhe in an attempt to speak, but only strangled gasps came out. Johnny felt foul-tasting bile run into his mouth. He knew that he could not watch Tom Willett let go and crash down hundreds of feet onto the jagged rocks in the quarry below. He knew that if Tom let go he would let go himself. He would not be able to face life alone and alone if he watched Tom Willett fall.

He began to shift one hand from the iron rod to take hold of Tom, but as soon as he relaxed his grip he knew that he would fall. He gripped the hard iron tighter with both hands and put out one foot with a vague idea of supporting Tom upon it. But he knew at once that that was no good either.

He thought: If I could lift him an inch or two he would pull himself the rest. He's strong—

He crossed his ankles and hooked his feet together, one over the other like a man climbing a rope. He shouted to Tom Willett, "Stick your foot between my ankles. Quick. Stick your toe in between my legs. I can hold you."

He saw Tom bend his head and look downward. He heard Tom's feet scrabbling along the cliff face. Then he felt

Tom's toe touch his calves, feel the weight and then force its way between his ankles. He saw the wormlike veins bulge on Tom's forehead and writhe then he felt the weight pressing forward. At once his fingers were on the roughness of the iron rod. His body was pulled and stretched as on a torture rack. He thought: I can't hold him. I can't hold him. He's heavy.

He shouted, "Quick, Tom. Get up. God's sake. I can't hold you."

He felt Tom Willett's body move forward. Pressing down with his hands against Johnny Cooper's locked ankles he had heaved himself upward a foot. He was no longer hanging from the full extent of his arms and his legs but was bending his elbows, hauling himself upward.

TOM lay for a moment gathering strength. He was immensely strong, still, even though he was exhausted. His body smothered Johnny and pressed his cheek against the sharp rock. He grunted. And then he felt Tom pull himself higher and felt his hands clench down over his own on the iron rod. The other jerk and both Tom Willett and Johnny's fingers round the iron rod. They pressed in, squeezing Johnny's fingers into the jagged iron until he felt the blood running hot to his palms.

And then he felt Tom Willett's body slither slowly upward over the rock. A steel-tipped heel kicked him in the eye but he was not aware of it. And then he was hanging from the empty air.

As soon as Tom Willett's weight shifted off him the strength seemed to pour out of his body. He felt the effort he was capable of making was too tired to do anything else. His fingers were numb and without feeling.

He let the breath run out of his lungs and began to loose his fingers. The ceasing in his hands was like sleep over aching eyes. He began to let go. He did not care any more.

He wondered idly for a moment if he did not sink down. And then he felt a hand upon his coat, lifting him up. He closed his hands about the hand and began to pull himself almost against his will. He felt

scales of his arms knot like ropes beneath his skin. He felt himself rising. Then he found himself sprawling on rough pathway. He lay there without moving, his feet still in mid-air above the ground.

For a long while both men lay face downward upon the path, dragging air through their lungs like men who have run a race. And then, slowly they sat up. Tom Willett pulled a handkerchief from his pocket and began to mop his face. "Hell's bells," he said. "That was enough."

Johnny sat with his head upon his hand, gulping in his breath. He looked at Tom Willett but did not speak.

Tom Willett took a cigarette from his pocket and lighted it. He sat luxuriously on the jagged flints and sucked at the end.

Johnny said, "Give me a cigarette, Tom."

Tom Willett gave him one.

Johnny, he said, "did you push

Johnny pulled at the cigarette and looked out over the edge of the path into the quarry and down at the little toy train tracks in the siding below.

"Yes," he said.

Tom Willett nodded and blew smoke through his nostrils. "Lucy, I suppose," he said.

Johnny tapped off ash carefully against the ground. "Yes," he said.

Johnny said, "You'd have swung for it, Tom."

"Night have. But I don't think so. It would have been an accident."

Tom Willett sucked at his teeth. "What a night," he said. "You'd have swung sure as eggs. You'd have swung for a fancy girl—you'd have swung for a fancy girl like that. Good God, it's amazing!"

Johnny Cooper looked at him. For a moment he felt anger. And then he could not raise anger inside him. He felt as though he had been pumped out and empty.

Tom Willett said, "If you want her back you can have her. If you want her that bad—"

Johnny Cooper flipped his cigarette end over the cliff edge and watched it twirl away out of sight. His last puff of smoke hung twining above his head. He said, "No, I don't want her. Not now, I don't."

It was true. He did not want her. He began to think about her and all she had done and he knew he didn't want her and would never want her again. It was as though bandages had been removed from the eyes of a blind man, and instead of darkness he saw everything suddenly standing bright about him. He saw Lucy like a stranger and he did not want her.

He said, "I tried to murder you, Tom."

Tom rubbed his soiled hands along the sides of his trouser legs. He said, "Yes, you did, old boy. Well, what do you know about that?" and sat staring at Johnny Cooper.

LATER that evening they came into the Red Lion, both drunk and unsteady on their feet. They leaned against the bar and kept saying to the barmaid, "Roll it out, Jeannie. We're celebrating." And then they would burst out into raucous laughter.

Many of the older men in the bar resented the uproar and looked at them with annoyance.

The barmaid told them to behave or she would have to fetch the governor. She said, "And my name's not Jeannie. What are you supposed to be celebrating, anyhow?"

But they only went on drinking and slapping each other foolishly on the back.

"We've saved each other," they kept shouting. "Saved each other from a terrible fate."

And then they would giggle with laughter and tumble helplessly against the bar.

THE END

SPORTING ODDS

During the war, the Air Transport Command set up a baseball diamond on the Planters' Club golf course in the upper Assam Valley of India. There the 77th Transport Squadron played a game with the near-by Air Service Command base, with one man doing double duty as plate and field umpire from a position behind the pitcher. The umpire, attired in shorts, had no pockets in which to keep the extra balls, so he put them in a pile behind and slightly to the right of the pitcher's mound.

With a runner on third, the batter slammed a sizzler directly to the mound of balls, scattering them in all directions. The pitcher jerked off his mask and called for the ball to cut off the runner. The first baseman, the shortstop and the third baseman, each thinking he had the ball in play, rifled a ball to the catcher. All three balls arrived simultaneously. The runner was safe, but the pitcher was out—until he came to in a hospital with a broken nose and assorted contusions.

How to Give Winter the "HORSE LAUGH"

Right Now!

Last winter, 400,000 motorists who wanted South Wind Car Heaters couldn't get them. You'll be wise to get your South Wind now and be ready when cold weather comes. Otherwise you may be disappointed because this coming winter it looks like demand will again exceed supply. So, be smart! Give winter the "horse laugh." Get your South Wind, now. Here's why:

- Right now, South Winds are available with or without defroster. Mechanics are also available to install them.
- You need not wait until you get your new car. Install a South Wind in your present car. It's easy to transfer later.
- A South Wind is ideal to take the chill off nippy summer and fall night drives. It's always connected—ready for use.

Hot Heat in 90 Seconds makes South Wind the World's Largest Selling Car Heater!

CREATES ITS OWN HEAT...

NO WAIT FOR ENGINE WARM-UP

...FITS ANY CAR

ONLY \$29⁷⁵

Plus small installation charge

2 MILLION USERS SAY... "90-Second Heat! That's up to 7 times as fast as ordinary heaters! It means quick comfort even on shortest trips—to work, to store, school, movies!"

NO OTHER CAR HEATER can use the exclusive South Wind "sealed flame" principle. Burns fuel from the carburetor in a patented, sealed metal chamber. Fumes go out the exhaust. Its safety has won the seal of Underwriters' Laboratories. Easy to install...no hose to cut...no extra thermostats to buy. Get your South Wind now! On sale at auto supply stores, car dealers, garages and service stations coast to coast. SOUTH WIND DIVISION, STEWART-WARNER CORP., INDIANAPOLIS 7, INDIANA.

Its safety has won for it the seal of the Underwriters' Laboratories. Proved on millions of cars and trucks!

South Wind

90-SECOND CAR HEATER

COMING! The New South Wind "Custombuilt"—a Luxury Heating and Ventilating System for Motor Cars and Motor Transports—\$99.50 Plus Installation.

STORMY WEATHER

Continued from page 17

of the girls, dark and vivacious and out thirty pounds overweight, was apparently telling a story to the others. Two of the girls were probably sisters, although she couldn't see the face of the one with her back to her. Helen thought they looked very ladylike in their print dresses and white cardigans and their pigtails tied with red ribbons. The girl wore sloppy dungarees and a striped shirt open at the neck, and her hair hung lankly down her back. "Now do you think they all came here together—and, if so, can you understand the fat one is with them?"

CHARLES glanced carelessly over and shrugged his shoulders. It was evident such speculation bored him, but he persisted. "Now which one of them do you think the best chance of getting married?" Charles glanced over again. "I don't know what the one with her hair to us looks like."

"Well, I think she and the other girl are sisters. They're dressed rather alike. Anyway, then, which of the two?" Charles said. "Fatty."

"Charles! You're fooling!" Helen said. "It's a nice face. Got some spirit. Nice teeth, too. Nice eyes. Blondie like a cold potato."

"But she's neat, and you like neatness. You've always said you disliked fat people!" Helen pursued the subject as if it were a really important matter.

"But," said Charles inelegantly. "You asked me a question and I answered it. I do I care about three strange people sitting in the Oceanside bar?"

"Well, I like people. I'm interested. You like people!" he exclaimed in exasperation. Helen thought was exasperation. "It's a silly thing to say!"

"Irritability behind his remark unsettled her, and for a moment there were tears in her eyes. The whole day had been wrong. Somehow her self-esteem had slipped away from her little by little, and she considered that its vanishing was due to Charles' putting her in the pit of her stomach. She would not speak again until he did."

"I watched her husband remove a cigarette from his package, and as he lit it on the table, shaking down the ash, she reflected with irritation that he always tapped the cigarette more than necessary—twelve or thirteen times. She never did any tapping herself, and although she had just declined one cigarette, she asked for a cigarette so that she might have the pleasure of lighting it just as he did. Later, when her fingers removed a piece of tobacco from the tip of her tongue, she noticed that Charles was watching her. She wondered if perhaps he hated her as much as she disliked him. She had just lowered her finger to her dress when she caught his eye watching it, and suddenly she blushed.

"Disgusting!" she exclaimed. "Do you wipe it off on my skirt?" Charles laughed too, and the tension was broken. He gave her his pocket handkerchief, and she vowed privately to herself of the habit.

"At the end of the second Martini conversation became for the first time spirited, and they felt so relaxed that they ordered a third. They went to Guy's for dinner and had steaks and broiled live lobsters, and himself came out of the kitchen to help them. It was pleasant to be relaxed, and Helen felt that everything would turn out just beautifully.

"The picture that they had both seen

was being shown at the one movie theater, and because there was nothing else to do they walked several blocks through the rain to a new place Guy had told them about, the Whaler, where there was some music. Helen had expected to drink beer, as she usually did when she'd drunk more than two cocktails before dinner, but there was no beer, so they each ordered a Scotch and soda.

The music started up as soon as they had ordered: a good pianist and an indifferent violinist, who played old popular tunes in a rather bored manner. Charles seemed to be satisfied, so Helen refrained from mentioning the fact that the violinist's intonation left something to be desired.

Charles, full of a sense of well-being after a good dinner, was in an expansive mood, and he talked about what they would do when the weather changed. They had never gone out in a fishing boat, for example, nor had they

couple of friends of Charles' whom she disapproved of, and hadn't she welcomed them into her home without ever giving the slightest indication of her feelings?

"Why, I'm feeling peevish," she thought; "I should be ashamed. As if it weren't bad enough for me to be a dull companion—"

Presently Charles went over to speak to the musicians, and when he came back he was smiling slyly.

"Now, don't talk," he said. "I've got a surprise for you. They're going to play something you like!"

Helen beamed expectantly, and in a moment the musicians had launched into the Flight of the Bumblebee.

She couldn't help it; it was a reflex over which she had no control. But she laughed, laughed aloud as she seldom did. And because she wanted desperately not to laugh, and tried to stifle the sounds—for the sake of the musicians as well as Charles—she became hysterical, and

how much she wished—that Lee and Pete Brooks had come with them!

When she went to sleep she prayed that it would be a lovely clear day tomorrow. The island weather was capricious; you could never tell when you went to bed at night what the sky would look like in the morning. The stars might be twinkling brightly at midnight, but an hour later a fog bank might blow in, and in the morning the sky would be gray.

When she awoke, the rain had dwindled to a drizzle, but the wind was still blowing southwest and no one saw any sign of its clearing. Charles announced that he wasn't going to shave until after breakfast, which was most unlike him.

He ordered prunes and cream, ham and two fried eggs, blueberry muffins and marmalade and coffee. Charles always breakfasted with a lusty appetite of which Helen had often boasted to her friends, but this morning she wondered if he realized he was beginning to have a roll of fat around his waist. His father had a corporation, and Charles really ought to watch his figure.

Helen felt virtuous, having ordered simply orange juice, toast and coffee, although there was no need for her to diet. In fact, she had very little appetite at any time and didn't really care about food at all; anything would do. She had never dared confess this to Charles, who was something of a gourmet and rather despised people to whom roast beef was roast beef no matter how it had been cooked. Eating, to Charles, was an art.

It was funny, Helen thought, how Charles' two enthusiasms were literature and food, whereas hers were music and painting. It had not occurred to her before that they were perhaps not so perfectly mated as they might be.

AFTER breakfast Helen wanted to buy some post cards, and she selected ten, all brightly colored and showing gay young people lying on the beach or sailing in the harbor. When Charles went off to the lending library Helen returned to their room to address the cards.

"Lee darling," she wrote, "the island is as lovely as ever, although we've had rather bad luck with the weather so far. . . ." (Funny, they hadn't been here twenty-four hours yet, and she was writing as if they'd been here a week.) "Cocktails last night in the Oceanside bar, and lobsters at Guy's, just like the old days. But it isn't the same without you and Pete. Love. H. and C."

She knew that if the Brookses were here they would all be sitting on the twin beds engaged in some mad form of excitement; they had spent many a hilarious rainy day with the Brookses. Helen had supposed right along that some peculiar chemical reaction set in when the four were together, a chemistry to which each of the four contributed. It was a blow to find out now that it had always been the Brookses to whom they owed their fun. It was, in fact, shocking. It meant that the Brookses could go anywhere, and be with anyone, and still be the center of all the crazy activity.

Worst of all, she realized that Lee and Peter must have something together that was lacking in Helen and Charles. And this was an appalling revelation.

She thought back to the time of their marriage, when no two could have been more thoroughly in love than they. What had they possessed then that was so right, that had somehow been lost during the six years of their marriage?

They had had scarcely any money in the beginning, but neither of them minded being poor. And Charles had talked to her about his work—why, it must be years since he'd even mentioned one of his cases to her. And she had

"Suppose it isn't practical! It's still the biggest five-dollar bill ever printed!"

COLLIER'S

LOUIS JAMME

been through the historical museum. He wanted to do things this year, get to know the island better, might settle down here sometime. His enthusiasm was contagious, and Helen was as eager as he to explore the island, but it occurred to her that Charles was just the least bit pompous whenever he talked of the future. Oh, she was glad he could be so self-confident, sure of his eventual partnership in the firm, but—oh, dear, she was ashamed of the disloyal thought. Why shouldn't Charles be a little arrogant, when he was the white-haired boy? He'd already gone twice as far as most of his classmates.

"What was the name of that friend of yours?" he was asking. "The one who got drunk at the reception?"

"Oh, Hilda Hawley."

"That's it. Well, if I remember correctly, she said her old man owned quite a lot of property on the island. Maybe you should look her up sometime."

"All right." She couldn't do any such thing, of course. Hilda had been her best friend until her marriage. Charles had said simply and firmly that he couldn't stand her. So she had given up Hilda, seeing her only for lunch occasionally and finally not at all. She hadn't thought of it before, but it now occurred to her that it had been unreasonable and tyrannical of Charles. There were a

when the tears ran down her cheeks they turned into real tears because of shame.

"Oh, darling, I'm sorry!" she said finally, when she could speak at all. "I'm awfully sorry!"

"Well, I should think so, making a scene like that. May I ask what was so amusing?"

"Oh, Charles, it isn't as funny as you think. It was just that I was expecting to hear something very different, like All the Things You Are or If I Loved You or one of the songs we both like so much." She was weakly drying her eyes, and she still felt a tiny dangerous spark of hysteria waiting inside her to be set off if Charles should say the wrong thing.

"But you like classical music! You don't usually go into hysterics over it!"

"I know, Charles, but the Flight of the Bumblebee!"

"You don't like the Flight of the Bumblebee!"

"It's all right, darling, but it's been kicked around so—you know, on the radio. I'm sorry. I'm all right now. I'll have to think of something to say to the musicians."

"No. I will apologize for you. I shall tell them that my wife is feeble-minded."

Of course she had been wrong, but it was horrible to hear Charles being so stuffy. He was always so affable, so charming, so unruffled. She wished—oh,

Are You A Lady In Distress?

DO YOU often wish you had more money? Your husband who is so good—so kind—does he seem a bit "edgy" when it comes time to pay bills? His salary, being not quite enough to meet all demands, causes you both worry.

That seems quite general. That's why more and more women want to know about the Pin Money Club for girls and women with little time to spare.

Hundreds of letters come to me from long-time members and new members. They love having a business all their own. The money earned often pays fuel bills—buys curtains or something else for the home. They also know the joy of buying an extra-expensive hat or suit—many things!

WRITE today for our free folder, *There's Money For You*, to help you solve your problems. Address a card or letter to

listened in admiration, proud of that legal mind of his, and pleased too that he thought her an intelligent listener.

Could it be that he had found her less than intelligent, that it wasn't true—as she had supposed—that with his increasing duties had grown a greater need to relax at home? This was something that needed thinking about; it couldn't go on. Perhaps they could talk it over sometime when the circumstances were just right. On the beach some quiet afternoon. "Something has happened to us," she could hear herself begin. "We've lost something that we've got to get back."

When Charles returned from the lending library he brought four books and a jigsaw puzzle, and he looked cheerful.

"Just the thing for a rainy day," he explained heartily.

They hadn't worked a jigsaw puzzle since their early poverty-haunted days, when they couldn't afford any other means of entertainment. It made Helen feel very fond of him that he should have thought of it. Working the puzzle together, they might be able to recapture the thing that had gone.

IT WAS fun at first, even though it did go slowly. She had a knack for being able to select the right piece for a certain spot without having to experiment first, while Charles used the trial-and-error method, yet they both worked at about the same speed. But presently Helen became conscious that the tune Charles was whistling was the first four bars of *In the Gloaming*, over and over. At first she was amused and fascinated, and then she whistled along with him so that she could steer him safely into the next four bars and let him finish the song. He did finish the song, but all unconscious of his wife's machinations, when he began the song again he went over and over the first four bars until Helen thought she couldn't bear it. She had a strange urge to be violent, to tear her hair or smash something. Instead she calmed herself.

"Darling," she said gently, "how would you like to change the record?"

"Huh? What'd you say? Oh. What was I whistling?"

"In the *Gloaming*."

"I'm sorry I'm getting on your nerves." His mouth made a straight line.

She had done it again—injecting a discordant note into their relationship. Oh, why couldn't she have held her tongue? What if he *had* been whistling monotonously? Hadn't she always loved his jaunty off-key whistle when he came home every day? Hadn't the very imperfection of it endeared him to her?

The whole day passed like that. There were only moments in which she felt they were on the old affectionate basis, and most of these occurred when they had been drinking, so that Helen could hardly wait till drinking time. They had cocktails before lunch as well as before dinner, and Helen felt that Charles was as eager as she to induce these periods of easy companionship. The next day passed in the same way, and the next. The islanders said it was the rainiest August in the island's history. There seemed to be no end to it. It was very bad indeed for business.

It was very bad indeed for Helen. When she was occasionally away from Charles she brooded over the intangible thing they had once shared, the thing they had lost, and thought a great deal about the talk they would have on the beach when at last the clouds blew away and the sun was shining. She wondered if things would have been different if they had had a child. Charles always said there was plenty of time, but perhaps children were what kept people together.

After seven days of rain Helen at last awoke to a blue island day. She and Charles dressed hurriedly, eager not to waste a moment of the sunshine.

It was almost heartbreakingly beau-

tiful. The sky was cloudless. All trees were green and shining. The gray-and-white houses looked scrupulously clean. They walked down to the water and gloried in its lambent blueness. The view was so dazzling that Helen's pale eyes squinted against its impact.

Charles was in a fine humor: affectionate and ebullient. He made little remarks all through breakfast, and under the stimulation of his wit she found herself responding. After breakfast he deliberately put his arm around her, and in the company of everyone walked thus along the beach to the hotel. This, she thought, was a day for us to have our talk.

They packed a lunch to take to the beach, and Charles poured some rum into the vacuum. It was like old times.

On the beach they collected shells they used to. (They always thought they were going to take them home, but a year at the end of their holiday ended by leaving them on the mantelpiece.) Then they lay down on their backs, their eyes closed, and felt very lazy. Helen thought she must guard the moment carefully and do nothing to disturb the sweet serenity of the mood.

Later on Charles went away to one of his comical sand men, and when he worked he whistled the first four bars of *In the Gloaming* over and over. It lighted Helen; it made her feel more toward him. Carrying a tune, she affectionately, was the one thing in the world that Charles didn't do perfectly. For no reason at all she thought of Hawley and how she'd made a fool of herself over Charles at their recent coming repeatedly back from the bowl to kiss the bridegroom until it positively embarrassing. It must have been pretty boring for Charles. He had always been a terrible man of course, and considered other husbands fair game. Helen wondered why she had ever liked her.

WHILE she lay watching she gloried in the vigor that she found him so active on the beach when she herself could lie there all day without a ring. She thought affectionately of her great family of his, so lively and full of them! She believed she actually drew strength from Charles; he had played two.

He called to her, having just made up an absurd pun. She laughed and then found herself running one even more ridiculous. How stimulated her! She would be without him. And this was what she had been looking forward to, these days on the beach. How glad she was that the Brookses hadn't come!

Loving him as she did at this time she knew she would be safe now by bringing up the subject of the lack of marriage. She waited until he came and when he came he lay down beside her and looked at her with such love in his eyes that her heart turned over.

"What a glorious day!" he said. "And what a glorious girl! I love you." He spoke the three words as if he had just made a great discovery.

"And I love you too," she said. "Darling—"

But what was there, after a while, to him about? What were those feelings she'd had that something was wrong between them? What was it that she could put her finger on that made her feel their marriage in jeopardy? Why, she couldn't name a thing. She must have been wrong. Nothing had been lost, certainly not as they could look at each other and feel like this.

"What is it, dear?"

She laid her cheek against his and looked at him adoringly.

"Nothing. I'm just happy."

THE END

OLD SNAKE IN THE GRASS

Continued from page 13

they can get and as much of it as they can. We'll accept the listing with thanks and we'll run an ad in the city papers tomorrow."

Linda contrived a smile. "Well, at least it's nice to have you show some interest in the business. Of course, that will be a hard bit of property to sell, so if anyone should show any interest I think I'll come long to help. Keep everyone's mind on the business at hand."

Chuckling to himself, the commodore left the office. Everything, he thought, was working out splendidly. Linda had talked right into it. One trip to Smugglers Reach on a foul day would be enough to open Jerry's eyes to the nature woman. The commodore chuckled more as he walked down the street. He would get George Otis to answer the bill. George was an old sailor who had had woman trouble and who would be delighted to help a young lad like Jerry blow off a lee shore. The weather reports would forecast when sailing was likely to be the most unpleasant.

"I am," the commodore told himself complacently, "an old snake in the grass."

IT was that one morning about a week later Slick Chick, with one reef in mainsail and only her staysail bent forward, nosed down the coast into a bay that drove slanting rain and spray to the faces of the four oilskin-clad people huddled in her cockpit.

Conditions, the commodore thought wilyly, could hardly have been more ideal. The damp cold was creeping through his oilskins and water had gotten into one of his boots. Only a true lover could find any relish in being out in a small sailboat this day. He glanced at Linda. Her face was small beneath the wester and he noted with satisfaction she was cold. Jerry was sailing Slick Chick as easily as possible, to lessen the discomfort for Linda as much as he could, it wouldn't do any good. She was bound to become waspish before the day was over. The commodore did feel sorry for Jerry, though. The disillusionment in her face for him today was going to hurt. Time and sparkling days of good sailing would eventually heal the wound and

Jerry would look back upon his narrow escape from matrimonial chains with gratitude toward the commodore.

The commodore was also pleased with his old friend, George Otis. When he had arrived from the city that morning and Linda had suggested that perhaps another day would be pleasanter, George had made his weathered old face look something like a carved coconut and said there was never anything especially pleasant about buying real estate and if he couldn't get to Smugglers Reach on a bad day he wouldn't be interested in the place at all.

For a moment there, the commodore had been afraid that Linda would back out of going along. But Jerry had solicitously suggested that she remain behind and that had been that. Linda had come.

The commodore would have been even more pleased had he known how completely Linda had made up her mind to have nothing further to do with boats again if she ever got ashore. But he would not have been surprised. He would have pointed out that Linda was running true to feminine psychology as he knew it. What would have surprised him, however, was the fact that Linda had also made up her mind that Jerry was going to have nothing to do with boats any more in the future, either.

But Linda was amazed at the compact neatness and comfort of Slick Chick's cabin. It was as modern as tomorrow. The chrome galley and enameled ice chest were immaculate and glistening. The china and glassware shone in their racks. The two berths were deep and wide and the sheets on them were snow white where they were turned down over the blankets. There was a place for everything and everything was in its place. Linda's brows went up. For the first time she realized that to Jerry sailing was not just a means of escape from work but an end in itself. She decided that the only reason he didn't spend more time ashore was that he had everything he needed right here. Linda could see the work Jerry had put into his boat to achieve perfection. By the same token, if he could be lured ashore, the furnace in his house would never be out of order nor the lawn

Enjoy Summertime Warmth All Next Winter!

install a modern
MONROE gas heater
NOW!

Comes next winter, these new, beautifully-designed Monroe Gas Heaters will be hard to find ... and every shivery day will see dealers so busy, you'll have to wait for installation. So **why** wait till winter comes? Your dealer is showing the complete line of Monroe's latest models right now. He'll be happy to help you choose the right size and styles for **your** heating need—whether it's a chilly spore room or a whole house. When icy winds blow again and temperatures take a tumble, just set your thermostat and enjoy the glowing, summertime warmth of your Monroe Gas Heater. You'll be glad you **didn't** wait.

Built with the famous Gasmaster Burner that operates efficiently and economically with **ALL** gases.

ever rank. Linda's domestic soul quivered.

And there were books on the shelves over the berths. Half of them dealt with boats and navigation but the other half were the same kind she liked herself, a mixture of serious works and mysteries. To Linda's mind came the picture of Jerry's loose-jointed frame sprawled out on his berth as he smoked a pipe and read those books. Her domestic soul quivered again. She saw herself in a Cape Cod-type cottage with Jerry. She saw him mowing the lawn and putting up screens and painting eaves. She saw herself stretched out beside him on a couch before a fireplace with her head on his shoulder while they both read until it was time to see if all was well in the nursery before retiring. Inside the heavy boots she was wearing, Linda's toes curled deliciously, and the determination was born that in her life with Jerry there would be no boots. There would be only slippers she could kick off under the breakfast table so she could slide her feet up along Jerry's shins when she felt like it. The only problem remaining was that of making Jerry want her more than he wanted his boat.

A trickle of cold water ran down Linda's back from the collar of her oilskin coat and she hated the sea and Slick Chick with a ferocity that would have delighted the commodore. She glanced with detached cynicism at the commodore and George Otis, who sat huddled across the cockpit from her, sensing that in some way both of them were against her. She suspected that Mr. Otis was exactly what he was, a phony prospect. She reasoned that the purpose was to get her out on enough unpleasant days to discourage her from coming along any more and that, after that, Smugglers Reach would be a convenient reason for Jerry to go sailing any time he wanted. A grim little smile flickered momentarily at the corners of Linda's mouth. All three of the men, she felt, had made the mistake of underestimating her capabilities.

Rising to her feet, Linda climbed up out of the cockpit to the narrow, windward strip of deck between the cockpit and the rail. She swayed there, balancing dangerously against the cutter's movement.

"Hey!" Jerry said. "Where are you going?"

"I'm just going to move around," Linda said. "Find out what kind of a sailor I am."

"Listen, be careful. Get hold of something before you . . . Hey!"

THE instant the water closed over her head, Linda regretted her act. The water was much colder than she had thought and her oilskins and rubber boots were heavy. Panic seized her. She struggled desperately to rise against the weight that was pulling her down into the icy depths. She tried to call Jerry's name, and swallowed a strangling mouthful of water.

In all Linda's life nothing had ever felt so wonderful as the sudden crushing strength of the arm that encircled her and the thrashing power of the body close to her fighting to the surface. Gasping and gulping air into her lungs, she heard Jerry's voice rasp, "Idiot! And stop hanging on so tight. Swim, dammit, swim! Kick your boots off!"

Somehow, as Jerry supported her and at the same time swam hard to keep himself above the surface with the weight of his oilskins which he had not had time to shed, Linda managed to get her boots off. She could see Slick Chick, with the commodore at the helm and George Otis at the sheets, just coming down-wind toward them. Slick Chick shot by and Mr. Otis tossed a life preserver. Linda and Jerry clung to it while the boat came smartly up into the wind again and, pointing high, nosed up slowly toward

them. Mr. Otis knelt on the deck hanging onto the lee shrouds with one hand extending the other out toward them.

"Dammit, girl!" Mr. Otis snapped. "that was a fool thing to do!"

"It was an accident," Linda said through chattering teeth as she came over the rail.

"People who can have those kind of accidents have no business aboard boats," Mr. Otis growled.

Linda could have hugged him for saying that so Jerry could hear it as he came over the rail. But she nodded humbly. "I know it now. I'll never be a sailor."

"Balderdash," Jerry said. "Get below. I've got dry clothes that'll be warm for another pair of boots in the cabin."

Jerry followed her below and closed the companionway hatch after him. Linda got out of their oilskins. Now, Linda thought, was the time. While he was breathing hard and looking at her that way he was as she stood there with wet clothes molded to the curves of her body.

THERE was no pretense when Linda stepped up to him and put her arms around Jerry's neck. Earnestly and sincerely and enthusiastically she worked on him. She felt him tremble then his arms went around her and his feet left the cabin flooring so that water dripped from the ends of her glistening, stockinged feet.

"D-dar-r-ling!" Linda gasped. "careful! You almost lost me once."

A big, wide, spreading grin came over Jerry's face. "Baby," he said, "I think that'll ever happen again."

Linda nodded. This was the time to get things settled. "It's the last time I ever step on a boat where those things happen," she said. "From now on I stay ashore, darling. We'll work and love on land where . . ."

Jerry placed a finger under her chin and looked down at her. "You're a funny face," he said.

Before Linda could make up her mind whether he meant it literally or not, Jerry stepped over to a locker and began bringing out dry clothes. He decided he probably meant it literally. He tossed some clothes on one berth and some on the other. "There isn't anything," he said, "but we can keep our backs turned. Get into those dry clothes. They'll be too big but they'll be warm."

When Linda and Jerry emerged from the cockpit, Jerry took them from the commodore and said, "We'll break out the jib, commodore? May I please shake the reef out of the main?" Both these old salts and Linda looked at him questioningly at Jerry.

"Uh . . . my boy," said the commodore with a trace of anxiety, "we're practicing rail down now. Don't you think you're carrying about all the canvas you should?"

Jerry laughed. "Slick Chick'll let's get her going."

Linda remembered that Jerry had tried to tell her that a boat was almost the nearest thing to a living creature he had ever achieved. At the time she had sniffed disdainfully. But now it seemed that perhaps there was something to what Jerry had said. Under the tional canvas Slick Chick seemed to have declared war on the sea. She heard him over and buried her lee rail. Water bubbled and hissed along her deck to the coaming. But she was driving her boat the oncoming seas; punching her way into smothering of spray whipped back along the deck.

Linda saw the commodore and Mr. Otis watching both Jerry and Slick Chick sailed. She saw a look of admiration come into the eyes of Mr. Otis. She saw the trace of a smile in the commodore's eyes.

"Jerry, you'll take the stick of her," the commodore said.

Linda shivered. She was frightened.

nd puzzled. She heard Jerry laugh gain. "Hell," he said. "She isn't even training. Linda can handle her."

And before Linda knew what was happening, Jerry had reached over to where she sat on the other side of the tiller and had taken both her hands in one of his. When she was grasping the tiller, Jerry grinned. "Here you are, Linda—she's all yours!"

Linda squealed with fright as Jerry slid away along the cockpit seat. The commodore's jaw sagged. Mr. Otis blinked and then slowly began to grin.

Linda squealed again. She gripped the tiller until her knuckles showed white. Here, through the tiller, she could feel the surging power of the cutter. Slick Chick seemed to her to be rushing through the seas at a fearful pace. "Jerry! You come back here!" Linda bleatedantically. "I—I don't know what to do!"

"It's time you found out," Jerry said artlessly.

"Darn you!" Linda wailed. "I'll drown all! You come back here! I... Look at me!"

A huge wave hit Slick Chick hard on weather bow. The cutter shuddered; it blotted her bow from sight. Then she seemed to shake herself and with a sudden, leaping surge smashed through the water that had hit her. Linda felt the living power under her; it was something infinitely more powerful than herself. Another sea rushed at the cutter. Jerry slid overboard and put his hand over Linda's on the tiller. He moved it gently and this time Slick Chick eased over the sea in a gentle, twisting roll.

"Gentle her," Jerry said, and moved away. Linda thought bitterly. "This damn' boat! Oh, by all means! Fury filled her, replacing fear. She drove Slick Chick to the bottom of the sea and Jerry with her. She'd sail her boat at the mast would come right out of the water."

A savage exultation filled Linda at the thought of the wind tearing at the rigging, slamming the taut sails. She began to feel just how to move the tiller so that Slick Chick would plow through the seas, riding spray high and smashing solidly through hard. Something, Linda felt, would give.

Nothing did give and Linda be-

came aware of the fact that gradually, without knowing it, she had been easing Slick Chick through the seas. Sailing her more and more smoothly. A tingling exhilaration went through Linda. The cutter's immediate response to the slightest move of the tiller thrilled her. Without knowing it the grim look had faded away from her face. Her lips were parted and her eyes began to sparkle.

"Take it easy," Jerry said. "You can't learn everything in one day."

No, Linda thought, not everything. But you could learn a lot. You could learn that when you sailed a boat you couldn't have everything your own way. You could learn that by yielding a little here and being a little firm there, you might lose some but you gained a lot more. When you allowed yourself to become a part of something else it became a part of you, and the sum of the two blended into one was greater than the sum of the two apart. When her hand on the tiller gentled the cutter she could feel the power of the wind gathered smoothly by the curved sails and transmitted as through her own body to the swift hull beneath her and it was as though she and the cutter were a living whole.

IT WAS the way, Linda knew in that moment, that all things should be. The way it should be with her and Jerry.

She looked at Jerry and smiled and he grinned back and then Linda knew that what she wanted of life, Jerry would give her, even as she would give him what he wanted.

"Jerry," the commodore said, "there's Smugglers Reach. Time to come over on the other tack and head in."

Mr. Otis snorted. "The hell with Smugglers Reach. This cutter is what I want." He looked at Jerry. "Give you fifteen thousand for her."

Quickly Jerry glanced at Linda. "That's almost a house and lot right away, baby," he said. "How about it?"

Linda didn't have to stop to think. "When it's time for a house and lot we'll work for it the way we've worked for Slick Chick," she said, "together..."

Which are the facts upon which the commodore bases his belief that he is a very wise old snake in the grass without whose help Linda and Jerry would never have found out the answer to it all.

THE END

\$100,000,000 WORTH OF CANCER RESEARCH

AS MOST of us know or should know, cancer is one of the most murderous of diseases, and as a general rule it can be cured only if caught at an early stage.

It is so insidious in some of its forms that few of its victims suspect the truth about their troubles in time for their physicians to be able to render the best possible help.

Cancer in all its varieties killed 181,600 Americans last year. Stomach cancer alone got 38,000—and this form of the disease is commonly not detected until it is too far advanced for surgery to do any good.

It is estimated that 17,000,000 Americans now living will die of cancer eventually; and that one third of these could be saved by methods of treatment which are well known already. IF qualified physicians could go to work on them soon enough.

What we need—what the human race needs—is a cure for cancer that will be as reliable as the cures we now have for diphtheria, syphilis, most forms of pneumonia.

While it is true that we can't buy a cure for cancer by simply laying out large sums of money, as we bought the atom bomb for some \$2,000,000,000, it is also true that cancer research is not nearly so well financed as it ought to be.

The American Cancer Society is trying to raise \$12,000,000 this year for its unremitting war against the disease, but it can allot only about one fourth of this sum for research. Other agencies are forever fighting cancer and conducting research with what money they can round up. From time to time, emotional and entirely worthy appeals like Walter Winchell's Damon Runyon Cancer Fund help considerably.

We're not trying to slur any of these endeavors. They have our very best wishes. But we would like to inquire whether it isn't possible to enlarge cancer research by several hundred per cent, in the hope of conquering the disease that much sooner.

Here is an idea which has walked into Collier's

office, and which we want to pass along for general discussion:

As every U.S. taxpayer knows, this country, two years after the end of the shooting part of the war, is still carrying on enormous relief and rehabilitation activities in many parts of the world.

One of these jobs consists in relief work in the U.S. zone of occupied Germany, and in all of Japan. Budgeted for that job is the rather husky sum of \$645,000,000 with which to buy assorted supplies for civilians in those areas.

These supplies are to be sold to consumers there, and are to be paid for in local currency—marks in Germany and yen in Japan. Obviously, the U.S. government can't spend that money anywhere except in Japan and Germany.

Well, then, it is suggested, why not set up big cancer-research projects in Germany and Japan and finance them with part of these funds?

Suppose \$100,000,000 were to be earmarked for such projects out of the total of \$645,000,000. That would pay for around 10 times as much cancer research as is now being carried on in the United States. Or, to say it in terms of time, we could finance as much cancer research in one year by this method as we can finance in 20 years at present rates of expenditure. In five years, we could carry out a program which normally would take 100 years.

We don't like to sound a defeatist note in this connection; but if 100 years' worth of cancer research won't produce a cure for cancer, maybe there never will be a cure.

There are several other obvious advantages in this plan, it seems to us.

For one, it wouldn't cost the American taxpayer an extra thin dime. The research projects in Japan and Germany would be financed by a clever shifting of money which the American taxpayer already is destined to spend.

For another, German and Japanese scientists would probably be attracted to these local projects

in considerable numbers—meaning that the task which they employed so energetically for war purposes would be given a peaceable and constructive outlet.

For a third advantage, the Germans and Japanese would realize that, in respect to cancer research at least, they were paying their own way in part, instead of depending wholly on U.S. charity. That ought to restore considerable self-respect to these conquered peoples, which should be a good thing all around.

Large cancer-research projects abroad, should be attractive to some of our young promising research scientists who would like to go around and see something of the world outside their own country.

As we understand the matter, Congressional action would not be necessary to put this plan into operation. It could be got under way by cooperation of the State and War Departments, with the co-operation of General MacArthur in Japan and of General Lucius Clay in Germany.

Outstanding cancer specialists in the United States could supervise the setting up of the projects, and our information is that some of them would be more than glad to do so.

The result would be an all-out attack on one of the most dreaded and mysterious of all diseases—an attack manned by the best scientific brains from three countries and amply financed. In the process, a specific for cancer might be developed.

As indicated above, we're not dogmatizing on this subject, or waving the arms and shouting that the thing has got to be done or else.

We're not sure that it is feasible. But on the other hand, we can't pick any serious flaws in it.

We do want to toss it into the U.S. for a general debate, discussion, analysis and action, and to ask that this plan for at least \$100,000,000 worth of cancer research be carefully considered by anybody and everybody who has anything constructive to contribute to the argument.

with hair like this,
you'll hear this:
"hello,
handsome"

Vitalis

and the "60-Second Workout"

50 seconds to massage Vitalis on your scalp. Pure vegetable oils dissolved in alcohol go to work two ways: First, the alcohol stimulates your scalp. Second, it evaporates quickly, leaving a fine protective film of pure vegetable oils distributed evenly on your hair and scalp. This prevents dryness, rids loose dandruff, helps retard excessive falling hair. **10 seconds** to comb. You now have well-groomed hair with a natural lustre. No greasy look—Vitalis contains no mineral oil. At any drug counter or barber shop . . . ask for Vitalis, *Handsome*.

THE WEEK'S MAIL

HEAT ON THE RANGE

DEAR SIR: It seems to me that Lester (They Kicked Us Off Our Land, July 1) after what must have been a whirlwind trip through the Cow Country has presented his report of a "phantom" war between the Stockmen and ALL THE PEOPLE OF THE LAND. Such a distorted view must have been obtained in the cool rooms of some fine hotel, rather than in the real hinterland, where a few conversations with real Westerners and real live people and inspection of the range (he knew anything about it after he looked at it) would have dispelled some of the fog in which he has wound himself.

GEORGE M. MELTON, House of Representatives, Helena, Mont.

... Congratulations! The facts brought out in your article are the more shocking because men in our Congress paid by government funds are out to wreck government lands of our tremendous West. This is nothing short of treason. . . .

RACHEL PEEPLES ROGERS, Atlanta, Ga.

... The public lands of my native state of Arizona are in a deplorable condition through overgrazing and the cattle industry, by its own shortsighted methods, not only going to ruin the country but going to kill itself off. Already most of the top soil is gone, sheet and gully erosion are rampant, and the perennial grass is about gone. About the only thing that grows well are those things that cattle will not eat such as cholla and burro weed. . . .

JACK O'CONNOR, Tucson, Ariz.

... This grab, by the so-called stockmen is just another Johnson County Cattle War. The only difference is that they are sending congressmen this time instead of guns. . . .

J. A. SHAW, Dubois, Wyo.

... The sheep herders seem to have forgotten the days when the cattlemen were their bitter enemies, and continually killed the flocks, cut off the water supplies and called them stinkers with capital S. The public-land menace to the West's problem, and God help the fertility of the soil if the cattlemen once more get control.

CRANSTON THOMAS, Tampa, Fla.

... You Easterners who are authoritarian on everything from cotton sharecropping to soybean production—swinging agricultural economists—have the answer to it all. . . .

F. H. SINCLAIR, Sheridan, Wyo.

Had your health checked lately?

Q. Why see a doctor when you're well?

A. Health is more than an absence of disease. A medical examination permits your physician to determine whether you are as healthy as you can be, *and should be*, to live and work at your best. Or if you are below par, the doctor can often catch and correct trouble

before a breakdown occurs. Most people should have such examinations once a year. In certain cases, and for people over 65, more frequent checkups may be desirable.

Q. Are "Fifth Column" diseases

threatening you?

A. Diseases such as high blood pressure, cancer, tuberculosis, heart ailments, and diabetes may develop to a dangerous state without any warning symptoms. But they can be detected by your physician, helped, when necessary, by blood tests, urinalysis, X-ray,

fluoroscope, electrocardiograph, or other diagnostic aids. Annual examinations will usually lead to the discovery of "fifth column" diseases *in their early stages*, when modern medical science can do most to control or cure them.

Q. What about your daily living habits?

A. As part of your physical examination, the physician will probably check your daily living habits. He may ask about the amount and kinds of food you eat, whether you are getting sufficient rest and exercise, or how you use your leisure time. Knowing

your daily habits and your attitude toward life may enable him to advise and guide you to better mental and physical health. By faithfully following his instructions you can do a lot to help assure yourself a longer, happier life.

KEEP UP WITH THE WORLD

BY FRELING FOSTER

Bowling is today the most popular participant sport among American women, the number playing weekly having increased from about 3,000 to 3,500,000 in the past 30 years.

Probably the only race ever won by a horse while in an upside-down position was run at Dargaville, New Zealand, on February 2, 1931. Ridden by Joe Parson, this thoroughbred, Brampton, was within 40 feet of the finish when it suddenly stumbled and fell with a force that caused it to roll over several times and then slide across the line, with its clinging jockey, a split second ahead of the horse that came in second.—By Arnold Gozar, Auckland, New Zealand.

Astrology has grown so fast in this country in the past generation that its present annual "take" has been estimated as high as \$200,000,000. Moreover, this alleged science now has nearly 20 branches, among them being Glandular Astrology, Sexual Astrology and Astrological Physiognomy.

In 1749, a cynical Londoner who claimed Englishmen were as credulous as children made a large bet that he could convince them that a man could climb into a quart bottle. Using a fictitious name, he rented a theater and advertised that he would perform the trick there three days later. By curtain time on the night set, all seats and standing room had been sold at double their price and the near-by streets were jammed with those who had to be turned away. Naturally, the man did not show up—and soon collected his bet.

Since Alcatraz became a federal penitentiary in 1933, nine inmates have won their freedom by studying in the prison library the law pertaining to their case, filing a petition for a writ of habeas corpus and then proving to the judge before whom they were taken that their imprisonment was illegal.

A crusade to "save sinful New York" was undertaken in 1903 by the evangelist John Alexander Dowie, who had built the town—Zion, Illinois—as headquarters of a new religion. Carried in eight special trains, he and 3,000 of his followers descended on Madison Square Garden where, in the middle of Dowie's first sermon, the vast audience walked out in disgust. After two weeks, during which he held three small meetings daily and his people distributed literature to a million homes, the Zionists left, having accomplished nothing on this expedition which cost \$300,000.

When the Spaniards conquered Bolivia in the 16th century, 20,000 of them established a colony in the high altitude (13,600 feet) where, owing to the thinness of the air, they never suffered from oxygen deficiency but were unable to keep infants alive. In fact, for more than 50 years, not a child born among them lived longer than two weeks; and the colony there had to maintain its size by recruiting young Spaniards from lower levels.

The world's largest private yacht, the Savarona, which was built in Italy in 1931 at a cost of \$4,500,000 for the late Mrs. R. M. Cadwalader, Philadelphia and which is now the presidential yacht of Turkey, though having only 13 staterooms, this steamship is 408 feet long, weighs 4,700 gross tons, requires a crew of 100 and has an average operating cost of \$25,000 a month.

In Mexico, some prize-fight jai-alai courts and similar arenas are enclosed in steel cages to protect the contestants from the other missiles hurled by spectators to give vent to their feelings.

THE WEEK'S WORK

Above, Miss MacVicar, nebula, 1944; at right, Miss Vickers, first magnitude star, 1947

WITH fifteen years of active service behind him, Robert S. Allen should be aware of the dangers of brass poisoning (Too Much Brass, p. 13). All his life he's been a fighter with word and gun. Born in Latonia, Kentucky, on Bastille Day, 1900, he enlisted in the Regular Army at sixteen, ate dust with the cavalry on the Mexican Border till he went overseas.

Refusing a regular Army commission, he postgraduated by scholarship at Munich, reported the Hitler Beer Hall Putsch and Trial for various American newspapers, then came back home to work for the Washington Bureau of the Christian Science Monitor. He got the sack when he and Drew Pearson took the Washington brass for a sleigh ride on the best-selling Washington Merry-Go-Round.

After co-founding a widely syndicated column of the same name, and polishing off further brass in additional books, Allen went to war, serving with General Patton as Assistant G-2, Chief of Combat Intelligence. He got his eagles from Patton in April, 1945, and lost an arm in Germany about the same time, emerging from the war with many decorations. Right now he's back peppering the brass and book-writing in Washington. His *Lucky Forward*, a history of Patton's Third Army, is coming out this month.

"I feel the welfare of the Army, and therefore the security of the country, is being seriously handicapped by the conduct and antics of certain brass hats," Allen says. "They clearly are devoid of a true American concept of their functions as military men. Our country has grown great and mighty because throughout our history we have pursued the sound democratic course of employing our military for protective purposes and not to run the nation. In the interests of the military themselves, it is vital they be kept in their place—to put it bluntly. That is what Too Much Brass is all about. It is not antimilitary in any sense. Its purpose is to bring in the open a very grave national problem."

THINGS have been on the up and up recently for Martha Sawyers (Lifting the Lid, p. 24). She hates flying, so Collier's dispatched her by plane to the Andes, where she com-

pleted a series of paintings, tudes up to 15,000 feet. "I four happiest when I lay on the gr that height," she says. "It ga feeling of safe footing."

While dangling around the P peaks busy at her task, Miss got herself invited to a cond Rising at dawn, Miss Sawy party breakfasted on biscuits ion soup, climbed on their In nies and began riding straight so it seemed. Miss Sawyer-guest of honor, got the only saddle in the party; the rest dian saddles: with backstops.

After she had slid off the her horse for the 88th time, so mercifully changed saddles w Sawyers. Then when the pon to slip from under the passen everybody dismounted and cra their hands and knees to the world where they eventually and lay gasping for breath.

A dead horse had been lef on a volcanic peak, and cond winging in from as far as 90 lunch. When the condors go they couldn't take off, the ide take aim and bang away.

"Unfortunately, mine host cited just about the eighth bi Miss Sawyers, "and fired. Eig lion birds took off. We wa hours but they never came ba

Going down was like slidi the Empire State building grease storm.

This is not the familiar story of the rich squire's son and the farmer's innocent daughter. In fact, it's just the reverse

THE FARMER SEEKS A WIFE

BY MURRAY HOYT

ALL my father wanted beginning July 22d that summer when I was twelve years old was to have Slateledge ready by August 3d when Vice-President Coolidge was to visit us. His letter came July 1st. Mr. Coolidge was an old classmate of Father's, at Amherst. His house was down below Rutland at the mouth. He had been elected gov-

ernor of Massachusetts, and later Vice-President of the United States.

When Father had written tendering the invitation to visit us in our new home, he had expected that all the work would be done by the beginning of July. Being city bred, Father had no idea how long such things took. But when Mr. Coolidge's answer came, there was still a lot to be done,

especially in the matter of plumbing. Father had ordered two of those modern septic tanks that had just come out, but they hadn't yet been installed. They were sitting in the front yard.

He said to Mother, "Dammit, Levina, we've got to have everything ready. You can't ask a Vice-President of the United States, even a Republican, to walk down the path—"

During the evening of the day the letter came, Father burst into the kitchen after he had come upon Henry Warner kissing my sister Anne out near the chairs overlooking the lake. Mother and I had talked about Henry and Anne a lot previous to that, but Father hadn't thought Anne would go seriously with a farm boy, so he had closed his mind to the matter until he

discovered it himself. That was his way: He had to discover things for himself. You couldn't tell Father anything. Once he believed a thing, he could ignore someone telling him the opposite more completely than anyone else I ever knew.

He began to stride up and down the floor. Mother, who was sewing, glanced up.

Suddenly he shouted, "Dammit, I won't stand for it. You hear, Levia. I won't stand for it."

Mother said quietly, "Sit down, Farnsworth."

Father paused in mid-step and squinted at her suspiciously. Mother's eyes remained placid and innocent.

Then he told her about Henry Warner and Anne.

UNLIKE most men who are given to occasional family shouting, Father did not shout because of anger. He shouted for two reasons: when he was unsure of his facts, or unsure of the way they were going across. The volume of his shouting was in direct proportion to his doubts in these matters. He tried to convince by sheer force of sound.

He shouted, "I will have no child of mine marrying a low-income farmer, a—we might as well face it—a hick."

"You married one yourself, dear."

"And I—" But he was trapped. His loud tones took on the hurt, plaintive quality of a man who, when he is meeting the enemy head on in honorable conflict, finds himself kicked in the pants.

"Now, Levia, that was different. I took you away from all that. A woman goes to the home of her husband. Anne would be exiled in country poverty."

"I was," Mother said.

Father fell back to his last line of defense. His body slumped, his head bowed. For a long moment he stood still. When at last he spoke, his voice had the musical resonance of an organ's low notes. "Very well, Levia, what I think does not matter. I must not forget that I am a retired has-been now, whose counsel is worth nothing."

Usually this was effective because Mother loved him very much and her heart was as big as all outdoors. She would listen to none of that "has-been" talk.

Mother snipped the thread with a little click, gathered up her sewing basket, and started for the living room, detouring around the toolboxes which the plumbers had left in front of the kitchen sink. She paused near the door. "So I am a hick, am I?"

Father's roar split the air. "I never said that! Why—"

But Mother had closed the door with a crisp little bang. Father had a handful of his bushy hair in each hand, his face lifted in supplication to the ceiling.

"Mortimer," he said to me, "though your mother is a very remarkable woman, women do not always react with the same sane reasonableness you find in men." He followed Mother into the other room to try again.

As far as Father was concerned, one farmer was exactly the same as all other farmers, just as one Chinese was the same as any other. If you pinned him down he would admit that all farmers probably weren't hicks, that the graduates of agricultural colleges might be all right, even that some farmers must be getting rich, judging from the prices we were paying. But he made these admissions as if he didn't expect to meet any such farm-

ers himself. In exactly the same way he admitted that probably there were Republicans who were politically honest and wise, but you could see he didn't really deep-down believe this thing which common sense told him he ought to admit.

If all Father's ideas had been as unsound as this one about farmers, Mother would long since have been making all the family decisions. But in matters which had come within his actual experience, Father was practical and very shrewd. His trouble stemmed from generalizing even more than most people about matters outside his experience and then closing his mind. It was something we had to face from the beginning in our household, just as some households face chronic gambling or drinking.

When Father retired, Mother maneuvered him into buying Slateledge, a point that jutted out into Lake Champlain half a mile from the main road. They hired an architect to submit plans for doing over the house which was already there, and plans for building a small guesthouse near by.

THEN Father began to look for people to work for him. He had bad luck. All the men he asked would "change work," but they wouldn't work for wages at a time when the farm work needed doing.

But most of them said, "Henry Warner would be just the man for you. He's handy." So Father drove our new touring car over to the Warner farm.

"The Zebulon Warner farm," he told Mother. "These farmers don't even show any sanity about naming people."

We found Zebulon Warner's son Henry out in a field riding a manure

spreader. Father beckoned to him but he finished the load before he drove over next to the fence and stopped. He didn't get down.

Father called, "Young man, do you want a job?"

"No," said Henry.

That was Father's first experience with Henry's loquacity. He swallowed his breath, got out of the car, walked over to the fence and began to talk. Father could be very persistent when he wanted to. When he finished his arguments he paused expecting Henry said nothing.

Father went over the argument again. Still Henry said nothing. Finally Father said, "Well, young man, will you do the work?"

"Yes," said Henry.

Father looked exasperated but kept control of himself. He set the time and the rate of pay. The car drove away. On the way home Mother, who had been silent for a long time, said, "Anne, did you see many wild strawberries when you went out to pick them, just before the young man changed his mind about working at our place?"

Henry appeared for work the next morning and I heard Father talking to Mother about it with that baffling quality that the people of rural Vermont have engendered in him. "I told him about those stone steps down to the beach. I explained it all pretty fully. He just stood there looking at me. So I told him the whole thing again in a different way. And he just stood and looked at me. So I said, 'Do you think you can do it?' He said, 'Yes.' Would he have gone on standing there forever if he hadn't asked him that?"

Mother said tartly, "He would have." (Continued on page 55)

ILLUSTRATED BY ERNEST CHIRIACKA

We must have made a peculiar picture as we went out the door. We crossed the porch and suddenly Father shouted, "Now then, put up your hands, all of

TOO MUCH BRASS

Congressmen—and some distinguished military leaders—are fed up with lobbying and talking out of turn by Army and Navy officers. Here a veteran Washington correspondent who also is an ex-Army officer gives you the low-down

BY ROBERT S. ALLEN

THE Army and Navy took a painful shellacking in the recent session of Congress, and they have only themselves to blame. Congressional leaders are rapidly becoming fed up with being harangued and high-pressured by certain generals and admirals.

This growing resentment is not confined to civilian ranks, and its importance can be gauged by the enraged reaction and uneasy concern it has caused at the most distinguished levels of the military itself. A notable, and little-publicized, recent instance was the resignation from the Marines Brigadier General Merritt A. Edson. He quit because, as he expressed it, he could no longer countenance "the assumption of power by the military in Washington."

"I am a military man and proud of it," Edson declared. "But when we reach the point where the military are directing, instead of supporting, our country's policies, we are far along the road to losing what this country has always stood for. It was because of this trend of events that I finally reached a very difficult decision to resign from the Marines and return to Vermont."

The official silence that greeted Edson's blunt statement is very significant. A native Vermonter and graduate of the state university, Edson enlisted in the Marines in 1917, won a commission, and after World War I, made the Corps his profession. In World War II, he won the Congressional Medal of Honor and was promoted to general officer.

Last spring, General A. A. Vandegrift, commandant of the Marines, personally selected Edson to head the Corps' Plans and Policies Division. His agency is comparable to the elite OPD of the Army's General Staff, and its directorship is given only to the Corps' brightest brass. Also, Vandegrift made strenuous efforts to dissuade Edson from resigning, but resign he did and is now head of the Vermont State Police.

That explains why no brass hat of Army, Navy or Marines had one word to say regarding Edson's abrupt departure. There was nothing they could say about his views.

The concern of the highest military levels over Congressional and public resentment against military meddling in national affairs is evidenced by several equally significant incidents that brought on by General Dwight D. Eisenhower, soon to be as Army Chief of Staff to become president of Columbia University, and General George Marshall, former Chief of Staff and now Secretary of Defense.

In the capital, the two great leaders are distinctly in a class by themselves so far as the military is concerned. Marshall and Eisenhower are universally regarded as statesmen in the finest sense of that word. Congress differentiates sharply between Marshall and Eisenhower and most other generals and admirals.

Eisenhower did his whipcracking on the labor front. In an unpublicized directive (War Department Circular No. 344) he sternly ordered the Army to pipe down on this hotly controversial question. "Policy with Respect to Statements Concerning Strikes, Lockouts and other Industrial Disputes," the directive declared:

"The responsibility for handling labor relations is vested in other government agencies, and it is not the function of the War Department to pass judgment on, or otherwise to inject itself into, questions of this character. Wherever possible, the Army avoids any form of involvement in industrial disputes and under no circumstances does it take sides in them. Therefore, Army officers will refrain from public statements expressing opinion on the merits of a controversy or which may otherwise be construed as partial to one side or the other."

Marshall administered his spanking in the form of a pointed lecture to brass hats at the War College. He bluntly told his former colleagues that they did too much yapping about Congressional budget pruning and not enough honest elimination of waste and extravagance. If there were more sincere economizing by the military, he declared, they would have far less difficulty obtaining appropriations from Congress.

"You have not put enough effort into the problem of reducing military costs," Marshall said. "You err when you submit dogmatic requirements. It is useless to say that political leaders fail to give you what you want unless you can assure the public that you did your best in keeping down estimates."

"You must realize very clearly that it will become more and more difficult to obtain military appropriations from Congress that swell the budget disproportionately. The Army has never put sufficient effort into preparing studies on its budget which will make military requirements clear to civilians."

Result: Slashes in Appropriations

Both the Army and the Navy had plenty of reason to rue this obtuseness in the recent session of Congress. They paid for it in deep slashes in their appropriations.

The Army's would have been a lot deeper if it hadn't been for Eisenhower's testimony before the powerful House Appropriations Committee. He succeeded in soothing some ruffled feelings and in retrieving some of the ground lost by less able Army spokesmen.

When Eisenhower was rushed up to the committee, Congressional leaders were in a fighting mood. They and their constituents had been subjected to a deluge of Army lobbying and propaganda. The attitude of the committee members was expressed by Representative Albert J. Engel, six-term Michigan Republican, veteran of World War I and father of a son who fought in Patton's Third Army.

"The War Department's lobby," Engel hotly charged, "is downright vicious. It ranks with the worst I have ever seen here. If a private corporation resorted to some of the practices that seem to be standard on the part of generals in meddling and interfering with Congressional business, the executives of that corporation would be thrown into jail."

"At one committee hearing I caught General Richards (Major General George J. Richards, Army budget officer) signaling witnesses on what to testify. I had to order this general to behave himself. On another occasion, during a debate in the House on an Army appropriation, an assistant of General Richards sat in a gallery sending notes to

members on the floor. I got up on the floor and raised hell about this. That put an end to it."

"There has also been a flood of propaganda, most of it inspired by the military, to the general effect that we have reduced budgets arbitrarily and recklessly. That is absolutely untrue. This committee sincerely desires to give the Army and Navy whatever funds they need to maintain strong and adequate establishments. But we insist that waste and extravagance be eliminated, that the military fully justify their vast appropriation requests as all other government agencies are required to do, and that they give us the facts without trickery, camouflage and propaganda. We are responsible to the people who bear the burden of these huge expenditures. The military is serving them, not bossing them or Congress."

Eisenhower made no defense of the Army's lobbying antics. Instead, he gave the committee unqualified assurance that the Army would bow uncomplainingly to the will of Congress.

"We have presented to you," he said, "our request for the funds that we think we need. This is the best judgment of the War Department at this time. But I want to say to you that the War Department recognizes the constitutional responsibilities of the Congress. When the Congress has made its deliberate judgment on the portion of the national income that can be devoted to the mission of the Army, the War Department will live within the decision that the Congress has made."

"There will be no recriminations and no complaints by anyone within the War Department. If I hear of anyone acting or speaking to the contrary there will be another in his place when it comes to my attention. I believe in the American system and the American way of doing things."

The declaration unquestionably helped the Army appreciably in this instance. But, unfortunately, there are very few Eisenhowers among the military and it was not possible for him to race up to the Hill every day to undo blunders perpetrated by other Army brass.

The hostile attitude toward the military that repeatedly manifested itself in high Congressional quarters was one of the most significant behind-the-scenes developments of the recent session. It is particularly significant for two reasons: The present Congress is a very conservative body and usually the military fare best under such circumstances; and the hostility was of a personal nature. It was not organized and there was no antimilitary bloc. It was merely that leaders and members developed a high personal sensitivity to the aggressiveness of the military in national affairs.

Leaders such as Senator Styles Bridges, New Hampshire, chairman of the Senate Appropriations Committee, Representative Daniel A. Reed, ranking Republican member of the House Ways and Means Committee, and Representative Clare Hoffman, Michigan, chairman of the Committee on Executive Agency Expenditures, publicly voiced their displeasure.

"Many of us in Congress feel the military talk too much about policies," said Senator Bridges. "Also, they are distinctly out of their field when they lobby for the passage (Continued on page 76)

THE DEVIL IS A GENTLEMAN

BY CHARLES B. CHILD

Inspector Chafik wondered
how many men had been
clay in the lovely hands
of Khurrem the Dancer

THE little man who entered the Cabaret of the Great Caliph, behind the fashionable Saa'dun Quarter of the modern city of Baghdad, stood for a moment in the shadows, as if he were shy of this walled garden where patrons sat in booths discreetly screened by flowering shrubs.

He looked at the stage where an orchestra of various wind instruments, strings and drums was playing varying rhythms, while a slender girl sang a single note and then surrounded it with an arabesque of grace notes. It was music without harmony, but the man had not a Western ear and found it pleasing. As the girl began to dance, he walked down a path between the high wall and the shrubs and entered a booth so unobtrusively that the solitary occupant did not notice him.

Inspector Chafik of the Criminal Investigation Department carefully dusted a chair and said as he sat down, "If the thoughts of men were public, one would be justified in raiding this place. And even you, my dear Abdullah, would see the inside of a cell."

The tall, gaunt man hastily looked away from the stage, but seeing the smile lurking in the dun-colored eyes of his companion, he raised a hand in protest. "Sir, my concentration was purely of a professional nature—" Sergeant Abdullah began, and wriggled in his seat when the Inspector interrupted:

"The purity of it is what I doubt. The girl is indeed gifted." They both looked at the stage where the dancer turned full circle with swiftly moving feet and made of her body a reed rippling in a hot wind of passion.

Watching her, Chafik wondered how many men had been clay in the flowerlike hands of Khurrem. His records at headquarters described her as a Syrian, but many details of her life were lacking and this was irritating to the tidy mind of the little man. He said, voicing his worry, "She has danced in Cairo, Beirut and Tcheran. Her lovers are always military men or government officials and she ignores others although they are often wealthier. An odd thread in the pattern, for surely a woman of this profession is solely interested in money?" He shrugged and then said, "But on the record one could not refuse her entry into Iraq. A suspicion is not a fact, and you, Abdullah, will now report to me only with facts."

The sergeant answered as if reading from his notes, "On your orders I have watched this woman for a week. Her favor goes to Major Ali Rasim of the 2d Mountain Brigade. He is infatuated and sits nightly in the booth at the top right corner of the garden, where she often joins him."

Inspector Chafik turned his sleek head, the black hair oiled and brushed until it had the sheen of silk. The lights in the garden were dim, but he could see a man in the booth. Major Rasim was the younger son of an aristocratic Baghdadi family and the brigade with which he served was organized for frontier defense. Chafik lighted a cigarette and said, "This is a matter for Military Intelligence. We, as the political and criminal police, are solely interested in civilians."

"Among the civilians, sir, Mohammed Shaalan is captivated by the girl—"

"Shaalan, Mohammed. Eldest son of Ibn Shaa-

lan, a sheik of the Muntafiq." The Inspector was quoting from his records and as he partly closed his eyes he could see the card on which the particulars were entered. "Rich," he went on. "Spends more time in Baghdad than on his father's estate. Weakness, women. Arrogant. Hot-tempered. Is the man here?"

"In the booth opposite." Sergeant Abdullah looked across the cool garden and then said, "He has gone now, but he was there when you arrived. The girl ignores him."

"Other men?"

"They are as bees around the queen," Sergeant Abdullah said.

"A queen bee," Chafik said, "has an unattractive appearance and is often swollen with eggs. One cannot say Khurrem is unattractive. Or swollen," he added, watching the girl who had finished her

dance and was now bowing to the applause. He drew back into the shadows as the dancer left the stage and walked lightly to the booth where Major Rasim was sitting.

"The names of the other men—" began Sergeant Abdullah.

A woman's scream ripped the perfumed air of the night and was followed by a moment of silence, broken only by the croaking of frogs in the irrigation ditches squaring the lawn. A scream ran in mocking echoes within the high walls and as panic gripped the crowd Inspector said calmly, "Tell the police at the doors to get the body out. It appears there is entertainment at the Great Caliph tonight." He vaulted the wall and ran for the booth Khurrem had entered. One brief glance he turned to the men who were at his heels. "Return to your seats," he said.

"If the thoughts of men were public," Chafik said, "one would be justified in raiding this place. And even you, Abdullah, would see the inside of a cell"

"And then you saw the knife," Chafik prompted gently.

"Yes, I saw *that*. And only half an hour before we sat and talked."

"So he was killed when you were on the stage and all eyes were on you. Even I was watching you. But what did you see from the stage? Surely you sang for your lover?"

"The booth is in shadow. One cannot see into it from the stage. And who says he was my lover?" There was a challenge in the question, and throwing back her cloud of hair Khurrem looked at the Inspector with hatred tempered by fear.

He answered softly, "I know many things about you and will know more. Come to me tomorrow and bring your passport. The name is Chafik J. Chafik." He turned to Sergeant Abdullah who had just arrived with a squad of police summoned from a near-by station. The sergeant was ordering back a man who had roughly pushed his way through the crowd, but the Inspector said, "Permit Mr. Hassoon to pass. He has a right here." He had recognized the owner of the cabaret.

"What is this? What is this?" demanded Hassoon, hugging his hands to his breast and contorting his thin body into a gigantic question mark. "I have always had a respectable cabaret," he said. "You, Inspector Chafik, know I give good entertainment without vice. Now a woman screams and the police gather like flies on a festering wound—"

"There has not been time for the wound to fester," Chafik said mildly, and moving aside from the body he asked, "You know him, Mr. Hassoon?"

"Major Rasim!" The shrill voice sank to a whisper as the proprietor peered at the body and projecting knife. "Murder? Oh, Compassionate God, what wickedness has this woman caused?" He turned so quickly on Khurrem that Chafik thought he was going to strike her and caught his arm.

"Why do you think the woman is the motive for the crime?" he asked sharply.

HASSOON was calmer now but his voice was hedged with anger as he said, "A woman who sings and dances is as honey to men. When she gives her favors to one the evil begins. Perhaps I am in the wrong business," he said looking with distaste from the dancer to the body. He took a handful of salted melon seeds from his pocket and politely offered them to Chafik, who bowed his thanks but preferred his cigarette. "As I have told you, I make every effort to keep the atmosphere of my cabaret clean," Hassoon went on, "but I have often looked on the faces of my guests and found them lustful." He took the husk of a melon seed from his mouth and placed it tidily in an ash tray.

Chafik said dryly, "We appear to share the same opinion. As you are so observant, my dear Mr. Hassoon, can you tell me who was particularly jealous of Major Rasim?"

"There were many, but I have noted one man who looked at him with hatred—but I must be loyal to my guests even if I dislike their ways."

"Major Rasim was also your guest. You must not withhold information."

"True. The name I was about to mention was Mohammed Shaalan."

Chafik gave Abdullah a warning look because the sergeant had said, "By God and by God!"

Then the Inspector said quietly, "Let us go to your office, Mr. Hassoon. Abdullah, look for the son of Ibn Shaalan and if he is still in the cabaret bring him to me." He gave the corpse a brief glance. "Obviously the killer took the precaution to wear gloves, but of course test the knife for fingerprints. Detectives are more fortunate in fiction." Inspector Chafik added sadly. . . .

In the office behind the stage, where there were also dressing rooms for the entertainers, the little man sat and waited. He lighted the inevitable cigarette while Hassoon munched melon seeds. Presently the sergeant ushered into the room a sharp-nosed, swarthy man who was dressed in the fine cotton and silk robes of a tribal Arab. The gray headcloth which shaded his face was bound with a cord of braided goat's hair making a double ring about his head, and as his robes swirled Chafik noticed the holster of a (Continued on page 65)

are already here." His voice, not overloud, the quality of a whip. Entering the booth, he looked at the girl who had against the shrubs with gloved hands to face; her eyes were black pits. She was about to am again when the little man caught her wrist slapped her cheek. "It would be wise to forget ics," he said. "I shall have many questions ik." Khurrem whispered, "See, see! Oh, God the ciful! The major—" Chafik interrupted, "Bodies have no rank or title. y are all equal before God," and going to the al; he looked at the man in military uniform who ve huddled low in a chair, his chin on his breast, mouth open. om the base of the neck at the right shoulder irected the wooden handle of a knife. A small

patch of blood stained Major Rasim's light summer tunic. The Inspector ignored the knife and put his hand on the man's heart. Casually, voicing thoughts, he said, "It was to be expected he would be dead, with the knife in such a spot." Lifting his strange, ageless eyes to the girl, who was now quiet, he continued, "Such a thrust could be made with the arm of the killer lovingly around his neck. It could also be made by one standing behind on the path between the bushes and the wall. Was your arm around his neck?"

"I? You suggest—" Khurrem straightened her slender body and said in the husky voice of anger, "My arm was not around his neck. I entered the booth and thought he was sleeping. He drinks too much and you can see the whisky on the table. I spoke to him and then I put my hand on him." She covered her face with her hands.

JAZZ BROTHER

THE STORY OF
EDDIE CONDON

How jazz music moved from a speak-easy called the Stork Club to the august environment of Town Hall, with station stops on luxury liners and bread lines

Conclusion

THE Stork Club was an old brownstone on West Fifty-eighth Street just west of Sixth Avenue. We went to work there in the fall of 1931. We hadn't yet met the owner. After our first set, McKenzie went out to the vestibule and paced the floor. He needed \$500 to save an insurance policy and he didn't know where to get it.

As he walked and smoked he became aware that someone was watching him, a man dressed like an Oklahoma horse trader.

"Do you like this place?" the man asked.

"How could I like it when I can't get enough dough to keep an insurance policy that will take care of my family in case someone hates my singing and puts a hole in my head?" Red said bitterly.

"How much do you need?" the man asked.

"Five hundred dollars," McKenzie said. "Do you sing here, too?"

The man reached into his pocket and took out a wad of bills. Red stared. The roll was two stories deep.

"Take a thousand," the man said, handing him the roll. "You may need it."

Red peeled off ten hundred-dollar bills. "That's a lot of dough to be carrying around," he said shakily, handing back the roll. "If the guys who run this joint see it you may have to leave it behind when you go."

"I think I'll stay," the man said. "I own the place. My name is Billingsley. I hope you'll be happy here; the customers seem to enjoy your music."

McKenzie was a different man when he came back. "I just met the most wonderful guy in the world," he said. "His name is Sherman Billingsley. He's our boss and I want you lousy bums to treat him with respect."

Joe Sullivan and I were living in a two-room garden apartment at the rear of a building on Fifty-fourth Street between Park and Lexington. We had birthdays in the same section of November. We decided to celebrate them with parties: Joe's was first.

"We can begin at half past two, right after we finish work," I said.

"We need a piano," Joe said. "I can't have a birthday party without a piano."

We found an upright for sale. It was old, battered and parched; the price was ten dollars. We hired three Negroes with a truck. I telephoned a piano tuner and asked him to be ready to administer to a sick piano.

The piano tuner was waiting when we got there. He took the front off the upright and worked for hours. It was so old and so dry that he was afraid to bring it up to standard pitch for fear it would explode, but when he finished, it was in tune.

With his wife, Phyllis, and daughters Maggie, 4, and Lisa, 2, Eddie relaxes in Washington Square

BY EDDIE CONDON AND THOMAS SUGRIE

The guests were on time; it was easy not to be late at two thirty in the morning. Since it was Joe's party several of the guests were pianists; they took turns at the upright. Later Fats Waller dropped in; for a while he and Joe alternated at the keyboard.

We toasted the first day of Joe's twenty-sixth year with Billingsley's brandy. After that I remember little.

Our guests finally left and we went to bed. We woke up in time to get dressed and go to work. I walked into the living room. There had not been much disorder and some of the girls had cleared away the glasses and emptied the ash trays. But

something had happened which now slow I called. Two dozen of the best hot piano players town had been banging on the upright for continuous hours, with the front off to get volun membered a piano hammer sailing past rhea while Fats was playing, and another landing in lap. They had snapped off under the impa left hand.

Now I saw piano hammers all over the floor on the chairs and in the lounge. One of them was hanging from a picture. The boys had beaten the upright to death. I walked on and looked at the corpse. Some of the hamms

Paul Smith, advertising executive and jazz enthusiast (and incidentally Eddie's brother-in-law), listens to Condon. Smith also plays the guitar

Town Hall concerts, begun in 1942, provided larger audiences for the new music. Here Gene Schroeder is at the piano while Condon strums rhythm

anging out, broken but not snapped off. Others ere still intact. I tried the keyboard. There weren't enough notes left to play an octave.

Just before Christmas, the Stork was padlocked by federal prohibition agents. In a few weeks it reopened at Fifty-first Street and Park Avenue and we went into it. We worked until spring; then McKenzie got restless and joined the Whiteman band. I sat around New York with my teeth in my mouth, playing parties and club dates, making an occasional record, changing my clothes in Plunkett's icebox, keeping alive on free steaks at the Onyx, thanks to Joe Helbock.

One night I walked in and found Jimmy Dorsey and Jerry Colonna at the bar; Helbock was mixing drinks for them.

"We'd like to ask you to join us, Eddie," Dorsey said solemnly, "but we just decided on a new system. Each night one person will buy all the drinks; tonight that person is you."

"Fine," I said. I turned to Helbock. "Joe," I said, "ask the boys how they'll have their water, hot or cold."

Between sessions at the piano Joe Sullivan used to sit and talk with me. "Eddie," he said one night, "do you think the public will ever make an honest man out of jazz?"

I was feeling bitter; my rent was overdue.

"There is no such thing as an honest woman," I said. "There are just women who get higher prices than other women. Jazz is in the lower brackets."

In the spring of 1933, McKenzie left Whiteman; the Mound City Blue Blowers reorganized and returned to the Stork Club. In November repeal came and we were out of a job again.

South of Harlem, the headquarters of jazz was the Commodore Music Shop. It became a meeting place for jazz enthusiasts. One of these was Paul Smith, an illustrator, art director, aviator, advertising executive and amateur guitarist.

Sometimes Milton Gabler, proprietor of the shop, asked me to assist him in identifying the performers on a certain record.

No company ever bothered to list the personnel on a popular or jazz record; the only way to identify the performers was to ask a musician who had been on the date. I listened to Gabler talk about the greatness of jazz, its recognition as an art by the people of Europe, and its future in America.

"Do you think it will be recognized here before it dies?" I asked him once.

He shrugged his shoulders and smiled; his eyes had the look of a kid sunk in a dream.

"It's recognized now," he said. "It's just a matter of spreading it to a larger number of people."

Cliffier's for September 6, 1947

Over here we never think anything is recognized until the entire population takes it up; then we get tired of it and call it common and look for something else. You can't do that with an art; in fact, I don't think an art is ever popular; there aren't enough people with taste and understanding to make it popular. It's the cheap imitations of art that are sold by the million."

That summer we rehearsed a band for the Onyx, which had suffered a fire and was being redecorated; Jack Kapp of Decca let us use one of his studios. By August the band sounded almost musical; it contained a couple of men I hadn't previously known. They were Mike Riley, a trombonist, and Ed Farley, a cornet player.

Bandstand Clowns Try Pie-Throwing

We opened and I found out about Riley and Farley. During rehearsals they had conducted themselves as musicians; an audience transformed them into clowns. They poured water over each other, scuffled, mugged, and did everything but play music. Manny Klein, a cornet player who dropped in for a drink and saw the slapstick, went out and bought a lemon-meringue pie. He gave it to Riley and said, "I dare you." Riley took the pie and hit Farley in the face with it. After that it happened every night. I called them "Lemon Meringue" and "Custard."

When the clowning started I left the stand and went to the bar. No matter how low you fall, I thought, there's always room underneath. But a man isn't compelled to step down. I didn't. I was fired.

McKenzie and I moved to an opposition club across the street, the Famous Door.

One morning early in 1936, I woke up with a blazing pain which filled me from my neck to my hips. They took me to Polyclinic Hospital, and six doctors tried to diagnose the trouble. One of them was Dr. McGrath, who had been a surgeon for fifty years.

"Please, Doc," I said to him, "operate here." I drew a finger across my throat.

The blood count on my white corpuscles was high, indicating infection. It was decided to operate immediately. I was put behind a screen.

They gave me ether and operated. My pancreas had burst and its juice was dripping into my abdomen, trying to digest whatever it touched. Half of my appendix was gone. No one had any hope for me.

When the operation was finished I was wheeled into the death room, a small cubicle where a man

Dimitri Mitropoulos, conductor of the Minneapolis Symphony (right), is one of the serious musicians to applaud jazz music as an art form

can pass out without bothering his fellow patients. My temperature went to 106 and I began to sink.

The fever lasted for three days and three nights. I was rubbed with whisky and wrapped in hot blankets. When McKenzie found out about the whisky massages he brought a bottle from the Famous Door.

"What's that for?" Miss Roach, the nurse, asked. "It's to rub Mr. Condon with," McKenzie said.

Miss Roach sniffed. "We use only bonded whisky!" she said.

McKenzie stared. "To rub a guy with?" he said.

He opened the bottle and he and Bunny Berigan and Joe Bushkin drank it.

There was no chance for me, but Slovak, an intern friend of mine, kept trying. I was given extreme unction, the church's last sacrament for the dying. Then my temperature came down, my mind cleared, and I began to get well.

Fifty-second Street was booming when I got back to work. After the Famous (Continued on page 68)

Senator Irving M. Ives, here posed before the statue, The Driller, in the Museum of Natural History, Washington, has won prestige among his colleagues as a labor expert and a man very close to Republican potentate Thomas E. Dewey

LAST year, the Republican majority leader of the New York State Assembly decided there was no chance for advancement in his job and announced that he was retiring to become dean of one of the schools at Cornell University. Immediately thereafter, on March 1, 1946, a wake was held for the political corpse in a touching testimonial dinner at Albany's Ten Eyck Hotel. The printed program of the dinner bore the likeness of the corpse, with an inscription underneath, reading: "Well done, thou good and faithful servant."

Governor Thomas E. Dewey stood up, patted the good and faithful servant on the back and allowed as how he would be missed, but that the political world's loss was the academic world's gain. Lieutenant Governor Joe L. Hanley then got up and echoed his boss' sentiments, and Irwin Stein, the Democratic minority leader of the Assembly, brushed a tear from his cheek and delivered an oration on the worthiness of his former opponent.

That was less than a year and a half ago. Since then, the corpse—Irving McNeil Ives by name—has developed remarkable signs of vitality. Three months after he was buried politically, Ives was resurrected when Dewey could find no other Republican in the state to throw in against former Governor Herbert Lehman in the 1946 senatorial election. Two months after that, Ives was elected. Three months, to the day, after the wake at the Ten Eyck Hotel, he broke freshman-senator tradition by leading debate on the floor of the Senate and scoring victories over Robert Taft of Ohio.

As a result of all this, Ives is being hailed in various authoritative quarters as (a) Dewey's spokesman in the Senate, placed there to duel skillfully with Taft and Senator Arthur Vandenberg, in the Dewey Presidential offensive; (b) the most influential freshman senator to grace the Capitol in the memory of a half-dozen Washington correspondents; (c) the Republican Vice-Presidential candidate if Dewey is stopped at the G. P. convention, and a Middle Westerner like Taft is chosen to head the ticket; and (d) the next governor of New York, with a good chance to be the Republican nominee for President in 1952 or 1956.

Much of this, of course, is open to dispute by other experts, skeptics and Democrats, who claim that Ives is not a skillful spokesman or an advocate for Dewey, but merely is a stooge who takes his orders by direct telephone line from the supposedly Supreme Man of Albany; that he exists as a Vice-Presidential candidate only in carefully planted rumors of Taft's followers who are trying to splinter the Dewey camp; and that his present position is based mostly on his reputation as a friend of labor, and if he

Senator Irving M. Ives has been notably successful in talking like a liberal and voting like a conservative. The result: prestige for himself and a flock of assorted votes for his political mentor, Governor Dewey

BY BILL DAVIDSON

...ues to alienate labor as he seems to have done since he came to Congress, he will have a tough time getting elected to anything.

These items are highly controversial, and either—or neither—side may be one hundred per cent correct. There is one point, however, about which there is no argument whatever. It is generally agreed in Washington that the tall, good-looking, 51-year-old Ives has bounded from the limbo of scared politicians to a position of most unprecedented power for a freshman senator.

This showed up for the first time when the 13-man Senate Labor and Public Welfare Committee met one day last spring to begin consideration of the labor legislation which eventually became the Taft-Hartley Bill.

Mr. Taft Was All Smiles

Robert Taft was the chairman of the committee and Ives was its low-ranking junior member. Taft came all smiles, and handed out printed copies of the stringent labor measure which he personally had drawn up in conjunction with Senator Joseph H. Ball of Minnesota. "All right now," said, "let's get to work and start on one of my bill."

At this point, according to other senators present, Ives said, "There are a lot of things in your bill that I don't see with, Senator. So I've brought along copies of my own bill."

Taft was struck speechless by this, and Ball turned a flaming shade of red. "Your bill?" Taft asked finally, in a tone calculated to chill the wet spots behind the ears of the freshman. "Yes," said Ives. And while Taft looked on helplessly, the junior senator from New York passed out type-written copies of his bill.

From that point on, the junior senator from New York led a combination of four Democrats and three liberal Republicans to a series of 7 to 6 victories over some of the sterner provisions of Taft's bill. Later, he fought it again on the floor—until he went through a series of spectacular reversals (presumably due to party pressure) and wound up on Taft's side. Many experts consider that once he joined Taft's side, he became the keyman in the passing of the Taft-Hartley Bill over President Truman's veto. No less than ten Republican senators admittedly looked to Ives for a lead on how to vote on the bill, and even Taft's people confirm that if Ives had voted against overriding the veto, the Taft-Hartley act would not be law today.

When you check over this list of Ives-influenced senators, an interesting fact emerges: Nearly all of them are from the Eastern industrial states that would be Dewey supporters in the 1948 Republican Presidential showdown. One begins to wonder, therefore, if they vote with Ives merely

because he is known as a labor expert, or because he actually does speak for the heir presumptive to the Republican nomination. Ives emphatically denies any pressure or instructions from Dewey, or even any contact with him, since he came to Washington. This may be true. There is, however, considerable evidence on the other side of the argument.

For instance, even though Ives always has been courteous and respectful in his committee work and debates, the chances are that if he weren't in very close touch with a powerful figure like Dewey, he would have been given the same freeze treatment accorded to other freshman senators who got a little too active in their first session. Ives, furthermore, did confer with Dewey at least three times during the debate on the labor bill—at the Gridiron Club dinner in Washington on May 10th, at the New York State Young Republicans convention at Schroon Lake, New York, at the end of May, and at the Hamilton College commencement a few days before the veto battle.

One of Ives' closest acquaintances in the Senate said, during the labor bill debate, "Ives is not a free agent. He is troubled terribly right now." Another senator points out that several times Ives argued violently for a point on one day, and then meekly voted against it on the next. He mentioned specifically page 4264 of the Congressional Record for April 28th, where Ives put up a tremendous fight to have the labor bill split up into four separate bills, and pages 4389 and 4392 of the Congressional Record of April 30th, when he abruptly changed his mind and voted for the single bill. This senator attributes Ives' changes of mind to nocturnal telephone calls.

A top Dewey aide in Albany readily confirmed these long-distance conferences. "The telephone," he said, "is a wonderful thing." One of the Capitol telephone operators reports that official calls from Albany get top priority on any of the three overtaxed telephone extensions allotted to Senator Ives—even if one of the extensions happens to be connected with the White House.

Whether he is playing Dewey's game or his own, Ives is playing it very shrewdly so far—for Dewey. While Ives is occasionally scorched by the Old Guard Republicans as "just another damned New Dealer," and by the unions as "a traitor to labor," Dewey merely says, as he has before, "Ives is to the left of me." He then proceeds to gather in the liberal votes produced by his hand-picked senator's talks, and the conservative votes that result from his own pregnant silences.

During this session Ives has sponsored two other pieces of legislation that undoubtedly are based on humanitarian motives, but follow the same pattern. His bill for a federal

One of the most elaborate of political wakes was given Ives in 1946 by Oswald Heck, left, and Governor Dewey. A year later Ives was a potent freshman in the U.S. Senate

commission against racial and religious discrimination in employment is exactly the same as the mild New York State bill that didn't cause anybody any trouble, and brought several hundred thousand Negro, Jewish and Catholic votes into the Dewey Republican fold in 1946.

The second of these bills came about in a strange way. In 1943, during the battle of the Warsaw ghetto, a tiny, six-year-old girl named Elza Friedrych saw her father and mother slaughtered by the Nazi SS troops. Then she was spirited away and hidden by members of the Polish underground. When the war ended, two old friends of Elza's parents—Helen and Isaac Shatzkin of New York City—determined to find the little girl, adopt her, and bring her to the United States.

Inequity in the Quota Law

They spent large sums of money locating Elza. Then they had her transported to a boarding school in Sweden, and Mrs. Shatzkin flew to Stockholm to complete the adoption arrangements. There she ran into a fantastic State Department situation. Because Elza had not been precocious enough to register as a displaced person in December, 1945, when she was all of eight years old, she was ineligible to enter the United States under existing quota regulations.

Mrs. Shatzkin raved at every level of the State Department—but to no avail. Then, in desperation, she came to see Senator Ives in Washington. The result was \$830, or the Ives War Orphans Bill, which is designed to permit any war orphan under 14 years of age to be admitted to the United States, just so long as an American citizen will adopt him.

Because of his feelings in matters like this, plus a tremendous amount of personal charm, Ives always has been able to stampede the women delegates at every convention at which he was a candidate. He is a slim six-footer, with graying hair and deep blue eyes, and a

beautifully resonant speaking voice.

Ives comes from pre-Revolutionary Dutch-English-Presbyterian stock. He was born on January 24, 1896, in Bainbridge, New York, a tiny village in the Susquehanna Valley about halfway upstate, which is surrounded by milk cows and Allegheny foothills. The cows provided his father, a feed and grain merchant, with a comfortable living, and the mountains furnished inspiration for his mother, a former schoolteacher and minister's daughter, who was determined that her only son, Irving, should either become the President of the United States, or a Presbyterian pastor somewhere in the valley. "I want," she used to say, "his voice to be heard."

Irving's voice was heard considerably—in school plays, in the dozens of public-speaking courses his mother made him take, and on the tennis court, where he cussed out pretty Elizabeth Skinner one day, and ended up by marrying her a few years later. (She died early this summer after 27 years of marriage.) A platoon of 5th Division infantry listened to Lieutenant Ives' voice over the sound of shells during the six months of the Saint Mihiel and Meuse-Argonne offensives in World War I. And then, when he returned to Hamilton College in 1919, to finish up his junior and senior years, a lot of other people heard him.

He was captain of the tennis team, a basketball forward, the president of his class, a member of the debating team, a baritone (like Dewey) in the glee club, the favorite leading man of the dramatic club, a Phi Beta Kappa and the editor of the yearbook. In his spare time, he sounded off with extra fortitude as a cheer leader. And back in his freshman year, he led a wild campus political campaign which netted 14 adult votes for Charles Evans Hughes in the Presidential race of 1916.

During this early period, Ives did some surprising things for a man who now is a pillar of the Republican party

(Continued on page 63)

"He said you were a four-flush
slapped him," Myra said. I began
"Kiss me," I said. She did. Seven

A man in a brown suit and a woman in a blue dress are sitting at a table. The man is holding a cigarette and looking at the woman. The woman is leaning in and kissing him on the cheek. On the table, there is a glass of beer, a cigarette, and some small white flowers.

YOU TOO CAN BE A GENIUS

BY W. L. KNICKMEYER

In this case, genius was 10 per cent inspiration and 90 per cent Myra

IT WAS the same old thing. I looked at Myra Stewart sitting across the table from me in Harry's Bar, and why I'd had to go and fall in love with her I couldn't guess. But there it was. Not that she wasn't nice looking, with her dark hair done in a topknot and that little nose tilted up and the way her chin was, soft and round, with a dimple in it.

She looked all right, and she was a fine girl and I liked her. Only, she had these ideas.

She said, "After all, Herb, you've been out of the Army for over a year, now."

Was that something to complain about?

"Sure," I said.

"But you haven't *done* anything!"

What did she want me to do, pick a fight with Molotov?

I said, "I won eighty-five bucks in a crap game last night."

"Be serious, Herb." She leaned toward me across the table. She was earnest, intent. "Haven't you any pride? Haven't you any ambition? Look at James Wyatt."

I didn't want to.

"I'll have to look at him all week end," I said. "What was the idea of telling him we'd come to his damned farm, anyway?"

"It isn't a farm—it's a perfectly beautiful estate on Long Island."

"Oh," I said. "So that's it. I'm supposed to be struck all of a heap."

Her lips tightened. "It wouldn't occur to you," she said, "that you might have had a Long Island estate yourself, if you'd tried."

I made a noise in my throat. "Are you trying to tell me James Wyatt worked for that place himself?"

Myra blushed a little. "Well—maybe he did inherit it. But you have to admit he's running the business by himself. A big publishing firm like that!"

All he did was sign his name where somebody told him to. He wouldn't know a book if he met one in one of his favorite bars.

"Okay," I said.

"I'd be ashamed," Myra said. "You started out together in college—and now look at you! Working on a newspaper—the fifth one since you left school!"

The difference was, my old man hadn't left me fifty-one per cent of the stock in a publishing outfit. I said, "Okay, okay. Forget it."

I'd been hearing that kind of stuff ever since college. James this and James that. James was captain of the debating team. James was editor of the yearbook. I played a little second-string football and basketball, and a pretty sharp game of poker.

When the war came along, James was a lieutenant in the A.G. section of Corps Headquarters, and I was an artillery sergeant. And now it was starting again.

I was pretty tired of James Wyatt.

"Forget it," I said. "Let's talk about something interesting, like: When are we going to get married?"

Myra's face tightened up again. "Not until you've made something of yourself," she said. "I don't want to marry a—bum. A newspaper bum."

So now I was a bum. I stared at her, and I was mad. I said, "Maybe you want to marry James Wyatt."

I said, "I'm damn' tired of hearing about James Wyatt. Anybody can publish a book. If he could write one it'd be different. But he can't even write his name without using both hands."

I kept on staring at her. She was beginning to burn. Her mouth trembled a little and her topknot bobbed and swung.

"Oh!" she cried. "I suppose *you* could write a book?"

I hadn't thought of it, but why not?

"Why not?" I said.

Her jaw dropped a little.

"Herb! Do you mean—?"

Why I did it I don't know. I was just mad enough not to be able to think straight. At the time, it seemed like a good idea.

"Sure," I said.

"A book! Herb Waters! And I never suspected—!"

Neither had I. I leaned back in my chair and looked nonchalant. Myra just gawked at me. Then what the literary lads call a trace of suspicion came into her eyes.

"Just where is this book?" she said.

I made my second mistake. "Right here in my pocket."

She sat up straight and reached across the table. "Let me see it."

"Oh, no. I couldn't do that. It would disturb what we literary men call the current of inspiration."

Myra looked at me. Her eyes were big. Awed.

She said, "Is it—finished yet?"

"Not quite."

"How much longer will it take?"

I might as well make it good. "Oh," I said, "a few hours—maybe a day."

She reached across the table again and caught my hand. "Herb," she said, "I'll marry you just as soon as you finish it!" Her eyes were shining.

Mine weren't. I swallowed a couple of times. "Swell," I said. "Fine." I swallowed again. "That's just dandy."

Myra nodded happily. There were dreams in her eyes, now, plenty of them.

GOLF'S BAD BOY

BY TOM SILER

The petulant Frank Stranahan probably won't be the choice of the wise money in the coming National Amateur tournament. But he's sure to be the center of attention

FRANK STRANAHAN, the golfer, is the luckiest young man in America—he is lucky to be alive. How he came this far without being clipped by a cleek is a mystery. He has irritated spectators, infuriated competitors and almost caused the British to reject the Marshall Plan. What has undoubtedly saved him is a federal law prohibiting a spectator from shooting a golfer in a trap.

His tours of England and Scotland have done as little for Anglo-Saxon amity as the Battle of Bunker Hill. His first venture among the heather saw him firing his caddy in a fit of rage. Since a Scottish caddy has the same approximate standing in the community as a Presbyterian dominie, this was regarded as sacrilege, and London papers muttered darkly that if Stranahan were part of the American loan they might need to reconsider the deal.

Last April, Frank returned as a member of the Walker Cup team and conducted himself so admirably that several Englishmen ventured to speak to him. This, naturally, couldn't last. He remained over for the British Amateur and on the very first hole of his third-round match with George Morgan, a virtual unknown from Glasgow, he did it again.

Morgan knocked in his putt for a par four and then tapped in Frank's ball, the Scot's way of conceding a half on the hole.

Stranahan flabbergasted the gallery and remote parts of the British Empire by asking for a ruling. In short he wanted credit for winning the hole because Morgan had hit his ball. The stewards ruled against him, and the English press thereafter wanted no part of him. He lost next day to Willie Turnesa, the eventual winner, and returned home amid a chorus of ironic cheers.

"A braw sort o' lad," said the Scots dourly, "but a bit daft."

But he was back again in July playing in the British Open. All he had to do on the 72d and final hole to tie Fred Daly was to sink a shot from 110 yards away. He smacked it, the ball arched high in the air, hit the green and rolled straight toward the cup. The crowd let out an awful holler, the cheers ringing loud and clear. Stranahan galloped hopefully up to

When Stranahan won the semifinals of the Western Amateur, the girls, his best gallery support, crowded about him

find the ball three inches from the cup. His face fell.

The story now verges. According to reports in the American press the British were honoring a courageous warrior who would not be downed by adversity. Frank followed with a little speech in which he said he had been a bad boy but would be a bad boy no longer and furthermore he loved each and every one of the British race (Cheers).

Or Were They Bronx Cheers?

However, Vic Ghezzi, another title-seeking invader, had a sourer view of the proceedings.

"You don't think they were cheering that shot, do you?" he asked Frankie. "They were yelling because you missed it. That was a holler of relief."

Ghezzi was serious but it wouldn't do to interpret his sharp remark as an indictment of British sportsmanship. After all Bobby Jones, Walter Hagen, Gene Sarazen and Lawson Little had a

grand time collecting British championships. The natives were fond of the visitors and still talk endearingly of Jones' brilliant triumphs over there. But mention Stranahan, and the hair rises on the backs of the lions in Trafalgar Square.

As a golfer, Stranahan is the most egocentric, monomaniacal character who ever swung a mashie. His sole, constant, obsessive ambition is to be the "best golfer in the world." As a young man he sat down and considered his assets: no financial worries, no job to tie him down, a fine set of muscles and a mind that gets hold of an idea and crushes it. He is a rich man's son who has taken the golfing veil. Furthermore, he gets his determination from his father, Robert A. Stranahan, multimillionaire manufacturer of Toledo, who is himself a crack golfer and still ranks high among the seniors.

Not since Papa Feller began buying machines to build up little Robert into a great pitcher has anything approached the Stranahans. The boy's

notions concerning food, drink and exercise border on the eccentric. Stranahan drinks no whisky or beer; he has never tasted coffee. He likes a root beer or a strawberry pop. On a wild night, but milk is the staple in his diet. Nor does he like eggs. He is a prodigious consumer of bananas, oranges, apples and raw vegetables like carrots. Lifting 250-pound bar bells is his idea of fun.

Jim Ferrier, the P.G.A. champion, tells of the time he had dinner with Frank during one of the California tournaments. "As soon as we sat down Frank opened a brown paper bag and pulled out a raw carrot," he calls. "While munching on the carrot he ordered four shrimp cocktails and three glasses of milk. Nothing else. The waitress turned a bit pale and backed away a few paces as she wrote down his order."

Stranahan firmly believes his monastic simplicity will lead to golfing greatness. He practices more than tireless Ben Hogan, constantly in perfect physical condition and

somewhere with somebody virtually every day in the year. Golfing ory fails to record what part, if sobriety and bulging biceps ed in the gallant championship les of the past. Frank, however, is remotely concerned with history—the present and the future. He ws that milk was not a basic part Hagen's diet; that Jones never st a bar bell in his life; that Sara-wouldn't be caught dead nibbling carrots.

le also knows that, strangely ough, poor boys win golf titles, pro amateur. Dick Chapman is the wealthy amateur champion since es' prime. And virtually every pro is an ex-caddy. Yet Stranahan to-is the amateur most likely to chal-e the supremacy of the pros.

o amatur has had such a build-up decade and a half. His brilliant, his sharp tongue and lack of re-nt, and the jockeying with specta-always have him on the spot in tournament. He'll be a major at-ion once again when the amateur gathers shortly at Pebble Beach, Monte, California, for the Na-al championship. Ted Bishop is defending champion and Marvin l" Ward, who recently defeated nahan for the Western champion- probably will be the choice of the money. But Stranahan will be the er of attention.

ie top pros insist Stranahan right is like an incubator egg 20 days . He's on the verge of breaking of his shell and becoming a big er. His 1947 record bears them He finished second to Demaret ided with Nelson in the Masters ugusta and was only a stroke off inning pace in the British Open. National Amateur this year could e show that would launch him on ining spree.

Stranahan's approach to the final at the Masters was characteris- He trailed Demaret, the leader, e strokes. Picard told him he still win it. Frank agreed, but added, take a 66 to do it." It seemed a

prodigal waste of time to point out that Nelson, Hogan, Chick Harbert and a few others who played golf for a living were closer to Demaret than he was. That night Stranahan ate an early dinner and whisked his pretty girl friend to her home. He tossed the weights around for an hour and practiced putting on the carpet of his hotel room for two hours. An hour's practice the next morning on woods and irons and he was ready to tee off.

He shot a brilliant 68 to tie Nelson at 283, a new amateur record for the Masters, and finished in front of 50 of the country's finest golfers. He reproached himself endlessly for not tying Demaret. Significantly, he wasn't too downhearted to go to the practice tee and bang away for another hour in the gathering twilight.

Plays Strictly for Medals

Stranahan convinced himself last year that he was ready for the best. He won the Western Amateur, Great Lakes Amateur, North and South Amateur, and Mexican Amateur, doing poorly in the National Amateur, of which more later. Against the pros Frank won the Kansas City and Fort Worth Opens, and finished no lower than fifth in six other open meets. According to his own bookkeeping he would have finished sixth among the money winners had he been allowed to accept prize money. As it was, he collected medals and left the cash for the pros. He could easily net \$20,000 as a pro this year. He doesn't want to join 'em, he wants only to beat 'em.

Money, as you may have gathered, is not one of his worries. His father picks up the tab. Years ago he tried to persuade his strong-willed son to go into business. No dice. Now Frank joins the pros in January and stays with them all year, detouring during the summer long enough to compete in all the major amateur events. Otherwise, he's a fixture along golf's gold trail. He travels by motor usually and has an awful time at hotels. When the bellhops see him coming they yell,

"Head for the woods, men. The bar-bell boy is here."

Frankie is the first to admit he's still in the doghouse in England but reports progress on this side.

"Had 'em on my side for the first time last winter," he says proudly. "I think it's the bobby-soxers."

We can personally vouch for the last part. The bobby-sox brigade rallies behind him faithfully, trails him around the course, surges in for autographs on the 18th green and even stands worshipfully by while he bangs away in interminable practice sessions.

Being a handsome brute, the gals troop along with him in a match as if it were a country picnic. By the end of the day he is hard in friendship with a few of them and occasionally dinner dates result. That's when the ladies get disillusioned. Just when things begin to get interesting, Frankie hoists himself aloft, looks at his watch, says, "Gotta get my sleep, you know," and departs. This leaves the ladies with a lot of evening still on their hands.

Frankie was dismayed in his early days when he found the gallery was against him. They evidently resented his money and were eternally rooting for some ex-caddy who was reared around the coalyard. Frankie naively asked the sports writers to soft-pedal the fact that he was solvent but all that got him was a belligerent lack of co-operation among the newsmen.

His appearance and demeanor also antagonized the patrons. As he comes out to the first tee, Frankie walks ram-rod-straight, taking long deliberate steps, something between a strut and a swagger. He is five feet ten and has long chestnut hair that falls daringly over his forehead as he plays bare-headed. He has deep brown eyes, square shoulders and a picture physique of 175 well-scattered pounds. His slacks are impeccably tailored and his solid-colored polo shirts fit him as tightly as Mabel's girdle, giving his impressive biceps a chance to ripple.

What really started him on the way up in public approval was his match with Smiley Quick, thirty-seven-year-

old Public Links champion, last year in the Western Amateur at Duluth. Smiley was the sentimental favorite. Talkative and colorful, Quick had had the spectators in his hip pocket all along, entertaining them with dire predictions of Stranahan's fate. Smiley began giving Frank the "treatment," obviously figuring his pampered rival wouldn't know how to meet the challenge.

The match quickly settled into the golfing counterpart of a barroom brawl. They began standing in the line of each other's putts, moving about while the other player executed a shot. The Emily Post of golf, whoever that is, would have been horrified. On one occasion, having the upper hand, Quick told Frank, "All your millions won't help you now." Stranahan, another time, putted out and went on to the next tee, leaving Quick to putt out alone.

"I'm going to put the spurs to you now," Quick said, as they teed off.

"With what?" snapped Stranahan.

"It won't take much with that swing you've got," retorted Smiley.

This sort of thing, unprecedented in championship golf, went on for 38 holes, by which time the gallery had eased off of gritty, leather-tough Smiley and was rooting for Stranahan, who had shown he could protect himself with brass knuckles or pillows.

Going to the 39th hole, Quick said, "I'm going to end this match now; then I'm going to take care of you out behind the clubhouse."

Stranahan's answer was a 12-foot putt for the birdie that ended the overtime match on the 39th hole. Quick walked over, shook Frank's hand quickly, and disappeared. That was the last trace of the Stranahan-Quick feud. Anticlimactic as it was, Stranahan bounced right back from that vicious battle to defeat Ward, two-time National Amateur champion, in the championship match which also went into overtime.

A month later, in the finals of the Great Lakes Amateur in Chicago, (Continued on page 61)

's favorite conditioning exercise is tossing the weights . Here he's revealed "cleaning" a 150-pound bar bell

In his hotel room the tireless Mr. Stranahan devotes much of his time to polishing up on his putting game

The Stranahan grip. Exercise and golf have developed powerful hands

The Tarabucan women of southern Bolivia have a "special occasion" hat made of felt, trimmed with sequins, coins and tassels. Little do they know that its adaptation by Laddie Northridge in black felt, trimmed with tassels and felt strips, is being worn at the fashionable Stork Club

The fanciful creation on the right is the famous Cholo hat of Bolivia and Peru. Painted a glossy white, it acts as a reflector of the sun's rays. Walter Florell reflects a future note in an off-white beaver felt with bands of bright green and fuchsia satin encircling the crown

LIFTING THE LID

BY MARTHA SAWYERS

On a recent tour of South America, Martha Sawyers was fascinated by local millinery designs and sketched these hats for Collier's. Back in New York the sketches inspired leading hat designers with the results shown here

Around the Peruvian side of Lake Titicaca, Indian women wear the above hat to shade their eyes or hide from wolves. In T. Azeez, a Park Avenue jewelry store, Peter Bondi's version in felt, trimmed with ostrich tips and lace, would cause any American wolf to look twice

A legacy of the Spanish Conquistadors, this suede helmet is worn by both sexes of the Tarabucan Indians. "For Ladies Only," Florence Reichman made a velours helmet that enhances the charm of our Rockefeller Center visitor. The colorful trimming is velvet, gilt braid and pompons

THE G.I. covered his head with a steel bucket for protection, but he also used it as a chair and often as a washbasin. The silk topper wears magicians as a rabbit hutch. But in the Cordilleras of South America, the Indians wear a varied assortment of lids for more obvious reasons: To attract the opposite sex; as a tribal designation or spe- badge of distinction; to provide warmth or to he rain and sunlight. In Sucre, Bolivia, the women advertise the fact they are in mourning by looping the crown of he hats with some pompon gimmicks. Striking re cheerful note, the men and women of Pisac, wear a flat-funnel hat with a base of woven trar. The underside is covered with red llama felt na cross of silver or gold braid is stitched onto ne black round top. Nowadays the man wears it only on ceremonial

occasions such as weddings or fiestas. Most of the time he sports a snappy felt model of modern classical pattern. Machine-made of llama wool and gluc, it costs the equivalent of 25 cents and looks like it after the first rain.

With the exception of Carmen Miranda's creations, the most famous of all South American hats are those worn by the Cholos of Peru and Bolivia. In the lower altitudes of Peru, the stovepipe crown is of almost normal height, but when we reach the Bolivian Andes, it becomes affected by the altitude and shoots up into the thin air to a height of 15 inches. Banded by a narrow black ribbon which is sewn into a butterfly V-shape on one side, the hat becomes a class symbol of the vast majority of Indians in the Andes region.

The female city slickers of La Paz, Bolivia, are partial to felt derbies which are manufactured in

Spain. Shaped like our own derbies, they are produced in many colors and are worn straight on the head except by the more modish teen-agers.

The hat paintings shown on these pages are part of the collection I brought back from South America for Collier's. Four were selected for adaptation by leading American millinery designers. The results were not only attractive but the silhouettes of the Indian hats are strikingly similar to those which American and Parisian milliners are showing as the creations which all self-respecting women must wear for fall and winter.

Since it's a well-known fact that contrary to our South American sisters, the primary, secondary and last purpose of our hats is to attract the roving eyes of the opposite sex we'll know that our designers have done their job well when the familiar low whistle greets the appearance of these bonnets. ★★★

MAN HUNT IN MOPANG

It was just as well that in the dim light, neither the warden nor the mounty could see the look of righteous malevolence in Jeff's eye when he saw the blood

BY EDMUND WARE

Jeff Coongate, master of the art of poaching, reforms—slightly, that is

EMERGING from a dream of pursuit by game wardens—a figment too often duplicated in the reality of his life—Thomas Jefferson Coongate, the one-eyed poacher of Mopang Forest, sat upright under a dripping cedar. He fought his way through layers of sleep which hung upon him like the folds of a collapsed parachute dipped in alcohol and winced at the afternoon light. He knew at a glance exactly where he was, but as yet, not how he had got there. From where he sat, Zack Bourne's cabin was less than a mile up the shore of Mopang Lake, and that, then, must have been his destination. There were signs that the object of his excursion had been the illegal slaying of game.

Old Jeff's rifle lay beside him on the wet moss. In the pocket of his mackinaw rested a bottle of rum which went by the brand name of Dark Hazard. From the song in his temples and the savor of his mustaches, the one-eyed poacher concluded that he had been drinking. Moreover, he became aware suddenly of a unique and startling hang-over symptom—the sensation of someone kissing the back of his neck. At first, Jeff did not dare look around. The kissing was rhythmic, damp and musical, and he believed it to be an illusion which would pass, along with the brown mists of rum. Yet, while in memory he retraced the steps which had brought him low, the kissing lavishly persisted.

Earlier that spring day, Jeff re-

called, he had strolled into Sim Pease's store in the hamlet of Privilege to see if his Spanish War pension check had arrived. Sim Pease, storekeeper and postmaster, said, "Nothing doing, old-timer. You're about three days previous."

"They might've made a mistake and sent it early."

"The treasurer," Sim said, turning up the radio on the counter, "has never been known to make a mistake of that kind."

Over the radio, a horticulturist was giving an address on the treatment of potato seed prior to planting. Jeff recalled being bored by the subject matter.

"Who cares about potatoes," he asked Sim, "without venison gravy to

pour over 'em? Turn that dam off—no, wait! Hold her steady as she is!"

An announcer had broken the latest news on a man hunt which was then in progress in the wild areas to the north and west of Mopang Lake. Until then, Jeff Coongate had been scornful of efforts to track the fugitive, an escaped convict named Creeper Conway. To Jeff, it could track a bug across a drop of sweat. The efforts of the law had been shameful. But the current hunt brought incidental tidings of the sweetest kind.

Two bloodhounds, the news said, had been on the trail of Creeper Conway for several hours.

SPECIALISTS

IN FITTING TRUCKS TO EVERY JOB

International KB-8—specialized for distribution of bituminous material.

International KBR-11—specialized for the transport of coal from pit to tippie.

International KBR-12 Truck-Tractor—specialized for hauling heavy machinery.

International KB-8-F—specialized for mixing and transporting concrete.

International KB-6—specialized with low frame for beverage delivery.

International W-6564-OH Truck-Tractor—specialized for heavy log transport.

THIS EMBLEM

IDENTIFIES GREAT TRUCKS

FEW hauling jobs are alike. Trucks must be *specialized*. International Dealers and Branches are specialists in truck hauling problems.

There are 21 basic models in the International Line, the only complete line built.

Engineers at International's four great truck works are masters at *specializing* these 21 models into more than 1,000 different types of trucks.

That's one reason why more heavy-duty Internationals have served American commerce and industry for 16 years than any other make.

Here are two others:

1. The International Truck Point Rating System, which enables International

Dealers and Branches to determine the payload that may be economically carried by a given truck in any specific operation.

2. *Specialized* truck service by International Dealers and Branches.

MAN RUNNING

BY SELWYN JEPSON

CONTINUING A THRILLING ACCOUNT OF FLIGHT FROM THE NOOSE

I lifted the Commodore's revolver and, taking careful aim, put two shots through the back window

The Story:

EVE GILL is prevailed upon by a crusty, eccentric father, COMMODORE GILL, to steal a Rembrandt painting which he feels should belong to In— from his wealthy sister-in-law. After failing to come to terms with a shy London art dealer, K. ZIMMER, one evening, Eve encounters JONATHAN FAROSE; Jonathan is fleeing from the home of millionaire JOSEPH INWOOD, who was murdered in his library. Jonathan, who has been having an affair with Inwood's wanton wife, CHARLOTTE, has been tempting to make the murder, while Charlotte has confessed to him, seemingly work of anonymous burglars.

Eve drives Jonathan to the Gill country place in Kessingland, where she hides him. The Commodore, who has sailed to the Netherlands to sell the Rembrandt, telephones Eve and tells her the painting is a forgery.

Returning to London, Eve manages to scratch up an acquaintance with DETECTIVE SMITH, who, although he has no inkling of the Jonathan-Charlotte relationship, is hunting Jonathan in connection with the murder. Realizing that Jonathan is being ruthlessly used by Charlotte, Eve disguises herself as "Dorothy Simpson" and obtains a position as lady's maid to the supposedly grief-stricken widow. Soon Eve finds out that Charlotte is in cahoots with her real lover, FREDDY WILLIAMS. GROVES, the butler, attempts blackmail and meets with a fatal "accident" engineered by the brutal Williams.

In order to continue the war of nerves more effectively, Eve leaves the Inwood household and telephones Charlotte. In her plaintive lady's-maid voice, Eve demands blackmail money. Then, copying her characterization of Dorothy Simpson, Eve walks into the apartment of the mysterious Williams "by mistake." She poses as an aspiring actress, "Felicity Cunningham." Williams attempts to seduce her, but Charlotte, upon receiving the telephone call from her maid, interrupts his advances by ringing the downstairs doorbell.

"Leave by the back stairs and come in the morning," says Williams as he goes downstairs to open the door. But Eve slips back into the apartment and hides behind drapes as Williams, angry at Charlotte's intrusion, ushers the widow into the apartment. Eve listens to their conversation. . . .

V

DARLING, don't!" It was Charlotte speaking. "You're hurting me!"

"When will you learn that when I say something I mean it? I said tomorrow. This is the second time you've done this."

There was physical pain in Charlotte's voice. "And for the same reason—exactly the same reason. . . please—"

"Something's happened to put the wind up you. I know, I know."

"For God's sake give me a drink!" I heard glass against glass, and the gurgle of liquid.

"Freddy," she said, "it's happening again. I don't think I can stand it. I know I can't. It's torture! All over again! Freddy—!"

"What is all over again?" Freddy demanded.

"Groves—"

"If there's anything in the world that can't happen again, it's you butler. I ought to know." He laughed unpleasantly. "I am extremely angry with you for coming here again—the second time I've said

weren't to. Just because you have an attack of nerves and see ghosts—"

"You don't understand. It's someone else—doing what Groves did—black-mail—" She was sobbing by now, dry, strangled sounds of a woman at the end of her tether.

He hit her. I heard the sharp smack of his hand on soft, thinly covered flesh. She cried out and he hit her again, ordering her savagely to stop being sorry for herself and tell him what had happened.

"Don't—don't!" But he hit her a third time. I held my breath. It was ridiculous to feel sorry for her; after all, I had arranged things so that he would be in a bad temper when she came and I ought to be glad my plan was working out. All right, I was glad.

IT WAS high time, however, I told myself, that the swine realized he wouldn't get much out of her if he beat her up any more.

"Freddy—Freddy—" she said, and I marveled to hear the fear, the misery and humiliation in that voice of all voices. An actress? Not at the moment. They say there is no fellowship among women. No, I hated Charlotte as thoroughly as ever, and this was the most important moment, so far, but I nearly wrecked the whole thing by almost stepping out from behind those curtains and throwing something at Freddy Williams.

"Let's go back to where you came in," the man was saying, with a shade more reasonableness in his tone. "Someone else has stepped into Groves' shoes. A friend of his he let into his—and your—little secret?"

"No—but it comes to the same thing—" She struggled for control of her voice. "Freddy darling—oh, you hurt me so—"

"You make me sick," he observed. "I thought you had guts of a kind. You started off well enough, too."

"I'm afraid I love you too much. It's—it's very weakening for the morale."

"All right. You love me too much. That's my fault of course."

"I'd rather you hit me than despised me."

"The two go together. Hurry up. I'm bloody tired. I never realized murder could be so exhausting. Who's the black-mailer and what's his angle?"

"It's a girl—a wretched, half-witted creature of a maid I took on when Good left. At least, she doesn't seem quite so half-witted—"

"A girl!" He sounded relieved, almost amused.

"Sly, cunning, nasty—she frightened me much more than Groves did. He was at least polite about it."

"What does she know?"

"She heard, and I think saw, Jonathan the other night. She's not in the house any longer, thank God. She ran out after Groves—died."

"Does she know about you and me?" he asked.

"I don't think so. I don't see how. Except—"

"Except what?"

"No. It's nothing. No, she can't possibly know about you."

I realized she had thought better of telling him about the switchboard at Number 4. She had got herself into enough trouble. In any case, she could not be sure I had listened in to her conversations with him. She preferred to think I had not.

"She feels she ought to go to the police, I suppose?"

"Yes, the same sort of line that Groves used."

"It's the usual one, I believe, although I've never used it myself. It's quite unnecessary as a rule, if the setup is sound. What stage is this in, so far?"

"She obviously wanted me to stew in my own juice for a bit. She said she would ring me tomorrow. I don't know how much she'll want, but I think she'll

tell me soon. It's awful, Freddy. I can't face it! Oh, Freddy, I'm so miserable."

His temper gave out again. "For God's sake almighty!" he shouted. "Do you realize, you little cow, that you're saying you have another one on the plate for me? How many more people are there who've seen or heard this or that and will expect to cash in on it? Your damned all-powerful vanity is at the bottom of it! You think you can never make a mistake—that no one will dare to oppose you or take advantage of you." He got his breath. "When in hell's name is it going to stop?"

"Don't forget, darling, you started it. You killed—"

This time he must have struck her in the mouth. The name vanished in the blow and her whimpering cry. He went on without stopping:

"There's Penrose still to be dealt with. Who comes first in the new series? Haven't you made a list? In order of priority. Shall I notify London Transport, so they can have the mortuary ambulance at the right station at the right

watch for it, though I don't think he's expecting it."

"That was in my mind. Unless we it carefully she'll be likely to turn the rendezvous too. I prefer to deal problems of that kind one at a time. Your Jonathan will be enough for a mouthful. For God's sake, Charlotte, you seem to think this sort of thing easy!"

"I don't! It's only that you're really afraid."

"Maybe. But I'm not careless. In any place you could give him for a rendezvous without actually putting him to it but which he would know was somewhere you have met him. It really doesn't matter where it is, as you can pick him up with a car as I

"Where I can pick him up?"

"Yes, you."

"No, no! I couldn't! You can't ask to!"

"Seems to me," he said coldly, losing sight of realities. You never do you?"

I do not know what he did to

BUTCH

by LARRY REYNOLDS

time? What a waste of petrol, going up and down—surely we could fix to do the whole lot together. . . ."

"Darling, darling! You mustn't—"

"I'm not as tough as I thought I was, either," he remarked, and I heard him filling a glass.

This! I told myself, breathless against the wall, is the truth. Just a little more, Freddy, just a little more.

THERE was a silence. Then he said, "Penrose, obviously. You can pay the girl for a bit and we'll have time to see. But he is in a different category. Marked 'urgent' in fact. They mustn't catch him. Not now. I couldn't stand the worry. And no more train suicides."

"No, dear. No more train suicides. God! You've made my lip bleed."

"Serve you bloody well right." There was another short silence.

"Wanton," he said.

"Yes, darling. Isn't it lovely?"

"I can't think if you do that."

"Of course I want to think!" he said sharply. "That message must go in tomorrow, for the next day's issue—Friday."

"The girl will see it. She's bound to

she gave a sharp, muffled scream. voice went steadily on:

"I let you off Groves, but from now you are going to do your share. Besides, I've never set eyes on the man and if I could recognize him would I be expecting, risking his neck for me? Of course not. It's out of the question."

"Where—where would I talk to him?"

"I think I know that part of it. I'd waiting. You would stop the car, him to get out, and then as soon as he was out you would drive off. Good, I'm tired!"

"Let's go to bed," said hark abruptly in a voice I scarcely recognized as hers; it was like a child's.

"I wondered when we'd come to this," he muttered. "Oh, well—"

And before I had fully realized what was happening, a door to my left opened, the lights went out, and he closed.

I remained listening where I was, a little or nothing to hear. I was perplexed and disappointed. Just that, in the middle of a sentence and certainly halfway through a discussion of the utmost importance gone to bed.

I waited five minutes, or what

EBERHARD FABER

LEADERSHIP IN FINE WRITING MATERIALS
SINCE 1849

five minutes; probably it was less than three, and then satisfied that they really were in the next room, that the communicating door was tight shut, and the evening over so far as I was concerned, I came out. The room was very dark and I was glad I had earlier taken a good look at its geography. I went carefully but without lingering to the hallway, closing the sitting-room door after me slowly. It was pitch dark now and I dared not put on the light, for I was sure the door on the left would be another door into the bedroom; I thought I could hear the low murmur of their voices beyond it. However, I was not going to stay in the place a moment longer than it would take me to feel for the knob of the main door and turn it, even if by putting my ear to their door I might perhaps make out an occasional word.

I was in a bad state, with now and again an uncontrollable trembling; I had had just about enough.

I stood in the corridor, where a low-power bulb gave me light at last, and decided I must risk the click the door of the flat would make if I closed it fully. The alternative of leaving it open seemed the worse, for Freddy Williams would be certain he had shut it properly after Charlotte's arrival. So I pulled it gently but steadily until the tongue slipped over the edge of the staple and sprang home. It sounded terribly loud to my tense ears. I ran quickly to the stairs and down the three flights to the entrance lobby, ready to believe that I heard him running down the stairs behind me. But all was quiet.

I slid back the spring lock of the street door and stepped into the welcome freshness of the night air; I kept close in to the wall as long as the pavement was within view of the windows above.

I reached the corner and turned it, feeling like a swimmer who has gained the beach after a long hard fight against an outgoing tide.

WHAT more did I know now than I had known when I went in? Nothing. I had known all that, hadn't I? But with an element lacking which made all the difference: certainty in many things which so far had been suspicion and intuition; for instance I was certain now that Freddy Williams and not Charlotte had killed her husband. She had probably been present, for otherwise she could not have played her act with Jonathan, bloodstained frock and all the rest of it. Her slender arms and soft white hands might be guilty of that murder, but they had not swung the candlestick. Further, Freddy Williams had twice confirmed that he had killed Groves, and I had heard enough of their future plan to know that he proposed to kill both Jonathan and Dorothy Simpson, separately and in that order. It was odd to think that I was Dorothy Simpson. But they would have some difficulty in finding her, unless I let them. No. She had done her part well; as a final contribution forcing Charlotte to Freddy Williams' flat at the time and in the circumstances I had chosen.

But would what I had heard be regarded as admissible evidence according to the law?

I thought of Billy Bull. If I told him the story—or told my Mr. Smith, or should I go to a lawyer?

By this time I was within a few yards of the Daimler and so busily occupied with my thoughts that I awoke rather abruptly to the sight of a man with his hat over his eyes who leaned against the fender and watched me approach.

"Thought you'd never show up, sister. The boss wants you."

"Does he?" I said. "And who's the boss?" But I was trembling again and my mouth was dry. Freddy Williams? I was so thoroughly frightened of him that I could expect any cunning from him.

"Come on, sister, don't act dumb." He moved up to the door of the car as I

opened it. "I said, *the boss*." He dropped his voice. "Zimmer—"

I stopped trembling, and heard myself laugh.

"Zimmer—you said?"

He slipped past me into the back seat. It was slickly done. I saw that he was undersized and thin-faced.

"You drive, sister. I'll show you the way."

"Yes," I said, suddenly angry in the reaction from fear; this seemed only irritating and a stupid waste of time after what had been filling my mind. I started the engine, revved it unkindly and drove off in what in any other car would have been a roar of acceleration. As it was, we merely went fast very soon. "Yes," I said again, "I'll drive, but I'll show *you* the way."

"Hey!" he said loudly. "Turn left at the bottom."

I swung the car to the right and streaked toward Hyde Park Corner.

"Sister," he said in my ear, "you're going to get into serious trouble. I'm holdin' a rod behind your sweet neck and if you don't calm down I'm liable to drill

in the subsequent crash; for a thing, I knew that whatever had K. Zimmer's orders to him there been nothing about murder, and third I thought it unlikely that he had a gun.

Finally, near the Knightsbridge his nerve broke. "Say that again, he requested, almost mildly.

"I didn't say anything. I don't *you* smoke, though."

"You said you'd never heard of Zimmer."

"That's right. That's what I said. don't let it bother you. I expect other people haven't heard of me either."

"Your name's Gill," he said. I allowed you from Thurloe Square we'd got the address from that maid at the Kessingland place. So gotta be Gill an' you can't fool me with this car around or—"

I laughed. I made it a goodro hearty laugh. He began to sweat in rather filthy manner and demanded I wasn't Gill, who in hell was I? I answered him. He climbed over the

a hole in you. Turn this car around! I've got a rod an' I mean it!"

"I hope you'll be able to produce a firearms certificate for it," I said. "The police are bound to ask if you've got one."

"What's that you're givin' me?"

"They let you go to the pictures too often as a kid," I said. "The wrong sort of pictures. I'll tell the magistrate so when I give evidence. Perhaps he'll remand you for a medical report. You'll probably get away with it, if you go on the way you're behaving now. Unless, of course, you have previous convictions."

"For gosh sake, shut up and do as you're told!" he cried.

I whirled the car around the Artillery Memorial on a squeal of protesting tires, bouncing him from right to left and back again.

"You don't mind Chelsea?" I asked. "It's more convenient for me. I know Inspector Smith very well. He'll give you every attention."

"Zimmer said—"

"You tell Inspector Smith what he said. I've never heard of the man."

"You—what?"

I took no notice while he wrestled with his problem. I was quite sure that whatever else he did he would not drill a hole in me; for one thing I was driving fast enough to insure that he would get killed

of the seat and slid down beside me squinting at me nervously.

"Only another three minutes I say. "Do you know that this will be the first time I've ever charged anyone with tempting kidnaping, assault, illegal possession of arms, using obscene language, disturbing the peace, and so much worse I've just thought of—"

"Stop this car," he said. "Let me out here! Zimmer's nuts anyway!"

I laughed again. He reached for the wheel in a kind of miserable panic, jabbed him hard with my elbow, grunted and became extremely glib, talking at a great rate about how he always getting into trouble because people took advantage of him, of his nature, his weakness for wanting to be his pals.

"Here we are," I said. "Chelsea Station."

He was out of the car and running a hare before I had stopped. I was sitting all over. I sat there gripping the wheel with both hands; the blue over the police station was blurred. I tried to focus it in an effort to control my nerves.

I had a wild and yearning thought in a moment Ordinary Smith would be out of that door, see me here at the end of the pavement, would say,

American Originals

For more than 100 years the Conestoga or "covered" wagon, an American original, was the chief form of land transportation in opening the American frontier.

Americans always find new frontiers for thought as well as action. Take the idea: "Gin is gin." No longer true since Seagram developed the first basic improvement in gin-making in over 300 years.

It's Seagram's Ancient Bottle Gin, an American original, a different gin.

Different in its naturally golden color. Different in its smooth body. Result of Seagram's leisurely, time-honored method.

What all this means to you is the most refreshing, cooling-est Collins in the world.

Seagram's Ancient Bottle Gin DISTILLED DRY

The original "ancient" bottle (left) will, when available, replace the present standard bottle.

KAYWOODIE REMEMBERS WHEN—

First Electric
Street Railway 1885

The Kaywoodie organization had been making pipes for 34 years when the Hampden and Baltimore line in Richmond, Virginia, inaugurated the world's first electric railway. Kaywoodie has grown with the popularity and serviceability of Kaywoodie Pipes.

HOW TO TELL THE
GENUINE KAYWOODIE

dear, you've been right all the time. Why didn't you tell me? Of course Jonathan didn't do it; you're all in—it's our turn now."

But of course he did not, being snugly at home in bed, asleep and not even dreaming about me.

I sat a moment or two longer, recovering a little, and thinking of what had just happened.

So K. Zimmer had come to life, had he? Anyway, it would take him a day or two to work out what he wanted to do about it. That was all that mattered at the moment.

I wished I were less sleepy, but I had had more brandy in the last two hours than I was used to, by several glasses. I let myself into Aunt Florence's, warmed some milk and took it up with me, slipped off the gray frock, kicked off my shoes and lay on the bed trying to think about tomorrow and all that had to be done.

AFTER having breakfast with Aunt Florence, I sent her off to Harrods. Then I shut myself in the living room and made some telephone calls, the first to Kessingland. I rang to ask if the Peacock was home yet. Mary answered.

"No, Miss Eve, not yet. Jim was up in the clock tower ten minutes ago, and they're not even in sight. I sent him up there, wanting to know about lunch, and so on."

"Everything all right?"

"Yes, dear."

"I shall be home this evening, I hope for good."

"Hobhouse says to tell you he has put the Austin back in the stable. He says it's all right now."

"Is Hobhouse with you?"

"No, dear. He was in last night for his drop of milk. A nicely spoken man, I thought. He'll be company for Captain Charlie. Jim says he's all right too, and Jim takes a lot of pleasing. Jim's been teaching him about the sheep, maybe as a beginning. We wanted an extra man, they all say. I'll have something in the larder for you."

I called Charlotte and told her peremptorily to draw five hundred pounds in one-pound notes and wait for further instructions about delivery—it might be a few days. But she'd better be ready with the money.

I added, to make sure she was not trying to believe that Dorothy Simpson could be ignored as an amateur, that of course in the final settlement, whenever that should be, I would give her back the four letters "he" had written to her but which were now in my handbag. I heard the gasp of horrified surprise, and rang off satisfied that her morale was beyond reviving for a while.

Next, I woke up Freddy Williams, or rather half woke him up, for he was characteristically heavy-headed, and wanted to know who and what in a muttered, disagreeable undertone.

"Felicity!" I said brightly. "You haven't forgotten Felicity Cunningham. After all, it's only three years since we met—or it feels like it."

"Oh—ah—" he said, and I could hear a prodigious yawn.

"Wake up! It's nearly ten o'clock. Did she keep you up so very late? And did you fix it up?"

This, as I had hoped, upset him; he had fixed up several things last night, but nothing I was supposed to know about.

"Fix what up?" he said, more alertly.

"You silly man. Whatever piece of business you pretended was to be discussed. So that you could put on that show. I suppose I'm very tactless, but are the chances of a job any better—a show with a place in it for your Felicity?"

He laughed again and paused to consider in the light of morning how he stood in the world compared with this time yesterday. It must surely seem better to him. The basis for assuming so was sound; every murder he committed

on her behalf bound her more closely to him, a woman already infatuated with him, a woman who would be worth, so they said, nearly five hundred thousand pounds.

"Yes," he said finally, "I think there's very little doubt, now, that I shall do a show, maybe two shows."

"At the same time?" I said in reverent tones.

"Who knows? It might be the way to break in."

"When—when—" I asked breathlessly. "I mean, how soon can I see you? I'm a horrid, forward hussy, and ought to be ashamed of myself! The trouble is—and you know perfectly well what it is—oh, Freddy, I don't care whether I get to be an actress or not, but I—I would like to see you again."

"And I would like to see you," he said. "Show or no show?"

"Show or no show. So I'm going to be very sensible and cool-headed and say, before it's too late and I'm forever lost: Goodbye, Freddy darling."

"Hey, wait a minute. I don't eat young women."

"I don't like the way this has hit me. It's too much like the—the real thing, and

first impressions of my new friend without such prejudices. Once those impressions were in his mind, it would matter, of course. In fact, one of his best friends was Bull, the chief superintendent of the East Suffolk Constabulary, so it just showed, didn't it? Indeed, Bull often came to lunch on Sunday, and he might meet him and see for himself that the Commodore could like a plain man and without reservations.

I could not forget the sordid and deceitful reasons for which I had married like me, and I felt like a beast. I hoped, some good would come of him.

I put through another trunk call this time to Billy Bull at Norwich, and was certain that he would, in point of time, come to lunch on Sunday week.

"I'm flattered," he said. "Usually don't wait to be asked over."

"I know, and I was thinking it rude and unkind of me. You're a good friend of mine, Billy Bull. For heaven's sake, don't think you can't come over whenever you feel like it as well as only that sometimes I want to be alone."

"I understand, my dear. You're all

you're the wrong man, my dear Freddy!"

"What about lunch?" he said in a practical voice designed to bring me to my senses and at the same time tempt me into saying to myself: "After all, I can keep my head at lunch, can't I?"

"No," I said in a stifled voice. "No. I'll ring you up—maybe. Are—are you likely to be free sort of—any day? If I feel . . ."

He chuckled, but he did not crow, and said, "Any day this week, any day next week—except Tuesday. I may have to go out of town on Tuesday. The best time to ring me is about eleven in the morning."

"Yes," I said weakly. "Goodbye."

"Goodbye for now."

I PUT down the receiver. I might be wrong, but it looked as though he had put aside Tuesday for Jonathan's murder. That gave me four days.

I telephoned Chelsea Police Station and asked if Inspector Smith would speak to Miss Eve Gill. He would. I asked him about the week end after next. Could he come to Marsh House? He sounded stunned, but pleased.

Yes, he'd love to.

I made sure not only that he would accept but that he would not mind coming as plain Mr. Smith because for some silly reason my eccentric father was prejudiced about policemen, and I wanted the old gentleman's favorable

nice, you know. I'll look forward to day week. I'll put a circle around on my calendar. A red-letter day.

"It may well be that," I said, and he would not hear the shivering suggestion of the thought behind it.

My third trunk call went to Countess of Inderswick. She was watering roses in the garden, but they were in the telephone.

"Eve darling!"

"I've been in a bad spot, Sophie. I can just see the way out, I think."

"A man!" said Sophie delightedly.

"A man," I agreed, to save time—suppose it was true. "Lots of men, Sophie. Some of them will be around Marsh House the week end after this. Will you come for the Sunday?"

"Do I have to bring the Earl?"

"No."

"Goody-goody."

"One other thing, Sophie. Do you remember years and years ago, when we were terribly young and actually working for a living—all of eighteen months in fact—and you used—"

"Of course I don't remember things. I married the Earl to forget about them. I didn't I?"

"—you used to be able to do shorthand—"

"A kind of shorthand!" snorted Briggs, and I could see her red head as she jerked her indignant head around and twenty-two words a minute

was the fastest girl in my year—I mean at shorthand—

"And at earldoms. But what I am trying to say, and this isn't airy conversation, please if you think you need to, practice the shorthand between now and Sunday week, and bring your little book with you and some sharp pencils."

"How lovely and mysterious! Whatever for?"

"No, Sophie dear, no questions yet. Please? You'll come?"

"Of course. But you'll tell me soon? You know suspense makes me lose weight."

"That wouldn't hurt you."

"But it would infuriate the Earl. His mother was a Gaiety Girl."

I looked up Stevens, Rogerson and Stevens, dialed the number of their dusty offices in Bedford Row and asked for Mr. Rogerson, Jr., who was of my generation and not old enough or artied enough to put an equalizing "Rogerson" in the firm's name. But there was nothing he did not know about the Gills and their possessions. At least, he knew all the respectable parts, which at the moment was sufficient for my purpose.

"Donald, this is Eve Gill. Can you lay hands on the plans of the Marsh House estate, easily I mean, while I hold on? There's an argument about a measurement—not a legal argument, so don't get in a state."

"The papers are in the family box. It will take me a minute or two. What measurement do you want?"

"The distance from the southwest corner of the house to Ship Cottage."

"As the crow flies?"

"Well, as the footpath crawls or walks or whatever footpaths do. It's nearly straight."

"Hold on," he said.

I held on.

He came back to the telephone.

"Fourteen hundred and twenty-four feet," he said, "by the footpath. It's shown as straight, but isn't there a bend in the middle I seem to remember? Although it wouldn't make any great difference."

"Thank you, Donald."

That was enough of the telephone.

MY PACKING did not take long. I fetched the car, put my bags in it and drove to Harrods.

Aunt Florence was not deviating from routine and I found her at a small, elegant table among the armchairs in the large, silent beige lounge, dealing with today's correspondence, which was as heavy as always.

"I'm just finishing, dear. Why didn't you tell me you were coming? But it's just as well. I'd like you to meet Mr. Eskewing, in the sports department. His little girl—"

I said hastily I was ridiculously busy because I had had a message from the Marsh House, some housekeeping problem or other which meant I must hurry home. I had come to say goodbye and thank you. And there was just one thing. It was probably a silly question, but where had she bought that radio set she had given Father last Christmas? "It was here, at Harrods?"

"But of course, dear. Don't tell me it has gone *wrong*! Mr. Haslett would be most upset. They got it in specially because Rupert said he particularly wanted to play records and get South America and ships at sea and all sorts of things. Mr. Haslett said—"

"No, Aunt dear, it's working beautifully. It's only that I don't understand one of the gadgets, and if I could have a word with Mr. Haslett, who may remember the set, if he's still here—"

Mr. Haslett was most helpful. Not only did he remember the radio set Aunt Florence had bought for Commodore Gill, but remembered it in the intimate way a good technical salesman should. He was able to tell me that I was quite right in

thinking that the letters MIC over two of the many little holes in the back were an abbreviation for the word "microphone" and that if the knob on the left of the front panel was moved over to the extreme right, a position which was also marked "MIC," the set could be used as a microphone amplifier.

"In fact, Madam," said Mr. Haslett proudly, "you could use it as a public-address system."

"If we had a microphone?" I suggested.

"Exactly, Madam. You would put the leads of the microphone into the terminal holes you noticed in the back of the chassis."

"Tell me about microphones. Can I buy one?"

Mr. Haslett waved his hand at a showcase and in a moment was demonstrating microphones, explaining their simple mysteries, their characteristics and peculiarities. For the best and clearest results you spoke about six inches from the instrument; the same volume control used for radio also decided the volume of the voice coming through the microphone circuit to the loud-speaker.

"Or voices?" I asked. "I mean, sev-

he was a good Harrods man; he said: "Five hundred—well, I don't see why not, Madam. There's nothing against it, technically."

I was feeling much better.

"Good. I'll take that microphone—and the booster and five hundred yards of the er—screened stuff."

His face fell. He infinitely regretted it, but he had not so much as that in stock, it really was an exceptional amount, I understood? Furthermore, it came in hundred-yard rolls, and that meant four joins, soldered joins if the screening was to be effective. He looked harassed. I said, "Oh, dear, couldn't you please try? Mrs. Webster was sure you would do everything you could. It is most urgent and important. I have to go up to Suffolk this afternoon. If I could have it by three o'clock—"

"It will be a considerable weight."

"I have a car."

To disappoint Mrs. Webster was out of the question. He took the plunge.

"We'll do our best, Madam, for three o'clock."

I wrote a check for seventy-odd pounds while he made out an order. It

and would take some finding even if a one knew what to look for.

Mr. Haslett had done all he had set to do. The packages were carried to the car and he gave me a short, wise lecture on what to remember installing the microphone.

So at last I set off for home, with days in which to persuade Jonathan not to accept any invitation to come and be murdered which might appear for his tomorrow's Daily Telegraph. Also I was doing arithmetic with days, I counted on only eight in which to persuade him to justify having spent that chunk of life savings on satisfying the rules of evidence.

IT WAS good to be home again, to unpack and put away my things, to look at the windows of the dining room wide open to the warm dusk, the candle lighted, their yellow light playing on the black wood of the table and glittering on the silver.

A great deal had happened to me since I had set off for London ten days ago. I was emotionally and physically exhausted, and in no condition to meet the crisis I had planned. If I could not control it, guide it, use it, I would be ruined. Looked at then, as I forced myself to do, objectively and critically, seemed an impossible thing I was a complete stranger to me and unknown to one another, occupying distant positions not only in space but in relation. I had to be brought together in the corner of England at an exact hour in precisely organized circumstances in order to save a man from the consequences of one act of romantic folly.

I was plain frightened. I was ended of being hated by people when they found, as they would, had deceived and cheated them. I was frightened of Father, who would mete me every kind of hell for getting up in such an unsavory business. I failed. If I succeeded, of course I would probably commend me as a success to his teaching. I was frightened of Charlotte, of her cold self-interest combined with her madness where Freddy Williams was concerned—and I was particularly frightened of Williams in a physical way. But above all and everything I was frightened of losing Jonathan, because I had ever hard I tried, I would not be able to save Charlotte entirely from the consequences of what she had done as a necessary to murder.

The healing peace of the evening was rapidly vanishing under the impact of these thoughts, and I pulled myself away from them by reminding myself that Jonathan was not far off, that apart from my desire to see him which had been nagging me quietly ever since I left home, there was something of importance I must try to find out from him without letting him realize what I was telling me.

So I fetched a scarf and walked to Ship Cottage by the footpath which cut through the thick belt of trees protecting the house from the north wind.

There was a light in the dining room and the front door was open. Jonathan was sitting in a chair by the fire, of it, smoking a pipe, reading a book and looking for all the world like a man taking his ease after the day's work.

I whistled to him, to give him time to see me and realize who I was.

"Well, what's the news?" he asked.

"I've been worrying about you."

"That was nice of you."

"I realized after you left on Monday that I hadn't really the faintest idea what you were up to. I tried to find out but somehow the point got lost. I've been worrying."

Not so nice of him, I thought. I leaned on the wooden fence and looked across the marshes.

"You mean, I might be interfering?"

"Your father lives in constant dread that the man next door will return our lawn mower"

GREGORY D'ALESSIO

eral people could be heard at the same time?"

"For that you would do better with the omnidirectional type," he said, with the technician's happy disregard for the lay mind's limitations. "A good one costs twenty guineas, but a very fine job. This one, for instance—"

"Ah, yes," I said, "and is there any limit to the length of the connection between it and the set?"

"My word, yes! Not more than five yards." He was horrified. So was I; my heart fell with a sickening disappointment; then he added: "Unless, of course, you use a screened cable, and a booster amplifier."

"Oh," I said, brightening, "I see."

"This sort of thing—" He pulled out a small, silvery drum, its outside being made of firmly woven metal thread. It looked very professional.

"With that," I asked, "I wouldn't have to worry about the distance between microphone and set?"

"No worry at all. It's expensive, of course—one and six a yard. But with this booster"—he held up a small box—"you'd be safe over any distance—fifty, sixty yards—any distance you liked."

I swallowed, and said sheepishly:

"Er—five hundred?"

He looked startled. He was thinking: What a silly girl! Why doesn't she move the radio nearer the microphone? But

was a lot of money, but it was the best material I could get and if it did what I needed it to do, it would not be too much.

I hoped from the bottom of my heart the Peacock would be back soon. I could do without the Commodore very well, but I doubted if I could manage without Charlie. This sort of thing was just up his street.

Next I went to Piccadilly underground station to retrieve Jonathan's attaché case. It was an anxious moment, although needlessly so, while the clerk took away the ticket to find the matching counterfoil among the racks of bags and suitcases. But it was such vital evidence, indeed the only tangible, provable evidence, so much an Exhibit A if ever there was one, that if anything had happened to it . . .

I paid the small sum owing on the deposit charge, carried the oil- and dirt-smear case to the car and sitting safely inside, pulled back the button on the single spring clasp and lifted the lid an inch or so.

White satin glimmered. A dark, irregular smear stained a four-inch patch in the upper folds, and Charlotte's perfume sweetened the air with heavy fragrance. I closed it, pressed down the catch, and lifting the back seat, made room for it among the spare inner tubes and so on; it looked quite at home there,

A new high in styling...

INTRODUCING FORTUNE'S
"ROCKIT"
 SERIES

**FEATURING ROCKER BOTTOM SOLES FOR A
 NEW SENSATION IN WALKING COMFORT**

● For a new high in styling... a new and entirely different sensation in walking comfort—step into a pair of Fortune "Rockits." Introduced by Fortune this season, handsome, moderately-priced "Rockits" are designed to send you right to the head of the style class. Yet, because of Fortune's

new, authentic rocker bottom soles, you'll rock along in your "Rockits"...fast, free and easy—as smooth as zooming through space. And because of Fortune's special rugged construction and rich, stouthearted leathers, you'll be rolling along in your "Rockits" *long after* less sturdy shoes have walked their last mile. So for a new high in styling *plus* sure-footed, long-wearing service, step into a pair of moderately-priced "Rockits." But to make sure they're *really* "Rockits," look for the authentic Fortune trade-mark. Try a pair at your Fortune dealer's *today*.

- LEFT: Style 6090. U-throat bal with heavy trim moccasin seam.
- ABOVE: Style 6176. Ghillie tie with rawhide lace, new beveled heel.
- BELOW: Style 6174. One-piece vamp, zigzag stitching, brass eyelets.

So Round, So Firm, So Fully Packed—So Free and Easy on the L

know you're trying to help, but what you do? It's an inescapably fixed thing. You haven't been trying to help that wine-shop chap? Upset his nerves of whom he saw? That's frightfully serious, getting at a witness. If he's the police—"

"I never even occurred to me. Besides, there are other things apart from the wine merchant—other evidence. No, I spent a certain amount of time with my enemy."

"I looked at me anxiously. The police?"

"I nodded. I said I had even had lunch with one of the men in charge of the case."

"NATHAN was impressed and hoped for heaven I had been careful. 'Tell me they know about Charlotte and that's the crux of it. Do they?' 'I don't think so.' 'Thank God!'"

"Not yet, anyway."

"They don't so far, they never will," I said with conviction. "She's safe."

"You're very sure, Jonathan. No one about you two?"

"I shook his head. 'We have known no other such a short time—only six weeks up to the time of the—accident.'

"Crawford Street? But that is in the West End, isn't it?"

"It's off Baker Street, which is not strictly speaking the West End. No. Honestly, you're expecting more than the worst; it's the impossible. We arrived separately, we left separately. It was an ideal place, and it was the only place we ever met in public."

"If it was in my mind to tell him before I left him that evening all that I had found out, the whole story of Charlotte and Freddy Williams, I discovered I could not do it. Every waking thought he had was about her, and if he dreamed, she filled his sleeping hours; he was like a sick man too ill to stand an operation, and I—well, I was the bad surgeon with neither courage to take the risk nor confidence in my own skill."

"I knew that the Daily Telegraph tomorrow morning would force me, however frightened for myself, to tell him the truth, literally in order to save his life."

"We said good night at the cottage wall and I went on alone to the house, depressed and disheartened."

"Lying in bed in the darkness, with the window open, I saw the masthead light of the Peacock like a low, yellow star at the mouth of the river; she would lie inside the bar for the night and reach her

"Charlotte needs me," he said. "I don't think anything has gone seriously wrong though."

"He showed me the message, and I read it again:

John. Please meet me at the usual place at four on Tuesday. I need you.

"If it was trouble she would want to see me sooner than that, wouldn't she?"

"I should think so, yes. But if it's not urgent, ought you to run the risk of going at all? You're so safe here."

"I must."

"He had satisfied himself, of course, that her need was a personal one, a beloved's need to see her lover, and his emotion was a fine mixture of pleased ego and triumphant male. Risk? Any risk was worth taking while he felt like this."

"Oh, God, I thought, how can I even begin?"

"Do you think," I began, however, "that because you don't figure on front pages any more the police have forgotten you? It will be weeks and weeks before—"

"You forget I've made one trip to London and back."

"That was at night, and the fact remains that you were incredibly lucky."

"I shall be lucky again. I realize I was a bit mad to have gone as I did, on the chance that I might be able to see her. But my chief mistake was in using your car—I might have involved you badly if they'd caught me in it. I would have said I had stolen it, but even so—" He shook his head. "This time I shall go by train, or bus."

"Either way would be equally sensible, or stupid. That's exactly the sort of thing they are waiting for you to do."

"He shook his head."

"Thanks to you I'm John Hobhouse, and can prove it."

"For how long?"

"Long enough."

"Oh, dear!" I said. "You really are an obstinate idiot. You believe just what you want to believe, don't you?"

"Like the rest of my species. Look at you. You believe that I shall get caught because you've made up your mind that I'm being a fool about Charlotte. It's as clear as daylight."

"I'm extremely glad of that. It makes things easier for me to tell you something which ought to convince you of it. I should have told you days ago, but I hadn't the courage and I wasn't absolutely certain. Let's sit down somewhere."

I SET off for the dike wall, where the long fine grass was soft below the crest, and sheltered from the land breeze. He followed. We sat on the slope of the bank, and I started at once by saying, "How much did she tell you about Freddy Williams?"

"That he was an old friend who would help her to the extent of giving her an alibi for the short time she was home that night—she had been to a theater with him."

"I thought she had to be so careful about a jealous husband? The theater?"

"Williams was a friend of Inwood, a friend of the family. If you're trying to make me jealous—" He laughed easily. "You're a funny kid," he added. "You're so very young in some ways."

"I dug my nails into my palms in an effort to control my fury. I counted ten, and then another ten; anything I told him while I was angry would mean less than nothing in making him believe."

"Williams," I said at length, "may have been her husband's friend, but she was—and is—having an affair with him."

"Nonsense," he remarked, without heat.

"Williams," I went on, "was not providing her with an alibi. It was the other way about. She was providing him with one, and with more than that. She provided him with someone to fake a burglary to account for the killing and in doing so did even better; she provided a

"You haven't quite hit it yet. Take the rest of the day off; go home and sleep it off, and sock out another layout in the morning"

JOHN RUGE

"I didn't meet in places where we would be by people who knew either of us." "See. And you did not meet often?" "Early every day," he said nostalgically. "She was wonderful, a busy person that."

"Did she telephone you to make dates?" "Usually. In fact, I think always. She was ringing me about ten, and let me know if she could manage it."

"Someone may have heard her telephoning," I suggested. "One of her friends."

"Maybe. But so far as I remember I never used my name, and it was a very short conversation, such as 'May be a bit late today'—or, 'I'm can't make it at all.'"

"That sounds as if you had a meeting place."

"I had. A café cake-shop place."

"That's just what I mean," I said. "Anybody who knew you may have seen you without your knowing, or the one who may suddenly remember."

"Not in a small, out-of-the-way place that one."

"Back in the middle of her shopping I expect, where all her women friends spend their mornings."

"Her friends shop in Crawford Street, the unfashionable end of it at that, and I was very surprised."

harborage about eleven in the morning; I fell asleep comforted in the knowledge that Charlie was home and would be able to help me. He would understand. I might even be able to talk to him about Jonathan and perhaps straighten out some of the conflicting desires and motives which seemed to be making me more and more woolly-minded at a time when I wanted all my wits about me."

"But before I could see Charlie and indulge myself with the luxury of healing confession, I had the Daily Telegraph to look forward to."

"I contrived to meet Sam Page again on his way to the cottage, and was able to see our Telegraph, identify the message before Jonathan saw it, and thus be with him within a few moments of his having read it in his copy."

"He was standing at the door with the paper clutched in his hand, an expression of anxious determination creasing his forehead."

"Good morning," I said. "I came to tell you that the Peacock is nearly home and—whatever's the matter?"

"Nothing, nothing—"

"I opened the Daily Express, and pretended to search it."

"You frightened me," I said. "I thought it might be something in the paper—or is it only in the Telegraph?"

Young men today have one of the finest opportunities to learn to fly ever offered in peacetime.

The Army Air Forces' Aviation Cadet program offers training which cannot be duplicated anywhere at any price.

Jet and rocket propelled fighters, larger, farther-reaching bombers, improved safety devices, better navigational aids, trail-blazing research and testing—many of tomorrow's innovations are begun by the Air Forces. And men who fly with the AAF are in close touch with such new developments.

Aviation Cadet pilot training is now open to qualified young men from civilian life, as well as to enlisted men in the Army. Applicants must be 18 to 26½ years old, single, and have had at least two years of college education, or the equivalent, at an accredited institution. Men chosen for training under the program will follow in the footsteps of the famous airmen who, in wartime, built and manned the world's mightiest air arm.

Upon successful completion of the course, graduates will be commissioned Second Lieutenants, Army of the United States, and

assigned to flying duty with the Army Forces.

Reactivation of Aviation Cadet training is typical of the Army Air Forces' continuing effort to provide outstanding young men with an opportunity to win advancement.

There's a real future for you with the Army Air Forces. Make your plans today! Ask for information on pilot training, and other information from the Air Forces, at any AAF base or at the nearest U. S. Army Recruiting Station.

U. S. ARMY RECRUITING SERVICE

Quixote, who is quite happily per-
ing the part of murderer-in-chief
place. Charlotte did not kill her
nd. Freddy Williams did it, in a
n rage, I think, without premedita-
in a quarrel probably about her.
ly Williams killed Joseph Inwood
he came to you pretending she had
it, and persuaded you to help her."
er a startled movement, Jonathan
ring at me as if either he or I had
suddenly mad.

I rushed on in a kind of vacuum of
ctual assertion and insistence that
s was true and he *must* believe it.
ad been with him the night you saw
Where else at that hour? You're so
about her you can't see how obvi-
l this really is. Her butler, Groves,
to blackmail her and she went to
ms about it—and Groves had to be
d of. Yes, he was killed too—
n proof would be difficult. They
murderers, Jonathan. Murderers!
alked with Williams. He's an in-
le, ruthless, brutal creature with a
idous conceit in his own infallibil-
rticularly with women. Charlotte
ee straight when she's with him, or
way from him. He obviously wants
oney. For the first time in his life
s a chance of a huge fortune com-

"I hate you for a blind fool!" I said.

"Don't you see how silly your story
is?" he asked with infuriating patience.
"You weren't there when Charlotte came
to my flat, with his blood on her dress, in
a state of abject fear and desperation.
Even if love blinds me as you suggest,
and God knows I would like to think she
hadn't killed him, I know a real emo-
tion and a true situation when I see it."

"Do you, *do you?*" I said. "Isn't it
that you won't admit the possibility that
someone else killed him because that
would mean she loves that someone to
such an extent that she would do any-
thing to save him. Fooling you, for in-
stance, into believing *she* had done it.
You would rather she was a murderess
than unfaithful to you."

"Charlotte is utterly incapable of the
guile, the wickedness necessary to such a
deception," he said with magnificent sim-
plicity. "Incapable technically, intellec-
tually and morally."

"Oh, my God," I whispered. "She hid
Freddy Williams from you—and you
from him. Was it her husband she was
so afraid of when she took such care to
meet you only in secret? I don't think so.
She's afraid, terribly afraid, of Freddy
Williams because she can't do without
him."

again. You *are* safe here, as safe as you
can be. You're already establishing your-
self as John Hobhouse in a small group
of people. That's a beginning, isn't it?"

"Of course. But—"

"Another thing. Suppose they do catch
you during one of these sorties? You
realize exactly what it will mean? They
are absolutely convinced you're the mur-
derer."

"They won't catch me. Anyway, I'll
have a story. Shock, amnesia—I have
until Tuesday to work out the details."

"Where did you get money, identifica-
tion, clothes when you were in a state of
amnesia—producing shock? Oh, Jona-
than, I'm not a policeman, but it must be
very easy to upset any story which isn't
true, once you can subject it to a few
simple, common-sense questions."

"I have until Tuesday," he said again.
"I'll leave Hobhouse and the money with
Charlie and stick to the simplest version
I can devise. The lost memory follow-
ing shock is obviously the best one."

"I agree there," I said. "You *might* get
away with it. *Always* providing the Char-
lotte connection does not come out."

He shook his head. He was unshaken
in that belief also.

"My luck will hold," he was saying.
"And of course I'll stay if you, and
Charlie, will let me. But I will be leaving
sooner or later. I—we—will be going
abroad, you see." His tone betrayed his
excitement. "That may be what she wants
to see me about. She may have a plan,
even a date—she'll need to get me a pass-
port. There are all sorts of details to talk
out."

I searched his face for some sign that
a seed of doubt had fallen in the ob-
stinate ground of his martyr's mind and
that between now and Tuesday it would
burgeon and take root. If only he would
want to take up the argument again with
me in Charlotte's defense. . . .

He went back to the cottage, and I
trailed after him. He was not actively
disliking me yet, but I knew he did not
care to talk to me.

I WALKED to the beach with a sick
and heavy heart. Presently I took off
my clothes, swam a little, and then lay in
the sun with nothing on, so that the heat
burned into me.

A mutter of sound in the morning air
became a gradually more certain thud-
thud of the Peacock's auxiliary engine,
until I could see her masts above the far
bank where she approached the last curve
of the backwater. I dressed and went
back to the house, wanting a little more
time alone before I had to face other
people, in particular the Commodore,
who might be in one of his moods after a
fruitless voyage.

We had lunch together, however, in the
Long Room, a cheerful meal at which he
told me all about his adventures with the
Rembrandt among the experts. The dis-
covery that Aunt Harvey Gill's golden
swan was a goose had delighted him.

He finished the story by saying, "Well,
that's that. I've put the damn' thing in
the cupboard under the stairs at the mo-
ment, but it's most important she should
have it back. I suppose you wouldn't care
to hang it up in her picture gallery again
one dark night."

"No, I wouldn't," I said.

"I want to know it's in her possession
again, and I want forty-eight hours no-
tice of when that is."

I asked him why, but he refused to say,
putting on his mulish expression.

"I feel I have had enough of it," I
said, and told him how K. Zimmer had
tried to lure me into another business
talk on the subject.

"Surely you don't propose we should
keep it indefinitely, do you?" he asked.
"A dud Rembrandt—in *this* house? No,
its proper place is with that bloody
woman, and I shall look to you to see she
gets it. I don't give a damn how you do
it, except I dare say you'll see the sense of

MY

ized that Jonathan was getting to
must believe me!" I cried desper-
know I don't," he said. "How
I suppose you've a motive for
go do this, but it's beyond me at
ment. If I were conceited enough
in you—you had fallen for me and
ing to keep me here, for yourself,
g make a little sense. But although
een involved together, consider-
involved, you scarcely know me well
to feel like that about me."

He smiled at me with dislike and said
that on the contrary he knew all about
Freddy Williams, who was no more than
a good friend of hers. She had made no
bones about it and often talked about
him. I held my head and struggled for
some revelation of mind or instinct which
would show me how to break through the
wall of his impregnable faith.

"I think I had better be moving on,"
he added. "Things are a bit difficult,
aren't they?"

"But you're safe here!"

"Under false pretenses. I've given you
a right to criticize, or rather to question
my good sense—where she is concerned,
and I shouldn't have done that. It's not
your fault. I—I don't want our—" He
searched for a word and could not find
it. He knew that in some ways it was
more than friendship, but in others less.

I was beaten and knew it. Perhaps I
should have presented him with a slower,
more circumstantial picture of my dis-
coveries, instead of exploding the thing
at him like that in the panic of the mo-
ment. All I had done was to outrage his
lover's feelings. I faced him contritely.

"I'm sorry. But please stay here. I
won't start this sort of conversation

ANOTHER
BOSTITCH
EXAMPLE

A BIG PROFIT
IS A LITTLE SAVING
multiplied
a hundred thousand times

A mid-western specialty
manufacturer reports that
using *Bostitch preformed*
staples thru an aluminum
plate has eliminated the
cost of a nut plate, tacks,
drilling holes, and nailing
on one of his products —
a rubbing block — for a
total saving of 75% . . . On a paint stip-
pler—a heavy fabric job—he does the
fastening 12 times faster than before . . .
He chose Bostitching also for the assem-
bly of a toy garage; because, as he says,
"It is the best, quickest and cheapest"
of the numerous methods he had con-
sidered.

Many firms, finding such Bostitch profits
in one department, are surveying all their
fastening operations to find other places
where Bostitching may help.

Thousands of combinations of all kinds of
materials, metal, cloth, paper, wood,
leather, plastics . . . are fastened better
and faster by Bostitch's 800 models of
stapling, tacking, and wire stitching
machines. *Maybe you, too, can profit* by
applying this method to your fastening
work.

250 field men in 91 key cities place at
your service the benefits of 50 years'
Bostitch research and experience.

Write for data on representative models
of the world's most complete line of wire
fastening equipment.

ild I, though?"

ade a movement of his vast shoul-eaning I knew my own business

I want to know," I said, "is if he any signs of doubt about going, or position to discuss the thing. As I e done what I could to shake his Charlotte Inwood, and with truth me, I may have been more suc-than I think."

"I'll keep an eye open. If he goes to her, he goes. Is that it?"

"Yes, Charlie. It's important, too, that I should know the time he leaves and how he proposes to travel. If he's caught en route, there must be no way they can find out we've sheltered him. The Com-modore, of course, doesn't know about it, and wouldn't like it."

"Neither would the police, nor any of us after they got through with us," he remarked, and left me in the abrupt way he has when he considers a subject has been exhausted, which is often sooner than the other person likes to admit.

I continued to keep out of people's way for the rest of the day, but I could find no inspiration for improving the Jonathan situation. I thought feebly of writing him a letter, and even began one, but the words looked as meaningless as they had earlier sounded.

The alternative to convincing him of the truth kept me awake until almost dawn, and when I did sleep it was largely due to telling myself a fairy story in which a miracle occurred wherein he suddenly saw the light and came to me to hear the truth again, this time with grateful comprehension and a desire never to leave me as long as he lived.

But there was no sign of this miracle all next day, Sunday, and that night also I had very little sleep, but not on account of Jonathan's pigheaded chivalry.

This time it was the Commodore.

At about three o'clock, when sleep was deepest and the night at its quietest, three sharp, shattering explosions startled me into simultaneous consciousness and movement, so that I found myself standing in the middle of my room in alarmed and complete wakefulness, realizing that Father had let off his .45 old-fashioned, long-barreled, silver-plated revolver at least three times in one rapid burst of fire.

I flung myself downstairs to the Long Room.

There was a half moon low in the southern sky which shone through win-dows, across halls and rooms and filled the house with more light than if it had been fuller but higher. The smoke of the Commodore's fusillade hung blue and

the new COOPER Safety-Grip

You can best compare the structural strength of the great new Cooper Safety-Grip with a modern steel bridge. For here is a tire that exceeds all conventional standards of the prewar past in ability to stand terrific amounts of stress and strain.

Made with 5 plies of Cooper Armored Rayon Cord . . . the body of this new tire is actually stronger than structural steel—springy and tough, safe as safe can be. And the steel-strong safety of new Cooper Safety-Grips can be yours for less than you think. First step is to see your Cooper dealer for complete details about his liberal change-over plan.

**ONLY THE COOPER SAFETY-GRIP
GIVES YOU ALL THESE FEATURES**

- ★ 5-Ply Construction (Instead of 4) ★ Armored Rayon Cord Body ★ Safety-Grip Traction ★ More Natural Rubber ★ Wider, Flatter Mileage Tread
- ★ 24-Month Road Hazard Guarantee.

acrid in the Long Room. I shouted something from the doorway before I went in, for I wanted to be sure he recognized me.

"Eve!" came his brisk, "action-stations" voice from the bunk. "Take this and get after him! Middle window! Missed the bastard!"

The revolver came slithering and glittering along the polished strip of floor between the two lines of Persian rugs and stopped at my feet. I picked it up, a hateful, heavy, unmanageable weapon in my hands, and asked, reasonably I thought, before going near the middle or any other of the open French windows, whom he had been shooting at.

"How in hell should I know?" he barked. "Don't stand there!"

THE household was all awake and vocal by now. I heard Mary crying out, asking what had happened, and the alarmed voices of the maids.

I went into the garden. The big lawn stretched smooth in the moonlight to the shadows of the cedar trees. The flagged path to right and left was empty.

There was dew on the flagstones, but the light was not good enough to see if there were footprints in it. There seemed to be none on the silvered lawn, where they would have shown. More to be able to tell Father I had investigated than because I was convinced as yet that he had really seen someone, I went along the path toward the small gate at the corner from which I would be able to see the courtyard and most of the stable buildings the other side of it. The gate was open, but then it as often was as not.

Nor was there any sign of him in or near the courtyard. I stood there in the shadow of the house, holding the gun in both hands because it weighed a ton, and listened. My heart sounded very loud. A wether's bell tinkled faintly across the marshes. I was enjoying my first moment's coherent thought since that sudden awakening. Having rid myself of the possibility that Jonathan might have been wandering in or about the house, I was reminding myself that in all these years of open doors and windows day and night, we have never had the slightest reason to doubt our freedom from burglars, sneak thieves, gypsies and the like, when suddenly I remembered K. Zimmer. I remembered, too, the incident of the other night, when that little man had tried to bully me. This might easily be the sequel. Hadn't I realized at the time it was unlikely he had been choked off for good? K. Zimmer had seemed to me to be unusually greedy and determined; those who usually dealt with him might be able to rely on the honor system among thieves, but we were outside the ring—strangers and amateurs.

Furthermore, I had refused his original terms and later threatened his messenger with the police. He would steal the picture from us without the smallest compunction.

The Commodore's target thus assumed a possible shape and reality.

Then I heard an unmistakable sound. It came from the road, "our" road which connects us to the main road, and as far as I could judge it was about a quarter of a mile away; the sound of a car engine starting up.

If K. Zimmer's friend had failed to find the parcel in the cupboard under the stairs, or the Commodore's gunplay had frightened him away before he could even begin to look for it, then it was a thousand pities!

I began to move at that moment, and to move fast, and did not pause except once briefly at the door of the Long Room to say, "I think it's K. Zimmer and I know what to do."

I did not wait for comment, which I am sure there was, but hurried to the cupboard. I knew the picture would still be there; not only was it the last place anyone would dream of looking for it, but I was as sure as I could be that the man

had got no farther into the house than a step or so inside the Long Room window; he would never have guessed someone was there, someone so lightly asleep and so heavily armed.

The picture was there all right. I dragged it out—a small, flattish, brown-paper parcel, and ran down the hall with it, snatched my leather jacket from its peg in the cloakroom and continued along the passage to the back door, out into the courtyard and across to the stables. There were lights all over the house by now and I could imagine a general convergence, led by Mary armed with a poker, toward the Long Room.

I flung the parcel, pistol and leather jacket into the Daimler and got behind the wheel. As usual she answered the first touch of the starter button, and I drove her out into the courtyard and through the archway as fast as she could pick up the throttle. I had a glimpse of Charlie in pajamas, shotgun in hand, hurrying along the path from Ship Cottage to join the party in the Long Room. He, too, sleeps lightly.

Our road was clear of mist except for patches now and again, and although I drove without lights I lost no time on

my man with fair confidence that it would not be long before his taillight came in sight. It was three fourteen by the dashboard clock, which meant that there was nearly an hour of darkness left. I wanted him to get as far away from Kessingland as possible before trouble started.

I was glad he had turned south, presumably for London, as though he had had enough of it for one night.

A mile from Saxmundham I came over a slight rise and saw a luminous patch and a flicker of red, which the next moment vanished, but it was enough. I could not be sure, of course, that it was the right car, but judging times and distance, I thought that more than probably it was. Apart from any of these calculations, it was not a likely hour to come on any traffic.

I slowed a little and gradually closed up to a two-hundred-yard gap between us, and kept it at that through the dark, twisting main street of Saxmundham and beyond into the open country again.

Presently the moon went, so that the only safe thing to do was to get quite close to him and let his headlights do for both of us. It was not a large car, and

wanted the showdown: a straight, piece of road with a deep ditch on sides, midway between Ipswich and Chester. Approaching it, I caught him again, and we passed through village in close procession. Two beyond it, with my straight str road imminent, I blazed on all the ler's illuminations, head, fog, and spotlights, so that his car was like a shop window at Christmas. He turned his head a moment to the reflected glare and reached the cord which dropped the blind on the back window. The movement was enough to show me his profile, at that I was right in my guess. His hand appeared out of the off-side window, signaling me to pass him.

But I refused the invitation, and a little he began to put on more than he had used so far; real thoughts, I could assume that he to be alone with them, that he easy in company tonight; but not sarily more than that. He was certain that he had got away from Mars without danger of pursuit.

As we turned into the straight, I my finger on the horn and held it. He drew in to his side to let me pass. There was not a lot of room for maneuver. His hand summoned me again. I moved the near-side door so that it shone at right angles and he gradually to draw level, keeping close to the turf at the road's edge. I could look sideways across the Daimler's front seat and the spotlight on me his face a few feet from me. I was beyond doubt the film gang had ridden with me from North Street to Chelsea. He turned, half by the light, and shouted something about pass and be damned to you. What did I think I was playing? I could not, of course, recognize him.

I began crowding him closer and to the verge. His mouth was open in surprise and alarm as he clung to the wheel, trying vainly to escape the shining spotlight and no doubt in the about the meaning of this deliberate tack on him.

HE COULD not resist the impulse. The brake suddenly when I swung so that my front fender was well of him. He lacked the courage, crash into me—which would be the sensible thing to do. As he went on, the inevitable happened. The steering was pulled out of exact balance so that he hit the turf with his front wheel, bounced onto it, lost control together for a moment and we off road completely; the tram bumped heavily on the ground before car came to a stop.

I braked and backed quickly and was abreast of him again with the light on him. He had had time to recognize the Daimler and had probably named me as well. In any case, he was weakly violent, "So it's you, you—" as if of it, and the gender of the obscenity feminine. "Bloody near kill me, you!"

He passed a bony hand over his perspiring face, gathering his strength for the shock of hitting the ditch. He the spot downward, so that its ear included the bright revolver, the eighth which I rested on the door and steadily trained on him. He paused, and continued to swear violently.

"Get out," I said, and had to repeat twice.

He got out and stood uncertainly blinking in the light.

"I've had enough of this game!" he said. "Murder's a law. You touch me and see if I hang, you—shooting at a block in a dark room, a bloke who only have a little talk."

"You're having a little talk now."

ALFRED

by FOSTER HUMFREVILLE

either account for I know every subtlety of curve and surface along that three-mile stretch, and indeed I doubted if K. Zimmer's emissary was going at half my speed.

It was particularly in the misty places that I realized how thin my nightdress was; the leather jacket would keep off some of the chill, but there was nothing to be done about the hardness of the Daimler's rubber-covered pedals on my bare feet.

I watched for car lights ahead and did not see any. Coming to the main road I slowed down, switched on the fog light which throws a low, broad beam, and saw what I had been hoping to find, the wheel marks of a car which very recently had passed from the smaller road to the larger; the white dust imprints of its tires caught and held by the mist-damp surface of the macadam could not have been clearer.

The tracks curved southward, toward London. I switched off the fog lamp, slipped on the leather jacket and at the same time rescued the revolver from the floor where it had landed and put it on the small shelf in the dashboard to the right of the wheel. Then I set off after

the driver was alone, unless he had a passenger who was sitting unnaturally close to one of the back-seat corners, the only parts of the car I could not see through the rear window.

We proceeded like this for some fifteen miles, and I had plenty of time to study the back-view silhouette of the driver's head and shoulders. Although the other night K. Zimmer's messenger most of the time had been behind me rather than I behind him, I thought the angle of the hat was the same, with its brim curling up at the left and back, and down at the right and front, where it almost touched the bridge of his narrow nose.

Just as I was beginning to speculate about relative armament and other aspects of the future, he spotted that there was a car behind him. I saw him move his head alertly to look in the driving mirror at the top of his windshield. I put on side lights immediately, hoping he would think they had been on all the time—for a car with no lights at all would arouse his suspicions, which I did not want to happen for a little while.

He increased speed, and I let him go ahead a bit. I knew exactly where I

rowing"—a traditional part of Alpine festivals, at which the Swiss welcome visitors from everywhere the world around.

There's High Fun in Switzerland

If you would treat your eyes to Alpine grandeur at its best—and give your heart a lift it hasn't known in years—you'll wing your way to the majestic peaks, the gem-like lakes of Switzerland this fall.

Wing your way—in the spacious, rest-cure comfort of a mighty TWA Starliner—at sun-racing speeds that put Geneva within a single day of routine America—in high contentment with the tasty foods, considered attentions, and world-wide airmanship that bless your journey through the blue. do you think you're off to in a stolen car?"

"Stolen? This crate? Hot?" He was indignant, not at doubt thrown on his virtue, but that he should be accused of negligence. "I'm not that dumb! You've got nothing on me." His words were braver than his voice or chin, which sagged and trembled.

"Oh, so you say it's your car," I said with scornful disbelief.

"I didn't say it was my car. I said it wasn't a hot one, that's all."

"Where's your gun? Let's have it."

He swore he hadn't got a gun, and I was inclined to believe him. Moreover, I made him turn around and prove it by taking the things out of his pockets and pulling off his jacket to show he did not sport a shoulder holster. He grumbled that he was always being misjudged, he could explain about tonight, it was just a misunderstanding. The window was open, and he didn't want to go ringing front doorbells, so he—

But I cut him short, telling him to get up on the front bumper of the Daimler.

"Front bumper?" He looked puzzled and mutinous.

"That's what I said. You can ride facing or back to the engine. Suit yourself. If the radiator's too hot to lean against, you can put your coat over it."

He wanted to know what the big idea was, but I did not see why I should tell him. I gave him five seconds to do as he was told, and jerked the pistol at him in a suggestive way.

"You don't have to die," I said as grimly as I knew how. "Not tonight."

He climbed onto the bumper and hung on to the radiator cap, over which he put his hat to protect his hands.

I DID not drive too fast for fear he might fall off; after half an hour we reached the bottom of the hill where the road turns at right angles to climb again into the city of Colchester. I stopped and ordered him to take to his feet. He could catch the five-fifteen milk train for Liverpool Street if he hurried. He wanted to know what about his friend's car, and I told him he could ring up a garage and have them tow it in for repairs—if he could find a garage open. Or maybe he could arrange it from London. I didn't care. He could continue to suit himself, but I hoped that by now he realized monkeying with me only ended in trouble, and perhaps he would on my behalf invite K. Zimmer to go to hell. He jammed his hat on his head, a hat no longer curly, no longer wicked, and stamped off up the hill. I felt he was sufficiently fed up and frightened at his bad luck where I was concerned to give up any thought of fighting back, for the moment anyway.

I watched him until he was sight, then turned the Daimler around and back fast to the ditched saloon glad it was not a stolen car. Pe was K. Zimmer's? That would be. But even if it were not, it would belong to one of his crowd and I was able to them.

I looked it over, a derelict in the dawn. In another hour or less the traffic would be on the road, the thirty police patrol on its regular beat between Colchester and Ipswich would pass this way. . . .

There was nothing in the car of interest, but I could remedy that.

I took the disputed Rembrandt from the Daimler and put it on in the back of the abandoned car.

Then I had a good look up at the road to make sure I was still took up a position with the Com revolver just behind the saloon, holding both hands for it, took careful

Through the back window I saw shots, which came out through the screen on each side of where the head would have been, and I fired into the nearside back fender center so that it ended up in the air burst from it with a sharp whistle. I thought investigation would be satisfied as to why the gone off the road.

Their next question, the reason such dramatic goings on, they were able to answer soon enough; they had to unwrap the parcel they took to the back.

After that, they could consult Zimmer, whom they doubtless knew by repute. He might be able to tell how The Old Woman in a Shawl was to be there, but again he might be unlikely he would have much to say to his curly-hatted friend, whose him would be too ridiculous for him. In fact, K. Zimmer might not have him for a friend any more.

However, it was other people's business now, and no longer ours, the mess.

I drove home in the gathering Monday morning, sneezing again because my feet were cold, but without alarm, if I saw any footprints in the soft turf roadside. It was a pity in some the scene was too far south Billy Bull's division; however, it only right that he should not be harassed by having the Rembrandt to light in his hunting ground.

But prints of a bare foot, a foot near a bullet-riddled car, found a gang fight over a stolen master key. He would have liked that sinister mysterious touch.

(To be concluded next week)

“We always expect unexpected guests”

You can expect good friends to come your way often when you make Schlitz a customary part of your welcome. Like your own cordial handclasp and smile of greeting, this fine beer helps you say sincerely, “We’re glad you came.” In its delightful aroma, there’s the fragrance of hospitality itself . . . the flavor of friendship in each sparkling glass. The very name on the label tells your guests that for them, you bring out the best.

DON'T LET THE RIGHT HAND KNOW

BY LESLIE GORDON BARNARD

"My gawsh!" Will Gregg, the station agent, whistled. "Don't tell me that's Joe's girl." "Wife," Father said and wondered how Mother would take it.

IN ALL his life Father had never felt like this. Behind him sat Joe and Mother. Beside him sat Sally. His heart thumped as he turned the car down the station road, partly because he was desperately afraid Sally might never come back again, and partly because he was going to give her something. He was going to give her two hundred dollars—and Mother knew nothing about it, or so he hoped. Saturday, while Mother was busy marketing, he had drawn it—feeling furtive and guilty—from their joint account. Of course he would tell her later. Let that bad moment take care of itself.

He'd done what he could for Sally; shown her the views from the orchard, taken her out to the barn, explained to her about blights and sprays and yields and co-operatives. Yet all the time there had been a terrible tenseness, because of Mother. . . .

When Joe's wire had come, saying, "Can you meet us Friday afternoon train?" Mother had glanced up sharply and said, "Us?" and Father had edged her past the rest of the message as if she were a shying horse. Saying nothing, she had gone out into the kitchen and started a tremendous baking, allowing herself only a little slamming of pots and pans.

"You'll come to meet them?" Father asked hopefully.

"Why should I?" Mother said, so Father went alone.

Will Gregg, the station agent, asked him. "Not feeling so good?"

"Could be," Father said dryly. Then the train came in and there was Joe helping the girl off.

A row of youths straddling a lumber pile gave with a wolf howl.

"My gawsh!" Will Gregg whistled. "Don't tell me that's Joe's girl."

"Wife," Father said.

"Glory, glory!" Will said, and Father knew he was wondering how Mother would take this.

Father knew also that he should be stiff with Joe for pulling this fast one

in the middle of finishing his education at the expense of a grateful country, but instead he shook Joe's hand strongly. "Wish you happiness, my boy," he said, and Joe said apologetically, "We—I figured it'd save a lot of fuss and argument so we—we just up and did it."

"So I see," Father said.

What Father saw was a girl in a green suit, a girl with shining hair and half-frightened eyes, trying to put on a good show, and not doing too well.

"This is Sally," Joe said.

"Hello, Sally," Father smiled.

The look fled from Sally's eyes; she flung her arms around Father and kissed him, and Father forgot everything he should have remembered—especially Mother.

Stiff as a ramrod, Mother met them at the door, in her best black dress. She gave Joe a peck on one cheek, which both men knew was just her undemonstrative way. "This is my mother, Sally," Joe said.

Briefly Mother extended a hand. "I'll show you the room," she said and Father's throat tightened. He knew she didn't mean it to sound as if she were renting them a room for the week end.

WHEN they came down Sally looked subdued but hopeful. Her lips and fingernails were very red, and she was, Father had to admit, highly attractive in lounging pajamas. Mother, never strong on color or show, took a look and said she guessed she'd better start getting supper.

"Could I help?" Sally offered.

Slowly Mother turned. "Ever peel potatoes?"

"Why, yes—I—"

"There's potatoes to peel," Mother said. And Father thought: Come, this is better, until presently he heard Mother saying, "If you'd ever raised potatoes on soil like ours you wouldn't peel 'em that way!" Joe, shrugging, went out and chain-smoked on the doorstep. He should have known, Fa-

ther thought, that Mother just couldn't help being thrifty. Every cent they could scrape had gone into Joe's education and now went into their joint account at the bank. You can't shake a habit like that very easily.

"Your mother's a fine woman," Father said.

"Sure," Joe nodded.

It was like that. Tense. Some parts of the week end better; some not so good. . . .

Now, driving Joe and Sally to the train, Father felt terrible. It had never occurred to him that he would not have this time alone with them until he'd backed the car out. And there, waiting in her best dress and the hat she'd fixed over, was Mother.

"Y-you coming?" he stammered.

"Why not?" Mother asked.

On the station platform Father stood first on one foot and then the other, uneasily conscious of the envelope in his pocket with its ten crisp twenty-dollar bills. Finally, edging Joe aside, he turned his back carefully to Mother, and said, "I want you to give this to Sally after you get on the train, Joe. It's a—a wedding present. From both of us," which was true enough, coming as it did from the joint account, his and Mother's.

Joe nodded, thanked him, and then they turned. Right off Father saw the mistake he had made, leaving those two women together. Something awful had evidently happened because Sally was trying to brush away tears and Mother looked like a dragon that has just effectively flicked its tail. Then with a rush the train steamed in, halted, panting. The conductor shouted, "All aboard!"—and Joe and Sally were gone. In Father's heart was a sick fear that Joe might never again bring Sally back here.

Stiff and straight, Mother stood waiting for him to get into the car. Silently they drove off. He would have to confess now, but it didn't seem to matter. The breach between Sally and Joe and Mother was now between

himself and Mother—the first serious breach in their long life together. He knew they must have it out now.

Father came right to the point. "What was Sally crying about?" he asked.

Mother's lips tightened. "I guess that was my doing. Maybe you would approve."

"Maybe not," Father said, the hurt in him growing.

BLUSHING, Mother said, words like hard pebbles, as they always were when she wished to convey any strong feeling. "It's something I wanted to talk to you about, once it got away. While you were up getting that feed Saturday I dropped into the bank. There's not as much in our count as there should be. Some's been taken out."

Father braced himself. "I mean tell you soon's they'd gone. I mean, well, that Sally should have a wedding present—from us. So I drew it while you were at the market. Two hundred, it was. I slipped it to Joe to give Sally on the train."

Mother looked as if a bolt struck her. "You did what?" she demanded.

So Father repeated it. He said, "There it is, and I can't truthfully say I'm sorry. They'll need all they can get hold of."

A queer look came into Mother's face.

"Well," she said, "they won't wait for a while. Not with four hundred dollars."

Father's mouth opened. "Four hundred—"

"Your two and my two," Mother said with grim relish. "What do you suppose I was in the bank for? What do you suppose I was just trying to tell you? The child seemed—quite touched when I gave it to her."

Father just sat there staring at the wonderful woman he had married. The silent kind. Undemonstrative. That was Mother.

THE FARMER SEEKS A WIFE

Continued from page 12

politely till you finished talking. He would have gone and done the job done it well." He roared. "A fine thing! Well, I'm just plain dumb." He was able to find for us two men who could help out. They were Mr. LaBombard, a French Canadian with fourteen children, and Mr. Suds, a truculent individual who swore and continuously, and drank an invariable amount of beer of his own picture. I was forbidden to hang near Mr. Smith. Mr. Smith had a Model T and furnished transportation for Mr. LaBombard. He never admitted to himself how much time Henry spent with Anne, but got into the habit of taking "a little" up to the main road in the early days. Henry usually strolled back and forth. He didn't seem particularly when he was with Anne. When I fished late at the dock, and out at dusk Anne and Henry would appear in a canoe, lazing along. When Anne was around, Anne's voice was always a couple of tones higher-pitched than the rest of the time, and she had a lot.

That day when the letter came and he made his scene in the kitchen, he was ready for the battle because he had Henry very much. And she knew that no matter how nice he was, he would automatically score three against him with Father. The next day, faced with the necessity of doing everything before Mr. Coolidge arrived, Father went forth to push his way along. Before noon Mr. Smith would be a so-and-so if any city social browbeat me." And Mr. LaBombard said, "I'll tink I'll not walking with you." They drove away together. The second blow came that night, and its effects weren't felt until the morning. Henry sought Father out in the library. I was reading a Ralph Barbour book in a high-backed chair and either they didn't see me or I was paying no attention. He said, "Mr. Forman, I want to see Anne."

There was no explosion because Father was absolutely sure of his ground. He said, "I like you a lot. But I don't understand that Anne means a lot to me. She's used to a different kind of the one you could give her. I'm used to expensive things. It won't work out and so I can't give my son. Perhaps to make things easier for everybody, it would be better if you didn't come around any more."

Where I sat I could see the current in the library door twitch.

He didn't say anything. There was a long silence. I could tell Father was making a genuine effort to say what he thought must be said, as merciful as he could. Lately he had begun to admire Henry, which was a great change in the light of his feeling about him. But because he loved Anne, he was mostly trying to do the best thing for her.

Henry didn't say anything. Faced with some more along the same line, he stopped and again waited for me to say something.

He said, "Good night." He went to the door with him. When he came back down the hall he was alone. Her head was up and her eyes were dimming. Father said, "Hello, Anne, I didn't know you were around." He rushed past him and up the stairs. I could hear her sobbing. At the top of the stairs he stood long enough to say in a tense voice, "You're—you're nothing but a Khan."

"Who, me?" Father looked around to see if there were somebody else in the hall she could have been talking to. "Now what have I done?"

He headed for Mother at once as was his custom when he was in trouble, or when the world's people were not acting reasonably.

When I reached the kitchen Mother was saying, "But we ought to judge the young man as an individual, Farnsworth, not by what he does."

And Father roared, "If he weren't a peasant, yes."

"I keep telling you farmers are not as poor as you think they are."

"I can well imagine. I suppose they summer at Newport, and winter at Palm Beach. They—" He paused when he saw the look on Mother's face, and bowed his head. "Levia, my little family has not always scorned my advice. But I am resigned to being hated for Anne's sake. I will try not to be bitter."

Mother sighed. "I suppose it has never occurred to you that tomorrow morning

you won't have anyone working for you at all."

Father snapped erect. "You don't mean Henry will stay away?"

Mother just shrugged. Father lifted his eyes to high heaven and bellowed, "Why can't anyone around here act like a reasonable human being?"

The next morning Father pattered around the yard pretending that he wasn't looking up the road. By 8:05 his face showed his feelings in spite of his efforts to hide them. By 8:10 he knew the worst, and made no pretense of hiding anything. Automatically he started toward the kitchen and Mother, then thought better of it and went out to the car. He asked me if I wanted to ride.

We drove over to the Zebulon Warner farm, where we found Henry riding a mowing machine in the middle of a field of tufted timothy.

Father and I got out, climbed the fence and walked across the newly cut grass. When we reached the uncut part of the field we waited until Henry came around on his next trip. He stopped the team of matched blacks and sat looking at us, saying nothing.

Father said with extreme heartiness, "Well, good morning, Henry. How are you feeling?"

Henry said, "Good."

"I was afraid when you didn't appear this morning that you might be ill." He paused. Then he said, "I see you are not ill."

"No," said Henry.

"I was wondering why you didn't come to work. I'm in a very bad position; we've got to have these things completed before August 3d when Mr. Coolidge comes." Henry said nothing. After a moment Father continued, "What was your reason, Henry?"

"You told me I had better not come around any more."

Father laughed. "Why, I thought you understood I meant only in the evenings to see Anne." Father went on to explain more fully. Then he told a couple of good stories. "Well, I am glad that this misunderstanding is all cleared up. Will you be at work this afternoon or will it be tomorrow morning?"

Henry said mildly, "I am good enough to work there, but not good enough to come and see Anne?"

Father bellowed, "I never—" When he was this far through the sentence he must have realized that bellowing was the worst possible strategy. So with each word the volume of sound diminished until when he had finished he was back to his ordinary voice again. "—said anything like that, my boy. I had hoped last night I had made plain how things stood in the matter of my daughter. I think you are a fine young man personally. I just do not want Anne to live in poverty."

"I'm not poor."

Father smiled knowingly. "Of course not. Poverty is relative." Then he added, "You will come back tomorrow morning, won't you?"

"Yes," said Henry. Then after a second's hesitation he added, "But I should stay here because we're behind with the haying. If we get in a jam later, will you help us out?"

"But of course, my boy. Naturally."

BEFORE we left, Henry had agreed to go over that evening and talk to Suds Smith and Romeo LaBombard about coming back to work.

But I couldn't quite understand Henry's giving in when he had Father at his mercy. It didn't make sense.

At home, however, Father's troubles were still manifold. For one thing this was one of the days when Gifford and Davis did not appear. These two men were the plumbers and they would show up regularly for a couple of days, get everything torn up, and then not appear for several days afterward. Father held a shouted conversation with them over the phone during which he elicited promises from them which I was pretty sure they couldn't keep.

Also Father had his troubles with Anne. She would not look directly at him, she held her chin in the air, and her eyes were red most of the time.

The third afternoon the windows were open and I could smell ginger cookies clear down at the dock. When I got into the kitchen Mother and Anne were talking and Anne was so upset that for once she didn't demand that I be sent from the room. She was saying, "—told him I'd be willing to marry him in spite of Father but he wouldn't agree to that. He said he could manage Father all right if he had a little time. As if anybody could ever manage Father. Henry makes me furious. Not wanting to go ahead, being so timid, wanting to wait until he can convince Father and keep relations pleasant all round. I'll be an old, old lady with a lined face and gray hair, maybe even as

Mr. Smith and Mr. LaBombard
Henry all through, Gifford and Davis
the septic tank for the big house late

the next afternoon. They promised to be
back bright and early the following morn-
ing if it didn't rain.

It rained. It began in the early evening
and rained hard all night. I awoke once
and heard the sound of the waves on the
lake. I could hear the rain pelting against
the window and the wind sighing in the
pine trees east of the house. The air was
full of sound but it was sound that made
you feel dry and secure where you were,
and lulled you back to sleep.

It was still raining at breakfast time
the next morning and it poured steadily
all day. Gifford and Davis did not come.

IN THE afternoon Father put the side
curtains on the car and started for
town to explain to Gifford and Davis
about Mr. Coolidge and the necessity of
having everything done before August
3d. I went with him.

The loose clay on top of the road had
soaked up the rain and become as slip-
pery as grease. We had gone only a little
distance when the car slipped sideways
down into the ditch. Father tried every-
thing to get it out. The clay caked on his
shoes until they were twice their ordinary
size. Finally he set the gas, put the car in
low, and let the wheels spin very slowly.
He had me steer. Then he pushed.

He got the car up into the center of the
road all right. But the moment he got it
up there it slid slowly off into the ditch on
the other side of the road. Then he tried
to put the chains on but the car was at a
considerable angle and slid off the jack.

Finally he just tied the chains around
each wheel and managed to get up to the
main road. Somehow we got to town.
Coming back with the chains on we came
through all right, but we left deep ruts.

After supper Father went out to see
if the boats were pulled up far enough.
All of a sudden we heard a horrified yell,
and then Father's steps on the porch.
He burst into the room, looking shaken.
All three of us were on our feet.

He said, "Now, Levia, be calm. Take
your example from me. I am sure there is
some perfectly natural explanation for
this. But while I was walking across the
back yard a huge apparition appeared
beside me. It was so real that I could
hear the noises it was making. Levia,
hand me my lantern and my revolver."

We must have made a peculiar picture
as we went toward the door. Father led
the way, carrying the lantern high, his
revolver in his right hand. Mother was
only a step behind him looking deter-
mined and prim. Anne and I crept along
behind them in spite of Father's warning
to stay in the house.

We crossed the porch and started
across the yard. Father shouted, "Now
then, put up your hands, all of you!"

Nothing happened. We went forward
a little farther and I think we all recog-
nized the apparition at the same time.

EARLY FALL *is Best of All*

for a restful, uncrowded vacation

● If you are one of several million Americans whose work won't permit a mid-summer vacation . . . cheer up, *you're in luck!*

We invite you to find out what many smart vacationists already know . . . that *early Fall is best of all*, for pleasant, relaxing trips. In fact, there's a growing movement all over this Nation to "spread out" the vacation season, into Autumn, Winter and Spring.

This Fall you'll find that "*the heat is off*", in more ways than one . . . off the thermometer, off transportation, hotels, resorts, National Parks. There's more

room, more fun, and more relaxation wherever you go.

And you can go almost anywhere, in Greyhound's deeply-cushioned highway coaches. You can reach the pleasure places of all 48 States, cruise up into Canada, down to Mexico.

Vacation begins the minute you step aboard, meet pleasant fellow passengers, and view thrilling scenery, close up. Today, more than ever, Greyhound is the outstanding value in travel, with fares lower than those of any other type of public transportation. *You'll save enough dollars for extra days of pleasure.*

GREYHOUND does all the planning
—You have all the fun . . . with
EXPENSE-PAID TOURS
of This Amazing America

At many Greyhound stations and Travel Bureaus you can purchase Expense-Paid Tours, which offer a wide variety of fun-filled vacations in handy "package" form. 1. good-time assurance . . . with your ticket, hotel and sightseeing all planned and paid for

Only
GREYHOUND

serves all the 48 States and Canada

The septic tank hole by the big had filled with water and the septic being empty, had floated right up of the ground. It was looming there in the middle of the yard. The tile line broken. My father stood and looked at the mess. The fight seemed to be gone of him. His shoulders slumped and he said, "Levia, the elements are against man cannot fight the elements."

It rained more in the night, and when it got up the next morning the septic had floated even higher, tipped over, partly filled. It was back down in the hole on its side. The road was a mess. The wheel tracks made the eve- before had filled with water and finally softened the clay all around. At the sun was shining and it was a morning. I went with Father when he looked at the road and at the septic. Father kept muttering the word "Levia." It was one of the few times I saw him when his confidence was fully gone.

After a while he got out the car, which had the chains on, and we churned away to the main road; from there we drove to the Zebulon Warner farm around Henry.

Father didn't say anything. He just went to hitch up the team. Father said,

to come in. From there we drove down to our road.

The sunshine and the wind were already drying it out a little and the men were filling up that center with gravel and dumping gravel, load after load, into the three worst mires. Keeping on the pasture grass we drove the car down to the lake.

When Suds arrived, he and Henry went over and looked at the septic tank. Henry stared at it a long time; then he said, "Looks damp, doesn't it?"

Suds said, "I ain't a-goin' to wallow down in there and shovel no mud." Henry didn't seem to hear him.

After a little he said, "Suds, what would you do to get that tank out?"

Suds said, "Well, maybe I'd rig a tripod with a tackle block."

Henry looked at him with just the right amount of admiration. "Good idea. It just happens I brought along a block and tackle with me. We'll get some timbers and rig the tripod. I've got a pump, too. We'll pump the water out to make it lighter."

They got the pump and timbers and the block and tackle. And after a couple of hours they got the septic tank suspended over the hole.

Henry said, "Now do you think we're

ever get anywhere unless they defied Father. There would be a crisis that night if Henry came to supper.

Late in the afternoon Henry hitched onto the town's road machine and began to scrape the rapidly drying road. When he was through he drove his car over it several times and then scraped it up again. With the many loads of gravel that had been put in, it was in pretty good shape. At five o'clock everything was done and Henry went home.

Father came home half an hour later. He drove in without any chains on. He went over to the place where the septic tank had been and it was a flower bed now. Romeo LaBombard had transplanted flowers so it looked very nice.

When he went into the kitchen, Father looked dazed. I could see, though, that Mother's lips were a straight line and her eyes bright. She said, "Farnsworth, Henry is coming to supper and to spend the evening with Anne."

"Fine," said Father.

Mother just stood there and looked at him in amazement. Then she drew herself up again, taking her courage in both hands. Very distinctly she repeated, "I said, Henry Warner is coming to supper and to spend the evening with Anne."

"I heard you. That's fine."

He said it absent-mindedly. Then he added, "You know, Levia, that farm of the Warners grosses three thousand dollars or better a month. A month mind you. They're milking over one hundred cows. Just think of that. Thirty-six thousand dollars gross is a big business. And all their stock is pedigreed. I worked on the books and the breeding records today. They have a lot from the Montvic and Rag Apple strains, whatever those are. Their pedigreed bulls bring thousands of dollars. Why, Levia, their net is tremendous. They just have Henry and his father and two hired men. Levia, I'm surprised you didn't tell me that a good farmer could make money."

MOTHER'S face was a study but Father didn't seem to notice. "They have a fine modern house. The thing that fools you is that the outside needs painting. And that they go around in those work clothes. They have a hired girl and every winter during the slack time Henry's father and mother go to Florida. While they're gone Henry runs the place and—" He was interrupted by Henry's arrival in the yard. I ran out to see him. Anne just happened to be out that way already.

I heard her say, and her lips were set and her chin held high, "I want you to understand, Mr. Warner, that having you here to supper wasn't my idea. I don't have to chase anybody. I don't have to beg—Henry, you get away. Henry, don't you dare kiss me. Father will—"

But Father was standing right there in the doorway and he didn't. Henry must have been pretty sure of himself.

Mother was beaming out from under Father's arm. Father said, "It just this moment occurred to me that you kids might like to live down at the lake in the guesthouse summers when Henry's people are at home in their big house."

Henry said, "Well, now, wasn't it dumb of me not to think of that?"

That was August 2d. Henry and Anne were married that fall and visited in the White House during their wedding trip. Henry and Mr. Coolidge hit it off beautifully. Mr. Coolidge's invitation was meant to make up for not coming to see us, I guess. Instead of coming to see us that next day, Mr. Coolidge was sworn in as President of the United States. Father felt cheated after all his work and worry. He roared considerably. He belatedly that it was damned suspicious that Harding's death had come just in time to keep Mr. Coolidge from visiting a Democrat. He implied that these Republicans would go to any lengths.

THE END

Does lots more than keep hair Looking Handsome

IN SUMMER YOUR HAIR NEEDS EXTRA-SPECIAL CARE

Kreml contains a special combination of hair-grooming ingredients, which is found in NO OTHER hair tonic. That's why a single application of Kreml in the morning keeps hair in perfect order throughout the hottest, stickiest summer day. But Kreml does *lots more* than this—

NEVER SMOTHERS HAIR DOWN WITH GREASE

Kreml *never* leaves hair looking greasy, sticky or caky. Kreml always feels SO CLEAN—SO COOL on the scalp.

WHEN BURNING SUN SCORCHES AND DRIES YOUR HAIR

Kreml is actually great to lubricate a dry scalp. It helps 'condition' hair in that it leaves it feeling softer, more pliable. It also removes dandruff flakes. Use Kreml daily this summer for that handsome, cool, clean-cut appearance from morn till night!

KREML Hair Tonic

A product of R. B. Semler, Inc.

Removes dandruff flakes. Keeps hair better-groomed without looking greasy

"Oh, dear. I didn't get you anything!"

ERIC PETERS

too late now to do anything, Henry. I said we're defeated."

"I said Henry. He worked a minute in silence, and then he said, 'Go over there and try to put things in order if you'll trade works with me.' 'Trade works? You mean work here or work there?'"

Henry nodded. "I could probably work on the books. In a short time I could probably improve the methods materially. I am too old for strenuous work." "This is bookkeeping," Henry answered. "We're way behind on our accounts and on our breeding records. I'm going to catch up on those today. It was too wet to hay-it. I can't let it any longer but I'll work at your place all day to do the bookwork for me."

Father said, "Harumph," and then he and Henry introduced him to Mr. Romeo Warner. The two men walked together.

Henry phoned a lot of people and pretty soon Romeo LaBombard and Suds Smith appeared. By the time Henry had two teams hitched to the double wagons for them. Henry drove his car over to the gravel pit. There a couple of shovelers already there and a lot of other teams were beginning

ready to swing it right side up and dump it back down in there?"

Suds said, "Seems as if I ought to dig some of that mud out of the bottom so she'll set right." Henry agreed that it was a good idea. Suds climbed down and dug out the mud. Then they dumped the septic tank back in place. Along about eleven o'clock Gifford and Davis arrived. They hooked the septic tank up again and Henry rigged a hose to fill it with water so it wouldn't pop out again if more rain came.

At noon when Henry came into the house he said to Mother, "Mrs. Forman, I'll thank you for that invitation now."

And mother, acting just as if she hadn't heard him, said, "Henry, I wonder if you would care to have supper with us tonight?"

"Thank you, ma'am," said Henry. "This is a surprise but I guess I can make it."

I didn't get the idea. If he thought Father had changed his mind he was wrong. Anne's crying and Mother's coolness during the last few days had only made him more stubborn. Father wanted to give in because he hated to be on the outs with his womenfolk, but he just wasn't going to see Anne make a mistake. I didn't believe Anne and Henry would

What your handwriting tells you about your "E. Q."*

Write "dextrose is food-energy sugar" here . . . then read the graphologist's analysis of the sample most nearly like yours.

dextrose is food-
energy sugar.

This handwriting reveals initiative and originality. This man may be a successful author. His physical and mental activity is derived chiefly from dextrose.

dextrose is food-
energy sugar.

Here we find original ideas and imagination combined with accurate achievement. He should find success in sales work. He probably uses more-than-average amounts of dextrose to sustain his vitality.

dextrose is food-
energy sugar.

This manual worker perseveres in his job, but his quick temper is a handicap to his progress. His lack of emotional control has nothing to do with his daily use of dextrose.

dextrose is food-
energy sugar.

This young man's script shows ability to concentrate, doing work calmly and accurately. His physical stamina and mental activity are sustained by dextrose sugar.

dextrose is food-
Energy sugar.

This executive's writing indicates great driving power. He is optimistic, and very impressionable. His vigorous pace is chiefly powered by dextrose.

dextrose is food-
energy sugar.

This young man's ambition and accomplishments are hindered by his physical condition. He is under nervous pressure, and is easily exhausted. His energy may be restored with dextrose.

dextrose is food-
energy sugar.

This young woman's writing indicates a logical mind. She possesses good executive ability. She will be an efficient homemaker. Her calm, well-poised activity is supported by dextrose sugar.

dextrose is food-
energy sugar.

This woman's writing reveals mental activity, good education and versatile executive ability and business sense. Always, dextrose helps provide her with energy.

dextrose is food-
energy sugar.

This intelligent young woman is independent in thought and action. She works quickly and carefully. She is a pleasant associate. Her vitality is high, her activities are powered chiefly by dextrose.

dextrose is food-
energy sugar.

Here we find a very emotional, affectionate nature. She is the protective, motherly type. She has strength of character. She is the type who uses overage daily amounts of dextrose sugar.

dextrose is food-
energy sugar.

While cheerful, warm hearted and sympathetic, girl will not be imposed upon. She accomplishes practical duties calmly and efficiently. Her energy is powered by dextrose.

dextrose is food-
energy sugar.

This rhythmical script reveals the keen mind of an artistic woman. Eternally young, she is interested in everything new. Healthy in mind and body, dextrose helps maintain her energy.

GOLF'S BAD BOY

Continued from page 23

confined his activities to golf. This more effective, Stranahan whip him again and much more decided. But things never get dull around him. During this match a newspaper photographer snapped Stranahan blast of a trap, the shutter clicking well Frank had hit the ball. Stranahan rebuked the guy, who had been pictures when Frank was in a high He looked up the photographer the match and apologized, admitting there had been no cause for his protest at that time a confidant of his said, "Things like that because he gets himself for making a bad shot."

Dominated by Will-to-Win

Incidents indicate he is not as motivationally as he might be; but more than they illustrate his competitive nature. He wants galleries to like him because it simplifies the matter of winning; he noted Quick's tactics for that grudge as a means of combating fire with fire. He fired his English caddy because he thought his chances of winning were jeopardized. His one motivation is, victory.

An impelling desire to win, called the instinct in boxers, has been his mark ever since he was old enough for games. He started playing golf at only because playmates dared him. At that tender age he considered the sissy, preferring football. He had his love of football before golf was large of him entirely.

Interest in weight lifting popped in early age, too, when he clipped one of those "you-too-can-be-strong" sent it in. That led to bar bells, ropes and pulleys and all the while he's been slightly hipped on the ever since. His living quarters are filled with physical culture magazines and sports books.

The time he was sixteen Frank was among many fine country-club golfers and had been playing since Garfield was in school never held too much interest in him. Books finished a poor second whether he was at Inverness, his

home club, in Florida or at Pinehurst, where his family maintains a house. But he was known only locally until Nelson went to Inverness as the club pro in 1939. Thereafter, Frank was the Texan's shadow; a sponge soaking up every drop of information from the taciturn champion.

"I've had a lot of credit for teaching Stranahan," Nelson recalls. "He was gripping his club all right when I first started to teach him. He first said to me, 'I want some of that bottom-drawer stuff.' We went out and I was amazed to find out that the boy didn't know how to slice or hook a shot. He beat me a couple times, almost as often as I beat him (Frank was sixteen then), and yet he didn't know how to hook or slice. I showed him how to make these shots, and he said, 'Man, this is the most fun I've ever had in my life.' Yet it was a long time before he knew how to place a low shot."

But it wasn't long before he was winning championships. By 1941, when he was eighteen, Frank was begging his father to let him join the pro safari with the Nelsons, Hogans and Sneads. Instead, his father sent him to a private school in Arizona. He distinguished himself there by winning the Arizona State Amateur, adding the Ohio Amateur to his mushrooming collection after he returned to Toledo. That summer he became the youngest golfer ever to win the Trans-Mississippi title. The kid played the finals in true killer style, shooting a 64 to go seven up in the first half of the 36-hole match. Meanwhile, Nelson and practice wore down the rough edges of his driving, irons and putting.

"Byron and I used to practice coming out of traps at two bits a shot," says Frankie. "He was a great teacher. I wish I'd listened to him more." The Stranahans and Nelson gave Inverness some sort of record in 1942. Byron won the state P.G.A. title, the elder Stranahan won the state senior title and Frank repeated as the men's amateur champion. Just to complete the clean sweep, Frank, who had never deigned to enter it before, captured the state junior championship.

This was the year, too, when Bing Crosby and Jimmy Demaret came to Inverness for an exhibition. Nelson sprung young Stranahan on his rivals and murdered them.

That fall his plea to join the golfing nomads along the tourney trail was rejected again. Enrolling in Miami University, he hardly had his clothes unpacked before the Army snatched him. Three years in service added up to 800 hours as chauffeur of a four-engine bomber. Even then he used furloughs and leave time to dash about the country and play with the pros.

On one occasion, while still in service, he had a few days off to compete in the North and South tournament at Pinehurst. Fearing wartime competition would be no good, he invited Ed Furgol, a fine amateur who since has turned pro, with him as his guest. "All he did was lick me and everybody else," Stranahan remembers with chagrin.

Discharged in October, 1945, Stranahan checked in at Toledo just long enough to get his civvies. A month later he whipped the cutthroat pro gang the first time in the Durham, North Carolina, Open. Just by way of piling the heat on him the final day, they paired him with Hogan, red-hot favorite. Stranahan beat Hogan to the wire by one stroke. Thereafter, he finished in the first five in four pro tournaments late in 1945.

Never Too Tired to Practice

These performances and his consistently brilliant shot-making in 1946 made believers out of the most skeptical pros. They used to kid this earnest, ambitious youth; now they accept him and respect him as a rugged competitor. In the final analysis practice has done the trick. We've seen Stranahan practice for an hour in the morning, play a tough 36-hole match, and follow up by whacking golf balls until dark. And then play catch with those bar bells.

"That's where I've got it on a lot of guys," Frank explains. "I'm as tough as ever after 36 holes. They laugh at that bar-bell stuff but that's what does it." Nelson and Hagen tried to tell him a year ago that he practiced too much.

"You'll go stale," warned Nelson, who achieved his championship the hard way.

Stranahan took heed, practiced less, eased up for a while. "It damn' near ruined me," he says now. "My game went to pot and I got back quick to that practicing. I don't know how anybody else does it but that's the way I have to do it."

His great disappointment last summer was at Baltusrol, New Jersey, site of the National Amateur. After the 36-hole qualifying test, the low 64 scorers' names were pulled out of a hat. No one was seeded. Thus it happened that Stranahan and Ward collided in the second round. Stranahan lost the first three holes, and Ward, Frank's victim in the 1946 Western Amateur, never gave him a chance to recover. Stranahan bowed out of the picture with a petulant display of temper.

"We play golf all summer to get ready for the National," he rasped. "What happens? Medal scores don't mean anything. The best players meet right off. Anything can happen in these early 18-hole matches. I don't get it." The autocratic U.S.G.A. maintained a beautiful silence, but Frank's father didn't.

"You win championships by beating everybody in the field," he said, and nothing further was heard from his peevish offspring.

Since then Frank has been a little less talkative—but doubly determined to win. He could start in the National Amateur—by beating everybody in the field.

THE END

PING GOES THE SPRING

Scientists of leading American watch company solve old problem. Eliminate commonest cause of mainspring breakage

When watches keep erratic time or suddenly stop and can't be wound, the cause often is *mainspring failure*. Steel mainsprings frequently lose power. Or, weakened by rust, they break.

Yes, mainsprings in closed watch cases can and do rust. High humidity with a sudden drop in temperature causes condensation of moisture. A tiny pin point of rust begins. And there is where the spring breaks.

But now the Elgin Watch Company has developed "Elgiloy" metal and from it a miracle mainspring: DuraPower*. The DuraPower Mainspring eliminates 99% of repairs due to steel mainspring failures. It retains its resiliency indefinitely, gives a steady flow of power for greater accuracy through the years. It will not rust! Only Elgin watches including Lord and Lady Elgins and Elgin De Luxe have the DuraPower Mainspring, and at no extra cost. Look for the symbol "dp" on the dial. Also at repair shops for replacement in many previous Elgin models.

THE VOICE OF ALBANY'S SILENT MAN

Continued from page 19

an alleged Dewey stooge. In Bainbridge, when the other kids were reading dreadfuls and dime novels between pages of their Latin books, Ives was looking at tracts by William Allen Robert M. La Follette, Sr., Eugene V. Debs and other radicals of that ilk. In college, Ives was known as the "Silent Man." In his senior year, he nearly was thrown out of school for leading a strike against compulsory Sunday-afternoon chapel.

Swung even further to the left after graduation, when he worked as a clerk in New York City for four years and attempted to support his wife and son, George, in Brooklyn on \$25 a week. "I thought," says Ives, "that I was going to become a Communist then."

Better Pay Reforms a Rebel

In 1924, however, the Manufacturers Company transferred him back up to the more respectable salary of \$1,000 a year, and in the untainted Republican atmosphere of Bainbridge and Chenango County, Ives' left-wing imprints faded. Only a bit of the spirit of rebellion remained. In 1925, the young Ives, a war veteran of Chenango County, revolted unsuccessfully against the Republican machines, and Ives left the Bainbridge branch of the insur-

re years later Ives came over and gave a fine speech nominating a rebel named Melvin C. Eaton to be the Republican leader. The speech helped Eaton to lick the machine. Later that year Eaton repaid the favor by getting Ives the Republican nomination in a special election to fill a death-caused vacancy in the State Assembly. Since, in Chenango County as in the rest of the State of Mississippi, nomination is tantamount to election, young Ives was back in politics.

In his first few years in the legislature, Ives was a bit of a troublemaker. The Assembly was controlled by the Joseph A. McGinnies machine, and Ives, a wealthy older man, among the rebels definitely was not included. One thing which disturbed the calm of the period was a series of boisterous sessions by the intermittently over-enthusiastic Ives. These included Olsen and Sprague's entrances into staid political sessions, and one classic case when Ives, in a fit of mood stormed through a Republican convention was held, leaving behind him a wake of overturned beds, complete with prominent occupants. Not everybody appreciated the joke.

In 1935, however, he was involved in the revolt of young Republicans, led by a brilliant prodigy from Albany named Oswald D. Heck, Jr. In the 1936 session began, Ives found himself sitting in the Speaker's chair just as fast the following year when he continued his fun-loving ways. It was discovered that he and his manager, Melvin C. Eaton, had secured just about twice the number of patronage jobs that actually ex-

isted. Ives made a quick political switch to save the party. Heck became Speaker of the Assembly, and Ives took his job as manager. In that year, too, Ives became a Senator. From this fresh start, Ives began to build a ten-year reputation as one of the finest lawmakers to come out of the legislature that produced Grover Cleveland, D. Roosevelt, Al Smith, James A. Roosevelt and Robert Wagner.

Republican majority leader, Ives had a State Labor Relations Act which closely paralleled the national act that was called the Little Wagner

Act. Then, as chairman of the bipartisan Ives Labor Committee, he pushed through legislation which set up a state mediation service for labor disputes, a system of unemployment insurance and workmen's compensation laws, and a much needed state Department of Commerce.

Out of this Ives committee came the New York State School of Industrial and Labor Relations, the first of its kind in the country; and a textbook, The American Story of Industrial and Labor Relations, which is used now in some of New York's high schools to choke off labor-management hatred at its source. Another commission headed by Ives reported out the Ives-Quinn Bill, which set up the State Commission Against Racial and Religious Discrimination in Employment.

All this comparatively progressive legislation got Ives into trouble with the right wing of his party, but no die-hard denunciations were as strong as those which were leveled against the Ives-Quinn Bill. William M. Stuart, an assemblyman from Steuben County in the northern part of the state, ranted that the bill would "bring on the greatest wave of race riots and blood baths in Northern history, and a resurgence of the Ku Klux Klan." None of these things ever happened, of course.

In addition to all this, Ives and Heck set Republican policy for the state while Democrat Herbert Lehman was governor, and they pulled the party together by means of regular conferences of the top legislative leaders every Sunday evening in Heck's hotel room—a pair of functions which Dewey took over as soon as he moved into the governor's mansion in 1942.

That was the year Ives began to decline slightly. His relations with Dewey were cold and correct, but he always was a party regular so he still fought hard for every piece of legislation handed to him by the party. The Assembly got to know, however, that whenever Ives got up on the floor and said, "This is a political measure," it was something that Dewey and not Ives wanted.

A Walk Out of Politics

Finally, early in 1946, Ives asked bluntly what his chances were to be nominated for the U.S. Senate. "Frankly, none," he was told by J. Russel Sprague, Dewey's top political adviser. In New York, the tradition for many years was to have a "balanced ticket"—that is, a Protestant, a Catholic and a Jew in the top positions—and both Ives and Dewey were Protestants. So Ives quietly packed his bags, and announced that he was accepting the deanship of the new School of Industrial and Labor Relations which he had helped found at Cornell. That's when the wake was held for him at the Ten Eyck Hotel.

The resurrection came pretty fast. No sooner had Ives put his feet on his desk in his new office at Cornell than Major General William J. (Wild Bill) Donovan announced his candidacy for the senatorial job. Dewey adroitly slapped the mild Wild Bill down, on the grounds that he had been too disastrously defeated when he ran for governor in 1932. Then Dewey announced, through Sprague, that ex-Lieutenant General Hugh A. Drum was the man. The county Republican leaders turned Drum down because he was an armchair general, and much too far to the right. So less than two weeks before the Republican convention at Saratoga, Dewey did not have a candidate.

Then word got out that the Democrats were going to nominate ex-Governor Herbert Lehman for the Senate. Panic spread in the Republican ranks. An in-

formal conference decided that the only man capable of beating Lehman would have to be a country boy well known up-state, and with a good enough record to cut into Lehman's labor and racial-minority votes. This was the equivalent of finding a Hindu-Moslem baseball team in Calcutta. There was, however, one Republican in New York State who fitted this difficult bill—Irving Ives.

Two days before the convention, Ives was called out of retirement, and a few hours later, he stood on the same platform with the man who had sent him into political oblivion. The Republican strategists were right. The state A.F. of L., for the first time in its recent history, refused to support a Democratic candidate, and thousands of labor votes poured into the Ives column. So did thousands of Negro, Jewish and Catholic voters who remembered Ives' antidiscrimination bill. When the smoke of the election had blown away, Ives had beaten the seemingly invincible Lehman by the comparatively narrow margin of 2,559,365 votes to 2,308,112.

Today, after his first few months in the Senate, Ives is rated as a good mixer, a sharp wit, an indefatigable committee worker, and a man with fine principles who sacrifices them, if necessary, on the altar of party regularity. He is extremely snappy with the repartee on the floor of the Senate and in committee hearings.

Fought Antilabor Provisions

Nearly all of Ives' reputation so far is based on his work on the Taft-Hartley Labor Bill. His other votes have been straight down the line with the party. When the labor bill was still in committee, Taft wanted to eliminate industry-wide bargaining entirely, and reduce all unions to a loose federation of weak locals; Ives fought him on this point and got the provision eliminated.

Taft, Senator Allen J. Ellender of Louisiana and Senator William E. Jenner of Indiana wanted to require a two-thirds vote of the workers of a plant before their leaders could negotiate for a union shop; Ives got the requirement scaled down to a simple majority. Taft and Senator Joseph H. Ball wanted to knock out the Norris-La Guardia Act to permit employers to get court injunctions to stop strikes; Ives watered this down so that only the NLRB can get an injunction, and only in a jurisdictional

strike or secondary boycott. Ives fought Taft on a measure that have allowed legal strike breaking on another which, if carried to extreme, even could have prevented men from talking to one another.

On the floor of the Senate, Ives unsuccessfully against the provision which eliminates union-administered fare funds, and the ruling which penalizes unions with Communist office. At this point, Ives was teamed up with liberals as Wayne Morse of Oregon, George Aiken of Vermont, James H. Ray of Montana and Claude Pepper of Florida, and the hard-pressed labor unions were loving him. Then he performed his sensational flip-flop and ended up on Taft's side. At this point, the conservatives began to sing, "Ives is our camouflaged a bit, perhaps—boy."

On June 23d, an A.F. of L. delegation from Rochester came down to Washington to see Ives. The delegation was led by Tony Capone, chairman of the Rochester Central Trades Council. Capone said, "An awful lot of the guys supported you in the last election here, Senator. What are you doing for them?"

Ives answered, "I haven't changed a iota in my attitude toward labor. There are a lot of bad things in this bill but I have to go along with my party. I may come a maverick, and a maverick makes a lot of noise but doesn't accomplish anything. If I'm going to do anything for labor later on, I'll have to stick with my party now." The A.F. of L. members were away, some of them apparently surprised. (Nevertheless, a few weeks later, the A.F. of L. President William Green held Ives largely responsible for the "reactionary" labor bill and urged all A.F. of L. members to vote against him.)

This is the sort of effective locution, that causes Ives to be called the Voice of the Silent Majority. Conservatives in Congress say, "Taft is all right. He's going to be a publican wheel horse in the Senate. One liberal senator suspects Ives is a head case to say, 'He's the kind of liberal who with us until just before the fire bell call.' Most of the Senate program declare that they haven't given up on Ives yet.

All of which, baldly stated, adds up to a lot of assorted votes for Dewey.

THE END

THE DEVIL IS A GENTLEMAN

Continued from page 15

Mohammed Shaalan was a young handsome appearance, but he was with an inner anger and burst. Why have I been brought here?—

Inspector said soothingly, "I have respect for the sheik, your father. Seat yourself. A cigarette?"

"I do not smoke." He stubbed out the butt smol-between yellow fingers, spilling from the tray on the desk and digging them tidily into a wastepaper. "You will excuse me asking," he said, "but I am obliged to on everybody who knew Major—"

"I do not know him! I never wished to know him!" Shaalan clenched his hands, and the stone of his signet was a red eye gleaming balefully in the electric light.

"Shaalan, do you know Khurrem?"

A young man answered, "The question is indecently personal. I have tried to ask her, but she turns her face from me. She even sends back my gifts. A woman should divide her life between her husband and her father. He added vindictively.

"Where were you when Rasim was killed?" Mohammed Shaalan said. "The dun-colored eyes of Inspector Ellsworth became suddenly brilliant, and he said, 'I cannot be sure, but I do not know when he was killed. I was in the booth when the girl danced and her dressing room.'"

"I use no woman has ever refused to dance with me—cause—"

"He sprang to his feet and said, 'I refuse to be questioned. My father is powerful, and we will not let our heads to Baghdadis!'"

"He did not stop him as he went to the door, but said as it slammed, 'I will watch all Iraqs.' The little man and voicing a thought, murmured, 'A very difficult young man. He watched.' Hearing his own name, he smiled, saying, 'I have an unchangeable habit of speaking my thoughts, and I will forget what you heard, Mr. Ellsworth. But you wish to speak?'"

"Proprietor of the Great Caliph Hotel, walking the room hugging his hands. 'It is so awkward,' he said. 'So very awkward. But I realize I will withhold information.'"

"You are an excellent citizen, Mr. Ellsworth. What is this information?"

"I was waiting to warn her. She said she withdrew her favors from Rasim, and conducted herself properly, I would break the contract and return her back to Damascus. As you said, I try to be a good citizen. I run a house of ill fame," he said. "Eight lips. 'Vice shocks me.'"

"Inspector Chafik was leaving the room after checking the identities of the guests, he stopped at the door of the girl's dressing room. The girl had returned to her hotel, and Chafik entered the room with Abdullah and a methodical search. The heavy perfume of jasmine made him press his hand to his nose. 'Perfume is a vice,' he said to the watchful Inspector. 'The fact is well known to the buyers in America, judging by the advertisements in their magazines.'"

"As long as there are women there will be perfume," he said. "The flower attracts the bees," said the Inspector. He picked up the ash tray from

the dressing table. "What do you see here, Abdullah?"

"Sir, I see a glass tray three inches square containing the stubs of five cigarettes. They are stained with lipstick and were therefore smoked by the girl." He gave a smile of triumph as he added, "I did not expect to see anything else. Mohammed Shaalan does not smoke."

The Inspector said, "That is true. I offered him a cigarette. Besides, we were told he was not here. What else do you see, Abdullah?"

"I see nothing, sir—"

"I also see nothing. You will note that carefully." And he left the room, followed by Sergeant Abdullah, who was fumbling for his notebook with a puzzled expression on his dark face.

IN THE morning Inspector Chafik sat on the edge of a chair in the office of the chief inspector. His superior, a burly Englishman who was a former chief inspector of Scotland Yard, held his present appointment from the Iraqi government. He was a man whose liver gave him an unpredictable temper. He was also justly proud of his department, so when he roared, "A man murdered under your nose and nobody arrested!" Chafik nervously twisted his black *sidarrah* and meekly bowed his head.

"There were three hundred guests," he said. "The killer was aided by the confusion. You yourself, Mr. Ellsworth, will be the first to understand my difficulties." He smiled ingratiatingly and went on, "If you will direct me on the basis of my report—"

Ellsworth said, "It's a very thorough report and a black one for Shaalan. My God, Chafik, there'll be the devil to pay if we pick him up for murder! A thing like that might well rouse the Muntafiq."

"I have handled him cautiously for that reason, sir. If only Mr. Hassoon had not been so observant—"

"He did his duty. Now we've got to do ours. And what's this damfool paragraph in your report about Hassoon?" The chief inspector picked up the file and read, "Observes the full ritual of daily prayer, including *coubh*, *zhor*, *acr* and *magreb*. Unmarried—"

He flung the file down. "His religious habits are his own affair. Tell me about the girl."

"Chief Inspector, she is undoubtedly the agent of a foreign power and used her charms on Major Rasim for obvious reasons. With your permission, I intend to retain her passport until the investigation is completed. And I will use her," Chafik added in a hard voice.

"Could she have killed Rasim?"

"She could—and she is an excellent actress."

"He may have threatened to denounce her." Ellsworth drummed the desk and then asked abruptly, "The knife's untraceable?"

"It could have been purchased anywhere. These knives are mass-produced in your country, sir."

"But they don't make 'em to kill people!" The chief inspector picked up Chafik's report again and reread the paragraph referring to the weapon. "A thin blade," he said. "External bleeding insufficient to stain the killer's hand. No fingerprints." He shrugged. "It's a tough case, Chafik, and I don't propose to muddle you with suggestions. You have your own methods and perhaps the less I know about 'em the better. I leave it to you."

The Inspector stood and bowed. He said, "Sir, I am honored by your trust and will do my best. But all is with God." He salaamed with the curved fingers of his right hand to his forehead, but when he was in the corridor and had closed Ellsworth's door he murmured, "I leave

An old horse is old for keeps—but an old engine can be made young again

You can't look an engine in the teeth, but you can tell its age by its performance—and new Sealed Power Piston Rings can knock years off its age, saving oil, saving gas, and lengthening engine life.

Whatever the make, model, or degree of cylinder wear in your car, truck or tractor, there is a Sealed Power Piston Ring Set specifically engineered to do the best possible job. These sets are made up from twenty-six (26) basic designs of piston rings, proud product of 36 years' use as original equipment by major engine builders. See your Sealed Power Franchise Dealer. Send a postal for illustrated, informative new booklet on 7 ways to save oil. It's free and may save you real money. Sealed Power Corporation, Dept. K9, Muskegon, Michigan. In Canada: Stratford, Ontario.

In addition to Sealed Power Individually Engineered Piston Ring Sets, ask for Sealed Power Pistons, Cylinder Sleeves, Valves, Water Pumps and Chassis Parts.

SEALED POWER PISTON RINGS

BEST IN NEW CARS! • BEST IN OLD CARS!

it to you. I leave it to you. How very nice to be the chief inspector!"

In his own office Chafik found the woman Khurrem waiting with Sergeant Abdullah in attendance. She was quietly dressed in the Western style, but a black shawl, like a Spanish mantilla, was draped over her head and from under the folds her great eyes looked out with suspicion and alarm. The sergeant, who was hovering behind her chair, made a gesture as if pleading for clemency but the voice of the Inspector was cold as he said, "You have your passport?"

He took the passport, embossed with the arms of the Syrian Republic, and wrote out a receipt. Khurrem said, "This is outrageous!"

"It is a precaution," answered Chafik. "It does not suit my purpose that you should leave Iraq. You are accustomed to taking orders, Madame, and now I give them."

"You talk riddles. I am only a woman who sings and dances—"

"You do both delightfully!" He turned to a ponderous steel cabinet and took out a file. "The pattern of your life," said Inspector Chafik casually, "has the intricate weave of a Kirman carpet and the more one studies it the more one sees. Your father, who was a Syrian, gave you a Turkish name. You were born in Istanbul and taken to Damascus at the age of ten. You were orphaned four years later and there is a gap in your life until you reappear in Tabriz, Iran, as a cabaret entertainer in the last year of the war."

"Is that a crime?" She put a cigarette into a jeweled holder and Sergeant Abdullah hastened with a match.

CHAFIK said, "It is not a crime. And as I am a broad-minded man I think no evil of you because you lived with Mr. Ali Muzaffer, a very prominent member of the Left, or Tudeh party." There was a musical rattle of bracelets as Khurrem's hand shook. The little man tapped the open file and continued in the same casual voice, "Here is where the pattern becomes very interesting. You crossed and recrossed the Middle East from Teheran to Cairo, and the men you charmed were military men and government officials, never any others. Those were your orders, Madame?"

"I refuse to answer such a question."

"And rightly so. Of course the connection of the Tudeh party with our very powerful northern neighbor—" Inspector Chafik paused. "Sergeant Abdullah, where are your manners? The lady's cigarette has gone out." He waited a moment and then said gently, "Madame, I am not interested in political matters this time. Only murder. I require a well-trained agent—one so charming as yourself, for instance."

"I? Work for you?" The woman was pale, trembling.

"I am a gentleman," Chafik said, "and it would distress me to retain your passport permanently. Mr. Hassoon might dismiss you from the Great Caliph and then perhaps you would find it difficult to find other work in Baghdad," he added sadly.

Khurrem picked up her long gloves and drew them carefully over her slender hands, the palms of which were touched with henna. "What are your orders?"

"You will continue to entertain at the cabaret, but you will be very kind to Mohammed Shaalan who has long admired you. Other orders will be given later. And you will, of course, be discreetly silent about our interview."

"I think you are the Devil!"

Inspector Chafik rose to his feet and bowed. "That is with God," he said. . . .

Five days after the interview between Inspector Chafik and Khurrem the Dancer, a sandstorm spread a dirty canopy over the Baghdad sky. It was a day of oppressive heat and the air was filled with dust and stinging insects, while

the noises of the city became strident as tempers shortened.

In the Nassah Quarter two men stabbed each other over a debt amounting to thirty *fi*ls. A husband at Kadhimain, wearied of his wife, strangled her and dropped the body in the Tigris, and was caught by the police. In his headquarters on Al-Rashid Street, Inspector Chafik read the reports and said, "One regrets these things, but conditions are excellent for my little plan and tonight, Abdullah, we put it into action."

Shortly before ten o'clock, Khurrem, performing to a half-empty cabaret, received a note slipped into her hand as she left the stage for the booth occupied by Mohammed Shaalan. The Arabic characters which marched from right to left across the paper had a certain tidiness, and left her in no doubt of the writer, although the note was unsigned.

She read:

"In the name of God the Compassionate. You will invite Mr. Shaalan to your hotel and proceed there by arabana. You will leave the carriage and enter the hotel ahead of him. Be assured that your virtue will be protected."

Khurrem tore the letter into shreds. Her fingernails were red daggers and her look was dangerous as she tossed her stormy hair and went slowly to the booth where Shaalan was awaiting. She passed Hassoon who said, "There are such few guests I am closing early. Please inform your new lover." Khurrem brushed him with her shoulder, a gesture of contempt.

When she passed through the gap in the flowering shrubs she found a smile for Shaalan, but it faded when the Arab said, "I saw a man speak to you! I saw you lean against him!" and fumbled with the gun under his robe.

The woman said in a husky voice, "Thou fool!" and her small teeth clenched on the stem of the jeweled cigarette holder. Then she opened her bag and took out her gloves. "We close early. I am weary. Will you see me to my hotel?" Partly closing her great eyes she looked at Shaalan through lashes thickened by kohl.

When they left the cabaret an arabana swung out of the waiting line and drew to the curb, and a man in a café across the street went quickly to the telephone. He dialed a number and shortly afterward Inspector Chafik, who was relaxing at his favorite cinema, rose as he felt Abdullah's touch on his shoulder.

The little man said, "Now I shall never know who put the body of the collector

of Chinese jade in the parrot cage at the Central Park zoo." He looked over his shoulder at the screen and shook his head regretfully as he left the cinema.

The street was almost empty. Dust, weighted with moisture sucked from the river by the day's heat, fell softly and a blue haze obscured the lights. Sergeant Abdullah said, "One eats dust," and Chafik answered, "It is our lot." They walked under the pillared arcade to the top of Al-Rashid Street and turning at a sign which read, MA'MUN HOTEL, entered a dark passage. A door leading to a neglected garden opened and three officers of the Metropolitan Police, their tunics smudged with white in the darkness, saluted smartly.

THE Inspector stationed himself behind the partly closed door and polished his nails with a handkerchief. Presently he raised his head as the clloplop of horses' hoofs sounded up the street, but he did not speak until there was the double crack of a driver's whip. Then he put away the handkerchief, saying, "It is the signal," and opened the door another inch.

As the carriage drew up, Mohammed

not equal to that of a pack of wolves. Please do not tear him to bits."

The steel jaws of handcuffs Sergeant Abdullah rose from the ground and said with wonder, "Sir, it is soon!"

"He fitted the pattern," answered Inspector, and went to look at the hollow-eyed man who was now in the grip of the police.

Hassoon was crying, "In the name of God let me kill him as I kill other lustful dog! The evil in the heart of men! The honey of women!" began to quote from the Koran in voice, "By their tokens shall they be known, and they shall be seen their forelocks and their feet . . . pestilential winds and in scalding . . . In the shadow of the black smoke."

The voice changed to gibberish. Sergeant Abdullah said, "God touched him. He will not hang, for madness has always been there. It is my shamed face because I did not see the truth, that this man who never loved and hated lust was himself filled with lust for the woman Khurrem, and killed those she favored. Yet, sir, and not a theory must have guided to the truth."

"I told you to note the fact. The tray in which we saw nothing but stubs of cigarettes. You disappointed Abdullah!" Inspector Chafik dipped into the prisoner's pockets and showed a handful of salted melon seeds. "He has a habit that he nibbles on smoke, so this one nibbles," he said. "The strong habit that he nibbles on the presence of Major Rasini's corn. He placed the husks of the seeds in a tray on the table. And in his own office a tray piled with husks. Yet in Khurrem's dressing room, where he said he had for her, were no husks. Therefore he was not in the room and therefore he was not the man who said Shaalan was not the man."

"Such deduction has the clarity of flawless crystal," said Abdullah.

"It was clear because God made the pattern. And the rest of the story is a pattern of woven threads. Who else but the Great Caliph could have stolen behind Rashid made the fatal thrust? He tried to make another victim by putting suspicion on Shaalan, but that failed and he was driven to murder. Fortunately he was prevented," Inspector Chafik added, "by Mohammed Shaalan."

"By God's mercy—" the young man said.

"And by my arm and the night guard you from the moment of the Great Caliph! You will find the safe place a safer place than the caliph's Baghdad. Please give my compliments to the sheik, your father." Chafik's was a dismissal and Shaalan, with perspiration from his face with the wiping of his headcloth, murmured, "Your House," and left meekly.

THEY took away the man who was now chanting from the Koran, "The beautiful ones with like eyeballs . . . whom man has not touched, nor any jinn . . ." Inspector Chafik turned to Khurrem who was veiling her face. The perfume of the envelope from his pocket and gave the woman.

"Your passport, Madame." He put it on the table and then said with a note of regret, "I took the liberty of exchanging your ticket for Damascus by the Night Desert Autobus, leaving tomorrow noon."

Khurrem said softly, a little catching her throat, "Yes, you are the Devil!"

And with his most courteous curved fingers hovering near her in a salaam, Inspector Chafik said, "But you will agree the Devil is a man—"

BROTHER JAZZ

Continued from page 17

Door closed I worked successively at the 18 Club, the Hickory House, and the Red McKenzie Club.

One night Paul Smith dropped in and suggested that I spend the holidays cruising on the Empress of Britain.

"All you've got to do is organize an eight-piece band for a nine-day cruise," he said. "The sailing date is December 28th; the ship stops at Cuba and Jamaica. You'll be back in time for the cold weather."

I barely escaped from Fats Waller in time to make the sailing; I was on the wagon except for wine but there was plenty of that around. That afternoon we played an introductory cocktail party. A tall steward named Flack stood near by and stared at us all the time.

Wanted a Piano in the Bar

The next day Paul and I were in the Knickerbocker Bar with our guitars. Bob Neely, whom we'd known at Perona's Bath Club, came in. Neely ordered drinks and asked me to send for the boys.

"We'll get a piano in here," he said, "and have some music."

Flack shook his head when we asked that one of the small uprights be brought in. "Absolutely not," he said quietly.

Neely went to the captain. Flack disappeared and returned with two deck hands and a piano. Later I was called to the office of the cruise supervisor, a woman.

"Mr. Condon," she said, "as leader of the orchestra you are entitled to freedom of the ship. I must remind you, however, that this is not true for the musicians under your direction. They must not gather socially in places reserved for passengers."

"Such as the Knickerbocker Bar?"

"Precisely."

I took a firm grip on my temper and then let go of it.

"My dear lady," I said, "the musicians in my band did not come on this cruise to make money or to provide themselves with employment. They are on vacation from jobs which pay them five times the coolie wages you are giving them. They are here to enjoy themselves and to relax, not to be locked in a coal chute during the time they are not performing."

"If you send them to sleep with the cargo and drink off the rudder, and if you can force them to do it, don't exclude me. Wherever they go I'll go with them, and I'll go first."

I didn't wait for her to answer; I walked out and called the boys together.

"From now on I want all of you in the Knickerbocker Bar as often and for as long as possible," I said. "That's all."

I went into the bar and sat down with Paul and my brother Jim. I was so angry I forgot about medicinal drinks and ordered whisky. In somewhat less than a hundred thousand loosely chosen words I described my encounter with the supervisor. Paul sipped his drink thoughtfully.

"Now that you've started talking for the boys, why don't you keep on doing it?" he asked.

"Just let anybody start pushing them around," I said. "Just let that steward Flack—"

"I don't mean that," Paul said. "I'm thinking of jazz musicians in general. Ever since I've known them they have been playing in night clubs and saloons and dance halls, being hired with no one to bargain for them, being fired with no one to argue for them. Like most artists they are inarticulate outside of their own medium of expression. A lot of articulate people are enthusiastic about our music, but is there a jazz man who can talk for his music, bargain for it, publicize it?" I had to admit there wasn't.

"Why don't you be it?" Paul asked me. "You know the musicians, you people like me, who want to do something for jazz, and you have hernia of the larynx. You couldn't stop if you wanted to. Why don't you your monologues to a good purpose?"

We drank a toast. "To the emotion of jazz," Paul said.

That fall McKenzie turned up job in Greenwich Village, at a place called Nick's.

Nick Rongetti had a long chirp of ideas. He liked jazz and a lot of it, created by the best men available. His club was a place on Seventh Avenue; it was drawing audience downtown.

"I hope you'll be happy here," Nick said.

"Now get up on the stand and play."

For the next eight years I was out of Nick's oftener than the moon. He fired me regularly—it may have been something to do with sunspots—he hired me on schedule. He was justified in bouncing me, and he was always logical in hiring me again. We had the same point of view—believed in jazz and wanted other people to believe in it—but Nick had one thing I didn't have: a piano. I had another.

"Play the music," Nick said.

"Play the music and talk about it," I said. "Talk about it to the right people. Get pictures and articles in newspapers and magazines. Get it on the radio."

"Get up on the stand and play guitar," Nick said.

Between sets I talked with customers, particularly those whose words or spoken word might help the cause. Sometimes I considered that my job at one of the tables was doing more jazz than my appearance on the stand. Nick disagreed with me. "I want you on the stand," he said. "I am not here to talk." I tried to explain that because of talk the club might be mentioned in newspaper columns that make the music better?" he said.

Acquiring Ideas of Promotion

One night I met a quiet young fellow with round spectacles who said he was looking for a magazine company name was Ernest Anderson.

"How can this music be promoted?" I asked him.

He told me. I missed one voice and part of another. "You're fired," Nick said. Anderson and I became friends.

In the summer of 1941, I, Russell and I went to Chicago to play the Brass Rail. Pee Wee stood Josh Billings and Slim Kurtzman. They were sharing an apartment. Kurtzman drove to the Brass Rail to meet me and take him home each morning. I always stopped along the way and got milk from the driver of a milk wagon. One morning they found the front of a large apartment house. The driver was in the building; the driver for him to appear, getting sleepier. Finally they decided to get a few quarts and pay the man the day. Someone saw them as they went away, took the license number and telephoned the police.

Half an hour later the two were in jail. They got word to me and I telephoned Uncle Dennis.

"Why did they want to drink?" I asked. "If it was liquor it was easier to straighten it out, to understand the need for a drink at half past four in the morning. Well, I'll do what I can."

By the time the case was called o'clock that night everything was arranged. Pee Wee was a pathetic

was what I was worrying about. en," I said. "I've got an idea. st forget about the book and get right away."

no." She rubbed her cheek on ulder. "I'd never forgive myself. ustn't ever, ever let me interfere ur work." voice was hushed, her eyes looked mine. It was a solemn moment, it. But I looked at her and I t kid about it. I felt cold inside. ouble was, she believed in it. my hands on her shoulders and at her.

slick, new, shiny. It had a piece paper in it.

wasn't anything on the paper.

trouble with writing a book to be that you had to have some- o write about. And my mind exactly like the paper. Blank. I smoking cigarettes until the sun wn. Long shadows crept across nsward, and the little birds twit- pily, going to rest.

ttle birds wouldn't have known riter if they'd met one in their tree. In their place, I'd've twit- o.

ed out a sigh and wafted it over riter, and there was the sound taps outside my door. Myra. t about chasing her away. I about pretending to be sick.

Then I thought what the hell—it had to come sometime.

The door opened softly and Myra put her head in. Her eyes were big and a little scared.

"Herb," she whispered, "can I—come in?"

I looked at her and for a minute I didn't say anything. She was awed and happy and there were candles burning in her eyes. I was the guy who'd lighted them. I was the guy who was going to blow them out.

I said, "Sure. Come on in."

She came into the room on tiptoe.

"How—how are you getting along, Herb? Is it nearly done?"

I didn't look at her eyes. I watched the topknot. It wiggled just a little with excitement. I shoved my chair back.

"Sit down," I said.

She sat down on the edge of a chair and leaned forward, looking at me, kind of breathless.

I said, "Listen." I was having trouble with my voice. "I've got to tell you something."

"Well?"

I cleared my throat. I didn't look at her. "There isn't any book," I said.

I waited. There was one of those silences. The heavy kind. Then she said, "I don't understand. You told me—"

I lifted my shoulders and let them drop again. "I know. I was a little crazy, I guess. But I wanted you to think I amounted to something."

"You mean you—lied?"

I couldn't think of any other word for it.

"I wanted you to marry me," I said.

The sun had gone down. The room was full of shadows. Everything was very still. I looked at the floor and waited for Myra to say something.

I wasn't feeling so good.

I said, "I did it because I love you."

She said something then. "Oh. I see," she said. "You love me." She made it sound like I'd insulted her. There was frost three inches thick on it. "You love me. So you lie to me. You humiliate me before James."

I raised my head and looked at her;

The best brushes have DU PONT NYLON BRISTLES

SPORTING ODDS

One of the most unusual forward passes in modern football story occurred during the University of Detroit—Central State teachers game in 1941. In the fourth quarter, Detroit halfback mer Madarik took the ball from center and stepped back to ss. His pass was intended for Art Link, Detroit end; but just Madarik released the ball an opposing player rushed in, and e ball was partially blocked and deflected upward and rward. Madarik rushed down the field, caught the ball ten rds from where he had thrown it and raced 60 more yards for ouchdown.

Clem Stava, Cicero, Ill.

her mouth was tight. There was pink in her cheeks and her eyes stared at me.

What I mean, she was mad.

She said, "How do you think I'm going to explain this to James?"

I kept looking at her and I could feel something starting inside me. I tried to hold it down but it kept boiling and boiling. My ears began to feel hot and my hands trembled a little.

Myra said, "I'll never be able to face him after this."

I took deep breaths. I counted ten. I counted ten more, just to be sure. "That's all you're worried about, isn't it—what James will think. Why don't you marry him, then?"

Her cheeks and her eyes were blazing. She was burning up, by the numbers.

"All right," she said. "If that's the way you feel about it, I will. At least he's a gentleman. He wouldn't lie to a girl."

I said, "Ha. Has he ever told you about his war experiences?"

She made a kind of choked sound and jumped up from her chair. Her hands were clenched into fists and she was staring at me, very mad.

I stared back, just as mad. "So go on and marry him. I wish you luck."

James was the one who'd need the luck.

Myra stood there looking at me for a minute longer. She started to say something, and didn't. She bit her lip. Then she turned and went out.

As soon as she was gone I got up and started circling the room. For the first five laps I didn't think anything. I just walked and was mad.

The next five I thought about Myra. She'd got me into the whole thing. All I wanted was to get married and live like anybody else, but she had to have some kind of genius around the house. I had to do something big.

Well, I'd done something big. I couldn't have made a bigger bust if I'd taken special exercises.

On the eleventh lap I looked out the window. Myra was down on the terrace, with James. She was standing close to him, looking up into his face. I didn't have to ask what they were talking about.

Eight laps later I was almost ready to feel sorry for James-boy. He was stuck with it now. He'd never have a peaceful five minutes again. I could see just how it was going to be—right up to the time he went into a sanitarium with his nerves shot, his publishing business shot, and his wife looking for another sucker.

Somewhere around the thirty-seventh lap I got my idea. It would take a lot of work, but who cared about that?

I was mad enough even to work.

A COUPLE of months later I was sitting in Harry's Bar when Myra came in. She stood by the door, looking around. I had an idea whom she was looking for—me.

I concentrated on my beer, hard. The bubbles kept breaking away from the side of the glass and rising to the top. The juke box played something soft and dreamy and I moved my glass around, making wet circles on the table.

And Myra's voice said, "Herb."

I looked up. She was standing by my table and when I looked at her something happened to my breathing, the way it always did. I hadn't seen her since that day at James', two months ago. We were finished, through, kaput. I didn't have a girl any more. Only, my breath hadn't found out about that yet.

"Oh," I said. "Hello, Myra." I tried to think of something else to say but all I could think of was, "Sit down."

She sat. We looked at each other across the table. She had combed out her hair; the topknot was gone. The juke box played it soft and low, with tears.

"Herb," Myra said. "I—" She hesitated; then it came out in a rush: "James showed it to me. Yesterday. Your book, I mean. He thinks it's—wonderful."

Maybe I jumped a little. I hadn't

thought about him showing it to me. But I could see how he'd think good idea. I borrowed one of them to fit the spot.

"Ah," I said.

I drank some beer. I looked and then down at the table. "You think of it?" I said.

"I thought it was wonderful. Her voice was kind of strained. It will be a big success." I waited, "I had no idea you could write that, Herb."

It was a surprise to me, to me, didn't tell her that. I waited.

"I want to congratulate you. She stopped. Her eyes looked at me. I kept on waiting. She said, 'I then she started to cry.'

"Hey!" I said. That wasn't been waiting for. "Come on, said. "Cut it out, will you?"

She cried into her handkerchief. It was one of those little ones, all soaked. I gave her one of mine.

"Quit it, now," I said. "What's the matter with you, anyway?"

MYRA blew her nose. It was one of those little ones, all soaked. I gave her one of mine. "Herb," she said. She stopped. "Am I really like that?"

I played it safe. "Like what?" "That awful woman. In your head. She sniffed. Her eyes looked at me and weepy. "The one who drove me into a sanitarium."

I thought about libel suits and "Of course not," I said. "You get that idea?"

She looked at me and started again. When she could talk to me. "Don't try to be kind, Herb. I do everything you said about her." She came across the table and touched my hand and went away again. "Herb—ever forgive me?"

I raised an eyebrow at her. "You? Why? What difference does it make to you?"

The tears had made streaks on her face. Her mouth was trembling. Her eyes were small, like a mouse.

She said, "Bub—because I love you. I want to marry you."

I set my glass down and stared at her. "You? Want to marry me?"

She nodded. I put on more catch up. "But what about James?"

"James!" she said. "I've never anything about James. It was you, Herb. Ever since college."

I blinked. I shook my head. I was always yapping about him.

"Because of you," she explained. "Cause I wanted to be proud of you. Cause I love you."

I looked at her hard. "You with him on the terrace? You weren't just talking about the problems of the postwar world."

"No," she said. "We were talking about you."

"Uh-huh."

"He said you were a no-good loafer. He said you were just a paper bum. He said you were a flusher and a liar." She paused at me. "So I slapped him."

I stared at her for a minute. I began to grin.

"For that alone," I said, "I'd have married you. She leaned over toward me. I said.

She did. Several times.

"Herb!" Myra said. "Oh, don't you go to bed. I'm going to write a story about you. I'm going to write a story about a girl who likes to take care of her babies."

I watched her eyes while she said, "Oh."

She said, "I can't wait to read it. I made a note of it."

THE END

In one day, one scheduled airline dispatched planes from one airport carrying these varied commodities as Air Freight:

The U.S. Leads the World in Air Freight

Scheduled Airlines of the United States operate the largest freight transportation system in the world. A fleet of 700 planes, all of which carry cargo as well as passengers, plus a fleet of 50 all-cargo planes, provides air freight service between hundreds of communities served by these lines.

Over the times since 1941 the scheduled Airlines have reduced freight rates, including 25% reduction effective August 1, 1947. Thousands of tons of goods today are moving on regular schedules at rates as low as 16¢ per ton mile. This air-transportation is saving shippers thousands of dollars in scores of ways...from packaging and handling economy to elimination of warehousing and speed-up of turnover.

Air freight is the newest arm of America's strength in the air. Organized today by the nation's industrial enterprise, it is alert and ever ready in case of national emergency.

You get there quickly, comfortably and economically when you go by *scheduled* Airline. Passenger fares are lower even than before the war. Air Mail is only 5¢. So, travel, mail and ship—by air! Call the nearest Airlines office or your travel agent for reservations. This advertisement is sponsored by the nation's *scheduled* Airlines and leading aviation manufacturers.

Air Transportation Strengthens America

FOUNTAIN OF YOUTH

BY TED SHANE

A boy's dream come true: A banana split garnished with three different kinds of ice cream, and in reserve a Sambee flanked by two flavors of ice-cream

Could you drink a Sambee or a Skyrocket? Or perhaps you'd prefer a Moron's Delight. They're all super for hot

SHOULD you find yourself on New York's Fifth Avenue next Thirst-day and should you have the price, you can try a Sambee. That is, if you want to. It's pronounced Zombie, and while it isn't alcoholic it *is* intoxicating.

Right before your eyes, the soda jerk—pardon, dispenser (remember we're on Fifth Avenue!) will scoop a mess of deliciously crisp-looking bits of fresh pineapple, peaches, berries, oranges, apples—whatever's in season—into a tall, cool glass. Over this he will squirt a dash of sweetening, then two scoops of French ice cream or sherbet. Next he will fill the glass to the brim with freshly squeezed orange juice, hook a hunk of orange to the side—and serve. You can see and eat this minor miracle of hot-weather concoctions at the original H. Hicks and Son's Aerated Water and Soda Bar, Fifth Avenue.

While there are those who will contend that the absence of carbonated water in this delectable ambrosia disqualifies it for such a title, VIPs (Very Important People) like Al Jolson, Robert Cummings, or the Gish Sisters, who drop in for their daily Sambee, will tell you it's the supersoda—the drink of the future.

There is nothing cheap about the Sambee. It sets you back fifty cents. Sundaes run a dime less and the good old-fashioned ice-cream soda these days costs thirty and thirty-five cents—the latter for fresh

fruiters. Let us remember we are taking America's most democratic drink on Fifth Avenue, smack among the Tiffanies and the Astorschnozzes. Ambrosia in crystal goblets on turbine yachts never did come cheap. And let us remember also that you can usually find a soda jerk of great sensitivity and magnificent imagination at your favorite corner soda fountain bar—where ambrosia retails at comfortable prices.

In Hicks', the daytime is devoted largely to feeding sodas and food to anyone with money, but if you drop in of an evening you'll find yourself rubbing shoulders and begging straws of a high-hat, a general, a plain ordinary dignitary or Mrs. Roosevelt. Or you can hear Fred Allen sucking the lecs of his chocolate soda noisily, while he argues violently with Oscar Levant, who takes the same. Jim Farley also takes chocolate soda; and as soon as Joan Crawford hits New York she makes a beeline for Hicks' and orders two chocolate mint sodas with collee ice cream—to catch up on what she's missed in Hollywood.

But they, Bing Crosby, Doug Fairbanks, Jr., and Walter Winchell, alone do not consume the four thousand sodas Hicks' puts out a day—more on sweltering, or parade days. Drop in anytime after eleven of a morning and you'll see them lined up three deep behind the fountain—lady shoppers at noon, debs after school, and people like you and

me all the time. Night-club owners in the neighborhood come for a really unadulterated drink, presumably to taste good ice cream, and Hicks' lacks the nostalgic comfort of a small drugstore soda fountain, it is a sort of unholistic Stork Club.

While it has been logically assumed that Hicks invented the ice-cream soda, the drink has little longer history. Historians apocryphally attribute ice cream to Nero, who dispatched foot-run slaves to the high Alps on hot summer days to bring back snow, over which he poured honey and juices. Marco Polo is said to have brought the recipe for "milk" ices from the Orient along with spaghetti, and from Italy it went to France where it became "butter" ice, by the inclusion of cream. Charles I imported it to England via a Frenchman named Di Marcis, tried to keep it a secret, but the cook blew his big mouth and it became a national delicacy.

On May 9, 1777, one Philip Lenzi, confectioner, told his patrons via the New York Gazette that ice cream might be had at his shop "most any day." A few years later Dolly Madison got into the act by serving strawberry ice cream at the White House.

In 1838 or '39 a Frenchman named Rousseau ran a perfume shop in Philadelphia along with a soda fountain, dropped some lemon squirts in his seltzer water and the new drink became so popular

that its fame spread as far as New York. The drink became iced and multi-flavored, and was dispensed from fountains as elaborate as a Mohammedan temple. "Youth, as it sips its first glass," advertised a fountain of the times, "experiences sensations which, like those of love, cannot be forgotten."

Oddly, it took nearly sixty years before the ice cream met the soda water. One Robert Green, while selling the soda of the day—sweet cream, artificially flavored sirup and marble-dust water—in 1874 at a Philadelphia fair, ran out of cream. He fetched in some ice cream from a near-by confectionery store and since his customers wouldn't wait for the stuff to melt, threw it recklessly into the drink. First day's receipts were only eight dollars, but at fair's end, he was raking in all of four hundred. And the ice-cream soda had been invented!

How the Sundae Was Invented

Almost as many claim the invention of the sundae as do the soda, including the elegant Hicks. Most authorities agree that the sundae came into being when a sodaman found himself out of carbonated water on the Lord's Day. Ingeniously he thereupon merely covered the ice cream with sirup and served it "dry." It was only a step thereafter into the world of the banana split, with its heaping masses of ice cream, crushed fruits, nuts, whipped cream and cherries.

And of the Flaming Fudge Sundae. Yes, if you find the right dispenser, he will whip this matter together for you. All he does is saturate lumps of sugar in brandy, embed them in marshmallows which are placed atop a hot-fudge sundae. The sugar is then ignited, and the heat melts the marshmallows which lava down the sides of the fudge, making a very beautiful Vesuvian sight indeed, and a warming thing on a cool day, or vice versa.

A Hicksian soda, made properly with crushed fruits or sirups, ice cream and whipped cream, becomes not only a delight for the eye and taste but a pretty nutritive dish. Dietitians have found a dish of vanilla ice cream contains not only the best available proteins you get from milk, but plenty of vitamins from A to Whee, the latter being the morale vitamin. Some think ice cream may have won the war. "I don't mind the beans," cried a Navy man, "as long as they top em off with ice cream!"

There are nonfattening sodas, as well as fattening ones—one contains sherbet, the other ice cream—and it is possible to go on an ice-cream diet and lose weight, while keeping up a personal parkle. A few years ago a dreamer put spinach ice-cream soda on the market. Youth, alas, said it was spinach, and he pox with it—but in time the human race may become lotus eaters and such meal-in-itself may return.

Tastes among Hicks' customers run about the same as they do on Main Street, or at the giant milk bar outside most American cities. Charlie Lesh, Hicks' veteran sodaman, says the chocolate soda is the favorite, with coffee and strawberry following hard behind. Men favor chocolate; women coffee; and the kids go for the fruit flavors, or affairs called Hubba Hubba, sundaes in which ice cream is piled high with fruits, nuts, chocolate shot, whipped cream and the kitchen sink.

Above all, Lesh and his fellows know how to make a soda properly. This consists of putting one and one-half ounces of crushed fruit or sirup into a sixteen-ounce glass, stirring in a soda-boostful of ice cream, whipped cream or coffee cream. The glass is then filled three fourths full with the fine stream of the carbonated water—and two scoops of ice cream are floated aboard before the glass is filled to the top with the coarse stream (great care

being taken to hit the side of the glass, as the cold water hitting directly on the ice cream would form ice crystals on it). Lastly the angelic brew is garnished with whipped cream.

Nourishing floats, milk shakes and malteds are made in the same way, except cold milk and chilled sirups and more ice cream are used in place of carbonated water, and the drink is mixed until the container frosts up. And, of course, freezes are made with soda water, sherbets and fruit juices entirely.

Nothing, of course, is quite as hard on a busy sodaman as a creative customer, who dashes in at rush hour and cries: "I want a root-beer soda, with crushed pineapple, cherry and vanilla ice cream and some walnuts on top of the whipped cream!"

Such a zombieish concoction is altogether possible, and in all probability would be most delicious. I see no reason, therefore, why I shouldn't urge you to ask your dispenser for any of the various

sodas for winter fare; and now milk, vanilla ice cream, coffee sirup and malted milk heated in the automatic heater make a very smooth thing indeed.

In the float line, you might go for a Miss Simplicity At Sea—a cunning mixture of egg, vanilla ice cream, vanilla sirup, whipped cream and ball of floating ice cream; or for a Crème de Menthe freeze—juice of half a lime, shaved ice, a couple of dippers of lime or fruit sherbet, soda water, a severe shaking up, after which more sherbet is floated alongside a sprig of mint. And a cherry, with a stem on it—for easier fishing.

Nor must we neglect the malteds, such as the old stand-by: the chocolate with egg; the butterscotch, the honey malted, made with fresh honey; and the fruited egg malted, which not only has an egg, raspberry sirup, ice cream, milk and two standard spoons of malted, but a few drops of angostura bitters—presumably to remove that ice-cream hang-over you may have picked up the night before.

"You'd be surprised to know how many old laws are still on the statute books!"

combinations of chocolate soda—chocolate mint with coffee cream, very cooling; bittersweet soda, made with bitter chocolate; a Boston Roof, bittersweet with salted peanuts on top; chocolate banana; milk chocolate soda; or ginger chocolate. Not long ago a woman asked for such a drink at Hicks', said it was a favorite in her day. Obliging the boys got it up for her. I tried it and found I was a happier, less thirsty, zingier man for it!

The Hoboken Soda—and Others

Among other flavors, Hicks' gets up a Hoboken soda, which is a strawberry soda with coffee ice cream; and an Orange Glow, which is orange juice, orange ice cream, and cream whipped up in the mixer and is a lovely sunset-colored and thirst-wrecking thing. Or you can dream up and name them yourself: pineapple and maple-walnut ice cream; fruit salad soda; pineapple coconut; lemon banana; or blueberry soda with chocolate cream. Yes, you can even ask for a hot soda and not get a dirty look. For some time fountain geniuses have tried to make "hot"

Which brings us to the eatin' dish of the soda world: the sundae. Basically the sundae consists of two scoops of ice cream, surmounted by sirup, and/or nuts, marshmallow and/or whipped cream and cherry, employing any or every flavor of ingredient the taste buds yearn to bloom for.

Glamor dish of the sundae world is the banana split. Hicks' charges seventy-five cents for their split, and you can name your own ingredients, or which side you want showing on the whole banana which is used. Aboard this are perched three balls of multiflavored ice cream, then three different crushed fruits, fresh or in sirup, go on this. Whipped cream festoons these yummy mountains (wow!), nuts snow on the cream, and cherries top it all. Eight hours are required to consume a Hicks' banana split properly, which accounts for the excessive charges (they include labor and fountain space rental, remember!).

Like the sea, the banana split is never the same—you can call for any of the twenty-seven flavors of ice cream and you can have them festooned with co-

conut, blueberries or peanut brittle, in case you have good bridgework. If you like your bananas vertical and not lying down, you will want a Merry-go-round Banana Royal in which the banana is quartered and laid flat alongside the mounded scoop of ice cream. Or you can demand that your banana be "wheel" sliced, or you can have it pulped and strained for all I care. The important thing, be it a Green-Eyed Monster Split—naked pistachio gleaming wickedly between innocent vanilla and heaps of whipped cream and stuff—or an Orange Malted Banana Royal—orange sections and orange sirup and orange pineapple cream—it all tastes the same—wonderful!

The parfait, of course, is the sundae with a French accent. Served in a sort of glass flower vase, instead of a banana split or sundae tulip dish, the parfait stems from France, and in it several layers of variflavored ice cream are alternated with crushed fruits, then topped off with the inevitable whipped cream and cherry. This vertical sundae is the world's most beautiful sight, and rivals even such Technicolored eye-and-taste dazzlers as Turner's Sunset and the Cherry Strawberry Pineapple Delight, which includes besides normal fresh fruits diced green-dyed pineapple. And any drink you desire may be frappéed. The frappé is a float in which the amounts of milk and ice cream are reversed, and in which crumbled cookies, wafers or macaroons are mixed.

Try These on Your Appetite

As with the soda, the variations on the sundae theme are also endless. Roasted cashew nuts on fudge and ice cream make up well; as does the coconut tangerine job which you might get in a Miami version of Hicks'. The St. Patrick's sundae is good on March 17th—green mint ice cream with hot fudge; and the Old Glory, or Red, White and Blue sundae—vanilla and strawberry ice cream, surmounted by cherries, and blueberries à la Betsy Ross—it's patriotically delicatessen on the Fourth of July!

Or adventuresomely try a Newport sundae—chocolate sundae with bits of milk chocolate, a coffee room—coffee ice cream and sirup with macaroons; or a coffee salted-almond sundae. However, we suggest you be specific should you want to try out something called a Thrill of a Romance, a Skyrocket or a Spell-bound sundae. These dishes are usually locally named as are the Scotch sundae—butterscotch and peanuts atop plain vanilla, with marshmallow and no cherry; or the Atomic sundae, which has cropped up most scientifically.

The Atomic contains four scoops of ice cream, crushed cherries and pineapple, butterscotch, disintegrated cream, all sprinkled with chocolate "shot," presumably the atoms.

It is so named because it probably not only blows one apart but also inspires the Atomic ache. And there's the Holy Cow. This awesome skyscraper evidently needs two stomachs to hold it, for it contains several balls of ice cream each poised on the other, drenched with so many ingredients and whipped cream that the purchaser exclaims, "Holy Cow!" should the dispenser have done his work well.

These days the bobby-soxer is demanding more and more on her dish. So don't be discouraged when on ordering a dish that contains marble-nut ice cream, pineapple pistachio ice cream, tutti-frutti ice cream, crushed cherries, uncrushed blueberries, Nabiscos, black walnuts and a rasher of bacon on top of whipped cream, the sodaman tartly asks, "Can you come in next Wednesday for a fitting?"

Remember, you may be an Escoffier of the Fountain of Youth and have a drink named after you!

THE END

TOO MUCH BRASS

Continued from page 13

of legislation. They have no right to operate as an organized pressure group."

Representative Hoffman was even more critical. "The job of the military," he said, "is to fight wars and to train and make plans when there isn't any fighting. But the military aren't satisfied with that; they are trying to take over the country. In my committee, we have had a great deal of trouble with generals and admirals. They are constantly sneaking around trying to find out who is going to testify on matters that we are investigating. Then they go to these witnesses and attempt to put pressure on them to change their testimony."

"Only the other day, a couple of officers tried to tell me I couldn't have a certain file on an officer who is being promoted in spite of a shabby record. We have evidence that this officer perpetrated a dishonorable deed; veterans who served under him gave us the facts. But the War Department said we couldn't have it."

"When we insisted, the Department then claimed the file couldn't be found. We asked who had gotten up the file, and the answer was, 'We don't know.' I finally got fed up and told them, 'You deliver that file by Monday morning or we will subpoena the Secretary of War, the General Staff and every other brass hat down the line until we get what we're after.' We got the file without further monkey business."

Questions Annoy the Military

Representative Reed gave voice to a complaint that is very general among members of Congress. "I particularly resent the attitude of the old-tie military toward Congress," he declared. "They merely tolerate us because we provide their appropriations. But when we want to know for what these huge sums are to be spent, they get very annoyed. Their whole attitude is that they are doing us a favor and that it's none of our business what they do with the money we provide."

"Another thing I emphatically do not like about the military is their propaganda in our home districts. We are flooded with letters from constituents writing that some general or admiral has told them this and that about some issue being considered by Congress. My answer to such letters is that it is Congress, and not generals and admirals, that

makes the decisions on such matters."

Other Congressional leaders were equally angry, were less outspoken from the record of the session it was that a deep-seated antipathy toward the military exists on Capitol Hill, and if the world situation were not so menacing, the military would have caused a lot worse than they did.

As it was, they took a severe drubbing. Their appropriations were drastically reduced and, with the exception of a watered-down unification bill and an overdue promotion-reform measure, the legislative program got nowhere. Universal military training, keystone program, was deliberately pigeonholed.

To sincere friends of the armaments this situation on Capitol Hill is extremely disquieting. It is very far from what may happen in the future, particularly if and when the threat abates. If the attitude of the present Congress is a straw in the wind, the Army and Navy face very rough times as peacetime organizations. Their methods and their operations in policy matters, the military have lost much of the good will won during the war.

Nothing demonstrates this more than the universal military training bill. Numerous national and local groups have repeatedly shown majority support for this measure. Yet, today, it is nearer adoption than when it was introduced in Congress nearly three years ago.

The failure of this vital defense bill is due in a large measure to the military themselves because they supplied some of the most powerful opposition ammunition.

A graphic instance was the dispatch of the effectiveness of the powerful in favor of universal military training. The President's Civilian Committee, made up of distinguished educators, clergymen and other leaders, was unqualified in its endorsement of the need and value of UMT. The report was the single most influential declaration of UMT. It made a tremendous impression both on the country at large and on Capitol Hill.

The obvious cue for the War Department, after the publication of this report, was to follow it up aggressively with other civilian backing, and there is abundance in the country. Instead, the first thing the War De-

"They won't be such good friends after they find out neither ever heard of the other"

Keeps your motor clean as a whistle

did was to unleash a swarm of generals to harangue the populace with ghosted speeches. Generals no one had ever heard of outside of Army circles took to the forum and the air with ponderous generalities that convinced no one of anything.

Apparently, it never occurred to the military that generals are supposed to be in favor of military training. Or that they have a direct personal interest in the matter. The more men under arms, the more wartime generals will keep their jobs.

But the alert opposition didn't miss these points, or the opportunity to make the most of them. The speeches were a godsend to UMT foes. It enabled them to shift public attention from the civilian report to the military and give substance to the charge that the military is "attempting to obtain control of our youth." The result was a counterbarrage of statements and declarations that cracked around the heads of the military like drumfire.

The Case of Central Intelligence

Another striking example is the history of the protracted effort to establish a permanent Central Intelligence service. The crucial need for a unified Intelligence organizations in these ominous times is readily conceded on all sides. Such an agency has been urgently advocated by all the civilian and military chiefs of the War, Navy and State Departments since 1945. Yet the proposal languished apathetically in committees in Congress. The underlying reason for this dangerous procrastination was opposition to military control of the proposed agency.

This attitude was voiced by Representative William Jennings Bryan Dorn, South Carolina, in an executive meeting of the Expenditures in the Executive Departments Committee. A general was testifying on the budget of the Central Intelligence Group, a War Department agency. The general stressed the need for adequate funds to ensure effective Intelligence functioning.

Dorn, an AAF enlisted veteran who fought in the Battle of the Bulge, heartily agreed with that. But he hotly challenged the competence of the military to direct a unified Intelligence system.

"We got plenty of information about the enemy down in the lines," Dorn told the general. "But you generals up above never did anything with it. We knew the Germans were going to attack, but you did nothing about it. That's why there was a Battle of the Bulge."

So the essential defense measure continued to gather dust in chary committees. Representative Hoffman's committee finally settled the matter by literally booting the military out of the way—and out of control. The committee wrote a provision into the bill expressly requiring that the director of the unified Intelligence service must be a civilian appointed by the President. And to further guard against military officiousness, the committee also added a provision prohibiting the agency from exercising police or internal security powers.

Thus, stripped largely of its militaristic features, the plan finally was approved by Congress in the last days of the recent session.

A number of government agencies have had acrimonious undercover collisions with the military. Chief among these is the State Department. Since the incumbency of Secretary Marshall, working relations between State and the military have appreciably improved. The brass respectfully keep their distance with the former Chief of Staff. But under former Secretary James Byrnes, relations between the State Department and the military repeatedly verged on open warfare.

One instance was the announcement by the Army Air Forces of plans for a world-girdling flight by a squadron of B-29s. The provocative project was proclaimed at a time when Byrnes was engaged in delicate negotiations at a Foreign Ministers conference in Paris. Without even troubling to inform the State Department, the AAF blandly announced the scheme at a big Pentagon press conference.

Acting Secretary of State Dean Acheson was furious. He blistered the military privately, and publicly made it clear that the AAF had another think coming. They hastily dropped their grandiose adventure and nothing has been heard of it since.

The oldest naval officer on active duty, Admiral William D. Leahy today is not only one of the most potent military figures in Washington, but he also wields influence in the personal counsels of President Truman on a wide range of subjects, particularly foreign affairs. Under Roosevelt, Leahy was no more than a liaison officer between the White House and the military. That is his true function as Chief of Staff to the President, a wartime-created job.

But under Truman, Leahy has become one of the President's most trusted personal advisers. The one-

time ambassador to Vichy accompanies the President on practically all his official trips, and is an invariable guest at intimate gatherings, particularly on the Presidential yacht.

Leahy is also credited with being largely responsible for the President's insistence that the U.S. sell arms to Latin America. Byrnes and Acheson opposed this on the ground it would lead to an armaments race. But Leahy persuaded Truman to press the matter on Congress. It failed to act, however, despite a special message and several speeches by Truman on the matter.

Leahy affects a forbidding aloofness toward newspapermen in general. But privately, he maintains close ties with several correspondents who specialize in foreign affairs. During the period last year when relations between Byrnes and Truman were strained, friends of the former charged Leahy with instigating some of the news accounts.

Immediately after Byrnes' return from the Foreign Ministers conference in Moscow, Truman summoned him to the White House yacht. On the ship, Byrnes encountered Leahy, who demanded, "Jimmy, what are you trying to do, appease those Russians? You're being too easy with them. The thing to do is to take no foolishness from them."

Byrnes bluntly retorted that he was Secretary of State, and he would let the aged sea dog know when his advice was wanted.

One thing that kept relations between the State Department and the military on edge was the persistent airing by some military figures of opinions and judg-

ments on delicate foreign situations. Such conduct is not only contrary to U.S. tradition and deep-rooted sentiment, but also to military statutes. Army regulations specifically prohibit military meddling in public affairs.

Army Regulations 600-700 states: "Members of the Army of the United States usually appear before the public in an official or semiofficial capacity and so contribute to the impression formed by the public. Consequently, care will be taken to differentiate between personal ideas and opinions, and official plans and purposes. Furthermore, their military status limits the extent to which members of the Army may, with propriety, make public pronouncements on political, diplomatic, legislative, administrative measures, and on matters the treatment of which tends to prejudice discipline, to involve superior officers in controversy, to interpret official publications, or to define military procedure."

Despite this express prohibition, brass hats have sounded off on policies and problems of critical national moment. A recent case was a speech made by General Mark W. Clark, at Fort Lewis, Washington, following his assumption of command of the Sixth Army. Addressing the massed troops over a loud-speaker system, Clark declared, "We are not able to see eye to eye with Soviet forces," and demanded a tough policy in dealing with them.

Douglass Welch, staff correspondent of the Seattle Post-Intelligencer, reporting the speech in a two-column front-page story, stated, "Clark's frankness startled even newspapermen."

Unquestionably, Clark has abundant grounds for feeling as he does. Also, there can be no argument on

the accuracy of his charges against the Soviet that isn't the point.

Clark is an Army officer; a senior command four-star rank. As such, it is not his province to speeches against a nation with which the United States is nominally at peace. That would have been unthought of a few years ago. It is contrary to American tradition and practices, as well as expressly prohibited by regulations. Were an Army officer of lesser rank to disregard his obligations in such a manner, he would be subject to court-martial action.

Further, as an officer, it is Clark's duty to obey regulations and orders. It is questionable whether disregard of mandates by a senior officer is contrary to discipline in lower echelons. Every military officer stresses the necessity of officers setting an example of meticulous obedience to orders.

Apparently some of the military have resorted to stratagems to safeguard themselves against charges. These have been transparent devices, but at least have indicated an awareness of the propriety of regulations. The most common of these dodge trite introductory remark, "I am voicing only my personal opinions and not the official views of the War Department."

Lieutenant General J. Lawton Collins, as I understand it, used this dissimulation in a talk in which he lectured a civilian audience on the role that the military have in the conduct of the nation's foreign affairs.

It was in this speech that Collins startled his hearers by observing, "Now let us look briefly at the situation as the War Department sees it today." Collins, gallant former commander of the V Corps was by the grins of his audience. It never occurred that he had mocked his own words in first announcing he was not talking as a War Department spokesman and then declaring that he would present the War Department's views.

Marine Corps Spokesman Starts Something

During the hearings last winter on the armed forces unification bill, General A. A. Vandegrift, Marine Corps commandant, prepared a 24-page statement he proposed to make before the Senate Armed Forces Committee. The measure was a compromise worked out by the War and Navy Departments after they clawed each other to a standstill in an unseen and-dog fight on the original far-reaching measure. As part of the compromise, both departments agreed to give it full support. It was under this agreement that Vandegrift, an obdurate foe of unification, submitted his lengthy, and highly critical, opus to Navy Secretary James Forrestal.

Forrestal whittled the statement down to size. Among his deletions was an angry charge that the Army had a secret plan, in effect, to scuttle the Marine Corps if the unification bill went through.

Vandegrift delivered his statement as edited by Forrestal. But the Marine "underground" has fully primed members of the Senate committee with what had been deleted from Vandegrift's statement. And when he finished making his innocuous statement, the senators asked questions which enabled Vandegrift to make the provocative accusations against the Army that his superiors had censored.

The result was front-page headlines in every newspaper in the country, followed by numerous editorials criticizing the President, Forrestal and others for enforcing unity among the brass hats on the stymied vital defense reform. On Capitol Hill, legislation was again thrown into jeopardy that can be overcome only by the utmost effort.

The nation is justly proud of every competent military force. From George Washington down, many have been elevated to the highest offices. But always it has been as civilians and not as generals or admirals.

Throughout the nation's history, it has always resented and resisted any manifestation of military meddling in public affairs. The Constitution provides for civilian rule, and by tradition and by that is the American way of life. In all the brilliant eras of U.S. history, there has never been a general on horseback.

These are perilous and uncertain times. Our forces must be strong and alert. Above all, we must have competent military leaders in whom the nation has the utmost confidence.

There are admirals and generals who, by their very disregard of the national way of life and their actions, are undermining that essential confidence directly impairing the strength of our military establishment. These brass hats are doing the nation a disservice in many ways.

THE END

The "Dutch Boy" Stepping Out with his New Blended Paint

In Colors or White...It's Blended Just Right...To Keep Your Home Bright

The "Dutch Boy" takes a step in the bright direction with his new *Blended Paint*.

And a colorful step it is . . . bringing you the famous "Dutch Boy" quality in lovely, sparkling tints and gay, glossy *Trim Colors* as well as a dazzling *Bright White*.

Each is specially *blended* by the Boy in the Blue overalls to *stay* beauty-bright . . . to *keep* your home looking right.

Blended to Protect Beauty **3** Ways...

House paint has three different jobs to do. So, the new "Dutch Boy" Paint comes in 3 different blends. Each blend does a special job especially well.

(1) Blended White *stays* White. (2) Blended Tints *stay* bright. (3) Blended Trim Colors *stay* Bright.

The "Dutch Boy" has never dipped his brush into other quality paint. It is the result of over 30 years of continuous, outdoor paint tests . . . the longest research project of its kind.

So remember, when it's a question of *weather*, it isn't a question of *which*. Now as always . . . in the new blended colors and white . . . "Dutch Boy" is *Good Paint's Other Name*.

THE MAKERS OF THE FAMOUS "DUTCH BOY" WHITE LEAD

1. Bright White, Blended to Stay White:

It goes on white and it goes on staying white, because "Dutch Boy" Bright White is *self-cleaning*! It permits rain to wash away dirt. Covers exceptionally well, and gives a dazzling, durable exterior finish.

2. Lovely Tints, Blended to Stay Right:

If you go in for color, you'll go for these "Dutch Boy" Tints! They keep their crisp, petal-freshness . . . because they're specially blended to assure lasting color and uniformity.

3. Smart Trim Colors, Blended to Stay Bright:

It's a bright idea to add cheery, long-lasting brightness with "Dutch Boy" Sash and Trim Colors. They're blended to keep their high gloss and color! Just the thing for doors, shutters and porch furniture, too.

Special "Dutch Boy" Blended Primer: An undercoat of great sealing and hiding power that hugs tight. When used under a topcoat of "Dutch Boy" Bright White or Tints you get a perfect 2-coat paint job, even on unpainted wood!

*our house
was a sad shack!*

We were put out, and I don't mean evicted! It would have taken all the piggy banks in China to scrape up enough money to replace that warped wood siding and get a re-do on the paint. Even then I knew the budget was in for an annual crack-up if we didn't want our home to get looking like something strictly-from-tenement!

now our nest looks like the best!

While I was fretting about the mess at our address, a kind friend told me about Careystone Asbestos Siding. My, what a build up! According to her, this wonderful material was beautiful and dutiful... needed no paint to preserve it... was fireproof, termite-proof, rot-proof.

"That's for us," I said. And wiser words were never spoke! For I called the CAREY dealer, found out how little it cost, figured how much we'd actually save by making our place a you-can-be-proud-to-live-in-it-home, and presto—the transformation was complete!

Honestly, this Careystone Siding (they tell me it's made of Asbestos Fibre and Portland Cement... lasts a housetime) is well worth looking into. Why don't you...

GET ALL THE *facts*

...about Careystone. Learn how much it can do to bring old houses up-to-date... to cut maintenance costs... to start new homes off, on the right foot. Your local Carey dealer will be glad to give you complete details—or if you write us direct, address your request to Dept. C.

MAN HUNT IN MOPANG

Continued from page 26

entire game-warden personnel, including young Tom Corn of Mopang County, had been called into the hunt. It was this last item which had claimed the interest of the one-eyed poacher, moving him deeply. A forest from which game wardens had been amputated was a blueprint of paradise. Such luck seemed like compensation for a life of poverty and hardship. Scarcely able to believe his ears, he checked with the storekeeper.

"So they ain't overtook this Creeper Conway yet?"

"That's what the fellow just said," Sim said. "Maybe them two bloodhounds'll help."

"Too much water in this country to work a bloodhound good—except on deer an' moose."

"There's a law against that."

Ignoring the storekeeper's reproof, the one-eyed poacher proceeded to his final point. "Did the radio say that the game wardens—including Tom Corn—was huntin', too?"

"You heard the man," Sim said. "I saw Tom Corn go by at daylight, this mornin'. Jumbo Tethergood said Tom was goin' to the Junction for the bloodhounds."

It was true! For once in his persecuted life, thought Jeff, he and Zack Bourne, comrades of the jack light, the demijohn and the jailhouse, would have a free field, and already the small bucks were fat on the spring meadow grass along the headwaters.

THE one-eyed poacher's future lay clear. He would proceed at once to Zack's cabin up the lake, lure Zack away from his devout and law-abiding wife, Sarah, and together they would set forth into the forest to feast upon wild meat, as the Lord had intended they should.

Jeff could not depart without a word of sympathy for the fugitive, who, unwittingly, had done him such a splendid turn. "That poor Creeper Conway," he said to the storekeeper. "All them state policers, an' mounties from over the border, an' bloodhounds, and now game wardens, too, after him. I feel sorry for him."

"How do you feel," Sim asked, "about the man he killed in the car on the highway, two weeks ago?"

"Don't feel nothin' about him. I never knew him. Now, Sim, if you'll jest sell me a few supplies, I'll be on my way."

"Your credit's a mighty skimpy thing, old-timer."

Glowering, the one-eyed poacher drew himself tall. "You can charge 'em against my check," he said, "when it comes."

The storekeeper sighed, and gave in. The Coongate financial dealings were as erratic and uncertain as a beetle on a hot stove. Jeff concluded his list of supplies. "An', yes, I might's well take them two bottles of Dark Hazard rum. I'm goin' up to visit Zack Bourne, an' Zack likes to take a swallow before meals, or after."

"What'll Sarah have to say about it?"

"I ain't come to that, yet."

Jeff stowed his provisions in his frayed knapsack, picked up his rifle, and departed. At seventy, he was tall, erect, and long-striding—a magnificent figure of a man, nimble of wit and foot.

Now, under the dripping cedar, he recollected that at several points along the trail toward Zack's cabin he had sampled the Dark Hazard. He had enjoyed solitary high tea at Leadmine Cove, and an exclusive party at Caribou Rock. Opposite Genius Island, the cold spring rain had overtaken him. He had warded off the chill to the extent of four bobs of his Adam's apple, and had advanced through the storm, singing in fine voice, and kicking the puddles dry, till drowsiness fell upon him, and he had crawled under the cedar to rest.

Having brought himself up to date cautiously turned his mind to the sensation. The businesslike approach to the kisser, whether real or imagined, caused the back of Jeff's neck to Warily, Jeff turned around. He was alone.

On similar awakenings in the past the one-eyed poacher had seen a variety of horrid hallucinations, such as large, proachful trout, and falcons perched on his wrists, but never had he seen a beautiful, lonely and lovable, hound which was now laving his face with a tongue as limp and slippery as wet moccasin.

"It ain't possible," Jeff muttered, disappearing.

But the hound, far from disappearing, turned his massive head, and sniffed in astonished sympathy at Jeff's gasp. It couldn't be true! It was a trick, like those other times. The hound, like those other times, the hound, like Thomas Jefferson Coongate, one eye!

Jeff clasped the hound. "Sweetie," he said, "we're made for each other. I'm goin' to name you Zibe, after that deer dog that a warden shot for being in cold blood for runnin' a n water."

The hound snuffled moistly at Jeff's shirt collar, and sighed like a man blowing. The one-eyed poacher never seen such wonderful ears before. They were over a foot long, and velvet soft. Jeff shook his own head. This rendezvous in the forest could be real, he thought. But while he intended to make the most of it, he intended to make the most of it.

"You pertected me in my sleep," said to Zibe. "We will hunt together long's we live. You want to smell track, Zibe? You come along with me."

On the last, rainy mile to Zack Bourne's cabin, Jeff conducted several experiments to determine Zibe's speed. At the Chancery Portage trail, he dropped a doughnut in his hand, and called the hound. The doughnut vanished, but remained, his tail batting the brush several times, Jeff stopped short in surprise and whirled suddenly. Always stood there, his one eye watery with adoration. But the acid test was Zack Bourne's cabin door.

JEFF entered without knocking, his dripping hat, and shut the door squarely in Zibe's face. Sarah had just lighted the lamp, and, a light on Jeff, her face clouded. No good came of this marauder's visit. Jeff Coongate was an ill omen, and only catastrophe. Even now, he and Sarah were greeting each other with looks of and an exchange of welcoming bows. "Jeff! It's you. My, I been here to see your ole face," said Zack. "Why, dang your empty stomach! It's been months since we had venison! You know what's happened to all the wardens—"

"I knowed it!" said Zack. "If you'd come, if you heard what Sarah heard over our radio about Tom Corn, an' all of 'em, up here hunting a murderer. I says so to Sarah, and Sarah?"

Blinking unhappily, Sarah said to Jeff Coongate would have been interrupted by which, through the bottom crack of the cabin door, sounded like a giant's throat. This was followed by a long, low moan, and a series of ing of toenails on wood.

Zack jumped for the deer head on his rifle hung. Sarah blanched.

"The murderer!" she said.

Jeff Coongate's one eye rolled in full relief. Zibe, beyond all doubt, was real.

"That ain't no murderer, Sarah,"

tered, and, as a matter of policy, hoped
that it was one of the wardens.

It turned out to be the mounty, how-
ever, when Jeff stepped around a boulder
an hour later and saw the posse's fire.
The mounty lay half asleep against a log,
his right leg in a crude splint and band-
aged to the knee. Tom Corn sat in the
shadows beyond the fire, the light gleam-
ing restlessly on his rifle barrel.

"Howdy, Tom," said Jeff. "Campin'
out?"

The warden was on his feet like a shot,
his rifle leveled. When he recognized his
visitor, he lowered the gun, and said,
"Howdy, Jeff."

"Where's the other warden? Git home-
sick?"

"I sent him away this noon, to try to
get out, and get some grub to us. We ran
out day before yesterday."

"Oh," said the one-eyed poacher,
elaborately taking a cold pork sandwich
from his knapsack. "Hungry?"

The mounty and Tom Corn stared
longingly at the sandwich. Jeff sat on a
cold stone and munched delicately, and
with relish.

"What happened to you?" he asked the
mounty.

"Fell. Broke my ankle, I think."

Jeff flipped crumbs from his mus-
tache. "Too bad. Seen anything of
Creeper Conway? I come to help you
boys out."

"Yes," said Tom. "Right here is his
last sign. Our fire is on top of the last
one he built—maybe yesterday. By the
way, you heard or seen anything of that
lost bloodhound?"

"Nope, Tom. Not a thing. You won't
need him, not with me along to do your
tracking."

"That . . . just . . . might . . . be," said
Tom, swallowing as he eyed the last
crust of sandwich disappear into Jeff's
mouth. "We found one of Conway's
moccasins here, worn out. One foot will
be bare."

"Well, Tom, if you'll jest be quiet now,
so I can get a wink of sleep, I'll catch
your man in the morning."

The young warden smiled. The old-
timer's boast, superior as it sounded,
might just come true. Tom watched Jeff
settle his huge, catlike form around a
root. The old poacher was instantly
asleep. He was at home, thought Tom,
anywhere in the woods. Root for a pil-
low. Rain meant nothing, cold less. And
that tantalizing trick of his with the pork
sandwich was just like him: he was an
actor beyond everything.

The thought of the sandwich made the
warden's throat contract. He glanced in
the dying firelight at Jeff's knapsack. It
bulged attractively. And even as he
watched, old Jeff's hand fell lovingly, and
protectively, across the sack.

A SOFT footfall broke the stillness.
Tom dropped a hand on his rifle.
Jeff was instantly alert. Both men turned
their faces toward the black forest at the
moment a sad-faced but seemingly happy
bloodhound trotted toward the fire.

The bloodhound was Zibe!

The mounty, too, had awakened.
"There's our hound," he said.

"Here, Jep! Here!" said Tom Corn.
Tom couldn't believe such luck. With
Conway's castoff moccasin, and the rain
stopping, Jep would surely run Creeper
Conway to earth. "Here, Jep! Here,
boy!"

It was just as well that in the dim light
neither the warden nor the mounty could
see the look of righteous malevolence in
Jeff's eye. Zack and Sarah had double-
crossed him! Zack, softened and cor-
roded by marriage, had been prevailed
upon to let Zibe loose. Together, you
might say, they had robbed him of his
one friend.

"Well, Jeff," said Tom, "it looks as
though Jep had made your acquaint-
ance."

The one-eyed poacher cringed and

glowered, as Zibe cavorted about him.

"Go away, dog! I'm sleepin'." Zibe stopped, perplexed. "Warden Corn," said Jeff. "Call off this monster. He's lappin' my face."

"He does seem extra friendly," said Tom, exchanging a wink with the mounty. The answer to the missing bloodhound was now clear to both men. "Pat him, Jeff. Just be kind to him," Tom said. "He might not stray any more."

"He trusts you, Jeff," said the mounty. Zibe playfully caressed the embarrassed poacher with a muddy paw.

"He wants to play," said Tom.

"Then let him play with you fellers. I don't aim to sleep with no strange dog."

But it was obvious that the dog and the old man were not strangers. Jeff gave up all pretense.

IN THE first light of day, Tom Corn's stomach was a vacuum, and he awoke to find Jeff and Zibe sound asleep in each other's arms. It was a sight which, under ordinary circumstances would have been touching.

"I could eat a photograph of a load of hay," groaned the mounty.

Tom said, "I could do with an old skull stuffed with bugs. Let's wake up Jeff an' see if he'll give us a sandwich."

They woke the one-eyed poacher and pleaded that they had been three days without food, and that it was unnatural of him not to share with them. In fact, it was criminally unmerciful.

Jeff Coongate yawned and stretched. He smiled in a manner commensurate with high sacrifice and self-esteem.

"I have shared," he said. "I have given all. I have fed your danged old bloodhound till he's all podded out."

Zibe leaned worshipfully against Jeff Coongate's leg. There was a moment of silence, and then the one-eyed poacher played the sweetest revenge card of his career. "Boys," he said, "how would you like a loin steak of venison, salted an' peppered, an' broiled right over this fire? I might be able to find a little water cress to go with it, though it's early for cress. I got a junk of pork—Zibe couldn't quite finish it—to make a little gravy out of..."

"Shut up!" the mounty croaked.

"Course," said Jeff, "I realize it's only late May, an' the law's on deer, but still an' all... There ain't a trout brook within ten mile of here, even if we had a fishline, or a bit of dynamite an' fuse."

The mounty looked pleadingly at the warden. The warden scratched his head. Jeff Coongate had him backed to the wall; Tom swallowed painfully. His stomach now seemed full of old tennis balls. But then he thought of Creeper Conway's moccasin.

"Go ahead, Jeff," Tom said. "Get a deer."

"I have your permission, Warden? An' can I take Jep, an' dog this deer? It would be quicker."

Tom played beaten. He hung his head. "Take the dog," he said meekly. "Get the deer back here soon. We can't hold out much longer."

"Very well," said Jeff. "I shall obey your orders, Warden Corn. An' I hate to think of what people will say."

Jeff went down to a spring to drink, and while he was gone, Tom Corn rubbed the bloodhound's nose with the escaped murderer's moccasin. He rubbed it deeply, and thoroughly. "There, you mutt!" he said. "You've been in bad company, and you're going to be in worse, if you can remember the smell of that moccasin."

Jeff returned cheerfully from the spring. He caught up his rifle, and examined the breech. "Come, Jep," he said. "Come along with ole Jeff Coongate, an' see life in the woods."

Jep went slowly. He whimpered in a strange way. "Did I feed you too much?" asked Jeff, as they went along in the forest. "Here, here, Jep. Here's a buck

track made after the rain. It's hot, Jep. A little buck. Jest right for us to feed off of. Drive him to water, an' I'll do the rest."

But Jep, it seemed, had other ideas. He bore away from the deer track, snuffing and rapt in the mysterious obsession of a strong scent. He began to run, and Jeff had difficulty in keeping pace.

It was nearly noon, when both Jep and his master were sweat-drenched and tired, that Jep began to sound the call of a chase near end. "A-roop, a-roop" he went.

A short time later, the one-eyed poacher saw the track of a bare foot. That moccasin! Tom Corn had tricked him! Ahead of him the fugitive came into view, climbing a tree. Below the tree, Jep danced and loudly and triumphantly a-rooped. Jeff saw the man draw an automatic from his pocket, and level it at Jep.

But the old woodsman's rifle was too fast. His shot ripped loose the echoes, and Creeper Conway dropped from the tree, holding his right wrist.

"You don't want to shoot at dogs, young feller," the old woodsman said. "They's plenty deer an' moose around here. Shoot at them. Büt not dogs."

By way of emphasis, Jeff closed his hand on Creeper Conway's arm, and Creeper thought he had been clutched in a steel trap. "Leggo, you big lug!" said Creeper.

"I'll jest have to take that little gun of yours, Creeper, an' we'll go along back."

"You know the way?"

"Know the way? Why, son, this is my home. You take the lead; me an' Jep'll be right behind you."

"Does the pooch bite?"

"Nope—he jest swallows whole."

Thus escorted, the Creeper made no further attempts at escape. The lonely forest had whittled him down, and he thought he might prefer hanging to being lost in the wilderness.

The party was welcomed by the mounty, young Tom Corn, and several others, who, during Jeff's absence, had arrived to rescue the missing searchers.

AMONG the newcomers were several newspaper reporters and photographers. They took pictures of Jeff Coongate and the Creeper, Jeff Coongate and the mounty, Jeff Coongate and Jep. They also asked to take a picture of Jeff Coongate and Warden Tom Corn, of Mopang County. Jeff declined.

"He tricked me. He sent me out to dog a deer, but he filled Jep's nose full of old moccasin, an' all we got was this Creeper Conway. Spoiled a whole mornin's hunt. I ain't goin' to appear in no photograph with him."

On the trip out to the settlement of Privilege, the one-eyed poacher craftily reminded Warden Corn of his order for venison—in May. "That order ought to hold, Tom," he said. "I give all my food to the state's hound."

"It doesn't hold, old-timer. There is no longer an emergency."

"How do you know anything about the emergency in my stomach—an' Zack Bourne's, too—for the taste of venison?"

"You'll have to wait till fall. It's the law."

Jeff's one eye lowered demurely. He bowed his head. "I understand, Tom. An' there's no hard feelin's. I recognize the position of the state."

"What?" Tom Corn blinked suspiciously. He would have been willing to bet that the old poacher's humility was about as genuine as a plastic nickel, and that even now he was planning a meal of fresh liver. "So you've reformed, hey, Jep?" he asked.

Jeff sighed. "Yes," he said, "when I seen you men out there, perfectin' us from crim'nals, an' the privations an' hardships you went through, to uphold the peace, it jest come over me, at last."

"Uh-huh," said Tom.

FINISHED? WE'VE ONLY STARTED

THE latest reliable organization to take a body blow at the idea that the United States is a mature and even aging nation is the Twentieth Century Fund.

You're familiar, no doubt, with the we're-finished idea, which has been in circulation for at least 25 years last past. Well, according to the findings of a staff of 20 Twentieth Century Fund experts who have been studying the question since 1944, the fact is that we've only made a good, promising start at utilizing this country's resources and developing its possibilities toward the goal of a comfortable life for everybody who will work.

According to a detailed report recently got out by this group, we have increased our use of power from water, coal, electricity and natural gas 343 times since 1850. Thereby we have raised the value of output per man-hour of work almost five times, and have cut the average work week by 33 per cent.

For all the stupidities of which our home-grown and foreign ill-wishers accuse us, we've

at least had sense enough not to hold back new inventions, as a rule, on the ground that they would destroy old jobs. We've realized that in the long run every scientific and mechanical advance makes more jobs and opportunities than it rubs out.

If we'll just stay on this track, the prospects for the future look excellent, even though there may be ups and downs economically in our free-enterprise system. In the planned economies up to now, there are only continuous downs.

We can hope eventually to cut poverty to the irreducible minimum in this country, if we'll only keep capital and labor reasonably free, and monopoly under fairly strict discouragement and, above all, if we'll strive endlessly to go on increasing our productivity.

And we can kick our present heritage overboard most effectively by becoming afraid of technical progress, and by falling for the pessimistic notion that as a nation we've finished growing. As a matter of mathematical fact, we've only begun our possible growth.

NO FOREST RAIDS, PLEASE

AN OMINOUS story is coming out of the National Forest system of the Far West between the Continental Divide and the Pacific.

These timberlands, property of the federal government, cover an area of some 80,000 acres. Livestock grazing is allowed in them to a certain extent, under federal permits—but there are critics who say that even this has been overdone of late years by some livestock ranchers.

Now, the National Livestock Association and similar groups of Western stockmen are trying to persuade Congress to take these forests away from U.S. Forest Service control and turn them over to the states where the forests lie—where the stockmen have more political strength than they can muster in Washington.

The stockmen also want the right to buy legal titles to forest lands to be used for grazing purposes.

Says the American Forestry Association:

As a raid upon public resources the plan of the stockmen is astounding in its audacity. This plan to break up the National Forests. The strategy is to put pressure on Congress to eliminate grazing lands from the forests and give permit holders the right to acquire such lands in fee simple. We do not believe the 80th Congress will be trapped by this strategy.

The American Forestry Association, incidentally, is not a group of conservation fans exclusively. Its membership includes a lot of loggers and sawmill people.

There may be ins and outs to this situation which we are not aware of. But we hope Congress will scrutinize all aspects of this proposal of the stockmen with the minutest care and will bring down the whole scheme if any ratlike aroma is detected in it.

The ruin of these great timber reserves and vacation lands via cattle destruction of grasses binding their topsoil is something that should not be permitted the Western livestock men or anyone else.

SEE WHAT WE MEAN?

WE WERE remarking a while ago that it would be a long step forward if many of us, especially in educational and government circles, would stop using overstuffed words and take to talking and writing plain English.

Little did we expect at that time that so soon an illustration of our meaning as the one about to reprint would be so soon forthcoming. It was, though. Dr. Wilbert E. Moore, Assistant Professor of Sociology at Princeton, recently addressed the 17th annual meeting of the Eastern Sociological Society in the Columbia University Men's Faculty Club; and, as reported by the most always accurate New York Times, here is a paragraph from the speech, so help us:

The lack of theoretical preoccupation on the part of many sociologists actively at work on social industries is not so much in the failure to make a conceptual scheme explicit as it is in the lack of hypotheses and analytical problems explicitly stated. The area of research is the "social structure" and as it is informally constituted and as it is informally operating. Within that area the aim is clearly descriptive and not analytical.

Now, it well may be that in that mess of words Dr. Moore uttered a truth capable of moving mountains, electrifying the hearts of men, and maybe even causing the angels to sing a new song. But if nobody understood his statement, how could a waiting world profit from it?

We know we can't understand it; we'd better not bet that few if any of the 300 sociologists who heard the Moore speech understood it. Let's quote; and we'd like to ask Dr. Moore in plain English, Doc, just what the hell are you trying to tell the world, anyhow?

Now at less than prewar prices—the tire that outwears prewar tires

WHAT BETTER ADS for B. F. Goodrich tires are there than letters from typical B. F. Goodrich owners? Here's one from Sheriff Edward O'Brien of O'Brien County, Iowa, shown pointing to the tire in the picture above.

"I have driven over one million miles, over all roads and under adverse conditions, during twenty-two years' service as sheriff. I have never seen any tire that could compare with the new B. F. Goodrich tire. I have driven at extreme high speeds—in sub-zero winter weather over frozen roads filled with chuck holes—and again over

these roads in the extreme heat of summer.

"The B. F. Goodrich tires on my present car have gone over 32,000 trouble-free miles, and they are still good for many more miles of hard driving."

The picture was taken at the time this letter was written.

B. F. Goodrich tires have a wider tread that gives you more mileage because it puts more rubber on the ground—distributes the wear over a wider area. You get better traction on wet roads, quicker stops, greater safety. And because the body of these tires is made with more cords and

stronger cords, you get extra blowout protection.

You can now buy all popular sizes of B. F. Goodrich Silvertown tires for less than you paid before the war. And your B. F. Goodrich dealer will give you an allowance on your old tires if they are still good enough to be used or recapped. *The B. F. Goodrich Company, Akron, Ohio.*

THE WEEK'S MAIL

RHUBARBS

DEAR SIR: Note your July 19th issue's F.O.B. Detroit: On the cover we've given Hal Newhouser, on the inside Newhouser pitching secrets that he pitched the Detroiters into a dazzling games behind the Yankees as of Aug. 1. As far as I can see, only two teams are for the editors of Collier's: Detroit the St. Louis Cardinals, ahead of whom a motley collection called Brooklyn—l games. Why not drop the other teams from the leagues, arrange a 154-game schedule between the Tigers and Cardinals and let the winners meet each other in World Series? TED AUGUST
Brooklyn (God Forbid), N.Y.

FEELTHY PEECTURES

DEAR SIR: I wish to register my vehement protest against the photographs which accompanied Coney Island (July 26th). Happas at thirty years I'm too old-fashioned to live in this brave, new world but I'll turn up a Puritan nose at the current competition between publishers and Hollywood producers to endorse licentious living. What this country needs is a return to the Gay Nineties.

BARBARA D. HUGHES, Essexville, Mich.

... In the Coney Island story I was interested in the way the problem of supervising children is so great that a squad of policewomen and -men is necessary to "ride herd" on them. wouldn't it be more practical to provide a recreation center for children where parents can check their children?

MRS. S. A. MILLER, Pickford, Mich.

CLEAN HOUSE

DEAR EDITOR: I thought you would be interested in knowing that as a result of exposure of vice conditions in your article by Harry Henderson and Sam Shaw (Daily For Sale, Nov. 23d), five of the nine councilmen were defeated. A new mayor has been elected. A new city manager will take office August 1st, and I am relieved to inform a new chief of police will be appointed about that time. Every house of prostitution in Wheeling has been cleaned up. Each of the madams was sent to penitentiary for two years, and "pimps" were sent to prison, one for two years and the other for eight years.

KEEP UP WITH THE WORLD

BY FRELING FOSTER

More than 200 false killer whales were found dead on the rocky coast of Mamre, South Africa, on November 19, 1935. Averaging 15 feet in length and 3,500 pounds in weight, they had been lured inshore by the fish on which they feed and were stranded by the receding tide. Most of them were wedged together on their backs in small crevices and had died either of exhaustion or suffocation in their struggles to free their blowholes.

Of the ten best known collections of chess sets in the United States, the largest and most valuable belongs to a New Yorker. It contains more than 300 unique sets, some centuries old, which came from 26 countries and are made of 12 different materials, including jade and gold.

One of New York's most amazing misers was James Henry Paine who died in 1885 at the age of 80 in a \$2-a-week garret in Bleeker Street where he had lived for nearly 30 years. During this time, the man was thought to be in dire poverty as he was seen daily searching garbage cans for food and gutters for cigar butts. But through an uptown friend, Paine secretly speculated in opera tickets and made so much money that, by living like a pauper, he was able to leave a fortune of \$391,200.

The newest spectacle lenses are trifocals, or bifocals having a third part that corrects middle vision which is used, for instance, by musicians when reading music at a distance of two or three feet.

Inasmuch as 32,000 of the 35,000 inhabitants of Bermuda cannot vote because they do not own \$250 worth of land, they have been unable to change the law that makes education compulsory, yet does not provide for free schools.

At a recent concert given in New York by an 18-piece electronic orchestra, the conductor employed a console through which the music of each instrument passes and is subject to control through corresponding dials and other regulating devices. This enables the leader to increase the volume of a single instrument to a solo part, feature groups or blend them all in the way he thinks best for a particular composition.

While most crooked dice fall side downward when dropped glass of water, one type is made out a permanent heavy side to detection in such a test. These are opaque and contain a drop of mercury which may be made to show through a tiny channel, between space in the center and another the surface. Thus, they are loaded and unloaded by being tapped on the "for good luck" or a similar reason.

At the Clinton Laboratories in Ridge, Tennessee, an ingenious system enables employees to fill containers for radioisotopes without exposing themselves to the radiation. Behind a thick wall of lead, they move the isotope wanted from a pile, and bottle, dilute, weigh, pack it for shipping, by operating mechanical fingers which they see through a periscopic device.

The majority of the 165 drive-in movie theaters in this country pay a franchise fee of \$1,000 and five percent of their box office receipts for use of a patented ramp-spacing arrangement that not only gives the car an unobstructed view of the screen but also permits it to enter and leave its allotted space without crossing the line of vision of any other car.

The Calypso songs of Trinidad, such as Stone Cold Dead Market, have become so popular in the United States since 1935 that the singer alone, Wilmoth Houdin, New York's Harlem, has recorded over 400 of them.

On rare occasions, a short-wave radio signal is reflected by a meteor in the ionosphere which gives it a way that may be heard by those listening to the message being transmitted.

Virtually all cities and states require enclosed elevators in private homes to be equipped with a telephone which outside calls may be made directly. With it, a servant or a member of the family can phone for help if trapped between floors in a car when alone in the house.

ANDREW GEER (A Slight Penalty, p. 89) is the only horse marine we ever knew. When his dad's horse-trading stable at Graceville, Minnesota, burned down in 1914, the family went homesteading in southern Saskatchewan, 60 miles from the nearest railroad station. Nearest neighbors: antelope, coyotes and badgers. "The land was so flat you could stand on a rain barrel and see the Gulf of Mexico—almost," Geer claims.

When he was eight, Andrew rode an Indian pinto to school—when they built one. His dad had won the horse in a seven-up game down in Montana twenty miles below the Geer spread. "In those days you could buy a pretty good pony from the Blackfeet for \$5," Geer says.

At twelve, Geer (five eight and 140 pounds) tried to join the 27th Light-horse Canadian Cavalry and kill the Kaiser, but a British captain with a waxed mustache told him to go home before he paddled Geer's seat. "But I'm not anti-British," Geer says.

At fifteen, Geer was riding stampede at roundups and bucking contests. Later at the University of Minnesota, he footballed, and because he was heavyweight boxing champ, earned his college way sparring with visiting pros like Mickey Walker, Tommy Loughran, Young Stribling and Ernie Schaaf. Summers he valeted a race horse named Cincofield; played semipro ball under an assumed name; was caddy master and dance-hall bouncer. Out of practice, he bucked his last bronco bareback, at the St. Paul State Fairgrounds, deciding to stick to football thereafter.

Leaving college without a degree but with many pleasant memories, Geer rode blind baggage seeking work, sparred with Johnny Risko, went to sea for five years, finally marrying a lady passenger.

When he quit ships in '35, he had a tough time on the beach, winding up as steelman on the San Francisco-Oakland Bridge.

After a spell of sports-announcing and bond-selling, Geer retired to the side of Mt. Tamalpais and began writing with moderate success. In '41, he went to Africa to drive for the American Field Service, got to know the Syrian desert like California Street, San Francisco (where he now lives), and was in the heartbreaking Tobruk-El Alamein retreat with the British Eighth Army. "We carried over 20,000 wounded off the field," he says.

Thoroughly annoyed, Geer came

home in '43, enlisted in the Marine Corps and managed to get to Saipan, Guam and Iwo Jima for the landings. He came out a major, decorated.

ABRIEF run-down on the Haverhill Brothers, John and Ward (The Machine, p. 24), goes like this: One is fat; one is not. One has hair; the other is John. One likes to play golf; the other to watch it. One goes his way, the other goes his way, too. "We're both very tired," they claim.

The brother fiction act has been going on for ten years; both to the couple of years off for the late L. Clambake; both are lazy; and both find a golf tournament the best way to hunt a story, especially with a hunch over. "The turf is easy underfoot," they chorus, "there's always a shade tree handy to sit under and watch the pros go by. It's a wonderful life."

SO SODDY to be late with the Sier of Mr. Selwyn Jepson, who in Man Running (p. 28) mounts with citement as it runs out. But Mr. son lives in London and has been Britishly reticent in informing us of slight, fortyish, average height, sandy haired-and-eyed, married, witless, book-stocked flat overlooking Lomb Street, and a small wooden house. Hants for when the weather is so. "So we go there scarcely at all," he advises.

Jepson served in both World Wars, did such hush-hush stuff in Numl that he can't talk about it. "Now and then to get away from all this," he says, "I write a story."

This week's cover: Air-borne Pic for our visiting photographer, Messrs. Cooke, and Pixeditor Ulrich Ca (Styled by Students, p. 18), air-mixed Stephens College girls flew to a grassy meadow near Columbia, Missouri, and posed over hamburgers, hot-boiled eggs and ants. The cover art are: brunet Beverly Reeves of San Francisco, Calif. (in coveralls), who piloted low studes Jean Barranger, Susan S. C. (blue half pedal-pushers, skirted blue-and-white-striped), blond Jo Sperry of Bushnell, Ill. (in green sweater); and Shirley Rich of Habra, Calif. Shirley's in red pedal-pushers, and a dark blue jacket designed by Barbara Gartley of Verona, N. J. Cooke and Calvosa who daringly invaded dormitory to make layout pix on pages 18 and 19 report the entire college is photogenetic, largely unmarried and largely intelligent. . . . TED SHULZ

You see it on every road you travel...

Car after car is a handsome new Nash. And listen to the *talk* about new cars—it's about Nash!

It's about the amazing gasoline mileage of a Nash "600" . . . 25 to 30 miles to the gallon, 500 to 600 miles to the tankful, at moderate highway speed.

The "talk" is about Nash bigness and beauty. The extra seat-room and head-room you get. The big rear compartment that takes a Nash Convertible Bed!

The "talk" is about Nash Conditioned Air. Automatic heat and ventilation that banish forever cold drafts, dust, stuffy air. *And more—*

*What's Back of
the Big Swing
to Nash?*

The "talk" is about the soft cushioned *ride* of a Nash—the only car in its field with coil-springing on all four wheels.

The "talk" is about the amazing new *safety* of Nash unitized body-and-frame construction.

And the "talk" is about Nash value and extra features.

Never before has ANY one new car appeared, that's been so far ahead in the things that count.

This, then, is what's behind the overwhelming swing to Nash. The reason *why* even greatly expanded production can't meet the demand.

There's a new kind of automobile dealer in America today. There's where you'll find the new Nash "600," and its brilliant running-mate—the Nash Ambassador.

Product of Nash research and engineering, new Unitized body-frame construction sets the pattern for tomorrow. Built a new way, with body and frame *welded* into a single steel-girdered unit, it is lighter yet immeasurably stronger. 8000 spot welds eliminate weak body bolts and noise-making joints.

YOU'LL BE AHEAD WITH **Nash**

Nash Motors Division, Nash-Kelvinator Corporation, Detroit

It's a whale of a job

We're adding new telephones at the rate of about 300,000 a month. That is 10,000 a day... And still it isn't enough.

SINCE V-J Day, we've added more than 5,500,000 telephones to the Bell System.

But fast as we put in one telephone, there comes an order for another. Sometimes two more.

So even though we're going full speed ahead, we haven't been able to catch up with all the orders for telephone service.

We're moving faster than anyone thought possible—with shortages

and everything—and we have broken all kinds of records.

It's a whale of a job and we're eager and impatient to get it done. For we don't like to keep anybody waiting for telephone service.

BELL TELEPHONE SYSTEM

THE PREXY PLAN OF GENERAL IKE

BY ALDEN HATCH

Some cried "Politics!" when the Army Chief of Staff accepted the presidency of Columbia University. Others wondered whether brass hats know much about education. But the general has some definite ideas on the subject—and, as usual, he pulls no punches

WHEN General of the Army Dwight D. Eisenhower finally accepted the presidency of Columbia University, the trustees were jubilant, the press was generally enthusiastic and educators acclaimed Columbia's choice. But some people were puzzled.

"What does a brass hat know about education?" they asked. "Has Eisenhower any ideas on the subject, or is he just going to be a front for Columbia?"

One friend who knew him well answered hotly, "General Eisenhower wouldn't be a front for heaven's sake!"

As for his ideas about education, they are very definite. He does not claim to know a lot about the technique of teaching; he is more concerned with aims than methods.

As a matter of fact, one of the reasons the general hesitated to accept Columbia's offer was that his beliefs are so strong he was not sure they would fit into the academic world. When he finally came before the trustees with his answer, he told them, "All I can bring you is the convictions I have always held. I am not going to change my spots."

The trustees unanimously assured him that they wanted him, convictions and all.

The most important of these is the general's passionate belief in freedom of thought. That is the key to his philosophy of education.

The greatest teaching of all, he holds, is teaching people how to think. But in order to think, it is necessary to know all the facts. For example, he believes that the systems of Socialism and Communism should be taught in order that they may be understood. Pure Communism, indeed, might be a Christlike doctrine were it not for its political implications. It is dictatorship that he abhors.

Eisenhower stated his creed thus:

"Freedom of the individual, presupposing faith of religious character in the integrity of the individual man, is the first leg on which democracy stands.

"The second is free enterprise, because total bureaucracy requires totalitarian government."

However, free enterprise must be modified by the necessities of a complex civilization. When you are part of a group, there can be no prosperity for the individual unless the group is prosperous. Eisenhower carries this thought beyond the boundaries of the country to embrace the whole society of the nations of the world.

As to the manner of education, General Eisenhower thinks that the present increase of emphasis on teaching the humanities does not go far enough. He would like to raise the prestige and importance of our undergraduate schools, and he would like to see more liberal education interspersed with vocational training in graduate schools. Turning out a good engineer, for instance, is not the best that democracy deserves; it is more important that he should be an intelligent citizen.

Next to the art of thinking, the most important thing to teach is pride in accomplishment, Eisenhower believes. From ditch diggers (Continued on page 30)

WAR BRIDE

BY QUENTIN REYNOLDS

The colonel watched her as she was being questioned. "Perhaps you can be useful," he speculated. "I need an interpreter. Report this evening at six."

She looked just as sweet as sugar—but so does cyanide

ANNA GERHART dabbed at her eyes with a tiny handkerchief. "Silly of me," she said shyly, "but you've been so kind, and—well, I haven't known much kindness in my life."

Bill Kirk of the Times cleared his throat. "That's all right, Miss Gerhart. You've been very patient with us."

Anna touched each of them with her tremulous smile and each of them smiled back. Then she left them. None of the ship newsmen said anything until Anna had gone. Then Bill Kirk said, "Poor kid, she's really had it. I don't like Krauts but this kid is different."

"Yeah," Benny Rose from the Tribune said, "I'll buy that. No one hates Germans more than me but this kid was—let's see—she's twenty-one now, so she was thirteen when the war be-

gan. Besides she's the first real good-looking war bride we've run into."

Three decks below in a large cabin Anna Gerhart was alone. She had just said goodbye to the woman who had been her cabin mate during the seven days of the crossing. Mrs. J. Alban Marsh, of Sterling Forest, Illinois, was a placid, comfortably upholstered woman who was returning with her husband, the Reverend J. Alban Marsh, from a church conference which had been held in Salisbury, England. They had been unable to get a cabin together, so Mrs. Marsh had been put in with Anna Gerhart. Mrs. Marsh, who at first had hated the idea of sharing a cabin with a stranger, melted when she first met Anna Gerhart.

When Mrs. Marsh entered the cabin for the first time Anna was standing there. Anna looked at her with frightened eyes—almost, Mrs. Marsh said afterward—as though she were afraid of being hit. But Mrs. Marsh, a sweet and charitable person, had smiled and said, "We are going to live together

for the next seven days. I hope you don't mind an old woman like me being put in with you." And then Anna had smiled, a shy, tremulous smile, and her big eyes had filled with tears, and Anna had said softly, "You are so kind. I haven't known much kindness." Then Mrs. Marsh had put her arms around Anna and had held Anna's lovely golden head close to her ample bosom and had said, "Now there—now there. Why, you're only a baby."

IT HAD been a pleasant seven days for Mrs. Marsh. She insisted that Anna share the table which she and the Reverend Marsh had reserved for themselves. Once Mrs. Marsh had said with a faint trace of sadness, "It is as though you were our daughter, Anna, and we were taking you on a trip with us."

Anna had said shyly, "It is as though you were my parents and were taking me on a trip."

There were a great number of young men on board, including one

unattached male film star, and attached to Anna quite unmistakably. How unattached they were and how desirous each one of them was for exclusive company, but Anna given them nothing but shy, embarrassed smiles and then had moved closer to Mrs. Marsh.

Anna Gerhart and Mrs. Marsh found a great deal to talk about. Mrs. Marsh hadn't had a real audience many, many years, and she enjoyed the obvious relish with which Anna listened to everything she said. Mrs. Marsh, on her part, learned quite a bit about Anna. She learned that Anna's father had been a Lutheran minister in Cologne. Anna had been the only child, and her father had supported the teaching of the Catholic schools by giving Anna lessons in English. By the time she was eleven she could speak fairly good English. Anna told Mrs. Marsh. Her father was always bitterly anti-Nazi, and her dream was to get Anna to America before the inevitable war came.

"Of course," Anna said a bit shyly.

Mrs. Marsh, "all Germans now they were always anti-Nazi. I suppose no one will believe me when I say I laughed when I heard that Hitler was dead. I laughed because Hitler was my father, and I laughed because Hitler was dead. But I won't tell you that. They will say, 'Yes, yes, Germans now say they hated Hitler.'"

"Hitler killed your father?" Mrs. Marsh prompted gently.

Anna nodded and looked out over the soft, calm sea. "Yes. Yes, he killed my father," she said. "I was eleven then. It was Easter Sunday and they sent him a sermon to preach. Hitler was preparing the sermon for war then, and he made the ministers preach sermons written by Goebbels and his propagandists. Didn't your father preach that day?" Mrs. Marsh asked.

"Yes, he did," Anna said proudly. "Not the sermon they had sent him. He preached an Easter sermon like Martin Luther had preached back in 1520, about the Resurrection. He

told of how the angels had come to the tomb of Jesus and how they had found the huge stone that had sealed the tomb rolled away. And he told of how one day a spirit of freedom would arise again in Germany, and that the people would roll away the stone of prejudice and ungodliness and tyranny from the tomb that was Germany, and that Germany would be free again."

Anna stopped then, and Mrs. Marsh noticed that she was biting her lower lip. Mrs. Marsh leaned over and put her plump hand over Anna's tiny one.

"There, there now," Mrs. Marsh soothed. "It's all behind you, Anna. Don't ever remember it again. Don't talk about it."

"I want to tell you about it," Anna said brokenly. "They knew what Father meant. Oh, yes. And storm troopers ran from the back of the church and dragged him from the pulpit. They sent him to the concentration camp at Oranienburg. An enemy of the state, they said. He died a year later. And then Mother just gave up.

He was so much part of her that when he died, why, she just couldn't go on living. I went to live with an aunt in the country. It was in Bavaria. My uncle was a farmer, and I worked on the farm all during the war. I was too young for any of the—of the services the army demanded from the women of Germany."

"And then," Mrs. Marsh said gently, "the American Army occupied Bavaria and you met him."

"Yes, I met him," Anna said, and raised her eyes to Mrs. Marsh. It was as though a light had suddenly been born within her, and the light shone through her eyes and Mrs. Marsh, watching closely, pressed Anna's hand happily. Mrs. Marsh liked happy endings.

THE seven days had passed pleasantly. Now it was all over and Mrs. Marsh had kissed Anna goodbye. Anna Gerhart was alone in the cabin; alone with her thoughts and her past. A rather large leather handbag on the bed held several symbols of Anna's past. Anna was wearing a simple black jersey dress. She wore a small triangular green silk kerchief, knotted loosely at the neck. Taking the bag to the white dressing table, she sat before it, looking intently into the mirror. Anna Gerhart frowned and shook her head. She had broken down twice during the morning, once when she had told the ship news reporters about her father and his last sermon, and again when she had bid Mrs. Marsh a fond if somewhat weepy goodbye. Yes, she might as well do a complete new make-up, she decided. No make-up was proof against two sets of tears.

She reached into the bag and took out a bottle. She looked at the label and smiled. It read, "Made in U.S.A." With quick deft strokes she applied the powder base to her face. Then she took a small silver case from the bag. It held *crème rouge*. As she rubbed the cream into her cheeks she looked searchingly at the face which stared back at her from the mirror. Anna was an honest girl; she never lied to herself about herself. The face that stared back at her was oval. Luckily she had escaped the bovine face structure and rounded insipidity which was the heritage of most German peasant girls. The face, topped and framed by golden hair which had the effect of softening her features, was good. She nodded with satisfaction. She had been right to dye her hair. Once it had been sleekly dark, but in those days she had been playing a sleekly dark part. Now she was playing the part of a wide-eyed blonde; an ingénue with tremulous smile. But she never made the mistake of thinking like a blonde. Her intelligence had a hard, crystal-clear quality, and it was that which had enabled her to survive; it was that which had made it possible to be where she was today, only a few moments away from security.

Next came the eye shadow and then the soft face powder. Her hands moved quickly; she had done this hundreds of times before. Then she reached for a small gold tube. She looked at it fondly. This gold lipstick container was one of the last presents the General had sent her from Paris. He had been transferred to the Russian front shortly after that. The General had been sweet, Anna reflected, touching her lips ever so gently with the lipstick; happily it was *rouge fraise*, a shade kind to her blondness. She liked the sound of *rouge fraise*; she repeated it in English, "Strawberry pink."

She studied her face carefully, objectively, as an artist would look at the work of another, with critical faculties alert. It was, Anna told herself, a good job. No one would suspect her thirty-four years, least of all a love-sick American, so lacking in ambition, Anna reflected contemptuously, that he had never risen above the rank of corporal. Her shoulders twitched in a gesture of distaste. For six glorious years she had been the friend of generals and even *Reichsministers*. Now she was going to marry a corporal. What was it Goebbels had said when the General had brought her to a house party at Warnemünde, on the so cool shore of the Baltic?

"*Du bist viel zu hübsch und verständig für einen General*," the little doctor had said in his soft, beautiful voice, and there had been a question in his eyes. Perhaps she was too beautiful and too intelligent to be wasted on a general, as the doctor said, but the General had his points. The General had studied at Oxford, and his English was Oxford English. That's why he had been so insistent that she learn English: not the fumbling, halting English she knew from her high-school days, but the English that would enable her to fit in easily in the life that she was to share with the General one day in London when the British swine were conquered. And she had learned that kind of English.

She smiled as she thought of dear, stupid Mrs. Marsh. How valuable Mrs. Marsh had been! Oh, she had her story down pat; she'd rehearsed it as she had once rehearsed songs when she was singing on the Berlin stage. But she felt she had needed a dress rehearsal or two before meeting Ernest's parents. Mrs. Marsh had been a good but not critical audience. Those reporters, on the other hand, were more critical. But her story had gone over. Of course, her ability to produce quick tears had helped, but that too she had rehearsed often. And her story was, she felt, a good one. She especially liked her mythical father, who was by now quite real to her. And that story of his Easter Sunday sermon she felt was really excellent. The ship news reporters had really liked that.

Her father? Her father had been a schoolteacher, but she hadn't heard of him since 1934, when she had left home to join a group of strolling players. She would always be grateful to them, especially to Hans Trenker, the director of the group. He had taught her the art of make-up. He had taught her how to walk; how to use her hands; how to emphasize a line by throwing it away, by underplaying it; he had taught her many other things.

She replaced the cosmetics in her bag.

A FEW moments more and the whole past would be buried—would be as though it had never existed. She smiled as she thought of him waiting there on the pier. His parents would be there too. He had sent her pictures of them, the small, nervous-looking father and the mother who was, Anna was quite sure, a reasonable replica of Mrs. Marsh. The father would be easy to handle, of course. She didn't expect much trouble from the mother, either. Besides, she had a lovely present for the mother. From her bag she took a small package and opened it. Two heavy golden earrings, brightly polished, lay in the tissue paper. Unconsciously her hand stole out to caress the earrings, but she wasn't

ACE IN THE HOLE

BY KYLE CRICHTON

Our own Sherlock Holmes delves into the baffling mystery of the bedazzled Red Bird and the misplaced batting eye—and turns up a guy named Musial

WHEN the St. Louis Cardinals opened the season in Cincinnati they looked like a group of corporation directors who had just met and declared a dividend. They were smug, confident and content. Ewell Blackwell bumped them off that day and various undistinguished gentlemen continued to haul them as the weeks dragged on. During one period they lost nine straight and were in last place with three victories and twelve defeats. The pitcher couldn't pitch and the hitters couldn't hit. It soon became plain that the Cardinals had contracted a severe case of astigmatism from a happy wife looking at their World Series clippings.

Chief among the deflated personalities was M. Stanley Musial of Donora, Pennsylvania, who led the league in hitting last year, but now making motions at the plate as a spinster repulsing a wasp with a towel. There were rumors that Stanley was suffering from *expansio cerebelli*, meaning a swelled noggin. After a spring holdout that brought him a reputed salary of \$5,500 (entirely merited by his record he had taken on the airs of a lama and was not available for press interviews. His shining face appeared in commercial testimonials, however, and it was seen that his dome taken on a triumphantly ovoid and pompous character.

"Obviously a case for trepanning and a tapping of the cranium," declared the more sultry and acrid of his critics.

Luckily, this was not required because as Stanley's batting percentage slumped, the enlarged pate contracted in unison. By the time the New York Giants got done buffeting the Cardinals around the Polo Grounds for three straight defeats, Stanley's cap was bobbing around so loosely on his head that he obviously needed a seamstress and a tuck.

The deflation became complete during the Brooklyn series when Musial missed the last game by reason of an acute pain in the tum. The New York medics announced that the venereal form nuisance must come out immediately. But this meant Musial

At the bat or spearing them at home base, Stan Musial can be depended on to do a competent job. This inner ner is safe as Stan takes to the air to haul down a high throw. Below how mighty Musial bat connects for

ould be lost to the team for at least weeks. He preferred to have the sky thing frozen until he could get back to St. Louis and confer with the celebrated Dr. Robert Hyland. In due course he was back in the line-up, a chastened young man.

Nobody was happy over the appendicitis threat, but it was generally agreed that Stanley's new mental state was an improvement. Now when he stood at the plate and twisted himself into the amazing and familiar stance observers could note a resemblance to the jolly thumping youth of yore. His slump continued but there was happy recognition that baseball had returned normal, and a nice young man was himself again.

"Those poor, poor Cardinals," the seven managers were undoubtedly saying to themselves. "If they want to get rid of that tragic, stricken young man, they have only to utter a faint cry."

Musial, of course, is as near a natural phenomenon as baseball has in years. He had simply knocked the everlasting tar out of the horse—ever since he hit the big leagues—until this spring. In 1940 he was a pitcher and outfielder for Daytona Beach, Florida. He landed on his shoulder diving for a line drive and finished his pitching career.

Now consider what happened next: He was taken on reluctantly the next year by Springfield, Missouri, in the Western Association, which is a Class-C league. By the middle of the year he was brought up by Rochester, New York, then playing AA ball. He went so well there that the Cardinals begged him in for the end of the National League season.

The Brooklyn Dodgers were winning their first pennant under Leo Brocher, and the Cards were breathing on their napes at every step. Every day during those last days was a national crisis and Musial was thrown as a sacrifice into this den of tigers. In twelve spectacular games he batted .45 and almost saved the pennant for the Cards. Sam Breadon, Mr. Billy Southworth and the eager St. Louis rooters can get half a crowd out any night of the week provided they are assured the pennant is safe.

That was comparable to pulling somebody out of a poolroom in Oskawka, Iowa, to play Willie Hoppe," admitted the experts.

The kid was among the first four players in the National League in 1942, first full year, and won the cham-

pionship in 1943. He was runner-up in 1944, went off to the wars (American Theater of Operations) in 1945 and copped the title again last year with .365. In three World Series he has delivered some resounding salvos for the Cause, but it can't be said that in any case he has dominated these important proceedings.

In last year's Series he got six hits in twenty-seven times at bat for a percentage of .222, but four of the blows were doubles, another was a triple and he knocked in four runs. He won the Most Valuable Player award for the National League last year (he also did it in 1943), polling 319 points out of a possible total of 336. One perverse judge placed him in ninth place, proving perhaps that he was a year in advance of the folk who found Stanley slightly insufferable this year in its earlier stages.

Making Him a First Sacker

What really set the *cognoscenti* on their ears last season was Musial's success as a first baseman. Eddie Dyer first let Ray Sanders go to the Boston Braves and then tried Dick Sisler on the bag. Richard immediately began to disprove the entire case for heredity by acting nothing like his father, the illustrious George Sisler, and Stanley was asked kindly to step in from left field and take over the chore.

"That boy doesn't make good," said the cynics with a shudder, "and Dyer is back in Houston hiding among the oil derricks."

The theory was that Stanley would be so worried about his fielding he would forget to hit, but Stanley never forgets to hit. He had trouble with his feet around the bag, but kindly people were soon saying he was the best first baseman in the league, which was not exactly true considering that Eddie Waitkus of Chicago was also around, but it sounded good and there was no general protest.

There was some small doubt in the beginning that Stanley would ever be a ballplayer. He had been a schoolboy wonder at Donora, playing basketball in the Stagg Interscholastic Tournament in Chicago and being looked on avariciously by certain football gentry at Pitt who considered him an excellent halfback prospect, but the loudest outcry came from Papa Lukasz Musial, who had worked hard as a Polish immigrant in the steel mills and wanted Stanley to take a college scholarship.

The crisis had arisen when Andy French of the Monessen club in the Pennsylvania State Association had wanted to sign him up. This was part of the Cardinals' chain and the salary was only \$75 a month, but Stanley was boo-hooing around that he wanted to take it and Papa was bellowing large Polish swear words at the thought of such nonsense.

What saved the Great National Pastime from disaster was Miss Klotz, Stanley's high-school teacher. Miss Klotz was a mature and influential lady who was not only capable of guiding a sixteen-year-old like Stanley but also of overwhelming Papa Lukasz, who had an almost religious reverence for the erudite. "You go right ahead and play baseball, Stanley," said Miss Klotz, nodding sagely at Papa while Papa nodded back mutely as if to show he knew the proper thing for a patriotic American.

But the Cardinals took their time about calling for Stanley and in the meantime he went to the Pittsburgh Pirates and was just about to sign with them (which he would have preferred to do, anyhow) when Mr. Breadon's agents tapped him and sent him off to Williamson, West Virginia, where Stanley stayed two years. Anybody staying two years in a league like the Mountain State shows so little aptitude for his profession that Papa Lukasz would have been justified in retrieving his treasure by violence, but by this time he was too stunned to protest.

Things were very little better for Stanley when he got down to Daytona Beach, Florida, in 1940. He was pitching between turns in the outfield but he was also subsisting almost entirely on turnip greens and salt pork. He had married Lillian Labash, whose father ran a grocery in Donora, and their \$100 a month in Daytona Beach only made Lillian (and Stanley) wish they were back at the store. Then Lillian broke the tender news that she was about to have a baby and all went black before Stanley.

What saved Stanley's reason and career was Dickie Kerr, who had been one of the few honest men on the notorious Chicago Black Sox and was now the Daytona Beach manager. He had won two games in that famous fixed series with Cincinnati, although supported by a group of thugs who were loyally trying to heave the ball into the grandstand every time they got hold of it. For his faithfulness Dickie got the same bag of peanuts

from the noble Comiskey for pitching the next few years. When he held out in 1922, Comiskey suspended him and he was out of the game for three years. The point is that Kerr kept his loyalty for baseball despite this treatment and now came to the rescue of the Musials. He rented a larger house, took in the Musials, and Mrs. Kerr attended to Lillian while Dickie coaxed Stanley along.

But things looked dark for Stanley when he dived for that line drive and fell on his shoulder and ruined his pitching arm. Kerr kept him in the outfield and next spring when he reported to the Cardinals' camp in Georgia, Burt Shotton could plainly see he was no longer a pitching prospect. He was sent to the Columbus, Georgia, team where Clay Hopper, now the Montreal manager, was standing around with his tongue out waiting for pitchers.

"Tut, tut," said Mr. Hopper, discounting all cries to the contrary. "It says right here you're a pitcher. Go on out there."

Stanley went out against the parent club on their way north from spring training and only heavenly intervention kept him from destruction. Terry Moore and Johnny Mize hit home runs, and other murderous characters whistled drives past his ears with such persistence that even Mr. Clay Hopper was convinced. It took a lot of searching among the clubs of the Cardinals' chain to find anybody who wanted Musial, but he finally landed at the afore-mentioned Springfield, Missouri, which was not too happy about the honor.

Hurry Call from Rochester

It was clear that he would have to hit with some briskness to stick with Springfield, because his arm was still so weak that on any long drive it took him three relays to get the ball back to the infield. However, by July his hitting had set off forest fires in great areas of the Middle West and his percentage had soared to .379. Tony Kaufmann up at Rochester had been sending tear-stained notes to the home office in search of a new outfielder and Stanley proved to be his man.

He banged things around at a .326 pace in the International and was then requisitioned by the Higher Powers as has been previously related. Quite the damndest thing ever heard of in baseball—Springfield, Missouri, to St. Louis, Missouri, in one year, let alone one generation—castoff punk to first-stringer on pennant contender at one leap!

The next year (1942) began as a nightmare (something like the present one). His bad shoulder began to kick up and he couldn't hit and couldn't throw. After a miserable spell in which he could do nothing right, Manager Southworth benched him. Later he was put back in against right-hand pitchers and began playing a tune on the fences. In due time he was in against all opposition and has been hitting ever since (except this year). There were scowls when Southworth placed him in left field, because it was felt that was no place for a southpaw, but Billy refused to worry.

"When a boy has baseball instinct like that Musial," said Billy, "he can make the plays upside down."

The Cards had a terrible time getting going last year and weren't helped when Max Lanier, Lou Klein and Fred Martin jumped to the Mexican League. The ubiquitous Jorge

PHOTOGRAPHS FOR COLLIER'S BY DAVID AND HY PESKIN

It was a comfort for Dennis to visit the hulk. He could stand at the wheel and imagine that the Bessie C. was new and bright, like the painting on the wall of the Blue W

THE HULK

The Bessie C. was on the beach now, and so was her skipper—but Dennis had a life to launch

TWO men were filleting flounder in the fish market, and Dennis paused a moment to watch the flat, slicing strokes of the knives; then he started slowly toward the dock beyond. He had always liked the fish market, but today an angled glance from Joe Dobson made him uncomfortable. There was little pleasure now in listening to the talk of fish fishing in the market, now that his father was no longer at his place near the window. It had been three days since his father lost his job in the mar-

Looking for your old man, Dennis?" Joe Dobson asked. The expression in his watery eyes was probably sympathy; he looked Dennis' way for an instant.

"Yes," Dennis said. "He was here a little while ago. I know that Mr. Brace, owns the Blue Water Hotel?"

"Sure," Dennis said. "Mr. Brace gave him some fish to eat," Joe Dobson said. "He's looking for your old man, too."

The boy nodded, and went through the dock. The water of the bay was dark and shiny in the afternoon sun, off by a channel marker, near the mouth of a tidal creek, several rowboats were fishing. Weakfish must be running, Dennis thought. That was the way to catch them.

"Hey, kid," a voice called. Dennis turned. Standing by the side of the icehouse, beside a tall man, was Mr. Brace, the hotel owner. He was a lean, brown man, the look of a dirt farmer about him. He had steady, pale eyes, and his gaze made Dennis uneasy again. "You're Jack Clifton's boy, aren't you?"

"Yes, sir," Dennis said. "You know where I can find your father?"

Dennis was pretty sure where his father was, but he shook his head. Mr. Brace frowned and stared down at the big bucket. "I was out on the water this morning," he said. "Caught fifty-five porgies and I gave your father two dollars to clean them."

Dennis slowly approached the bucket. He swallowed, and asked, "Can't he clean 'em, Mr. Brace?" "He cleaned 'em, all right. Sure, he cleaned 'em. But look!" Mr. Brace pointed angrily at the bucket. "He can't scale a one of 'em."

Dennis swallowed again. There was no use telling Mr. Brace where to find his father, he thought. He looked into the bucket. It was a lot of fish, fifty porgies. He straightened and said, "I'm sure sorry, Mr. Brace. I forgot. You forgot what?"

"I forgot to scale those fish," Dennis said. "Pop told me to scale 'em and I clean forgot. But I'll get it done right away."

The hotel owner frowned. "Son, I ought to tie a string on your finger. I haven't got time to wait around while you scale those fish. Your fa-

ther said they'd be ready by four o'clock and I made a trip here to get them. I can't wait around while you scale them."

"We can deliver them to the hotel, Mr. Brace," Dennis said quickly. "Is after supper all right?"

The man looked closely at Dennis for a moment, then nodded. "Okay," he said. "But you'd better tie a string on your finger, kid." He walked off to his car and Dennis looked again into the bucket. Fifty-five porgies was a glutton's dish of fish.

DENNIS borrowed a scaler from the fish market, and as Joe Dobson passed it to him Joe's watery eyes met Dennis'. Joe didn't say anything, but as Dennis started back to the dock Joe's big hand brushed his shoulder in a casual, friendly pat.

Fifty-five times, for fifty-five fish, Dennis scraped the scales from tail to head, cut away the stiff dorsal fin and side fins, lopped off the head, and tossed the parts into the water, where crabs had colonized near the market. He put the scaled fish back in the bucket, stowed the bucket in the icehouse, returned the scaler, and then he went to find his father. He knew where to look.

The bar was called the Blue Water, and occupied a square, one-story building across the street from the boat yard and a hundred yards from the big commercial pier where fishing boats brought their catches to be iced and shipped to the city. Fishermen and local workers frequented the bar, and often there would be a group of women in slacks and sunburned men in sport coats talking about their day's luck offshore on a charter boat.

For many years the Blue Water Bar had been the rendezvous of the charter-boat captains, and when a summer visitor from the resort section on the ocean side wanted to charter a boat he usually called the Blue Water Bar and asked Lou, the bartender, what was available. Whenever he went in the bar, Dennis studied the blackboard chart of the boats' schedules the bartender kept.

But before he looked at the blackboard, before he even looked to see if his father was there, Dennis always turned his eyes to the wall where a long time ago a primitive local hand had painted a regatta of boats in a mural circling the walls above the window frames. About a dozen boats were there, and of course Dennis knew the names of all of them, but the one he always looked at first was the Bessie C.

The artist hadn't got the lines quite right, although he had missed no detail. The Bessie C. looked a little squat in the mural, and sat the water with the complacent displacement of a tugboat, but the Bessie C. certainly had

not been a tug. There had been no trimmer, no more seaworthy, no handsomer charter boat in all Atlantic waters than the Bessie C. There was no doubt of that.

Of course, Dennis usually reminded himself when he looked at the painting, the Bessie C. had been built a long time ago. The painting showed three people aboard, two men and a woman, and the wide-brimmed summer straws and striped blazers the men wore indicated they had set out to sea thirty years or more ago, at least twenty years before Dennis was born.

Dennis paused in the doorway and gazed at the painting, then reluctantly pulled his gaze toward the bar. His father was there, at the far end, drinking beer, with his back to a booth where a noisy party was drinking old-fashioned. Dennis walked slowly across the room and touched his father's arm.

Lou, the bartender, grinned and said, "Hello, Dennis, how's the skipper today?"

"Fine," Dennis said, and waited until at last his father turned and looked down at him. His father did not speak, but his hand left the glass of beer and came down gently on the boy's shoulder.

Dennis waited until Lou had moved along down the bar, then he said softly, "Pop, I was over at the fish market, looking for you."

"I was there, Dennis," his father said. "I was there for a while."

"I saw Mr. Brace," Dennis said.

"Did you, boy?" his father said, and picked up his glass again.

Dennis thought that probably most of the two dollars had been spent. His father's face was flushed, and he leaned a little against the bar. One foot was on the rail, and the point of the bent knee showed white through a small tear in his khaki pants. Just the other day Dennis had sewed the tear up, and he made a mental note to get out needle and thread and sew it up again tomorrow.

"Pop," Dennis burst out. "You didn't scale those fish!"

His father's face was blank for a moment. The noise in the booth behind them was very loud, and Dennis looked away from his father's eyes and saw the people in the booth. They had obviously been out on a charter boat; a plump blond woman stuffed into mauve slacks and two men in expensive sport shirts. For an instant they held the boy's attention, but he heard his father saying, "Why, I must have scaled 'em, Dennis. That's funny. I was sure I'd scaled 'em."

Dennis gazed up at his father. His eyes felt hot, and he blinked. His father pushed his glass a little away from him on the bar and stared at it. As he leaned against the bar, his shoulders were slumped, but still looked big

and powerful. He was a large man, a handsome man, Dennis thought, when he was shaved. Dennis liked him best in the morning, after breakfast, when he sat over his coffee and his eyes were clear. A little puffy sometimes, but clear. And even early in the morning there would be a little smile, a small rueful smile. It was in the morning, after he had drunk his coffee, and stretched, and looked at the barometer, that his father sometimes talked of fishing and the Bessie C. But later in the day, after the Blue Water Bar opened, his father became another person, remote and even evasive. Sometimes Dennis felt like a truant officer.

"What did he say, Dennis, about those fish?" his father asked now, self-consciously.

"He said you should have scaled 'em."

His father moved his shoulders uneasily and said, "Okay. I'll scale 'em after a while."

Dennis did not say that they were already scaled. He looked up at his father's flushed, uneasy face, turned, and walked quickly out of the bar.

THERE remained a little time of daylight, and though he did not estimate the height of the sun, and seemed to give no thought to where he was going, Dennis turned his feet purposely along the road that led past the mud flats and the marsh. He walked quickly, with his hands clenched at his sides, and he did not slow his steps until he came to the hulk. He stood a moment beside the road, looking at it.

The hulk lay canted in the marsh grass, its keel deep in mud. The sun and the wind and the rain had blistered and worn the paint, and dry rot had withered the wood, but from a little distance it almost seemed that she could float, that she could put to sea again. It was only when you came a little nearer that you could see where she was stove in, there near the bow. And it was only when you came quite close that you could see the faded letters of her name on the stern: Bessie C.

Once aboard, of course, you knew she was a hulk. There was stale oily water on the deck of the cabin, and barnacles now were berthed where she had once slept four. You had to be careful where you put your foot. It was greasy and slippery where the two engines had been and the housings had fallen in.

Dennis knew where to step, and he knew that the deck in the covered wheelhouse yet was firm. He could stand there and turn the wheel. Its connections with the rudder had long since rotted away and the wheel spun easily. He could stand at the wheel and imagine that the Bessie C. was new and bright, like the painting on the wall of the Blue Water Bar.

It was a comfort to visit the hulk, to

CAN babies design their own diapers? Can fish design their own flies? Can birdies design their own nesties? Can hangmen design their own ties? All right, all right. It's the Stephens College girls out in Columbia, Missouri, get you this way, they being proficient to the point of dizziness in child care, flying, ornithology, sociology and design. And they do, the Stephens College girls all do, design their own clothes—slacks, short pants, jackets, raincoats and the graceful garments they like to sleep in. After they design these things, they make them up stitch by stitch, and after they make them they wear them. And after they wear them, the commercial world of manufacturers and buyers from big stores moves expresses amazement that juveniles can figure out what they want to wear all by themselves, buys them and makes them up by the thousands to sell everywhere. This kind of business has become a regular thing at Stephens College. Mrs. Paula Rowe, who heads the school's design department, has had to establish a clearinghouse for employment and sales. Each year several of her graduates are sought out by manufacturers of teen-age clothes in the St. Louis and Kansas City area for post-graduate designing jobs. And Stephens College designs-by-students, bearing the official school label, Susie Stephens Original, are gaining a modest prestige of their own in campus departments throughout the country. Students receive all fees. Once a year the Stephens design department puts on a fashion show in the modish night-club atmosphere (soft drinks—no hard liquor) of the auditorium of The College. Here students and faculty in evening dress greet their city fashion friends, and a good time is had by all. The photographs shown here were taken at the last show, at which seventy representatives of commercial firms were present. Nine Stephens departments participate in putting on the show. Besides design they have art, aviation, clothing construction, merchandise, personal appearance, photography, radio and textile design. The connection is obvious except, perhaps, in the case of aviation. But out of Stephens students, 425 are learning to fly. They want good-looking clothes to wear, and after they get them, like as not, they'll fly their designing friends out to a green spot for a picnic. (See this week's Collier's cover.) ★★★

Stephens students spend more than some of their time on The Lake swimming, sailing and sunning. Mary Lou Dorsett of Tonkawa, Okla., (left) shows off her own rayon jacket and shorts. At right, Barbara Walker of Milwaukee, Wis., wears coat by Bunny Freesmeier of Clayton, Mo.

Uninhibited is the word for these by-college-girls and for-college-girls lounging clothes. Left to right, Valerie Pederson of San Francisco lounges in plaid gingham by Mary Jane Orman, Beverly Reeves of Salinas, Cal., wears taffeta robe with black slacks designed by Anna Jean Grey of Oklahoma City, and Jo Ann Reed of Larned, Kan., wears Ellie Schooley's pajamas

THE GHOST OF THE SIXT

VENUE OF THE
AMERICAS

Edith wanted to marry Fred Boggs. The trouble was, Fred was a thinker; he wanted to make his influence felt in a troubled wo

PROBABLY everybody has heard the story about the fellow who lived in a house by the old Sixth Avenue el in New York City, how the first night after they tore the el down he would jump out of bed every time he didn't hear a train go by and holler, "What's that?"

That man is old Sam Hinkley, only they got the story wrong. Sam didn't jump out of bed because he missed hearing the trains. He jumped out of bed because he heard them.

Most people living on Sixth Avenue were glad to see the el go. It was dirty and noisy and they said it felt like the train was crawling into bed with you every time it went past the windows. Sam didn't feel that way about it. He was a motorman on the el and he wouldn't have swapped throttles with the engineer on the Super Chief.

"We're both of us serving the public," he would say, "except I'm transporting the poor people home which is more important than taking a talking horse out to Hollywood."

Another way the story they tell is wrong is in how many times Sam jumped out of bed the first night the el stopped running, which was December 4, 1938. It was only once and that was at 12:01, right after the last train went through. Sam jumped out of bed and said what the story says he said. Then he looked at his watch and a pleased look came over his face.

"Right on time," he said and he crawled back into bed. Nobody else heard that train go through, because everybody else on Sixth Avenue was getting the first good night's sleep anybody had on that street since 1878 when the el first started running with steam engines pulling the cars. Nobody else heard the trains after that, either, except old Sam. He kept right on hearing them even after they dug the subway on Sixth Avenue and changed its name to the Avenue of the Americas.

Sam's niece, Edith, who kept house for him in their apartment on Sixth Avenue near Waverly Place, said that as far as she was concerned Sam could think anything he wanted to, it's a free country and there was no harm in it. The trouble was that Sam and the el were in a way responsible for Fred Boggs trying to get into politics, which almost broke up a beautiful romance, among other considerations.

The trouble was, Fred Boggs was a thinker. He was a big muscular guy that some people claimed would be better off with his thinking if he had more brains to go with it, but that didn't stop Fred. When he came up to call on Edith, who was his intended, he went at it with Sam every time. The night the trouble started was no different from any other night, actually,

except maybe that Edith finally got too much of it, like the last straw.

Fred said, "Sam, here's what I don't get. What's so special about the el?"

Edith said, "Now don't start in on that again, Fred, will you, please?"

Sam said, "I tell you, Fred. It's how you look at the thing."

"Here's the point," Fred said. "The way I figure it, the el must have been pretty special for you. Right?"

"Right," said Sam.

"Okay," said Fred. "So what's so special about the el?"

Sam tried to tell Fred how he felt about the el, how it gave him the same feeling a guy might get flying one of those big airplanes, except Sam was nearer to the ground and the people. Sam still wore his blue-and-white-striped engineer's cap all the time, and his eyes were squinted up as if he were still looking far off down the track. He had a face on him like a department-store Santa Claus, all red and round, with wrinkles around his eyes from smiling.

"Maybe to a lot of guys, the way they look at it," Sam said, "runnin' the el was just a job with no significance to it outside of a pay envelope at the end of the week."

"It figures," Fred said.

"It don't figure yet," Sam said, "because that ain't the point." He looked down at his watch and then he looked at Fred with that silly, apologizing smile people get when they're talking and a noise comes along where they can't hear each other. That meant the el was passing through, and Edith and Fred would always wait.

Sam put his watch back in his pocket and said, "Right on time."

"The way I see it," Sam said, "a man ain't doing a hell of a lot no matter what he's doing unless the people get some good out of it."

"That's the point!" Fred said. His eyes lighted up and he got up and walked up and down the room. "You gotta do some good for the people." That was a strong point with Fred. All the time he was up in the Aleutian Islands during the war, when he wasn't just sitting staring at the seals and wondering how he got there, he was figuring ways he could help the people when he got back.

"That's what I done," Sam said, "on the el."

"I don't get it," Fred said.

Edith got up and waltzed around the room. She'd do anything to get those two off the subject of the el. "Look at me, Fred," she said. "I'm dancing!"

"It's how you look at it," Sam said. Fred sat down and put his chin on his fist. Edith sat down, also. "Every morning when I started downtown I says to myself, 'Sam,' I says, 'there's a

lot of poor people got to get transported to work and it's up to you.' And I transported them."

"Yeah, but—"

"Come evening, I says, 'Sam, there's a lot of poor people want to get transported home to the wife and kids.' And I transported them there. Public service."

"It's a thought," Fred said.

"It's how you look at it. The same goes for any job," Sam said.

"I get the public service all right," Fred said, "only what's so special about the el?"

Edith got up and walked out of the room. Fred had to go to the bedroom door and promise he wouldn't talk about the el and that he would talk to Edith, before she'd come out again. The trouble was that Fred was in a thinking mood and he had a lot on his mind.

AFTER they all got settled down again in the parlor, Fred said, "Edith, what do I do?"

"You think too much, which might strain your brain," she said, "but you're lovable nonetheless."

"No kidding, now. What do I do?"

"Okay, I'll play," she said, with a sigh. "You're a government employee, engaged in taking soundings in New York Harbor."

"There," said Fred, "you see? The world is going to pot, with crooks giving the people a raw deal all around," Fred said, "and what am I doing?"

"You're not making it any worse," Edith said, "which is saying a lot."

"I'm out in a rowboat letting a string out to see how deep the water is," Fred said, "while people are starving."

"Maybe if you put a hook on the line you could catch some fish at the same time," Edith said. She wasn't a nasty girl, but she had been through this routine with Fred before and knew what he was leading up to.

"Sure," Fred said, "you can laugh."

"When a girl is still single at age twenty-four," Edith said, "she laughs only at Abbott and Costello."

"We could still get married," said Fred, "right after I get my feet on the ground in my new line of endeavors. Politics."

Edith looked mad and said, "I could marry Everett Flawsom and then I wouldn't have to wait for you at all."

"Now, Edith," said Sam.

"Well," she said, "Everett asked me."

"I don't blame you for considering Everett Flawsom," Fred said. "He's a success in politics."

Sam said, "Everett Flawsom is a two-bit ward heeler who never did anybody any good."

"Here's the point," Fred said. "A man is in politics he's in a position where he can swing some good to the people."

"Politics ain't the only thing," Sam said. "You got a swell job now, Fred."

"Sure," Fred said. "Wonderful."

"It's how you look at it. You take soundings and keep the channel so the boats can keep on sailing, and so what would happen to the people of New York City if it wasn't for being on the job? Starvation!"

Fred shook his head. Sam said, "Look at it this way. If it wasn't for you, all the big boats couldn't take for the four corners of the world blowing their whistles and shooting steam and looking like floating mountains, the way they do."

Edith said, "You can do a lot of good in the world just sticking on a job and being a good citizen."

Fred got red in the face. "That's the trouble," he said. "A guy sticks to his job all his life, like Sam on the el, and it don't add up to nothing. People are still as bad off as before. Only after I'm finished with my course in politics, then—"

"Wait a minute," Edith said. "You had a funny look on your face."

"You're trying to tell me you also signed up for this course in politics, is that it?"

Fred stuck out his chin in a born way. "I only put down a deposit," he said.

"You gave Everett Flawsom money? Our getting-married money?" Edith looked like she was going to cry, she was so mad.

"You'll see I made a good decision," Fred said. "Honest."

"You made a decision all right," Edith said. "Now I'm going to see one. How would you like to get off here and never come back again?"

"Wait a minute," Fred said. "That's the point. After I get in politics—"

"Politics! Politics!" Edith hollered. "For goodness' sakes don't you it takes brains to be a politician goodness' sakes?"

"Now wait," Fred said.

"I'll show you who has brains," Edith hollered. She was all worked up. "I'm going to get smart and marry Everett Flawsom, the way he does, and how do you like that decision, politician?"

"Just a minute, Edith," Sam said.

"That's okay, Sam," Fred said in a soft voice. "As long as I know I stand. I guess it ain't right to let a girl to wait for a guy who has brains."

(Continued on page 90)

Sam took out his watch, looked at it calmly and said, "Right on time."

VENUE EL

BY IRVING GAYNOR NEIMAN

HEARTLESS HARVEST

BY HOWARD WHITMAN

A group of migrant children from New Mexico in the sugar-beet and pea country near Berthoud, Colorado. Usually the whole family will work in the fields; schooling for children is generally neglected. Plumbing for migrant workers is along primitive lines, as represented by the outhouses shown in this picture.

A new crop of Okies, estimated in the millions, is wandering about the country, following the crops they pick. To get their story the author traveled 9,000 miles through 17 states, toiling in the fields. Here he describes working and living conditions you wouldn't believe could be tolerated in America today.

THE open truck rumbled on, mile after aching mile. There was a tarpaulin to stretch over the rattling sideboards but it was unrolled only in a big rain or when the truck passed through a town—so people wouldn't see what was jam-packed inside.

The truck rolled and jounced, day and night, grinding out the endless miles through Texas, Oklahoma, Kansas, Nebraska, Iowa, Minnesota. Fifteen hundred miles. Three days and three nights. If the cargo had been cattle, the law would require a stop every 36 hours to rest and refresh them. If the cargo had been pigs, better still—they would get hose showers along with their rest. But as it was, this rickety truck didn't have to make any rest stops at all. Its cargo was only people.

Jesus Martinez, his wife and four children were among the 38 human beings jammed into the back of the truck, forced to stand up most of the time because there wasn't room for everyone to squat at once. The women and children took turns sitting on the planks along each side, though one spot was reserved for Mrs. Rosa Lopez because she was pregnant.

When the truck stopped for gas, Jesus Martinez and the other men would scurry out and forage for food. Maybe they had a few dimes left for hot dogs and coffee. Or, after their money ran out, they could ask for leavings at a diner. A counterman would look at their faces and give out some bread ends and a little jam.

Then everyone would rush for the toilets, but there was never enough time to take care of 38 people. So along a lonely stretch of road the truck would stop and everyone would clamber down and dart for the bushes.

The first night, Joe the Boss drove straight through without a stop and when Jesus pounded on the cab and begged him to stop for the sake of the women he barked back, "Siddown! How the hell you gonna get to the beets if we don't keep a move on?"

The beets—the sugar-beet fields of Minnesota—were far away, and \$22 an acre was going to be good pay, especially since all the jobs in Texas seemed to have been gobbled up this year. The family of Jesus Martinez was just one of thousands of Texas families who had turned migrant. The cotton fields at home had been deluged with surplus hands. And the citrus work had been bad.

When Joe the Boss was rounding up his crew in San Antonio the proposition sounded inviting. "Nice, easy work in the beet fields. Twenty-two dollars an acre—cold cash. I'm gonna take you there. I'm gonna give you the ride," Joe said. "You're gonna get a nice clean house to live in, free electricity and free water—everything free."

There was a break the third day, in Nebraska, when another truck of migrants up ahead smashed into an automobile. Five people were messed up. Joe the Boss stopped for an hour there, and he cursed at the way some crew bosses were so dumb

they'd drive themselves to sleep instead of taking shifts with a driver the way he did.

The last day and night of the haul nobody. Jesus Martinez' family had anything to eat because their money had run out, and Joe the Boss would not give them time to mooch at the gas stops. "How'm I gonna get you to the beets?" he'd be asking.

So when they got into Minnesota, into the beet fields, the 38 people in the truck were huddled like something like corpses after a bomb goes off. A few could get out of the truck without help. Some tumbled out. Some were sick and fell to the ground. Jesus Martinez, a strong man, let some tears roll down his cheeks when he helped his wife and children down.

Anyway, here was Minnesota. Twenty-two dollars an acre, and a clean house and free electricity—and all that.

The "nice, clean house" is a peeling shack of loose boards and a leaky roof and a sagging floor. It is so tiny you can hardly turn around, yet the Martinezes are going to have to share it with another family—Isidro Sanchez and his wife and children. Of course, Jesus can hang potato sacks across the middle so the Sanchez family cannot when he and his wife and the others get under to go to bed.

He can carry his water from over the hill and build a fire on the ground and heat some water wants to take a bath after a day in the fields. There is an outhouse with four seats, two for men and two for women. Only 63 other people will be using it.

He had better get down to work. He allowed Joe the Boss \$96. What for? Joe hauled him up from Texas, didn't he? He said he'd provide transportation, but he didn't say he'd provide free! Martinez owed him \$20 apiece for his wife and 16-year-old Celia, and \$12 apiece

camp of Pennsylvania migrant workers, located near North Norwich, N. Y. Each shack consists of one room and houses an entire family. Now migrant labor is plentiful again, the problem is increasingly grave

These men are migrants from Florida, working in the fields near Freehold, N. J. They are part of the Eastern stream (predominantly Negro) which follows ripening crops up the Atlantic Coast to New England

little kids. Joe the Boss would take that out of my pay. Oh, yes, you get \$22 an acre. That's good. Maybe if you get the whole family out there working (8-year-old Manuel, too) Martinez could handle fifteen acres or so. It would take him ten weeks. In the meantime, Anna Martinez could buy food on credit at the village store. She'd just sign a slip every time she bought something and those slips would be saved against earnings. Fifty dollars would be held back to make sure they would be on hand to top the bills in the fall. The Martinez family would be in debt the day they started. They'd have to work their hands off trying to get out of debt the whole time they were in the fields.

His, then, is the dirge of the family Martinez. It is the beat of many thousands of families in it. Peace has returned to the fields. The war and the shortage of harvest hands are over. Migrants are heading out again like a swollen river upon the highways and into the camps and over the fields. I saw this human tide ooze northward. It mounts the South and swells mainly into three great streams:

The Eastern stream surges with the ripening crops from Florida up the coast to New York State and New England. Its people are predominantly Negro.

The Middle West stream boils up from Texas and floods northward toward Michigan, Minnesota, and Colorado. It is Spanish-American, mostly, composed of Texas families called "Tex-Mex" or Mexicans.

The Western stream swirls with the harvests through California's fecund valleys up north to the state of Washington. Its migrants are mainly Southern California whites, including thousands of

Okies and Arkies who fled from the dust bowl in the 1930s.

Besides the main streams there are scores of little rivulets: Pennsylvania mining families who work the orchards of New York, Kentucky hill folks who dig potatoes in New England, and Missouri villagers who cut the asparagus in Illinois.

How many migrants are there? Nobody knows. Those who want to minimize the migrant problem say 600,000. Those who want to wring hands hard say 4,000,000. Edith Lowry of the Home Missions Council of North America—a Protestant church group representing 23 denominations, which has done the most work for migrants with the least noise—tells us there are 2,500,000.

Government Migrant Camps to Be Closed

I have seen a good many of them, covering 9,000 miles through 17 states to talk with them and to work in the fields with them. I have seen heads shake in Washington because now, when the need is rising, the government is closing shop at its 48 migrant camps—neat, model camps with clean houses, laundries, recreation centers—come December 31st. The federal medical program for migrants has already folded up.

Congress has dropped the migrant problem like a hot potato. In its adjournment jamboree at the end of July, Congress liquidated even the feeble if well-intentioned farm-labor program of the Department of Agriculture. Through its Extension Service, the Department of Agriculture was at least trying to facilitate the movement of migrants, setting up information stations along migrant routes, operating farm placement offices.

Congress had before it the Hope bill—known in some quarters as the "Hopeless bill" because it did

so little for migrants—but even this wasn't passed. A futile \$1,400,000 was allocated to state employment services for farm-labor placement, with some \$200,000 for the U.S. Employment Service "to coordinate activities."

"The Department of Agriculture is left without any farm-labor program at all," Meredith L. Wilson, director of the Extension Work, told me. "As far as migrants are concerned, we're washed up on January 1st."

Just two months before Congress adjourned, Marine Major General Graves B. Erskine had given his report as head of a government committee to investigate the migrant problem. He had told us, "Migrant workers have been robbed of so many normal American and human rights that it is almost unbelievable."

This season, for the first time since the depression, migrants in Florida again knew the vapid taste of boiled potato peelings. It was better than going hungry. Some got a better break—farmers let them dig what spuds they could find in abandoned fields, and they could eat the ones that wouldn't grade.

Some, according to Margaret J. Harris, a Home Missions Council field supervisor, got a worse break; the Red Cross and the Salvation Army, which desperately wanted to help them, were barred from their camps—to avoid "coddling them"—even though the children had only thin broth and grits to keep them alive.

The cry of "surplus labor" came out of California as early as January. The cotton crop was in and migrant communities started reporting "relief loads." Families drove their jalopies dry in search of work. Thousands roamed and waited until May, when they poured into the ripening San Joaquin Valley. All summer California was swamped, its migrant camps bulging with families waiting for work.

Texas began disgorging migrants in February, much too soon, for the crops to northward weren't nearly ready. But the Army and the war plants had thrown so many thousands back upon the land that the fields were overcrowded. Then the citrus market collapsed (they said it was a transportation bottleneck) and the vegetable market sagged, too.

It is a new day in the fields. A good day because there are plenty of hands to bring in the crops, and we do not need to import Jamaicans and Mexicans as we did during the war. (Continued on page 34)

Mrs. C. Hernandez, with four of her five children. Family shares a boxcar with thirteen other people

MR. MACHINE

BY JOHN AND WARD HAWKINS

There was a title at stake, but that wasn't what they were playing for

THEY stood on the lawn in front of the clubhouse and looked out across the course. The fairways were carefully swept carpets of light green flanked by tall, dark green trees. The land was rolling, the roughs deep. A meandering creek managed to cut almost every fairway, and in the middle distance there was an artificial lake only the Devil could have contrived.

"Very pretty," Pete Muntz said. "A fine place to hunt mountain goats. But not to play golf."

Tom Farrar said, "Look who's screaming."

He grinned at Muntz. Pete was tall, loosely built. He wore a deep tan, an easy smile, and a necktie. That was Pete Muntz—always a necktie. He had a thousand miles of fairway behind him. A great many of those miles he'd walked with Tom Farrar, on exhibition tour. There'd been few tournaments during the war, and the old heads had to earn a living some way. Farrar and Muntz had done well. They'd played a lot of golf together.

Muntz shook his head. "It's no good."

He didn't like the deep roughs, the narrow fairways. He was one of the powerhouse crew—long off the tee—and he tended to spray his wood shots.

"I think it's fine," Farrar said.

Sourly, Pete said, "You would. You can't hit a ball far enough to get in trouble."

The clubhouse was big, faintly rustic, and filled with a great many people. A variety of people—players, press, officials, contact men from the sporting-equipment houses, radio technicians, and plainfolk who had come to look and talk and rub elbows. Tom Farrar decided the club might be a nice place to loaf through a sleepy Sunday—but not this Sunday. This was one of the year's biggest tournaments. This was a circus. They went through the crowded bar to the locker room.

"Make mine Coke," Farrar said. "Plenty of ice."

Pete said, "I should know," and went away.

Farrar dug his golf shoes from the locker that had been assigned to him. When he straightened, he found a short, pudgy man had come to ask questions. The man had a half-filled glass, an owl's look. He was swaying.

"The name's Brown," he said. "Local press."

Tom Farrar said, "Fire away."

"What about your shoulder?" Brown asked. "One day we hear it's broken, the next it's well. The same with your wrist. How about that?"

"There's nothing the matter with me."

Brown drank and then chuckled. "I'll write it, Champ," he said. "But I won't believe it. Nobody lasts forever. You enough left to win this one?"

"I'll come close."

Brown shook his head. "You won it last year. But it was different last year. This year the kids are back from the wars. Kids like that son of yours." He stared round-eyed at Farrar. "The Farmer looks very, very good."

"A fine golfer," Farrar agreed.

"For sure," Brown said. He rocked on his heels, eyes shiny with thought, "I'm nosy," he said. "I've got to be to make a living. I've got to ask about this fight between you and the Farmer. Is it like they say, blood clear up to here?"

"Why don't you ask him?"

"I did. He says ask you."

Farrar said, "Looks like you're in a rut."

Brown looked moodily at his drink. "It's a big story," he said. "I've got to give it a play. I could do a better job if I had the straight dope. But it isn't necessary. Wire service says you two are ready to cut each other's throats. I can go on from there."

"You would anyway."

"Probably," Brown smiled. "But now I have no choice." He didn't seem troubled. "One more

question: Are you retiring after this tournament?"

"It depends," Farrar said.

"It's guys like you," Brown said, "that make heels out of guys like me." The difficulties of a reporter's life brought a sigh from him. "But I know why it all depends. I worked on half the papers in Montana. I've got friends up there—people I owe money. They tell me things so I can pay them back. They told me about you and your ranch."

"Is that a fact?" Farrar said.

"The ranch's the reason you an' your kid are in there sluggin' each other—that's the way they tell it in Montana. It's one of the finest ranches in the state. A model layout. Everything new; everything expensive. A fine, big herd of blooded cattle. It cost a pile of money. All you had, and that much more from the banks. A sound investment. A steak factory like that can really make money—it could if you weren't spread out too thin. In Montana they're saying you can quit golf if you take this tournament—top money and the contracts that go with it. You can go back to the ranch and raise T-bones. If you don't you have to keep on playing until you get a new roll, or until the banks grab the old homestead."

"You know a lot," Farrar said evenly.

"It's true," Brown said. "I could write it. I could tie it up with the fight you had with the Farmer when you wanted him to work the ranch and he told you where to go. I could make one hell of a story. I could"—he tried to drink from his empty glass—"but I'm not going to."

"No?" Farrar said. "And why not?"

Brown was scowling at his empty glass with mild surprise. He looked down the corridor that led to the bar. He turned abruptly away. Then, remembering the question, he came back.

"Because," he said, "some things are nobody's damn' business."

He turned again, almost colliding with Pete Muntz. Pete cursed him gently, and put two Cokes on the bench.

"A breath like a blowtorch," Pete said.

Farrar said, "No cracks. He's a friend of mine."

"He's still a whisky barrel," Pete said.

He straddled the bench and looked at Tom Farrar. The locker room was jammed. Pete swished the ice in his drink.

"I played a loop with the Farmer this morning," he said carefully. "The kid took me for fifty bucks."

"I understand he's hot."

"Good is a better word. He's not as wild as he was, and he's hitting them just as far." Pete Muntz rubbed his chin and frowned. "The way it adds up," he said, "it's you or the Farmer."

"What became of Pete Muntz?"

"He doesn't like match play," Pete said. "He's got a plane reservation for every day this week."

THERE were a dozen pros working on the practice fairway, each with his own audience. Bill Ekstrom, Tony Gatto, Gus Hammerly—the old hands, the big names. Johnny Sands, a kid new to the tournament grind. Tucker, Webb, Rock. More big names. They'd all come out for this one. Thirty-five hundred top money, and a fat wad of contracts for the winner. Down at the end of the line, the Farmer had the biggest gallery. His caddy was far out on the green slope beyond the end of the practice fairway—seventy-five yards beyond. The crowd liked a long hitter; they liked the Farmer. He was a brown youngster, big of wrist, and as broad as a barn door. He could hit a ball into the next town.

Tom Farrar found room to work. The good people—the gallery—drifted up to watch. Tom Farrar answered questions; he autographed programs—

and he wished they'd all go breathe on some else's neck. He kept that thought to himself. The good people and their money made the wheels around. A lot of them had come out the day before the tournament to see Tom Farrar hit practice balls to see if he really was the Mr. Machine of golf. They'd paid for the right to ask questions.

A woman asked, "What club are you using?"

"Eight iron," Tom Farrar said.

The eight was the best club in his bag. The far iron, now—but he'd worry about that later. The eight iron was flashy; he could drop pitch shots a bucket with the eight. The caddy could stand flat-footed and pick the balls out of the air on the first bounce. The gallery enjoyed that. Tom

Tom's putt rimmed the cup. The crowd read the green. Only Tom could beat the Farmer's drawl. "I'm sinking this," he said. "My old man got himself a ranch too."

the small pleased sounds every time he hit a ball. Just like a machine. . . ."

The pitch shots climbed the sky. The gallery thickened. Farrar was a small man, whipcord and slender, gray temples, and a jutting crag of a nose. He weighed one forty-five, soaking wet. He had small hands, small wrists, and he had to be completely right to win. Split the fairway with every shot, irons tight to the pin, and putt like an angel. Accuracy instead of distance. Years of work and million practice balls had made a machine of him. His machines wore out. He needed new wrists and new shoulder. Still, the eight iron was all right. It could please this gallery. He could coast.

He decided he'd had enough and waved his caddy

in. Then he remembered the four iron and changed his mind. He'd hit a few more, just for the hell of it, just to see. The caddy went back up the fairway. Farrar started working the four iron, using a full swing and all the club. The balls went out low and fast. Five of them went out as though on rails: the sixth took a wicked dive to the left. He got eight more down the middle, then hooked again. The gallery didn't notice, but Tom Farrar felt as though each hook was slugging him at the belt.

Pete Muntz said, "Try hitting 'em left-handed."

Farrar said, "It wouldn't help. The big trouble is I wake up a day older every morning."

"It's a way we have," said Pete soberly. . . .

Sundown. Molly Farrar pointed the car toward

the city. Tom put his head against the back of the seat and watched the beer signs go by. There was time to think. How long ago? Three years—no, almost four—since he'd drawn a thick pencil line through the boy's name on the entry sheet, at Wonderly. Four years, and he had only to look into his mind to see again, the fury in the eyes that were so like Molly's eyes. White and shaking, the boy had flung a hoarse, "You'll make no farmer out of me!" across the room, and a reporter had put it on the wires.

Michael Farrar, the stocky Montana ranch boy, had become the Farmer then. Syndicated columns picked it up, drove a wedge of anger into a gulf already wide: MR. MACHINE (Continued on page 83)

RED SHADOW

OVER THE PACIFIC

As U.S. officers battle to rebuild Japan's industry and food supply, every action taken is influenced by the menace of Russian aims in the Far East, according to both military and civilian officials

BY WILLIAM L. CHENERY

RADIOED FROM TOKYO

SOMEWHERE west of the international date line where suddenly Monday steps back into Sunday the impression begins to form in your mind. It is not so much a thought as a feeling. You begin to see new looks in men's eyes, a grimness, a sadness, a resolution in the lines of their faces. Men who battled and won, who saw comrades suffer and die sometimes under dreadful circumstances, who finally after tremendous effort seemed to have achieved a magnificent victory are now disillusioned and anxious.

Regardless of their choosing, the future appears to demand a new struggle that will call for all the reserves of strength, of wisdom and of courage, that they and all others who love freedom and justice can muster for the next great emergency. You become conscious of a menace in the air, an impersonal threat larger and more sinister than the reckless ambition of any mere military conqueror. For there is a zeal and a passion in the Communist Russian thrust in the Far East that is all but religious in nature.

That consciousness of impending danger, of inescapable threat increases as you move westward from island to island. It is inescapable as the air you breathe. It saturates every issue and every problem. Nothing can be planned, undertaken or accomplished without taking into account the possibility of Russian aggression. Nobody, high or low, victor or vanquished, is unaffected. Nobody outside Russia is conscious of any power to mitigate or to restrain in any fashion the Russian will to convert or to conquer. Nobody, that is, outside the United States.

This is a report not of something dreamed, but of my observations during a visit of inspection I made as one of a group of editors and publishers invited by Robert P. Patterson, then Secretary of War, to look at the American occupation of Japan and Korea.

We were given the opportunity to talk to Americans and natives on most of our island installations in the Pacific north of the equator. We talked to military men, to civilians. We asked questions that might have embarrassed both military men and natives. Nobody, least of all Judge Patterson, suggested any particular line of inquiry or of observation, yet without exception we heard much the same story from Japanese, Koreans and American military men and civilians. Here is that story:

I did not see one American, one Japanese, one Korean, one Chinese, civilian or military, who wanted war with Russia. I did not meet one mili-

tary commander who did not think that war with Russia would be a supreme tragedy for America and for mankind. I met many thoughtful, conservative American military leaders who feared that Russia will give Americans and the world no choice except war or surrender.

They believe that the United States will be attacked by Russia suddenly when Russia has completed a program of atomic-bomb development and construction. They say that already Russia is waging a quiet war against us in Korea as well as in Greece, and that only the noise of an exploding atomic bomb is needed to translate an ambiguous peace into an admitted war.

I do not say that these conclusions are sound or unsound. I do report that this is the prevailing opinion among military men and thoughtful civilians.

I asked one of the wisest of the generals if he thought war with Russia inevitable. He said he hoped not. Russia and not the United States, however, would make the decision. If Russia was determined on war, obviously nobody could prevent her from attacking the United States. He thought that the question depended very much on the state of mind of the Russian people. Russia has come out of a great war victorious. What effect on the Russians has this military triumph produced? Have they the feeling now that they are a conquering race, a people destined to be masters of the world? If victory in World War II has inspired in them a belief in their own superiority to lesser breeds outside the Soviet law, then the prospect for escaping war with Russia is dim.

On the other hand if the Russians are not driven by a determination to impose their will upon mankind, there is a chance of avoiding war. Some think that the decision will be made when Marshal Stalin surrenders office by death or otherwise. Some think that the decision awaits only the completion of Russian war preparations. Some of the military leaders say that Russia already has amassed an air force that outnumbers ours nine to one. They do not say that Russian planes are superior to ours or even equal to ours in quality. Whatever Russian intentions, everything that is done in Japan, in Korea, in China and in the island bases we hold in the Pacific, is carried on in the light of a possible unprovoked and sudden attack from Russia.

If you look at the behavior of the Russians in Korea or China the assertion is understandable. I hope that events prove these fears and expecta-

tions fantastically false. I hope that Russia proves as lamblike and benevolent as Russian apologists in the United States describe her to be. I can report, however, that few of the men responsible for the occupation and rehabilitation of Japan or Korea hold any such cheerful belief. The occupations of Japan and of Korea are similar, but basically different. I shall try to describe what is going on in Japan in this article. Korea is another story.

What has happened in Japan can be understood in part from what the Japanese tell you. I talked to an old Japanese statesman, a former admiral in the Imperial Navy whom I was able to reach because of a prewar slight acquaintance. I asked him if the occupation was irritating to the Japanese, who are a very proud people. He said of course there were minor points of irritation, that some Japanese were hurt and angry at being pushed around by soldiers, but, he said, these irritations are mere pinpricks. Every thoughtful Japanese, he said, realizes that without the American occupation Japan would be completely defenseless against any predatory power.

Plight of Conquered Japan

Warming up to the subject, he continued, "Japan has been conquered. We have no army, no navy. Not in fifty years, a hundred years maybe, can we build the arms to defend ourselves. Meantime, if we are to live and to recover, the United States must be responsible for our defense. General MacArthur's campaign against us was very brilliant and very successful. He overcame larger forces. He outmaneuvered our armies. His victory was complete and we are helpless unless the United States accepts responsibility for us."

The old man spoke, I thought, with complete sincerity. Before Pearl Harbor he was counted an honest, friendly man by the American government, and his sincerity is still accepted by responsible Americans. His views as to the necessity of the occupation are, moreover, shared by all of the Japanese we encountered.

The Japanese reporters and editors we met in Osaka, for example, were a diverse group, representing many varieties of Japanese opinion. All who spoke were certain that the occupation was acceptable because it was essential to Japanese defense and recovery. That program is something new in this world. Americans are strange conquerors.

In this last world war, American

science and industry devised and weapons of destruction in quantities almost beyond understanding. Billions of dollars' worth of every conceivable weapon of destruction were sent forward to fight the Japanese. Sometimes miles, of crates and of weapons and engines, trucks, and endless other items fill up the depots on Guam, Iwo Jima, Okinawa and many other places. Destruction was fantastically complete. But when the fighting ceases, Americans are unable to continue hating and particularly unable to endure the untold destruction. Throughout Japan and Okinawa the American civil government is busily engaged in cleaning up, making plans for the natives to return to their destroyed homes and seeking to devise ways of aiding the Japanese, especially, because their need for themselves is so great.

Generally, occupation authorities do whatever common sense and human compassion can suggest to make life as endurable as possible for the conquered people. The occupation centers, naturally, in General MacArthur. He is a remarkable character as well as a brilliant general. He has become very religious in a broad, reverent sense. He dramatizes himself, perhaps without conscious intent. As he talks you think both of the orator and of the eloquently projecting his own point of view. You are reminded both of austere John Barrymore and of the passionate Oliver Cromwell.

General MacArthur is perceived that the Japanese have undergone a real revolution in their opinion. They think their defeat marked their liberation from their militaristic past. They were a complete failure and they lie in the democratic Christian philosophy expressed, after its fashion by the United States.

Whatever the fact as to Japanese conversion, there is no doubt of the popularity of the general. I came out of the Dai Ichi building with a general and we moved out a side entrance so that the waiting Japanese might not be confused or disappointed by my own companion embarking by applause intended for another.

General MacArthur is sixty years old. He takes care of his health although he works seven days a week. He is generally in his office from 10 A.M. to 1:30 P.M. and from 8 or 9 at night. When he is in the office he is unhurriedly relaxed. General MacArthur in the occupation is like that Emperor, except the general bows to the Emperor.

The Story:

One night in London, EVE GILL encounters JONATHAN PENROSE fleeing from the house of wealthy JOSEPH INWOOD. Inwood lies murdered in his library. Jonathan has been at the scene of the crime covering up traces left by Inwood's wanton wife, CHARLOTTE, whom he has been having an affair. Her dress covered with blood, Charlotte had rushed to Jonathan's and told him that she and her husband quarreled and that she struck him with a candlestick.

The police, however, are on Jonathan's trail and sympathetically takes him to her father's country in Kessingland and hides him. After hearing his story, Eve rightly suspects that Charlotte is using the innocent Jonathan quite ruthlessly. Disguising herself as "Dorothy Simpson," a near-sighted, colorless seer, Eve goes to London and manages to get a job as a maid to the supposedly grief-stricken widow. Soon she learns that the real murderer, and Charlotte's real lover, is a brutally sadistic playboy named FREDDY WILLIAMS.

The police do not suspect that Charlotte and Jonathan even know each other, and the search for the smitten martyr continues. Quitting her job as a maid, Eve telephones Charlotte, tells her she is about Jonathan, and starts blackmail proceedings. Then Eve drops into Freddy Williams' apartment by mistake. This time she poses as an aspiring actress, "Felicity Cunningham."

That night she learns that the two plotters, not at all deterred by the thought of blackmail, have decided to do away with both "Dorothy Simpson" and Jonathan. Charlotte is to place a notice in the personal column of a newspaper asking Jonathan to meet her on Tuesday. Freddy Williams will be waiting to kill him.

Realizing her time to save Jonathan is growing short, Eve invites a number of people to a party at Kessingland. Among the prospective guests is DETECTIVE SMITH, who is extremely fond of Eve and is working on the Inwood murder case. Meanwhile, the unsuspecting Jonathan prepares to risk arrest for murder and go to meet his treacherous ladylove.

Conclusion

WHEN I got home, Charlie and Freddy agreed that I had done a reasonably sensible thing, although the Commodore did not seem to consider I had been in any particular danger, or if he did, he saw no objection to it.

It was nearly seven o'clock when I reached my room again and could take stock of myself. I did in a hot bath designed to ease the nervous exhaustion I was feeling. This was Monday, and I would be taking an irrevocable step about Tuesday unless a miracle happened.

And one of my last good nightgowns was dragged and ruined. . . .

I had just finished breakfast. Before Charlie spoke I knew that Jonathan was going to keep his tryst with Charlotte. Charlie said, "He's called the nine fifty-four at Halesworth, Eve. Surely you don't want me to stop him?"

"I want you to, but you mustn't." It was half past six by my wrist watch. "How is he getting to Halesworth?"

"He had proposed to walk to the main road to pick up the bus at the corner, but I didn't like the sound of it. I pointed out that if he were recognized so near home it might be awkward for us. He said that, and I thought I would take him to Halesworth in the Austin—not to the station. I'd let him have a quiet spot near by. He gave me all sorts of excuses to keep for him. I told him," Charlie concluded, "that if he wanted to come back to us, he must. Provided, of course, he was sure he hadn't been spotted. You wanted that?"

"Yes," I said, and he went to fetch the Austin. Presently I heard them drive off.

I waited half an hour, the most miserable half hour I think I have ever known, and then went to Halesworth myself in the Daimler.

It was ten minutes past ten when I parked the car in a turning off the main street and went to the telephone office. One of the telephone boxes was empty.

I kept my back to the counter and the other side of the place while I telephoned to the East London police.

I did not ask for my friend Billy Bull. He would be a shade too quick in the uptake and after a moment realizing instantly that (Continued on page 29)

I thrust the dress into the soft mud at his command and then reached for the pistol in my stocking.

"Ford's out Front," says the Wise Old Owl

(AN INTERVIEW)

"DON'T give a hoot for gimcracks," the Owl said, blinking, "I'm a practical man, I am, I want a car that I can depend on. Now you see the 1947 Ford line—there are cars that are perfect and I'll tell you why.

First, you get your choice of engines," and he raised his eyebrows, "no other car in my class lets you take your choice of either an 8 or a Six.

Then there's the matter of brakes," he went on. "They call 'em 'King-size' and that's what it is—be—with more braking area than any other in Ford's class. The hydraulic feature makes them easy to apply, too!

And, as to economy—well, I have a Scotch friend who tells me it's Ford's 4-ring aluminum pistons and balanced carburetion

"I never saw a more beautiful instrument panel," said Mrs. Owl.

that save a pretty penny on both gas and oil."

"But what about Ford BEAUTY," we asked. "Don't you have an eye for BEAUTY or are you too practical for that?"

"That's the wife's department," he replied solemnly, "but I can tell you she keeps me up days raving about Ford's longer, lower look, about the glamorous interiors and such. It's enough to drive a practical man mad."

"What are your views on safety?" we asked.

"If you are referring to Ford's 'Lifeguard' body I can tell you it's sound—really sound. But that's what you'd expect from the Ford people—thoroughly practical people. That's why Ford's out Front—and if you'd ask me I'd say they're out Front to stay!"

And with that, the Wise Old Owl blinked wisely and flew away!

"I'm savin' gas and oil ye canna beat 4-ring aluminum pistons," said the Scotch Grouse!

THE PREXY PLAN OF GENERAL I

Continued from page 11

to deans, every man should learn to value the thing he does.

In this connection, the general is all for raising the pay and prestige of teachers. "In order to have a truly educated America, we must have a top-flight educational staff. One that can take pride in its work and be assured of its proper place in the world," he says.

Eisenhower is counting heavily on the staff at Columbia for assistance in administering the university's affairs. "I need you to help me," he told Dr. Frank D. Fackenthal, acting president. Fackenthal, who as provost carried most of the burden in the latter years of Dr. Nicholas Murray Butler's administration, was elected a Life Trustee the same day Eisenhower was, and will be appointed Chairman of the Committee on Education.

Views on Technical Education

The general's approach to the technical side of education is that of a common-sense man who has had some difficult problems to meet and has learned something from them. He thinks that instruction in the vocational schools might profit by the use of the visual aids that were so successful in the Army training schools; and he suggests that there may be something useful in the Army method of teaching languages in a hurry.

A front for Columbia University, without ideas of his own? No one who has seen the general's eyes grow icy or heard his voice rasp out a sharp command can believe that. Though he has a modest manner and a genial grin, there is a case-hardened core of integrity in the man with which it is wiser not to trifle.

There are those who feel that Columbia might be a stepping-stone for Eisenhower to the Presidency of the United States. This is not the general's purpose in accepting the office.

After all, the avenues of politics are wide open to him. But he believes that his public utterances would lose their effectiveness if he had a political ax to grind.

He will not connive with the "Eisenhower for President" movement. As to the question of a genuine draft, he summed up his position when he told a reporter at Vicksburg: "No man could have the effrontery to say he would refuse. I have not been asked."

Some people have criticized the general for "deserting the Army" at a critical time. This is completely untrue. In a recent press conference he said, "I shall belong to the Army as long as I am above ground."

His understanding with the trustees of Columbia provides that the President and the Army shall have first call on his services, and that he will spend as much time in Washington, or anywhere else, as is necessary to fulfill his obligation to them.

The trustees came to the general at a propitious time. The Chief of Staff normally serves four years. If Eisenhower goes to Columbia next spring, he will have served almost three quarters of his term. There is no other job for him in the Army at this time. He wants to clear the way for younger men, and he is convinced that there are at least half a dozen generals who can fill the post as well as he.

Thus he faced the logical conclusion of the career he had begun thirty-six years before; but at fifty-six he had no desire to lapse into the desuetude of retirement: "I don't feel that I am about to stumble over my beard."

So he asked himself, "What can I do now?"

There were plenty of offers. Great industrial concerns offered him four or

five times the salary Columbi pay; but he felt it would not be lend his name to private interest.

In the confusion of conflict, the offer from Columbia to open up a vista of future. It answered the question of how find a new career and still hold the disposal of the President. It to give him direct contact with t of young men and women who an important role in the future nation. Most cogent of all, it was above the suspicion of selfishness from which he could continue the things he believes.

At the same time there were drawbacks. The situation at Columbia more complicated than that of any university. Though not m owned, it is an essential part of the City; and many of its problems of that great complex and religions in miniature.

Eisenhower would have pr smaller, more secluded school, might have had more time to perhaps to find out if he could enough to meet his own exact standards. The prospect of stepping position of enormous responsibility another, almost equally demanding him pause. The fact that he was in the field of civilian education a major objection. Then there possibility that educators might outsider being placed above the

But once the general had made mind, he no longer looked back acutely conscious that he was everything on the line. But he in Africa (at which time he commanded troops in the field it again on D-Day.

"It is part of life," he says.

Conferring with the Trustees

When the trustees of Columbia to him with their offer, General grinned and said, "Go to see hower with brains. You don't (He was referring to his brother who is president of Kansas State.

However, it seemed the trustees want the general. The date was 1947. The scene was the superlative house at West Point, a few years the parade ground where Ike Eisenhower of Kansas began his military career.

Columbia's Board of Trustees their two supersalesmen to proposition before the general. Thomas J. Watson, of International Business Machines, who is an ardent of General Ike; the other was Parkinson, President of the Life Assurance Society. They utmost powers of persuasion discussion with Eisenhower, hearts were in it.

More seriously General Eisenhower said, "The president of Columbia be a scholar of renown, one who his way around the academic

"We have many fine scholars campus," they answered him. seeking a leader."

They had been engaged in ever since President Butler retired spring of 1945. At the first the committee of trustees, appointed select a successor to Butler. 1945, the name of Eisenhower spontaneously suggested itself time Ike was still in Germany, was yet unconquered. The idea like wishful thinking.

But it kept popping up. In the of 1946, the trustees made a real approach to the general through in the War Department. Went back that General Eisenhower

to finish as Chief of Staff and was not thinking about any change.

That seemed to settle it.

On May 24, 1947, most of the committee were riding down Central Park West in Tom Watson's big limousine after a meeting that had considered—and rejected—another candidate. Out of a clear sky one of them said, "If we could get Ike now, would you still be for him?" They shouted, "Yes!"

It happened as suddenly as that. The meeting at West Point was arranged; and the salesmen sold the general. At least he agreed to consider their proposition, providing that President Truman and the Secretary of War consented; that the trustees understood that his first duty was to the Army, in peace as in war; and that Mrs. Eisenhower was agreeable.

"Mamie never had any say about our previous moves—orders came from above," the general explained. "This time she must be consulted."

President Truman and Secretary of War Patterson not only consented, they were enthusiastic. Mamie was willing.

On June 21, General and Mrs. Eisenhower met in New York with the full committee. They thrashed the whole thing out and the general finally accepted. Then he was whisked uptown to the university to meet the deans and top administrators, including Dr. Fackenthal. As the general came into the formal magnificence of the trustees' room, wearing his familiar battle jacket with the single bright line of ribbons on his breast and the circles of stars on his shoulders, the silence was like the last second before H-Hour. It was not a hostile silence, but it was charged with tension.

Tom Parkinson, his usually jovial face grave, made a brief, formal introduction.

The Speech of Acceptance

There was a scatter of applause. Then the general began to speak:

"If, on December 16, 1944, I had called one of you gentlemen to my headquarters in France and told you that the Germans had just broken through east of Luxembourg, and said that I was assigning you, with full power and responsibility, to deal with the situation, you could not have been more surprised than I was when your trustees told me that they wanted me to take over the presidency of Columbia University."

A ripple of delighted laughter ran through the small audience. The warmth of Eisenhower's personality was like sunshine in the room.

"But after all," he continued seriously, "if I had given you that assignment and you were a reasonably competent person, as I know all of you are, the Battle of the Bulge would have turned out exactly as it did, because I would have given you the personnel, the organization and the equipment to do the job."

"I know that here at Columbia you are going to give me the personnel, the organization and the equipment to do the job."

In that brief speech was all the art of understanding the other fellow's feelings. It was completely effective because it was utterly sincere.

Five minutes later Ike was sitting on the edge of the massive table, with everyone crowding around him talking at full speed. General Eisenhower had won the First Battle of Columbia.

General Eisenhower is not quite a tyro in his new field. He spent all of World War I instructing men, and he never got to France at all because he was too good at teaching. After serving as instructor in various officers' training camps and at Fort Leavenworth, he was made Commander of the Tank Training Center at Gettysburg. Though only a captain, he had 20,000 men to train, and one small French tank for practice demonstrations. (American tanks didn't come off the production lines until that war was over.) He had to improvise a method of training

troops in tank warfare without any tools, and at the same time maintain the morale of thousands of disappointed officers and men. It was like trying to coach a football team without any footballs.

It is a matter of record that young Captain Eisenhower solved the riddle brilliantly. His system of theoretical instruction enabled American crews to handle French and British tanks in battle after only a few weeks' advanced training under Lieutenant Colonel George S. Patton, Jr. in France.

Again, in the 1930s, Eisenhower, who was assistant to the Secretary of War, played an important part in developing the Army Industrial College.

Though Eisenhower was instructing in the art of war, he loathed the thing itself. The roots of this feeling ran deep.

As a little girl his mother had lived in Virginia at the time of the Civil War. The tides of battle washed around her house; soldiers of both armies ransacked it. Through childish eyes she saw misery and terror that she could never forget.

"War makes men like cruel animals," she said to her son. "They seem to forget our Lord and His teaching of love."

Eisenhower always remembered the urgency of his mother's words as she told him about those unhappy days. So he thought a great deal about peace while

there is a stern realism in the approach. Should good intentions Eisenhower has an alternative plan: defense in depth is prepared. In is a very sophisticated sort of idealism. American Citizen of the World.

But emotionally, General Eisenhower is a typical Kansan—individualistic, humorous and naïve. He still is the boy who rose at dawn to do the farm before he went to school. He studied his homework at night in the engine room of the Belle Springs ferry at Abilene, Kansas, where he was as night fireman.

His ways of having fun are those of the boy. He likes to hunt, play bridge or poker. He is a pretty fancy cook—at home the Eisenhower boys cooked dinner every night to give Mother a day off—but, on the contrary notwithstanding, he washes the dishes. His favorite pastime is spending an evening at home in a sofa in the sun porch of his quarters at Fort Myer and watch a 16-mm. film. If it turns out to be a drama, he simply goes to sleep.

The reason General Eisenhower attaches less importance to purely military function than to his ideas before the American people is that he believes "unless we achieve

COLLIER'S

... But, John, don't you see? ... If you go now ... it may be the end of everything ... for us ... MISCHA

teaching men to fight. Throughout his years in the Army, he read widely on subjects far afield from his profession. His vital interests were in history and government; his preoccupation was with people, not cannon fodder, and his passion was for freedom and democracy.

On his tours of inspection during the war, he often invited an enlisted man to walk alone with him. Off they would tramp through the muddy fields, talking of trivialities until the commander's casual friendliness had melted the constraint of awe. Then he would ask, "What's bothering you, son?"

Almost always the boy would pour out his troubles, military and personal. It was Eisenhower's way of taking his own Gallup Poll of his armies; and through it he learned much of the needs and potentialities of youth.

To understand General Eisenhower you have to take him apart; for there are two opposite sides of him, that together make the whole man.

Intellectually he is the brilliant soldier, diplomat and statesman who led the greatest Army ever to be under a single command. He was successful in welding that vast polyglot organization of men into a fighting team, because he had the background knowledge to comprehend their national aspirations, virtues and faults, the wisdom to make allowances for them and the quality of leadership to inspire them to heights of nobility beyond the human norm. Eisenhower's thinking is on a world-wide scale. His hopes for mankind are extremely idealistic, yet

order we face an awful cataclysm concerned primarily with the making of a free and peaceful world. He feels a compelling obligation to the virtues of men who were so loyal to an obligation to remove the threat from their lives and from the lives of the people of America.

Eisenhower contends that "the security in the absolute sense of a nation unless it is enjoyed by a nation security is only relative."

He is convinced that one of the pillars of the structure of world peace is a strong United States—and mean strong only in a military sense, mean strong economically and morally, and strong in every way that counts to be strong."

As far as the danger of immediate war is concerned, he told reporters in his opinion no great nation in the world today would deliberately provoke a war. The world is uneasy; the world is bewildered and walks in fear. ... He walks in our path of moral rectitude, strength to stand by our purposes."

In private conversation, he has a recognition of the dangers, but the object of peace foremost in our mind. He considers that the best way to our great objective is "to work abroad, and so to live here at home the whole world will see that it is the way."

Columbia sought a leader, and Columbia found one.

HEARTLESS HARVEST

Continued from page 23

But what kind of a day is it for the people?

A sad day, Monsignor John O'Grady, of the National Conference of Catholic Charities, tells us. Monsignor O'Grady, together with the Reverend Hermann N. Morse of the Home Missions Council and Rabbi Herbert S. Goldstein of the Synagogue Council of America, has made an inter-faith study of migrants and jointly condemned the "lack of decent housing," the "absence of health and educational facilities" in migrant camps.

"Migrant workers are the most depressed labor group in the United States," these religious leaders asserted, and they asked, "Can the people of the United States continue to maintain an agricultural economy that takes such a toll, that demands so much in human health and human life?"

In a migrant camp near Smyrna, New York, Harvey Clayton and his wife, Mary, were eating a dinner of scrambled eggs and beans when I came by.

"Hi, yo!" he called.

"Any work yet?"

"Boss says next week."

Clayton's "home," in the rich beanery of New York State, was a cubicle partitioned off in a cowshed. It was seven feet high at one end and sloped down to five feet at the other. The heavy timbers made it look like a cave. Harvey Clayton and his wife had a board platform to sleep on, covered with loose hay. There was another board platform in the dark back of the room where the Clayton children, Melanie, 14, Joe, 11, Jerome, 6 and Elizabeth, 3, had to sleep.

The Claytons were one of 26 Florida families in the camp. And they were fortunate because the cubicles in the cowshed were a good deal more commodious than what the others had. The stable, for instance. That had been boarded up into tiny cells. The floor was dirt, with some hay in one corner and some more hay on the rough wood sleeping platform.

Nobody in this camp had a bed. From nine-month-old Rebecca Dewitt to 74-year-old Corliss Jones they all slept on the raw planks and some brushed the hay aside and preferred the rough wood because the hay was full of lice and fleas.

The smell of dung filled the stable, though it was much milder in the cowshed and after you stayed in the Clayton family's room for ten minutes you got used to it. Some of the other families lived in tiny hen houses. When Abel Thompson crawled into his house, doubling over to get through the door, there was just room for him to take three steps alongside the plank platform where he and his wife, Jessica, slept. If he took another step he'd be treading on their

daughter, Grace, or tipping orange crate which was a crib new baby.

A preacher, the Reverend D. Williams, engaged in welfare work among the migrants at near-by Poolville, New York, had come to this camp before the migrants arrived. He found a foreman shoveling dung out of the

"You're not going to put hum in there, are you?" the preacher asked.

"Who says we're not?"

"Why, man, your whole camp is fit for animal houses. Not one is fit for human habitation!"

"Well, they come here, don't they? Must be good enough for them."

The Reverend Mr. Williams, formerly worked among Africa, said to me, "I thought I left behind in Africa. But here I find people living in stables and subsisting on bread. People do not live and that even in Africa."

Two Families in a Boxcar

Out in Minnesota, the H family had come to work in the beet fields. I found them living in a boxcar near the town of Blue Earth—in a boxcar partitioned in the middle, and the family lived in the other end. The boxcar, a beaten-up boxcar, had a leaky roof, splintery walls and it sagged on the cross-ties beneath it.

Cesareo Hernandez, his wife and children lived in the front end, a back end, which was so cluttered with coats and bunks in two layers could hardly walk through it, and another couple with a grandmother and children, making twenty people in the boxcar.

It was raining when I pulled into the asparagus camp near Rochelle, and I welcomed the shelter of a board house not far from the camp. As I approached the sagging porch I stepped quickly. A young girl giggled from a second-story window. "I'm sorry," she said. "I did not throw the garbage on you!"

It wasn't really garbage. It was water and all the women threw their washwater out the windows. When you have eleven people in a ten-room house the niceties of disposal are often overlooked.

It seemed the house bulged a little. I stepped inside. It already had a bad smell and they slithered in and out of the ways, the stairways and the landings were in a chunk of wood.

Mrs. Maria Herrera was baking bread on a wood-burning stove. "Your stove is smoking."

"Ha, ha. You call that smoke!"

at the families in Illinois living in mped backs of two-and-a-half-ton

trucks, the floorless tents in Michigan, the barns and the stables of New York, the corrugated metal shacks in Florida, which blaze like ovens in the sun.

Some migrants have their own jalopies. Some even have pretty good cars, bought with gravy from the \$150-a-week era of the war plants or with discharge money from the Army. A few make their own deals with the farmers and work free lance. Some are recruited by agents of the canneries. But the great bulk of American migrants work for crew leaders like Joe the Boss, sometimes called "row bosses" or "padrones."

The Ways of the Crew Leader

The Reverend Ellis Marshburn, Middle West supervisor for the Home Missions Council and one of the nation's keenest students of the migrant problem, says, "The crew leader's business is done in his hat, so nobody knows just what angles he is playing. It is common for him to make the migrant work out his transportation, and then make the farmer pay for it, too. Of course, neither knows that the other is paying."

"A crew leader lives off cuts. The slick operator will take a double cut on transportation, a cut per head for every worker he brings, a cut for the use of his trucks on the farm, and a cut out of the hourly pay or the piece work of his crew."

"He usually runs a grocery store or commissary, and sells to the migrants on credit. Many of these people can't even read the slips they have to sign. They just put their 'X' at the bottom."

There are, of course, legitimate crew leaders in the business. Some have led the same crews year after year and some migrants are quite attached to "the boss." But, as the Reverend Marshburn pointed out, "The system is basically rotten. For every 'good' crew leader I have found, I've found dozens who take advantage of the migrant—and of the farmer, too."

It is a good paying business, though. In Chenango County, New York, where migrants were getting 60 cents a bushel for harvesting snap beans, I found the crew leaders taking 10 cents for every bushel their workers brought in. With a crew of 200, as many of them had, their personal earnings in one day equaled the earnings of 40 migrants.

Former State Senator John G. Sholl, who heads New Jersey's migrant labor program, told me, "The crew leader has still another angle—sometimes he will swing a card game on pay day and clean out his entire crew." The Consumers League of New York went into this angle

in a recent survey, reporting "a particularly vicious contractor system" in which "the padrone makes a substantial income from gambling, authorizes the running of a 'house game' and commands a high percentage of 'the take.'"

In Berrien County, Michigan, the crew leaders ran such flagrant dens a few seasons back that the Berrien County Council of Churches stepped in and got the county sheriff to close them. After taking advantage of the migrants every which way, this was the crew leader's last resort. With gambling, liquor—and women, sometimes—he'd try to drain off the last penny the migrants might have saved. This way he could keep them continually 'mortgaged' so they didn't dare leave the crew.

Some crew leaders, called "contractors," make a deal with a big grower to round up so many migrants and deliver them to the fields at so much a head. In the Mississippi Valley I met contractors who collected \$20 a head for every worker they brought to the truck farms. A contractor might submit to a little hijacking, too, if the price was right. On his way up from Alabama, if a farmer stopped his truck and had a fistful of money the contractor might let him look over his crew and pick out half a dozen head that looked good. The trouble is that if he picked out a strong-looking father and didn't take his wife and kids the contractor would have hell to pay, because the wife and kids would be whimpering all the rest of the journey.

Waiting Causes Many Hardships

Fenton Hurley, with his wife, Naomi, and their six children, came up the east coast with a crew leader and there were many things he could not understand.

"We're always early birds," he said. "But we don't get no worm."

They had gone to the potato fields in North Carolina but they were three weeks ahead of the harvest, so they sat on their hands and used up their money until, when the work came, they made just enough to pay back the crew leader for their credit at the commissary and they were broke again when he loaded them up for New York.

"Now we been in New York two weeks and nothin' doin'," Fenton Hurley continued. "The boss said we would find all the beans we can pick. We would get half a dollar for a bushel and make 10 or 15 dollars a day, he said. I don't see anything like that."

So the Hurley family was in debt at the

commissary again, maybe \$30. And after the crew boss decided transportation it was going to take of bean picking to square things.

Some of the younger men including some veterans, took a dimmer view. One said angrily, "wantin' to get out of here since day we hit North Carolina."

"Now take it easy," said Hurley. "The work's a-comin'."

"Yeah, it's a-comin'," the young man continued. "But I don't see no pillin' up your debts and then your head off to get out from under."

"Man, I'd get out of here right I could," said another. "Trouble boss has already got me on the \$20 and I ain't got a cent."

The crew leader was in his commissary again. He had a discussion with him. He put it this way. "I try to take care of my people. The way I see it, who's going to feed them if I don't bring them up here on credit who broke. Who's going to give them if I don't?"

He said in a lower voice, "Money isn't good for these people. Some of them would go out and get it. This way, I give them credit and stick with the crew."

Why do the crew leaders bring them in ahead of the crops? Why do they wait around idle, going home?

"It's this way," a crew leader told me. "Ferry, New York, told me. 'It depends on the weather, and the money and goes as it pleases. I crew lined up and tell 'em we'll be certain day, I got to leave on that day. If the weather stalls the crop couple of weeks, that don't matter to me. 'Less I leave on my own, I say I'm leavin', my crew is gone and shove north with somebody else.'"

Farmers agree there's a good reason for having the harvest help in early. They come from long ago and you can't cut the time machine or your crop may ripen before hands arrive and you may lose your crop.

It was with this in mind that the Jamaican and Bahamian migrants insisted that their 250,000 imported by the United States work during the war be paid for a minimum of three fourths of their time, rain or shine, good crop or no such provision ever has been made for our American migrants.

(The concluding article of this series will appear next week.)

"Yes, she does stand out—but I hadn't thought of her as a sore thumb."

RED SHADOW OVER THE PACIFIC

Continued from page 26

His is the final word although both the American government and the Far Eastern Commission could not make their decisions. Up to this writing he had great success in dealing with the representatives of the conquerors, largely because he has had brains.

Difficulties have arisen not only with the Japanese, who maintain a strict party position on all issues, but also with the Australians who fear Japanese. Nobody, however, sees any more clearly than General MacArthur the necessity for Japanese recovery.

On the four main islands only 16 per cent of the land can be tilled. The rest is barren or sterile. Even so, until the war was got in command, this 16 per cent of the land supplied 85 per cent of the food consumed by Japanese. Realizing that Japan is about the size of India, Korea, Formosa and Manchuria, which formerly supplied the necessary food—about 3,000,000 metric tons. This fed a population guessed at 100,000,000. With the repatriated from various lands, the population is estimated at 78,000,000. Thus, Japan has to keep alive more people.

Minimum Subsistence Standards

Japanese are smaller than Americans, the doctors figure that on size they can get along with about 10 per cent of the food an American needs. The food requirement just to keep Japanese women is 1,285 calories for men, 1,470 calories. For a man to do light work 2,150 calories a day. You can't make a man work on an empty stomach, so, for the most part, of all motives, food has to be the Japanese.

Most of our allies agree with General MacArthur on this. Some have indicated a willingness to risk mass starvation. The Japanese work incredibly long hours to get the rice paddies, during constant rainfall.

The Japanese government, advised in the occupation, has shut down all but 10 of the 90 golf courses in the empire. Fields have been terraced on the mountainsides. What an effort can do is being done to increase food production.

A major handicap is the lack of fertilizer. Human manure is what is used most at present. That is the reason vegetables eaten by Americans at a hydroponics farm near the city of Kyoto. American doctors say the soil too thoroughly infected with growing Americans to eat fresh

vegetables. The Japanese mill about 95 per cent of the grain raised. This contrasts with the American practice of using 75 to 80 per cent of the whole grain. Consequently there is no white flour in Japan. Fish is a great part of the Japanese diet and fish is scarce because of the shortage of fuel for the fishing boats. So the occupation is trying to find ways of increasing the fish harvest. That is why General MacArthur had trouble with the Australians over a Japanese whaling expedition.

Farmers and fishermen and everybody else concerned with the food supply are regulated and controlled to the utmost to assure a fair division of what food there is. Farmers are allowed to retain 1,962 calories per adult from their own crops to feed their families. This is a smaller ration than has been found practicable in Germany or anywhere else. By a system of incentives—giving the farmer some scarce item he needs for his rice—remarkable success has been obtained.

Naturally a black market in food exists. Last year about a quarter of the rice went through the black market. This was chiefly private barter between farmers and people from the cities who had something to trade. A city family might trade a kimono for rice. I saw in Kyoto, women from the tenements with heavy sacks of potatoes on their backs. My interpreter told me that they were probably returning from the country with food they had gotten from farmers by direct barter. The black market happily has not affected the honor of the American Army up to now. Last summer 700,000 tons of food were imported and only 49 tons were lost by stealing.

This summer the farmers were delivering 104 per cent of the quotas of grain assigned to them. The system of rewards was evidently working. Nevertheless nearly every Japanese is hungry. I was told that anybody would work for food alone if full meals were promised.

In Japan no food is unrationed. The staple foods—rice, wheat and barley—make up 1,240 calories; fish, soybeans and other occasional foods add another 110 calories to make a theoretical 1,350 calories. This is less than half of what an average American eats. Even so, about five days a month, in the cities no ration at all is issued. In July, this year, the accumulated deficit of rations was 10 days in Kyoto, I was told.

This food shortage is basic to everything else. General MacArthur has approved schemes to provide more food for such groups as miners who do heavy labor. Scarcity of coal is responsible for many of the other deficiencies in Japanese life. One trouble is that the Japanese war machine recklessly exhausted the

alked around observing the de- hich superficially now resem- was done to Essen and the lley cities, Major General Byers, Lieutenant General Eichelberger's chief of staff, hat the bridge of the river had Fantastic things were done to

the bridges but 10 seconds after the bomb fell it would have been physically possible for the bridges to sustain the weight of a train of military trucks and tractors. The machinery might have been affected by radioactivity, but the bridges stood ready for traffic. They still stand, showing weird shadows on stone, the queer displacement and oddly illogical survival here and destruction there. So with the people.

A few of those who were injured and survived—ten, I was told—have the keloid scars from their atomic injuries. Otherwise Hiroshima is just another destroyed city populated by people who are trying to build something from nothing and who are strangely friendly to Americans who were the agents in the colossal catastrophe that befell them.

South of Hiroshima in the buildings of the old Imperial Japanese Naval Academy is the headquarters of Lieutenant General H. C. H. Robertson, the Australian commander of the British Empire Forces and General MacArthur's deputy in the occupation. A big, red-headed athlete who wears decorations for the highest valor, General Robertson stands with General MacArthur on guard over an empire irretrievably fallen. So far as it is possible to discern, there is no will in the Japanese people to revolt, to rise, to seek revenge for their defeat.

If they were persuaded they could successfully rise against their conquerors, possibly they might try, but they know they cannot—certainly not within the lifetime of any who might attempt to lead such an adventure. So they wait for the decisions of those conquerors who are to make the peace.

The occupation headed by General MacArthur parallels their own government and acts as adviser to it in all its relevant branches. The Japanese copy our institutions even to having labor organizations in general similar to our A.F. of L. and C.I.O. So great is the Japanese zeal to democratize industry after the American pattern that one of the reporters at Osaka asked us if we thought Japanese labor policy would be modified in the light of the Taft-Hartley Bill.

But overshadowing the occupation is the cloud of Russian intentions and Russian ambitions. Russian behavior in Japan is not conciliatory. Russian behavior in Korea falls just short of aggressive war. What we do, what we can do about Japan with safety to our own country depends upon whether or not Russia is determined to fight the United States and so, if victorious, master the world. The best military judgment is that Russia is not yet ready to perpetrate its own Pearl Harbor. Some say ten, maybe fifteen, years will elapse before Russia is ready. Meantime life must go on. The occupation would like to wind up in Japan. But for fear of Russian intentions the occupation could wind up in Japan very soon.

THE END

"My, you certainly have a large wardrobe!"

GREGORY D'ALESSIO

"Take-It-Easy" Heating

No Fire-Tending! No Work; Clean Heat—No Dirt
with Coleman Automatic Oil Heater

(Cutaway View)

See how it moves the heat! Compare Coleman with any other heater—radiant heater or circular, any type of fuel and see which gives you most! Coleman is clean! No ashes or fuel dust. It's automatic with no fire building or fire tending! And it gives "all-over-the-house" heating. Heats 3 to 5 rooms. Coleman features (shown in cutaway picture above) move the heat. It gets down, to warm you!

"Arm-chair fire-tending"—in a cleaner house! All the "fire-tending" you do with a Coleman Oil Heater is "light it in the fall and let go till spring." Keep fuel in tank; turn a dial to regulate the warmth. No ashes, or fuel-grime, or dirt to mess up your house!

Warm floors mean better health. Coleman gets the heat to the floor—so babies risk catching fewer colds playing down there; so your feet are warmer. Even old people can throw away their hassocks and be comfortable, with a Coleman Oil Heater.

Order your Coleman Heater now from your dealer. Ask for free literature or mail coupon to The Coleman Co., Inc., Dept. CM-907, Wichita 1, Kansas; Philadelphia 8, Pa. (Terminal Commerce Bldg.); Los Angeles 54, Calif.

Keep cool as a cucumber —

HERE'S A SWIFT'S BROOKFIELD DINNER that's easy to fix!

● You're fresh and ready for fun when you greet the family. For this meal gets you away from your hot kitchen in a jiffy.

Then, watch how appetites, wilted by Summer's sun, spring to life at the sight of old-fashioned "hot" potato salad with its tangy bite and savory links of SWIFT'S BROOKFIELD... the sausage with the "just-right" seasoning. Not too spicy, not too mild—it's the blend that millions find is seasoned "just-right".

Swift uses selected cuts of pure pork. Rich in energy-building proteins and Vitamin B, its uniform quality makes this sausage America's favorite year after year. Look for it in the gay red and blue package with the bright plaid ends!

SWIFT'S BROOKFIELD SAUSAGE AND "HOT" POTATO SALAD. Pan-fry Swift's Brookfield sausages according to directions on the package. As the fat accumulates measure 6 tbsp. and place these into another skillet. To the drippings add $\frac{1}{2}$ c. vinegar, $\frac{1}{2}$ c. water, 1 tbsp. salt, $\frac{1}{4}$ tsp. pepper, $\frac{1}{3}$ c. chopped onions and 2 tsp. sugar. Bring to a boil. Remove from the range and add $\frac{1}{2}$ c. chopped pimiento and 1 tbsp. of chopped parsley. Pour over $2\frac{1}{2}$ lb. (about 9) cooked, cubed potatoes. Top these individual servings with 5 cooked sausages.

The sausage with the Just-right Seasoning!

Also try the

SWIFT'S PREMIUM tender FRANKS

Plump, juicy, tender franks made from selected cuts of beef and pork. Sealed in the new cellophane wrapper to assure freshness and protect their goodness. They're high in protein.

Swift's Premium Table-Ready Meats

like tasty SALAMI are just the thing for hot-weather suppers, snacks, lunches and picnics.

PUNCH LINES BY SULLENS

BY HARRY HENDERSON AND SAM SHAW

The story of Fred Sullens, the fighting Mississippi editor, who for 50 years has slugged it out with words and fists

EVERY evening in Jackson, Mississippi, a bushy-browed graying man with a rotund shape and a face sits down before a typewriter and writes out a column for the Jackson News, of which he is editor and part owner. The column is called The Low-down on the Higher-ups, by Frederick Sullens.

From the fact that he begins work by taking off his shirt, and generally ends by going to bed naked, probably the most revealing thing about this man Sullens is that he is still alive.

There are two things Mississippians do when they pick up the News, the state's influential paper. First, they take a look at the price of cotton; then they go into Sullens' front-page column which they are likely to laugh at or set out to get Sullens' name.

Sullens' column items are a combination of the humorous and the defiant. He is a man whose boiling point is as low as Westbrook Pegler's. Sometimes he will be solely humorous, like when he complains that the man who was paid \$500 for violating the law. But the perfect Sullens is a combination of wit and deadly insult.

The following item published years

ago probably best exemplifies the tenor of his column:

"Jim So-and-So (naming a prominent state official) came to my office today. I beat hell out of him, his son, and his dog. If anybody else is looking for trouble, he'll find a well-preserved man in his middle fifties well able to take care of himself."

He meant it too. For years a session of the Mississippi legislature was not considered officially open until Fred Sullens had had a fist fight with one of its members, preferably on the floor. To quote Sullens: "I counted the day lost when I didn't have a fist fight or at least the threat of one."

He is scarred from head to toe from his many battles. The count on the number of times he has been threatened with shooting has been lost. Only seven years ago he and Governor Paul B. Johnson rolled all over the lobby of a downtown Jackson hotel using each other as punching bags.

His ability to survive ruckuses has given rise to the legend among his enemies, who include Mississippi's two ranting legislators, Senator Theodore G. Bilbo and Congressman John Rankin, that "nothing will kill the old buzzard." When Bilbo was elected governor for the first time, Sullens, who had bitterly op-

posed him, observed: "It's time to take the eagle off the capitol dome and put up a buzzard."

Because his column is devoted almost exclusively to Mississippi affairs, the average American outside the state has never heard of him. (Inside, the complaint goes, nothing can be heard but him.) But Sullens, now seventy, is probably one of the last of America's old-fashioned, rip-roaring, personal, fighting editors, ready to back up his words with his fists.

Though his columns have become noticeably gentler in the last year, for nearly fifty years Sullens has been the yeast in the half-baked political bread of a state beset by sectionalism, a one-crop economy, demagogues, Populism, an enormous racial problem, slow industrialization, widespread poverty, illiteracy, a rich cotton "aristocracy," and a crop of comic-opera politicians that can hardly be equaled anywhere.

His First Look at Jackson

Yet Sullens' presence in Ole Miss is almost accidental. In fact, after he got a look at it, he tried to escape. He was a reporter on the St. Louis Post-Dispatch, when he got an offer to work for the Jackson Clarion-Ledger. He accepted though he knew nothing more about Jackson than that it was the state capital.

Consequently, he was amazed to find a straggling little country town of 5,000 with no paved streets, no sewage system, and apparently completely dominated by mule teams. Its few buildings, including the state capitol itself, were shabby. After a quick, shocked walk around the town Sullens started running for the train back to St. Louis. He missed it, and he and Mississippi have been married ever since.

Sullens landed, he says, "fighting." For one thing, "news was suppressed at every turn. Anybody who was the least bit prominent could have a story suppressed and that simply didn't go down with me." For another, he was regarded as "a dam-yankee"—for while he had been born in Missouri, he was the son of a Union soldier. Worse yet, he was named Frederick in honor of General U. S. Grant's son, whom his father had cared for during the siege of Vicksburg, Mississippi.

Sullens and another young reporter were the entire editorial staff of the Clarion-Ledger and wrote everything from editorials and dramatic criticism to want ads. To supplement their meager \$15-a-week salaries, they were correspondents for papers in New Orleans, Memphis, Chicago and New York. Sullens was also correspondent of the then new Associated Press.

For three successive years, 1897-8-9, a yellow fever epidemic threatened Jackson, and the doctors ordered the city evacuated. Sullens refused to desert his post. "I remember," he says, "standing by the old state capitol and watching them go, first by the hundreds, then by the thousands, fleeing into the countryside. They were on foot, in buggies, surreys, wagons, on horseback and on mules. Finally the city was empty of everyone except me and a few stray dogs."

The third time this happened some people refused to leave the city and that

WAR BRIDE

Continued from page 13

of them; she was thinking of Erik Stalman, who had given her a ring. In many ways he was the greatest she had ever known. Where she had power, he had genius. It was he who had the humane method of eliminating the undesirables by means of the Stalman Gasverteiler, which looked like an ordinary shower bath. If water the shower spouted forth gas. Erik was a very great chemist. Anna always had a profound respect for his mind. He had first installed the Stalman Gasverteiler at his house. Other forms of so-called gas showers immediately became obsolete. By the gas showers at Auschwitz had been killed ten thousand undesirables. As Stalman pointed out to her, it took very little manpower to operate the Verteiler, which had been his name. Because she admired him so much, she became interested in the gas which had earned him such fame and high decorations. She asked him why he used chlorine and some other gas.

"In your English dictionary," he said with a laugh.

"Looked up the word 'chlorine,'" he said. "That it was an agent which 'had a deleterious and disastrous effect on all organic life.'"

"Undesirables whom we are to eliminate," Erik had told her, "are most certainly the lowest of the organic life. So—chlorine." He took up the earrings. Erik had taken them from Auschwitz. It was the first time she wrote, that the undesirables had anything to do with the camp but their bodies, but he had found the bodies hidden on the body of one of the undesirables, one of a group which came from Budapest. The craftsman was exquisite, he thought; he was, but an expert who had spent his life for him suggested that they had been made by Cellini or one of the pupils, and the creature from the city had been removed had been of some means and—he admitted—culture, of a sort. Re-wrapped the earrings and put the package into the bag. They

would make a nice gift for her future mother-in-law.

She stood up and sighed. Hans Trenker was dead and the General was dead and Erik had been hanged. All dead but the American colonel, and she never expected to see him again. Her heart gave a quick leap when she thought of Colonel Ralph Furey. He was a dark, lean man with cynical eyes and unruly black hair. Anna had fled from Berlin long before the end. She had left her real name, Anna Dietrich, there in the rubble of Berlin, and she had left her dark, sleek personality there too. She actually did have a distant relative, an elderly married cousin, in Bavaria, and it was at his farm that she sought refuge. She had dyed her hair and had assumed the looks and character of blond Anna Gerhart. Colonel Ralph Furey had been put in charge of the district. All civilians were required to register at his headquarters. Colonel Furey watched her while she was being interrogated by one of his aides.

"Perhaps you can be useful," he had speculated, looking at her narrowly. "I need an interpreter. Report this evening at six o'clock."

ANNA had become useful to the Colonel. He had requisitioned a fine estate as his personal headquarters, and Anna found servants for him; she found which wealthy landowners in the district had fine cellars, and then it was merely a matter of sending a truck to these homes and requisitioning the old champagnes and brandy that the cellars held. Sometimes after dinner the Colonel would sit drinking the brandy of Napoleon or the champagne of Rheims, and talking while Anna listened.

"You must get over your hatred for Americans, Anna," he said once to her. "It is absurd, like your loyalty to Germany. After all, Germany let you down rather badly. Don't feel, Anna. Just think. Always think and you will survive."

She sat on the arm of his chair and ran her fingers through his dark hair. "I don't hate all Americans," she said caressingly. "You know me very well, don't you?"

"Yes, little blond girl, I know you," he smiled. "You should study Goethe a little."

"Don't you think we'd better go outside before the others miss us?"

Why Mary Miles
Wears Washday Smiles

The
HOTTER
the Water...

...the
WHITER
the Wash

Now you can get the *hotter* water you need to make your clothes *whiter*. Now you can prove—as research experts on laundering did—that *the Hotter the Water the Whiter the Wash*.

NEW Temperature Dial Control! Get a Ruud, the Gas water heater with the Monel* tank and the amazing Ruud Temperature Dial Control. You'll get *hotter* water. And you'll get it *faster, cleaner, cheaper!* Here's how!

1. You get Hotter Water! Ruud's new Temperature Dial Control lets you dial the exact degree of *hotter* water you need for *whiter* wash; then sends you *all you need... keeps it coming!*

2. You get it Faster! No waiting! No watching! Always plenty of hot water, so you don't have to skimp. The fast heat-speed of *Gas* gives you quick replacement of the hot water you use, *as you use it*.

3. You get it Cleaner! No more dirty water from a rusty tank, to stain your linens and sinks. The famous solid Monel tank of your Ruud Water Heater can *never* rust. It always sends you hot water that's sparkling-clean and pure enough to drink!

4. You get it Cheaper! For 101 uses... from the morning shave to the evening bath... Ruud-Gas-Monel gives you hot water cheaper. Take Ruud Thrift-design with the new Temperature Dial Control. Add the rock-bottom economy of *Gas*, plus the extra-long life of the Ruud-Monel tank. And pocket your savings year after year.

Flash! The new automatic washing machines are designed to work better with hotter water. Get the *hotter* water you need. Get Ruud, Gas and Monel.

In a national survey, 99.1% of our customers say they would recommend Ruud-Gas-Monel to their friends. Built for all types of gas including LP-gas. See your Plumber, Dealer or Gas Company today! Write for descriptive literature now!

JOHNNY ON THE SPOT

The Ringmaster
Finds Out Why

PHILIP MORRIS

is so much better
to smoke!

The Ringmaster thought he had Johnny on the Spot. "Why," he asked, "is PHILIP MORRIS so much better to smoke?"

"Because PHILIP MORRIS is the ONLY leading cigarette scientifically proved far less irritating to the nose and throat," Johnny replied. "Less irritation means more enjoyment. That's why

the PHILIP MORRIS smoker really gets what other smokers only hope to get . . . better taste, finer flavor, perfect smoking pleasure!"

Yes, it's true . . . if every smoker knew what PHILIP MORRIS smokers know—they'd all change to PHILIP MORRIS, America's finest cigarette.

CALL FOR PHILIP MORRIS

hen. He was very great, almost as Shakespeare. I am sure your father, the pastor, often spoke of him?" He looked at her with mock-

smiled and slid from the arm of into his lap.

"Tell me about Goethe," she said, her hand on his ear.

He once said, 'Menschlich ist es zu strafen, aber göttlich zu vergeben.' A nice sentiment, Anna. 'It is to punish but godlike to for-

don't believe that for a moment," he said.

"True." He leaned forward to reassure. "But remember the phrase. 'Attitude you would do well to defeat come in useful someday.'" He nodded. The Colonel seldom smiled. She never forgot anything he reminded her more than a little dead Erik. The earrings she had seen were the only reminder she had of him.

"The Colonel had said to her one night, 'you should go to my country. Germany will always be a country where men rule. In America women rule. You are very beautiful. Men will love you and be drawn to you despite your beauty. It will be as though they are drawn into a clear pool and see something irresistible, there that they will pursue it, even if that means they are in the pool. You have that, but it is wasted in Germany. Go to Germany, Anna.'"

"She asked simply, 'Is a desirable G.I. and marry him. Young men of ours are very gullible. But be sure and pick a wealthy one.'"

"Marriages are forbidden now," he reminded her.

"The rule is going to be relaxed soon. The easiest way would be to get engaged to a G.I. When he goes to America he can send for you."

"Whom?" Anna asked simply.

"I can be sure to pick the right one," the Colonel picked up a batch of papers from his desk.

"Returning home next week," he said.

"To see you go," she said, quite

now that, Anna," he told her. "I dislike leaving you, too, but I have family at home and I am very busy with my family. You—well, you have to look out for yourself. The colonel replacing me is a very dull, stupid

chap. I have recommended that he retain you as a civilian assistant. But I wouldn't bother with him, Anna. He is bringing a staff of men with him. I have their names and records here. As a matter of fact, I trained these men myself. There is one worthy of your attention. He is only a corporal, but don't be misled by that. He comes from a very wealthy American family. Here you are, Anna."

He tossed a paper over to her. It showed a picture of the corporal and gave his record. She winced a little as she read, and then caught the Colonel's cynical smile.

"I think you will be able to handle him, Anna," he said smilingly. "Look at that record—college graduate—Phi Beta Kappa—two years of combat—good decorations. But be careful. He is young and idealistic. He is smart. Phi Beta Kappa is an intellectual fraternity. You must use—what shall I say?—restraint."

"You mean I—"

"It is easier to say in German," the Colonel had smiled. "'Gib nicht zu schnell nach.' In English we would say, 'Play hard to get.' Be an innocent, sweet little Bavarian girl. It is a part you will have no trouble in playing. And now, Anna, let us forget the future and think of the present. There is, I think, another bottle of champagne on the ice."

COLONEL FUREY had finally left, and the young corporal arrived with the new Colonel. He took little notice of Anna at first, but one could no more ignore Anna than one could ignore the warm Bavarian sun or the soft spring nights.

Each man of the Colonel's staff had done his best to fraternize wholeheartedly with Anna, but she had proved unexpectedly invulnerable. The Colonel, a decent man who was religious himself, was delighted with Anna.

"She's a fine little girl," he told his staff. "Leave her alone. Colonel Furey told me her story before he left. Her father was a minister who was killed by the Nazis. She doesn't go around protesting loudly that she was never a Nazi, like the others do. She just does her work well and minds her own business. I won't have anyone bothering her."

Happily, the corporal's German wasn't too good, and Anna was able to help him out quite often. She suggested timidly that she would be glad to give him some German lessons, and he eagerly accepted. They became casual, then rather close friends. Soon they were "Anna" and "Ernest," but even Anna's imaginary ecclesiastical father would have found

Heats Hot in 90 Seconds

For Quick Comfort

Yes sir! Before I'm out of the driveway my South Wind is blowing hot heat into the car!

HOT HEAT IN 90 SECONDS!

"My goodness, it's wonderful to be warm and comfortable going to the store, school, church or movies. Before you know it, our South Wind is pouring out hot heat!"

HOT HEAT IN 90 SECONDS!

"It's grand for old people! Our South Wind heats the car quick as scat. I can go riding in healthful comfort even on coldest days!"

Over 2,000,000 users cheer South Winds' self-created "drive-away" heat! No wait for engine warm-up. Fuel from the carburetor burns in a patented sealed metal chamber. Fumes go out exhaust. Easy to install. Fits any car. Get your South Wind, today. Sold with or without defroster at auto supply stores, car dealers, garages, service stations, coast to coast.

\$29.75

plus small installation charge

South Wind

90-SECOND CAR HEATER

South Wind Division, Stewart-Warner Corporation • Indianapolis 7, Indiana

Available Now! New South Wind "Custombuilt"

A luxury heating and ventilating system proved in aircraft, now ready for cars and motor transports. Automatically distributes heat evenly throughout car. Provides complete change of warmed fresh air every 60 seconds like the most modern home heating plant. \$99.50 plus installation. Ask your service dealer.

Only gasoline car heater proved by over two million users. Bears Underwriters' Laboratories safety seal.

Make these HOME REPAIRS before Winter

CRACKED WALLS

Cast an eagle eye over all walls and ceilings, and fill any cracks or holes with Rutland Patching Plaster. Just mix Rutland with water and apply with knife or trowel. Because Rutland is slower drying, it is much easier to use. Makes a smooth, firm patch that does not shrink, crack or fall out.

BROKEN CONCRETE

Holes in cement floors, walks, etc. are difficult to repair, as usual cement mixtures do not stick to the old surface. To make the job simple and sure, use Rutland Concrete Patcher. This is a scientific mixture that anyone can use. It is ready mixed. Just add water and apply with trowel.

HOLES IN ROOF

These frequently develop around chimneys, flashings, etc. Or they may occur anywhere. It's easy to stop such leaks with Rutland No. 4 Roof Cement. This is a heavy mixture of asphalt and asbestos which can be pushed into small crevices or applied as thick coat with putty knife or trowel.

LEAKY ROOFS

Old roofs can be made as new, for years to come, Rutland No-Tar-In Roof Coating. Easily applied with brush. Forms long-lasting, heavy tough film of asphalt and asbestos that doesn't crawl, crack or peel. Ideal for all roofs except shiny. Costs only about 2¢ a square.

ing in their relationship to censor. She took Anna for what she appeared to be—a lovely, rather sad-eyed Bavarian who had been too young to know the war was all about. They took walks through the green country about the city, and they found a swimming hole and splashed happily and in-ly in its cool water. Ernest was a dead, only twenty-three, but he had a latent hatred of Germans, Anna pointed out. This was hardly an unsurmountable barrier to Anna. She, too, a German, she told him. Hadn't she called her father and, indirectly, her mother? "Yes," she added thoughtfully, "my mother always taught me the doctrine of forgiveness. He was a great admirer of Goethe once wrote, 'Menschlich bloss zu strafen, aber göttlich zu sein.'"

"It is manlike to punish, but it is god-forgive," the corporal translated. "You don't need any more German from me." She had looked at him and

"I think perhaps I need more than German lessons from you, Anna," he had replied.

she used to feel on first nights when she was Anna Dietrich.

"Claim your baggage," a loud-speaker droned, and she walked to where trunks were piled under the letter G. And then the moment came. She was well prepared for it; her sudden confused blush and her look of timid uncertainty must have seemed very convincing to the three who had been waiting on the dock. Then Ernest's arms were around her, and he was whispering confused, happy phrases, and then he let her go as his father's strong voice said firmly, "Come now, we want to meet our new daughter."

He seemed small standing next to his tall son, and he took her hands in his and said softly, "You are even lovelier than our son had said. I hope you will be happy with us. Tell her, Mama."

Anna felt herself being engulfed in a huge embrace. Mama was so much like Mrs. Marsh, and Mama's eyes were filled with tears.

"Welcome, my darling girl," she said to Anna. "We always wanted a daughter. Now we have one."

Anna bit her lower lip and then looked helplessly at Ernest.

"You are so kind," she said brokenly.

The next half hour was a magic one for Anna. She settled back in a huge black car and held Ernest's hand tightly. Ernest's mother sat on the other side of her, and his father sat up with the chauffeur. Ernest's father did most of the talking. The car slid quietly across town.

"We have lunch ordered, Anna," he said. "Just the four of us, we thought. We have a suite for you at the Waldorf. And, Anna, we managed to pull a few strings. The wedding will be tomorrow, if that's all right with you."

Anna swayed closer to Ernest and looked up at him with limpid eyes.

"Whatever—whatever Ernest says," she said shyly.

They were at the hotel and an elevator sped them up, up, and it was as though Anna's spirit was soaring, too. And then they were in the suite which Ernest's father had engaged for her. Anna's startled cry of delight was genuine. The living room was filled with flowers. Anna ran to the window. New York, far below, looked like a toy city that was hers to play with. She turned and her eyes danced around the room. Why, that suite at the Ritz in Paris, which the General had been so proud of, had been nothing—she plugged up the channel into which her thoughts had flown. Paris? The General? That was a part of someone else's life—a dark, sleek, sophisticated girl named Anna Dietrich.

"Look into your bedroom, Anna," Ernest's mother said, with pleasant but mystifying urgency. "Go on, Anna, look."

ANNA flew into the bedroom. It was enormous. The bed was huge, and on it lay a pale blue chiffon nightgown and a matching negligee. Anna turned bewildered eyes to Ernest's mother.

"The closet," Ernest's mother said. "Look in there."

Anna ran to the big closet. She opened the door and a light clicked on. Her hands flew to her throat and a cry of sheer, exquisite pleasure came from her lips. The closet was filled with clothes. Her hands ruffled through them and her practiced eye noted the labels. There were satin and velvet dinner suits; there were exquisite street dresses, silk and lamé evening dresses; a dozen pairs of shoes, and—wonder of wonders—a long ermine coat.

"You see," Ernest's father said, his eyes a little misty, "You didn't need that old suitcase, did you?"

Impulsively—well, almost impulsively—she threw her arms around his neck.

"See, you've lost your girl to me already, son," he said, and his voice trembled with happiness.

"You shouldn't have," Anna said, shaking her head. "Those clothes are so expensive. No one can afford such clothes. No, we must send them back."

Ernest looked at his father, and there was a fierce pride in his eyes.

"I told you she didn't know, Father," he said, and there was exultation in his voice.

"Didn't know what?" Anna raised bewildered eyes.

"About Father's—money. Or about his big heart."

"Our son never told you that his father was a rich man," Ernest's mother said, smiling. "And one day it will all be—"

"He never told me," Anna faltered. "I would have been frightened."

"You will never have to be frightened again," Ernest's father said. "This is all yours, Anna."

"Until tomorrow," Ernest reminded her. "Then you'll have to share it."

"Ernest!" his mother reproved, but then she laughed and put her arms around Anna's shoulders. "He is an impatient bridegroom, little Anna."

A table was already set up in the living room. There were bowls of caviar glistening darkly in molded ice forms, and there were silver buckets from which

CH by LARRY REYNOLDS

"I didn't forget your birthday, Daisy. I even went to the jeweler's—but he was still open"

is quite easy after that. A month later he was sent home, but before he told Anna that he loved her; and with tears brimming in her soft eyes she confessed her love for him. He sent for her as soon as the rules permitted. Meanwhile, he would leave with her so she wouldn't have to

"I had protested, blushing. 'I can't take money from you. Not until we are married. Besides, I know how much a corporal makes.'"

"I have a little more than my corporal's pay," he had smiled mysteriously. "I can send for you very soon, Anna. You'll like my parsonage once they know you they'll like it."

"I snapped the handbag closed. She stepped out of the stateroom. The big ship was fully tied to the dock, and Anna stepped down the gangplank. Her heart was beating a little faster now, and she felt excitement that she always felt when confronted with a challenge. Not a moment of the pleasant tingle of expectancy

"I can't believe that I am really here." "You are really here, sweetheart," he said. "Forever and forever you are really here. Now, which is your trunk?"

Anna pointed to a very old battered suitcase. It looked very forlorn among the magnificent luggage and glossy wardrobe trunks that surrounded it. Ernest's father looked at it and said gently, "It's a very small suitcase."

"But I didn't have much to bring with me," Anna faltered. "Only a few old dresses and—another pair of shoes—"

"There is nothing in the suitcase you value?" Ernest's father asked. Anna shook her head, a little bewildered.

"Leave the suitcase," Ernest's father said, taking her arm. "We'll just walk away from it. And, Anna, as we walk away from it tell yourself that you are walking away from your past." Anna looked at him sharply, but was reassured by his friendly smile. "You have lived with tragedy too long, Anna. From now on you will learn to laugh and to live. We will help you to forget the unhappiness. Come, my dear—"

MILLIONS OF TEST MILES PROVED IT!

This is the record of the new Goodyear De Luxe tire in millions of miles of road tests in which tires were driven until the treads wore smooth:

The new Goodyear De Luxe averaged 34% more mileage than the famous Goodyear tire it replaces. Yes, 34% more mileage!

As you probably know, road tests are tougher on tires than ordinary driving. So the new Goodyear De Luxe certainly ought to do at least as well on the wheels of your car.

NEW!...POSTWAR PERFORMANCE—PREWAR PRICE!

This increased mileage actually costs you less. You not only get a new and better tire, you get it at a prewar price!

NEW!...STRONGER CORD!

The body of the sturdy new De Luxe is stronger because the cord is stronger. The extra strength in the body means the tread is made heavier. As a result, you get longer wear.

NEW!...HUSKIER SHOULDER —MORE EVEN WEAR!

The improved shoulder design of the long-lived new De Luxe makes the shoulder huskier, yet more flexible. In addition, it results in more even wear. The more evenly a tire wears, the longer it wears.

PONTIAC

le thrill of the first mile endures!

It's a great thrill to climb behind the wheel of a new Silver Streak Pontiac and put it through its brilliant paces. The big, smooth, quiet engine—remarkably economical in spite of its power—is master of every traffic situation. You ride in comfort as great as you could ask of *any* car. You experience ease and quickness of handling that come as an entirely new experience. Truly, it is a

thrill to drive a new Pontiac. *And the thrill of that first mile endures!* Year after year, your Pontiac will deliver this same satisfying performance—for Pontiac is designed and built to endure! This is true of every Pontiac built—regardless of year or model. So make your next car a Pontiac—the car that will be a thrill to drive as long as you have it in your possession!

Tune in HENRY J. TAYLOR on the air twice weekly

Pasquel had his eye on Musial, Terry Moore and Enos Slaughter. Jorge offered Stan a bonus of \$75,000 and a five-year contract at \$30,000 a season. That would seem to mean a total deal for \$225,000, but in view of what has happened to American players since in Mexico, it probably meant only a certain grab of \$105,000.

By staying a year below the border Stan would have had no United States income tax to pay and he would have possibly netted as much from the deal as he will save from twenty years playing here, but he turned it down. Without being too cloying about it, Musial put his refusal on the grounds of loyalty, both to the Cards and the good old U.S.A.

"I wouldn't like Mexico," he said. "The Mexicans wouldn't like Donora. We have two kids and they love it here. Why get ourselves all balled up?"

Stanley's Stance at Bat

Like all great hitters Musial has a style of his own and it is about as unorthodox as they come. As the pitcher winds up he curls himself back like a corkscrew. His bat is far back on his shoulder and the crouch of his body and the twist of his frame give him the appearance of a coil about to unwind. As the ball comes toward him he taps the toes of his front (right) foot three times on the ground, like a dancer pirouetting in a ballet. Then he either lets the pitch go by or takes a whack at it. How he sees it all from a cockeyed stance like that is one of baseball's mysteries. But Al Simmons broke all rules by hitting with his "foot in the bucket," Frankie Frisch was once a cross-handed hitter, Heinie Groh stood facing the pitcher and Mel Ott hit like a penguin, on one leg.

Musial thinks he has been lucky all along. "If I hadn't been dumb and fallen on that shoulder, I'd have been a pitcher and never got past the Three-I league." He considers it fortunate that he ever got back his arm at all and thinks being with the Cards was a break for him. Billy Southworth had a reputation for handling young ballplayers but as he says himself there was never any doubt about Musial.

"He wouldn't give up on himself,"

says Southworth. "How could I on him? Coming in with a bat that couldn't be good for an Everybody asked about him, even watched him and he thought for a he had to hit a home run every time a miracle he ever came through it.

In an era when big-name ball have personal managers, personal advisers and fiscal advisers, it is no wonder that Musial's fame has somewhat to his head, but it is possible that the blight will settle permanently. He is a great ball but unfortunately he has little color draws very few kopecks at the gate own performance. Ted William draw; Bob Feller is a draw; Brock a draw and the New York Yankee draw (for some peculiar reason Stanley is merely a wonderful hitter what was a great team.

When he returned after the apoplexy scare he managed to get two twenty-two times at bat, which gave a percentage of something slightly of nothing, but there were experts insisted it would be illegal for Musial to hit less than .300. The proposition hopeless for a long time, but in late and early August he started hitting such demoniacal fury that it took small men with an abacus to keep his average.

In view of the world situation, agreed that this recrudescence of man was the happy tonic required for our national morale.

Whatever finally happens to and the Cardinals, this year of 1947 will undoubtedly help in their reversion. By the time 1948 rolls around will be chasing kids in the streets for them autographs and will be so up at the plate he will consider a balls an affront.

We met a character in St. Louis recently who laid the blame for the troubles on Sam Breadon.

"Look at him," he said disapprovingly. "He has the team so crazy about ball they'd buy their way into the and then Sam goes and gives money! All this about Sam being flint... Why, Sam has just hog-rich ruined a bunch of poor country boys."

THE END

"Remember when it was considered foolish to live beyond your means."

YOUR CAR WILL LAST LONGER WITH A PUROLATOR MICRONIC FILTER

... our tractors use Purolator filters exclusively

Take a tip from the farmers. Protect your car the way they protect their tractors. For longer car life and trouble-free motor-ing equip your car with a Purolator Micronic Oil Filter. Do it *before* performance starts to lag . . . *before* repair costs start to mount. The Purolator Micronic Oil Filter effectively traps the bearing damaging dirt, dust, grime and harsh abrasives that work into your lubricating oil when your car is running.

During the war, thousands upon thousands of Purolator Mi-cronic Oil Filters were produced for the Armed Services and essential industry. Today they are standard equipment on almost every type of transportation vehicle.

If your car is *not* equipped with a Purolator Micronic Oil Filter have your service man install one today. If it *is* equipped with a Purolator be sure that every time you change the filter element you install a genuine Purolator Micronic Oil Filter Element. Remem-ber, only Purolator makes the Purolator—for your car's protection.

MAN RUNNING

Continued from page 28

Information was the real thing, he also recognize my voice despite I did to disguise it. But I had station inspector once and he a bright look about the nose, a pretty nose for a policeman. So I told him that I asked to talk.

I came on the line. I began breathing as if I had been running, and I told him in short, urgent bursts.

"Close!" I said. "That man Penne Inwood murderer!"

"It's that?" I knew by his alertness the name meant something.

"Close!" I repeated. "Halesworth—North station. I saw him! He's just the nine fifty-four! For London!"

"I know how I know it was him! Didn't know the same floor, the same corridor, his office in Bush House, and saw him every day for months? So now you tell him!"

"I say you've seen him before? Speaking, please?"

"God's sake, young man, if you understand plain English, let me hear someone who can!"

"How was he dressed?"

"I gave him a quick and unfaltering description of Jonathan's clothes and general appearance, ending with"—Why, I recognized the little brown spot on the side of his nose, no bigger than a pin—was right behind him when he got out."

"I heard him say, 'Third single, West Street,' just the same way I've often heard him say, 'Third floor, please' to the porter."

"I needed for breath. The inspector was convinced. His excitement was ill-controlled when he asked me to repeat the description to make sure he had got it right. Then he asked again who I was."

"Annie Harris, Station Road, Ipswich. I've been spending the week end with my mother. And now I've gone and lost my way all through trying to do the right thing. I hope heaven knows people like me deserve all they get. My goodness, if I don't hurry I shall miss the bus too!"

"I've got everything you want to know. Goodbye then, and mind you catch the bus. Put down the receiver before he hangs up on me. The only question I did not answer, which was at what number in Station Road I lived."

"However, by the time they had checked the bona fides of Annie Harris, the information was the real thing, he also recognize my voice despite I did to disguise it. But I had station inspector once and he a bright look about the nose, a pretty nose for a policeman. So I told him that I asked to talk."

I came on the line. I began breathing as if I had been running, and I told him in short, urgent bursts.

they would have arrested Jonathan. Yes, they would get him all right, and Charlotte would not, which meant that Freddy Williams would not either.

But I was paying a price for his safety, and unless I was very careful and very lucky it might be too high.

Keeping my head down I left the post office and returned to the car. I felt as bad as I had known I would feel, but forewarned was not forearmed. My eyes were gritty and smarting because I could have done with a good hearty cry and dared not take one if I wanted to stay tough long enough to see the thing through to the end.

WHEN I saw Charlie at home I judged by his noncommittal air that he had no reason to doubt that Jonathan had caught the nine fifty-four. I realized that however terrible I was feeling, it would not help to continue bottling up everything even until after lunch, and that now was the time to put my head metaphorically on Charlie's shoulder.

"Let's talk," I said.

"It's due," he remarked. "You look frightful."

I led the way to the old hayloft over the tithe barn, climbing the rickety ladder into the sweet-smelling half darkness which was among my earliest memories. Perhaps three times before Charlie had been up there with me, and always on occasions of importance.

I lay on my stomach in last year's hay while he sat with his back to the end wall where I could not see his face.

Thus, for a full half hour, I spoke without pause, without a question from him, telling him all that had happened in London while he had been away in the Peacock. At moments, hearing myself as if I were someone else speaking, I wished I could have told Jonathan like this, quietly and without emotional uprushes. He might have believed me.

I stopped at that point, where I had failed with Jonathan, to give Charlie time to digest the main premise of my case against Charlotte and Freddy Williams. He knocked out his dead pipe, refilled it from his battered silver tobacco box, and then said, "I see."

"You agree, don't you," I asked him, "that he wouldn't have a chance once those two got their hands on him?"

"He would keep his faith in her while this Williams was strangling him. Of course he hasn't a chance. You ought to have let me stop him. I thought it was merely the danger of his being picked up if he walked about London. Dammit, they are as dangerous as a brace of black mambas."

Then I told him what I had done in Halesworth an hour ago, and his judicial calm, already ruffled, broke.

"Eve! My God! He'll never forgive you—"

"He isn't going to know that I did it."

"Now, presumably," he said, "we come to the point. How are you to tell the police all this and not burn your own fingers?"

"Was looking after Jonathan a crime, if he is proved innocent?"

"And who is going to do that?"

"Charlotte and Freddy Williams."

"They'll have to undergo a considerable moral revolution, and in a remarkably short time. You realize that Jonathan will have to be produced by the police in a magistrate's court tomorrow morning?"

"Yes, and they'll remand him for a week at least. I thought of that. Tomorrow is Wednesday, and tomorrow week the police will certainly present enough evidence to justify the magistrate sending him for trial. But I think we can prevent even that happening."

"I gather you're coming to the point at last," he complained. "You know, I'm not the Commodore. I don't have to be spoon-fed the indigestible bits."

So I went on from where I had left off, and told him about the coming week end, about my purchases at Harrods, and generally filled in as many of the details of the idea as I could imagine at the moment. He needed no help from me to realize how tricky it would be to put into effect. He held the pipe tight in his teeth and said nothing for what seemed an age, while I became secretly more and more anxious. I could not do it without him. Apart from technicalities, he was for one thing the only person who could keep Father quiet during the critical stages of the proceedings, when his every instinct would urge him to violent and ruinous action.

I waited and waited, and kept my teeth clamped on my tongue to prevent myself saying, "You will do it, won't you?" or even "Well?"

Finally he said, "Has the screened cable twin or single core?"

I knew then that he was with me.

"I don't know," I said, trying to keep gratitude out of my voice.

"I'll take a look presently. There is

one other thing, Eve. The Commodore

"Yes," I said. "The Commodore"

"You know, I think I would tell

"But he would want to run every tell Billy Bull and Ordinary Smith to do this and that! He'd spoil it! sure, absolutely sure, we must give them without warning, before the think what it means except sort of matically without time to ask que and so muddle things. Billy Bull, I would think it was a trick of some He's so suspicious."

"You mean he'd refuse and the modore would refuse and this or inspector chap would refuse—and pose I refuse—to let you run the risk will be running all the time? The serious, dangerous risk?"

I said softly, "You realize, even if of the others would, that I must do way, myself."

"Because of Jonathan?"

"Because of Jonathan. I can't deliberately put him in danger as I have and avoid my share of it."

He nodded slowly.

"And if it goes wrong?"

"Jonathan would not be tried in autumn assizes. We would have weeks to break down the case against him by building up one against the murderer. But they would still be to jail him for years as an accessory to the fact, wouldn't they? Why should woman extract any price from him the glorious privilege of loving her "Steady," Charlie said.

I steadied, and he wound up the conversation then and there. "Show n screened cable."

BECAUSE, confessed, I was a last to sleep soundly from half two that afternoon until nearly could listen to Father's radio with visible tremor when the announcement of Jonathan's arrest was made during six-o'clock news bulletin.

They had not detained him. They arrested him. The headlines next morning were bigger than those which blazoned Joseph Inwood's murder.

"On information received, official Scotland Yard at midday yesterday arrested Penrose at Liverpool Street. He will appear this morning at West London Police Court in connection with the murder, etc., etc." followed a rehash of the original story.

Arrested. They were sure, were they?

I had not realized before that the brandt story would reach the public same time, and there it was, occu-

second place on the front page; I wondered a little ruefully where they would have been without me this morning.

"GANG WARFARE IN ESSEX" said the Daily Picture, "MYSTERY CAR IN STOLEN REMBRANDT DRAMA," and all the papers, even the Times, let themselves go in happy speculation about what might have happened on the lonely road beyond Colchester. Interviewed last night, Mrs. Harvey Gill had been delighted to hear that her priceless masterpiece had been recovered. I was glad to see that she had not offered any theory of her own as to the possible truth behind the gang warfare in Essex. Blood was still thicker than water in Pakenhurst, whatever private views she had so libelously communicated to the chief constable of East Suffolk. In the meantime the Essex police were pursuing their investigations. Presumably K. Zimmer was doing the same.

I TOOK the papers in to Father, who gleefully reached for his pen and wrote to the Times:

"Sir, I do not wish to question Mrs. Harvey Gill's good faith in believing the Rembrandt painting, now happily recovered and about to be restored to her, to be a genuine example of the great painter's work, but I feel in fairness to the public in general and art lovers in particular I should make known my late brother's serious doubts about the authenticity of The Old Woman in a Shawl. When he purchased it from the Pilkin Estate in 1923, he had it examined by the late Josiah Crabtree Jones, who pronounced it to be a Rembrandt but who, it will be recalled, was himself exposed as fraudulent in the celebrated lawsuit concerning the Vermeer fakes. It would be interesting, therefore, to have the picture considered by a panel of present-day experts. . . ."

I was not in the mood to speculate with him about the possible repercussions the publication of this letter would produce; I had a letter of my own to write. I borrowed Mary's writing block, ink bottle and pen from the kitchen drawer where she keeps them, retired to my room and wrote to Charlotte in a round council-school hand, marred by one word misspelled. More than one would have been too many.

Ship Cottage,
Nr. Kessingland,
Suffolk.

Dear Madam:

I am so glad to see in the papers this morning the police have caught that wicked man and he will surely hang don't you think and not so good I think for some people as well unless they are lucky which reminds me could you please make it convenient to call here next Sunday afternoon at three o'clock and not a minute before as my Sister Mary will be going out at 2:30 until close on midnight on account of being able to see Harold only once a week. We will not be bothered by nosy Parkers as this cottage is 4 miles from the nearest house except of course the big house which is saying the same thing as the old man as lives there is bedridden and does not go about. If you come by car or taxi from Saxmundham this road is the first turning on the right on the main road to Lowestoft 2 miles after the Southwold turning you cannot miss it because of the three white posts in the hedge at the corner it's only a small road and goes into the marsh. This cottage is 3 miles to the yard along the small road and you see it pretty soon as the only building in sight. Bring that package you know which and we will have a nice talk and fix up everything satisfactory. If you don't come I will know my duty and do it first thing Monday but I expect you know as well as me

how the news this morning makes it so urgent in fact more so to fix up everything. Bring this letter with you.

Yours respectfully

D. SIMPSON (Miss)

P. S. I will be able to give you a cup of tea and some of Mary's homemades as I expect you will be quite ready for a little something.

I showed it to Charlie who read it three times before commenting. "Where's the blot?"

"Blot?"

"There ought to be a blot, or the remains of one after you have tried to remove it with a penknife."

I walked over and posted it in Kessingland so that she would receive it by the country post in the morning.

I helped Charlie with the cable in the afternoon. It had to be laid so that it could not be seen from anywhere in or near the cottage; a dry ditch helped considerably to bridge most of the distance between the cottage garden and the Marsh House wood, where of course it was easy to loop it from branch to branch to the house itself. A row of runner beans in the cottage garden was useful, with their thick leaves; after that it had to go underground, a few inches below the surface, in sections of old water pipe, and it was no fun threading the stuff through them.

While Charlie made a hole through the wall of his kitchen-living room, I held spare cold chisels for him and continued to be grateful for something to do, even if it did not occupy my mind as much as I would have liked.

Things got better, however, when we came to the placing of the omnidirectional microphone.

For some time we suggested and countersuggested ways and means of concealing the microphone without interfering with its idiosyncrasies. Charlie didn't think it would work properly if there were anything between it and the voice. "And there's no way you can make the speaker stay in one spot."

"In the air over our heads?" I suggested.

Charlie said we'd work out something tomorrow.

DURING the night I realized why the microphone question was so difficult. Charlie's living room was altogether too austere. One earthenware pot and a pipe rack on the mantelpiece, a reproduction of a Van Gogh as the only picture, a calendar from a sheep-dip firm, and that was about all.

Once I began thinking like this, it did not take long to arrive at what I thought he would agree was the answer, and I could scarcely wait for daylight.

I labored all that Thursday, the day Jonathan was remanded for a week on the charge of murder, and found the physical exertion a great boon.

I ransacked the Marsh House attics, robbed Mary's collection of copper pots, and trundled loads of this loot to the cottage where I spent hours on a stepladder with hammer, nails and hooks.

By the time I had finished, the room and particularly the ceiling looked as if it had come about through the crossing of an early English kitchen (which, after all, was what it once had been) with a Montmartre bistro; but more than that, it was now quite like the cottage Dorothy Simpson's late mother had lived in all her life, obstinately refusing to part with the useless treasures of the centuries.

I made four muslin bags, and in three of them there were herbs picked by my own hand. They looked natural enough among the other oddities dangling from the beam and ceiling. The fourth hung between a stuffed Brazilian monkey (a pet of the Commodore's youth) and an Elizabethan pewter wine jug, and you could not see the outlines in it of the omnidirectional microphone which

utor."

at did you think of him? I mean
murderer? I suppose I was quite
about him?"

"Oddly enough you weren't," he said.
"He's more like an architect than most,
as a creative type. He tells the usual
story—it's so usual it almost shook me."

"In what sense usual—and why?"
"Accidental discovery of Inwood's
body, panic, followed by loss of memory
until they picked him up. He can't re-
member a thing after finding the Inwood
front door open, he says. He acts dazed
and the doctors are watching him. It's
so unlikely—"

"That it may be true?"
"No. I wouldn't say that. I'm sure
he's lying. I can't explain." He shrugged
his shoulders free of the problem and
grinned at me to say that he was looking
forward to his short holiday from the
sordid policeman's life.

But I did not want to pursue his un-
certainty. It was enough for me that he
had one, however instinctive and unde-
fined. It would help, tomorrow.

THE Commodore seemed to find noth-
ing immediately objectionable in
him, and almost at once treated him to
a discourse on the history of the Barbary
pirates without doubting that he would
enjoy it, just as though he was a friend
of long standing. But of course he did
not yet know how Mr. Smith earned his
living.

I took him for a longish walk through
the marshes before supper, where pre-
sumably overcome by the romantic
eeriness of the ruined Dutchman's mill
silhouetted against the glowing western
sky he kissed me without warning, and at
once, terrified, apologized.

I forgave him and he ate a good sup-
per with slightly goggling eyes. I felt,
however, that coming events would bring
him rudely back to earth. . . .

The spell of fine weather held, and that
Sunday was one of those golden days.
There was a bathing party before break-
fast, which even the Commodore graced
in a dulcet mood for so early in the day.

At eleven, when Sophie and the Com-
modore were reading the Sunday papers,
I betook myself to Mary and the kitchen,
followed a little wistfully by Ordinary
Smith, who seemed not to care to be
alone.

The veal stock was the right basis for
an asparagus cream soup.

The Commodore's salmon trout were

plump and fresh but rather small, and would be best grilled, one for each person.

The gigot of lamb was one of our own, marsh-fed and so tender it would melt in the mouth. Rubbed with garlic after all the fat had been taken off before roasting in butter rather quickly, it would be light eating. One would not want anything too solid after the salmon trout. I should have liked to give them the vegetables, the baby beans and young boiled potatoes, as a separate following course as the French do, but Billy Bull does not really approve of the custom, so they would come with the lamb. I did not want him to be irritated by even the slightest thing today.

Raspberry ice with a sprinkling of whole raspberries seemed the right conclusion.

Mary baked long, slender white Viennese breads, the kind with the eggshell-thin, crackly crust.

I took Ordinary Smith down to the wine cellar to carry the lamp, and we brought up two flagons of Steinwein, which tastes to me like white flowers distilled in sunshine; also two bottles of the Commodore's favorite claret, the 1933 Haut-Brion. It was now half past twelve. Lunch would begin at about one o'clock in the Long Room at the big table with all the French windows open.

Charlie appeared and was introduced to Mr. Smith. He seemed to like him. A few minutes later Billy Bull (without, thank goodness, the dog Fido) arrived. I introduced the two policemen without using their ranks; although Mr. Smith knew who Billy was, because I had told him.

Crime therefore would not be brought up as a subject unless Billy Bull did so on his own impulse in some other context than their mutual interest. In this respect, however, he got me to himself for a moment just before lunch, long enough to say, "I don't see why you had to be so dramatic about getting that damned picture back to your aunt. I hope there weren't any bodies after so much gun-play?"

"Not in that connection," I assured him. "Don't be ungrateful. You East Suffolk people weren't involved, were you?"

"No," he agreed hastily. "Thank you for that. But *his* letter to the Times! It's a bit thick, you know."

"You wouldn't like his sister-in-law to impose a false masterpiece on her friends and the public at large?"

We had coffee at the table. When watch said two-fifteen, and I dared wait another minute longer, I added the general mood of the six people who a short time were to be precipitated drama and decided that it was a right. Sophie was a trifle giggly, I knew she would not be any the less her elegant toes when the moment came Billy Bull was beaming at the Commodore, who was beaming at every Charlie was soberly aware that he be ready to take control, while Ordinary Smith was just happy and a little re-

In a pause in the conversation I said, "Has Father ever told you, Billy, the Cristobel ingot and how he lost his leg?"

"I must have," said Father, "surely." "There's a love interest in it, to say, with a glance at Sophie, who was the cue with alacrity.

"Oh, Commodore, do, please!"

"Two hundred and fifty-one or eight pennyweights," remarked the Commodore, contemplating the rampart in the smoke of his cigar.

"Who got it?" inquired Billy Bull necessarily.

"In the end," said Father, "I did in manner of speaking." And he was sure he would be good for at least quarters of an hour.

AFTER a few moments I left the room as unobtrusively as possible, Ordinary Smith showing interest in me who unfortunately has "things to do" and he dutifully returned his attention to the Commodore.

I went quietly out, paused in the room to equip myself for emergency and spent five minutes upstairs taking lipstick and fixing the Dorothy Simmons hair-do.

I found a pair of field glasses reached the cottage a little after half two, and after making sure that the room stage was set, with the microphone, I put a .32 down the right-hand side of the cushion of the chair I would sit in, and went to the attic bedroom where a small window at the back gave me a clear view at least a mile of the road over the hill along which Charlotte must come. In my elbows on the sill, I focused the field glasses.

It was a deserted world of gorse and bracken shimmering in the sun. The breeze was light but enough to

cleared the air of any morning mist which might have lingered.

Naturally, of course, I began to wonder whether she would really come, and hitherto unguessed possibilities started to worry me. After all, I had not heard a word from her. Freddy Williams might have changed their plans for some reason I could not know. The story Jonathan had told the police had not been made public. But they could be in no doubt about the danger from D. Simpson. The letter from D. Simpson could not have been more threatening. Or should I have been less ominously polite in favor of more downright, straightforward wording? Never had I had so many eggs in one basket.

Something flashed briefly at the extreme limit of visibility, then again, and I recognized it as the sun on a windshield. A moment later the car itself came into the circle of the field glasses' view. It was a big car, gray and shiny with chromium.

It did not, however, become larger, and I realized that it had stopped, as if the driver had seen the cottage. But before it started again, someone got out by the driver's door, opened the door of the back on the same side and climbed in. Both doors closed almost simultaneously and the car came on steadily. That meant what I hoped and expected: She was not alone, although she would appear to be so when the car came within ordinary seeing distance of the cottage; the man in the back would be crouching out of sight behind the front seat having given over the wheel to Charlotte.

I left the field glasses in the attic and went down to the living room where I put on Aunt Florence's spectacles and, with a Sunday paper in my hand, waited until I heard the car.

On my way to the open door I spoke aloud under the microphone, "Charlie. Stand by."

THE car stopped short of the cottage, turned around on the grass to face the way it had come, and as I reached the open front door, Charlotte was just getting out. Even without the spectacles I could not have seen anyone kneeling on the floor at the back.

She was wearing a small white hat. As she came nearer I saw she was carrying a brown paper package in addition to a white handbag. Her blue linen suit looked cool and matched her self-possessed air.

But her eyes were haggard, her lips tight, holding in the nervous tension quivering beneath that outward calm.

"Good afternoon," I said. "Won't you please step inside, Mrs. Inwood?"

It was the first time she had heard my natural voice, and the difference puzzled her. She looked at me, frowning...

Later, Charlie told me how things went in the Long Room. It must have been quite a scene.

It was at seven minutes to three by the grandfather clock, and in the middle of the Commodore's explanation of why Chiquita Gonzalez did not really mean to throw the knife at him, that the radio set behind him gave tongue in a loud voice—my voice, although not immediately recognized as such. But the words were crystal clear. "Charlie. Stand by."

Father turned and glared at it, sharing the startled surprise of the rest of the table. It was the more unexpected since, when Charlie before lunch had plugged in the microphone lead, he had also removed the small bulb of the signal light which would have shown the set was switched on. "What the hell?" said Father, preparing to rage.

Two people moved. Charlie went to the radio to be able to control the volume, and Sophie reached down for her handbag by her chair: taking a notebook from it and three sharp pencils, she moved aside her coffee cup to make room.

Except for Father's one outburst, only Charlie spoke:

"Will everybody sit where they are, please? It is most important that Sophie should hear every word." To the Commodore he added, "Eve will explain afterward, sir."

When Charlie calls him "sir," it is an occasion. It implies the formal approach of a junior to a senior officer, and with it now was a note in Charlie's voice which clearly conveyed a warning that for good policy reasons the senior officer would be wise not to argue. The Commodore grunted—and held his peace. Billy Bull said, "Eve! That was Eve!"

In the moment's silence which followed, Sophie decided she would hear better if she were closer, and settled herself in one of the armchairs by the radio with the notebook on her knee.

Then came my invitation to Charlotte to come into the cottage. When Ordinary Smith heard the name "Mrs. Inwood" he looked about him a little wildly, as if searching for a visible explanation of my invisible presence.

Charlie watched Billy Bull's reactions as closely as Sophie watched Ordinary Smith's. He said Billy looked "as if the snake might be dangerous but it was better not to show alarm." He lighted a sec-

ond cigar and glanced thoughtfully at Ordinary Smith.

After that, Charlie kept his fingers on the volume control switch and began worrying about me, thus missing much of the gradual understanding which came upon at least two of the three men. But when Ordinary Smith's own name came up he revealed himself to Billy Bull, indicating himself by tapping his chest with his thumb, and Billy Bull nodded.

Sophie applied herself to her shorthand like a good girl, allowing neither excitement nor Steinwein to spoil her accuracy.

CHARLOTTE stood for a moment on the threshold, looking about her, at the stairs in the far corner and at the closed door of the back room.

"Don't be nervous," I said. "You're quite safe here, like I said you'd be."

I sat down in my chair and waited for her to make up her mind. I did not think she was seriously suspecting a trap. Why should she? Apart from the difference in my voice, was there anything she had not expected to find?

"I won't sit down," she said. "There's no need for this to take very long." She made a gesture with the package.

"Put it on the table," I told her, and she did so, moving to the table and standing there, so that she was about five feet from the fourth bag of herbs. If Charlie was at the volume control, which he ought to be by now, that was not too bad.

"Aren't you going to open it—make sure it's all there?" she asked with a bite of sarcasm.

"Time enough. Have you brought my letter?"

She took it from her handbag and gave it to me. I slipped it in my pocket.

"If you will now give me mine," she said, "that will conclude the matter."

I shook my head and took off the spectacles.

"I said we had to have a talk."

"I can be certain of one thing"—she looked at me as at a cockroach—"you will try to cheat. What is it now?"

"I've found out something which makes a big difference. I was quite wrong when I thought it was only a matter of you wanting to keep a secret about you know who. You see, I thought like everybody else that this man Penrose had murdered your husband. Now it seems he didn't do anything of the sort. The police haven't got on to that either. See what I mean?"

"I'm afraid I don't." But she was frightened, then reassured herself. It did not really matter how much I knew. Not now. But it mattered to me that it should be discussed and recorded; there might not be much time left. So I went on quickly, hoping Sophie would manage.

"It was a nice bit of luck, that poor Penrose coming along just then and getting himself labeled as the murderer. wasn't it, Mrs. Inwood?"

"Are you trying to say I killed my own husband?"

"Some people might think so—" I began now to drop the Dorothy Simpson idiom, "they might quite easily think so if they were to read the letters in your bureau drawer, the locked one. The police—Inspector Smith, for instance—would cease to think of you as a sorrowing widow but as a wife who was finding her husband an encumbrance. Particularly in recent weeks, when you have had a more than usually engrossing experience with a new kind of lover. You remember I was there when Inspector Smith and the Scotland Yard man interviewed you? I saw you after they had gone—gone sooner than they might have because I came in at your signal to say an imaginary doctor was waiting. Remember how anxious you were they shouldn't pursue a certain direction in their questions? And how you tried to telephone to a flat in North Audley Street, to warn your lover? Sorrowing widow! You weren't faithful to your

Are You a chronic Shoe-taker-offer, Mister?

HERE ARE 4 PRACTICAL WAYS TO BE SURE OF BUYING COMFORTABLE-FITTING SHOES

"ONE... WEAR THE SAME WEIGHT SOCK you wear regularly when you buy your shoes. Size and thickness of socks make a difference in the fit and comfort of your shoes.

"TWO... LET YOUR SALESMAN DECIDE YOUR SIZE. He knows feet. He's had years of experience in the fitting of shoes. He knows you'll come back *only* if you get the *right* last, the *right* style, the *right* size to fit your foot. Trust him!

"THREE... TAKE YOUR TIME WHEN YOU BUY SHOES. Give the salesman the time he needs to try different lasts and sizes. Try both shoes on, correctly laced, and walk around in them. Be sure they feel right before you leave the store.

"FOUR... BUY AN HONESTLY MADE SHOE. Buy a brand of shoes where there's been no cheating in the making... where the shoes are made on a variety of lasts... where you are sure there's as much care put *inside* the shoe as there is in polishing the finish.

THESE SWELL LOOKIN' SHOES HAVE MORE THAN LOOKS!

FIT! Ward Hill Shoes are made on an amazing variety of lasts. There's a Ward Hill last that fits every type of foot... and perfectly! And every Ward Hill dealer is trained to give you a correct fit.

STYLE! Ward Hill styles are smartly designed by William Leon Knipe, made from the finest leathers—by a manufacturer famous for over sixty years for fine shoe-making.

COMFORT! Whenever a new Ward Hill Shoe is made, extreme care is taken to build it on the *one* last that will give you perfect fit and comfort... a feature many manufacturers often overlook.

FIT WELL!
STYLED SWELL!

Here's
how it
works

Plates at left are kept fully covered because of the big liquid reserve in the AUTO-LITE "Sta-ful" Battery.

Plates at right are exposed and inactive because of the small liquid reserve in ORDINARY Battery.

Liquid level shown in both batteries after equal evaporation.

husband for two weeks together from the day he married you."

"How dare you!"

"I dare."

"You spied on me!"

"You let your lover kill your husband. You came no nearer to killing him than that. There was no need for him to die, was there? He was tight-fisted but he let you go your own way. He didn't worry about your men. He knew he could handle them if they came too close to his marriage and his good name. But he should have worried about this new one. He was different. What happened that night when your poor husband tried to straighten things out before they went too wrong?"

"My God, he was right!" Her voice was a passion of angry fear.

The Long Room would not know what she meant, but I did; she meant Freddy Williams was right that I must be put out of the way.

"Yes, he was not quite in the usual run, your new man. He was much cleverer with you than the others had been. He knew how to use your exhibitionism, how to hold you, how to demand and demand so that you never came to the end of giving. And did not want to. Did your husband notice? I think he did. I think he was not expected to be home that night when you brought your lover to the house after the theater. What did your husband say that made this man lose his temper? And that candlestick so handy—"

"Stop! Oh, for God's sake!"

She was breaking. I thrust hard and without mercy.

"Did you try to save him? Did you cry out to warn him, your devoted Joseph? Or did you stand there and watch the sharp silver smash through the bones of his head to put out his life? Was it good to know that now you were more than ever in your lover's delicious power, held to him forever by the sharing of his guilt, to be hurt and frightened and hurt again because that's really the only answer that warms your cold heart?"

She made a movement to cover her eyes. I battered steadily on:

"Don't forget I was with you every moment of those few days after he was killed. I did not take my eyes off you. Why, I even knew about your all-night

visits to the North Audley Street flat when you were supposed to be so ill that you could not stir from your bed. Three visits. And the secret telephone conversations. I heard them, you know, on the switchboard downstairs."

"I don't believe it!"

"Mayfair 5413, or have I the wrong number? He was out the first time. Nearly all day. He didn't want to see you. It was an unnecessary risk, but you could not wait. And when you came to him in spite of his refusal to see you, it was quite awkward for him. He had another woman with him. I spoke to her when she left. You took a taxi there, remember? The driver will. Number ADP 995. But of course you did not need to note his number, as I did."

She glowered, her hands moving in futile gestures of repudiation and disbelief. I paused a moment.

THE straight line of the doorway's shadow in the shaft of sunlight on the stone floor had a bulge in it, such as a man's shoulder might make if he stood on the threshold out of sight. He had not been there a moment ago.

This was it. I needed thirty seconds to shatter the last of her defenses; I was nearly sure he would wait where he was to hear the rest of it.

"But there's no evidence," I said quickly, "to show you did not kill your husband against positive evidence which says you did. If you will lift that newspaper off the middle of the table you'll see something under it which you will probably recognize—go on, look, Mrs. Inwood. It's something you thought you would never see again, the sort of evidence the police would love to have—one of your several white evening frocks with a square foot of bloodstain on it."

She stretched out her hand and pulled away the newspaper, her horror-stricken eyes on the folded, crumpled satin. "The frock you wore that night. You did not expect to see it again, but there it is, yours and no one else's. It can be identified. Your husband's blood, Mrs. Inwood. The man who killed him thought of everything, didn't he? But has he thought how easily he could let you take the blame if he knew about that frock, if I should come into his hands?"

"No! No! No!" she said. "He wouldn't"

"Can't your wife be doing something besides mixing you a batch of Martinis?"

ELSIE HAS A NEW BABY BOY

NEW YORK — In message

Give him a name!

\$25,000.00

in cash prizes!

(including dealer prizes)

He's the chance of your lifetime to win a nice big
of cold cash—and have a lot of fun at the same
time!

and Elsie a name for her new baby boy—the cute
tyke above. And write 25 words giving your
reason for picking the particular name.

The lucky person who sends in the winning entry

walks off with \$7,500! . . . Second and third prizes
\$1,000 each. And more than 800 *additional prizes* in
ready-to-spend *cash*!

If you have several names you think might fit Elsie's
baby, send 'em all in—you'll have *more* chance to win.
Just remember to accompany each entry with a label,
box top, bottle top—any mark of identification—from

any one of the great family of Borden Foods.

Please help Elsie NOW!

Contest closes midnight, October 31, 1947!

Use the coupon on this ad or secure an official entry
blank from your store where you buy Borden prod-
ucts, or write on your own stationery.

Read these rules!

Send in a first name for Elsie and Elsie's new baby boy calf. Then in 25 additional words or less complete the statement: "I suggest this name for Elsie's baby because . . ."

Use the coupon in this ad or secure an official entry blank from your store where you buy Borden products, or write on your own stationery. Print clearly your own name and address (also your age and name of your school principal if you are under 14), and the name and address of merchant from whom you buy Borden products. Let your storekeeper help you, then, if you win a prize, he wins one too. Write on one side of paper only.

This contest is open to any person in the continental United States . . . except employees of The Borden Company and subsidiaries and affiliates, its advertising agencies and members of their immediate families. Contest is subject to all government regulations.

Submit as many entries as you wish, each entry must be accompanied by a

label, bottle cap, box top, or any other mark of identification from any Borden product.

5. All entries must be the original work of the contestants, submitted in their own names. No more than one prize will be awarded in one family.

Mail your entries to:

Elsie's Contest
P.O. Box 18
New York 8, N. Y.

Entries with insufficient postage will not be accepted.

6. Entries will be judged by the judging staff of The Reuben H. Donnelley Corporation. The name will be selected on appropriateness and originality. The statement will be judged on sincerity, logic and aptness of thought. Duplicate prizes awarded in case of ties. Age will be considered in judging entries of children under 14 years. The decision of the judges will be final. No entries will be returned. All entries and ideas therein become the

property of The Borden Company, which shall have the right to use, with contestants' names, in Borden Advertising.

7. The contest closes midnight October 31, 1947 and all entries must be postmarked before that date and received before November 15, 1947.

8. The Borden Company will have notices mailed to winners. A complete list of winners will be sent to all contestants requesting one and sending a stamped, addressed envelope. The Borden Company will decide whether or when to announce any winning names for the calf.

hat. Give me that frock—I'll pay!"

"Come in, Mr. Williams," I said. "Wouldn't you do that?—or would you?"

The shaft of sunlight was all but blot-out as he stood in the doorway, large and florid and at ease in a gray flannel suit, hatless, his dark hair curling a little lamplily on his forehead, a slightly perspiring forehead, perspiring, however, from the heat of the afternoon sun. Charlotte turned to him before he could speak and uttered the words I had heard and prayed that she would say: "It's worse!" she cried. "Worse! She knows everything! She knows you killed Groves! She's threatening to tell the police I did it, playing me off against you! That frock! She's got hold of it, God knows how! Oh, you were right about her! She's dangerous, much more dangerous than that silly little Groves man!"

"Quietly, quietly!" he said with an air of irritation. "You've let her get at all right, haven't you? What's the idea?"

But if she can know all this by spying, watching and guessing and being sly and cunning, who else mayn't there be? Groves, now this one—oh, Freddy, will it end? I know I'm the sort of man people take more interest in than

"A compliment from a murderer, a double murderer at that, is a compliment indeed."

"I did not recognize Felicity Cunningham at first."

Charlotte said, "Who? But she's the maid Samson—"

"Simpson," I corrected her.

"She's what she likes to call herself. I told you to shut up." Freddy Williams blew cigarette smoke into the air; it whirled and eddied in a small blue mist around the muslin bag above him. "A homely setting. I don't wonder you hanker for a stage career. Or was that part of the act too?"

I looked at him. I shifted in the chair as though with uneasiness under his fixed gaze.

"You can't frighten me," I said.

"No?"

"I'm not a helpless butler on a crowded underground station," I added. "I know all about you. I knew you'd come with her. Groves wasn't looking as far as you were concerned. I am. Don't move!"

"I hadn't moved," he said mildly. "You're nervy, aren't you? Beginning to realize what you're up against, eh?"

"Don't be silly. Of course you're dangerous. Joseph Inwood because he annoyed you by trying to stop your affair

way, what exactly did Joseph Inwood say that made you so cross? The inspector would be interested in that too."

"You've said enough! These academic post-mortems—or shall I say ante-mortems?—are dull affairs."

"Threatening me, Mr. Williams?"

"You know so much about me, work it out."

"You moved then," I said, and took out the pistol. I held it on him. He studied me thoughtfully and relaxed against the table again.

"Oh, my God," Charlotte muttered. "I said she was a cunning—"

"—You did, she is," he said, and to me: "Well? You know what I am and you prepared yourself. Very sensible. Very professional. Where do we go from here?"

Charlotte's jitters were pitiable now. I took time to reply.

"First a confession to both murders, signed by you, and in it a vindication of Charlotte to the extent that she was an unwilling agent throughout and that whatever wrong she did, either actively or by omission, was the result of your pressure and coercion."

Charlotte drew in her breath sharply. Freddy Williams glanced quickly at her and back to me.

"What's the idea?" His expression was ugly.

"It—it's true," Charlotte was saying almost to herself, and then more clearly, "It's true! I didn't want any of it—how could I?"

"Is this a little plot between the two of you?"

Although he had not moved she backed away from him. "No, no, Freddy. Of course it isn't. I don't know what she means. Honestly—I swear!"

HE PAUSED and seemed to forget her in trying to decide what lay behind my terms. There was a settled scowl on his face and he spoke softly, too softly, I learned afterward, for the microphone to catch more than an occasional word.

"I've had enough of this silly business. Confession, you want, do you? Want to make sure there's a record for the police if anything should happen to you? Do you really believe you could get that from me? Gone all sentimental, too, about a frail sister in distress—she'd be grateful to know that someone has almost a free pardon for her. She'd pay more in gratitude than in fear, you think? You're wrong about her too, Miss Cunningham, whoever you are. She's tougher than that and so dishonest. So dishonest—if she thinks you're weaker than she is. Only one thing will keep her straight with anyone—" He was edging closer to me while he was speaking, watching me with his fierce, steady eyes.

"Had you thought," I asked, "what will happen when she gets tired of the only thing which keeps her loyal to you? She will, you know. She always does. Ask her to show you her collection of letters, the unburnt offerings from her—friends of the last few years. It's all there. You might recognize then the unwilling accomplice who turns king's evidence. Whatever you are thinking of doing now—or thought of doing—will be one more problem for her, one more thing on her conscience from which she must sooner or later escape. So—"

Charlotte was staring at me with something like her old self-control. I had given her an idea. She was looking at it carefully, weighing its possibilities. She might dismiss it but it would come back. Freddy Williams glanced at her, for she had uttered no cry of undying loyalty to him when I had questioned its permanence, and he saw what she was thinking.

Violent but ordered rage showed in his eyes as he turned to me again.

"So—" he said. "So what—?"

"Stay where you are and listen to me." But I fell silent, allowing him to

"The war must really be over now, Roy. The other day I caught myself thinkin' that maybe Sergeant Polk wasn't too bad a guy after all"

HER'S

JOHN RUGE

socially prominent, well off, important, but—"

"You're as important as my foot," said Williams. "Shut up and let me talk with this! Pull yourself together!"

"You don't understand! She—"

He moved quickly forward and cupped her face, hard, twice. She whimpered and put her hands to her cheeks. He did not say anything; indeed she said nearly all she was to say that afternoon. Thereafter Freddy Williams talked for them both.

He was in his best mood; he fancied himself hugely. He was in command of a situation which he had ordained, or so he thought, and for an audience he had a cowed and frightened woman and a man whom he would soon put in the same state.

He sat on the edge of the table with his legs crossed. Charlotte, lighted a cigarette and did not take her eyes off me. He seemed considerably in their power, but the mind (and at other times the heart) of the female on whom he set them was another matter. Finally he spoke: "Professional blackmailer?"

"I have no qualifications, I'm afraid." Or the contrary."

with his wife and Groves because he tried to blackmail her—" I nodded toward Charlotte. "She didn't do so well in that bit. You know she took the two hundred pounds she'd paid him from under his mattress before anyone else in the house knew he was dead, before it was in the papers or anything? The police would be interested in that point. If they knew, of course, the money was ever there, which they don't, so far—although Inspector Smith wasn't altogether satisfied with either accident or suicide. I was there when he searched Groves' room. I know. I talked to him. He wouldn't take long to get on to it, once he was given a hint."

"Everything," I heard Charlotte saying. "She knows everything! It's diabolical."

Freddy, however, did not pay any attention to her this time. His expression was uglier, his eyes darker and as unwavering as ever.

"You see," I said, "Inspector Smith would be glad to know the name—and address—of the witness who was standing close to Groves just before he fell. He hasn't come forward, you know. Have you an alibi for about ten o'clock that Tuesday night, Mr. Williams? By the

CROSLEY *Shelvador* *

THE NEW **CROSLEY**

Frostmaster

**Compact Storage for
100 Pounds of Frozen Foods!**

Here's a kitchen-size frozen food cabinet that gives you thrifty facilities to take full advantage of the amazing convenience and health values available today in frozen foods. Smartly styled with practical flat-top work surface . . . quiet mechanism operates at peak penny-pinching efficiency . . . adequate capacity for trip-saving quantity shopping. Freezes 12-18 pounds of meat, up to 10 pounds of properly processed vegetables. See it at your Crosley dealer's when you go in to look over the Shelvador.*

MATCHLESS CARROLLTON RADIO-PHONO
WITH F. M. . . and Floating Jewel Tone
System that says "Goodbye" to needle
noise, chatter, hiss, and scratch! Records
last up to 10 times longer, sound better.

HI-BROILER RANGES—new gas
range convenience—also elec-
tric models for better, easier
cooking.

TELEVISION SETS—You're really
there with a Crosley! Table
models and television radio-
phono combinations.

A WONDERFUL NEW EXPERIENCE every time you open the door! That's what you get in the Shelvador,* the refrigerator door that doesn't steal time at meal time. The food you want is *where* you want it *when* you want it. Everything handy, right at your fingertips . . . a "food-inventory" at a glance.

That's a tremendous help in any kitchen. It saves time . . . minimizes stooping and hunting for food . . . reduces spilling and pesky mop-up tasks.

The *exclusive* Shelvador* convenience is backed up by a host of mechanical improvements to give you the finest refrigeration available. Stop in at your nearest Crosley dealer's, to see these advantages for yourself. And be sure to ask for your free copy of the helpful book-chart, "How To Arrange Food In Your Refrigerator." It's full of practical information . . . a guide to efficient money-saving food storage. Get your free copy today!

a step forward. Because I had decided to let him carry his intention to in sight of its end, thus to mark him and need of further proof as a murderer and at the same time make sure the law would be able to do something about him.

Deliberately I allowed the pistol to slip in my hand, and put the other to my mouth as if in mortal fear.

"Give it to me," he said sharply, and in a moment snatched it from me. I sat without moving, keeping my eyes on him as fascinated as I knew how.

He relaxed a little, the scowl softened. He pulled back the carriage of the automatic, and revealed, because no cartridge was ejected, that it was unloaded.

He laughed with faint contempt and the spring went with a snap. The microphone heard it, I was sure, but I wondered if they recognized the sound in the Room.

"Let's take a little walk," he remarked conversationally, and dropped the pistol in his coat pocket.

"O," I said. "This can only be settled between us. His voice was part of the thin crust of amiability over the anger which controlled him. "Charlotte. You sit in the room until I come. I shan't be long—"

"O, no—" she whispered. He looked at her and said, "Take this and gave her the package of money. To me, he said soothingly, "I can see that it's not at all adequate in view of the changed situation."

He had closed around my right arm above the elbow.

"We can talk here just as well," I observed. "There's not a soul about."

For in those marshes, amongst the reeds and mudholes and bogs of the darkness outside. I had a look, you know, before I came in. Stuffy in here. "Go."

He swept the frock off the table with his free hand, and tucked it under his arm, then pushed me ahead of him through the doorway into the bright sunlight and set off briskly, still holding me, and led the path along the main dike wall. Charlotte went slowly to the car, and I followed only once in our direction. She was a little unsteady on her feet.

"You would be very silly to murder me," he said to Freddy Williams.

"Whoever suggested such a thing?" He asked easily. "You are much too clever for that. Much too clever. It's in my mind to deal with you."

"Don't talk business until I have that piece of paper, signed. I must have protection. Surely you see that? You have to walk so fast?"

"I also have to have protection."

"Why? Have you lost that beautiful self-confidence?" I asked. "I do hope I didn't drive it away."

He led me off the wall down the grassy slope to a sheep path along the dike itself. He was not bothering to talk to me any more.

"I don't like this," I said.

"Do I care?"

"I want to go back to the cottage."

"Do you!" His fingers bit into my arm.

I reviewed the conversation under the microphone and was satisfied. My efforts to keep any personal reference to Jonathan out of it had been successful. That had been vital.

CHARLIE could not have held them a moment longer after they heard Freddy Williams say that we would take a walk in the marshes; nor did he try. Indeed, he was the first of them to reach the door of the Long Room.

Ordinary Smith was saying something to his Maker under his breath; Billy Bull was silent with a desperate look on his face—so Sophie told me—and the Commodore, having hopped across to his bunk for the revolver in its hiding place, hoisted himself into his wheel chair, shouting, "For God's sake, don't wait for me!" of which there was no danger.

Sophie, a little exhausted and with aching fingers from gripping her pencil too tightly, relaxed and began going through her notebook while everything was fresh in her mind to fill in one or two bits she had had to scamp. She assured me that although she was not really worrying about me, she could not forget that Freddy Williams and I were something over a quarter of a mile away and that the marshes covered several square miles north and south of the cottage.

The trouble, of course, as far as the rescuers were concerned, was that from the moment Freddy Williams took to the lower path along the main dike, the bank hid us from the Marsh House side, so that by the time they reached the cottage they could not see anything of us. They saw the gray car, however, and as Charlotte saw them she started up and drove off down the road as if the Devil were after her. . . .

Freddy Williams did not slacken pace, and as he still grasped me most painfully by the arm, neither did I. But I think I was breathing more quietly than he; it may be he was in worse physical condition, but on the other hand I had neither inclination to murder nor be murdered, and my emotions were on a comparatively even keel.

He was looking this way and that at the

Of all the drinks that go with Fall,
Kinsey Sours are best of all!

September's just the time to discover how wonderful whiskey sours can really be... if'n' when they're made with Kinsey, the unhurried whiskey for unhurried moments. Here's how:

Juice of $\frac{1}{2}$ lemon... $\frac{1}{2}$ teaspoon of powdered sugar... 2 oz. of Kinsey Whiskey. Shake well with cracked ice and strain into glass. Fill with soda, and decorate with slice of lemon or cherry.

Quite a delight! But then, Kinsey's superbly smooth, delicious flavor makes any drink taste better. Try it tonight and see for yourself!

ah, measuring and estimating and trying to decide on a likely and suitable spot for what he had to do.

He did not slow up to get rid of the pistol he had taken from me but tossed it into the middle of the dike.

"You silly little amateur," he remarked. "I knew it wasn't loaded the moment you pulled it out."

I marked the place as best I could by a bunch of bullrushes, but there would be a foot of mud at the bottom in which it might be impossible to find it. I was angry. Although I was not as keen on pistols as the Commodore had tried to make me, that pistol was one of the pair regarded as my particular own. But anger was the stimulus I needed.

I had been thinking about this man differently from the way I ought to have been thinking. I saw now that he was more than the object of my private grudge; that he should pay for the death of so many men and the near death at the hands of the law of a third. How many bottles had he created in the women who had passed through his perverting influence? He had grown sleek and plump and well content with himself on the food of the evil he had taught them, that Roman cat which was fed only by the liver of nightingales.

The grip of his hand was abruptly unbearable, but I knew I must endure it no longer if I was to make sure of

the sheep track did what they all do or later in the marsh, it came to a wide plank which bridged the dike; the track continued on the other side, zigzagging through tufts and hassocks, cutting the bald patches of mud, toward the water. The tide was out, the gray mud glistening and shining like silver in the sun.

Andy Williams stopped to consider the prospect, then pushed me ahead of him onto the plank, which he had to do as it was not wide enough for him to pass abreast of me. I went across without murmur; if I showed no objection to the roll in the marshes, appearing subservient to his overpowering will, he decided there was no further need to molest me. I could not leave the track

without getting bogged. My arm ached from the pressure of his fingers. It was some minutes since either of us had spoken; I wondered how long his conceit would support his belief that he was in complete control of the situation.

We proceeded in single file like this until we came to the edge of a largish mudhole, within reach of the tide's flood, with pools of water lying stagnant and still on its oil-smooth surface. Here he said, "All right, this will do."

I turned to face him. He was holding out the frock.

"This piece of evidence," he said, and tossed the white frock to me. "I don't think it need come into our arrangement with each other. Stuff it in the mud."

I held it to me, and let him see my nerve was going. "I'm ready to call it off," I said anxiously. "I'll bury this as you say, and forget it—forget everything. I made a mistake. I see it now. I oughtn't to have tried to—to get the better of you. I—I—don't like it here! It's lonely, and oh, please, please don't look at me like that!"

"If I look at you like that, as you call it, it's nobody's fault but your own. Hurry up!"

I knelt down and bundling the dress, thrust it down into the soft ooze at the edge of the mudhole.

"Smooth it over," he said, and I flattened the wet surface with my hands.

I had not foreseen being made to bury the frock like that, and it gave my morale a little fillip to know that my luck was holding for these last few minutes. I dare say I would have had no difficulty about it in any case, but it did give me the best of opportunities while I was still kneeling there wiping my hands clean of the mud in the long grass by the side of the track, to take my other pistol from the top of my stocking and keep it out of sight behind me when I stood up.

He was looking at the mud speculatively, his heavy mouth grim.

"That's pretty deep, isn't it?"

"Yes," I said. "Nobody will ever find it."

"The body, you mean?"

"Body?"

He took off his jacket and dropped it on the grass. His white silk shirt blazed

MICHAEL BERRY

SPORTING ODDS

When everyone else moved on, leaving service troops holding a Pacific island, it was pretty sure all the enemy had been cleaned out. Free of danger, the G.I.s had settled into a routine of Army housekeeping, drill and softball. Their games were invariably as hot as the local climate and there was plenty of jeering the afternoon a racing outfielder put on his brakes just short of the clearing's edge. Staring out at him, rifle barrel glinting through the rank growth, was one of the supposedly eliminated Jap soldiers. The American boy held his breath, wondering what to do. The Japanese decided it: He moved cautiously, picked up the ball, bowed gravely, tossed it to the G.I. and faded into the jungle.

"Say, who's
quizzing
who?"

HE: You know. I'm supposed to be asking the questions here...

SHE: But you look as though you know the answers, too!

HE: Ah... the subtle approach...

SHE: ...and all I want to ask is who made that new suit?

HE: Timely Clothes, lady—and it's not new. Must be three or four seasons old.

SHE: Are you kidding?

HE: Nope... it has Balanced Tailoring.

SHE: Balanced Tailoring...?

HE: That's what it said in the booklet...

"lots of fine hand-needlework for softness, and machine-sewing for strength". Seems to work, too.

SHE: Well—wait 'til John hears what I learned from quizzing the quiz master!

Balanced Tailoring makes
TIMELY CLOTHES
look better...longer

TIMELY CLOTHES ARE MODERATELY PRICED, TOO...AND IF YOU DON'T KNOW YOUR NEAREST DEALER, WRITE TIMELY CLOTHES, ROCHESTER 2, N. Y.

with light against the sage green of the marsh behind him.

"Your body," he said, and undoing the cloth belt of his trousers, stripped them off in a remarkably deft movement, put them on top of his coat, and stood there in his shirt and underpants, considering me. "If you want to scream, please do," he added.

I stared at him, then said, "Oh, I see! How dumb of me! That's in case you get dirty pushing me under the mud. You think of everything."

He frowned.

"Don't you understand? I am going to kill you. In a minute or so from now you will be dead and out of sight for ever, side by side with that stupid woman's frock."

I shook my head. "No."

"Oh? You still think you can bargain with me? Were you thinking, perhaps, that Felicity Cunningham's seductive arms might woo the villain from his deed?"

I BACKED away a little. "No. For one thing I'm not Felicity Cunningham. I meant I could not lie side by side with Charlotte's frock because, you see, it isn't Charlotte's frock. It's an ancient one of my own with a little rabbit's blood spilled on it. Hers is safe at home—my home. I'm sure you are right to think I'm a fool, but I wasn't such a fool as to show her the real one."

He was quite unshaken. "Thanks for letting me know. I was going to take a look round the cottage before I left."

I shook my head again.

"Would I have been so silly as to arrange that meeting in the cottage if it had really been where I lived?"

Rising blood darkened his big cheeks; I was beginning to penetrate his self-confidence. I went on:

"I don't think you will feel strong enough to look round any cottages before you leave—if you leave. What does it feel like to meet a woman who isn't afraid of you?"

"You're afraid of me, all right!" he said thickly. "You're so afraid that every wit and trick of mind you're capable of is working overtime to get you out of the worst mess of your witty, tricky life."

"Mr. Williams," I said coldly, "you don't even make sense any more."

"You're bluffing!" he accused and took a step toward me, his fingers curled, his eyes no longer on mine but on my throat. Of course I was afraid of him, even though I could have killed him; the violence of his rage seemed to reach me across the space which still separated us and might have enveloped me even before his hands had I given way to it. I stood quite still, watching him. He wouldn't jump at me, but would come slowly, savoring his anticipation in spite of the urgency of his passion to kill.

I heard myself say aloud, "They've always run, haven't they?"

"And I've always caught them. So don't bother, in spite of any added zest you think you might give the proceedings. It's too hot this afternoon."

He took another step. The next would bring him within the limits of my safety.

"I wonder what they would think if they saw you now. I don't mean the dead ones, the two men who are dead because of your conceit or greed or sadism or whatever little, mean motive you had. I mean the silly, vain, lovesick women who have been the food and drink of your useless life. You look so revolting, you know, and unsuccessful—" I laughed in his face. "That's the word—unsuccessful."

"I shall kill you very, very slowly," he said. "I shall squeeze for a bit, and then, when you think it's your last moment, I shall let you breathe again, for a little while—a minute or so." He paused. "There's nothing unsuccessful about killing when you know how."

"A hot, angry, rather fat man in his

shirt and underpants," I remarked "spoiling my marsh and the goodnes Sunday."

I moved my right hand from belt to my side as he raised his foot the next pace toward me.

He saw the pistol. He stared at it his mouth opened slightly, so that looked suddenly like a fish taken out the water. His foot wavered a moment and felt for the ground behind him.

"No," I said. "I am not going to You are. This one is loaded."

The sound which came from his lips was curiously like the roar of an animal and I knew from it and the blarney of his eyes that any idea of making him see that he would neither kill me this afternoon nor anyone else ever again was a foolish one, that no words I could use would show him he had lost, and neither this afternoon nor ever again would he kill for gain or pleasure or other reason.

So, as his brain decreed the least strike me down, and before the messenger reached his legs, I shot him and saw blood stain instantly the white of his shirt-sleeve high on the upper part of his right arm. The shot reverberated across the marsh, and I thought I heard a distant answering shout.

Freddy Williams rocked on his back, cried out and clasped his arm with the other hand.

"You've hit me! You bitch!"

"An inch higher than I meant to said, and fired again. It was a better the bullet nicked him exactly where he wanted it, the edge of his left arm inches above the elbow joint: the modore would have been pleased me although I might have admitted I had a target dressed—or rather dressed—considerately all in white.

The man very nearly screamed; it was a sound too shrill for a cry of pain or warning. He thought, of course, that he was badly hit. He turned and plunged off down the sheep track the way we came, yelling for help at every step. When he had gone thirty yards, I saw a bullet over his head, so that the whole thing would encourage him. This time it really was a scream. He ducked and on, his head still down.

I gathered up his coat and trousers and letting them trail in the mud as I went, ran after him. Why, I thought, shouldn't he arrive in Billy Bull's station looking a little muddy? It would make him look much more like a deer. He bounced across the plain to the other side and ran on.

TWO figures came up on the main wall; they were too far away to distinguish whose they were, but fairly certain they could see Freddy Williams, even if my print frock might blend with the background; however, to be sure they would come to meet me, I paused on the plank bridge to fire rapid shots along the line of the wall itself. The bullets struck the surface of the water a few yards ahead of Freddy Williams, pounding along the track on the other side, and ricocheted one after the other with successive plumes of spray.

In spite of his fear, he ran comparatively slowly and I was able to keep the same thirty yards behind him all the time so that whenever he looked over his shoulder he saw me there, obviously intending to get close enough to finish him without wasting any more bullets or misses.

I saw now that the reception committee was rightly composed of Billy Bull and Ordinary Smith. Both were in a state of great agitation; they seemed to be running, waving and shouting all the same time, but at which of us I could not know. When Freddy Williams saw me he seemed to hesitate, as though he was beginning to work again and was puzzling as to how he would explain his presence in these parts, he came

ing about the marshes half naked
shot full of bullet holes. Also he
have wondered at the sudden ap-
pearance of two men in what he had be-
lieved to be a desert.

He pulled up suddenly and stood for
a moment staring at them, and then
looked over his shoulder at me. He could
either go forward unless to run into
the arms nor back the way he had come
without danger of another bullet from
my pistol.

He came to the decision that he could
not climb the steep slope of the dike wall
and must therefore cross the dike itself.
He might have done better if he had
attempted to wade it. But he tried to
run. Fear's wings were not enough
even for a lighter and less exhausted
man. Twelve feet would have been too

far. He came down in the middle of the
water with a despairing bellow and
there with his feet in the mud, the
water up to his waist and clasping his
outstretched arms.

It became a little hazy in my mind at
that point because of the sick feeling, a
sicker feeling than the prospect of
what he had ever put in my inside.

Everything else seemed far away and
of no interest at all. I think I was aware
of Freddy Williams floundering out of
the water with Billy Bull on one side of him
and Ordinary Smith on the other, and
of Charlie who had apparently come
nowhere, holding my head and say-

ing, "I'm sick, you'll feel better."

"I'm all right," I said from a great dis-

distance. "You said you would hold them both
in the cottage until we got there," Charlie
said accusingly. "What went wrong with
you? How did he persuade you to go with

him? Charlie dear, please—I've had an
awful day—all that cooking in the hot
kitchen this morning, and—"

"Pffui," said Charlie. "Pffui, pffui, pffui!"
It was as near a sign that he had lost
self-control as I had ever seen.

We were interrupted by Father who
in his wheel chair pushed by
me. He was gripping his revolver and

ready for anything. I began trying to
explain. It was very difficult. . . .

Billy Bull and Ordinary Smith took
Freddy Williams to Kessingland Cottage
Hospital to be dried, bandaged, and put
to bed to sleep it off with a policeman in
close attendance. Ordinary Smith spent
some time on the police station's direct
telephone line to London, and amongst
other things gave instructions for Char-
lotte Inwood to be picked up.

The two of them came back again to
the Marsh House for supper and the in-
escapable questions about my part in the
business. Billy Bull was discretion itself,
allowed Ordinary Smith to do all the
questioning and forbore to cast doubt
upon anything I said, which knowing me
so well he might have done, for there
were bits I had to keep quiet about. They
might yet discover Jonathan's share as an
accessory after the fact, but they would
get no help from me. Indeed Ordinary
Smith was now ready to believe every
word of the panic-amnesia story Jona-
than had told them.

"He'll be released at once?" I asked.

"It will be a question for the public
prosecution people, but we'll be glad to
see the last of him. We were wrong, you
see. We don't like that. Any say I may
have will certainly be in that direction."

AFTER supper, Ordinary Smith ma-
neuvered me into the garden; I
dreaded the inevitable, but it had to be
faced sooner or later, so rather now than
have it hanging over me. I said, "Shall I
ask it for you? Nobody has yet. But
Billy, and Father, too, for that matter,
are asking it in their minds, just as you
are."

"Well," he began uncomfortably, "the
beginning does puzzle me a bit, but if
you'd rather not—"

"I would much rather not," I said,
"because you'll realize, as you are already
guessing, that my interest was more than
academic, more than a test of my theory
that architects don't murder. Yes, I knew
Jonathan. I knew he hadn't done it."

He nodded. "I thought that must be
it." He took my hand. "But you could
have told me what you had discovered
without running those appalling risks;

How to make

SPICY ICE CREAM SHORTCAKE

as served at the

HOTEL ASTOR
NEW YORK

SPICY ICE CREAM SHORTCAKE

- 1 pint lemon or chocolate ice cream
- 1 cup milk or thin cream
- 3 cinnamon sticks
- 2 teaspoons cornstarch

- 1 tablespoon water
- 2 egg yolks
- 1 tablespoon honey
- Dash salt
- 4 slices spicecake

Use your favorite ice cream. Heat milk with cinnamon sticks. Cover and allow to stand 10 minutes. Remove sticks. Cover and allow to stand 10 minutes. Remove sticks. Blend together, add cornstarch and water. Heat, stirring constantly until slightly thickened. Beat together egg yolks, honey and salt. Gradually stir in milk. Return to saucepan. Stir over low heat or hot water until creamy. Cool. Place cake on serving plate. Top with ice cream and pour over sauce. Serves 4.

Thrill your dinner guests with this famous dessert of a famous hotel! Use your favorite local brand of quality ice cream—the kind you usually find packaged in the sanitary, convenient Sealright container.

For other unusual ice cream desserts associated with fine dining places, ask your dealer (or write Sealright) for folder, "Smart Tricks with Ice Cream," by Mabel Stegner, nationally known home economist.

I—we—could have acted on what you found out quite early in the business. The Mrs. Inwood-Williams affair, for instance—"

"Could you have proved he killed Inwood?"

"She would have broken down under questioning."

"Not she! The Charlotte you heard this afternoon was not the Charlotte you would have questioned. Could you have applied the shock principle the way I did, and listened to her when she thought it did not matter what she said, with Freddy Williams there to fill in the gaps, boasting of his murders to a roomful of witnesses? Could you have caught him at a moment when he had just failed to kill a third time—red-handed almost?"

"Our more prosaic methods have been known to bring in one or two criminals in the past. No, Eve, I admit it. It's the tidiest case-ending I've ever seen or heard about. It's just that I hate to think of what you had to do."

"Not as much as I do," I said. "You haven't spotted one of the worst things I did—from my point of view." I shivered, but plunged into it:

"Yes; I saw you get out of Jupp's car the evening after the murder and followed you into that pub. It was entirely through picking you up that I ever managed to get close to Charlotte and her precious Freddy. It was from you I heard about the lady's-maid job, and wangled myself into it as 'Dorothy Simpson.'"

"But dammit! I picked you up!" he cried. "I've been wishing ever since I'd been properly introduced. I don't believe it! You couldn't do it!" He paused, his mind busy; his eyes took on a wintry look and he dropped my hand. "You mean our dinners at Carletta's, and everything—"

"Even this week end," I drove in the last nail.

"I see. Yes. But—" He was still struggling.

"But what?"

"I don't care! Isn't this the biggest thing in my career, and always will be? To go home with a double murderer and a story which will knock every other headline off the front pages for a fortnight! It's the policeman's dream come true! Jupp, all of them, will be round my neck with free dinners and what-will-you-have and how did you do it, old boy!"

"I'm glad," I said.

"And I didn't do it. You did it."

"If you can hide me away under 'information received,' that's all the share I want in this. I'll tell you why; I don't want Jonathan to know too much of what I did."

"But you've saved his life, practically I don't say he'd have gone all the way to the execution shed, but he might have had a hell of a time making his stick."

His eyes were still a little bleak.

"You're perfectly justified in looking like that," I agreed. "If the thing repeated, I would do all that I did. I'm like that. I wish I weren't. I got the idea into my head and nothing matters. I'm not really very nice."

He walked a few paces away from me, then turned, and came back.

"It was the right idea," he said, "that's important. You had an idea of an innocent whom all of us were guilty. I'm quite happy to be sacrificed in the course of putting that right. I sighed. "I'm a silly chap," he added, "I thought it had happened at last."

My throat was lumpy and my heart hurt.

"I wish you could know how I like you," I said. "And how I wanted to rush to you and tell you the whole beastly story, not because you were the police but because I—well, I love you."

"I wish to God you had."

"I dared not. You wouldn't have allowed me to go on with what I wanted to do. You wouldn't, in the ordinary shape of your duty, allow yourself to be deceived."

"That's probably true." He again.

I wished I could think about him as he had been dreaming, I thought. I could not, and I had finished with tending.

WE WENT into the Long where the others, including the Commodore, were drinking the Commodore's very best uncustomed, cised brandy. Charlie and Billy Bu favored me with one of those sharp, precious and undercover glances you get when you have been alone in a twilight garden with another gentleman.

Sophie also eyed me, but with ordinary insatiable curiosity. I put my head at her secretly, and she put hers at mine. The Commodore poured me brandy called for my health to be drunk. I looked as he had been looking all the time, excessively pleased with himself, having shared in the creation of a clever, unscrupulous daughter. I looked at him and did not let him see I knew he was quite capable of beating me soundly when everybody had gone, having hogged all the shooting.

Presently, when it had been arranged that Ordinary Smith should stay until tomorrow to see what his price

condition was like before reporting to London, I saw Billy Bull to his car.

"You've been awfully good."

"No," he denied. "I've been cautious."

"I brought you into it because it was your territory and I thought, anyhow, that two policemen were better than one."

"Your Mr. Smith is better than most. He could have handled it alone."

"He's not my Mr. Smith."

"That's up to you."

"You're not cross at having it kind of sprung on you?"

"Shall I tell you my real, honest, personal feeling, which I've had ever since it started?"

"If it doesn't make me burst into tears—I'm a bit on edge."

"Are you indeed? I was beginning to wonder if there was any end to your reserves. No, my dear, I'm not cross or hurt or anything like that. I expect Smith has told you our official view—we're glad you mixed yourself up in it. It's just that you went out on one of the finest stalks I've ever seen, and left me at home." He climbed into his car. "I feel the way Fido feels when I take out the gun alone. Next time, please, I'd like to come too. But on no account whatever—I repeat—on no account whatever, is there to be a next time." He started the engine and, the words half lost in the burst of its noise, he added, "You mean too much to me."

HE WAVED his hand and drove off fast, so that one moment he was in the courtyard and the next had vanished, leaving only a little cloud of dust and the swiftly decreasing sound of his car. It seemed to me we were all being very sentimental tonight.

Sophie was telephoning the Earl when I reached the house. It was no use, she said, fussing. She was driving an important man to London tomorrow morning in connection with official business, practically a matter of national importance in which she also was involved. She couldn't tell him any more because he knew what country exchanges were, but if he watched the newspapers he would learn. No, the family name was not being dragged in the mud; she had left that to him. Yes, she loved darling Boozie very much and one day he'd be proud of his Tiddles, who had kept her

head in an emergency... No, as a tired of telling him, for the fiftieth time he would have to wait until next week. Heirs are babies too, and no less than for having coronets on their nappies.

Jonathan came back of his own accord at the end of last week. I have not heard from him yet. Charlie says to leave him alone. He is a man sick in his heart, and he will be for a long time yet. Ordinary told him a good deal of the truth about Jonathan had to believe it, coming to him. Charlotte, taking the hint given her during the showdown, had to be picked up; she arrived at the Chelsea police station that same evening a few minutes after Ordinary Smith telephoned to them, and said she had to make a statement about her husband's death; in effect, she took the firm line toward what she will ultimately do with the king's evidence and for herself pleaded silence; it will be in her favor that she was coerced and blackmailed into silence; had no idea that the conversation in the cottage was overheard. They think they will serve two years, maybe three.

Charlie says he believes Jonathan thinks she had no choice in anything she did; that he ought to be at the jail when she comes out. My reply to him was, "Let's see what he feels after that." When, if nothing else seems clear, he should be able to realize at least that she was completely infatuated with Freddy Williams throughout the time she was letting him, Jonathan lie he was the only man in the world for her, and however crazy that may seem, there are women who cannot say no to anyone who says please ardently enough, not even if they are herds.

But I am in a confusion myself. I really want Jonathan as much as I do. Is he himself, or does he represent something I made him into, in my heart? Now that he has no need of me, is out of the wood, safe, where over there in the sheltered behind the marshes, helping the herds build the wattle enclosures for winter lambing, do I feel the same about him as I did when I made his brother in the Peacock that first morning?

Honestly, I do not know. Charlie or someone would tell me. THE END

"You're improving, Mr. Meeker. Notice how much faster you're recovering consciousness?"

COLLIER'S.

PUNCH LINES BY SULLENS

Continued from page 45

Sullens came down with a heavy fever himself. But his stay in the plague city brought him to the door of Melville Stone, founder of the Press, who became his close friend and later gave him nationally important assignments.

Sullens brought Sullens in to cover, for national political conventions. Sullens, made him the acquaintance of President since Teddy Roosevelt. Now Wilson is his great ideal. "You are feet of clay when you get to him. But Wilson didn't. He was a man, every inch of him, at all

judgments of national leaders, eclectic, personal. During the Mississippi floods Herbert Hoover, was accompanying on a tour of the flooded area, refused Sullens' suggestion that they fly over the flood. It only turned Sullens against him and nothing that has happened since changed his mind.

World War I, he served as an ace officer and he has been a major ever since.

Don't Stand Filth and Flies

Back to Jackson's yellow fever—campaign for a sewage system that threat forever. "I didn't think," he says, "that yellow fever is unsanitary conditions. I just stand the filth and the flies. I thought I was crazy. 'Spend on filth!' they yelled. 'You're in my mind.' But I kept after it and got it through. Then the epidemic ended."

Sullens parted company with the editor abruptly in 1905. The Colonel R. H. Henry, was at the equal of Sullens in explosive temperament. One morning Sullens came to a dramatic criticism he had written until 2 A.M. to write had been by Colonel Henry.

He cries, "he had cut it practically. Just butchered it. When I saw red, just boiled over. I took the galley proof, ran into his office and told him he had a helluva nerve in my critique when he hadn't the performance. Then I tore it up and told him he could take it to go to hell."

Two hours later, Frank Belknap, publisher of the rival Jacksonian, made him city editor of that paper. A year later, Sullens became a shortly afterward bought out other interests.

His first fist fight came when he was the mismanagement of the state by the young and powerful son of the trustees decided to make some. "He tackled me up near the capitol," says the Major, "and it was a short fight. He was stronger than any athlete around here in those days. He didn't know how to use his

quite a brawl. We rolled and rolled way up and down the block in the capitol two or three times before he knocked him out."

While Sullens had been attracted to a long-tongued member of the state legislature, John Sharp Williams, later to be one of the greatest U.S. senators ever had.

He was a wealthy cotton family, as a delta aristocrat, or as a fondly, "to the manor born." A scholar of law at both home and foreign universities, he was contemptuous of ignorance, and the roughest sharpshooting demagogue in American history.

Sullens shared Williams' taste for good literature, philosophy, wit, corn liquor, and contempt for the "red-necks, yaps and yahoos," to use an old Mississippi phrase for its small impoverished white farmers, and their inflammatory spokesmen. Williams and Sullens became intimate friends, set out together to demolish James K. Vardaman, former governor and then U.S. senator.

The Great White Chief, as Vardaman styled himself, was the granddaddy of all the demagogues who have dominated the South in recent years. He always appeared in public in white, including a giant white hat, riding a wagon drawn by sixteen oxen, and preaching a fear-some sermon on the "niggah menace to the white race."

Sullens and Williams, though believers in the South's traditional white supremacy, thought Vardaman's "menace" was nonsense.

Copies of the News show that Sullens blasted Vardaman as:

"... a rantankerous demagogue, a vain poseur, a perpetual pageant, a vain hysteric roaring to and fro, a voluble rantipole who has always lived alternately on the charity of his friends and the forbearance of his creditors. He is the only man in Mississippi who can convert a minnow of thought into a whale of sound. He sets himself up as an idol, bids the populace fall down and worship, and pontificates before the world as the one just and only honest man."

This cannonading gradually wore Vardaman down. However, it was not until he joined the "Willful Twelve," who voted against U.S. participation in World War I, that they managed to defeat him and elect the late Pat Harrison to his seat. Vardaman died a short time later, a broken man.

As long as Senator Harrison was alive, he and Sullens were bosom friends and Sullens helped him in many ways. During one campaign in which he wrote most of Harrison's speeches and prepared his publicity, Sullens never left the hotel room in which he worked for three weeks.

Ten to One Against the Senator

During his last campaign Harrison confessed to Sullens that he was dead-broke after thirty years in politics.

"Could you pledge two thousand dollars of your salary ahead?" asked Sullens. The senator guessed he might.

"Well, you get \$2,000 and give it to me. I'm absolutely certain you're going to win and I know a fellow who'll bet 10 to 1 against you."

The senator hocked his salary, Sullens made the bet, and Harrison went back to the Senate with \$20,000 in his jeans.

By this time Sullens' fist fights were as regular as sessions of the legislature, and often took place on the floor. The first such fight was with a young lawyer named M. Ney Williams whom he termed "an inconsequential young man... sadly misrepresenting Hinds County in the legislature." The next morning Sullens was in the state senate, leaning over to talk to a senator when someone tapped him on the shoulder. As he straightened up, Williams swung.

"I ducked and swung one at him. It caught him," he says, "just right and he went down like a stuck hog. Then the uproar started. It completely broke up the legislative session."

Though they have never come to blows, Sullens' longest standing feud has been with Senator Theodore G. Bilbo.

Some of the things he has said about Bilbo would make your hair stand on end. Alluding to Bilbo's reputation for associating with ladies other than his wife, he wrote, when Bilbo once went abroad:

"When Bilbo went ashore in Denmark, the band played God Save the Queen." But Sullens complains that, "It is virtually impossible to get under that fellow's skin. He's got the hide of a rhinoceros."

However, he succeeded at least once, during the reign of Governor Lee M. Russell, when the governor's secretary brought charges of seduction against the governor and named Bilbo as a witness. Bilbo dodged subpoena servers and hid out for some time rather than testify. Finally, the judge cited him for contempt and sent a federal marshal after him. The marshal was about to give up his search when he heard a heifer calf bawling in the barn, and found Bilbo hiding in its stall. Sullens, next day, wrote:

"Some people have expressed sympathy for Governor Russell in this seduction case. Some have expressed sympathy for the girl. Still others have expressed sympathy for Bilbo. Personally, all our sympathy goes to the heifer calf."

Bilbo later said that was the "meanest thing anybody ever said about me."

Red Pajamas—With a Message

Once, Sullens and Bilbo did get together to support a mutual candidate for governor. The alliance was celebrated with a big political rally at which Sullens presented Bilbo with a pair of red suspenders and a pair of red pajamas with the advice: "Keep them where they belong."

But with all his bombardment of Bilbo, he has never been able to defeat him seriously. Some observers feel that it is ironical, now that Bilbo seems to be slipping, that Sullens runs front-page editorials announcing in Bilbonic tones: "White Supremacy Is At Stake!"

Privately, Sullens admits, "The Negro menace is just a bogey. But we've got to face the fact that increasing numbers of Negroes will qualify to vote, that the Texas decision of the Supreme Court guarantees the Negroes' rights, and the hell of it is that you can't get the white people to register and vote."

Sullens' most famous battle took place in May, 1940, when Governor Paul B. Johnson laid open his skull with a cane in the lobby of the Walthall Hotel. Sullens had been riding herd on Johnson for over a decade.

He defeated Johnson's first two efforts to become governor. Johnson struck back with a libel suit in his home county, where he was both personally popular and an intimate of the judge. Realizing the case would be lost, Sullens settled out of court for \$12,000 and a front-page apology.

But he never let up on Johnson. When Johnson called him a "character assassin," Sullens roared back:

"You cannot assassinate a thing that is nonexistent."

One thing like this led to another. Almost daily after Johnson became governor, Sullens hammered him for vetoing school bond issues, attempting to gain personal control of all state bureaus, depriving the tax commissioner of his powers, and charged him with trying to become a dictator.

The Major lived at that time in a suite atop the Walthall. In the lobby one evening he was waiting for the elevator when he felt something strike him a sharp glancing blow on the head. Wheeling, he found he had been struck by a cane brandished by Governor Johnson.

Sullens snatched the cane—a heavy hardwood stick which Johnson normally never carried—and flung it across the lobby. Then he sprang forward and grappled with Johnson, throwing him backward across a chair and falling on top of him. The chair crashed—Sullens later paid the hotel eight dollars for it—and the two men rolled onto the floor. Sullens, astride the governor, was about to smash in his face when he noticed

that Johnson was wearing glasses. He snatched off the glasses, hurled them to smithereens, and raised his fist for his haymaker. But the crowd, most of whom had accompanied the governor from the executive mansion, broke up the fight.

Sullens' head had been split open and he was bleeding badly, but otherwise he was all right. Johnson was escorted by his friends back to the executive mansion, where he took to his bed for two weeks. He never issued a statement regarding the fight.

However, the next day the Daily News made the most of it, and when two of its reporters showed up in the legislature's press gallery wearing football helmets and carrying baseball bats the session broke up in a riot of laughter.

Today Sullens' fighting days seem to be over. A year ago he suffered a serious heart attack, which he barely survived. To his great annoyance his doctors have forbidden him to climb the stairs to his editorial and news rooms. Now he does all his work at home and scoots into the business office to pick up his mail and leave his column for the day.

Mrs. Sullens, a pretty blond California girl whom he married some years after the death of his first wife, is relieved that the Major has quit fighting. "Why, once," she says, "I had to carry a big old heavy .45 revolver around in my bag for days."

As much as possible Mrs. Sullens now keeps him at home, a large rambling stone house aptly called "The Rockpile." There the Major keeps in touch with everything going on in Mississippi and the South by telephone and has a lot of fun with Cracker and Little Man, his Pekingese, and in the cultivation of camellias and roses. Once a week he gets together with a handful of friends for a poker game.

His Challenge to Critics

The Major still covers everything from the death of a child's pet to national political conventions. He feels greatly overrated as an editor. "If anybody says I am a punk editor," says Sullens, "I won't waste time arguing. But any man who says I am not a good reporter is a gilded liar."

Members of his staff agree. They long ago gave up trying to compete with him.

Perhaps his oldest and closest friend is W. G. Johnson, one of the original founders of the News and co-owner of the paper. Johnson has always run the business end of the paper, and each sticks scrupulously to his own field. Once a year they meet formally and Sullens asks if they made or lost money that year. That's all he wants to hear about the business end of the paper.

Actually, they have been highly successful. They now own what, for many years, was their only opposition, the Clarion-Ledger. However, Sullens has nothing to do with its editorial policies, which frequently are at variance with his views.

Three years ago Johnson suffered from an extremely serious heart attack and was not expected to live. Sullens, grief-stricken, realized there was nobody on the paper capable of writing the story of Johnson's life. Finally he got out of bed and spent the night composing an obituary; then he had it rushed to the paper and set in type.

But Johnson rallied and a week later was sitting up. Sullens took a proof of the unused obituary to Johnson's hospital room. "Here," he said, thrusting the proof at Johnson, "see how you'd look dead."

Johnson flailed it onto the floor, saying, "Get that damn' thing away from me. I never want to see that."

Johnson's reaction still puzzles Sullens somewhat. You get the feeling, as he tells of it, that he would never pass up the chance to read his own obituary. He might find something new.

THE END

Souvenirs—

My, my! All those pretty with the pretty promises, pretty prices—not pretty performance. Something to make any man remember to buy an Inkograph.

parked in front of the hotel.
from the garage took the car

away. Doc Murphy came over to say
hello while they waited for the elevator.
The men who worked the money loop
didn't read the sports page or listen to the
radio to find out what their chances were
—they watched Doc. He was fat and
bland and as cheerful as his ulcers would
let him be. He was a contact man—
Superior Golf Clubs—and when he was
too busy to pass the time of day you were
due to get chopped off at the pockets, out
on the course.

"Tommy," he said. "How's the
shoulder?"

"Fine. A grease job fixed it right up."

Doc looked pained. "Tommy," he
said, "it's nice you won this one last year.
You don't have to qualify. It's going to
be murder out there tomorrow." He
turned to Molly. "Take care of our
boy," he said. "We need him."

Farrar said, "For Old Superior."

FARRAR played Monday's round
with Louis Gatto and Muntz. They
were out to qualify. He was there because
the good people expected the defending
champion to put in an appearance. His
four iron was still sour. The four iron
and two putts that rimmed the cup put
him one over par at the turn. He had
trouble on the back nine—the dog-leg,
the narrow fourteenth—and came home
with a headache and a fat seventy-four.
Pete Muntz was two under par; Gatto
had a sixty-eight.

Gatto said, "I want you in the draw,
Champ."

"Listen," Pete said. "He's sixty-eight
proud."

Tuesday—second eighteen, qualifying
round—Farrar stayed in the hotel. He
spent most of the afternoon under the
heat lamp. He got the results from Pete
Muntz in the lobby that evening. "A guy
named Bell takes the medalist money
with one hundred and thirty-six," Pete
said. "The Farmer, Gatto, and old man
Muntz are one stroke behind, with one
thirty-sevens."

Farrar said, "You shot some golf."

"I got lucky," Pete corrected. "The
Farmer's the boy who made the golf
shots. He was in trouble all day, and he
still burned up the course." He looked
at Molly, looked away. "You got Ross
in the draw, Tom."

Doc Murphy hurried by. He had
a careful "Hi, Tom," for Farrar, and a
wide grin for Pete Muntz.

Pete said, "He heard about my one
thirty-seven."

"And my seventy-four," Farrar said.

Wednesday was bright and fair;

It's a new radio program, dear—they came and took away our re-
frigerator and a thousand dollars' worth of household furnishings"

KAISER

**One Every Minute
Is Not Enough!**

Production scheduled at Willow Run now exceeds a car every minute. But even 12,000 KAISERS and FRAZERS a month are nowhere near enough! For our many thousands of owners are our best salesmen. They have discovered something *totally new*—in *beauty*, in *performance*, and, above all, in *ride*! They tell their friends—their friends take a ride—and order a KAISER or a FRAZER. If you drove even five miles in one of these 100% postwar automobiles, you would want one, too. Why not try it? *Wherever you are*, there is a Kaiser-Frazer dealer near you.

KAISER-FRAZER CORPORATION

• WILLOW RUN, MICHIGAN

FRAZER

GEORGE SHEPHERD

nesday was the day the scramble had rough—sudden-death day. Thirty-pairs of men off the first tee in the morning; at noon thirty-two of the men had qualified were on their way home. Roy Ross was on his way home. "He dropped his second into the brush on the ninth," Tom told Molly. "He dropped the fifteenth. He couldn't catch even." Molly smiled. "We don't pack yet." "The Farmer won, six and five." "He's playing well," Molly said. "Not," Tom said. "Real hot." He left her with her knitting and a magazine. She wouldn't follow him; she hadn't for many years. She would wait on the club veranda, or in the house, a gentle and placid woman who did listen to the talk of the swarming crowd. There was no need, for Tom Farquhar would come to her as soon as the match was over. She would read the announcement in his brown and weathered face as he spoke—in the shape and set of his mouth, in the wind-and-sun-creased lines about his eyes.

left her in a sheltered corner of the
and went down the stairs and
gh the crowd. Johnny Slocum, the
pro, was waiting on the first tee—

t year's P.G.A. . . ." A coin spun,
ing in the sun. Johnny Slocum
his sweated paunch and
ned one down the middle.

den-death Wednesday, second. Sixteen matches off the tee after—and at sundown another sixteen were out of the running, out of the way. Johnny Slocum, genial and gay, was a nice guy, a fine instructor, had no business out there with the boys. He was playing because the members thought he should; the members were Johnny's bread and butter, he tried, and Farrar's ailing four helped make a match of it. He went on the seventeenth, beaten two and by the defending champion. He said broadly for the press photograph "I can't kick," he told Farrar. "The members can't."

reporter—Brown—was sitting on a railing beside Molly's chair. A few empty glasses said he'd been there some time. He blinked at Tom Farrar, who looked clouded and vague. "We been waiting for you out," he said reproachfully. "Don't touch like that Slocum, and you can't go seventeen before you get him." "I say," Tom said, "He won. That's all that counts."

Farmer's already in," Brown said. "One lasted quick. He blew Ned right off the course." He peered at empty glasses. "The bottoms of things are too close to the top," he said. "An', Champ, the wires keep asking for you and the Farmer. They need you."

n write it," Farrar said evenly.
n said, "I'll be as nice as I can."

read the scoreboard." . . .

The scoreboard was wrong. Gatto-foot putt died short of the cup thirty-eighth; the match ended

Muntz came through the locker-room crowd carrying a tray loaded with plates, glasses.

"I had me scared," he said.
Farrar said, "I scared myself."
A little pros knocking on the door.
said Muntz. "Tomorrow night
be only four." He lifted his glass

and grinned. "I was very good today. And I'd better be good tomorrow. Tomorrow I play the Farmer."

"He's still hot?"
"Tucker didn't have a chance." . . .
And it was Friday—the quarter finals. Four men left in each bracket. Four matches. Tom Farrar and Hank Leonard were first off the tee. There was a telegram in Farrar's shirt pocket, signed by the ranch superintendent. "Mow that Leonard down," the message said. "The bank's making passes at our shirt."

Leonard was tall and lean, the unsmiling veteran of many a tournament war. He worked at his trade in sober quiet. He spoke three times during the day. Twice he said: "Take out the pin." His third speech was made over a handshake on the thirty-sixth green. "You're too tough for me, Tom," he said. "Good luck tomorrow."

And as Tom walked the clubhouse path he decided he would simply say they'd be

COLLIER'S

HANK KETCHAM

around another day and let it go at that. No point in telling Molly how much the match had cost—in strength and skill—how very little he had left. He'd had luck in the draw, but he'd had to go the whole route every time to win. He summoned a smile as he climbed the veranda stairs. And then he stopped, hand tightening on the rail.

The Farmer was bending over Molly's chair. Tom Farrar could not see his face, but he would have known that set of shoulders anywhere. He heard the wordless run of the Farmer's voice, blurred and soft against the unending clatter of the crowd. He saw Molly's face upturned, saw her lips say, "Please!" Tom Farrar took a backward step; he was turning when the Farmer laughed.

"A man gets what he's earned," the Farmer said.

Tom Farrar went down the stairs. He stood on the path, jostled by the crowd. He pressed his hands against his waist to stop their trembling. In his mind he heard the youth and drive in the Farmer's laugh. The years piled up upon his back. He waited, drained and spent, feeling only the flutter of a muscle in his weary thigh, until someone spoke to him. He looked up to meet Brown's unsmiling eyes.

"He's gone," the reporter said quietly. "They didn't see you, Champ."

Tom Farrar said, "Thanks, man."

MOLLY was quiet on the long ride to town. When Tom tried to mention the Farmer's name, the words refused to come. He put his head against the back of the seat and closed his eyes. He thought about the ranch. He counted the years he'd spent on the tournament loop; he wondered where the money'd gone. Unconsciously, he flexed his shoulder against the dull, persistent, bone-deep ache. He was the last of yesterday's big names, and he'd run out of time. Mr. Machine—with a stiffening shoulder, and an iron swing that had gone astray.

Pete Muntz was in the lobby. A slow smile lighted his eyes. "I hear you did well today," he said.

"I outlucked him," Farrar said. "And you?"

"Old Man Muntz was a ball of fire," Pete said. "He was very, very good. Long woods, beautiful irons, and eleven one-putt greens." He cocked his head. "The Farmer was a wild man. On the fourteenth, he hit two that were a mile out of bounds and still goin' when we saw them last. I was in the rough just once. I broke the course record."

"You took him?" Farrar said.
His voice was louder than he meant it
to be. His hand had tightened at his side.
Pete Muntz spread his hands.

"I lost," he said. "I never played better golf or took a worse beating. He's all yours, Tom. Get by him and you're in. There's no one in the lower bracket who can give you a match. Me, I'm catching tonight's plane out."

Farrar said, "We'll see you, Pete." He took Molly's arm. They passed a

newsstand on their way to the elevators. The tournament was page-one news, as it always is in the city in which it's played. Farrar saw his name and the Farmer's name. The sudden stiffening of Molly's arm, the hurt at the corners of her mouth, told him she had seen the headline too. The sports writers were beating the old, old drum. They were good at that. They could take the blaze of a single match and whoop it up to a forest fire.

"I guess it had to come," he said.
Molly said, "Yes, Tom." . . .

The gallery was huge, piled up against the first-tee ropes as a spring flood piles up against a dam. The good people were strung out in thick lines on both sides of the fairway, banked deep around the distant green. Inside the ropes was another, smaller crowd—press, photographers, radiomen, officials in bright red

DEMAND

coats. The iron voice of the speakers opened a lane for Tom Farrar. The Farmer was waiting beside a bench.

"They want pictures," an official said. Tom Farrar met his son near the center of the tee; they faced the cameras there. Flash bulbs winked in silent explosions of white glare. "Now," a photographer said, "how's for one with you two shakin' hands?"

"Why not?" said Tom Farrar.

The Farmer's hand was big and hard; his grip was a closing vise. He had strength to spare, but there was doubt in the look he had for Tom Farrar.

"Hello, son," Farrar said quietly.

The Farmer grinned. "How are you, Dad?"

"Semifinal. Thirty-six holes," the speakers said.

TOM FARRAR won the toss. His drive was long and straight; the Farmer passed him by thirty yards. The good people swarmed past the ropes to flood the fairway. Tom Farrar followed his caddy's back, and there was time to wonder what it would be like to play a match without a mob breathing on your neck.

"Here you are, sir," the caddy said.

The green was still a long, long wood away. Tom Farrar's second was a full eight-iron short. He moved up with the crowd; he watched his son prepare to play his shot. The Army hadn't hurt the Farmer. Odd, but after all this time he couldn't think of the boy as Mike. The Farmer was leaner, but only a little. Big wrists, big hands—he had his mother's big-boned frame. He powerhoused his second, reaching strongly for the green. He hooked, far out. The gallery groaned.

"Long," Farrar said. "And in the trees."

He thought of that as he dropped his approach wide of the pin. Two woods, and the Farmer was past the green. He was a siege gun, an 88. But he was in trouble, so this hole was safe. Farrar waited while officials cleared a path down to the screen of brush. He couldn't see the club head swing, but he heard the shot and saw the ball climb above the trees. The flash of it was enough—it is when you've spent your life following it.

"On," Farrar said. "Ten feet from the cup."

He knew then why Jarrett, Spain, and Tucker had gone down. He knew what had happened to Pete Muntz. And he was afraid he knew what was going to happen to Tom Farrar.

His putt rimmed the cup. The Farmer knocked the ball away, and crouched to read the green. His grin was broad. The good people were twenty yards away.

Only Tom Farrar could hear the Farmer's low-pitched drawl. "I'm sinking t

he said. "My old man got himsel ranch this way. I figure I can earn too. Fact is, I got half a ranch ridir every ball." His putter moved. "It's he said.

The scoreboard read: Farrar, down.

On the second green, in the same voice, the Farmer said, "Stubborn that old man of mine. He thinks he to carry all the load himself. He can why every man has to earn enough to his own way." He smiled then. sinking this one, too."

The scoreboard read: Farrar, down.

Tom Farrar found his putting t He wasn't sure just how, or why, but again his hands, his wrists, did wha mind told them to do. Somewhere c first nine his four-iron swing came b Because, he told himself, my sho doesn't ache. And then he wondero much of that dull, persistent pain been imagined—conjured up as a de barricade against the day—this c when he would have to play his son or part, it was unimportant now. was a warmth in the Farmer's grin on every green he whispered some that only Tom Farrar could hear.

"A great golfer, my old man," Farmer said. "One of these days he how tough it is to live in a shadow as his."

"He knows," said Tom Farrar.

"Suppose he could use a partner," Farmer said. "Suppose he'd sell th interest he tried to give away?"

"I wouldn't be surprised," said Farrar.

THE day was gone when he v across the graveled parking reach the car. He saw Molly's face, tipped and intent. The sound of h approach was lost in the voice of the "... his best," the radio said, "wa ply not enough. The outcome was in doubt at any time. Mr. Machir good, he was very good. But the F —his son—had all his father's ski he had youth. ..."

Tom Farrar said, "Molly."

His voice startled her. Her hand out toward the radio switch, the back in her lap. She said, "I'm Tom," in a faint and clouded voice pack tonight."

"No, Molly." He was laughing. "Tomorrow you're going to see golf. You're going to see that t ours take Bill Ekstrom in the final we're going to be here early, b Ekstrom won't last long!"

Molly smiled. "Yes, Tom," sh

EVA OLESON XAN, Birmingham, Ala.

DISTORTED IMAGE

EDITOR: Herbert Asbury's article on "The Box Office" (July 12th) led me to be misleading about the past and future of television. He says a television receiver without a telephone link can produce a clear image; television sets now being sold are cheap; that wave bands now being used by television stations are about to be abandoned by the FCC in favor of other frequencies on which present-day sets will operate; that good television entertainment is too expensive for "free" television broadcasting; that the movie industry will refuse to permit telecasting of their films for "free" television reception; that they will permit them to be transmitted by cable vision; that the telephone companies are all set to go ahead with Com-McDonald's phone-vision idea. None of these conclusions is more than a possibility.

Clear television images are now being transmitted to thousands of home receivers without the aid of a telephone link.

Television without wires works. Sets on the market are built for television on wave bands assigned to TV by the FCC. The FCC has not indicated any forthcoming change in these assignments. Comdr. McDonald may be correct in his frequently stated belief that TV will eventually move to higher frequencies.

Television doesn't need to spend \$10,000. Expensive programs such as "The Tonight Show" and "The Ed Sullivan Show" are the exception rather than the rule even in radio.

Phone vision, or some other form of television, may eventually develop as Muzak, a music subscription service which has developed in the audio field. The history of broadcasting indicates that it will serve as an auxiliary not a replacement service.

The problem of erecting antennas and receivers on apartment-house roofs, mentioned in Mr. Asbury's article, is being solved.

More than 50 corporations have applied to the FCC for permission—which has been granted—to spend from \$500,000 to \$1,000,000, on their opinion that "free," as opposed to subscription, telecasting will be the standard form of television in the future.

EUGENE KATZ, New York, N. Y.

WITH THAT BUILT-IN GOODNESS

EDITOR: I have just concluded "The Merchant of Valor" by Clarence Budington Kipling (Aug. 2d). Would it be too much to ask to have more novels by Clarence Kipling or of this thrilling story and also illustrations by Mario Cooper?

R. E. MACLEARN, Yarmouth, Me.

"The Merchant of Valor" is every bit as excellent as claimed. I would like to add a 19th-century history to the back of the story. The reason for the decline of the church then was because of many mass conversions to Christianity by kings and their peoples, without knowledge of what it was. These conversions (like Count Riaro of the serial) brought riches to control the church. The outcome of this was the Reformation. History also shows that the church was in opposition because it then righted the efforts of many new saints.

A. FRITH, Lake Marshall, Minn.

GLASS OF FISHION

DEAR EDITOR: Re Carleton Beals' exciting story (Aug. 2d) "The End of the World Strikes Oil," I quote: "Or, if you prefer, he will etch in a nude mermaid."

Well, well, well. A nude mermaid! Low-scale hussy. Couturiers, do your stuff! Might ask Henry L. Jackson what the well-dressed mermaid is wearing this season. He knows all about wearables.

SAM SMALL, Los Angeles, Cal.

The waters off Patagonia being chilly, mermaids are fully clothed. They wear dresses made of sealionese.

OCCUPATIONAL DISEASE

DEAR SIR: With mixed feelings we of the 7 P.M. to 7 A.M. shift read Main Street Moves to Japan (June 14th).

It is true that certain individuals "have it made" over here. But believe me, they of whom you write are in the minority. It is not rough—do not misunderstand me. But there are some military personnel who don't have jeeps or shiny new cars to ride in, who do work 12 hours a day or night, to whom one day off a week is a recent luxury, who can't go to "rest hotels" because they have become dependent billets—and to whom this land is a far cry from home and the "life of Riley."

M. E. VON DER SUMP, 1st Lt. ANC, Tokyo, Japan

DEPARTMENT OF ENLIGHTENMENT

DEAR SIR: I notice in your July 26, '47 Collier's that Butches freind doesn't know how to drive well nor do the cops for they are both on the rong side of the road.

DONALD HAYWARD, Delton, Mich.
P. S. Polies put your address so a guy can find it.

RAH! RAH! RAHDIO!

DEAR SIR: Rah! Rah! Radio (July 26th) says college radio was born at Brown University. The wired wireless system first came into use there but college radio was born at Union College, Schenectady, in 1916. A College Radio Station 2YU was put in operation and a large amount of research was done with loop and directional antennas.

In 1921 the members of the Radio Club rigged a receiver and loud-speaker in a baby carriage and paraded around downtown Schenectady broadcasting programs from the College Station W2XQ. This stunt received country-wide write-ups.

RANDOLPH M. STELLE, Bound Brook, N. J.

SELF-ADORATION DEPARTMENT

HI YA! My favorite and first-read article is The Week's Mail. Without a doubt this is the spiciest of all your columns.

What a fascinating position this must be! I have two columns in our little daily syndicated paper; I'm also a free-lance news reporter. However, the greatest thrills are the letters I receive either correcting or commending my work. I think that there is an ulterior motive on their part just so they can see their names in print. Aren't people lovely? I often wonder what we'd do without 'em.

J. A. NORRIS, Hollywood, Cal.

BUNNYISMS

DEAR SIR: "I had a nice time, nothing can thank you enough," said Mrs. Ben Hawkins of Ossining, New York, the other day, and my own dear wife, on alighting from the Seattle plane at La Guardia, cried ecstatically: "I can't tell you how glad this all looks to me!" Top those, Bunny McLeod, you with your cracks like "That's hitting the male on the head!"

G. WILLIAMS, Chappaqua, N. Y.

The latest from Bunny is, "Things are never as bad as they turn out to be."

What do you need to go into business —and stay in?

1. The first thing you need when you go into business for yourself is an idea, or a service, or a product—*something to sell*, in other words. The better that “something” is, the better your chances of getting enough customers—and of keeping them satisfied.

2. Next you need money enough to get started and to keep going until income catches up with outgo. Maybe you use your own savings—or maybe you borrow from a bank—or from other people who have enough confidence in your proposition to *risk their savings*.

3. Then, of course, you need loyal employees who know their jobs, and a place in which to do your business. And this will have to be equipped with supplies, or materials, or machinery—the tools with which to work.

4. Now comes good management. Maybe yours is the kind of business you can run all by yourself. If not, you'll have to hire a capable manager. If you fail here, competition will soon force you out of business. Then you and your backers will lose their money and you and your employees will be out of jobs.

5. And almost from the day you start, you'll need to do enough business to meet your payroll, your rent, your taxes and all your other expenses. And these charges must be paid before there'll be anything left for you or your backers.

6. Finally you need to make a fair profit—not just because you want one, but that's the only way you can *stay* in business. Profits are the very *mainspring* of American industry. And they pay for the expansion and improvement that bring more products, more jobs, lower prices, and greater security for all.

NATIONAL **A**SSOCIATION OF **M**ANUFACTURERS
For a Better Tomorrow for Everybody

Write for your free copy of “Who Profits from Profits?” Address: NAM, 14 West 49th St., New York 20, N. Y.

Most Americans say they think 10 to 15 percent out of each dollar of sales would be a fair profit for business to make. As a matter of fact, industry averages less than half that much.

A SLIGHT PENALTY

BY ANDREW GEE

A tongue of flame licked nearer and nearer as the acetylene torch, wedged between boxes, bore down on Perry. "Turn off the torch!" he screamed

BULLETIN! San Francisco, March 14 (World Press). At dawn this morning the steamship Amer Prince sank in deep water at the entrance to the Golden Gate after a collision in a dense fog with the tanker Henry Westover. Passengers and crew were rescued. Immediate operations were begun to salvage seven million dollars in gold stored in the sunken ship's specie tank.

IT WAS late afternoon before Perry Turner slid under water with a line of bubbles trailing behind him. A full-running ebb tide ebb and hauled at him, and the ripplings of the bay swirled past his glass until the darkness of forty fathoms of water closed in on him. Standing on the well deck of the wreck he said into the speaker, "On bottom."

"Okay," Macklin answered. "Take easy." Talking as he inspected the wreck, he reported her lying broadside to the tide with her bow pointing north. The amidships hole that had sunk on the port side away from the wreck. Working swiftly he secured the buoy markers.

"The must've settled in some rocks, Mack. She's damn' near on even

that'll make her easy to work." At the port rail he paused, wondering if he had felt the deck twitch under his feet. He waited for a time and decided it hadn't. A tide like this would be bad business, he told himself.

He had gone under, with the insurance people yelling hurry-hurry and offering a stiff bonus to get the gold before the wreck had a chance to break up like the old Rio had.

The bonus sounded good to him. No matter how much money he made, it always seemed he and his crew were suffering from the shorts. "I'll catch hell if this job takes very long," he told Macklin.

"What d'you mean?"

"Mitzi met some people at the race track. Kasperson's the name—ever hear of 'em?"

"Nope."

"They got a yacht, race horses and a French chauffeur. Ever since they invited us down to their country joint Mitzi's been in a loop." Perry didn't tell Mack that Mitzi had told the Kaspersons that he had his own salvage company.

"What time're you supposed to be home?"

"Five thirty."

"You'll hafta spend an hour in the chamber when you come up. Want me to get her on the radiophone?"

"Forget it."

Keeping Macklin up to date, Perry slipped over the side and worked his way into the hole. Remembering the ship's diagrams he had studied, he made his way down a tangle of steps that had once been a companionway and forced a lane through boxes of cargo to enter the mail locker. At the far side he came upon the specie tank.

Illuminating the dial of the safe with his battery searchlight, he began to work the combination. Three turns to the left . . . 34. Four to the right . . . 60. Back left three turns and stop at 55. He tried the handle but it didn't give. Again he tried the succession of numbers without success.

"I'm a helluva Jimmy Valentine," he said. Squatting down until his front glass was inches away from the dial he worked it again.

"The combination they gave me don't work, Mack, and I'm not sitting up all night with it," he said.

Perry unhooked the acetylene torch from his belt, and snapped it on. "I hope there's no cops around because I'm going to burn a hole in this box."

The yellow-blue flame bubbled through the water, and began to cut a wavering line in the steel around the dial.

"You've been under fifty-five minutes," Macklin said. "Think you can get it open before you have to come up?"

"Ycp."

"Those Navy divers just came aboard from Mare Island. They'll go down as soon as you give the word."

"Tell 'em to start getting into their woollies—" Perry grabbed for the handle and missed. The deck slid out from under his feet as he spilled down the lane of boxes against the port bulkhead. A second later he was spread-eagled under a torrent of shifting cargo.

"The port buoy went under!" Macklin yelled. "What happened?"

"The tide shifted her . . ."

"Your pressure all right?"

"Yes." Perry strained until he thought the cords in his back would tear loose. "I'm pinned." He tried again and found he could move his right hand a few inches—that was all.

"Don't fight it," Macklin said. "The boys'll be right down."

THE vessel settled farther. Perry jerked his head around to the left-hand glass. A tongue of flame licked nearer and nearer as the acetylene torch, wedged between boxes, bore down on him.

"Turn off the torch!" he screamed. Hypnotized, he watched the flame move closer. It knocked bubbles against the glass; it flared high—and went out.

"It was fixin' to cut into my hat," Perry said.

"That's okay, boy." Macklin was trying to talk to him and the people on deck at the same time. "The boys'll be down in ten minutes."

Perry grunted. What could they do when they got down? The wreck had shifted to port, and the hole he had entered was now closed by the bottom, a bottom of sand and gravel. There wasn't a hope that they'd be able to mole in to get him, and because of his lines he had to come out by the same hole he had entered. Only God knew why his air line still worked.

Again he reared against the weight pinning him down and when he gave up he was weak and had to bite his tongue to keep from screaming.

"Hey, Mack," he said, fighting to keep his voice right, "will you call Mitzi?"

"I can hook your circuit onto the radiotelephone. Do you wanta talk to her yourself?"

"Sure."

"Hold tight."

Perry blinked the clammy sweat from his eyes. He heard the dial clicking and then a familiar voice answered.

"Mitzi, this is Perry."

"Where are you?"

"Working."

"I've been waiting for you."

"I know, but I got hung up."

"How long will you be?"

"It's hard to say."

"But you promised me!"

"I know, baby, but I got stuck."

"And don't call me 'baby,'" she said. "If you had a decent job you could work decent hours."

"Maybe you've got something there."

"You're crazy if you think I'm going to miss the Kasperson week end."

"Okay, okay." Perry cleared his throat and took a deep breath. His muscles were beginning to twitch in little pressure spasms. "Did you send the check in for my G.I. insurance?"

"No."

"This is the last day, you know."

Her voice rose. "And you know I had to have new clothes for this week end. You can get reinstated next month—there'll only be a slight penalty." She paused. "The Kaspersons are out front now. I'm going."

The instrument gave a death rattle and the connection was broken.

"Are you through?" Macklin asked.

"Yep, I'm all through, Mack."

BULLETIN! San Francisco, March 15 (World Press). Salvage operations were halted on the sunken treasure ship, Amer Prince, while race-against-time efforts were being made to save Diver Perry Turner, who was pinned in the wreck as the vessel shifted in the

THE GHOST OF THE SIXTH AVENUE

Continued from page 20

"That's right," Edith said.

Fred picked up his cap and went out the door, holding his head up high and walking off to his life's work. After the door closed Edith bust out crying as if she would never stop, but nothing Sam could say would make her change her mind about Fred and Everett Flawsom, and that's the way it stood.

Fred saw Everett Flawsom a couple of days after this and gave him the balance of the \$500 tuition money for the Downtown International Academy of Political Arts. Everett shook his hand and congratulated him on his new career.

"I sure appreciate you using your influence to get me in the school," Fred said.

EVERETT was a fancy dresser, although nobody was sure exactly where he got his money except being a ward heeler. "Glad to do it," Everett said. He rubbed his gold ring on his lapel and watched it shine. "The dean and me are old chums from the political arena. I'm one of the advisers at the academy myself."

"They got a big school down there?"

"It's exclusive. Right on Wall Street. I showed you the stationery, didn't I?"

"Yeah," Fred said. "Engraved."

"You better not go down until classes start in a couple of weeks," Everett said. "You don't want to look too anxious." He looked down at his ring and said, "I guess you heard about me and Edith."

"Yeah," Fred said. "I heard."

Fred bought himself a blue serge suit and a conservative tie so he would be dressed up right for his classes. He stuck on his job out in the rowboat in New York Harbor and he did a lot of thinking. He would watch the boats sail past him and he would say to himself, "If it wasn't for me them boats could never get in here at all," the way Sam would have said it.

After work he would change into his new blue serge suit, so he could get used to the feel of wearing it, and he would sit at a table in the corner of McNarney's Bar and Grill, way downtown near where he worked. He would have a couple of quick ones because he was feeling low all the time, even in the blue serge, thinking about Edith. That's where he was one day when old Sam Hinkley came in and sat down on a stool across the table from him and put his engineer's cap down on a chair.

"Haven't seen you around the house, Fred," he said.

"That's right," Fred said.

"You didn't bust up with me, too, did you?"

"What about it?" Fred's head was feeling a little woozy as if he just stepped off the Whirl-a-Gig at Coney Island.

"Edith is getting married to Everett Flawsom tomorrow."

"Congratulations," Fred said.

"He's taking her on a boat trip to Florida for a honeymoon. They're going to get married right on the boat."

"Wonderful," Fred said.

"Six o'clock tomorrow night the boat sails. The Floridian, they call it. The boat."

Fred didn't say anything.

"I come down on the el," Sam said, to get the conversation going again.

"Yeah?" Fred said. "I bet you did."

"I tell you about the el," Sam said. "Maybe you're wondering why it's still going, after everybody stopped riding on it. Right?"

"They ain't showin' no profit," Fred said, in a sarcastic way. He took another drink and laughed.

Sam said, "A lot of people put a lot of money and work into making the el, so the poor people could get a good ride

for a nickel. They put the el up a hundred years."

"So what?" Fred said.

"Well, figure it. A hundred years top of 1878 gives you 1978. So forty years to go when they to down."

"Listen—" Fred said.

"You can't stop something that's going on. Figure it." Sam finger up to his forehead to show how to do it. "You think the el important? Would it still be running if it wasn't important? See what I mean?"

Fred poured himself another drink. His head felt all flannel. "No," he said. "It sounds nutty to me."

"Fred, Edith's been crying a lot. I hear her in her room."

Fred said, "You want to know what?"

"What?"

"The el ain't running. They're taking it down."

"Sure it's running."

"Sure," Fred said, "only you only guy who can see it. You know they do with people who see things ain't there?"

Old Sam's face looked pale. He picked up his cap and said, "I hear it all the time."

"Get wise," Fred said. "The el ain't up there. It's dead and that shows how important the el is. You can stop bending my ear."

Sam walked over to the door and looked at his watch. He said, "It's five minutes late already."

"It's nine years late," Fred said.

Sam opened the door in a hurry. He started to turn back only he saw his watch and stood listening for a moment and then he walked out.

THE next morning Fred went out in the Lower East Side. The Floridian sailed past around 10 o'clock. The way Fred felt right then he probably would have punched the bottom of the rowboat and he would have wiped his face if there wasn't a couple of minutes in it with him.

He had a headache the sixteenth day of the month. Queen Elizabeth and it wasn't the drinking he did at McNarney's Bar and Grill. It was from this whole night and the whole month.

Here's the point, he was thinking. What did you have to give it for? What did he ever do to you? It was that kind of thing was giving him a headache. It was about Edith, too, sailing on the Floridian that night with Everett.

He looked up and there was the Floridian sailing out of sight down the river. "Hey," he said, "ain't that the Floridian?"

Paul Ginnis, who was in the rowboat, said, "It ain't the Normandy."

Fred said, "What time is it?"

Paul said, "Eight thirty A.M."

Fred said, "Something is wrong."

He thought it over the whole thing. He was working and by the time he got back on shore he had it figured out. Something was wrong. He went to Sam's place from a drugstore, answered the phone.

Fred said, "What happened?" Edith said, "Fred?" Her voice was funny.

Fred said, "Hello, Edith. How are you?"

Edith said, "What are you thinking about? Why did you hang up on me?"

Fred said, "Ain't you sailing on the Floridian?"

Edith said, "You bet I'm sailing on the Floridian and I hope I never see you again after what you did. Ever-

started thinking. He called up
called up a friend of his, Izzy
who lived about ten blocks
n Sam's place.

er to Sam Hinkley's right away
let anybody get out! You
Fred yelled.

Izzy was a longshoreman who could
stop a dozen Everetts if he got there in
time. "Okay, Fred," he said, "only what's
it all about?"

"Never mind! Do like I tell you!"

Right here there are two versions of
what happened next. Fred hollered some-
thing into the phone and when Izzy
asked him to say it again Fred had al-
ready hung up and was on his way.

Izzy says that Fred said, "I'll get up
there quick on the el." That's the way it
sounded, anyway. Fred says what he said
was, "I'll get up there *quicker'n hell*,"
but Fred always gets a funny look on
his face when he says that, so you can
take your choice.

A lot of people will say they don't see
how he could have gone up on the el,
anyway, since they tore it down in 1938.
They still have to explain how he got up
to Sam's place so fast; the rush-hour ex-
press on the el used to be the fastest way.

RIGHT at five thirty sharp, Fred
walked into Sam's, puffing and
blowing. His hair was pushed back on
his head like he'd been in a high wind,
and it wasn't a windy day.

Everett was just coming out the door,
with Edith behind him.

"Hello, Everett," Fred said.

"Hello, Fred," Everett said and his
face got as pale as a peeled potato.

Fred pulled back and smashed him a
right hook smack on the nose. Everett
sat down hard in the doorway and put
his hand on his nose. Fred lifted him up
again with his left hand and let him have
it again with his right. Everett flew off
the floor and traveled right back into the
parlor where he landed flat on his back
and that was all there was to it.

Fred said, "Edith, you can't marry this
guy because he's a crook."

Sam was standing over in a corner by
the window. Fred said, "Hello, Sam."
Then he started telling them what hap-
pened about Everett.

Izzy Godron came tearing up the stairs
hollering, "Nobody leaves the house!"
but Fred told him it was all right.

"How did you get here so fast?" said
Izzy. "And what's the idea of saying
you're coming up here on the el, like you
said?"

Sam looked up. Fred looked embar-
rased and said, "I never said that. How
could I come up on the el, for crying out
loud?" Only right then he closed one
eye, like a wink, and only Sam could see
him do it. Sam suddenly stopped look-
ing sad and looked happy.

"I guess you did all right even not
being a politician," Sam said. "I bet you
can even get back the dough this bum
took from the people."

Fred put his foot on Everett's chest
and laid his chin on his fist and looked
thoughtful. "Here's the point," he said.
"If a guy sticks on his job and keeps his
eyes open, he can help the people take
care of the crooks and the phonies, like I
done. You follow me?"

Sam nodded his head. "It's how you
look at it," he said.

Edith said, "Isn't anybody going to
look at me?"

Fred said, "Honey, maybe I ain't got
no brains, but I wish you would marry
me anyway."

Edith kind of sighed and said, "That
was my intention all along."

Fred smiled at her in a silly, apologiz-
ing way and said, "I beg your pardon,
honey, but would you mind repeating
that last? I suddenly got a funny roaring
noise in my ears."

Edith said, "Never mind," and held out
her arms and Fred took hold of her and
kissed her.

"There," he said, "it's all right. The
noise is over now."

Over in the corner old Sam took out
his watch and looked at it with a calm
expression on his face and said, "Right
on time."

THE END

IT ALL COMES OUT IN THE WASH

BY LOWELL BRENTANO

Some funny things happen in laundries, not the least remarkable of which is the fact that you usually get back what you sent. Here's how it's done along with a few facts and figures on the future of the laundry industry.

A BROOKLYN housewife, trying to sort her laundry and stuff it into a laundry bag, and at the same time answer the door and the telephone, and keep her children out of mischief, is increasingly annoyed by the family cat. The animal kept following about, rubbing against her ankle and miaowing distressfully. After having tripped over it twice she picked it up, cuffed it gently, tossed it onto a chair, and told it to go away. Then, having answered the phone and chased Junior away from the cake she'd baked for supper, and told the man at the door she didn't want any brushes, she hurriedly tied up the laundry bag and gave it to the laundryman.

A few hours later a girl marker at the laundry, preparing to empty the bag upon the long sorting table, was surprised to see it wriggle a little. She said to a fellow worker, "Well, I've seen some funny things around here, but this is the first time I ever saw a laundry bag walk."

She delved into the bag and began pulling out cats. The Brooklyn tabby had taken its mistress literally and had, indeed, gone away. It had jumped into the laundry bag, and en route to the laundry, comfortably nestled in the mass of soiled clothing, had given birth to four kittens.

This is probably the most remarkable event that ever occurred in a laundry bag, but any bag received by a laundry in a big city is a sure bet to contain a surprise. Cats in laundry bags are not uncommon, and neither are puppies. The latter usually make less commotion than the cats. A laundry bag is so full of fascinating things to chew that a pup is pretty busy.

A surprisingly large number of laundry bags disgorge false books, eyeglasses, cuff links, shirt studs, rings and other personal belongings.

After your laundry is sorted, each group of articles is placed in an open-weave cotton bag, which is closed with a big safety pin carrying your laundry mark.

Shirts get special treatment. Here a machine stamps the laundry mark in ink on the inside of the collar band.

The actual washing takes place inside various-sized washing machines. Soap and alkali in the water break the first dirt. Usually there are three suds baths, followed by from four to six rinses.

ifferent machines are used to iron shirts. One does the sleeves and cuffs, another the collar, a third the back and sides and a fourth the bosom. A battery of these machines, run by experienced girls, can turn out 160 shirts an hour. A laundry with three batteries of the machines can handle 20,000 shirts a week

ings. And money—in sums ranging from a penny to several thousand dollars. Not long ago a marker in the laundry of the Hotel Plaza in New York found \$17,000 in large bills in a soiled pillowcase; it was turned to the owner before he knew gone.

do such things get into laundry? Well, it's the fault of "dat ole human nature. A woman will take a ring to wash her hands, put it in the pocket of her apron, then throw it in the laundry hamper. A man will take off a dress shirt and forget to remove the cuff links and buttons. Books are read in bed, forgotten and rolled up in the sheets and pillows. Eyeglasses are shoved into pillows and reach the laundry in the way, and so do an occasional pocket knife. Money is pinned or tucked into shirts or underwear, or in the pockets, and likewise forgotten. All coins are left in the pockets, right in the seams, of children's dresses and playsuits.

There's a plausible explanation for the things we find in laundry bags," says an experienced laundryman, "except the teeth. That one has us all."

Complaints also come up against the human nature in the matter of customer complaints about lost or damaged articles. In the first place, most of the stuff clothing into laundry bags is jumbled, haphazard disorder,

make out laundry lists in a slapdash manner, and are as apt to overstate as to understate the contents of the bag. Often, after the housewife has made out her list, another member of the family will add something to the bag without telling anyone. Relatives and visiting friends stuff their laundry into the bag and say nothing about it.

Many people don't even bother to make a list; they rely on the honesty of the laundryman, which is generally of a high order, and on their memory, which is seldom accurate. Incidentally bachelors, traditionally neat and orderly, are the worst offenders in this respect.

Sometimes this sort of carelessness causes serious mix-ups. During the height of the hotel shortage one of New York's biggest hotels was the headquarters of a convention.

In the Treasurer's Bag

The president of a well-known company and his wife, attending the convention, were unable to find a room in time to dress for the banquet, and the treasurer of the company, who was alone, invited them to use his suite. After the convention the treasurer, back in his own quarters, hurriedly stuffed his dress shirt and other garments into a laundry bag, called a bell-boy, and asked for overnight service. Tired and in a hurry, he didn't make out a list, nor did he examine the laun-

dry bag before using it. Furthermore he failed to inspect his laundry when it was returned; he just packed the bundle and caught his train home.

There his wife unpacked his bag and found a brassiere and a pair of stockings, together with a laundry bill listing both garments. The treasurer knew they had nothing to do with him but he couldn't explain. His wife left him, and it was several weeks before the hotel straightened matters out by tracing the articles to the wife of the company president. She had thrown them into the laundry bag and forgotten them.

It is a universal custom to complain about lost and damaged laundry, but actually the record of any well-run laundry is surprisingly good. Such an establishment, handling about 15,000 pieces a day, will average 15 reported lost, and ten of these will eventually be restored to their owners. During the war, of course, when the laundries were forced to hire inexperienced workers, losses were greater. A first-class laundry will seldom have more than three complaints of damaged articles for every 100 bundles, including the unreasonable grievances.

And by and large, laundry customers are unreasonable. For example, a man pulls his shirt off roughly, without unbuttoning the cuffs, and strains the buttons. He accuses the laundry of tearing them off. If the laundry loses a four-year-old shirt, the cus-

tomers demands a new one in return. If a woman's inexpensive, half-worn blouse is lost, it immediately becomes "my expensive blouse, the first time I've had it washed."

To combat such complaints and reduce actual damage to a minimum, leaders in the laundry industry recognize the value of scientific and business research. The American Institute of Laundering, at Joliet, Illinois, is "the official proving and improving ground" of the industry. Its training school for laundry executives maintains the same high professional standards as leading universities. Its model laundry is a testing laboratory for new methods and techniques. Recently the A.I.L. has worked hand in hand with fabric and textile manufacturers to improve the washability of their products. Materials that pass all the tests receive the A.I.L. "certified washable" seal.

But assuming that you have carefully shaken and searched the pockets of every garment and made out an accurate list in duplicate, what really happens to your clothing when it reaches the laundry?

"Ah," says the average man, "I know what happens. They run everything through a fraying machine, and then they give it to a man with a hammer, who breaks the buttons. If he misses any, his assistant rips them off. Of course, nothing like that happens, but your laundry does."

do you know...

that your local ice company will be glad to supply you with ice prepared in exactly the right size for every household need?

If you want your table to have all the glamour even the finest restaurant cannot surpass, use plenty of crushed ice when serving salads, sea foods, fruits, fruit juices, fruit cocktails ... or making *real* home-made ice cream.

This is just one of the many new, post-war services the progressive Ice Industry is providing for better living. You ought to know about them *all*. Just ask your local Ice Company.

NATIONAL ASSOCIATION OF ICE INDUSTRIES
1706 L Street, N. W., Washington 6, D. C.

many processes, the number and kind depending upon the sort of service you're buying.

In most communities there are six main service classifications. The cheapest, and probably the best known, is the old-fashioned "wet wash," with everything returned damp. Then there is the "thrifty," with flatwork ironed and wearing apparel damp. If you order "rough dry," the flatwork is ironed and the wearing apparel is dry, and "family finished" or "press finished" brings the flatwork home ironed ready for use and the wearing apparel roughly machine-ironed. Flatwork is ironed if the service is "complete finished," and wearing apparel is finished by hand where necessary.

All of these services are charged for by the pound, and a bundle of a certain minimum size is required. Topping the classifications is "list price" or "custom work," with everything returned ready for use and charged for by the piece.

The Process—Step by Step

A bundle of newly arrived laundry goes first to the sorting or identification tables, where it is weighed, separated and identified. Girls swiftly unscramble the bundle, checking the contents against the laundry list enclosed in the bag or making one of their own, and divide the articles into as many as 16 different groups. Silks and rayons and woollens cannot be washed with cotton, and dark- and light-colored articles cannot be washed together.

Once the sorting and segregating have been completed, each group of articles is placed in an open-weave cotton bag or net, which is closed with a big safety pin stamped with letters and numbers corresponding with those on your laundry list. For a list-price customer, every article carries a laundry mark, which is removed from the more fragile garments after they have been ironed.

There are millions of different laundry marks in the United States, a fact which has proven a boon to smart cops and mystery-story writers. There is a growing tendency for police departments to accumulate a complete file of local laundry marks, which have often been of assistance in solving crimes and identifying victims of accidents. One detective, Captain Adam Yulch of Nassau County, New York, has become nationally known for his success in cracking murder cases by the use of laundry marks.

After the various items in a bundle of laundry have been properly netted, the nets are put into various-sized washing machines, where soap and alkali in the water break the first dirt. The temperature of the water ranges from 90 degrees to 160 degrees, with colored articles at the lower end of the scale. From then on different processes are used, depending upon the character of the articles being washed and how dirty they are. Most modern laundries are equipped with automatic controls, so that a wash is carried through all the processes without the use of human hands.

The average family wash receives three suds baths, followed by from four to six hot and cold rinses, the last containing a little bluing to whiten and freshen the garments. Housewives who fear that their clothing may come in contact with other folks' apparel should be relieved to hear that health department tests show that the rinse in a well-run laundry is bacteria-free, a condition almost impossible to achieve in home laundering. Still in their nets, the clothes are next deposited in huge spinning baskets, called extractors, which whirl about at some 800 revolutions a minute, draining off surplus water by centrifugal force. After 15 minutes the clothing is just faintly damp, and if the customer has ordered "wet wash" her laundry is finished. Otherwise, it is ready for ironing.

Socks, blankets, window curtains and

similar articles are dried on forms after removal from the extractors. Bath towels, bath mats, rugs and other items which need to be fluffed dry rather than ironed flat are tumbled in cylinders and dried by hot air. These tumblers are also used by laundries which offer a rough-dry service, in which wearing apparel is soft-dried or air-fanned and returned un-ironed.

From the extractors the wash goes to the ironing department, a place of mechanical marvels. The flatwork ironer, generally though improperly called a "mangle," has rollers 10 feet long, and an ironing capacity of 15 sheets a minute. Large laundries attach this ironer to an automatic folder, which handles sheets, tablecloths and spreads. With this sort of equipment the laundry of the Hotel Plaza in New York is able to process 110,000 pieces of flatwork a week.

Shirts are ironed on a battery of four machines. One irons the sleeves and cuffs, another the collar, a third the back and sides, and a fourth the bosom. One battery of these machines, manned by experienced girls, can turn out 160 beautifully ironed shirts an hour. An efficient, average-sized laundry, such as the Rite Way Laundry of Brooklyn, with three batteries of machines, can handle about 20,000 shirts a week. When the ironing has been completed, the laundry goes to the sorting room again, where the various pieces are assembled, reidentified, and grouped for packaging and delivery.

The business of washing other folks' clothing, said to have been begun by a disillusioned forty-niner in California almost a hundred years ago, has grown into one of America's most important service industries. It is really big business. In 1946 approximately 7,000 power laundries employed 275,000 persons, and the annual customers' bill amounted to \$738,000,000. And these figures don't include the innumerable hand and Chinese laundries to be found on almost every block in the big cities. In New York alone there are more than 6,500 of these small establishments, doing an annual business of more than \$60,000,000.

Where Most of the Work is Done

Almost all of these shops serve as agency or distribution outlets for the big wholesale laundries; the two or three women usually seen ironing on the premises are merely finishing up work which has been processed by the wholesalers. But despite the nation's huge laundry bill, most of America's soiled clothing and linens are still washed at home in the family tub or washing machine. Some months ago a leading figure of the laundry industry prepared a confidential analysis of the business done in various large cities. With a potential of 100 per cent, Miami laundries do 11 per cent, Dallas 12, Milwaukee 6, Nashville 16, Buffalo 7, New York 16, Detroit 7. For the country as a whole, 91 per cent of the family laundry is done at home.

The bulk of the American laundry business is institutional; it consists of washing the uniforms worn by a vast army of factory, railroad, business and professional workers. The barber, the butcher, the waiter, the grocer, the beauty-parlor girl, the doctor, the nurse, the dentist, and many others, all wear uniforms for either aesthetic or sanitary reasons. For every towel used in the American home, the average barbershop will use 10. For every sheet and tablecloth used at home, hotels and restaurants use 20. And out of 300 first-class hotels in New York, only 5 per cent operate their own laundries; the rest send the wash out.

Then there is the vast diaper service for baby, a comparatively new and rapidly growing phase of the industry, which is big business in itself. During the war the diaper services could not begin to keep up with their orders, but

WATCH OUT FOR BLEEDING GUMS you may have GINGIVITIS

4 out of 5

May Get This Wicked Enemy
Handsome Teeth and Firm

When you brush your teeth and gums bleed—even a tiny bit—neglect this condition.

Because tender, bleeding gums are often some of the first signs of gingivitis—a mild gum inflammation—a decided enemy of firm, healthy and handsome teeth.

Neglect of Gingivitis often leads to dreaded Pyorrhea, which only a dentist can help. See him every few months. Then at home do this:

Help Gums Be Firmer— Teeth Naturally Bright

Put some Forhan's Toothpaste on your fingertip and massage it into your gums. Do this every time you brush your teeth.

Forhan's is made especially for massaging gums to be firmer, cleaning teeth to their lovely lustre and sparkle.

Even after the first time with Forhan's—notice the difference—your gums feel so invigorated. You look so clean. You'll like the refreshing taste, too.

Forhan's costs no more than ordinary toothpastes. So buy a tube today. All drug, department and 10¢ stores.

NO HARSH ABRASIVES IN FORHAN'S

END PURE, SO THOROUGH AND SURE!

for September 13, 1947

now conditions are much better. These services start a youngster off with about 9 diapers a day—63 to 70 a week—and taper down to 50 or 60 a week after six months.

So far, however, diaper services are available only in the large cities—statisticians have figured out that a city of less than 100,000 population cannot support an exclusive diaper laundry. In the smaller communities, therefore, a mother must either wash the little rascal's triangular pants herself or send them to a regular laundry, which is usually more expensive than the special diaper services.

A recently established service somewhat similar to the diaper business is household linen rental; in several cities laundries have begun to rent linens to housewives at prices no greater than would ordinarily be charged for laundering them. A pioneer in this field is the Consolidated Laundries Corporation, which operates in New York and New Jersey. Within the past two years, Consolidated has opened a number of linen stores in New York City, where women may rent a two weeks' supply of linen on condition that they exchange half of their supply weekly for fresh linen. The charges are 14 cents for sheets, 6 cents for pillowcases and Turkish towels, and 5 for hand and kitchen towels. All with no minimum and no deposit.

Few Men Wear Starched Collars

The changing fashions of both men and women are reflected by the laundry business. For example, the period when men demanded that their collars and shirt bosoms be heavily starched has definitely ended; in fact, men have gone to the other extreme. Today, the laundry does not starch a man's shirt or collar unless specially instructed. As a result of this change, thousands of plants in the big cities are stuck with expensive and complicated equipment for ironing stiff collars, which must either stand idle or be sold to the junkman. In New York nearly all the laundries have abandoned their stiff-collar departments, and the man who insists upon wearing such a thing usually has to shop around quite a bit before he can get it laundered.

This abandonment of stiff-collar machinery is part of a drastic streamlining of the industry, interrupted by the war, and now resumed. In the opinion of Victor Kramer, America's Number One laundry consultant, the era of multiple-service laundries may be on the wane, the trend now being toward the specialty shop idea. He thinks that the laundry customer of the future may be offered a variety of specialized services to fit individual needs.

One of the newer developments is the drive-in, the laundry equivalent of the cash-and-carry supermarket. This movement, started in Atlanta in 1930, has

made great gains in the South and the Southwest, and recently in New England. It has been especially popular in areas where middle-class families practically live in their automobiles. Since the ordinary laundry spends about 25 cents of every dollar for expenses connected with pickup and delivery, it is obvious that the drive-ins can afford to give the customer a substantial discount. As a rule, this amounts to from 15 to 20 per cent of standard prices. A recent questionnaire showed that approximately one third of the laundries in the United States plan to add drive-in services.

The vest-pocket laundries called laundrettes and laundromats are also proving successful. Batteries of from 20 to 24 automatic washing machines are housed in clean, airy, well-lighted buildings, often equipped with waiting rooms for customers and playrooms for children. The housewife brings her bundle, puts her clothing into a machine and a quarter in the slot, and goes about her shopping or other errands, returning later to collect her laundry.

At present these establishments are for wet wash only, but a few are adding drying equipment. Of course there are drawbacks to these places—a woman must do her own separating, she has no assistance whatever, and only two temperatures of water are available, hot and warm. She must buy her own soap, bluing and bleach, and she can't wash more than 10 pounds of clothing in any one machine. so that if she has a fair-sized family wash she'll require two or three machines.

A variation of the laundrette technique is the washing machine with a coin slot. These are located in the basements of many apartment houses. If they are installed in sufficient volume, they may become more of a menace to the laundry industry than the laundrette. For with a washing machine in the basement, a woman can quickly wash her silks and rayons and nylons, and then iron them at her leisure.

Most people complain vehemently of the high cost of laundry, but in comparison with the price advances in almost every other field, these complaints seem not altogether justified. Prices were frozen by the OPA late in 1942, on the basis of those prevailing in 1940. In 1943 and 1944 the OPA authorized increases of from 4 per cent to 5 per cent in each year. In 1946 a further advance of 12 per cent was permitted.

When OPA was abandoned, prices jumped another 10 per cent, a total increase of approximately 33 per cent since 1942. Victor Kramer and other laundry executives believe that although the cost of labor will remain high—it now gets 60 cents of the laundry dollar—prices will gradually ease off, which is probably the best news laundry customers have heard yet.

n looking at a chart. When he
her, his father said, he took on a
Those were the great days, when
sie C. was berthed among the
boats at the municipal dock.

Dennis visualized the Bessie C., spick-
and-span, with Captain Jack Clifton
aboard in his yachting cap, shaven and
clear-eyed and grinning, and his mother
there, too. It was not easy to visualize his
mother. There was a photograph of her
at home, in a fluffy sort of dress, with a
trailing skirt, and when Dennis visualized
her aboard the Bessie C. she had to wear
that fluffy dress; he simply couldn't imag-
ine her in any other way. Of course he
knew she hadn't worn a dress like that,
but he would not even try to visualize
her in anything like the mauve slacks the
plump blonde in the bar had been wear-
ing.

Boats like the Bessie C. chartered for
a lot of money, even though she had been
long afloat when his father first acquired
her. His father must have made pots of
money in those days, Dennis thought.
He wasn't working in a fish market then.
He wasn't doing odd jobs then—cleaning
fifty-five porgies for two dollars. Dennis
winced and tried to forget about the un-
scaled fish. He spun the hulk's wheel and
gazed ahead at the marsh.

SHADOWS were long now, and the
marsh was like a sea. In the darkening
light the marsh seemed to roll away in
waves, and in Dennis' imagination the
waves mounted and it was the storm.
The bow of the Bessie C. lifted and fell
in the great storm and the wheel spun
to the rudder's buffets. The wind bat-
tered the harbor and sent waves crashing
against the pier, and the Bessie C. was
lifted by them and carried away and
taken helpless and yawing here onto the
flats and hurled with great force against
an old piling and her bottom was stove
in. Here she had settled into the mud,
unattended, and they had stripped her of
everything of value, like taking jewels
from a corpse, and left her on the flats, a
hulk. Dennis knew that his father had
failed to make her fast that night, and
he knew why. His mother had been
dead only two months that night.

Seeing how the sun was reddening in
the west, Dennis thought it must be

pretty late. He had to be at work on
time, and he had to take those fish to
Mr. Brace. The Seaview Hotel was al-
most opposite the concession on the
boardwalk where Dennis worked for
three hours every night, and he could
drop the fish off on his way to work. He
stepped carefully to the gunwale and let
himself down to the soggy ground, deep
in marsh grass. There was a path, made
by his own feet, and he followed it up
to the road. He did not look back at the
hulk.

His father was not at home. Dennis
had not expected him, yet he was disap-
pointed. The two-room cottage they oc-
cupied stood on the bank of a tidal creek
and there was a small, rickety dock, but
they had no boat of any kind, not even a
rowboat. The house was in view of the
highway and once, a long time ago, his
father had talked of putting up a sign
and selling bait, but he had never done
anything about it.

For one thing, he had said, they didn't
have a rowboat, anyway. How could they
get bait to sell?

There was milk in the icebox, and Den-
nis found bread and made two peanut
butter sandwiches. He sat at the kitchen
table to eat them, under the shiny barom-
eter his grandfather had brought from
Holland. As a matter of course he looked
at the barometer, and it was only after
he had assured himself that fair weather
would prevail that he glanced at the
clock. It was late, and he hurriedly ate
the two sandwiches and finished the milk.

He got to the fish market in time; it
had not closed yet and the icehouse was
open. Old Joe Dobson was washing
down the floor of the market, and he
waved to Dennis as he went past to the
dock. Dennis got out the bucket of por-
gies. It was very heavy. About thirty
pounds, he estimated as he carried it with
both hands to the road. There he stopped,
and took a handkerchief from his pocket
to wrap around the handle of the bucket.
He started on again.

It was at least a mile across to the
ocean side, where the Seaview Hotel
fronted on the boardwalk, and the bucket
became heavier with each step. Dennis
tried counting steps. He would take one
hundred steps, then put the bucket down
and rest. By the time he reached eighty,
his arms and even his shoulders were
aching, and he went through the nineties
at a trot, dropping the bucket on the
hundredth step. Once the bucket tipped
over and he had to pick porgies up from
the pavement. He was very tired, and
his arm sockets were sore; his knees be-
gan to feel weak.

If he could just save some money, Den-
nis thought. If he had a bicycle it would
be easy. He could put the bucket of fish
in the basket and pedal over to the Sea-
view; he could ride to work every night
on his bike instead of walking there and
back. If he just had a bicycle, that was.
If he just had eight dollars.

Those bikes they had made in wartime
were not very good. They had only the
essentials—a frame, handlebars and
wheels, but it was the best kind of bike
he could get for eight dollars, even if the
frame was rusty and the saddle sprung.
Bobby Martin was getting a new bicycle,
the latest model, with all the gadgets you
could think of, and he'd sell his old war-
time bike for eight dollars, he had prom-
ised, as soon as he got the new one. The
tires on the old bike were fairly new, and
it was a bargain.

Dennis picked up the bucket. Well,
he didn't have a bike, and it was a long
way to the Seaview Hotel with his thirty
pounds of fish. He started on the next
hundred steps, but had only reached
sixty-two when lights sent his shadow
rushing on ahead of him, then an auto-

mobile slowed and stopped beside him. A voice called, "That you, Dennis?"

Dennis turned. It was Joe Dobson in his old heap. He said, "Hello, Joe."

"Where you going with that bucket, Dennis?"

"Seaview Hotel."

"Well, hop in," Joe said. "I'll take you over."

As Dennis lifted the bucket into the car Joe looked at the fish, but he said nothing. Dennis sat quietly, breathing hard, relaxing his arms and shoulders. He was very tired.

The car entered the resort section and rolled along through traffic beside the boardwalk. When he stopped the car at the Seaview Hotel, Joe asked, "Want a lift with that bucket?"

"I got it, Joe," Dennis said, and got out. Joe passed the bucket down to him, grinned and drove on.

The Seaview was a shabby white Victorian building, summer style. It looked like a shopworn wedding cake, with its cupolas and fancy shingles. Dennis carried the bucket around beside the hotel, and found Mr. Brace sitting on the back porch. The hotel owner took the bucket, nodded when he saw the scaled fish, and said, "Say, you didn't carry it here, did you?"

"Oh, no," Dennis said importantly. "We brought it in the car."

DENNIS crossed the street to the boardwalk. It was early in the summer and business was pretty slow. There were only a few customers in the concessions that took up about a hundred yards of boardwalk in the small resort town. Also it was pretty early in the evening. Only seven o'clock.

Dennis worked in a concession where they rolled balls into holes that represented playing cards. Each customer received five balls when he put a nickel in the slot, and if he filled a poker hand, three of a kind or better, with his five balls, he received cigarettes as a prize, up to twenty-four packs for a royal flush. It was Dennis' job to pass out the cigarettes, and occasionally when only one of the two owners of the concession was on duty, to make change. He liked the job, and the time passed quickly because there was always something to watch.

Dennis thought that the two men who operated the concession were pretty good guys. He was a few minutes late tonight, but neither mentioned it. It was a good job, but it didn't pay enough to make saving eight dollars for a bicycle very easy. Dennis figured that the summer would be just about over before he'd have the eight dollars saved, and he was very much afraid that Bobby Martin

would find another buyer for his bike.

Boys Dennis knew often passed by the concession and called to him—the given up trying to promote a free through him—and that night Bobby Martin rode by. Bobby had shown him the catalogue picture of the bike he wanted, and the gadgets he intended to put on it, and every time Dennis Bobby he asked about the bike. To Bobby still was riding the old wobbly bike, which was the answer to the question in Dennis' mind. But Dennis was excited.

"They're getting the new ones tomorrow, Dennis," he said. "Dad ing me uptown tomorrow and I'm ride it home."

"That's swell," Dennis said.

Bobby glanced toward the old leaning against the boardwalk. "Still want that one, Dennis?"

"Yeah," Dennis said, and turned away. He knew he wouldn't get the eight dollars by tomorrow. He'd never have that eight dollars even if he had it. They needed the money. He knew how much he needed the money. He'd been waiting long time for this tomorrow, when the new bicycle would come, but now it was here, tomorrow was too soon. Tomorrow had lost the special quality it had usually had, and now it was a depressing urgency about it. His father had to get a job tomorrow.

Maybe, Dennis thought, as he turned to give a pack of cigarettes to a man who had rolled a full house, the boardwalk would take his father on again. He'd worked there once, before he started at the fish market. He had worked in a lot of places. He had held more jobs than he could think of at the moment. He had held none of them very long. Knowing how it was, Dennis could help blaming his father sometimes. The night he had failed to make the big score, that night of the big storm, he had thought of the unscaled fish that could not help blaming his father.

There was a core of resentment within him that night, and when he got home, his thoughts returned to the fish and the heavy bucket and the Bessie C. They mixed together in his mind and he thought of how they made him think of his father who had died when he was only ten years old. He did not remember his father except from the photograph, and he did not know just how it had been when he was alive, in the days when the fish was put out to sea, but he knew it.

Windshield Washers

for September 13, 1947

very different. He knew it had been wonderful then. Thinking of it brought a lump in his throat, and he did not blame his father so much, because there had been that visual transition again, and his father was there in a yachting cap, brown-faced and clear-eyed and grinning.

Dennis kicked at a stone on the road. He didn't care about any old bicycle. He'd got along so far without a bike, and pretty often he could hitch a ride to and from the boardwalk. Besides, he didn't mind walking on a night like this, when there was a moon.

The moonlight made a wonderful shiny pattern on the road, and objects loomed with shadowy definition—the trunks of trees, the squat shape of the Blue Water Bar, with lights streaming from the windows, a dark indistinct form. . . . Dennis looked again. The form took shape; a man was sitting on the curb outside the Blue Water Bar. Dennis' steps quickened, and the form became recognizable. It was his father, sitting on the curb with his legs sprawled out.

"Pop!" Dennis cried.

His father raised his head. Light from the barroom windows touched his face and made it blank and colorless. He said, thickly, "That you, kid?"

Dennis stopped two feet from his father. "Anything wrong, Pop?"

He heard a rueful chuckle, and his father's voice said, "Tell you the truth, Dennis, Lou tossed me out. Gave me the old heave ho. What do you know about that?" He laughed raspingly.

Dennis abruptly sat down on the curb beside his father. He felt a little sick, and whispered, "Come on, Pop. Let's go home."

"Claimed I was annoying the customers," his father's voice said, indignant now. "It was that blonde in the purple pants. She—"

"Pop," Dennis said, "let's go home."

"Nope." His father put a heavy hand on Dennis' shoulder. "Gotta go back in there, Dennis."

"No you don't, Pop!" Dennis' voice rose anxiously.

"Yep," his father said. "Gotta go." He put his hands down beside him and tried to push himself up. "Gotta get my hat."

"I'll get it!" Dennis cried, and jumped to his feet. He ran ahead of his father to the entrance of the bar.

THE lights were bright inside and there was a good deal of noise. The corner booth was the noisiest, and Dennis saw bulging mauve slacks. The plump blonde and the two men in sport shirts were still there and they were still drinking old-fashioned.

Dennis walked up to the bar. Lou gave him a self-conscious smile and said, "Your old man ain't here now, Dennis."

"I'm looking for his hat," Dennis said.

"That's right," Lou said. "He did have a hat. I don't see it, though."

Dennis walked along the bar, and a man at the end of it reached down and picked up a hat from the floor. The felt was sprinkled with sawdust, and the plump blonde in the mauve slacks looked at it and laughed. Dennis' face was flushed as he beat the hat against his knee to dislodge the sawdust.

"Father, dear father, come home with me now," the blonde called out, and the men with her laughed.

Lou said, "Sorry about the hat, Dennis."

Dennis turned slowly and looked at the people in the booth. They were all laughing, and they were all looking at him. Dennis stared back at them and the grin muscles stiffened, then the grins slowly faded. It was suddenly very still in the barroom.

Dennis' chin came up and his flat, defiant voice said, "My father's a charter-boat captain."

The two men in sport shirts exchanged

ENJOY BETTER HEARING LONGER!

WITH
"EVEREADY" "MINI-MAX" BATTERIES!

HERE'S real help to make your hearing aid perform its best: "Eveready" "Mini-Max" batteries with the extra power capacity to give you *proper full-volume operation!* Revolutionary inner construction, with *no waste space* between cells, gives you this *extra battery life* in the same, or *smaller*, space.

Ounce for ounce, the greatest energy producers . . . size for size, the most compact . . . penny for penny, the most economical, "Eveready" batteries *save you money!* Get them from your hearing-aid dealer.

← **ULTRA-SMALL** hearing aids (new sets with amplifier and batteries in one unit) and others with clips for two-unit instruments are designed around these "Eveready" batteries. #412-E "B" battery at left, smaller than a box of safety matches, delivers 22½ volts. (Similar "Eveready" 15- and 30-volt types also available.) "Eveready" "A" battery (#1016-E) matches "B" battery in size.

FOR OTHER modern hearing aids of the single-unit or double-unit type, this "Eveready" #420-E "B" battery delivering 22½ volts, together with this "Eveready" #1035 "A" battery, offers long life and economy. (15- and 30-volt "Eveready" "B" batteries are also available.)

← **THESE NEW** small "Eveready" batteries can be used with all existing vacuum-tube instruments employing 22½- and 30-volt separate plug-in "B" batteries. Ask your hearing-aid dealer about them. The 30-volt "Eveready" "B" battery (shown at left) is #430-P and the companion "A" battery (right) is #1040-P. The same high "B" capacity is also available in 22½ volts.

HEARING-AID USERS requiring a heavy-duty 45-volt "B" battery obtain exceptionally long life from the "Eveready" #455-P battery (left). The "Eveready" #1052-P (right) is the companion "A" battery. (A 33-volt "Eveready" "B" battery is also available.)

The registered trade-marks "Eveready" and "Mini-Max" distinguish products of

glances and one of them said, "Sure, kid. Forget it. We're all kind of tight."

"That's our boat," Dennis said, and pointed at the painting on the wall. "The Bessie C."

The plump blonde put out one hand; she was blinking, and her mouth was screwed up. "Honey, it's a beautiful boat," she said softly. "Come over here a minute."

"Lou," Dennis said, and he was fighting back the tears. "That's Pop's boat, ain't it?"

"You bet it is," Lou said. "The Bessie C."

"See here," Dennis said. His hand went to his hip pocket, where his wallet was, and very carefully he removed from the wallet the card he always carried. He held it out, and the blonde took it, avoiding his eyes. There was nothing for her to do but read it aloud, and her voice was low and not quite steady.

"The yacht Bessie C.," she read. "For charter. Deep-sea fishing. Captain Jack Clifton. Municipal dock."

"That's my father," Dennis said. "Captain Jack Clifton."

"Kid," one of the men said, "we're all kind of tight. You know how it is. Nobody meant anything."

NOW the tears had forced through. Dennis was sobbing. He snatched the card away and turned toward the door, and he had nearly reached it before he noticed his father standing there. He was leaning a little against the wall, and his fists were clenched, and for an instant the dignity that Dennis had tried to salvage was there.

Dennis said, "Here's your hat," and thrust it into his father's hand, then he ran out through the door. As he went past he had a glimpse of his father's white face, stiff with a strange sadness, then he ran on into the night.

Away from the bright lights of the bar, Dennis came into the moonlight, and the cool radiance of it was soothing. He stopped crying, and paused in the open, under the moon, to return the card carefully to his wallet. It was one of several cards that remained from the grand old days of the Bessie C., and Dennis kept the others at home in a box he had decorated with sea shells.

He walked on again. He had not once looked behind him, but he knew his father had not followed. There had been no footfalls on the road behind him. To his left, fifty feet away, was the turning

that led to his home on the creek, but he did not go that way. He followed the road toward the mud flats and the hulk.

Even without the moon he could have found the way along the path his own feet had made. In the moonlight the hulk loomed ahead of him and he found the marshy knoll and scrambled up to the deck. He knew just where to step to avoid the rotting planks, and he made his way to the wheelhouse. Moonlight slanted in and illumined the wheel, and Dennis leaned against it, looking out at the marsh. His eyes were dry now, and he stood quite still, listening to the far-off croaking of frogs.

His hands gripped the spokes of the wheel, but he did not turn it. He remembered the scene in the bar, and he was ashamed now of the things he had said. He held the spokes tightly and for the first time the old Bessie C. was to him what others saw, a rotting hulk in the marsh grass. There was no magic left for him here on the hulk, and it no longer seemed a refuge.

His hands slipped from the wheel and suddenly he kicked the metal base of it hard, then he slipped down to the deck. He let his shoulders rest against the bulkhead, and squeezed his eyes tight, but the tears came through. He stretched out on the deck, with his face in the crook of his elbow, and wept angry tears.

He did not hear footsteps in the marsh, nor the first scraping of a shoe on the hull. The sound that aroused him was a heel thump on the deck. He sat erect and saw that the moon now was low; he had slept. He called out anxiously, "What's that?"

"Dennis?" It was his father's voice, low and humble. "I thought I'd find you here, kid."

Dennis heard heavy steps coming toward him and saw his father's figure in the moonlight. He said quickly, "Be careful where you step, Pop."

"I know the old Bessie C., Dennis," his father said. "I know every plank of her. Where are you, kid?"

"Here, by the wheel."

His father's shadowy figure entered the deeper shadow of the wheelhouse and merged with it, then moonlight touched his face. He said softly, "You know, I've got good news for you, Dennis."

"I don't care," Dennis said.

There was silence, then his father sat beside Dennis and stretched out his legs. After a time he said, "Joe Dobson told me how you scaled those fish."

"Yes," Dennis said.

"And you carried them to the Sea-view."

"Joe gave me a lift," Dennis said.

"I know," his father said. "I should've scaled 'em. I'm sorry you had to do it, Dennis."

Dennis swallowed and said, "That's all right, Pop."

He felt his father's hand on his shoulder, heard the low voice saying, "Don't you want to hear that news?"

"Yes," Dennis said. "Sure."

"You're wanting a bicycle, aren't you, Dennis?"

His father knew very well that he wanted a bicycle, Dennis thought. His father knew about the eight dollars. He did not answer.

"Well, you're gonna have that bike," his father said. "The best in town, Dennis."

Resentment rose again in Dennis. He wanted no false promises that night. He said quickly, "I don't want a bike."

"I mean it, kid," his father said, and the fingers pressed the boy's shoulder. "You know that barometer at home, that one of your mother's. The one that was here on the Bessie C. in the old days."

Of course Dennis knew that barometer. Didn't he polish it every week? Didn't he look at it every morning, the first thing he got up?

"A fellow offered me seventy-five dollars for it once," his father said. "I'm going to sell it and I'm going to get you that bike. How do you like that?"

There was silence again in the shadowy wheelhouse of the hulk. The barometer had always hung there on the wall. His father had sold everything else salvaged from the Bessie C., but he had not sold the barometer that his wife had first put aboard. There was a special meaning in his saying he would sell the barometer, and it gave Dennis an empty feeling.

"I think your mother would want you to have that bike," his father said. "She'd want to sell that barometer, too."

THE empty feeling passed and Dennis' heart pounded. Yes, he thought, his mother would want to sell that barometer. He thought he knew what his mother would want, and he burst out, "All right, Pop, let's sell it. But I don't want a bike!"

"You don't want a bike?" His father's voice was puzzled.

"No," Dennis cried. "We can take that money and get a rowboat, Pop. We can sell bait and rent the rowboat, like we used to talk about. I'll take care of that. And then we can save up for another rowboat and after a while we can have a bunch of 'em and we'll rent 'em out by the day and then—" He stopped and sucked in his breath.

"I see," his father said. "And then someday you'll have another Bessie C. That's it, ain't it?"

"Yes," Dennis said.

His father patted his shoulder. "Kid," he said. "We'll take a shot at it, you and me. I'll string along with you on that, Dennis. I'll latch onto a good job, kid. You watch." His voice rose. "I'll start out tomorrow and I'll get a job and I'll buy that rowboat and you'll be captain of the fleet. You'll be in charge of the bait business. Say, they're getting a buck a quart for sand shrimp these days." The voice stopped abruptly and there was a moment's silence; then his father said softly, in an altered tone, "Dennis, I'm going to do the best I can. Maybe I'll make the grade. I don't know, but I'll sure try." He hesitated an instant. "But one thing I do know."

Dennis looked up, and in the moonlight he saw his father's smile.

"I know this," his father said. "Come hell or high water, you're going to get yourself a charter boat before you're done, and you'll be the best damn skipper in the harbor!"

UNITING WESTERN EUROPE

THE Kremlin put the One World idea out of the running when Molotov refused at Paris recently to have any truck with the Marshall Plan for economic restoration of Europe.

But the idea of One Europe, or at any rate of One Western Europe, took on new life at that same time, as Count Richard Coudenhove-Kalergi and other veteran advocates of a United States of Europe are now pointing out.

The U.S.E. plan is based on the theory that if the various nations of Europe only could knock down their tariff barriers and turn the Continent into one big free-trade area, most of the stresses and strains which have bred so many wars would ease off.

Certainly it worked out that way in the United States of America, which became a big free-trade area when the Constitution took effect in 1789. That development killed off several incipient wars among states, and opened up a lot of markets which previously had been surrounded by tariff spite fences. Our growth as a great and prosperous nation began then and there.

Truc, the difficulties facing a U.S.E. are much greater than those which threatened the U.S.A. in the old days.

Many different languages are spoken in Europe,

and there are national and group hatreds going far back into history.

But we made it stick, and there doesn't seem to be any unbeatable reason why Western Europe couldn't do likewise.

The chances for formation of a Western European federation seem especially good at this time, assuming the United States presses persistently for it as a *quid pro quo* for the help we are expected to extend to European nations in the form of money and materials for recovery from the war.

If any Western European nations turn coy about joining a U.S.E., and show signs of planning to hook up with the Russian group, we can point out to them the fact that Russia can offer them nothing but blood, sweat, toil and tears under an unrelenting, implacable dictatorship. The Kremlin can't feed its own people decently, let alone anybody else.

The Marshall Plan, if we go into it on the scale forecast by the State Department, will cost us tremendously. But if we can get out of it some sort of U.S.E., it may be worth all its costs, because we have been dragged into Europe's two latest wars at an expense far greater in each case than the expected cost of the Marshall Plan.

HARVEST OF THE SILENT SERVICE

A JOINT Army-Navy committee recently completed the big job of figuring out how much Japanese shipping the Allies sent to the bottom during the late war. The figures make some of the most interesting and satisfying reading we've seen in quite a while.

The grand total was 10,600,000 tons, which was just about all the ships the Japs had, except for rowboats. Of this total, the forces of the United States sank 9,700,000 tons.

The most dramatic feature of the story, of course, is the huge top total of the submarine killings—5,320,000 tons, well over half of the entire tonnage of Jap shipping slaughtered by U.S. agencies.

Along with this accounting goes a melodramatic story of how the U.S. submarine Archerfish, prowling off Nagoya November 29, 1944, spotted the biggest aircraft carrier ever yet built—the

59,000-ton Shinano—on a trial run, and fired a salvo of torpedoes, one of which hit and sank the Shinano.

On the basis of these disclosures, we'd be justified in spending heavily on submarine research and improvement, and on new subs for the Navy. We'd be criminally negligent, indeed, not to do so. These ships have proved themselves just about indispensable in two great wars.

And that appears to be only half the story. It seems highly probable that if there are any atom-age wars a great deal of dependence will have to be put on underwater fighting ships, and perhaps on underwater supply ships and troop transports as well.

The prospects look a bit dubious for battleships and carriers in future wars, but apparently the sub's career is only well begun.

TRANSLATIONS, PLEASE

WE WILL now register a loud, uncultured y against a habit in which some crude aut persist in indulging, and for which we can find justification.

What we're squawking about is the practice of ringing foreign-language words and phrases into text of a book without furnishing translations in English in parentheses or footnotes.

Dr. Arnold J. Toynbee does this, we're sorry to report, in his otherwise magnificent *A Study in History*. The late Albert Jay Nock did it in his otherwise salty and almost priceless *Memoirs of a Superfluous Man*. Other authors with plenty to say have the same annoying habit.

We do mean annoying. Very few Americans have a working knowledge of Greek, Latin, French and German. That is no doubt regrettable, but a fact. If the author thinks he is paying a delicate compliment by neglecting to translate verbal jewels cut in foreign tongues, he's mistaken. Our own doubtless uncouth feeling always is he's merely trying to show us how erudite he is, how dumb we are.

Let's just have translations, please, in all cases from now on, so that all the customers can tell what the author is talking about all the time. What does a man write for, anyway, if not to tell his whole meaning across to anybody who can understand anything he writes?

AGAIN THE AAA

WE'VE paid our disrespects before now in space to the American Authors' Association, a Hollywood-hatched scheme to drag on a writers in the country into a copyright-control to deal with publishers, radio concerns, movie companies and so on.

The time appears to be ripe to sock the AAA the button again, so here goes:

James M. Cain and his associates, who dropped the original scheme, were temporarily set on their heels when the American Writers' Association was organized to fight the AAA. Now they have come up with a charter, in sonorous language, which purports to remove the former objections and obviate any danger of regimenting writers in this country.

It looks like the same old totalitarian proposition to us, with some new trimmings. The writers fell for the AAA would still have to turn over all rights in his own productions to this agency, let it handle all his literary business. In consequence the outfit would be a small board of government who could push the work of authors whose they liked and fail to push that of authors whose politics they didn't like.

We already have the Authors' League of America to fight copyright and kindred battles for writers, and we have a multitude of smart literary agencies whose job is to see that their clients aren't exploited.

As we've remarked before, we hope publishers and all others mixed up with production of the printed word in the United States will continue to rebuff the AAA until its back is tired and quit. It isn't needed, and it is doing no business.

Does the "Bottle Bacillus"
get in your hair?

**YOU
SAID
IT!**

Better start with
Listerine Antiseptic-Quick!

Don't let INFECTIOUS DANDRUFF get a head start

THOSE ugly little germs on the scalp, those flakes and scales on hair and coat collar may mean you're in for infectious dandruff . . . and *it you need antiseptic treatment at once.*

If you have the slightest symptom, get started right now with Listerine Antiseptic and massage. This is the method that has helped so many because it treats an infection as it should be treated . . . with germ-killing action.

In clinical tests, twice-a-day use of Listerine Antiseptic brought marked improvement within a month to 76% of dandruff sufferers.

Listerine Antiseptic goes right to work on the stubborn "bottle bacillus" (*Pityrosporum ovale*) . . . kills it by millions. This is the ugly customer

that many dermatologists call a causative agent of infectious dandruff. Don't try to conquer it with so-called "overnight" remedies devoid of germ-killing action.

Simply douse Listerine Antiseptic on scalp and hair, and follow with vigorous fingertip massage. Make it a part of your regular hair care. And if the symptoms persist, repeat the treatment twice daily.

You'll be delighted to see how quickly ugly flakes and scales begin to disappear . . . how readily itching is alleviated. Your scalp feels so clean, so cool, so healthy. And your hair looks the way it should.

LAMBERT PHARMACAL COMPANY, St. Louis, Missouri

THE TREATMENT

MEN: Douse full strength Listerine Antiseptic on the scalp morning and night.

WOMEN: Part the hair at various places, and apply Listerine Antiseptic.

Always follow with vigorous and persistent massage. Continue the treatment so long as dandruff is in evidence. And even though you're free from dandruff, enjoy a Listerine Antiseptic massage once a week to guard against infection.

P. S. Listerine Antiseptic is the same antiseptic that has been famous for over 60 years in the field of oral hygiene

ON THE **GO?**
FEELING **LOW?**

BRACE UP WITH A

"**Bracer**"*
SUPPORTER BELT

BRACE UP WITH A "BRACER" . . . the comfortable 2-way stretch Bauer & Black supporter belt that induces proper posture, makes your clothes fit smoother, and helps reduce fatigue by its gentle yet firm support.

COVER	By DAVID PESKIN

THE WEEK'S MAIL

FIRST-BORN

DEAR EDITOR: Another child of white European parents born in North America about the same time as Snorri Thorfinnson (The Week's Mail, Aug. 9th) was an ancestor of George the Sixth, King of Great Britain, Canada, Australia and other places. This was Aud, called the Old, a girl born in one of the short-lived Norse colonies on the American mainland soon after 1000 A.D.

Aud was taken from America to Iceland and thence to Norway, where she married. Among her descendants was Anne of Denmark and Norway, who married James the Sixth of Scotland and First of England. From their daughter, Elizabeth, descended the present king of England.

I had these facts direct from that fine historical scholar, the late Sir Charles Oman. This long-range triangular linking of America, Britain and Norway is little known even in Norway.

THOMAS DUNBABIN, New York, N. Y.

POWDER KEG

DEAR MR. DAVENPORT: Since reading W. B. Courtney's The Balkan Follies (Aug. 9th), my blood temperature is now 212° F. If this was his intention to create anger, I do not know. Maybe it is to open our eyes.

Why does the U.S. allow such conditions? Why do not our fliers also have tommy guns, and "live" ammunition? What is there to lose? It seems from the "Follies" we have no respect from the Soviets. Why give them any? Why not once more "liberate" the Balkans—the time from the U.S.S.R.?

MRS. DOROTHY McDONALD
The Plains, Ohio

UNBROTHERLY LOVE

GENTLEMEN: In Japan's at Batto Aga (Aug. 2d) the author makes a simile thus: "deader than the Athletics' chances after the first two games." In recent years there would have been quite to the point but Philadelphia's are kind of proud of our "A's" this year. They will not cop the pennant but they'll be a lot closer than some other clubs. I enjoyed the story as a who-just allergic to slurs on "A" baseball.

KENNETH ROTH, Telford, Pa.

PSYCK OF PSYCHIATRISTS

GENTLEMEN: Someone will have to stick his neck out (Spare the Child, by Howard Whitman, Aug. 2d) just to let it be known that there are many self-respecting people who are more than fed up and disgusted with this psychiatric nonsense. Some 30 years in public schools has taught me a few things.

(Continued on page 66)

RKO's PIC-TOUR OF THE MONTH

"SO WELL REMEMBERED"

BESIEGED by autograph hunters during filming in England of James Hilton's *So Well Remembered*, JOHN MILLS, popular British star, smiles, signs. Co-starred in Anglo-American film: MARTHA SCOTT, PATRICIA ROC, TREVOR HOWARD and RICHARD CARLSON.

"TYCOON"

IRRESISTIBLY DRAWN, yet aware of gulf between them, highborn beauty LARAINÉ DAY struggles half-heartedly in arms of JOHN WAYNE, rough, tough engineer in her father's employ. Scene from RKO's *Tycoon*, tempestuous epic drama, filmed in Technicolor, set in spectacular Andes.

"MEMORY OF LOVE"

LOVELY INSPIRATION for a great concerto—and a love affair that's even greater—is MERLE OBERON in RKO's *Memory of Love*. She also teaches DANA ANDREWS that no man can divide his heart between two women. Grand music enhances drama. ETHEL BARRYMORE co-stars.

"THE FUGITIVE"

IN HIDING, and in terror: HENRY FONDA and DOLORES DEL RIO plot escape in scene from *The Fugitive*. In room beyond, pursuers revel noisily, unaware of pair's nearness. PEDRO ARMENDARIZ co-stars, JOHN FORD directs. A John Ford Merian Cooper Argosy Production.

KEEP UP WITH THE WORLD

BY FRELING FOSTER

In 1925 in a suburb of Tokyo, Japan, a puppy called Hachi accompanied his master to the railroad station each morning and back again each evening for several months, after which the man died. But the dog continued to await his return at the station every night during the rest of his life—more than ten years. Hachi's devotion so impressed the Japanese government that it erected a statue of him on the spot where he waited and also sent statuettes to all schools in the empire as a symbol of faithfulness.

Although whales grow to be several million times heavier than mice, the eggs from which both develop are approximately the same size.—By Grace D. Williams, New York City.

In the United States, the rate of chronic alcoholism for women was 59 per cent higher in 1910 than in 1945.

A New York baker is a specialist in making "spectaculars," or giant cakes representing certain scenes or structures. One of his masterpieces, produced for a publicity campaign a short time ago, a scale model of the George Washington Bridge and its near-by approaches, was nine feet long and weighed 130 pounds.

Few diseases have such extreme characteristics as rabies in man. While a person bitten by a rabid animal is usually saved by a series of vaccine injections started immediately after the attack, a victim not receiving this only known treatment usually dies. In a doomed case, no symptoms of the disease became noticeable for a period of from three weeks to several months; yet after they appear, the patient generally succumbs within five days.

Wood carvings so small their tails cannot be seen without a magnifying glass are cut inside both halves of a rosary's terminal bead, open in the middle, that is owned by Peabody Museum in Salem, Massachusetts. Although each carving occupies less than two cubic inches, depicting the Day of Judgment, 47 figures, while the other, depicting heaven, has 58 figures—with wings.—By Eleanor Wells, Tilton, N. H.

No movie is made in Hollywood until its script has been checked for violations of the Production Code approved by Joseph I. Breen of the Motion Picture Association of America. When a script contains scores of prohibited words, actions and scenes it is sometimes revised many times before it is satisfactory to both the writer and the studio. To cite an extreme case, the work of revising The Man Always Rings Twice extended over a period of nine years.

Americans and Britons differ in their pronunciation of at least 2 per cent of the words in the English language.

The largest residential organ in existence is the Aeolian of Pierpont on his Longwood estate in Pennsylvania. Weighing 55 tons and requiring 14 freight cars to be shipped there in 1930, the organ, believed to have cost nearly \$300,000, has 100 pipes, one pedal and four manual keyboards, and is powerful enough to be heard throughout three big cathedrals.

Ten dollars will be paid for each feature accepted for this column. Contribution should be accompanied by their source of information. Address Keep Up With the World, Collier's, 250 Park Ave., New York City. This column is copyrighted and items may be reproduced without permission.

Collecting ancient automobiles, such as this old Mercer, and keeping them in running order is the hobby of a famous Metropolitan Opera tenor. His powerful voice has thrilled millions via the radio, movie screen and concert stage. Currently you can hear him every Sunday afternoon at 2:30 EST on the NBC network as star of the program "Harvest of Stars."

He's young and handsome and lives at Westport, Conn. He owns eighty antique automobiles of all shapes and sizes. About gasoline, Mr. M. . . . says: "I always use 'Ethyl' gasoline . . . even in the old-timers that were built long before high antiknock gasoline was available."

2. The hobby of this great American novelist is promoting soil conservation. He is one of the organizers of the fast-growing movement "Friends of the Land." He lives on his 1000-acre farm in Lucas, Ohio—about which he wrote the 1945 best seller "Pleasant Valley." His first novel, written in 1923, was "The Green Bay Tree." Three years later he won the Pulitzer Prize with "Early Autumn." His recent book "Mrs. Parkington" became a highly successful movie.

Living on a farm, he has to do a lot of driving in his 1946 station wagon . . . and he always uses "Ethyl" gasoline because: "It takes good gasoline to bring out the performance of an engine, and with me 'Ethyl' gasoline is tops."

WHOSE **HOBBY** IS THIS?

See if you can identify these three famous people from their hobbies . . .

Flying a four-place "Navion" is the hobby of his six-footer from Mountain View, Ark. He left a telephone company job to sing with an orchestra. Emerging as a successful emcee, he was tapped for Hollywood in 1931. After making his way through some thirty pictures, he changed character to win acclaim for his boiled roles in "Murder, My Sweet," "Cornered" for RKO, and in Columbia's "My O'Clock." His latest is "The Ends of the Earth," a Columbia picture.

Besides flying, he enjoys driving. He always says gasoline improved with "Ethyl" anti-knock compound in his convertible because: "The only way to get performance out of a car is to feed it the right gasoline . . . and that's 'Ethyl' gasoline!"

READ THIS TO CHECK YOUR ANSWERS:

When you use "Ethyl" gasoline, you're certainly in good company. Millions of car owners—including prominent people in every field—have found that it pays to use "Ethyl" gasoline for full power and all-round performance.

Among the celebrities who always stop at the "Ethyl" pump are the three you've probably identified from the clues given above: 1. James Melton 2. Louis Bromfield 3. Dick Powell.

These famous people know that the familiar yellow-and-black "Ethyl" emblem on a pump means gasoline improved with "Ethyl" anti-knock compound. This is the famous ingredient that steps up power and performance. To get the most out of *your* car, whether it's a prewar old reliable or brand new, look for the "Ethyl" emblem in the station where *you* get your gasoline. Ethyl Corporation, Chrysler Bldg., New York.

Collier's photographer, Jack Manning, who collaborated with Photographer Lofman, shoots the televised operation reported on page 20

UNDERSECRETARY of the Treasury Archibald Lee Manning Wiggins was saying to friends at Washington's Statler, "They can't get away with it. They're dumb. We can't let them chisel the American people," when one of Collier's ear men happened along, asked who couldn't do what to whom and why. The result: They Can't Fool the Revenue Man, p. 68.

For such an unpopular office, Mr. Wiggins is a surprisingly popular man. Born in Durham, North Carolina, he's made Hartsville, South Carolina (pop. 5,000), his home. A small-town banker, department-store manager, seed-company official, and publisher of the Hartsville Messenger, he's also been president of the American Bankers Association, guest lecturer at the Rutgers Graduate Banking School, and has honorary degrees from his Alma Mammy, the U. of N.C., for being one of the state's most useful citizens.

The Collier's check thrilled Mr. Wiggins as much as one for \$50 that arrived just before Christmas, years ago, when Mr. Wiggins was a student at Chapel Hill. It was from the Durham Herald for which he had been corresponding in return for by-lines, and Mr. Wiggins was rubbing two nickels together to convince himself he wasn't broke when it came. Mr. Wiggins' first impulse was to return our check to us, then he decided to give it to someone else who needs the money worse than Collier's.

"I have a somewhat old-fashioned idea that I shouldn't use any of my time for personal gain while I am on the government pay roll," he says.

Mr. Wiggins resigned from his many businesses when he became Undersecretary. Another Hartsville Boy Who Made Good: Bobo Newsom.

DICK PEARCE assures us if the folks in his new serial, Sweet Water, p. 11, are imaginary, the setting of Tularosa Valley isn't. A little cup o' New Mexican hell, Tularosa is forbidding, compelling, dry, harsh and desolate, rimmed by abrupt mountain ramparts. "The highway and railroad are both transcontinental," he says, "but they sidle around one side of the valley, clinging together for comfort, as though they knew they had no business there."

The mountains wall out little luxu-

ries. Ice cream must be made home, or you wait for the bus to bring it from El Paso, 100 miles away. "Where the water isn't alkali, it's gyp," he says, "and where it isn't gyp, it's hard you can pound corn with it."

The cattlemen will always be in Tularosa: There is no soil to attract the farmer. "The valley floor is black malpais, red dust and volcanic sand, where the horned toad gasps for breath and the rattlesnake flees in terror," travelogues Mr. Pearce. This is the valley where the Atomic Age was born, and where the too-our grandchildren are being tested and sharpened. It was northwest of Alamogordo that the first A-bomb exploded, near an ancient Spanish aptly named Jornada del Muerto, a journey of death. The B-29 boys use the area for practice A-bomb drops. West of Alamogordo, the Army has a big rocket research base.

Mr. Pearce admires the valley as much as they do their valley. He takes pride in its painful conceits. "One old-timer maintains he and his family survived one winter on a rabbit, eating so many that they spring they fled hopping into the quite every time a hound barked."

When Mr. Pearce isn't touring around Tularosa, he and his family of three inhabit an under San Francisco flat. After a hard rewriting in the cacophony of the room of the San Francisco Examiner, he relaxes at home fictioning. "I'm doing the same as the fellow who comes home from his office and enters in a flower garden," he explains. "I don't envy him. I prefer certificates to marigolds."

This week's cover: Fancy Pants. The pose for David Peskin, four Chaperonettes: Mrs. Fred W. Marble, Jr., Mrs. Wilson, Mrs. Bob Connaghan, and Lindell Storey, though born and raised in Western saddles, had placed everyday clothes (dungarees and white shirt) with ornate details made by Rodeo Ben of Philadelphia. Rodeo Ben makes dazzle duets for movie cowboys. Girls have brains and brains: Marble is a Stanford B.A.; Wilson is a soph at the University of Wyoming; Storey is there; and Arta Connaghan is domestic—stopped baking a cake for her son's first birthday to pose.

"That's no ride for you, Barbara," Thomason remarked. "I don't see why not," she said, and looking up at Lineer, added, "If Mr. Lineer will invite me"

SWEET WATER

BY DICK PEARCE

As the rails stretched farther and farther into the strife-ridden dry country, men's tempers grew thin. Knuckling down to a power-mad boss was not easy for Jim Lineer—and it was hard to control the impulse which drove him toward another man's woman

JIM LINEER put on his shirt, pants and socks and climbed back into the caboose's upper bunk. He interlaced his fingers, cupped them beneath his head, raised his knees and closed his eyes against the liquid light of dawn flowing in through the cockloft. He let his big body go loose to draw the last bit of rest out of the night. He dozed. The caboose whipcracked into a curve. He half awakened to the high shriek of flange steel against rail steel. A tight curve. Too tight. Someday the Atchison would have to take the kinks out of this branch. Maybe a complete new survey. Lift it away from the river. He dozed again.

"Five minutes," said the brakeman

Lineer did not open his eyes. "Thanks," he said.

The brakeman was a Kansas man. He did not like the Territory. He did not like no-destination freights. He did not like pass riders who boarded without a by-your-leave. But this one had minded his own business and shared his box of El Paso cherries. First of the season, they were.

The brakeman jerked a thumb forward toward the cab. "This blackie figures all deadheads are fair game," he warned. "You'll get a rolling stop."

Lineer turned his head. "Thanks," he said again. He slid off, sat on the lower bunk and pulled on his boots. Next to the squat stove lay his valise. He reached out with one leg, put the sole

ILLUSTRATED BY EDWIN DAWES

Collier's for September 20, 1947

of his boot against it and shoved. The valise slid neatly to the door. He stared after it, arms slack on his knees, reluctant to come awake. He rose, stretched and put on his hat. His leg muscles, trained in long habit, caught the small sways and dips in the road-bed beneath. Solid here, but a little choppy. But then, the Atchison was still too busy growing to fret over maintenance.

"Coffee would taste good," he said.

The brakeman said sourly, "Our deluxe service doesn't begin until sunup." Then he remembered the cherries. "Sorry. I forgot to load up at El Paso."

The train began to slow smoothly. Not a brake stop. The engineer was letting the grade work for him. Lineer opened the door. He stepped out into the whistle and the chill of forced dawn wind. The rails rushed away southward beneath him, sweeping back along the harsh brown earth, slowing in the distance to the curve, disappearing in a bend of the river. Eastward the mountains raised a

broken barricade against the red sky.

He felt the surge of power that began far ahead with the engineer's hand on the plug, then reached back car by car to grab jerkily at the caboose. So that was the way it was to be. He cursed softly but he grinned too. He dropped to the right step. Ahead he saw a dolly and beyond it a big red car on a siding. Too risky on that side. He swung to the left step, the valise in his left hand. The ground forward was clear but uneven.

HE CROUCHED, waiting, his eyes watching the ground well ahead but seeing too the earth that swept by directly beneath, full of blacks and browns and reds, faster and faster until they became black streaks and brown streaks and red streaks. He bent lower. He squatted, holding the valise just inches above the ground. The earth lifted and leveled and rushed. He swung the valise forward, saw it start sliding evenly on its bottom. He jerked off his hat and sailed it down and out. He leaped out and

forward, and was running before his boots touched the hard ground.

In just a dozen steps he pulled up. His eyes went first to the cab of the engine. Sure enough the engineer was leaning out, watching with a pleased anticipation. Lineer threw a triumphant salute. The head disappeared into the cab.

Lineer's breathing quieted down. He deepened it again, fully awake now, feeling good. Besting plug-pullers always made him feel good, although he reflected that he was a little out of practice. That was a game of his younger years, his twenties. He had matched them a hundred times on work trains, and there were big round scar burns on his knees; he had not always won.

In this land that hammered young men to a whip-rod leanness, or broke them imperceptibly, here was a man who did not conform. His body possessed a symmetry of parts, a compactness of thigh, a depth of chest to match his width, a breadth of hands that were flat through the palm and

somehow knowing. The whole suggested power, but power completely at rest, wholly under control.

It was as though he had learned, in the endless struggle with the sun, some secret of keeping his strength by keeping it indolent, ready to use but unused. But it went deeper than that. There was remoteness in the dark gray of his eyes, and repose on his wide mouth. In some subtle way these suggested that he had broken the impelling bonds of sun and turquoise haze and sweet night wind, and lived with them upon terms of his own.

In one visible respect, however, he was among the conquered. Along his cheekbones and the taut skin of his jaw, where to most men the sun granted a protective blackness, he was burned and broiled to a color more red than bronze. That was the Sonora sun, away from which he had traveled now for three days.

Lineer retrieved his gear and looked about him. Eastward the sun found the low mountain cleft that it favored in this month of May and poured

Lineer gathered the whole of the power of his body and launched it with cold calculation in two aimed blows. Folsom's head went back and he sank to the floor.

through, full yellow, full warm in the moment of its arrival. It struck along the angle of his right jaw, kindling minute blazes in the sandy stubble of yesterday's beard.

A few paces to his right was the big red car on the siding. His eye took in its expensive construction, recognizing the name ALTHEA spelled out in dull gilt on its side. Colonel Edwards' palace car. So they were here ahead of him. Beyond the siding was the yellow greenery of the Rio Grande. To his left, westward, squatted the town. A collection of adobes, low, scattered, treeless—holding back, wisely, from the river's uncertain temper; pushing forward unconsciously to escape the shadow of mountain masses. A town that toiled not too much, baked evenly, greeted strangers warmly and grew not at all. The town of San Antonio, Territory of New Mexico.

Northward the low plume of the peddler freight began to dissolve. He looked at it and yet did not really see it as he worried some thought, caught

up by that vague sadness, that private loneliness which comes to a man when his transport leaves him. Then he came back to this moment, and as he thought of the days that lay ahead he felt the first slow run of excitement.

He ran a hand down the side of his face from temple to jaw point. When he took it away there were soot streaks on the palm. He was suddenly conscious of the dust that stiffened his hair, the body sweat of his clothes.

He could go on to the hotel and get a tub carried to his room. But there was the river with its clean sand and its cold, clear water. It was an inviting thought.

AS HE reached for his bag there came to him that indefinite, disturbed feeling that he was watched. He looked first to the private car. Its curtains were drawn. The Great Western party still slept. No watcher there. Beyond the car, coming up the road from the river, a gray burro dragged a *carreta* stacked high with wood. Little fountains of dust rose

behind it, then collapsed quickly. Its brown-skinned driver, nodding atop the wood, was the only human in sight.

Lineer chuckled a little at himself. Spooking wasn't like him.

He crossed the tracks, angling toward the road on a course that would take him around the end of the car. A face appeared at the car's last window, nearest him. Then it was withdrawn, the curtain dropping so quickly that he was left with an impression of only half a face, of a rounded cheek and a laughing eye and a hand drawing a brush through long hair.

He stopped, then strode on again. He was across the siding when the girl's call came to him.

She emerged on the car's rear platform, a tall girl cloaked in a garment of soft gray. It was buttoned high at her neck and came down to her feet. He recognized it as a traveling duster. Long auburn hair was pushed back from her forehead. It was fastened loosely at her neck, as though she had been dressing it and had clasped it hurriedly at sight of him. She still held the brush in her hand.

Lineer walked to the end of the car and stood looking up.

"What did you say?" he asked.

"I said, 'Is this San Antonio?'"

"It is."

"Then where are they?"

A girl's quick laugh, almost a giggle, came from inside the car. The girl above him was laughing too, but whether it was mischief or mockery in her green eyes he could not tell. He said, feeling suddenly stupid, "Where is who?"

"Aren't you one of the Tularosa Valley men?"

"Yes."

"We were told that every young man in the valley would be here to meet us. That they would take one look at us and carry us away to—"

"Miss Barbara!" The voice of the girl still inside the car was half scandalized. "You come back in this minute!" He heard the soft giggle again.

He thought he understood now. A little. It was mischief of some kind. And maybe mockery too, for the green eyes above him were too coolly self-possessed.

He took the last step to the car, laid his hand on the railing and met her eyes, his own direct and unsmiling.

"I'm sorry," he said. "We have neglected our manners. But I'll be back this way in a few minutes and I will gladly carry you off to my mountain cave. Provided, of course," he added gravely, "you can cook my bear meat and sweep out the cave."

He saw the quick color come into her cheeks and heard the other girl's laugh, a full and pleasing peal of delight. And he had a fleeting awareness of little and disconnected facts: that the sun was gleaming on the heavy silver of the brush and making red gold of her hair; that there was the merest suggestion of upturning at the outward corners of her eyes; that she pursed her lips in a gesture almost sulky; that the merry eyes of another girl were examining him from the doorway.

Then the girl above him spoke. "It's a bargain, sir. But my horse must be snow-white or I will not go." It was gaily said. But as she whirled away from him he saw the storm in her eyes. He had rebuked her in kind. And this girl did not easily accept discomfiture.

He watched the last swish of her cloak through the door. A moment of silence followed, a whisper and a

low reply. Then he heard their mingled laughter.

Walking on toward the river he could feel two pairs of eyes following him. The feeling did not leave him until he passed beyond the willow trees and turned downstream in search of a sandy bank. He stripped naked, sat in the shallow channel with his back to the current, and began to scrub himself with sand.

Who was she? He knew, within limits. She was connected in some fashion with the same business that had brought him here from Sonora. She spoke of the Tularosa Valley. She was aboard H. H. Edwards' private car. Apparently it had arrived last night, on schedule. This was the day.

Why had she done it? Speaking to a strange man in such a fashion was a piece of brazenness, actually, a thing she would not dream of doing at home, among her own kind. The act had its undertone of defiance and self-will. And of insolence that had prompted him to reply to her as he did. It could have been a dare between the two girls. But no, probably she acted on impulse. The impulse that makes people far from home break the restraints that customarily bind them.

Into his mind came an unexpected thought. It lodged there forcibly, coming from nowhere with logic pushing it. Perhaps this girl intended to go along on the trip into Tularosa Valley. Perhaps somebody was turning this venture into an outing, a prolonged picnic.

He pushed the thought away. Too improbable. H. H. Edwards knew what kind of country the Tularosa desert was. Back it came. That car was from New York. Would she have journeyed so far if she did not intend to go the rest of the way? He was aware gradually of a burning pain along his right thigh. He rolled sideways to lift it above the water and saw that he had rubbed one spot until abrasion had reddened it. He stood up with a growling oath. Any woman would be in the way. A green-eyed girl with insolence on her mouth could wreck this railroad before it was started.

WALKING back toward the town in fresh pants and shirt and socks, feeling clean and feeling starved and aware that he needed a shave and maybe a haircut, he found he was watching the last windows of the car. No life showed.

He strode on across the tracks. The livery yard was crowded with picked horses. Among the litter of the long, tin-roofed stable were three fine hacks. Splendid was the word for them. They were closed coaches. Their wood- and leatherwork were a shiny new black; the copper of their lamps gleamed from recent burnishings. They did not belong to this town. He looked at them and back at the private car. Somebody had done some thorough spadework.

Beyond the stable was the north-south road with 'dobes hunched down beside it. This was the miserable road with the great name. This was El Camino Real, the ancient King's Highway struggling up from Mexico, climbing on northward to Santa Fe. Across the road he spotted the hotel, adobe, too, distinguishable from others only by its length and compartmentation. The town was still awakening. Crossing over, he saw only a half-dozen people the length of the road.

(Continued on page 36)

WANTED: A MIRACLE IN GREECE

BY PAUL A. PORTER

FORMER PRESIDENTIAL EMISSARY TO GREECE

TODAY an almost forgotten American mission has got to perform a miracle—or fail in its job. The miracle is to save Greece from economic disintegration and the inroads of Communism.

The fight to save Greece is just beginning. The announcement of plans is not enough. What will go on in Greece this month and next is infinitely more important than are the debates which commanded the headlines last March and April.

Last January, I went to Greece as head of a mission charged with reporting on the economic situation and with determining what outside assistance would be necessary for the survival of the Greek nation. I know at firsthand the complicated and discouraging conditions which today are confronting Dwight Griswold and the American Mission for Aid to Greece. And I feel strongly that the American people should know precisely what these conditions are.

During a trip through the lovely Greek countryside, a peasant I talked with typified the Greek national psychosis. He was a weary and discouraged man, prematurely old, his face lined and wrinkled, his hands upturned in a gesture of mute despair.

"Four times in my lifetime my home has been destroyed," he said, "—by the Turks, the Bulgars, the Nazis and the guerrillas. Why should I build it up again?"

This hopelessness is typical. The whole country, from top to bottom, is in the grip of a gray, unrelieved, profound lack of faith in the future—a lack of faith which produces simple inertia for the present. From the large textile manufacturers in Athens to the small shopkeepers and farmers in the northernmost part of Macedonia, peo-

prisal was an unbelievable act of horror and brutality. The 1,200 men of the village were herded into an open field, where from the vantage point of higher ground, they were forced to watch their homes and shops burned from the incendiary volleys fired simultaneously into each structure. When the conflagration reached its height and the Greeks sought to break away from their Nazi guards, machine guns from concealed emplacements massacred the helpless lot of them.

Meantime, the women, old men and children were concentrated in the largest building—a school. It was the last to be ignited. Legend has it that the screams of the women and children were too much for an Austrian officer and he shot the lock off the door. Liberated from the blazing school, the survivors fled to the hills and returned later that night to recover the bodies of their men on the hillside, and buried them in the village cemetery.

The despair in Greece today is crucial, because our whole program of aid is based on the assumption that the people will be able to snap out of the prevailing inertia. We are not stepping up the amount of outside assistance enough to make the future much different from the past. During 1946, Greece got about \$330,000,000 from UNRRA and the British; our aid of \$350,000,000 barely exceeds this. And, at the same time, we are banking on the ability of the Greeks to more than double their exports. So, far from having too liberal an amount of money for use in Greece, we are operating on an exceedingly narrow margin. Indeed it may soon become apparent that estimates of \$350,000,000 which my

group made are too conservative, and that additional funds may be necessary. Mr. Griswold will find that conditions have rapidly worsened since the first mission went out last January. There has since been a widespread drought which has substantially reduced local grain pro-

duction. The military activity has been stepped up. And our own price level has risen to shade the value of the dollars Congress has made available. The \$350,000,000 loan will not go as far as we had hoped and planned. At best, we will get up to the minimum reconstruction level. At worst, we may have trouble maintaining a level of decent subsistence.

If the American mission is to end this deep sense of national hopelessness, it must resolve two controversial situations—the civil war and the present government.

One winter day in Macedonia, as I was standing on a riverbank, hundreds

of low-flying geese suddenly appeared out of the clouds, flying in formation and honking wildly as they came. I remarked casually to a Greek standing with me that they must have fine shooting in Macedonia.

"Men have been so busy shooting one another in this part of the world," he answered sadly, "that they have had no time for the geese."

So long as this state of mind continues, the prospects for economic reconstruction are dim. You cannot devote your full energies to repairing docks, building bridges and maintaining roads when you are likely to be shot in the back any moment. The greatest obstacle to the reconstruction of Greece is the continuance of the civil war. There can be no permanent solution of Greece's economic future until the present military burden is reduced—until money and men are released for productive purposes. There can be no permanent solution of Greece's psychological paralysis until the menace of external aggression is removed.

I am convinced that the Russians know this even better than we do. The Communists know that the revival of guerrilla warfare will put us badly on the spot in Greece—so they are working overtime to revive it. That is why, it seems to me, Russia's U.N. delegate Andrei Gromyko vetoed the U.S. proposal to establish a semipermanent frontier commission in the Balkans. The plain fact appears to be that the U.S.S.R. does not want a pacification of frontier conditions in the Balkans. For such pacification will be an almost indispensable condition for American success in helping bring about Greek economic recovery.

This brings up the question of the Greek government. The present regime obviously must constitute the set of tools through which we work. We cannot kick off by naming a new team. Adoption of these means would contradict the ultimate ends we wish to accomplish in Greece and elsewhere; furthermore, blatant intervention of this kind would supply potent ammunition to Soviet propaganda about American imperialism. But we can—and must—do something to sharpen these tools.

Chief among these tools is the Greek civil service. The late King George of Greece, in my first talk with him, referred to many government employees as "camp followers" and "coffeehouse politicians" and described the whole civil service as a kind of pension system for political hacks. These were harsh words, but not unwarranted. The civil service is overexpanded, underpaid and demoralized. The low salaries have been augmented by a completely baffling system of extra allowances by which a few civil servants probably get as much as four times their base pay.

At the same time the bulk of them do not get a living wage. Many of them are forced to supplement their government pay by taking outside jobs. Imagine the effects in Washington if officials in government de-

partments worked part time for local lawyers or lobbyists or industrialists. The curiously short working week—usually 33 hours, consisting of mornings only for 6 days a week—facilitates the economic double life which so many government workers lead.

The result is complete disorganization. I have never seen an administrative structure which, for sheer incompetence and ineffectiveness, was so appalling. The civil service simply cannot be relied upon to carry out the simplest functions of government—the collection of taxes, the enforcement of economic regulations, the repair of roads.

Thus the drastic reform of the civil service is an indispensable condition to getting anything else done in Greece. But the civil service is just the beginning. There is the far more intricate and explosive question of the political leadership of the country. Candor will compel me to make some frank statements about this government, but what would you have America do? Would you have prayed with Henry Wallace for the defeat of the Greek aid bill so that you could exchange the present inefficient, right-wing regime for a police state on the Tito model?

I rather doubt it. Because whatever it is, the present Greek government is not a totalitarian dictatorship, and besides, it does not seem to me that the nature of the government is relevant to the question of external aggression. We can't take the position that it is all right to commit acts of aggression against governments we do not like, and only bad to commit such acts against governments we approve.

There is within Greece a vigorous and critical political opposition. There is a free press. The Communist paper is published daily in Athens, and each morning in my mailbox I received an English translation of the mimeographed bulletin of the EAM bitterly denouncing the present regime. It is not at all a liberty-loving regime in the American sense, but it is paradise next to its neighbors of the north and their much vaunted "new democracy." Obviously the existence of freedom of expression is no excuse for other governmental delinquencies. But it does signal the possibility of peaceful and democratic change.

On the other hand, the fact remains that this present government has not on the record, shown any affirmative philosophy or any inclination to do the things necessary to end their nation's travail. On my first day in Greece, I had a talk with General J. G. W. Clark, the intelligent and somewhat sardonic head of the British Economic Mission.

"When visitors on arriving in a new country," he began by saying, "run into a sandstorm or a hurricane, they are always told how unusual the weather is. But the situation you are running into here in Athens—the monetary crisis, the possible civil service strike, the pending fall of the

ple are paralyzed by uncertainty and fear.

Businessmen will not invest. Storekeepers will not lay in supplies. Peasants will not repair their ruined houses. One official told me that 150,000 homes had been totally destroyed in Greece and that only 1,300 had been rebuilt in 1946.

My most depressing experience in Greece was a visit to Kalavryta, the Lidice of Greece. This was the village high up a narrow gorge near the Gulf of Corinth where, in December, 1943, a small band of Greek resistance forces ambushed a squadron of Nazi occupation troops. The German re-

CHARLIE SQUIRES AND THE SEVEN

They had spent the night on a bench in the station, running a dangerous blood pressure

AFTER Charlie Squires quit the hotel business in Chicago to take up turkey raising, the *Innkeepers Journal* sent me to Wisconsin to see how he was getting along. As we might have suspected, he was getting along fine.

"Oh, hell, yes," he said, showing me around his model farm. "I've finally licked the turkey business—figured out a serum to keep 'em from catching cold."

Susie, his wife, was thinner, but as pretty as ever. She seemed happy in a bright, nervous way.

"This is so much better than living in a busy hotel in some noisy old city," she said. "And I love my house. I love it!"

It was quite a house. It had been put together with imported flagstone, granite and mahogany; the drapes were hand-woven and the furniture was all custom-made.

"Charlie insisted on ordering things that were hard to get—but he battled around until he got 'em," Susie said, proudly. "We're all settled now. The last chair came yesterday."

We sat in the sun porch where wide screened windows overlooked Charlie's manicured acres, with the Kickapoo River glinting below us in the summer sun. It was serene and quiet there, and the countryside was gentle, inviting the eye like green New England hills. It was no wonder Susie loved it.

She brought us coffee in a silver pot, with fresh hot rolls and home-churned butter. Charlie perched on an arm of the oversize davenport and stretched out his long legs.

"I suppose you heard about my last night at the Grand Embassy with Bert Buell and the seven Italian acrobats?" he suggested.

"Several versions," I admitted. "Nobody seems to have it straight."

Charlie lit his pipe.

"Never knew a story to get so garbled," he said, comfortably.

Susie, who had put on her coat to go shopping, decided to come back in and sit down. Charlie looked up in surprise.

"You don't want to hear it again, punkin!" he exclaimed.

"If you're going to tell that one, I certainly do!" she said, an intent look in her eyes. As he talked she moved to the edge of her chair, following every word as though she'd missed something last time he'd told it.

Of course, not every woman understands the satisfaction some men find in good, stiff competition. Perhaps that's what Susie missed in Charlie's story. She'd never quite believed, for instance, that he had

enjoyed the war. He's no ordinary fellow and he liked everything in China, including Lingling. His letters home were ecstatic; he was forever wading across rice paddies after being given up for dead.

And when he came back to Chicago and his job in public relations with the Grand Embassy Hotel in 1945, the situation that awaited him delighted his soul. Through the congested war years room clerks had got the habit of insulting customers without discrimination, conventions had been rudely turned away, old gentlefolk had been sneered at because they were too innocent to cross eager palms with rare jewels or gold. The arrogance that accompanies power or plenty had made the Grand Embassy staff insufferable; even charwomen had splashed supper guests with their long wet mops. Fastidious people had been sent to rooms with warm crumpled sheets still on the beds. Some of them had been asked to sleep with total strangers.

But now the war was over and people could begin to pick and choose again, and the house count was falling off, and the Tiger Room was losing money; and when Charlie asked for the complaint file two housemen had to trundle it in on a hand truck.

Now, there are two thousand seven hundred and forty-eight rooms in the Grand Embassy, and Charlie's job was to keep them full of people. He was promotion manager. Kenneth Ashcraft, the managing director, who had also been away, a colonel in the Quartermaster Corps, was appalled at the situation. But not Charlie. The bigger they are, the harder they fall, he said. The tougher the challenge, the more it excited him.

He tried to cheer the old man up.

"Why, there's nothing to it," he said, as they went through that poison-pen correspondence together. "I'll push until they give, that's all."

He wrote letters, made long-distance phone calls and flew from city to city in anything that would leave the ground. When he found customers who'd promised never again to darken the Grand Embassy's revolving doors he mesmerized them with his charm, sent them small bottles of Irish whisky and large baskets of flowers. He'd never been happier. Whenever he was thrown out of an office he'd come back to Susie with his long face aglow.

One night he came into their suite after a trip to Toledo, picked Susie up and danced her around the room.

"I've met the champion!" he shouted joyously. "Wait 'till you hear what happened to H. Bertrand Buell!"

Bert Buell was executive secretary of the International Roadmasters, an annual convention of three thousand wild-eyed, spendthrift highway engineers. Before the war, nothing had been too good for Bert;

He usually managed to get them to sign before their fingers became too limp to hold a pen

the staff had wooed him as if he were a shy young man—with pretty compliments and rare tropical fruits and five-pound boxes of candy for his wife. But in the heyday he'd been told to take his commission to Muskegon; and when he had stopped one night with his wife, a new house detective had woken him up and thrown him out, along with Bert Buell. They had spent the night on a bench in Union Station running a dangerous blood pressure.

"But why doesn't he sue us?" Susie asked.

"Because," said Charlie triumphantly, "the egomaniac forgot to register his wife, a hot-blooded blonde. Isn't that a honey of a situation? There's nothing in the complaint file to touch it. He's sore he wouldn't even write us a letter!"

"But, Charlie," she said, in her pretty, boiled way, "you act pleased!"

"But can't you understand, Susie?" he demanded. "It's gonna be a fascinating battle of wits!"

"Oh, dear," Susie said. "What is it about these things that makes you so happy?"

He tried to explain it to her. In Toledo there had been tumult and shouting in H. Bertrand Buell's

Susie laughed at Bert's tired old jokes and listened wide-eyed to the story of his life

private office, then a door opened and a heavy ash tray had missed Charlie's head by inches.

"But what's funny about that?"

He looked down into her lovely, puzzled face and kissed her.

"You just keep house, sweetheart," he said. "I'll run the business."

It was along about then that he dreamed up Cock 'n' Feather, a secret bar back of his office in the bowels of the house. You pressed a button, a panel slid open and there it was, a replica of an English taproom, stocked with every liquid a man could handle. Into this little nest he would coo recalcitrant prospects and ply them with hospitality until they thawed out, usually managing to get them on the dotted line just before their fingers came too limp to hold a pen.

"I don't see how you're going to get Bert into the hotel, let alone down here," Mr. Ashcraft said, the day the carpenter shop sent in the sheets for Charlie's hideaway. "A rather expensive shot in the dark, it seems to me."

"Bert is merely the *pièce de résistance*," Charlie, cheerfully. "Come in here a minute."

He pressed the button, the panel slid open, and there was the President of the National Association of Canners of Artichoke Hearts, asleep on a leather wall bench.

"I just booked him for December," Charlie said with satisfaction. "Next to the National Association of Glove and Parka (Continued on page 17)"

Hollywood's latest superspectacle, *Forever Amber*, cost six million and may be the last of its kind if England sticks to her 75 per cent tax on American film profits

HOLLYWOOD HEADACHE

BY KYLE CRICHTON

With audiences staying home, the British clamping down, labor troubles and high costs continuing and censors yelling for blood, the poor unfortunate movie makers are a confused and apprehensive group of tycoons

WE WERE delving politely in the labyrinths of Hollywood and had just prepared a report finding the situation grim when suddenly it became not only confusing but catastrophic. A man named Attlee from London took careful aim and hit Hollywood and Vine right smack on the inter- with a block-buster. This was a 75 per cent tax on the profits of all foreign films playing in England, and he couldn't have hurt Hollywood if he had spread typhus from a low-flying

to say that things were pleasant before Attlee started throwing rocks. The American films were having their agonies without his assistance. The British were thumbing their noses at him and for the first time in years wild deer were found again in the balconies of theaters. Some time around Easter, receipts had fallen off as predicted. One day, fine; next day, nothing. "Somebody obviously passed a law," said Benetogous, independent producer who had just lit out The Macomber Affair with Gregory Peck and was feeling rather confused about the

There was a slight pickup during the summer and prices were high for the fall and then Attlee yanked them out from under. His action was followed by an angry declaration (signed by the eight big Hollywood companies) that if England wanted to that way, Hollywood would retaliate by refusing to give them American films. This would certainly ruin the English theater owners, who can't do without the American product, but it might not in Hollywood.

Normal times Hollywood got as much as 50 per cent of its total revenue from foreign markets. The profit on good films ran around 40 per cent. Even when the British were trying desperately to get their purchases down, Hollywood was taking \$3,000,000 out of Britain. This represented almost the entire Hollywood profit. Losing that meant that the California gentry, already giddy with high costs, must take the ax and try to whack ruthlessly.

It may all be a tempest in a teacup, with some deal made between Hollywood and the British. But Hollywood will be years getting over the shock. If the tax sticks, it will revolutionize American Hollywood. What is even worse is that what they can do, others may do. The French and the Swedes are even now struggling desperately to make enough films to capture their own share from the Americans. We are facing quotas and blocked currencies everywhere. Oh, Hollywood! Things may indeed be very

Before Attlee spoke, the Journal of Commerce, an influential Wall Street publication, was predicting that in 1947 profits in Hollywood would be between 25 and 30 per cent. There was immediate panic in Hollywood that theater prices would have been raised here, but that will certainly stir up a hornet's nest because our audiences have been hol-

dering for months that ticket prices are outrageous and the pictures smell.

For a long time the producers have been screaming that labor is ruining the industry and now they will have to redouble their efforts to force salaries down. Actors and writers have been insisting that censorship is so strict that nothing but fairy tales can get on the screen, and Congressman J. Parnell Thomas and his un-American Activities Committee have been scaring the last few remaining wits out of a Hollywood already on the verge of conniptions. In short, a mess.

As if Attlee had not done enough, the British films have been giving us a merry time over here as competition. The Hollywood big shots have three attitudes on this: (a) They scoff, (b) they tremble and (c) they say the English example will force us to do better. The British have carefully sent over only their best films and if Hollywood doesn't think they have made an impression on this country they are crazy.

We have been in small towns where the local manager was being driven mad by demands that he bring in such movies as Great Expectations, Henry V and Brief Encounter. There may be only a few in each town setting up the clamor but the feeling that American films are being outstripped in quality by the foreigners is rapidly seeping into the consciousness of our audience. Britain took only \$5,000,000 out of this country last year but the J. Arthur Rank organization was promised a total of \$12,000,000 next year under a deal with American exhibitors. What happens to this now is also a question, because there may be an attempt at reprisals.

In some quarters of Hollywood, we had found a certain smugness about attempts to keep our films out by blocked currency devices. We traced this to a certain Jacques Grinielf, French entrepreneur backed by Serge Semenenko, Boston banker. It seems that Mr. Grinielf has such a good method of getting around these barriers that he has recently paid \$6,000,000 for a bunch of American reissues and is now busily tying up new releases. M. Grinielf denies that his activities belong to the black market.

"I do not violate the codes of any country in which I do business," he states, "but there are lawful ways of unfreezing money, whether it is in francs, lire, marks or what have you."

The British may have had that in mind when they launched their pretty plan. They didn't bother holding the money in the country for future collection by the American producers; they simply took three quarters of it away in a tax. M. Grinielf will have a difficult time getting around that one.

Things were so bad in Hollywood in midsummer that out of 1,000 film writers, there were only 209 employed in early July. Six hundred assistant directors had dwindled to 200. There were fewer than fifty pictures before the cameras.

"Yes," said the optimists, "but you forget the finished films the firms have in their vaults. Some of these were made at low cost. The producers are in great shape."

(Continued on page 78)

Linda Darnell, as Amber, fights a losing battle to keep her illegitimate son from his father, Cornel Wilde. But she does her fighting in \$750 costumes. This was before the economy wave hit Hollywood

Producer Perlberg and Director Preminger thought nothing at all of spending a quarter-million bucks to reproduce the great London fire of 1666 as a fitting background for Amber's torrid romancing

Lavish weeks and dollars were required to film the Black Plague of 1665, in the course of which Amber and her true love almost died. Here Amber strangles a plague nurse—this, too, in a long, costly way

TUNED IN ON THE SURGEON

The operation begins, and the television camera looks down on a moment of intense concentration. Below, before the operation, the engineer focuses the camera, placing his hand in the area where the surgeon's hands will be.

IN AN operating room on the tenth floor of the New York Hospital, a surgeon bent over the figure on the table. "The patient is a woman of about fifty years of age," the surgeon said, in a lecturing tone of voice. "Two weeks ago she noticed a small lump in her left breast." He outlined the patient's medical history, and then, picking up a knife, said, "I will now make an incision, and . . ."

Step by step, as he went on with the operation, he explained what he was doing and why. "I will explore this area," he said, as his fingers probed, "to make sure that no affected tissue remains . . ."

This is the sort of teaching demonstration that goes on every day in great medical centers for the benefit of small groups of students, but this time there was a difference.

This time the operation was being televised, so that the surgeon's every word and every move might reach more people than could possibly crowd into an operating room.

This particular operation, for a breast tumor, and another performed the same day for cancer of the thyroid gland, were televised as a rehearsal of an elaborate four-day series of telecasts for the fellows of the American College of Surgeons, meeting at Hotel Waldorf-Astoria, September 10 to 12.

With some 5,000 surgeons attending the Clinical Congress from all over the country and from several foreign nations, this was arranged as the first big-scale tryout of television as a means to dissemination of medical knowledge. The idea was to permit close observation of an operation by several hundred doctors seated in a hall room far removed from the hospital.

Arrangements for the telecasts were made by the program committee of the American College of Surgeons in co-operation with three groups: the Radio Corporation of America, whose engineers turned several new tricks to adapt the medium to this use; Johnson & Johnson Research Foundation, which financed the event; the New York Hospital, whose surgeons agreed to do their work under the eye and ear of a television camera.

RCA engineers arranged to wire the telecasts from the hospital to the city by a special telephone line to avoid any possibility of their being received on the television sets of the general public. In the hospital, the camera over the operating table had four interchangeable lenses, allowing for varying depth of focus according to type of operation. In the hotel, 15 receiving sets each would permit as many as a hundred observers to get a comfortable view.

Faith in visual education, in the "show me" rather than a "tell me" technique, was part of the reason for the organizing of the American College of Surgeons in 1913. The founding surgeons felt that it would be helpful to any doctor to meet his fellows for a few days each year in a medical center, there to observe at firsthand the work of outstanding practitioners of his art.

Through the years the best pos-

PHOTOGRAPHS FOR COLLIER'S

BY JACK MANNING AND JACOB LOFF

arrangements for clinical observation have been made—but these have never been good enough. Even under the best circumstances only a few observers can get close enough to an operating table to see clearly what the surgeon is doing. Most operating rooms can accommodate only a few persons in addition to the necessary team of nurses, anesthetists, doctors. Amphitheaters, especially built to permit clinical observation, are not satisfactory, either, because, again, only a few persons can be close enough to see what goes on.

Medical movies are, of course, a partial answer and they are used extensively. Now television supplies yet another means of visual education, and the medical profession has great hopes for it. In comparison with movies, television has both advantages and disadvantages. Movies are more difficult to make, require more technicians and more elaborate equipment in the operating room. And they are not available for distribution until some time after they are made. On the other hand, movies, so far, outstrip television in sharpness of definition and in color.

Perhaps the most attractive thing about the medical telecast is its immediacy. Doctors, like other people, are subject to the dramatic pull of something that is happening right now, this minute. The telecasting surgeon has no time to correct his words or his mistakes—as he could do when editing

a movie. The audience sees an operation exactly when and as it is performed.

Rehearsals revealed that a good many bugs needed fixing. During one televised operation, witnessed by the New York Hospital and Cornell medical students personnel, the clatter of instruments in the operating room was so great as almost to drown out the surgeon's words. Of course the clatter was not so great as it sounded, but, magnified over the loud-speaker, it did sound as if the entire instrument table were falling apart. Engineers are working out ways to exclude extraneous sounds.

Again, a surgeon said he wished it were possible to cut off sound except when he was making comments. "Can't we have a foot switch to shut off sound? A switch to be controlled by the operating surgeon?"

"Certainly," said the engineer, and within an hour the foot switch was in place. Thus, one by one, various small distortions are being eliminated.

Television can be especially serviceable, many doctors think, in keeping the profession abreast of new surgical developments.

After a few more technical difficulties are removed, it wouldn't be at all surprising if medical institutions everywhere were able to tune in on a sight-and-sound presentation of any unusually interesting operation being performed in Baltimore, Montreal, San Francisco, anywhere. ★★★

BANNER OVER FIRST

BY JOEL REEVE

The fans didn't like the busher playing first base for the Eagles—and neither did the Eagles. Then they began to think there was a ghost on the team

MR. HAL MOORE, owner of the Eagles, took Patsy Dealer to the third-base box and introduced him to the girl. She was a small, brown girl with a pertness which tremendously became her. Her name was Marge Marlowe, Mr. Moore said. Then Mr. Moore went back to his own box and his own worries.

Patsy Dealer did not think much about her right then, because he was trying to get accustomed to a big-league ball park in a hurry. The Eagles were warming up on the green-and-brown field. He saw Egg Lorimer limbering his arm. He knew it was Lorimer because the lefty was going to work for the Eagles that day and the home team needed the game.

The girl said, "You're not tongue-tied, are you?" She was smiling a little. She had an air of belonging in the third-base box, but she was not the wife of a player, for Patsy knew there was no Marlowe on either the Sox or the Eagles.

Just then Manager Joe Gudgeon hit a fungo too far to Hap Fite's right. The Eagle first baseman did not try for it, shaking his head ruefully. Patsy said, "His leg is really gone."

The Eagles came in off the field. The girl said, "Hap is lame, all right. But he still hits those homers!"

The great stands were filled. The important game had brought out all the loyal fans and many who were seeing their first game of the season. The pennant race was as hot as the August sun above. Patsy gawked at the people. He said abruptly, "This is the first big-league game I ever saw."

"Well, don't take it so hard." She laughed gently. "But of course you're a ballplayer."

He looked at her now. Her eyes were friendly and brown and fringed with long, dark lashes. When she smiled at him the day seemed brighter and happier and some of the tension lessened.

He said, "I'm the busher come up to take Fite's place."

Her red lips made a round, "Oh!" "I'm scared," he said.

"Yes." She nodded. "Hap's got thirty homers, so far. He's playing on a dime, but he still hits. People won't like a substitute for him."

Patsy said, "I never hit a homer in my life. I'm a place hitter. I was taught that way. I had the best teacher . . ." He was silent, wondering why he talked at all to this girl. His was a stern mission.

She said, "Hap's been out there a long time. He is the Eagles."

"Yeah, I know—" All women are sentimentalists, he thought, even fans who sit in third-base boxes and seem smart about baseball. Again he turned and stared at her. "I read about you. In a column. You sing in some night club. You're always with Hap Fite."

She had a green kerchief in her hand and the odor of it was delicious. She bunched it in her fingers and said, "Hap's a nice guy—and a great hitter. His leg is killing him, but he plays without complaint."

"Oh, sure," said Patsy. "Sure . . ."

ON THE field the Eagles and the Sox hooked up, with Egg pitching his heart out on every ball, and Grampion working equally well for the invaders. It was generally agreed that the Eagles, a veteran team, were going along on fight and spirit. The Sox had the class and were favored to win the pennant. The Sox also had Elbows MacNeal, league-leading pitcher, and they could save him for tomorrow's crucial game. Grampion today, MacNeal tomorrow; Patsy shook his head. The Sox had the balance on their club.

The girl said very little, twisting her green kerchief as the pitchers' battle went on. By the eighth neither team had scored. Grampion proceeded to strike out the first two hitters in the Eagles' half of that inning. Then Hap Fite took a huge black bat to the plate, limping a little. The crowd roared encouragement.

Fite was thirty-two, a genial giant, with twisted cartilage in his right knee.

He had been the greatest, most colorful first baseman since Gehrig. His hitting was tremendous. He stood, grim, waiting.

Grampion fed him outside stuff, low, to make him stretch. Patsy Dealer almost fell out of the stands watching. The girl leaned with him, and their shoulders touched. The count went to three and two, and Grampion had to get the ball over the plate. He threw his curve for the outside corner. The big first baseman teed off.

Patsy caught his breath in sheer admiration. The swing was poetry, the crack of the bat a shout of joy. The flight of the ball was as the flight of a lovely bird. Against the cloudless sky the sphere seemed to hang, suspended, mocking. Then it drifted, dropped like a plummet, and out in right field the bleacher fans grasped for it.

The assemblage rose to do honor. Marge Marlowe said in Patsy's ear, "Wasn't it great? Wasn't it perfect?"

"Great," agreed Patsy. "Perfect." His hands gripped the balustrade.

The applause ended; they sat down. She said, "It's going to be hard for you out there."

"Sure. That's why I'm scared." He smiled at her, but his eyes were clouded. "Don't get me wrong. I'm only scared my stuff won't work. I'm not scared for me."

"I believe you," she said. "You follow the great tradition on the Eagles. All the great first basemen: Speed Frazier, High Pockets Maloney—Doc Frayne."

Patsy said, "You got to put Doc Frayne first on that list."

"My daddy knew him," she said. "Doc was the best. My daddy said Doc wasn't guilty, he wasn't the kind to throw games—"

Patsy said shortly, "That was years ago. And Doc didn't hit those homers, either, y'know."

The girl said, "You've got something on your mind, Patsy."

"Baseball," he said.

She smiled. He was a handsome youth, in a rugged way. His features

During a country-wide speaking tour, 225,000 persons spent \$300,000 to hear Henry Wallace. Here, as Vice-President, he addresses an "I am an American" Day

THE ABUNDANT MR. WALLACE

BY DICKSON HARTWELL

Henry Wallace is the enigma of the 1948 election campaign. Struggling furiously to become a "people's choice" he gives the Democrats many sleepless nights with his threat of a third party. But Republican party chiefs consider him their greatest asset since Abraham Lincoln

THE most feared politician (by politicians, of course) in the country today is Henry Wallace. Barring the indisputable intervention of God—or the devil—Wallace has less chance of becoming President than almost anybody except Mortimer Snerd. But there are a lot of politicians currently being haunted by the fear that, as Wallace goes, so goes the nation in 1948.

The eyes of the wisecracks are on Truman, Taft, Dewey and Warren. But Wallace is the man they dread. For Wallace may be able to insure the election as President, of any Republican whose body is still warm enough to get the nomination. He is the Republicans' greatest potential asset since Abraham Lincoln.

He might also, with somewhat greater effort, get Truman re-elected. There are those who say he's Truman's only hope.

For Henry Wallace is working madly to become a "people's choice." Like the 1912 Theodore Roosevelt

and the 1924 Robert La Follette, Wallace's friends see him as a political symbol for several million voters. How many there are is anybody's guess but a recent Gallup poll shows 6,250,000 persons as saying they would vote for Wallace if given the chance in '48. This is five times as many additional votes Dewey needed to over Roosevelt in 1944. In addition, Wallace can try to draw from another 9,000,000 voters who say they are against him, but haven't yet made up their minds.

Right now, on his fall New England and Middle West speaking tour, Wallace himself doesn't know which way he'll jump; a situation which, for him, is not exactly new. Wallace is a hungrily curious man, with an unpredictable, roving intellect that subordinate only to his low emotional boiling point. Wallace knows an opportunity when he sees it, though, and if it turns up between now and the '48 elections he'll grab it, but undoubtedly at the wrong

for his political ineptitude is vast and occasionally even astonishing.

As a man who has borne his share of political kicking around, Wallace would be inhuman not to enjoy his present outlook. Flynn of the Bronx, Hague of Jersey City and Kelly of Chicago robbed him of the 1944 Vice-Presidency (with its almost certain succession to the Presidency) because they refused to guarantee to Mr. Roosevelt vital big-city votes if Wallace were renominated. The bosses were not impressed by a pre-convention Gallup poll which showed 65 per cent of all Democratic voters for Wallace and 2 per cent for Truman. Wallace now has them sweating—along with the Democratic National Committee.

A modest man although occasionally swept away by his own importance, Wallace once told a Senate committee he never felt he was primarily a political figure. Nevertheless, as a student of Franklin Roosevelt he earned one lesson: Never go before the people with little promises or little words. Give them the best you've got; in fact, give them everything—loud. The literal application of these instructions makes Wallace, who occasionally seems more fervent than practical, appear something of an evangelist offering a superheaven to all who are saved.

As a "people's choice" Henry presents a picture dear to the heart of the cartoonist. He carries an olive branch symbol of world peace in one hand and a food parcel in the other. In one coat pocket he has jobs for everybody at high wages. In another he has a better income for the farmer. In his hip pocket is a health and slum-clearance program; alongside his wallet is abolition of the poll tax. Where other people keep a show handkerchief, Wallace carries homes for all. With his small change is federal aid for schools. And so that no one is overlooked, tucked away in his watch pocket is a small profit for the businessman and the preservation of what he likes to call "democratic free enterprise" not too clearly defined.

Displays of Physical Prowess

Action is the word for Henry. He has once described by an awed geneticist, after a day spent in his company, an "amazing gathering of the genes." During a recent fatiguing tour, someone in Wallace's party asked if the pace wasn't tiring him. In answer, twenty-nine-year-old Wallace dropped the floor and did 25 push-ups without touching his chest to the rug. Wallace has wrestled with a photographer in as public and inappropriate a place as Washington's swank Wardman Park Hotel. He was narrowly rescued from another public fight by some Frank who rushed him to a cooling-off place and then personally took care of his antagonist.

Wallace's mind is no less effervescent than his body; his lively if peculiar intellect is, in some respects, not unlike that of Senator Robert Taft. Those feats of memory and capacity for assimilating complicated reports make him socially distasteful to less talented colleagues.

So far no responsible person has called Wallace a Communist. But he has been called a Communist-front man and when he went abroad last spring and repeated criticism of our foreign policy that he had already made in the United States, without attracting particular notice, choleric congressmen castigated him as an

"itinerant saboteur" and demanded that he be brought to trial as a traitor.

The European speeches created a tempest in Washington but they revived Wallace as an outstanding political figure. Before he went abroad his immediate political aspirations were to "liberalize" the Democratic party. He was not interested in a 1948 third party. Said he last year, "It would be simply impossible for a third party to get on the ballot in enough states to make anything approaching an effective challenge. . . . It is time for third-party advocates to stop kidding themselves. . . . As far as 1948 is concerned, a third-party effort would insure beyond all doubt the election of a reactionary Republican. . . ."

But when his European tour provoked satisfying headlines and excitement, Wallace, who thrives on publicity, returned to the U.S. feeling his oats. Five days later he enplaned on a transcontinental speaking trip during which 225,000 overflowed meetings to cheer him, breaking political precedents by paying 60 cents to \$2.40, for a total of \$300,000, for admission tickets.

Only the most pragmatic candidate can face such acclaim without deciding that he is a man of destiny. By the time Wallace wound up his tour at Washington, he declared, "If both parties insist on pursuing the present suicidal course toward war and depression, there will be a new party, even if it has no chance of election success in 1948. . . ."

Organizing a liberal third party imposes practical problems. Wallace's organized support comes largely from two groups, each of which admits Communists to membership—the Southern Conference for Human Welfare which has little more than nuisance value, and the Progressive Citizens of America. The PCA was a merger of the C.I.O. National Citizens Political Action Committee and the Independent Citizens Committee of the Arts, Sciences and Professions.

The PCA claims organization now in 22 states and a membership composed of 75 per cent of Democrats. It hopes to become a permanent political movement and with sufficient cause might even support a Republican. But because Communists support the PCA, many liberals for Wallace won't back him as a PCA candidate. Wallace has no apparent distaste for Communist support. Like women who knowingly marry drunkards he believes his good influence may reform them.

The current Wallace strategy is to go ahead with plans for a third party, hoping to strengthen his bargaining power at the Democratic Convention next summer. If Wallace fails to "liberalize" the party at the convention, the third-party movement will be shelved temporarily in most states and Wallace will go full steam ahead to elect Wallace-type candidates to Congress. These tactics can elect a Republican President (and may enable numerous, powerful Republican Dewey haters to balk *his* nomination).

Compromise talk by the Wallace wing may impress practical Truman supporters at convention time when they will be scrambling to line up liberal and labor support. Several million Wallace followers will be the difference between possible victory and certain defeat. As a result the Democratic party may emerge from the convention in a new dress—a party dedicated, on paper at least, to the Wallace brand of liberalism. Said one highly placed national committee

Democrat: "Of course we'll put Wallace planks in the platform. Who the hell cares what's in the platform?"

One thing seems certain: A switch of 300,000 votes in New York and 200,000 in California, and Truman can be an ex-President of the United States.

This Wallace movement is not merely a threat to Truman. Where its effect will be most seriously felt is among congressmen, governors, mayors, district attorneys and the little men in state and local government who depend on a victory for the entire ticket to carry them into office. It is on this lower level that a third party can most thoroughly disrupt the Democratic machines.

At Least 100 Delegates

Wallace won't go to the convention armed merely with a vague third-party threat. He expects to have pledged delegates from Washington, Oregon, Colorado and California with a scattering from other states to total at least 100. He figures an outside chance of going in with 250 delegates which would mean adding to his four-state list: Idaho, North Dakota, Montana, New Jersey, Wisconsin, Nebraska, Connecticut, Michigan and Pennsylvania. (In 1944, Wallace told Roosevelt he could deliver 290 votes on the first ballot. He got 429½ and reached a top of 472.)

If there is a bolt from Truman (nobody now expects there will be) Wallace can help select the Democratic nominee. At any rate he hopes to influence the selection of the Vice-Presidential candidate (Senator Claude Pepper, D., Fla., or Senator Glen H. Taylor, D., Idaho) and, if Marshall fails to make time with Russia, a new Secretary of State, a job which Wallace would give his chicken farm to get.

The Democrats are unhappy about Wallace. They don't like him. Some think his Communist-tinged blessing may be the kiss of death. The only candidate Wallace has had a chance to support since his European tour was Charles R. Savage, a "Wallace Democrat" from the Third Washington Congressional district. Wallace campaigned for him during a special election last spring. Savage lost. Republican and Democratic leaders agree it was because distaste for Wallace kept conservative Democrats away from the polls.

As a "friend of labor" Wallace expects labor support. His hopes were weakened in July when off-again, on-again A. F. Whitney, president of the Brotherhood of (250,000 Railroad Trainmen, and a vice-chairman of PCA, came out for Truman after threatening a year ago to spend "millions" of the union's money, if necessary, to defeat him.

Labor leaders have seldom been able to deliver member votes except in local elections. Last year when the Case bill, regulating labor, passed the House and Senate, the C.I.O. sloganed, "Remember in November," a drive to defeat every congressman who voted "against labor" and to re-elect those who voted "pro-labor." The results of this all-out effort: Of the 228 congressmen the C.I.O. determined to defeat, just 5 per cent lost at the polls. But of those the C.I.O. endeavored to re-elect, 40 per cent were defeated.

The political power which Wallace now wields, in a negative sense, does not derive from qualifications for leadership. His effectiveness in influencing people lies in emotional appeal. He talks constantly of the "common man" and "peoples everywhere"; of "peace" and the "abundant life." The effect is not unlike

IN COLLIER'S

THE SPLIT HICKORY

BY JANE RICE

ILLUSTRATED BY HERMAN GIESEN

The remarkable story of a man who had to measure up to the faith of his son

I WAS pretty near eleven when I began using the Split Hickory as a kind of thinking-out place. Before that, I just sort of went up there, when—well, like whenever I saw Pa was getting ready to pitch in drinking. I didn't study on it any, though—until the time Marty Shane said Pa was no-account and I tried to lick Marty but couldn't. The reason I couldn't was a peculiar thing. It was the stumps. All the while I was trying to whip Marty I kept seeing those stumps Pa had been meaning to pull up and, somehow, never had got around to doing it.

Every spring at planting time Pa'd say, "Come fall, I aim to clear me that stumpland." And in the fall he'd say, "Next spring, early, I'm going to commence yanking up them stumps." But he never did do it. And, when I was pasting into Marty, it was as if I was stumbling over those blame stumps. I don't know why. Anyway, I didn't lick Marty. He didn't lick me either. But I didn't lick him.

Afterward, I whistled Jinks—he wasn't but a gangly, half-grown, lop-eared pup, then—and I went up to the Split Hickory. It's quiet up there and yet there's a kind of a whispering.

Looking out and around you can see every which way. You can mark the creek by the willows and the old covered bridge, and Ballards' by their red roof, and Sims' by their green one. The double row of honey locusts leads to the old, falling-down Tuckett place where the Newphers live, the whole parcel of them. And you can place us, Pa and me, by the stumps, and by the gully where the washout was the year the tobacco got drowned out twice. From up there by the Split Hickory the pike looks about as wide as a yellow ribbon dipping in and out, and at the crossroads the store and the

schoolhouse are the size of salt box. On a clear day you can see clean the gap where you turn off to go Boonesburg.

Anyway, that day I couldn't whup Marty, I went up to the Split Hickory and I thought it through. I thought through that maybe things got in the road the same as those dang stumps had got in mine. Things like his not being able to keep the gully from washing, and the loan at the Boonesburg bank there didn't seem any way to get shut of, and always back-owing at the store, and things like that. So

(Continued on page 91)

The dog growled deep when he saw me, and I stopped where I was. "Since I put that muzzle on him," the beef-faced man said, "it sure interferes with his mea-

AMERICA'S MOST FAMOUS BOUQUET

Migrant workers' children get very little schooling and either work in the fields with the adults or hang around aimlessly like this group near North Norwich, 1

HEARTLESS HARVEST

BY HOWARD WHITMAN

Conclusion

MIGRANT workers are ignorant folks. You hear that said a good deal, and as regards book learning it is true. Among the Spanish-American migrants from Texas, many can't speak even a little English. Among the poor whites and the Negro migrants, many can't write their own names.

What of the children?

The National Child Labor Committee studied the children of strawberry pickers in Arkansas and Kentucky and warned us that these kids would get even less schooling than their parents. Their parents were among our sorriest illiterates. The children would be worse.

It is difficult to send children to school when you are following the crops, spending three months in Texas, three months in Missouri, three months in Wisconsin, three months in Michigan.

"What grade are you in?" I asked Cleto Gonzalez, a sharp-eyed boy of eleven.

"I guess the first grade," he replied.

"But you are eleven years old! You should be farther than that."

"Yes, I know," said Cleto. "Every winter I go back to Texas and I go in the first grade. I do not stay the whole term, so they do not pass me. I have been in the first grade for a long time."

There were children fifteen years old in the fifth grade, twelve-year-olds in the second and third grades, and great numbers of children who had given up school altogether. In the Rio Grande Valley, where the bulk of Spanish-American migrants spend their winters, 40 per cent of the children attend school only four months a year, and in one school district 50 per cent of the migrant children do not go to school at all.

Some Northern communities have tried to open their schools to migrants or even start summer schools. But sometimes a snag has been hit.

For example, this year a fine old community along the East Coast was going to open its schoolhouse in a special summer session for Negro migrant children, and teachers were hired.

Two weeks before the school was to open there was a new stir in the air.

People began holding meetings, small meetings at first in one another's houses and then large, outspoken meetings. The gist of it was this: "We don't want those black kids in the same schoolhouse that our own children have to return to in the fall!"

A man who had worked on the plans for the school asked, "But what can they do to the schoolhouse? They can't hurt it."

"Those migrant kids are filthy. They'd disease up the place."

"I assure you, we plan to examine them all."

"No, sir. None of those black kids

in our schoolhouse. We wouldn't have our children go back and sit at desks if we knew those filthy migrant kids had been there."

So the plans for the school called off.

School is a luxury for migrant children because their hoe-calls and berry-stained hands have a primary value in the fields. Child labor laws to cover children in the fields, and in many states have laws the children work and

New York State has a law to children under fourteen from

Our migrant workers live like animals amid filth and disease. Child labor replaces formal education and Jim Crowism adds to their plight. There is a remedy for this deplorable situation but to date, very little is being done to improve it

There's a lot of difference

in **LOW-PRICED CARS !**

Compare the cars in number of
QUALITY FEATURES

MOST HIGH-PRICED CARS HAVE	21
LOW-PRICED PLYMOUTH HAS	20
LOW-PRICED CAR #2 HAS	9
LOW-PRICED CAR #3 HAS	8

See the new Quality Chart at your Plymouth dealer's shows you exactly how all three leading low-priced cars compare in 21 features with high-priced cars. Feature by feature and car by car, it identifies the 20 found in Plymouth, the 9 in one other leading low-priced car, the 8 in the other.

That's quite a margin in Plymouth's favor — but it's far from being all. Over and above the 20 quality features, Plymouth gives you basic advantages found in no other car in the

lowest-priced field. Safety-Rim Wheels to reduce tire-failure hazards, are one example.

The many others include: Safe-Guard Hydraulic Brakes, a third more effective; Floating Power Engine Mountings for smoothest performance; Superfinished engine and chassis parts almost immune to wear.

There certainly is a lot of difference in low-priced cars. And the Plymouth advantage climbs higher the more you compare.

There's *STYLE NEWS* in Men's Hats

A marked distinction coming between town and sports headwear. From what I've seen, most popular business model will be the narrower snap brim model, pinched crown. Best business colors will be: rich brown, grey and soft green shade. For spectator sports headwear, I've noted many versions of Tyrolian type hats in rough felts with tapered crowns, narrow welt edge brims and cord trimmings.

"Randy" YOUR STYLE SCOUT

There's style news in RAND shoes!

YOU CAN SEE by the shoe (down there) that Rand stylists have really out-done themselves, turning out a line of you'll-want-to-sit-and-gaze-at-them shoes. They've got the looks, the comfort, the long wear you want. See your Rand dealer and find out why we're so enthusiastic about these gRAND value* shoes.

COLLIER'S

JOHN T.

ing on the farms. But in the bean counties virtually all the migrant children worked and it was the boast of many a crew leader that "all the kids over six go out and work."

When I got to Colorado, half a dozen people warned me that I'd find no child labor in the beet fields. "Not this year," they said. "Things are tight as a drum now." The Sugar Act, which pays benefits to sugar-beet producers, forbids the labor of children under fourteen and is supposed to penalize the growers \$10 a day for each child who works.

But I worked with a crew in the beet fields of Colorado's South Platte Valley and there were three children under fourteen working in the next row. There was a boy, Benny, only ten, who could handle the short hoe like an expert.

I saw kids—boys and girls of ten, eleven and twelve—all over the beet fields, and a man from the Agricultural Extension Service finally admitted with a shrug, "You can't enforce these things. Wait until the peas come in. Children will pick half the crop!"

Child-Care Centers Aid Too Few

While the Lanham Act was in force the country had many child-care programs for the youngsters of working mothers, and a few hopeful things were done for migrants. But we let that part of the Lanham Act die in March, 1946. New York State has started its own child-care centers to fill the breach. I visited one at King Ferry and there were 15 others, but all of them together touched just a tiny fragment of the migrant children in the state.

Elsewhere the plight of little children, when all the others in the family are out in the fields, is a sad and rough one. The Home Missions Council does the best it can. It sends workers around to migrant camps to entertain the children and teach them useful arts. I went around with Robert Strubhar, a Home Missions worker, in his miniature automobile, stopping at the dilapidated settlements to bounce a ball with the lonely children and to crayon picture books. Each time we drove away the children made it such a sad farewell we hated to look back.

Sometimes a migrant mother will lock her smallest children in a jalopy or the cab of a truck while she works. It is better than taking chances.

It is better than the incident Reverend Marshburn told me about the nine-month-old girl who was left alone in an Arizona cotton camp. "Some small boys were also left behind and they got tired of playing in a mudhole," Reverend Marshburn related. "They came into

the shack and poured kerosene on the child and set her on fire."

She lived through it, though her mother could hardly recognize her afterward.

Perhaps the best solution is what migrants call "staking out" their children. You take a youngster of two or three and put him out among the beet fields with you, out among the fields where he is least likely to get hit by a tractor and you pound a heavy stake into the ground. You tie a rope around his waist, tie the other end to the stake, leave about ten feet of slack so he can crawl or walk. Then you can work and not worry so much.

There is nothing you need more than a bath after a day in the fields. Why I could not see Marcario when I arrived at his hut near Fairbairn, Minnesota. He was taking a bath.

Juanita, his eldest daughter, said, "Little kids can take bath outside in the kettles," she said. "But when grown-ups take bath they have to take kettle and shoo everybody out."

Marcario Ortega came out propped up with his trousers on and a piece of blanket from a blanket, which he used as a towel, over his shoulder. He was washing the tin kettle and announced, "I would throw out the water unless somebody else wanted it."

"Never mind, Papa. The wood is burning. We can heat up some water," said Juanita.

In a camp near Hamilton, New York, the Polish migrants were more fortunate. They had showers, though the showers weren't working the day I was there.

At this camp the people washed and scrubbed their teeth in a creek in the morning. There was also a pipe running water and a faucet, but there was only one pipe to serve 150 kids. Kids waded in the creek and some were thrown beside it and some drank out of it.

Emil Kacubicz was worried about the creek because there was a privy on the side it just 100 feet above where the people brushed their teeth and washed the water. There were three privies at the camp. Emil pointed to the one at the edge of the pea field, one at the road and the one alongside the creek. "Some of the women don't like to go there," he said.

The Kacubicz family was not bad off as migrants go. Not as badly off as families in the Imperial Valley, California who drank out of irrigation ditches. Or the families in Michigan who had a horse trough in which they washed their hands and faces, their clothes, and put the babies' clothes.

Migrants are used to the fact

Collier's for September

30 families must use a single privy. A Washington hearing last spring Ed Neal of the Farm Bureau Federation ph-poohed the idea that 60 people to the privy was such a terrible thing and in Patton of the National Farmers Union got up and said, "Ed, I'd like to see you at the end of that line!"

Privies are a polio threat. There was a polio outbreak in a migrant camp in California a few years back and, though it was disregarded at first, it spread to near-by town and that changed things. Local health officers swarmed through the camp cleaning up messes and giving everybody examinations and shots.

Once T.B. got so bad in the Michigan ar-beet fields that all the T.B. beds in all hospitals were full of Texas migrants. People in the towns and cities worried, so the beet growers sent a microscope to San Antonio to screen migrants before they came north.

Migrants are not residents; hence any community feels they have no right to mooch in on the free clinics or charity hospitals. They are expected to take care of their own way.

Since being broke is an occupational hazard of migrants, they do not go after a doctor very often. Last year a two-year-old girl in a camp near Poolville, New York, died of spinal meningitis, having had no doctor's help until the last minute when it was too late. In Ohio, Merend Marshburn relates, a man with rampant tuberculosis was living in a camp with 57 people. When a church member insisted the man be hospitalized, authorities told him, "This is none of your business." He stuck to it, though, and after three weeks got the man, Juan Diaz, into a hospital though he was already dying and could be kept there only three days.

In a camp near South Haven, Michigan, I saw a little girl with running eyes and a bad cough, maybe whooping cough. Her father said, "She should see a doctor, no? But I haven't money." In hearing words scores of them said the same thing: the parents who could do nothing for their little boy's throat infection, the mother who "hoped" her baby didn't have pneumonia though she

had been burning with fever and sweating at night.

A U.S. Public Health Service physician, who asked that his name be withheld because of the political heat in Washington, told me, "Migrant children miss out on their immunizations. There is considerable diphtheria among them, though it could be prevented by a simple inoculation. We've found the most weird kinds of malnutrition in these camps. And talk about your impetigo, scabies and plain lousiness—there's perhaps as much among our own migrants as among the DPs of Europe."

Tragic Death Toll Among Infants

The very old and the very young seem to fare the worst. In one of the richest farm counties of the West, one fourth of the migrant infants died, one year, from malnutrition and pulmonary diseases. And a 73-year-old woman died among the pea vines of Chenango County, New York, while I was there.

At the Fort Lupton migrant camp in Colorado they were just folding up the clinic at the time I arrived. Fort Lupton is one of the 48 government camps which close shop on December 31st. At all these camps the migrants were given complete health examinations, the children were inoculated and vaccinated, and medical, maternity and dental care were provided when needed. Though the government camps accommodated but a handful of migrants, relatively, they set a wholesome pattern, which is now being rubbed out.

Disease among the migrants is something of a Pandora's box. Uncap it and a thousand communities are laid open. Microbes, once freed, are democratic in their nature and make no distinction between Spanish-Americans, Negroes and the old-time residents of town; but people aren't as democratic as microbes.

In Vermilion County, Illinois, Luis Cantu, a young asparagus cutter, went into a country tavern to get a glass of beer. He was told to get out.

"We don't want Mex in here!"

Cantu nodded and walked out. But a policeman heard about it and he knew

that Cantu had served with valor in the South Pacific, so he stomped into the tavern and said, "You serve this man or I'll lock up the place!"

White-haired Pedro Hernandez, of the same Vermilion County camp, went into a movie in a near-by town and was told, "Upstairs!" All the Spanish-American migrants who went to the movie were put upstairs, but Pedro Hernandez could not see this because he was born in the United States and his father was born in the United States, and he asked, "How could I be more American than that?"

In Johnstown, Colorado, the proprietor of a hamburger stand put up a sign, "White Trade Only," apparently deciding that the Spanish-Americans, because their skin is swarthy, are no longer members of the white race. In parts of Minnesota the segregation of Spanish-Americans is so rigid that anyone who fraternizes with them gets a social taint. One man said, "If I let my children play with these Mexican kids, then my children are taboo in the rest of the town."

Sometimes the feeling about migrants shows up in the prices at the village stores. A few pennies higher is often regarded as a kind of tariff because migrants don't belong in the community.

HOLD STILL WHILE I THROW SOMETHING

Here I stand, remodeled, re-dressed,
Looking like Helen of Troy at her best.
I've learned what to feature, and what to hide.
I've parted my hair on the other side
And swooped it up on top of my head.
My nails, once pink, shine a garnet red.
I've found a new shape to paint my lips
And a marvelous garment to banish hips.
Oh, I'm half Venus, half Cleopatra:
A crook of my finger would summon Sinatra.

Here I stand, a living statue,
Batting my curled-up lashes at you,
Waiting for you to gasp with delight
At the changes wrought in me overnight,
Waiting for you to give a cheer
For a neckline cut way down to here.
Me, I'm a batch of dazzling charms,
A made-over siren to hold in your arms.
I'm new and different, I'm strange and glowing,
And all you can say is "Your slip is showing."

—Phyllis Wright

In Berrien County, Michigan, certain clergymen didn't like this practice and so the Council of Churches opened up a grocery store. It was especially for migrants and the prices were exactly the same as local people paid.

During the war years, when crop pickers were scarce because migrants went into the war factories and the armed forces, the government imported 250,000 foreigners from Mexico and the West Indies to do farm work. Contracts were made with the Mexican and the British colonial governments. Every imported worker was guaranteed free and adequate transportation, health and medical services, a fair minimum wage and wholesome sanitary housing.

I saw a camp for foreign workers (a few of whom are still here winding up their contracts) at Winnebago, Minnesota. There were white houses with screen doors, shower baths, beds with mattresses and a large clean kitchen with hot and cold water.

Because of the standards set up for importees, many a grower with slum shacks on his land has told the farm labor office, "I'm afraid my housing isn't good enough for Jamaicans. I'll have to take some American families."

The Department of Labor found that not only the foreign workers but even the German and Italian prisoners of war who were put to work on the farms lived on a far better scale than migrants. A report by the Department at that time concluded, "Thus, standards for both our 'good neighbors' and for our enemies are far higher than for our own countrymen."

In my travels I found plenty of farmers, particularly big growers, who resent doing anything for migrants. There was, for example, the cannery official in Faribault County, Minnesota, who said to a group of ministers, "We let you into the camps to hold religious services for the migrants—and that's all! You keep your nose out of housing and sanitation. That's none of your business!"

But I also found farmers and some big growers and some canners who wish to help migrants. Take Bill Reimer, manager of a blueberry plantation near Grand Junction, Michigan. Bill uses from 250 to 450 migrants every summer. He has just built shower baths for them and he keeps them in clean houses which the families like, so that some migrants, like Fred Angotti, who has 17 children, have been coming North to work for Bill Reimer for 10 summers. Bill also gives the Home Missions Council a hand with its child-care center in near-by Hawkhead.

Near Berthoud, Colorado, farmer Lyle Littrell works 160 acres. I was talking with some migrants on his land when he drove up with his truck to deliver water to their storage tank. "I know both sides of this story. I've been a farm hand myself," Lyle Littrell said. "These migrant families need a decent place to live and I'll see that they get it. You treat these people right and they'll do a job for you. It's good business."

That's what Colorado farmer George Ewing also said. He's built clean stucco houses for his workers, but the money has come back into his pocket three times over. "I'll never forget the time they saved a crop for me," he said. "We had freak weather and I had to get my crop in mighty fast or lose it altogether. Well, sir, these people went out in the fields and worked their heads off. They kept right on working at night—by moonlight—and they wouldn't stop until I went out myself and called them off the field."

In New York State, the Consumers League reports, three large growers winced at their migrants being hauled up from Florida in jam-packed, unsafe trucks, and arranged for them to come North by bus. One said, "I didn't like the way we were bringing them up, like animals. And besides, some of them got such swollen feet and sore backs from standing up in the trucks that they couldn't work at all at first. There's no economy in that."

A few states have tried to raise the status of the migrants. New Jersey has done the best job. New Jersey passed a Migrant Labor Act in 1945 and has set up a Division of Migrant Labor in its State Department of Labor, with former State Senator John G. Sholl in charge.

Mr. Sholl has 12 inspectors who comb the back roads sticking their heads into migrant camps and making sure that no families are crammed into dumpy tables or forced to sleep on raw wood bunks. Inspector Fred Metler called on a big

potato grower who had 89 migrants packed into stalls like livestock and got him to build new housing where families could at least have a wall between them. He called on another grower, who had put up \$30,000 to fight the migrant law, and got him to build barracks-type housing instead of crowding his migrants into the top of a barn with potato sacks for partitions.

I scouted some of the back roads with Sholl and we saw the neat migrant colony of farmer Richard Applegate which had houses with raised floors and screened windows. At the big potato farm of Ernest Tark where 60 migrants live, Tark was helping some carpenters put the finishing touches on new houses of cinder block with insulated metal roofs to keep the summer heat out.

We stopped at the farm labor office of Clinton Mundy in Freehold, New Jersey. Farmers go there when they want migrants but Mundy gives them none until one of Mr. Sholl's men has gone out and looked over the camps.

Problem Concerns Entire Nation

This summer New Jersey opened nine clinics where migrants can get health examinations. In July the Jersey legislature passed a law opening all the public schools to migrant children during the school term. But the migrant problem does not belong to New Jersey or any special state. It is a cloud on our title to freedom as a whole nation. It is the concern of all of us.

Last May, out of Washington, came the report of the Federal Interagency Committee on Migrant Labor—a report-to-end-all-reports on the migrant problem. Top brains of the Department of Agriculture, the Department of Labor, the Federal Security Agency, the Interstate Commerce Commission, the National Housing Agency and the Railroad Retirement Board worked on it. This was the committee headed by Marine Major General Erskine. It read, in part:

"Child labor, substandard living and a padlock against education have destroyed the rights of children and drastically disturbed the integrity of family life among migrant workers. . . . Unorganized, unprotected by workmen's compensation laws in most states, ineligible for educational, health or welfare benefits while following the elusive dollar during seasonal employment shifts, migrants frequently find maintenance of even a minimum standard of living an impossibility."

The committee recommended "that

such state and federal legislation enacted and such administrative action taken as is necessary to give the protection to migrant workers as is available to other workers."

To get rid of the day-and-night trading of human beings, Paul S. Taft, Professor of Economics at the University of California, recommends:

"Laws should be enacted, if necessary to give power to the Interstate Commerce Commission to supervise trucks and other vehicles which haul laborers commercially across state lines in order to assure safe and suitable transportation. There seems no reason to safeguard movement of humans any less care than we safeguard the movement of commodities."

On the crew-leader system, and credit bondage which it spawns, the gratuity labor committees of the Twelfth and Thirteenth National Conference on Labor Legislation pointed out, gratuity workers by and large are protected by written agreements or contracts. Crew leaders, labor contractors or agents sent by employers to recruit workers often lure them by false promises to places where labor is needed and working and living conditions are poor.

The committees recommended "legislation should be enacted on a national level to regulate the activities of labor contractors who operate across state lines and, wherever necessary, similar legislation should be enacted by states to set up state controls."

General Erskine calls migrants "the forgotten people of 1947."

In what sense forgotten? Monsignor John O'Grady, the Reverend Henry N. Morse, and Rabbi Herbert S. Goldstein have answered the question in an interfaith report:

"Why," the Catholic, Protestant and Jewish leaders ask, "should agricultural workers continue to be exempted from the provisions of the Fair Labor Standards Act and the Social Security Act? Only the same arguments can be offered that were originally offered by industry in the 1890s. In industry these exemptions are no longer accepted. Minimum wages have come to stay; work compensation, old-age and survivors insurance, unemployment compensation have come to stay, but the agricultural migrant continues without adequate protection from the law and even without fair chance of using his own efforts for protection."

There is much, it would seem, to be done.

THE END

"Could you have the coat delivered with the price tag still on it to my neighbor, Mrs. Flegenheimer, by mistake?"

He ducked beneath the hotel door. The lobby was long and low and narrow, paralleling the street. It was empty. At its far corner was a door. From beyond the door came clatter, the smell of coffee and, presently, a cheerful woman of middle age.

"Mr. Lineer? We expected you last night. Beautiful morning, isn't it?"

"You expected me?"

"Why, yes."

"Who said I was coming?"

"Mr. Thomason."

"Tracy Thomason?"

"Yes."

"How about some of that coffee?"

"Go right into the dining room. Mr. Thomason is already there."

Lineer turned toward the dining room, paused and looked back at the woman. A small frown came and went with some thought. He said, "I'll take up to four eggs with that coffee." He strode into the dining room.

Tracy Thomason had finished. He remained seated until Lineer reached his table. He rose slowly then, his light gray eyes moving over Lineer's face with a lingering deliberateness. He reached his height and waited, faintly smiling.

Lineer stood soberly before him, then offered his hand. He murmured, "That was last year, Tracy. Last year and the last job. It's behind us."

"Of course, Jim." Thomason took the hand in a quick, powerful clasp. "It's good to see you, fellow." He grinned as he raised his left hand to Lineer's shoulder, resting it lightly there in an affable gesture until he saw some warning gleam in Lineer's eyes. He dropped it, still grinning. "How's Sonora?"

THOMASON'S face was strong, long-jawed, full of some fire of want that could give a demanding boldness to it, yet altogether pleasant now. His hair was almost pale yellow. Faint small freckles splotched his forehead. His neck was a powerful, corded column. He had heavy-boned, sloping shoulders and a cleanly tapered body. Even as he stood loosely the deep drive and force of the man thrust out from him. It was a vitality and a strength that had in it the quality of sharp insistence and of need, and of something more.

Lineer said, "All done except for the soft spots. I left them to Georgie Price."

"And that black Irish?"

"Big Tim? Still there. I'll be bringing them both up if we build this railroad."

Thomason said thoughtfully, "I still believe I can whip him. He got in the first lick. I didn't think so big a man could move so fast." He caught Lineer's direct glance and answered it challengingly. "I carry no grudges, Jim. It's behind us."

The middle-aged woman was an understanding one. The coffee did not await the eggs. A pretty Mexican girl of fourteen brought it, flashed at Lineer a smile that was both inviting and uncertain, then raced back to the kitchen.

Lineer drank with relish. Thomason produced a cigar, rolled it gently in his fingers and lighted it. His hands were long, big-knuckled and restless. He seemed to be waiting still, observing Lineer's unshaven jaw, the clean but rumpled cotton tans, the hair that curled damply over his ears. Lineer set down his cup, remembering this man, knowing that Thomason held a surprise and relished it.

Lineer said, "I saw Colonel Edwards' car down on the siding."

Thomason nodded. "I'm going down there now. Want to come along?"

"I'll clean up first."

"As you like. I'll probably be bringing them up here."

SWEET WATER

Continued from page 13

Lineer returned to his coffee, drinking slowly, thinking that he knew the surprise and did not like it. Presently he said, "When did the car get in?"

"During the night sometime."

The smile on Thomason's face was small, expectant. It would come now. Another question or two. This was the way of the man, that he must have a triumph over other men in each hour, even though it be a small thing.

Lineer pursued patiently, "The woman said I was expected yesterday. You expected me."

Thomason leaned back. This was it. "I didn't come with the colonel. I've been over in your Tularosa Valley for a month, Jim—with two engineers from the New York office."

"Doing what?"

"Surveying the coal mines at White Oaks. Cruising the timber. Testing ranch wells. You didn't exaggerate. That's mean country."

Lineer's voice held a rising persistence. "What kind of water tests?"

my plan to get water down from mountains?"

"That's right. We won't need it."

"But Colonel Edwards has not made any decision yet?"

"He'll accept my recommendation," said Thomason confidently.

"Why are you so sure?"

Thomason showed impatience. "All, I've got two company engineers back me up. Don't be stubborn, You're getting a railroad through home country. That's what you want. Does it have to be built just your way?"

Lineer said absently, "When I was a boy I thought the whole world was the Tularosa Valley. So I was afraid of the world. I used to sit on my back on the Sacramento scarp and just look down by the hour. I've seen the valley when it looked like the pits of hell, white smoke curling all the way to the sky and making you want to cut and burn. But it wasn't smoke. I've seen it when it was like a cool seashore, enticing a

"Tell me about yourself. What sort of mischief do you like?"

"Volume and chemical analysis."

"You took my notes with you?"

"Yes. They're in my baggage somewhere."

"You ran my flume line out of the Sacramentos?"

Thomason looked at the tip of his cigar, his face smoothing into blankness. He said carefully, "Only part way, Jim. Enough to get the general idea. It's practical. But too expensive. We can build the railroad without it."

"And run it?"

Thomason nodded, his eyes swinging back to meet Lineer's directly. He said half curtly, "And run it."

"No."

Thomason's lips stiffened. For just a moment his pale eyes shone with the bright hardness of a will that lashed out unthinkingly at any opposition. Then he smiled. "Keep your mind open on it, Jim," he said.

The four eggs came fried together. The potatoes were flaky and crisp, boiled yesterday and fried this morning. The Mexican child-woman lingered until Lineer smiled his thanks, then she ran again. He cut into the eggs with his fork and chewed without tasting.

He said, "Let me understand this. You are proposing the road be built and operated with water from wells?"

"I am."

"And you are recommending against

down to choke him to death with white sand in his throat. But it was sand either. There is something peculiar in the way that valley reaches for you and then tries to break you. Once you hold of you it never stops fighting you. I guess it has a hold on me because I was born there. I love it. It is home, though I haven't lived there for fifteen years. But I don't trust it. I don't understand it."

Thomason snapped, "If you're going to say I couldn't check that valley out in a month, maybe you would like to try. I found out one thing you didn't put in those persuasive letters of yours. You had a feud so big it could ruin any railroad. Ware and Nye? That's been going on for twenty years."

"If you knew it, why isn't there any mention of it in your correspondence with us?"

Lineer said dryly, "I was trying to convince you fellows this railroad could be built with water from the mountains. Once that was decided we could solve other problems. I agree with you, a feud is important. We'll have to talk something about it."

Good humor came back to Thomason's face. "It won't be necessary to already settled it. They're here at hotel now."

Lineer said incredulously, "Where? Nye here? Together?"

It's a Honeymoon

Listen a little and watch a little!

Watch the man or woman, the husband and wife, who have become Dodge owners after years of limousine habit and experience.

They almost lose their dignity in the fun they get and the way they carry on. You'd think they were getting their first automobile thrill, and in many cases they are.

One thing is certain,—Dodge has a strangle hold on the affection of every owner, and with many of the new ones, it's a happy honeymoon, nothing less.

SMOOTHEST CAR "AFLOAT"

I want my
insurance agent
hometown & handy

INSURANCE IS ALMOST AS PERSONAL AS DOCTORIN'

by don herold

There are two times when I want my insurance agent nearby and neighborly—

1—when I buy my insurance and need somebody smart who can size up my situation personally and give me advice, and prescribe tailor-made insurance, to fit my needs perfectly;

2—when I have a claim—am in trouble and flustered—and need a friend to help me out.

Insurance of all kinds has improved so much in recent years (it keeps improving every month, almost) that it takes an expert to keep up with it.

Insurance is more adaptable than it once was. It can be fitted better to individual needs. A good local insurance agent or broker can suggest the right insurance just as a good doctor can diagnose your case and write the right prescription for what ails you.

The local insurance man can perhaps suggest combination policies that will cover you like a tent, safeguard you scientifically, and still save you money on premiums.

I'm talking of fire insurance, of accident insurance, liability insurance, theft insurance and all other kinds of insurance protection. You'd be surprised how these coverages have been streamlined in recent years.

WHY I PREFER AMERICA FORE

I prefer an America Fore agent because he represents a big, strong group of big, strong companies who, together, write practically all kinds of insurance except life.

And another reason I'll take him is that America Fore has thousands of agents all over America—to any one of whom you can appeal wherever you have trouble and need insurance help.

Yes sir, I want a reliable, local man whom I can confer in person or on the phone when I need insurance, or on whose shoulder I can cry when I have a claim.

P. S. I've written a little booklet—a sort of quiz game—which will tell you about dozens of recent new wrinkles in insurance coverage and help you figure your own insurance needs. Ask America Fore to mail it to you free.

back and sent the toe of his boot into the side of the valise. It skidded across the room. He watched it teeter and come to rest upright. Then, chuckling aloud, he wheeled out of the room.

The lobby was still empty. He heard voices in the dining room and looked in.

Wilson Ware and Jubal Nye were at breakfast—together. A third and younger man sat with them.

Ware, facing the door, saw Lineer first. Ware was attacking his breakfast with elbows akimbo and black beard pushed forward over his plate. For Wilson Ware brought to the table, to the easing of simple hunger, the same relish and energy he applied to all things.

He shouted his welcome, raising his fork to salute in one black-furred fist. He stood up as Lineer came forward, and his body seemed to close off all that part of the room behind him.

"Jim Lineer, by God!" he boomed. "Sit down, man! Sit down and fill up."

Ware's heavy, rounded shoulders filled a coat of well-tailored broadcloth. His shirt was a gleaming white and his tie a scarf of dark silk. His beard, jet-black and stiff, was neatly trimmed. Yet there remained about the man a shagginess he would never lose—the mark of the rough miner who had tramped into the Territory thirty years ago.

"Thanks, Wilse," said Lineer. "I've eaten."

"Jube," said Ware, "you know Jim, don't you? Old Oliver Lineer's boy?"

JUBAL NYE was thin and long. Thin with that tough dryness of hide and muscle and bone which comes to some men at seventy. So long that he sat with his legs sideways to the table, trouser legs pulled up, white socks showing over the tops of high shoes, white hair sparse above a fissured face.

The old lawyer rose with the slowness of his years and put out his hand. "I ought to know Jim," he said. "I bought his ranch when he was back in the valley last year. Jim, boy, it's good to see you." His old back was straight. His eyes, their blueness washed by time but their alertness undiminished, showed pleasure.

"This is Ed Ware, my nevvie," said Wilse. "Ed, shake hands with the man that's come home to build us a railroad."

Ed Ware was twenty-five. He had a round, cheerful face. There was a roundness about all of him, of shoulders and wrists and waist, that gave to him an impression of size he did not have.

His uncle said, "Ed came to the valley after you left, Jim. He's running my bank down at Tularosa."

Lineer pulled up a chair and sat down,

held by the unreality of this moment watching the complete affability between these two men who had been implacable enemies for so long. Something of his thoughts must have shown in his face for Wilse Ware's laugh bellowed out.

"It's simple," he said. "Jube and I want this railroad more than we want each other's ears. That right, Jube?"

Jubal Nye said dryly, "Profit can be strong inducement to peace, Jim."

The old lawyer's face wore a gentle smile. It was a smile that carried Lineer back through the years, remembering the way of this man, remembering the Nye who dominated courtrooms and political gatherings with his cold, precise logic. That was the weapon that had made him the one man in the Territory who could match Wilson Ware. And always when his passions had been most deeply stirred yet most perfectly controlled, there had been that gentle smile. Wilson Ware was watching it, and in Ware's black eyes little dancing fire seemed to leap out to meet it.

A little silence ran on as both of them waited for Lineer to speak. He was expected to utter a banality, to say that was glad. And they would barely hear his words. The whole of their minds as their wills were locked across this task as they had been locked for twenty years in a struggle that shaped the lives of men and women in the Tularosa Valley.

Lineer knew then that this was a trap only. Here was a quarrel that ran deeper than just old hates and spilled blood. It was the struggle of untamed nature each unable to conquer the other and able to stop trying. It was the way the Tularosa desert, and the way strong men molded by it.

It was a fact that he accepted with conscious concern. If they had given their word to Thomason or to each other it would be obeyed scrupulously so long as the railroad was under construction. He wished he knew what arrangement Thomason had made with them.

He said at last, "Thomason told I'm glad. If we build the railroad we need your help."

Wilse Ware picked it up quickly. Thomason indicated to us it's a thing."

"He is in a better position to know I am."

Ware said bluntly, "Now, Jim, you're a Great Western man but you're a valley man too. If there's a joker in this valley is entitled to know it. If you know anything, out with it!"

"I proposed this line," said Lineer promptly. "I want to build it. I came here to meet Colonel Edwards and p...

MARKS THE SPOT

WHERE THE THIEF WAS TRAPPED

A smear of dirty oil on an AC Oil Test Pad—oil from the crankcase of a car whose owner didn't need an oil filter. The evidence shows clearly on the white pad.

Get this oil test FREE—and in a jiffy—at any official AC Oil Filter Service Station. The attendant wipes the dipstick on the Pad, instead of a rag, and you can see for yourself whether your oil is good to use.

Oil is a power thief. It clogs piston rings and slots—makes valves stick—hastens engine wear—steals fuel and oil—steals more and more power as the days go by. And slowly but surely, it builds up your bills.

Your engine needs an oil filter. The AC oil test will show you why. And the AC Oil Filter will show you why the AC Oil Filter gives you tops in protection—and why the AC Replacement Element is the one you should use in your present filter, if you have one. AC Quality Replacement Elements for nearly all filters.

Order your AC Official Oil Filter Dealer today and trap the thief that's stealing your power. Here you see the sign illustrated at the right.

Free oil tests, with AC Test Pads, are available wherever you see the official AC Oil Filter Service Station sign. AC Oil Filters and Replacement Elements are also available there.

to him it can be built. He came to see for himself and make his own decision. I've been here a little over an hour, and I haven't seen him yet. So far as I'm concerned there is no railroad until he says so."

"So Thomason could be going off half-cocked, eh?"

Lineer smiled. "You don't expect an answer to that, Wilse."

"I expect any answer I can get," growled Ware.

Jubal Nye's shrewd eyes were on Lineer. He said, "Thomason told us you will be in charge of construction."

"Yes."

"Jay Gould started a line up the valley some years ago and abandoned it. Said it was water trouble. Do you know if there was any inside reason why he quit?"

"None to my knowledge."

"His engineers just couldn't find the water?"

"That's right."

"And you can?"

"Yes."

LINEER waited for the next question, wondering what the old lawyer knew. But it did not come.

Young Ware spoke up. "Did you know about the women?"

Lineer nodded. "I know there are women in the party."

"I wonder why," said Ed.

"No place for 'em," growled his uncle. "I told Thomason so."

Ed Ware laughed. "You're the only one that's complaining," he said.

He explained to Lineer, "Uncle Wilse planned some rough capers for the party. Fake holdups. Mountain oyster parties. Vaudeville at White Oaks with girls all the way from Denver. Then Thomason told him there were women coming and he had to cut it all out."

A sudden hubbub of voices came from the lobby.

"They're here," said young Ware eagerly. "Come on."

Lineer followed last into the lobby. Thomason was already busy with introductions. Lineer saw Colonel Edwards, three men he did not know, and the two women.

Edwards saw him and signaled him over. The president of Great Western was a man of hard solidity, with the beak and hooded eyes of an aging eagle. There was knowledge of men in his face, and an unexpected patience. His eyes were weary. Yet there was the richness of vigorous health in the iron-gray of his spade beard and his short, stiff hair.

"I'll buy for Sonora," he said. He spoke rapidly, giving a sharp distinctness to each word. "I like a man who keeps his schedule. How are you, Jim?" With-

out waiting for an answer he called a the room, "Barbara, come here, you?"

She still wore the cloak of soft. Her hair was up, held by a green ribbon fashioned in a wide bow in front. emeralds set in thin gold made spots of warm green at her ears.

"Barbara, this is Jim Lineer. Jim daughter."

She met Lineer's direct gaze with challenge in her own, and her smile came a small thing showing only a curve of her lips. "No snow-white hair, Mr. Lineer?" she asked.

"Give a man time," Lineer murmured.

"What the devil?" said Edwards. She did not answer, for Thomason stepped up to her side. She put a hand on his arm, facing up to Lineer.

"Tracy," she said, "this is the man I told you about. The one with the rain cave."

Thomason chuckled. "Don't mind Jim. If she gives you any trouble whistle for me. We're going to be married, you know."

"I didn't know," said Lineer. "Congratulations, Tracy."

Thomason stared briefly at Lineer the edge of some remark, and then knew that he had not kept his remark out of his voice. Here, then, was reason for Thomason's easy assurance. Here was the reason Thomason was going to build the railroad. A setup. A setup. Regret and a slow movement through Lineer, and then he set in a stubborn impassivity.

Colonel Edwards' eyes moved deliberately from one man to the other on to his daughter. They rested long moment on her, full of a fondness, yet shaded and thoughtful.

He aroused himself to say to "Where's Molly?" He moved his until he found the other girl, standing motionless and withdrawn near the door. His voice was quite gentle: "Molly,"

She was smaller, more rounded than Barbara Edwards. Her hair was her eyes the darkest blue. Her name Molly Riordan. She offered her shyly. All the merriment that Lineer remembered was gone from her, as moved close to the taller girl almost seeking protection.

"Come on, you two," said Thomason. He put a hand at the elbow of each and guided them away.

Edwards' eyes followed his daughter. Without turning his head he said to "You think you've found some answer, Jim. Don't be too sure."

They watched as Thomason led the girls to the erect figure of Jubal. Both girls made a half curtsy, graceful and respectful. Thomason moved

"But don't you see, if I changed my decision, then the other team would be irritated with me"

on to Wilson Ware, whose black eyes showed his frank appreciation.

Barbara Edwards spoke to him, smiling but abrupt, "I'm told you have canceled some of the entertainment because of females in the party. You must restore it at once."

Ware sent an accusing glance at Thomason. "Now, Miss Edwards," he said, "I'll see that you don't miss anything."

"No soothing words, Mr. Ware. I won't have it." Her tone, coolly imperious, said the matter was settled. She gave him a smile again.

At Lineer's side the shoulders of Colonel Edwards moved upward and then forward imperceptibly. Some sagging of muscles brought unhappiness sharply into focus in his face.

"A lovely girl," said Lineer.

Edwards turned. "She is," he said. His voice was almost cold as he continued, "You two may be thrown together for the next year. You're entitled to know the rest of it. She is also a headstrong girl. A spoiled girl. A troublemaker. But not a fool, Jim." He frowned and closed his eyes. When he opened them he said crisply, "Come on. You haven't met my associates."

Lineer shook hands with the three men. They were middle-aged, well-fed, well-barbered, conservatively dressed. He knew without being told that they were along for pleasure. They would invest their money in Edwards, not the railroad. Edwards would make the decisions.

Wilse Ware and Nye moved into a corner with Thomason. They talked a moment, then Edwards joined them. Ware boomed for attention, grinning jovially.

"We're leaving as soon after dawn tomorrow as possible," he said. "After tonight you fellows will sleep under the stars with diamondbacks for bedmates. We've got luxury hacks for you—the best this side of New York. We've got your pick of horses, and a saddle that will fit you. We've got the two best range cooks in the Territory. Tents, for sissies and the women. Ponchos, if a miracle should happen. Wear what you want to. But you'll need evening clothes in my town of White Oaks! Pack the stuff you want to take and we'll check it onto the wagons now. You won't be seeing that private car again until you get to El Paso. We'll be out two weeks—longer if you want. Any questions?"

"Yes," called Edwards, matching his geniality. "How's your bourbon supply?"

"More whisky than water in the Tularosa country, man," said Ware.

Old Nye picked it up quickly in his precise voice, "And that doesn't necessarily mean, sir, that whisky is plentiful."

"You find the whisky," said Thomason. "We'll find the water. Won't we, Jim?"

LINEER swung back toward the hotel. The walk had done him good. He felt a pliant ease through his body. He had that simple yet inexplicably difficult knack of segregating the disturbing thoughts in his mind, sealing them off, slowing his mind down to the measured pace of his legs. There was a harmony in it, and the coolness of the dying night wind and the bright wash of stars in the night heaven were parts of that harmony. He wondered idly if, after a man took a wife, he felt the same deep need for solitary walks. He turned in at the hotel just as Tracy Thomason and young Ed Ware emerged.

"There you are," said Ware. "Come along to Steve's for a nightcap."

"You've got to see this, Jim," said Tracy. "Ware men and Nye men drinking peacefully together."

Ed Ware had already made his pilgrimage to the saloon. More than once, to judge by the brightness of his eyes. Lineer could not see Thomason's face in the vague smear of light from the hotel

door. But the man's voice held a liting good humor. Lineer guessed that he had just returned from the car on the siding.

"Let's go," said Lineer.

They started down the street. Thomason lagged a moment and then came forward between Lineer and Ware so that they were walking three abreast. He said, "If I had the voice for it I'd cut loose on Sam Bass. It's that kind of night." He raised his right arm and rested it carelessly across Ware's shoulder. "I would bet you have a voice, Ed. Let's hear it."

Ware glanced up, his round face pleased. "Not me."

Thomason's left arm came up and across Jim Lineer's shoulders. Lineer shrugged. The arm remained. Keeping the pace, Lineer took a long step leftward and the arm slid off. Thomason's mouth widened in silent laughter, and he let Lineer see it.

"Barbara was curious about you, Jim," he said.

"Yes?"

"I didn't give you the worst of it."

"Thanks."

They swung in at Steve's, cutting their way to the bar through the semigloom of

last, bred to a quieter humor. The men on Wilse Ware's pay roll included cowmen. But there were also teamsters and miners, and loggers who worked the high shoulder of Sierra Blanca.

A slim, quick-striding man stepped up to Ware. He had a handsome, restless face.

"Glad you came," he said. "I think we'd better send them back to the wagon soon."

"No hurry," said Ware. "Harry, meet Jim Lineer. Harry Keck, Jim. He's one of Nye's foremen."

KECK shook hands briefly. "Heard you," he said. He turned back to Ware, and an insistent tone came into his voice. "I want to call my men out. Can't ask them to go unless the Ware men go too."

"Aw, Harry," said Ware, "have a drink and forget it. Let 'em have some fun."

"My orders are to prevent trouble," said Keck. "Not to stop it after it starts but to keep it from starting."

Thomason cut in, "I don't see any trouble, Harry. What's eating you?"

Keck gave him a quick, hard stare. He

tobacco smoke and coal-oil lamps. Steve's fell short of the needs of men who must play hard. Its stubby bar ran down the right side, beyond the front door. Restaurant tables, where a wayfarer could sit to a thick white plate of frijole beans and sometimes a pile of wilted greens, filled the right side. Beyond both were the two poker tables and, at the far rear, one billiard table.

But it was all the town afforded, and Ware and Nye men had been busy for hours proving that it could be made to do. Lineer saw only one man, head on arms at a table, who was dead drunk. Both poker tables were full and both games were pleasantly noisy, with the intensity of high-stakes gambling entirely absent. At the bar's far end, men clustered around a tall, redheaded tenor, trying with the concentrated expressions of the half-drunk to add harmony to his high, sweet tones.

Warming his drink, Lineer was thinking that he could pick out the Ware men and the Nye men, and the difference between them was the difference between Ware and Jubal Nye.

There was about the Ware men a robustness and a rough humor that was missing from the nature of the others. Not that Nye hands loved fun any less. But Nye's men were cowmen first and

faced back to Ware and jerked a thumb over his shoulder. "Look at Jess Folsom."

Lineer recognized the squat figure of Folsom, remembering him as boss of the big wagons that hauled Ware's coal from White Oaks to the El Paso smelter. Folsom stood at the pool table, twisting chalk down hard on his cue and studying his shot with drunken gravity. The chalk broke apart in his thick fist and he laughed as he tossed it over his shoulder.

He swung one broad hip up on the table and leaned down until his elbow and hand were on the felt, balancing with exaggerated carefulness. One of the other players moved against him, staggering little and protesting. Folsom raised up put an arm on the man's chest and shoved. The man smashed back against the wall as if catapulted.

Keck said to Ware, "Next time that may be a Nye man. Then you and me and ten like us can't stop trouble."

Folsom made his shot. The ball flew off the table and bounced away among the feet at the poker table. He slid from the table, frowning, as the players shouted good-natured curses at him. Then he heaved the cue like a spear toward the room's far corner and roared out his laugh again.

His head came down and he saw the group at the bar watching him. He

People are saying—

“Honestly, we never knew *any* car could give us so much and cost so little!”

...s, you're wise to choose a new Chevrolet. It will fulfill your desires for Big-Car quality, Big-Car comfort, Big-Car performance and dependability; and it will save money on purchase price, operation and upkeep as well. It alone gives

BIG-CAR QUALITY AT LOWEST COST.

Women, as well as men, give their *highest* praise to this beautiful new Chevrolet, famous for BIG-CAR

QUALITY AT LOWEST COST.

Ask them for further details, and they will tell you that Chevrolet is *outstanding* for Big-Car styling, Big-Car comfort, Big-Car performance and dependability, among all automobiles in its field.

They will remind you that this is the natural result of finer quality, for Chevrolet is the *only* car in its field combining such features as Body by Fisher, the Knee-Action Gliding Ride, Valve-in-Head Thrift-Master Engine, Positive-Action Hydraulic Brakes, and many other advantages usually reserved for

higher-priced cars.

Naturally, these features mean *greater satisfaction* in all phases of your motor car investment. But the main point, which all owners emphasize most strongly when they speak of Chevrolet, is that it gives these Big-Car advantages at lowest cost—and, in fact, at *substantial savings* in purchase price, operation and upkeep.

Own a Chevrolet, and we believe you and your family will join with other men and women in saying, “Honestly, we never knew *any* car could give us so much and cost so little!”

Yes, people are saying— **“IT’S THE NEW CHEVROLET for BIG-CAR QUALITY AT LOWEST COST!”**

plowed through the crowd in a direct line, a short, hugely broad man rocking with the heavy awkwardness of some gross, herbivorous creature.

He shouted, "Howdy, Ed." His two beefy hands reached forward and closed on Ware's sides at the lowest ribs. He strained upward, keeping his knees and hips straight, lifting with the power of his great arms alone.

Ware's feet left the ground. His face turned red and then whitened as he flailed down on Folsom's forearms. His words were a choked yell. "Cut it out, Jess!"

Folsom dropped him, laughing. "Still can do it, by God! Did you see? Knees straight as a new couplin' pin."

Ware's brief struggle with himself moved across his face as he gave way to the anger of embarrassment, acknowledged to himself the futility of anger and chose to act as if nothing had happened.

FOLSOM shifted his attention to Keck. The slim man stood between Thomason and Lineer. His eyes had a cold watchfulness.

"Hey, Harry," said Folsom. "I hear old Nye's got you babyin' some new black bulls. Polled Angie—what do ya call 'em?"

"Aberdeen Angus," said Keck.

Folsom rolled his body without moving his feet, his face glistening and jovial and red with his liquor.

"Bet I can lift you like that, Harry."

"Sure you can, Jess," said Keck. "But don't."

"Think I can't, huh?"

"I said you could, Jess."

"Bet you can't lift me then." He raised his arms out from his sides. "C'mon, try it. Bet you ten you can't. Bet ten not a man of the four of you can."

"Forget it, Jess," said Keck.

Others were turning toward them, their attention caught by Folsom's voice and Keck's watchful eyes, sensing that Folsom's liquor was pushing this room toward trouble. Lineer saw two Nye men move away from the others and take up positions farther up the bar. In a moment another Nye hand followed. Keck shot a glance at them and then held his eyes steadily on Folsom. Ed Ware was frowning helplessly.

Folsom grunted triumphantly and dropped his arms. He squinted up at Keck, his face judicious.

"How're them black bulls doin'?" he demanded.

"Good shape," said Keck.

"They ain't either. Don't feed me that stuff. Them fancy slobs won't rustle for themselves."

Folsom missed the sudden pull of muscles at Keck's jaws.

"I know cattle," he went on. "I spent my time pushin' 'em out the brush too. Nobody's gonna fool me about cattle. And I'm telling you them black bulls won't rustle. Ain't that right, Ed?"

"Now, Jess—" began Ware.

"Of course they won't." Folsom peered at Keck, threw back his head and let his good humor roll out again. "Harry's all right," he said. "He just ain't gonna admit old Nye got stuck with them fancy black bulls." He reached forward suddenly. "C'mon, Harry. Upsy-daisy."

In the moment that his huge hands closed against Keck's ribs and applied their pressure, Keck bent his own arms and brought the points of his elbows down in short, sharp jabs. But the elbows struck the stiffened muscles of those great, rounded forearms and slid off. It threw Keck forward and their heads met with a flat, cracking sound that went all around the room.

Lineer and Thomason moved then with such a precision that it almost seemed as if they had planned it in advance. Thomason was a fraction of a second faster in grasping Folsom's right forearm with both his hands. Lineer took the left forearm. He felt instantly the immense power of the man and threw

his shoulders into a hard downward shove before Folsom's hand unlocked from Keck's ribs.

Folsom stood without resisting, looking foolishly at the hands gripping his arms and looking up, first at Lineer and then at Thomason. It was in that moment that Keck's fist crunched into the soft, round blob of his nose.

Lineer sent a curse of purest anger after Keck as the slim man danced back, and then devoted his whole attention to Folsom. Folsom's eyes blinked. A child-like surprise, simple and unbelieving, spread across his face. Blood gushed from his nose and dripped from his upper lip and made twin streams around the sides of his mouth.

His eyes peered into focus. He tasted the blood and he tried to raise his right arm to wipe the sleeve across his mouth. Thomason held the arm tightly. "Steady, man," he said. Folsom rocked a little, seeming to grope back in his mind to find the memory that told him his arms were pinioned.

"What?" he mumbled. "What?" He licked at the blood. "Godamighty!" he screamed. He drove the imprisoned right arm back and forth like some great piston plunging wildly loose in its orbit. "Steady, man," said Thomason. "Steady, man. Steady, man." He said it over and over as he rode the careening arm, straining with the whole weight of his body to force the arm down.

Folsom threw himself back against Lineer. He used Lineer's body like a bracing wall for his bulk, and he pulled the right arm into his side and then flung it forward and outward with a crazed fury. The fist of it sank into Thomason's belly like a battering ram.

Thomason's grip loosened and the great arm twisted and jerked upward and was free. Thomason moved in again instantly. But the forearm struck him full across the chest and spun him backward.

Lineer made his decision then. Folsom must go down quickly. Everything depended upon Lineer's speed and power. This room was just seconds away from a disastrous brawl. Lineer freed the other arm, side-stepped to the left, balanced his weight and sought the vital spots in that wet, purple face.

This man before him had a prodigious animal vitality. But he was flesh and blood and bone. He could be felled as an ox is poleaxed. Lineer gathered the whole of the power of his body and launched it with cold calculation in two aimed blows.

THE left struck fair on Folsom's temple and did not glance off. The right found the jaw, thudding home with a controlled and deliberate wickedness.

Folsom's head went back and then his body. He caught himself with a backward step. He lurched forward for one uncertain step and sank to the floor. From his lips came a low, animal whistling that was lost in the soft smack of flesh against wood.

Lineer moved back against the bar, feeling the reaction in the sudden need of effort to fill his lungs and in the sharp pain in his hands. He faced up to the sudden quiet, soberly waiting.

Someone reached to the bar, grasped a brown olla and spilled its water down into Folsom's face without a word. Someone else squatted, raised Folsom's head and pushed the rolled wad of a jacket beneath it. Others crowded forward, looking down curiously.

"He had it coming," someone said.

A voice—the man who had raised Folsom's head—said dispassionately, "He didn't have to cold-cock him."

Young Ware moved to Lineer's side. He looked at the man who had spoken and then around at the Ware hands. "Jess started it. You hear?"

The silence ran on, and Ware called sharply, "Jake. Lefty. Take him to the

DOES LOTS MORE
 THAN KEEP HAIR
 Looking Handsome

Let This HIGHLY SPECIALIZED
 Hair Tonic Show You How

Kreml contains a special combination of hair grooming ingredients which is found in NO OTHER tonic. This is why it keeps hair neatly in place longer. Gives nice healthy-looking lustre, to single application of Kreml in morning keeps hair in perfect condition all day long. But Kreml does more than this—

NEVER SMOTHERS
 DOWN WITH STICKY

Kreml never gives hair that cheap, greasy or leather look. It never leaves hair feeling sticky, gummy or greasy. Your hair and scalp always feel so CLEAN with Kreml—kind of hair "she" likes to touch.

IS YOUR HAIR SO DRY
 IT BREAKS AND FALLS?

Kreml is fine to lubricate a dry scalp. And if your hair is so dry it breaks and when you comb it—start with Kreml at once. Let it make your hair feel softer, more pliable and looser if it had some 'body' to it. At the same time Kreml removes loose dandruff and leaves the scalp feeling so alive—so 'hygienic' men, take better care of the hair you've got. Use Kreml every day to get a 'head-start'.

fighting. I've never seen anybody para-
lyze a man that quick."

It was middle afternoon when the
caravan of three coaches plodded up a
canyon to a high ridge of the Oscuros.
The wagons twisted slowly down then
through a mile of juniper and blinding
white limestone, and so came upon a
small valley.

"Flick's Tank," said Wilson Ware. "We
spend the night here."

Colonel Edwards opened his eyes,
closed them quickly against the glare and
then reopened them carefully to a squint.
Old Jubal Nye dozed on, his head thrown
back against the seat. Lineer twisted
around until he could see ahead the
sparkle of water in an earthen tank. The
bed wagons and chuck wagons already
were unloaded on the slope above it. Still
higher up, two men were staking the tent
for the women.

Last night, their first away from the
river, they had camped around a hoof-
pocked tank on the high tableland where
soapweed and sagebrush stretched away
to a gray void. And this morning the
west wind had come up stronger than
usual, pushing at them throughout the
day, flinging red-gray dust after them,
pursuing them even after they reached
and began climbing the clean Oscuros.

The coach stopped. Edwards stepped
out, followed by Ware and Lineer. Jubal
Nye emerged last, his long legs stiff and
slow. Edwards glanced back at the sun,
still high in the west.

"Why are we camping so early?"

"Man, it's fifteen miles to the next
water," boomed Ware. He was stamping
his thick legs and biting at a fresh cigar.
Two days in a dusty coach could not
disturb the vitality of this man. "We
could never make it today."

Edwards asked, "Is water so far apart
everywhere in this country?"

He turned to Lineer for his answer;

HIGH LIFE BEER

and Nye turned too, giving Lineer close attention. "That kind of water is it?" Edwards' suddenly was sharp. These two in the road to Tularosa Valley there been little railroad talk. Edwards been the affable guest. Now, for reason not apparent, he was again the president of Great Western, the crisp captain of railroads.

"High mineral," said Lineer. "Mostly magnesium. Lots of sodium." "Hard as hell on boilers?"

"Would be."

"Can you run a railroad with it?"

Thomason ordered analyses on it," Lineer. "When he gets back the we'll have a definite answer."

"You know this country, Jim," persisted Edwards. "Give me your best estimate."

Lineer considered his answer, meeting ready insistence in Edwards' eyes. Lineer and Nye waited without expression. Lineer pondered fleetingly if they understood how vital was the question to him. They did know it was important, for they dominated a country where men fought endlessly and died. And they were shrewd men and did not miss the inflection of a voice.

a man who controlled a sprawling empire of rails was giving his personal attention to a local coal road through an isolated valley. And there was his spoiled daughter who was to marry Thomason—why was she here where no woman belonged?

Lineer swung restlessly about, watching the second and third coaches stop. Beyond them the horse cavvy was coming up. Tracy Thomason stepped out of the last coach, giving a hand to the two women. Barbara Edwards' cheeks were dusty, but she looked surprisingly fresh.

Wilson Ware's nephew emerged last from the coach. He stood a moment facing Thomason, a trace of anger showing on his round face. The taller Thomason looked down at him with a half-humorous smile. Young Ware walked away, turning once to shoot a puzzled glance at Barbara. She did not notice, for Thomason was speaking frowningly down to her. She answered with a quick impatience. When he offered his arm she turned abruptly from him and walked alone to the group about her father.

Thomason followed, his face stubbornly set, the sudden stiffening of his gait revealing the moment when he became aware that half the party had witnessed the incident.

They know that water, just any water, is enough to run a railroad? It had water that would not foam and scale boilers and blow engines and men to come.

Lineer said finally, "This is part of a disagreement between Thomason and me. You taking up that disagreement?"

"I would say: ground water, no; rain water, yes."

"I still want to bring it down from the mountains?"

"That is the plan I submitted," said Lineer. "I've heard nothing that would change it."

Edwards nodded and said no more. Lineer held his eyes on Edwards for a moment with his lawyer's keen attention. He sent a speculative glance at Barbara before he turned away wearily, a blanket and stretched out. Wilse watched Edwards, his black eyes with his direct curiosity.

Lineer knew what was in their minds. Lineer and Edwards did not do things with Thomason. He had insisted, in their presence, that Lineer commit himself on the point that a chemist's report would be beyond doubt. He had made public knowledge of Lineer's plan to flume water from the Sacramento, and identified Lineer's plan. Why?

There was no obvious answer. This was a part of larger questions that had challenged Lineer these last three years. He still could not understand why

Barbara spoke to her father, nodded to the others and walked on toward the tent. As she passed close to Lineer she gave him a direct, smiling glance. He saw the faint paleness of anger beneath the curve of her lips and the furious glints in her green eyes.

Thomason stopped at her father's side, his eyes following her for a moment before he met Edwards' inquiring gaze.

"It's nothing," he said easily. "The strain of the day."

Edwards turned to watch his daughter's retreating back. There was bafflement in his expression, and resignation too. Yet it was clear in the way he watched the swing of her erect shoulders until she stooped at the tent flap that he had a father's deep pride in this girl.

Molly Riordan passed them on her way to the tent. Her glance moved over Thomason briefly and without expression. She smiled at Colonel Edwards.

"Like it, Molly?" he asked. Always there was a gentleness in his tone when he spoke to this girl. Seemingly she was a servant. Yet the comradeship between the two girls belied the relationship of mistress and maid. And Edwards treated her with the same affectionate courtesy he showed his daughter.

Molly's eyes swung around at the black juniper rim of the little canyon. "I—I don't know yet, sir," she said. Her head was poised as if to catch some distant, mysterious sound. "It's so faraway like." She dropped her head and hurried on up the slope.

The camp began to take shape. Wagon hands spread more blankets. Wagon tail-gates set on blocks became a table. Even snowy linen appeared. Young Ware found bottles and glasses. Molly came out of the tent. The slim, graceful figure of Harry Keck moved around from the wagons. He went directly to her, speaking some word that brought pleasure to her face. He offered his arm. She took it hesitantly.

Off to the left, Jess Folsom's high, rasping voice said, "Now that's right nice." Keck swung half around to give him a long challenging stare. Molly Riordan kept her arm in Keck's, looking up at him uncertainly. Folsom's grin was friendly. His squat body was spread back against a wagon wheel. Yesterday he had shown that same friendly grin to Lineer, and no word had been spoken of the fight. But Keck, when he had ridden by once quite close to Lineer, flashed down at him a glance that held the cold shock of deadliness in it.

Colonel Edwards called to Lineer. He pointed over the valley slope to the southwest, where a black-shouldered peak rose to a rounded white crown of broken limestone. "You could delude yourself that it's a snow-capped peak," he said.

"I think we can see part of the Tularosa country from there," said Lineer. "Want to ride over and take a look?"

"Thanks, no, Jim. My old bones wouldn't stand it today." Edwards turned and walked away.

"I'm game," said the voice of Barbara Edwards.

LINEER turned in surprise, for he had not seen her leave the tent. He said, "It's two hours up to that peak. And rough."

"I'm still game," she said.

Thomason strolled over. "That's no ride for you Barbara," he said.

"I don't see why not." She looked up at Lineer, adding, "If Mr. Lineer will invite me."

Thomason stepped to her side. "Barbara, I don't want you to go."

"There is no good reason for you to take that attitude, Tracy," she said. "I'm going."

The muscles tightened in Thomason's cheeks. "You may not go," he snapped.

Lineer expected sudden temper, and he was not prepared for her smile as she said coldly, "I still go where I please and when I please, Mr. Tracy Thomason."

Thomason bent forward as though he longed to grab her shoulders and shake her. Then he controlled himself, matching her coldness. "Has it occurred to you that maybe you are not wanted?"

They turned expectantly to Lineer. Over Barbara's head Lineer saw that Colonel Edwards, ten yards away, was watching him too, half smiling and oddly intent.

It was an issue now. Created from nothing, it had grown into a quarrel in which Lineer must earn the antagonism of one or the other of them and, in the end, the enmity of both. For he sensed that this was part of a larger clash of wills that, when ultimately decided, would give a pattern to the marriage of these two. His instinct was to side with Thomason. He did not want to ride with this tempestuous girl. But in that moment he met Thomason's eyes, and the pale flakes of them gleamed with a threat that was bare and real and hot.

Lineer called to a Nye hand, "Saddle that big bay and a gentle one." He turned back to Barbara, speaking shortly, "If you have a heavy riding habit, get into it. This brush is no respecter of persons."

Thomason wheeled away without a word and flung himself on a blanket. Colonel Edwards studied Lineer with a long, slow regard. Up near the water tank Molly Riordan smiled at Harry Keck, dropped her arm and followed Barbara swiftly to the tent.

(To be continued next week)

BEHIND YOUR STICK OF GUM

BY FRANK JELLINEK

Chicle traverses a grim and dangerous trail—from the steaming jungles of Mexico to the counter of your drugstore

IN AN average nonwar year, the people of the United States spend about \$100,000,000 on chewing gum. Every day, the City of New York champs its jaws on \$12,000. The U.S. manufactures nearly all the chewing gum in the world and consumes nearly all of it. Advertising, manufacture and wrapping cost the manufacturers millions.

Behind these statistics lies the grim story of the jungles of Campeche and Quintana Roo, in Mexico's far south. For reasons not yet fully investigated, only these two sweltering, mainly unexplored regions where the Gulf Stream rises can produce first-class chicle, the gum from which the finished product is made. There are 50 ingredients in a stick of gum, but the basis must always be chicle. And the gathering of chicle is a little-known story.

There are few more hazardous big-scale industries. There are few where working conditions are so dangerous and primitive. Chicle, although it is refined in model factories before it reaches your teeth, traverses a trail of blood, mud, sweat and tears. Even improvements made during the past few years have been able to do little to remedy conditions. Nothing can alter the fact that a good crop depends on rain and a good harvest on the workers' ability to climb a 60-foot *chico zapote* tree with nothing more than a rope and his feet.

No one has yet been able to suggest any feasible method of financing or insurance. The retail price of a package of good gum has always been a nickel. The amount of first-class chicle inside the stick may vary from 8 to 30 per cent. This is the affair of the manufacturers. But down in the city of Campeche, a walled, historic port where the extraordinarily handsome white inhabitants attribute their looks to the pirate raids several generations back, huge fortunes are made and lost purely by the rains.

Seek Chicle Harvest in Steaming Jungles

The tall *chico zapote* tree is scattered about in the jungles, on land which is mainly Mexican state property. There are no stands of trees. The individual gum-rich tree must be sought through jungle which is not in the slightest colorful. In the Campeche and Quintana Roo jungles there is no profusion of orchids or picturesque birds. The jungle is hot, steamy, spiky and dark. Twenty thousand *chicleros* and their families live there ten months in the year.

The actual process of extracting chicle is much like gathering rubber. Groups of ten men and a foreman seek suitable trees. Each man slings a rope over a branch, shins up—climbing irons are now banned in Campeche for fear of ruining the trees—and cuts V-shaped slices in the bark. The bottom of each V joins the cut below, and they drain into a waterproof sack tied to the bottom of the trunk. When it rains the sap flows. When it does not, the tree, thus cut, may die.

It takes a tree five or six years to recover from bleeding, but it has taken at least 50 years to get it into a state to bear. Most of the trees in these jungles are very old indeed and were there long before Columbus discovered America. But in the jungle it is almost impossible to replant young trees. Creeper life stifles the shoots. You cannot—though it has been tried—make a chicle "plantation."

The *chiclero* may spend years in the jungles with only the briefest intervals at the fiestas following the end of the season. But he is an aristocrat of labor. It is a simple question of supply and demand.

The native tribes of these remote regions will not undertake the dangerous work. The *chicleros* come from all over Mexico. They are sought far and wide. It is no work for unemployed bums. It is not every man, not even every Mexican, who can climb the bare trunk of a 60-foot tree, delicately cut the bark—and, above all, live ten months of the year

in the jungle without running amuck.

The risk of the whole industry is increased by the system of "advances." The men are recruited by contractors, most of whom live in the city of Campeche. At the great fiestas in May they hire their men. A good *chiclero* can produce about 1,000 pounds of the latex in a season, worth about \$260 to him. The workers are paid according to what they bring in. The contractor, who has received cash in advance from the U.S. companies who need the chicle, offers the worker an advance of nearly half.

Nowadays in Campeche and Quintana Roo, there is almost nothing to prevent the worker taking the cash and disappearing. Besides, if the rains do not come, it is not the worker's fault that he cannot deliver his quota. The loss is passed on to the contractor and eventually to the company. It is not permitted to set off a worker's deficiency for one season against the next. The worker starts clean when the season begins each May.

Neither the companies nor the contractors have any method of insuring themselves against this kind of loss. The Mexican government had a scheme by which it collected a fund based on \$7 per quintal of 101 pounds—all chicle in the raw state is reckoned in quintales—to pay off arrears to the U.S. companies, but when the rains failed in 1944 and '45, the plan had to be postponed. The companies, Campeche contractors think, lost about \$15,000 in 1944, a bad year, on advances to the contractors. Of course, they recouped a great deal during the war, since the armed forces were chewing 600 sticks per head as compared with the usual civilian average of 107.

The contractors who do the companies' work locally, taking concessions from the Mexican government for thousands of jungle acres, finding the workers, appointing the overseers and becoming responsible for the whole process from tapping the trees to delivering the grayish bars of the *quintales* to the company offices in Campeche or the Yucatán capital, Mérida, are usually as

tough as they come. Most of the old-timers began as explorers, workers or overseers themselves. Their tough straw-ber characters were forged by years of fighting the jungle.

Until a few years ago, only 37 of the exploited millions of acres. Now there are 97 in Campeche. In the old days they drove their workers into the jungle in May and kept them there, virtually slaves, until the following February. They raided each other's concessions with gun and fire. In Quintana Roo, which is a federal territory, not a state, the contractors are often still warring and they still raid.

Where Law of the Whip Governed

Both Campeche and Quintana Roo have been unionized and government-controlled for ten years. But in Chiapas, where the second-class reddish latex is produced, there is no union and no government committee. There are unlimited virgin jungles and the law of the whip, wielded by overseers appointed by the contractors—men to whom Sir Legrec would have seemed a sissy.

The big contractors have to be gamblers. Some have made fortunes. But if they go bankrupt, they can always return to their old profession as overseers. They often do. They were trained in the old days, when it took 14 days to reach the jungle "centrals" on horseback, and there was no way in or out for ten months except through "breaches." These were worn in the forest paths between the solid walls of the great lianas, behind which lay the horrors of the unknown. A breach stood armed men.

Twenty thousand men, women and children in Campeche and almost as many in neighboring Quintana Roo live a strange life to provide Americans with chewing gum. In May, there is a fiesta at Tenosique, on the noble Usumacinta River, where the chicle workers already given their advances in Campeche, foregather to buy their tools, two cutlasses and collecting bags—to take leave of civilization. actors' men slink around the booths, lighted by oil flares, pouncing on the last recruits for their crews. Shotgun rotgut rum is sold illegally. Bedraggled women display the last of their charms, hoping to be taken on as "cooks" in the jungle centrals. Young fliers from the big contractors' outfits wander around the plaza seeking adventure.

The families gather. Some of them will walk through the breaches for days until they reach their workplaces. The more skilled workers will be flown in, with medicines, big boiling pans and ten months' rations bought, by law, at wholesale prices. Whole conglomerations of Indians and half-breeds prepare for ten months in the jungle.

They go up to the *monte*—the scrub country—long before the rains begin. They settle down, clear a space for subsistence crops, often imperiling vast regions of tinder-dry jungle by burning of the undergrowth. They build their homes—four bamboo poles and a thatched roof of big flat leaves—against the north wind. The rains will not come before August or September, but before that the jungle must be surveyed. The

of chewing gum. The more enlightened do chew gum, but they consider it an exotic habit.

The romance of chicle goes back possibly thousands of years. It began, long before Columbus, in the strange civilization of the Mayas. Embedded in the ruins of Uxmal, in Yucatán, is a *chico zapote* tree trunk at least 700 years old. The Mayas made the gum into balls, believing it was a kind of rubber. With these balls they played a game somewhat like basketball.

Three hundred years later, an exiled Mexican general, called Antonio Lopez de Santa Ana, met a New Jersey merchant, Thomas Adams, on Staten Island. Adams noticed that his friend was perpetually chewing on the bark and resin of the *chico zapote* tree, which grew near Santa Ana's estates in Veracruz.

Adams, like the Mayas, thought the gum was a new kind of rubber. But when he realized it was not he flavored some of it with licorice and founded a new folk habit.

The masticating habit has obviously come to stay, but the supply of first-class chicle is dwindling. Campeche old-

suspicious characters haunting the hot cafés of Campeche, where they offered attractive prices and no questions were asked.

There is more than a suspicion that, although the bad seasons of 1943 to 1945 led to official statements that not half the allotted quotas had been filled, a good deal of the chicle was smuggled out of the jungles to unknown destinations. For even the most unscrupulous manufacturer needs at least some chicle in his gum, and transportation difficulties and enemy occupation had cut the supply of second-class gum from Chiapas, Guatemala and the British Malay States.

In recent years, the Mexican government has developed a widespread inspection and supervision service in the jungles. When outside companies tried to buy chicle in midseason, they were refused permits. On the other hand, the government has for years prevented the big companies from monopolizing the whole yield and fixing the price.

In addition, the government, through the Chicle Committee in Campeche, founded in 1939, sees that workers receive a fixed price, known in advance, for a given amount brought in, food at wholesale prices and medical attention. The Chicle Workers Union gets cash contributions from the Committee and has equipped a much-needed hospital in Campeche with 85 beds. It expects to open a larger hospital shortly. Eight thousand of the 12,000 employed are Union members. But the old-time contractors still prefer to recruit their own men.

The contractors do not belong to the all-powerful Committee. They even complain that they are not permitted to enter its offices. They must, however, pay a contribution to its upkeep and they are subject to inspection out at the centrals and *hatos* where the chicle is boiled and collected.

A Losing Battle in the Courts

The reason for government control is that the jungles belong to the state. The one big private concession, the Mexican Gulf Land and Lumber Company, acquired by U.S. investors some 40 years ago and covering half a million acres of uncharted chicle and lumber jungle, was recently expropriated after a five-year struggle in the courts. It had never produced very much chicle.

Despite all modern improvements, the getting of chicle will always remain a hazardous and perilous business. Possibly the very hazards and perils, the easy, though hardly excessive, profits will always attract adventurers until the trees are drained dry.

Men seem likely to go on climbing the 60-foot trees, waiting for the rains, collecting sap and brewing it over the great fires.

Campeche and Chetumal bask in the tropic sun. In the company warehouses, the clerks count the quintales, separating the gray blocks from the red squares that are inferior stuff from Chiapas or Guatemala. In Quintana Roo, colonels with federal concessions plan raids across the borders of their breaches. Over the fires at the centrals, where the bubbling *chico zapote* sap is deprived of its humidity and formed into the rough bars that will be shipped to New Jersey, squatting men tell legends of blood and terror.

In South Bend, Indiana, an irate theatergoer removes gingerly from his pants the gob that has permitted an overworked stenographer to get through the day without succumbing to hysteria. That gob represents the extraordinary risks accepted by a whole series of men thousands of miles away, about which most of South Bend and the rest of America has never conceived even the remotest idea.

THE END

"Why don't you refill all of your tires, Jim?
The air seems so fresh and clean here!"

COLLIER'S

BEN ROTH

precious Gulf Stream, fifty miles away from the coast, may make fast work necessary. Meantime, the crops must be grown, because in remote Campeche, where the airplane is more familiar than the truck or train, food at the company costs a dollar a day.

After the rains come, there is again wild fiesta in honor of All Souls and All Saints, when the contractors have to drink in genuine rum. Otherwise the workers will always fall for shotgun liquor and bootleg a quintal of chicle—two weeks' pay—for one night of forgetfulness of the jungle obsession.

At the end of February, the season's work is finished. The workers descend in on the towns—Tenosique and Campeche. The contractors pay in cash. The respectable inhabitants of Campeche stay home all day and all night for two weeks. Then the cycle begins again.

Though there is little compulsion, the personnel of the *chicleros* does not vary much from season to season. The advances in cash and the temptations of the *atas*—in which the contractors are often not wholly disinterested commercially—work a sinister attraction. At very few of them understand why they are thus working. They were hired to extract chicle. They have not heard

timers give it 15 years at most. All the trees have been discovered, they say. The jungle has been charted, so far as the *chico zapote* possibilities are concerned.

When the rains failed in 1944 and '45, losses were very considerable. But such disasters may actually prolong the supply of first-class chicle, if everyone concerned in its production does not go bankrupt first.

Chicle has never been of any use for anything except chewing gum, and good chewing gum has never been made without chicle. During World War II, the U.S. Rubber Reserve, the Desmond Company and others tried to revive the ancient Maya idea of making rubber from the *chico zapote* resin. They were not successful.

A black market in chewing gum developed, however. The bulk of the big companies' production was set aside for the U.S. armed forces. Smaller companies sprang up or raised their production for civilian demands. Mexico itself, where chewing gum had hitherto been virtually unknown, began to chew, and small factories were opened. Fifteen per cent of the crop was set aside for "national consumption," but the contractors say that much of this was bootlegged out. They all have stories of

Manufacturers—and, of course, Bert Buell—he's the worst enemy we had."

Mr. Ashcraft shrugged and okayed the cost sheets.

"Maybe you know what you're doing," he said.

"When I get Bert Buell into this little nest," said Charlie, "you'll apologize for doubting me."

By now the Grand Embassy had been dusted, scrubbed, painted, refurnished and the sheets had been laundered. Marble gleamed, chromium glittered and everywhere you looked you could find cordiality, humility and new potted palms. One by one the old customers were beginning to forgive and forget. But it was still a struggle and Charlie was busy and happy. Miss Enright, his secretary, would stagger home on Fridays all but weeping with fatigue.

"Ye Gods, what a live wire!" she said once to Susie. "How do you stand living with him?"

"You see more of him than I do," Susie said.

And that was true. Charlie had a theory that five hours' sleep was all he needed. Day and night he'd come dashing into his suite for thirty-minute cat naps, thus giving the impression of working around the clock. He was an inspiration to the staff.

"Ah, Susie!" he'd cry, throwing himself on the bed. "There's nothing like hotel work to burn up excess energy. No waiting around here, like there is in the Air Corps. Nobody stays forever—they check out sometime, and you have to get 'em back. And think of it! Right under this roof there's love and anger, birth and death, murder and suicide—and hundreds of employees all speaking different languages, most of which I'm planning to learn. Why, this business can keep a man excited his whole life long."

CHARLIE hit hard and got away fast. Conventions that had been abandoned to places like Okinomweok pocketed their pride and signed up again. Lawsuits were settled for a gin and biters in the Cock 'n' Feather. The Seven Marchetti Brothers, earnest acrobats whom Charlie had first seen leaping about in a USO spotlight at Lingling, were packing the Tiger Room to the walls, twice nightly. The house count began gradually to climb.

Susie, who vaguely sensed the restlessness that came with each success, could always hearten Charlie by reminding him of Bert.

"Ah, yes," he'd say, brightening at once. "He won't collapse like some of these other sissies. He'll go down fighting, see if he doesn't!"

H. Bertrand Buell's fury was unabated. He slammed doors, banged down receivers, sent back unopened letters; flowers, bottles and candy were coldly refused.

"They don't come any tougher,"

Charlie said, admiringly. "Why, I wouldn't be surprised if it took me a coupla years to calm him down."

But one day, after he'd landed the National Association of Glove and Parka Manufacturers, Susie found him in the suite reading a poultry journal. He was very depressed.

"Darling, what's the matter?" she asked anxiously.

"I'm not sure the Cock 'n' Feather was such a hot idea," he said, morosely. "These guys are getting to be pushovers."

Susie aimed her random arrow.

"Well," she said, brightly, "you've still got Bert!"

But this time it didn't cheer him.

"I can outthink H. Bertrand Buell," he said, flipping pages listlessly.

"How do you know?"

"I've been working the angles on him," he said wearily. "Reports are coming in. He's beginning to crack."

"You mean—he's going to stop here?"

"Looks like it," sighed Charlie.

"But, Charlie! Even if he does, how'll you get him down to the Cock 'n' Feather? And if you do get him there, will he drink with you?"

Charlie put the magazine down and paced the room. "And then there's Mrs. Buell," Susie reminded him.

Charlie lit up.

"That's so!" he said. "Maybe I'll make another trip to Toledo."

He came back from Toledo and sang in the shower and Susie was bewildered but happy again.

And then, one bright August morning, Kenneth Ashcraft bolted into the suite at breakfast time.

"Charlie," he cried, "you've done it!"

Charlie Squires broke off a piece of toast.

"What now?" he asked, indifferently.

"Bert Buell's in the penthouse. I've sent up a basket of bananas and oranges."

Charlie's face went white. "Is Mrs. Buell with him?" he asked.

"No. She's at home in Toledo. He's traveling alone. Go get him, Charlie!"

Charlie reached for the phone. "Mr. Buell?" he said, briskly, in his professional manner. "Anything I can do for you this morning?"

Then a slow grin tugged at his lips; he put the receiver down and gave it an affectionate pat.

"Well?" shouted Ashcraft. "What'd he say?"

"Great guy, H. Bertrand," said Charlie, hitching up his belt. "He's still sore. Hung up on me." He paused in the doorway. "Ever notice Bert's fraternal emblems?"

"What about 'em?" asked Ashcraft.

"I'm gonna use psychology," said Charlie. "I'll hogtie the guy with his own watch chain."

"Hold on!" cried Ashcraft, who always liked to be in on the kill. "Where'll I meet you?"

"Wait in your office," Charlie mysteriously. "And let nothing you." He came back and kissed her. "This is the World Series, Sw," he said.

H. Bertrand Buell sat in the living room bulging in two monogrammed blue shirt. It was that he'd been an economics before he'd joined the Roadman that wasn't all he'd joined. chain sagged with emblems, orders and secret societies, clubs, luncheon clubs and the his left hand he wore a ring spelled: BERT in small diamonds. His name, H. BERTRAND BU, traced in gold on the buckle. Charlie had thought of this brave display of jewelry concluded this about him: H. Buell was a man who was sure he could get in. He joined.

HE WORE pince-nez on a cord. When Charlie came perched them on his nose and mouth to speak.

But Charlie interrupted. "Buell," he said, sharply, "make something clear to you here at Mr. Ashcraft's in."

Bert got up.

"Asked me!" he roared. "Why, damn you, Squires, you bagged me. My banker, my chief of police of Toledo, begging me to give you a chance." He shook a big finger at Charlie's nose. "You tell control my own convention money, I've committed no checked in here as a court friend of mine and now I'm out."

"Good," said Charlie.

Bert's jaw sagged.

"What did you say?"

Charlie looked him over.

"We're all booked up," he said.

NOW READY... 4 majestic new volumes about a world-shaking decade!

10 EVENTFUL YEARS

A comprehensive, universal record of the secrets and successes, the songs and sadness, the progress of civilization in every field of activity during History's most stirring decade

Would you like to hear General Wainwright's own story of Corregidor... or read a biography of F. D. R. by Mrs. Roosevelt, herself... or learn about World War II from General Marshall's own words? You'll find them all in 10 EVENTFUL YEARS!

Gathered together, as only the Editors of Encyclopaedia Britannica could gather them, are countless thousands of facts, many that were formerly top-secret, about the wonderful, the progressive, the nightmare years of 1937-1946. Many of the articles were written by the very people who lived, and often directed, the events they describe.

In this massive reference work, the jigsaw pieces of a spectacular decade fit together into one clear picture of political, social, scientific and cultural trends... everything that History will consider important from those years. Fashions and foibles, too, are recorded... from hep cats and movies to Wrong-Way Corrigan and The Big Apple!

Though World War II occupies only a fraction of the 3,450 pages of 10 EVENTFUL YEARS, still, this great work contains what is undoubtedly the most comprehensive resume yet written. You will read never-before-revealed accounts of submarine warfare... dramatic revelations of Army, Navy, Marine and Air combat.

10 EVENTFUL YEARS is more than a stirring history of an epochal decade. It is more than a mammoth storehouse of valuable information. It is a *Diary of Mankind* through ten fabulous years... a literary master work that you and your children will read, use and treasure always. Send the coupon today!

A GREAT LIVING RECORD TO READ AND TREASURE

- 4 Large Volumes
- 800 Contributors
- 3,000,000 Words
- 1,600 Articles

CHICAGO 14

ILLINOIS

The old man put both hands on the desk.

"I can't believe my ears, Charlie. Mr. Buell says you insulted him!"

"Oh?" Charlie's tone took on a note of surprise. He put his cup down. "He got it, did he?"

Bert Buell arrived and pointed a quivering finger

"That's the way he talked to me upstairs! Fire him!"

Charlie tilted back in his chair, put his feet on the desk.

"Mr. Ashcraft," he said, flicking his cigarette, "if you want Bert Buell in this hotel—you book him. And if you book him—you handle him." He picked up a letter. "And if you don't like what I'm saying, here's my resignation!"

Kenneth Ashcraft was patting the wall trying to find the button.

"Now, boys!" he cried as the panel slid open. "Let's have a friendly little drink in the Cock 'n' Feather." He grabbed Bert's arm and shoved him in. "There's been a misunderstanding. Let's straighten it out."

"Make mine tea," said Charlie. "I'll be damned if I'll drink with him."

But he patted the wall behind him, found the button; the door closed, and H. Bertrand Buell was in the nest.

BREATHING hard, Bert lowered himself into a red-leather arm chair. His cheeks were twitching.

"Now, then," he said, staring nervously at Ashcraft, who was making lightning motions back of the bar. "Look here. Damn it all. I've got a right to know what brought this on!"

Ashcraft missed his aim with the seltzer but managed somehow to pour two jiggers for Bert.

"Speak up, Charlie," the old man cried. "Cards on the table. Bring it out in the open. What's got into you?"

"I'll tell you what's got into me," said Charlie furiously, passing Bert his glass. "I'd slept in a ditch all night in Lingling—cold and miserable—and when the mail came, here was a letter from Susie telling me H. Bertrand Buell had kicked a sailor's seabag across the lobby in a childish burst of temper because he couldn't get a room! Didn't know there was a war on. Why, it made me so cockeyed mad—"

Bert was hammering on the table.

"I had a room," he shouted. "They threw me out of it!"

"Details," stormed Charlie. "Did you kick some poor gob's seabag, or didn't you? That's what I want to know."

"He had his reasons," screamed Mr. Ashcraft.

"They threw my wife and me of here into a blizzard," roared "Can you ask for a better reason than that?"

"Why, you knew that, Charlie," tested Mr. Ashcraft. "I told you self."

"Nothing of the sort," belied Charlie. "I didn't find out until peasant started throwing ash trays in Toledo."

But he allowed himself to be soothed. By then, Bert's glass had emptied three times and a yearning approval was warm within him.

end, Charlie reluctantly agreed to them for dinner in the Tiger Room even greater reluctance he promised to bring Susie. And when Bert recoiled away toward the elevator, Ashcraft said, admiringly, mopping his brow:

"I'm beginning to see it, Charlie dried the inside of his collar. "I'll hand it to you. You're a psychologist, my boy!"

"Tonight's the night," said Charlie grimly. "Never underestimate H. Bertrand Buell."

He slept three hours, the long he'd had since 1945, and then, at 10 o'clock, put on his dinner clothes and went downstairs with Susie to meet Buell. He was right. Bert was there and when Ashcraft joined them at the table he fired the first gun:

"I called Toledo and consulted Buell on the phone this noon, but he took my shower," he said, coldly had an interesting comment to about this hotel."

"What was that?" asked Ashcraft lightly.

"She wouldn't be found dead," Bert said.

MR. ASHCRAFT shot a glance at Charlie and found him smiling.

"Now, now," the old man interrupted hastily. "Let's have a drink. We be, Bert, old boy?"

"Tomato juice," said Bert promptly. "It may help the hang-over I've got. Smart guy, aren't you, Squid?"

Charlie was gazing at Bert with admiration.

"You're okay, Bertrand," he said, shaking his head. "You're fast on your feet."

"Don't sweet-talk me!" cried Charlie. "Come on, Ashcraft, order my drink and let me get out of here."

Ashcraft nervously called the waiter and it was then that Susie went on Bert. All sweet attention a

NEW • IMPROVED

SQUIBB

DENTAL
CREAM

special trial offer

It keeps on longer after the brushing stops

New improved Squibb Dental Cream is a new experience in longer mouth refreshment. It helps the cleaning by staying with your brush. It helps after the cleaning by staying longer on the job in your mouth. It's alkaline. It's flavored with natural oils—not synthetic. Stays soft in the tube—won't harden.

This trial offer guarantees your money back if you aren't completely satisfied. Just bring both tubes, even if empty, and the wrapper back to your dealer. He'll return the full 39¢. (Offer good only through Nov. 30, 1947.)

the alkaline dental cream

WEATHER: "RAIN" INSIDE YOUR WATCH

Scientists explain why
millions of mainsprings break,
and one doesn't

High humidity followed by a sudden drop in temperature sets up a miniature rainstorm inside of the tightest watch cases. For such conditions cause the condensation of a droplet of moisture. A tiny pin point of rust begins—and there is where the mainspring breaks. Rust is the commonest cause of mainspring breakage. The finest steel mainsprings ever made will rust.

But now comes Elgin's amazing new DuraPower* Mainspring. It's made of an entirely new alloy. The DuraPower Mainspring will not rust. Furthermore it retains its "springiness" indefinitely for greater accuracy through the years.

The DuraPower Mainspring eliminates 99% of repairs due to steel mainspring failures. Only Elgin Watches including Lord and Lady Elgins and Elgin De Luxe have this miracle mainspring, and at no extra cost. Look for the symbol "dp" on the dial. Also at repair shops for replacement in many previous Elgin models.

flashing smiles, she got a Martini down him, and another, and finally a third. She laughed gaily at his tired old jokes, admired his emblems, listened wide-eyed to the story of his life. Then she mellowed him further with onion soup and *poulet à la Stanley* with Château Yquem 1928. Then Cherries Jubilee. And, finally, Ashcraft's last bottle of V.S.O.P. brandy. It was the brandy that won him over.

"Mrs. Buell would like you, Susie," said Bert thickly at ten o'clock.

"She can never forgive us, I know," said Susie, fluttering her lashes. Then, appealingly, aiming for Bert's big heart: "Even if you take your convention to another hotel in October, I shall do my best to make her happy. I remember seeing her when you were here last time. She's beautiful."

"Beautiful," echoed Kenneth Ashcraft.

Charlie, sitting gloomily with his chin in his hands, felt a slipper against his shin.

"Yes, yes," he said, joining in. "Beautiful, beautiful."

Bert warmed a big brandy snifter between his palms and drank it down. His eyes were like marbles now. He fixed them on Susie.

"When I tell Mrs.—" Bert paused.

"Buell," said Susie, helpfully.

"Yes. When I tell Mrs. Buell about you, Susie, everything's going to be all right." He splashed more brandy into his glass. "After the floor show," he said owlishly, "let's all get together and set the dates."

"Hear that?" cried Mr. Ashcraft, patting some spilled wine with his napkin. "Hear that, Charlie?"

Susie signaled the roving photographer to take their picture. A beaming group—all but Charlie, who was sadly drawing a map of Lingling on the tablecloth.

Susie nudged him again.

"What's the matter?" she formed with her lips. "What is it?"

Charlie glared at Bert. "Quitter," he said, under his breath.

It was at the roll of the drum announcing the floor show that an idea struck him, spiraling into his mind from something Bert had said. He'd had drink for drink with Bertrand but his head was clear as a bell. It seemed to him that with this final conquest the best challenge in the hotel business was gone forever, the last beckoning light had fluttered out. But now he sat straight, his interest returning.

Bert had said, "I was an acrobat for a while, when I was a boy."

"Not really!" Susie had been surprised.

"I know it's hard to believe," Bert told her, patting her hand. "I've put on so much weight and all. But I wasn't bad. Toured a whole season with a circus once."

Charlie pushed his glass aside. "Excuse me a minute," he said, getting up.

He ducked under the spotlight, circled through the darkness behind the orchestra platform and hurried to a dressing room.

THE Seven Marchettis were flexing their big muscles, wriggling the toes of their large bare feet, doing bends. They were astonishingly healthy considering that they never breathed fresh air except when riding in cabs to railway stations.

"Our friend Charles!" Tony Marchetti cried, flashing his white teeth. "You have a ringside table, no? Tonight we dedicate our act to Mrs. Squires."

"You'll do better than that," Charlie said, waving them into a huddle. He whispered earnestly until Tony suddenly backed away.

"You have had some quantities of wine, yes, my friend?"

"What of it?"

"But this, that you are asking, is very unusual, yes?"

"Who got you your job here?" demanded Charlie. "If it wasn't for me you'd be playing Kenosha."

The brothers looked at one another doubtfully. Then they all shrugged.

"We will do our best, Signor," Tony said. "The Seven Marchettis never forget a friend."

When Charlie came back to the table he was once again all affability and charm; Susie was relieved.

BUT when the Seven Marchettis returned to take their bow at the end of the performance they suddenly broke ranks and stormed Charlie's table uttering wild cries of delight.

"H. Bertrand Buell!" they cried. "Bert Buell! Allez-oo!"

There was a tumbling instant of confusion, an interlacing of arms and legs and then Bert Buell, pince-nez dangling, was sitting in the middle of the dance floor on the upraised feet of Tony Marchetti. Six other Marchettis on their backs in a circle lifted their paddlike feet in unison and presently Bert was

"Yes, I know your husband
is a schoolteacher, but what
does he do for a living?"

COLLIER'S JOHN JARVIS

sailing through the spotlight beam with the greatest of ease. The Marchettis were exact and gentle; their precision was a pretty thing to see.

But then something happened.

A shower of silver cascaded to the dance floor from Bert's gaping pockets and a roaring upswEEP of laughter ran into the veins of the Seven Marchettis like liquid fire. This was their first taste of stormy applause; never had they heard open palms banging in delight on night-club tables, nor knives hammering against highball glasses; never had they seen an audience helpless with laughter; it was heady wine. A latent sense of comedy welled up in them, and ignoring the piteous, surprised bleats that came from the whirling figure of H. Bertrand Buell they tossed him higher and spun him about in intricate patterns until his shoes, one by one, came off and his necktie snapped and fluttered to the floor.

When the audience could laugh no harder the Seven Marchettis carried his limp form away. But then the house came down in shrieks and whistles and Bert's sagging body was back for an encore. No sound came from Bert, though. No protest. No movement, whatever. And once again they carried him off.

"He's fainted," Susie cried.

"If this is a practical joke, Squires," Mr. Ashcraft thundered, "it's your last."

Charlie rose with dignity.

"Now," he said, "I'll straighten everything out. Just leave it to me."

"I'll handle this," snapped Ashcraft hurrying away.

They found Bert lying red-faced couch in the dressing room, his breeches dangling near the floor. Like Marchettis he, too, was barefoot, he lost his socks during the encore. Ashcraft propped him up and called loudly for water. The acrobats cried in a corner. Sobbing, Susie brought glass. In that crowded room Charlie was calm.

"Mr. Buell," said Ashcraft, hurriedly. "I apologize. My lawyers will be to talk to yours any time you say."

Bert struggled to an elbow. "Did that photographer get a picture of it?" he gasped.

"Certainly not!" said Mr. Ashcraft horrified.

Bert staggered to his feet.

"Well, why the hell not?" he demanded. "Get him in here!" The spotted Charlie and staggered across room to embrace him. "Good Charlie!" he cried, slapping him on the back. "Your idea, they tell me," crushed Charlie's disgusted face against his shirt front. "Fulfilled a long ambition," he babbled, shaking hands with everybody. "Nobody believed I once was an acrobat, even my wife. Get that photograph in here!"

Mr. Ashcraft looked on dazed. Bert climbed to the top of a pyramid on the broad backs of the Seven Marchettis. A flash bulb exploded. Bert waved to them.

"Book me up, Charlie," he said. "And, Susie, you be nice to Mrs. Buell during the convention."

Charlie stalked across to Kenneth Ashcraft.

"Well, why don't you fire me?" he demanded.

Ashcraft jerked his eyes from Charlie to Bert Buell on the pyramid and again.

"Never mind," said Charlie, bowing. "I quit. I'm going to look around a business with a little competition in it."

WHEN he'd finished telling the story, Susie said, "And we did it, too. All our turkeys got pneumonia. It was dreadful. But now veterinarians come from everywhere just to see Charlie. We're making a fortune out of it, dear?"

He was pacing the room. She followed him around, trying to kiss him.

"How's hotel business in Chicago these days?" he asked.

"Falling off," I said.

"Heard anything about the Embassy?"

"Down forty per cent." I told him.

He stopped. His eyes brightened. "How about Bert Buell?" he asked.

"His gang is all booked to Toledo next October."

"Is that so?" said Charlie, looking gayer by the minute. "What man Ashcraft? Suppose he'd put the old job again?"

I had to say it. You don't lie to Charlie.

"Not a chance, Charlie," I told him. "From all I hear he wouldn't let past the revolving doors."

Susie was watching him anxiously. He was pacing again, aglow.

"Hell, kid," he said to her, "raising is too damned easy. I was about the hotel business in the first place. Come on, Susie—on your feet. We need us, gal! Let's pack."

There were tears in her eyes. She looked slowly around that lovely room. But then she lifted her lips, smiling mistily. She loves the guy. She doesn't think she'll ever understand him.

THE END

AMERICAN LEADS THE WAY IN EXPERIENCE

PASSENGERS CARRIED

For ten years, American has led all domestic airlines in total passengers carried!

PASSENGER MILES FLOWN

American has led all domestic airlines since 1937 in number of passenger miles flown!

DC-6 SERVICE

American—first with regular DC-6 service—has the greatest number of DC-6 aircraft in operation!

NUMBER OF AIRCRAFT

American leads all domestic airlines in number of airliners in service!

ENGINEERING RESEARCH

American's engineering staff—employing the finest research facilities—has no equal in technical skill and knowledge!

IN FLIGHTS FLOWN

American, day-in and day-out, makes more scheduled flights than any other airline!

IN PERSONNEL TRAINING

American excels all airlines in intensified, thorough personnel training!

IN TESTING AND INSPECTION

American exceeds the rigid requirements of the Civil Aeronautics Administration in its testing and inspection of aircraft and equipment!

IN AIRFREIGHT SERVICE

American was the first airline to operate Airfreight service!

...AND, FOR THE FUTURE

...for continued leadership, American has on order more DC-6 and Convair transports than any other airline!

The Finest Flagship of Them All!

AMERICAN'S FIVE STAR

SPEED! More than 300 miles per hour—on only 65% of the available horsepower of its four powerful, Pratt & Whitney engines! . . . Unmatched climbing rate, 1500 feet per minute, brings it swiftly to high altitudes at which maximum speed and travel comfort can be enjoyed.

COMFORT! An entirely new experience in fatigue-free flight! . . . Automatic and complete air conditioning and pressure control . . . soft, roomy seats . . . and a host of other features—plus American's unsurpassed personalized service!

DEPENDABILITY! The most modern product of the knowledge and experience that produced the world-famous DC-3 and DC-4 . . . of years of research and planning—plus rigorous testing by American Airlines experts—including 300,000 miles of pre-service flight-testing.

THE WEEK'S MAIL

Continued from page 4

What would I do about it? Just go out and ask the average everyday workman or businessman who has not been hypnotized by a lot of high-sounding mumbo-jumbo put out by the psychiatric medicine men to fortify their own jobs.

First—Make punishment swift, certain and severe for both parents and hell-raising brats alike.

Second—Put a bounty (about 50 cents per head) on all the career-boy psychiatrists.

Third—Have the parents of the decent kids demand that their offspring receive at least their proportionate share of money spent for public education.

WILLIAM D. YOUNG, Bishop, Cal.

CAME THE DAWN

DEAR SIR: According to Mr. Jim Marshall (Life with Mr. Powell, Aug. 16th) I quote: "Bill was born July 29, 1892, in Pittsburgh. He first saw the light of day fifteen years later, when his family moved to Kansas City." I presume from this Mr. Powell was born blind, but recovered his sight when he arrived in Kansas City. Or is, Pittsburgh such a Smoky City?

J. ELLIOTT, Banff, Alberta

To see the light, sir, we suggest you move to Pittsburgh.

ZZYDD CORP.

DEAR SIR: Might I toss in a couple of items for the Zzydd Corp. formed by that Sarasota screwball Bandel Linn (The Week's Work, June 21st): I have (1) a Double-spring Padlock for those who like to bolt their food, and (2) a Bottomless Drawer in which to hide one's emotions.

FRANK COLE, Garden City, L. I.

GAGOMETER

DEAR SIR: Note your infernal machine, the Gurney Gagometer, designed to reject cartoons automatically (The Week's Work, July 26th). Beware! I've thrown together a countermeasure of loose bobby pins, a hot plate, some old bedsprings and a lawn mower. Completely automatic, it starts at the drop of an editorial NO!; is patented as

the Lichty Gag-Fired-Joke-Editor-Mincer & Distillation Plant; is collapsible, and can be carried handily from editor lair to e.l. in a steamer trunk. If cartoonist dies of overrejection on the way, he can be buried in the trunk—and be rejected wherever he goes.

GEORGE LICHTY, Chicago, Ill.

BLUE BABIES

DEAR EDITOR: A short time ago I met Ray West, a stanch citizen of Corpus Christi, and learned that his son had just recovered from a "blue baby" operation at Johns Hopkins Hospital in Baltimore.

[Collier's published an account of Dr. Alfred Blalock's new technique for operating on so-called "blue" babies in A Gift of Life, Apr. 6th, '46.]

In Auckland, New Zealand, Mr. and Mrs. R. J. W. Rose read the Collier's article and subsequently brought their daughter, Marie Stewart, five, to Johns Hopkins. She was operated on last May and released in June, a healthy, mischievous child.

The day after, Roy James, a boy from Australia, was admitted, operated on in

June and released the first week of August a healthy specimen of boyhood.

During the last year, how many "blue" babies have come to Johns Hopkins as a result of the Collier's article is not known. But Dr. Blalock has discharged 80 per cent of his patients as healthy, normal children.

BOB WILKINSON, New York, N. Y.

OUT TO LYNCH

DEAR EDITOR: Concerning your editorial One Cure for Lynching (Aug. 2d) I wish to quote: "Anyway, here's to Hurtsboro Mayor Vann. He's a man."

Why make Mayor Vann a national hero? Why not give the Negro maid, who helped my sister fight the Negro and prevent him from carrying out his criminal attack until help could be obtained, equal credit for job well done? Here's to Hurtsboro's Negro maid Pecola. She's the real hero.

JOHN M. CADE, JR., Tuscaloosa, Ala.

... From the security of his skyscraper office, the average editor cannot comprehend the ungovernable, despairing, compelling rage underlying the lynching of rural rapist.

His womenfolk have never been isolated hours on hours, day in and day out, in an unprotected farmhouse. Nor have they day after day hurried fearfully down lonely country lane at dusky-dark for the cows. When legal processes, unhampered by outside erratic societies and individuals make punishment of rapists certain, lynching will go the way of the old-time protective practice of stringing up cattle thieves.

H. Y. NOBLE, Shreveport, La.

... It seems difficult to achieve unbiased judgment where color enters in. If there could be some way that one's color could be hidden until the trial had ended, this might be possible. We are responsible for our citizens, and if the helping hand not given those born into unfortunate homes we should not mete out the same punishment to those less handicapped.

NORMA WILLIAMS, Santa Monica, Cal.

WAR PAINT

DEAR SIR: If the girls are going to fool then let them fool us, but I, for one, resist their turning the world into a giant powder room as they do on the cover of August 16th, preparing for the School for Character article in the same issue. Why can't girls keep the unpleasant facts in beauty parlor—you know, the place where the average girl spends half her time and two thirds of her money so she won't look like the average girl—but usually does.

GEORGE BELLAGAMBA, Bronx, N. Y.

BUNNYISMS

DEAR SIR: It's tough to top the malapropisms of Bunny McLeod (The Week's Work, Aug. 16th) but I have heard a mental lapses in my day. "Why don't come see me never? I live where the bends!" a vaudeville acquaintance mine once said. On our way homie from party she summed up sagely, "Well, much for the social annuities!" But I love her most dearly when she observed: guess I'm using the correct tick-tac. Maybe I wasn't because she later said, "must be psychopathic, you read my mind."

These are male-aprops I have heard. "Let me meditate it over!" "He must be muscle, no superstitious flesh on him!" can make a mistake, I'm not inflammable!" Of course, you probably know I Clark once advised everyone, "Don't my show if you can!" and Jack Norwicker cried: "I very don't like her!" We're trying to figure out what he meant.

JOE LAURIE, JR., Jackson Heights, N. Y.

Mr. Laurie's contributions, while hilarious are not the McQue except for Dave Clendenen which is a genuine Bunnyism.

Collier's for September 20,

PROMISES NEVER WHIPPED A WHISKER

But through the talk and
get down to facts! This
Schick Electric Shaver has to
prove—in 10 days—on your
own face—that it's the finest
shaving instrument ever —
or you get your money back!

When it comes to *promises*, we can make more
than most people.

After all, we've worked for 17 years to make shav-
ing almost as easy as flicking a light switch. And in
the Schick Super we honestly believe we've turned
it the shaving instrument that beats them all.

But packing this ad with promises wouldn't *prove*
anything to you.

Instead we say this:

Put a Schick Super next to your face—and see
what it does for you.

Watch those heads give you double-action on
every stroke—watch your face come out from be-
hind the toughest whiskers bare and beardless,
back and nickless.

Find out how Schick takes work and worry, cuts
ed scrapes, out of shaving. Try out some fast
re-date shaves. Shave with your shirt on when
the is short.

Do it all for 10 full days. And then—

SCHICK *Electric* **SHAVES**
and **SHAVEREST**

10-DAY TRIAL BUY—Here's the Schick Super we're talking about. Tidy, neat, compact, with two close-cropping, non-nicking, fast-working heads that give you double shaving action on every stroke. Complete in handsome traveling case, ready to plug into any socket, AC or DC, at \$18.00. Buy one—try it for 10 days—and if it's not the finest way to shave you ever found, return it and get your money back in full. Or—trial-buy the famous Schick Colonel for only \$15.00.

If you don't feel that the Schick Super tops everything for shaving ease—bring it to your dealer's and take all your money back!

So what do you say? How about starting the 10-day trial right now by heading for the nearest Schick dealer?

SCHICK INCORPORATED, STAMFORD, CONN.

FOR COMPLETE CONVENIENCE—THE SCHICK SHAVEREST

Handy automatic wall-holder, handsome in any bathroom. Fits any Schick ever built (Colonel shown here). Holds it safe, fingertip handy next to mirror. Stops current automatically. Zips up the cord.

PORTIS HATS, CHICAGO 10, ILL.

THE boy at the bank teller's window was small and nondescript, and no one paid any attention to him until he produced a big bundle of currency and slipped it under the grill for deposit. As the teller counted the money several \$1,000 bills were disclosed.

Then the man next in line began to take notice; he was a field agent of the United States Treasury, waiting to deposit his regular pay check. And a Treasury tax man reacts to a \$1,000 bill like a member of the homicide squad does to a bloodstained garment; he wants to know where it came from and who owned it and where the owner got it. To him a \$1,000 bill usually means there's a tax evader in the woodpile. The agent turned to the boy and said, "Son, that's a lot of money you're depositing. Where do you work?"

"I'm a clerk for an insurance company," the boy said. When the boy left, the agent followed and spotted the firm.

This agent was not an income-tax man, but he reported what he had seen, and investigators immediately took the trail of the \$1,000 bills. It was a very simple and productive inquiry. From the insurance company they learned that the big bills had come from a manufacturer of automobile trailers; he customarily paid his insurance premiums in cash, and often with very large bills. So the investigators swooped down upon the manufacturer, examined his books, compared the figures in them with his bank deposits, expenses and other items, and wound up with claims against him and his business associates for delinquent income taxes. With penalties, the amount collected was almost \$2,000,000.

This manufacturer had entered in his books all payments made to him or to his company by check, while cash payments, which were encouraged, were not entered. He thought he had dreamed up an original scheme that would fool the Treasury's income-tax experts; actually, he had tried one of the oldest tax-evasion dodges, one that rarely works.

Disgruntled or underpaid employees are a fruitful source of tax tips

Every year thousands of taxpayers voluntarily disclose unpaid taxes

Treasury men get to know names of even the smallest

THEY CAN'T FOOL THE REVENUE MAN

BY A. L. M. WIGGINS

The tax evader who juggles with his return may think he's fooling Uncle Sam but he's only picking up a load of grief for himself. Here's what was told by the Undersecretary of the Treasury.

He had forgotten, among other things, that if a man gets anything for his money it must be passed around. Passing big bills in secret is well-nigh impossible. Invariably somebody sees them, and almost always somebody tells about what he has seen. And eventually the news gets to income-tax people, who have very sharp ears.

I told the story of this tax evader to a friend, and he said, "Oh, yes, I know you get most of the big boys. But what about the little fellows? There must be thousands of them who get away with murder every year."

Well, my friend was wrong. We get the little evader as well as the big ones, but the little cases seldom get into papers, and the general public doesn't hear of them. Take the case of the man who ran a filling station and lunch counter on the outskirts of a sizable city. He made a good living from his business, but he was distinctly a small operator. He figured that he could chisel a few hundred dollars in income taxes without running any risk. He operated on a cash basis; how could anyone know how much he was in? So what finally happened? He paid the \$300 he tried to evade and a 50 per cent penalty besides. In addition, he hired a lawyer, and the lawyer didn't work for nothing. I estimated that it cost this man about \$1,000 to try to evade \$300 in taxes.

Why was this man suspected? Simply because his reported income did not fit the pattern of other operators in the same kind of business in the same territory.

Another small evader, whom we caught, was a fuel tractor; he sold several thousand cords of wood to the Army. In his tax return he reported correctly the price he had received, and most of the other items of his return were wise correct. But he made one mistake. He claimed before he sold the wood to the Army he had bought it from neighboring landowners. One of our local agents happened to know that a great deal of the wood came from a site that was being cleared for an airfield, and had cost the contractor nothing but the labor of cutting and hauling. This made a big difference in his profit and, of course, in his true tax liability, and the fact that he had attempted to evade taxes made an even bigger difference.

The fact is that over a stretch of years an income tax evader has almost no chance to escape paying what the government's income-tax division says is due, plus penalties. The evasion has been willful. And on top of that, if the fraud, there may be a jail sentence. An evader should think he is safe merely because he doesn't hear from us a few years. Under the law we have six years in which to catch the man who makes a false return and to recommend criminal action against him. But additional taxes may be assessed at any time a deficiency due to fraud is found.

What type of girl did you marry?

Whatever her type, she's your best girl. So remember her wedding anniversary with a gift that's worthy of her—a beautiful and accurate Hamilton Watch!

OUTDOOR TYPE. Does she like sports as much as you do? And do you even take her along on hunting trips? She'll love a stunning Hamilton like the FL-6 (below). 17 jewels, 14K natural gold case and link bracelet with Hamilton's finest Medallion movement: **\$210.**

HOMEBOODY. Is she cute as a button, neat as a pin? And does she surprise you with dinners that taste even better than those your mother used to make? Surprise her with a lovely Hamilton like the LYNN (below). 17 jewels, 14K natural or white gold case: **\$71.50.**

UTTERLY FEMININE. Is she still as young-looking as the girl you proposed to—even though she's the mother of three husky children? She'll be even more beautiful wearing the graceful and accurate LANA (3rd from left, below). 17 jewels, 14K natural or white gold case: **\$71.50.**

GLAMOUR GIRL. Is she such a wonderful dancer that she makes even you look smooth on a dance floor? She'll be thrilled speechless by the breathtaking beauty of the graceful GRETA (4th from left, below). 17 jewels, 14K natural or white gold case and heavy silk cord: **\$100.**

The watches below were picked to suggest Hamilton's wide variety of styles and prices. See your jeweler for many other appropriate Hamilton gift watches from **\$52.75 up.**

For married women only! Gladden the heart of that swell guy you married with a handsome, faithful Hamilton on his anniversary. (Above)—WESLEY, 19 jewels, 14K natural gold case, Medallion movement: **\$180;** (Right)—NORMAN, 19 jewels, 14K natural gold-filled case: **\$66.**

The finest hairspring ever developed! It's the exclusive Hamilton Elinvar Extra—non-magnetic, rust-proof, true at all temperatures. First used in Hamilton Railroad Watches, then in Hamilton war timepieces, now assures greatest accuracy in every Hamilton made. Prices include Fed. Tax. Send for FREE catalog and revealing booklet, "What Makes a Fine Watch Fine?" Hamilton Watch Co., Dept. D-5, Lancaster, Penna.

BLENDED WHISKY

The Heritage Whisky

A HERITAGE TO REMEMBER

*"...twenty-four standards, taken at the same time,
are ready to be laid before Congress."*

— LETTER FROM GENL. WASHINGTON TO THOMAS MCKEAN,
PRESIDENT OF CONGRESS, OCTOBER 27, 1781

Sweet indeed, after anxious years, was America's victory at Yorktown. And nowhere was it celebrated more heartily than in Colonial Philadelphia. Today, those early traditions of hospitality are

nobly sustained in Philadelphia, The Heritage Whisky. An exceptional whisky, so rich yet mild, you might reserve it for special occasions. Yet you can afford to enjoy Philadelphia Blend, regularly and often.

*From a Series of Historic Paintings Designed for "Philadelphia" The Heritage Whisky. Famous Since 1804.

After how long after the filing of the return. At this moment the Treasury has in its more than 30,000 leads—they come from every imaginable source—which will undoubtedly turn up hundreds of millions of dollars in hitherto delinquent taxes. So far in 1947 we have collected delinquent taxes as high as \$200,000 in a single month. During the current fiscal year, which ends next June 30, we expect to bring into the Treasury about \$2,500,000,000 through our enforcement activities. We estimate the cost of enforcement to effect collection is not more than one dollar for every dollar collected.

We are determined to get every dollar that is due the government, with penalties of interest, and are prepared to recommend criminal action in every case that seems to justify it. No other policy would be fair to the ponderant proportion of the American citizens who pay their full and proper taxes.

Source of Income Is Immaterial

When it comes to tax money the government is not interested in whether you get your income by preaching the Gospel or by engaging in a disreputable occupation; we want our share and we're determined to get it.

A man may be a gambler, a bookmaker, a blackmailer or a burglar, but he doesn't give the government part of his take, we step in. And one way or another we usually manage to find out what his take is. In order to learn what the rules of the numbers game were, we had mathematical experts calculate probabilities; and operating on the basis of his figures we have collected enormous sums from numbers operators in the big cities. We did the same with bookmakers.

And how do we catch all these people, other evaders with more honorable occupations? Well, there are thousands of ways of doing it, and our agents know them all. Since the federal income-tax law became effective in 1913, approximately 388,000,000 returns have been filed and in the process of examining them over the years all the tricks of the evaders have been encountered. Often that a skilled examiner can spot an intentional error almost at a glance. We have plenty of skilled examiners. Scattered over the country are more than 1,000 Treasury offices, and out of about 22,000 men and women work the business of collecting taxes. And our agents are not snoopers, although disgruntled taxpayers may claim they are. They do no improper prying into your affairs. But they do examine your tax figures. If there is an error, they are just as anxious to refund an overpayment as to assess an underpayment.

They are observant, and they know the areas in which they live and work. They read the newspapers. They make detailed studies of real-estate transactions. They learn about unusual currency transactions. They look into sudden displays of wealth. The purchase of mink, for example, has started many a successful tax hunt. If a man buys a suit notably finer than his economic condition would seem to justify, we investigate. We investigate hat-check receipts, waiters' earnings of cabdrivers and others to get a line on average income. Some of our agents have even been at these occupations to get this information.

One of our agents in Chicago saw an advertisement of an auction sale of jewelry and thought it might be interesting to find out who bought what. One man he learned, bought a ring for \$12,000. Another paid \$19,000 for a necklace. A third bought three rings, the most expensive for \$3,500, the most expensive for \$3,500. Their tax returns were ex-

amined to see if their reported income indicated such spending power. I am glad to say that most of the buyers were shown to be in the clear, but several were not, and after an investigation we levied and collected additional taxes, with penalties.

Even money hidden away may trap the tax evader. Recently, twenty-dollar bills that had a musty odor began to circulate in a small city. A revenue agent traced the bills to the original owner and found them to be part of a treasure that had been buried in a damp spot. It proved to be income on which no tax had been paid.

Death, too, may play the role of detective. When a man dies, his estate is usually subject to an estate tax. If the inventory shows hidden wealth on which income taxes have not been paid, the estate is assessed the tax plus the penalties.

In addition to the evaders uncovered by routine checking of returns a great many are turned up every year by informers. Government agents receive no additional compensation for taxes recovered, but the informant may be paid a reward as high as ten per cent of the delinquent tax collected. These informers, whose names are not revealed without their consent, are of many kinds. The estranged and angry wife of a doctor secretly gave evidence that caused her husband to pay more than \$100,000 in delinquent tax, interest and penalty. A three-cent stamp brought information from Alaska about a construction worker who had won more than \$200,000 gambling, and had reported none of it. We took \$160,000 from him in tax, penalty and interest.

Discharged or underpaid employees are a fruitful source of hot tax tips. Recently a bookkeeper brought to the Treasury two sets of books used by his employer, one for income-tax purposes, the other the true income record. They cost the employer the evaded taxes and penalties plus a jail sentence, and the informant received a substantial reward.

Checking Up on the Farmers

For years it has been common talk that many farmers paid little or no income taxes. There was some truth in this, because farm incomes were small, many farmers kept no books, and farmers have never been expected to do much paper work.

The Treasury tax experts finally decided that the current high income on farms seemed to justify more income-tax returns than were being received from the rural population. So a team of 128 agents were sent to a typical farm community and told to get the facts and, if the facts warranted, the delinquent taxes. These agents studied the AAA benefit payments and other government subsidies. They examined bank accounts, store accounts, yields per acre, and land values based on acreage yields.

In general, they studied the standard of living in the test area, and searched the records of grain buyers, cattle buyers and others who buy farm products. The agents worked an average of six weeks each, and the cost of the study was \$88,142.29. But as a result of the investigation the Treasury collected from the several hundred farmers in the test area a total of \$5,359,589.56 in taxes, penalties and interest.

Similar studies are planned for other farm communities throughout the United States.

Every year there are thousands of voluntary disclosures of unpaid taxes made by the taxpayers themselves. Such a voluntary action usually avoids humiliation and prosecution. If you have a friend who has temporarily gyped Uncle Sam on his income tax, give him a tip. He can't get away with it.

MACHINE FOR MODERNS

IN THE brief span of a dozen years the combination of a scraper pulled by a Diesel-powered tractor has revolutionized earthmoving. It has helped to win a world war, and is ready for new and gigantic undertakings in a world at peace.

A dozen "Caterpillar" Diesel Tractors and matching "Caterpillar" Scrapers could have built the old Erie Canal — "Clinton's Ditch"—in half the time it took the thousands of pick-and-shovel men employed on that project, and at less cost. Today every citizen benefits by the vast accomplishments of these modern machines.

Moving steadily behind the brute power of the tractor, a "Caterpillar" Scraper bites into the soil with its tough steel blade, scoops up yard after cubic

BANNER OVER FIRST

Continued from page 22

ere not classic, but they were clean-cut and his jaw was good. He did not look like most New Yorkers, with his deep tan and stubby haircut. . . .

The Eagles were again in the field and the Sox were up for their last raps. It was the head of their batting order and in the full pen the Eagle reserve hurlers were working furiously, for a one-run lead is nothing against a wild base-running team like the slugging Sox.

The Sox lead-off popped. But the second hitter choked up and slapped one between first and second, nearer to first. Hap Fite could not get to it. Kelley, the center, was safe on a doubtful single.

Patsy said, "You see that? Kelley showed that one at Fite. They're playin' the bum leg!"

The girl said, "Smart baseball. . . ." The green kerchief was a rag in her fists. Morgan, the next Sox batter, laid back though to hit away. Then he crouched suddenly and laid a bunt down the first-base line.

Fite, of course, held the bag as Egg primer rushed to cover the bunt. Egg was able to throw out the runner at first. But Kelley, starting fast, turned second

wish you luck. I've been an Eagles fan all my life. I inherited it from Daddy."

He said, "Thank you, ma'am." Patsy felt the friendliness of the girl; it was funny, because the column had said she was always around with Hap Fite. He supposed she was a dyed-in-the-wool fan. He knew about them. They kept baseball going, made it the national game. He watched her go from the box and suddenly he felt terribly alone and inadequate. He hurried to send a telegram to his mother, who had that tremendous faith in him.

JOE GUDGEON was old and gnarled and tough. He was piloting the Eagles through a rocky season, against terrific odds, and his seamy face showed it. He held Patsy Dealer by the elbow in a grip of iron, and his face was a mask from a grim pageant. The silent, grouped Eagles stared back at him.

Gudgeon said, "This here is Patsy Dealer, up from Florida. He plays first today."

Hap Fite kept his head down, tying his shoelace. It was Mike Holman, the fiery second baseman, who snapped, "What's this, Joe, college stuff?"

Someone laughed on a harsh note. Yesterday's loss had rankled; none of the home club was in good humor.

Gudgeon said, "I say he plays first. He's got the signs; he bats second. Dorn goes into clean-up. Hap'll be ready to pinch-hit. I got no use for sorehead ballplayers. Now go out there and take the lead in this league where you damn' well belong." His voice was quiet but he wore his toughness like a cloak. The veteran ballplayers got up and went out.

Gudgeon said to Patsy, "You wanted it this way."

"Sure," said Patsy. "I'll be all right."

"We all better be right," said Gudgeon. They walked out the runway together. The crowd matched yesterday's and the field seemed enormous after the cramped little stadiums down home. Patsy swallowed and looked at the third-base box.

He saw her at once because of the green kerchief. He did not waste any time staring. He went on and sat on the bench and watched the Sox work their allotted warmup time.

The Sox were cocky today. They were even in the standings; they had Elbows MacNeal to pitch. Even Fite had never hit freely off MacNeal. In baseball there is always this fateful series between the two leaders, somewhere along the line of August or September. The Sox knew and everyone knew that this could be the breaking point, that the veteran Eagles could fold today and let the Sox run away from them.

The Sox came in. Gudgeon growled, "Snap out there!"

Patsy Dealer, five feet ten inches tall, one hundred and seventy pounds, rolled a little as he trotted. He had heavy legs, slender ankles, but not too slender, not like Babe Ruth's ankles. He took his old fish-net glove to first base.

Then the roar went up. It was astounding—it was shocking. The resentment came out on the field like a cloud of poison gas. It rolled over him, stifling him. A leather-lunged fan transcended the noise with a shriek, "Who's the little bitty clown? We want Fite!"

Holman tossed the ball to him. It plopped out of Patsy's glove, rolled on the grass. He was fixed as a statue, his mouth open.

Abruptly his chin came out, his teeth went together. He walked over and deliberately picked up the ball, examined it, threw it to the bat boy, calling, "Save that for me."

Holman said, "What's the idea, busher?"

slid into third under Fite's hasty throw. The tying run was set up.

Hearst, the giant Sox left fielder, was at the plate. Gudgeon buzzed for a repitcher, but allowed Egg to throw Hearst. Egg threw one ball. There was a tremendous shout as Hearst picked the first one and slammed it on a line to the luckless Fite.

Kelley scored. Hearst went to second. The next man banged a single off the left pitcher and the ball game was ended so suddenly that the girl in the third-base box did not seem to realize that she was in the bag.

The Sox got two more runs before it ended. The Eagles could not get a hit in their half of the ninth.

Patsy sighed, looking at the brown girl. She had slim legs and did not look like a club singer was supposed to look, thought with some surprise.

He said, "Poor Hap. He'll die all right tonight."

Patsy said, "He'll die worse tomorrow. . . . I shouldn't say that, but Mr. Fite—I mean I'll be in there tomorrow. He had to tell someone."

"How soon? Without practice, or anything?" Her eyebrows went up. "You mean you can step in there and take his place?"

He stood up to leave. He had to meet Moore and Joe Gudgeon. He said, "I can't tell you any more right now. I'll be in there."

"Why, you're too short," she exclaimed. Then she said quickly, "But I

A Truly Great Name

AMONG AMERICA'S GREAT WHISKIES

"It'll be a museum piece," said Patsy gravely. "I never drop one."

Holman said, "You better not." He was holding back. Patsy knew, seething at the installment of a bushier in Fite's place, but determined to play it out. They all felt the same, because they did not know. It was a revolutionary experiment and only Mr. Moore's belief and insistence had put it over.

Patsy said, "You see that you're in there." His voice was harsh, and he scarcely recognized it as his own. The churning inside him lessened, steadied to a drumming beat. This was his life's mission, this was his battle to win or lose. That it steadied him, that he was all right, was only slightly amazing because he had prepared for it.

He fielded the fungus carefully, without flashiness. His seeming awkwardness became a flow of efficiency around first base. Holman said no more and Patsy finished the infield practice with a quick pickup and throw to the plate and ran off the field in his high-kneed, rolling stride. Behind first base the jeers rose and the man with the voice, a little, wizened man whose mouth was a braying trumpet, howled, "We want Fite!"

glanced down at Gudgeon coaching on third. He got the "no orders" sign and the lump departed and his stomach was all right. Gudgeon was giving him his chance to hit the way he wanted.

He had a narrow stance which seemed unnatural and faced him toward the pitcher. The little fan shrieked, "Itty boy's got a foot inna bucket!" Patsy tugged at his cap.

MacNeal, a master of curves, was cautious, pitching to a strange bushier in a crucial series. The Sox poised, darting sharp glances at the batter's box. Patsy relaxed as he had been taught, every muscle loose as ashes. MacNeal missed the corner on a couple of teaser throws.

IT WAS two and none when the good ball came in. It was slightly outside, from a left-handed pitcher to a left-handed batsman.

Patsy's stance widened as he strode. His bat slid around. He used only his wrists when he punched the ball.

It rang convincingly off the stick. It slid past the diving second baseman. It rolled on the grass, short in right field. Patsy was running.

No one hooted when Patsy Dealer

balling. The incident had upset some delicate balance, the thing which distinguished him from other good hurlers and made him great, and he could not get the second curve exactly where he wanted it.

Older pounced, swinging. Gudgeon gave Patsy the signal to run. The ball went into right field, as was proper. Patsy rounded third. The dirt flew beneath his shining spikes. He hurled himself at the precious rubber which was home plate.

He had scored a run on his first appearance in the big leagues. Instinctively, as he climbed to his feet, he touched his cap. The crowd behind first base was silent amid the cheers.

The brazen-lunged one howled, "So itty bitty's a speed boy. Who wants him? We want Fite!"

Patsy trotted to the bench. He slowed for one look. The green kerchief fluttered. He ducked beneath the awning of the dugout. There was a murmur of congratulations, that was all.

Then a big, tobacco-chewing man sitting next to Hap Fite drawled, "Okay, bushier. You gimme a run. Let's see what these soreheads kin do about holdin' the lead."

That was Charley Prince, who was pitching that day. Hap Fite patted Prince's shoulder. The next two Eagle batters went down, stranding Older. Patsy got up and hustled onto the field. He had not expected anything but resentment from the Eagles. Fite properly thought himself a better first baseman on one leg than any bushier with two swift ones.

Patsy had to do more than fit on the base paths, he knew. The Eagles were slipping, they were old and tired, they needed a boost, a moral lift.

Again the green kerchief fluttered at him. He took his infield throws in a slight haze. He knew he could not afford to think of the small, brown girl. He grimly thrust her from his mind.

THE game settled down behind Prince's fast-ball pitching and MacNeal's curves. The Sox connected a lot, but the fielding was tight. Patsy had put-outs galore and every throw he took increased his ease. The innings sped by like magic little eras of time.

The single run began to loom. The tension was terrific. It seemed as though the Eagles sat atop a volcano from which at any moment Sox power would explode. It went all the way through to the ninth inning, with the Sox at bat and the score one to nothing against them and Charley Prince still throwing his hard, high one bravely down the middle.

Patsy had never been able to see another good ball off MacNeal. He had walked once, but no other hit was vouchsafed him that day. In the field he had accepted his chances without spectacular incident. The leather-throated fan had fallen into a dull monotone of invective for sheer lack of material. Patsy had showed himself to be a speed boy, an acceptable, rather small first baseman—certainly not the successor of the great Hap Fite.

It was not enough. Patsy almost begged for trouble, silently aching to prove himself. He was torn between his desire to have the game safe for the Eagles and to complete the mission he had undertaken in coming here. Inside him the churning mounted as the last half of the ninth opened.

Charley Prince was strong, but the Sox were aroused to fever pitch. Anderson, Sox lead-off man, rapped at a bad ball. It skidded into left field for a lucky single. The Sox began to shout and howl like Indians, scenting a rally.

Anderson, a good base runner, took a big lead. Prince threw to first in an attempt to pick him off. A groan ascended from the stands.

It was a rotten throw. It was too high

"Fight is what you'll get," Patsy napped. The fans saw him look up and saw his lips move and the time-honored shout went up:

"Rabbit ears! Itty boy's got rabbit ears!"

At the dugout, Patsy paused, glancing p at the box. Marge Marlowe sat unchined, a small figure. She knew what "Rabbit ears" meant—a ballplayer who cannot take the riding of the opposition or the fans. He wondered if she despised him already. . . .

ELBOWS MAC NEAL was very great. He had a grandeur of presence to go with his pitching. Patsy selected a bat from the three light sticks he had brought from Florida. He held it tightly, feeling eyes upon him. He looked up into the face of Hap Fite.

The lame first baseman's countenance was impassive. Patsy started to speak, checked himself. Fite said in a low voice, "Watch his hooks."

"Yeah," said Patsy. "Thanks." He went into the on-deck box, squatting, holding the bat. He never swung two, he just played with the stick he had selected, stretching his arms, loosening the muscles. Mike Holman, leading off for the Eagles, fanned.

The second baseman came back, stomping, glaring, heaving his bat ahead. Patsy rolled to the plate tugging at his cap. His stomach contracted once as he

ran. The heavy legs became a blur, the sturdy body hurtled through air. Morgan, the Sox fielder, coming in to play safe on a palpable single, was one step slow.

Patsy, burning the paths, hit first base with his left foot, seemed to soar through the air. Nearing second he took off in the dirt, a perfect hook slide. Ball, runner, and shortstop of the Sox went into a cloud of dust and then a blue-uniformed arbiter was spreading his hands, his dour countenance split in a cynical grin. The bushier had stretched a single into a double.

Patsy arose and hitched at his pants, then his hand crept in that habitual gesture to his cap peak. He held the bag, looking expressionlessly down at Gudgeon. His demeanor proclaimed with insolence that this was all in the game.

Inside him, however, was a churning; not lighthearted, not happy; the excitement as of a fight just ahead.

Ken Older was at bat, staring at Patsy, then at the pitcher. MacNeal was conferring with his infield, glancing askance at Patsy. The Sox could not play in on the grass, not with hard-hitting Older up. Yet there was a new speed demon on second with one out. They ate up time until the umpire called play.

MacNeal threw one pitchout. Patsy took a generous lead, slid back. MacNeal steadied and went back to his curve-

almost for Hap Fite, much less an undersized busher. It seemed destined for the stands. . . .

Patsy's legs uncoiled. He stretched. Like India rubber, he seemed, growing a foot, then leaping. The big glove snatched. Patsy came down to earth, diving for Anderson, but that worthy had sensed the play and was safe back on the sack.

Patsy walked to the mound. He grinned and said, "Okay, Charley, ol' boy. 'At's the way to hold him there."

The color was just beginning to return to Prince's cheeks. He said, "Kid, you're a fielder."

Holman, scowling, had come in also. He took the ball from Patsy and molded it in gnarled, strong hands. He gave it to Prince, stared at Patsy and said, "Let's play some ball."

PATSY went back to his position. The crowd was suddenly silent, waiting. Kelley was up. Kelley choked his bat and laid one down the first-base line. It was the only chance in that game Patsy had had to cover a bunt.

Patsy went in like a coursing rabbit, chased by hounds. He snared the ball in his bare hand, spun. He had ample time, thanks to his speed, to get Anderson at second. He threw underhand, snapping the ball, aiming it at second base.

Holman was not there. He had run to back up Prince, who covered first. Hill, the Eagles shortstop, made a dive and trapped the ball, holding Anderson to second. But everyone was safe.

Patsy started to yell, "You dummies, can't you cover?" Then he closed his mouth like a steel trap and walked toward Prince.

The pitcher said, "Kid, we never played that one."

"Yeah." Patsy took a deep breath. Holman was coming in. Patsy said, "I booted that one. I'm damn' sorry. I shoulda played Kelley."

Holman still said nothing. Prince went back to the box. The Sox were rattling the bats in front of the dugout, screaming themselves hoarse. The runty fan behind first bawled, "I knew he'd kick it around! We want Fite!"

Patsy did not dare look for the green kerchief. He crouched, watching the hitter. Prince struck out Morgan with great courage, and Hearst, the big Sox slugger, came up. The Eagles infield backed up, expecting anything from Hearst to be hot and heavy.

This was the moment. Hearst could break up any ball game. The tying run was on second, the winning run on first. Prince, his jaw hard, took a lot of time to make his pitch.

Patsy set himself, watching the third-base coach, watching Hearst. He took a quick look at the poised base runners. He made up his mind.

Prince fogged his high hard one through, attempting to get past Hearst for an initial strike. The Sox slugger, using perfect strategy, suddenly faced around and loosened his bat. He bunted, and he laid it down the third-base line, where Prince himself, a slow man, would have to field it.

Patsy shouted and moved. The magic speed of his legs carried him onto the grass. He crossed in front of the amazed Prince, bisecting the diamond.

He was in the third-base path. He scooped the ball from the dirt. He slung it, underhand, to third, shouting as he did so, "Second, Owen, second!"

Owen, the Eagles third sacker, tagged Anderson. He fired the ball to second base.

Kelley, unsuspecting, had rounded second two steps. It was Holman who came in behind Kelley and took Owen's perfect peg. It was Holman who shoved the ball at Kelley. It was the perfect play, except Kelley had come awake and was under Holman in a wriggle and slide which saved him by a hair.

Holman came to the box with the ball. There was fire in his eyes. He said, "Charley, this busher's been trained. Charley, he almost got the side for you."

Prince said, "And I know who trained him—"

Holman said, "Charley, pitch to these monkeys!"

Patsy was back on first. Kelley had made a great play, getting back safely to second. Oliver was up, a good Sox hitter. Patsy bit his lip. The strain was getting too great. He had to steal a look at the third-base box.

The handkerchief was flying, all right, like a small flag. The girl was no longer

est fielding first baseman since Doc Frayme—

"An' Doc Frayme taught him," said Holman. "Nobody else could have."

Joe Gudgeon took a deep breath. He said, "When Doc took Patsy—his sister's kid—an' told me he was goin' to train him for me, I knew someday it would come true. Doc Frayme was my pal—"

"Was?" Holman frowned. "Why, Doc's livin' down in Florida . . ."

Patsy was staring at the girl. She kept her eyes down, listening.

JOE was saying in his honest, tough voice, "Doc died last week. They kept it quiet down there, Patsy and his mother. Doc sent Patsy to me from his deathbed. And if that's corny, okay . . . You saw what happened. Them Sox'll never catch us now, with Hap pinch-hittin' homers an' the kid fieldin' like he does."

Holman said, "I'm satisfied. I give in. You're right, Joe."

But then Patsy had to speak. He got up and stepped near them. He said,

"There's more'n that. Doc Frayme was supposed to be a crook. He got run outa baseball. The greatest player ever lived, he would've proved, if they hadn't run him out. Why, they couldn't get him out—he could place-hit into any field, off Alexander, off Mathewson, off Bender . . ."

Mr. Moore said, "Another player died recently. He left a statement. It was positive proof that he was the guilty man. Frayme never threw a game. He liked to bet, he liked to drink beer, he was a happy character. But he was honest, as Joe always claimed, and as many another player claimed." The owner of the club said softly, "But Doc wouldn't give it out that this other man was guilty. He was content, in Florida, on his orange grove. He just wanted Patsy,

Dealer to come up to his old team, the Eagles. I think I'm as tough-minded as any of you. But I'd like to be able to shake the hand of Doc Frayme—and tell him I'm sorry."

They were silent, then they all talked at once. Patsy's heart swelled under it—this was what he had worked for. The genial, grinning face of the great man who had died swam before him. . . .

Then the green kerchief was before him, twisted and rent, but green as ever.

"Are you Hap Fite's girl?" he asked.

She said, "Hap's girl? Why—Hap's engaged to my sister. You see, I'm Monty Fulheimer's daughter. My daddy played with Doc Frayme. You can't sing in nigh clubs under the name of Fulheimer."

The bull session was going strong; the baseball elders were yapping, heads together. Mr. Moore had produced a discreet bottle of Scotch. Fite said loudly, "I'll teach that kid to slug one sometimes so they don't figure his play—"

Patsy said, "I've never been in a nigh club. Do they serve steaks?"

"Omigosh," she despaired. "Just an other hungry ballplayer? All my life nothing but base hits and rare steaks?"

He was gently taking the green scarf from her small brown hands. He was folding it and placing it in his breast pocket. He looked at her long and hard.

She said, "Well, maybe I'm wrong . . . so sue me!"

They laughed together and then they were slipping away from the clubhouse, running for the taxi stand.

THE END

COLLIER'S

HANK KETCHAM

sitting down. She was standing, leaning forward. The tension had got to her, all right. It eased him to know it.

Prince threw to Oliver. The Sox hitter swung, but the ball glanced off the top of the bat. It lofted high, going foul: It was dropping into the stand behind first base. . . . The little loudmouthed man was jumping, stretching, eager to grab the souvenir—

An arm knocked the prancing fan sideways under the seats. A bare hand struck the railing and Patsy Dealer climbed an invisible ladder. Worn, brown fish net swept, as though catching insects. Patsy fell into the stands alongside his tormentor. Like rubber he bounded back, gesticulating with the glove for the umpires to see. The ball reposed therein.

The ball game was over. The Eagles had won. Patsy dug the vociferous little fan out from under the seats. He said politely, "I hope you enjoyed the game, sir." Then he vaulted the railing and ran for the tunnel.

IT WAS a small, curiously silent victory gathering, in the clubhouse, nestled in deep left field. Mr. Hal Moore had called them there—Joe Gudgeon, Holman, who was field captain, Hap Fite. Patsy gaped when the girl came in with Fite, but everyone seemed to accept her presence and he wondered with a sudden sinking feeling if she and Fite—if they were engaged or anything.

Mr. Moore said, "I guess you all recognized Dealer's style out there today. I guess you know we've got the great-

USE
TWICE
WEEKLY

An important independent producer had a different view.

"Don't let them kid you about that," he said. "What they have in the vault can give them a headache. The picture is made, the money is tied up and the studio costs go merrily along. No matter how you cut those costs, studio overhead can chew you right up. If you're making only a few pictures, the studio overhead is distributed over fewer films. Instead of the overhead figure being 30 per cent, it is now 60 per cent on some films. That brings them in at such a figure that only the biggest ones have a chance of getting the money back. You put 60 per cent overhead on a modest little stinker and it goes down without leaving a trace."

However, it is true that the big studios are holding back films which may stir up the paying patrons in the fall. Twentieth Century-Fox has *Captain from Castile* ready to charge out in October. Enterprise has *Arch of Triumph*. Charles Chaplin withdrew *Monsieur Verdoux* after six weeks' try in New York, but distributors feel it may do better now.

What will probably be the best test of all is *Forever Amber*, into which 20th Century-Fox has thrown everybody but its last vice-president. They started with Peggy Cummins, dropped her, spent a few millions fooling around and then hurled Linda Darnell into the breach. It may end by being one of the costliest films ever made. If it makes a profit, Hollywood will consider that God's in His Heaven and all's right with the world. If it makes a profit without the English revenue, it will be a miracle.

Being bemused by the whole proposition, the producers occupied the summer months in putting out reissues of old film. That old perennial *Gone With the Wind* did well, but Alexander's *Ragtime Band* was strangled immediately on rebirth and others crept miserably back to their lairs.

"What were the gentlemen trying to do?" asked an acid-minded observer. "Drive the audiences out of the theaters permanently? When the slump came, instead of leading with their aces they trotted out the third team."

David O. Selznick *did* give the public a chance to gaze at his *Duel in the Sun* epic but this was considered a doubtful boon by the industry. "When the kids come home from a movie and start doing burlesque of it," said a Hollywood figure, "that's not good."

The big grossers were *The Best Years of Our Lives*, *The Egg and I*, and *The Farmer's Daughter*. The experience of the latter picture was heartening because the public resented the title and the picture never drew well anywhere in its first week. It took word-of-mouth comment to get it started.

What really worried the producers was the squeeze between falling receipts and the cost of making pictures. There was general agreement that something would have to be done about costs, but what? The big studios were cutting heads off right and left (M-G-M fired in the thousands, including producers, directors and writers) but still million-dollar pictures were costing two million.

"Lousy carpenters getting \$2.58 an hour," said one grumbling producer.

There was a general tendency to take a wallop at the hired hands but little criticism of actors, who were getting as much as \$250,000 a picture. One producer reported that a star had graciously

lowered her price to \$200,000 but he was not hopeful of a permanent change.

"Now that business is off," said the producer, "we simply *have* to use a big name in our pictures. That means they can demand more in bad times than in good."

It was said openly that Cary Grant would draw down between \$400,000 and \$500,000 from Samuel Goldwyn for his work in *The Bishop's Wife*. Much of this excess, however, was caused by a delay when the ebullient Samuel tossed out the original script after two weeks of shooting and had the cast sit around expensively while a new one was being hatched.

This small exercise in patience cost M. Goldwyn \$800,000. On that basis the final picture would probably run between three and four million.

And all this was before the British bombshell. If labor was a problem then, what will it be now that the foreign market has dried up? Will labor give up the

settled. In the meantime, men who made Hollywood a miracle of technical efficiency are walking the streets unemployed and the cost of making pictures continues to soar.

There have been attempts to beat this game by making pictures in foreign countries but nothing much has come of it. RKO has the Churubusco Studios in Mexico City but according to Dore Schary, production head of the studio in Hollywood, there is nothing to be achieved by making pictures there except novel outdoor settings.

"What you gain in lower wages, you lose in efficiency and time," Mr. Schary says. "The same thing is true of England. Eddie Dmytryk has just made a picture for us over there that cost \$1,100,000. He has done *Crossfire* for us here for \$560,000. We can still do moderate-priced pictures here if the work on them is done long before the shooting starts, but when you get into a big spectacle, like the *Ivanhoe* we'll do in England next year, it will run you into four million no matter where it's shot."

Dmytryk has definite ideas on the British films and asks us not to worry about the threat of competition. One of the strengths of their pictures is that the studios are near London and use stage actors. However, this is also a drawback because the actors are back on the stage at night.

"And the technical men can't compare with ours," says Dmytryk. "It's a cliché to say it but they take their time and they also take their tea. That's why they're lucky to make fifty pictures a year while we're making four hundred. We see only their best; you should see the others, whew!"

The same point is made by I. Goldsmith, a former English producer (*The Stars Look Down* etc.), who is now with Eagle-Lion in Hollywood. The quality of the present English pictures, he says, lies in the importance granted the writer. "But that's something that can be done only when you're making few pictures," says Mr. Goldsmith. "When England begins making them in the hundreds it will become a business, as it is in Hollywood, and they'll have the same problems. You'll soon find that the general quality become better but that the peaks will be fewer."

Another business that has everybody in Hollywood groggy is censorship. As the attacks continue the tendency is to stick even

closer to "pure" entertainment, meaning escape films of the most innocuous type. At a time when audiences are finding foreign films exciting because they tackle human problems, Hollywood is retiring into a cave.

Dr. John Lechner of the Motion Picture Alliance for the Preservation of American Ideals denounced the following pictures as containing "Communist or subversive propaganda: *Margie*, *The Strange Loves of Martha Ivers*, *Boomerang*, *The Best Years of Our Lives*, *Medal for Benny*, *Watch on the Rhine*, *The Searching Wind*, *Pride of the Marines*, *The North Star*, and *Mission to Moscow*." William Mooring, film critic of *Tidings*, official organ of the Roman Catholic Archdiocese of Los Angeles characterized *The Farmer's Daughter* as Communistic.

There can be no doubt that the persistent whackings are having an effect. Warner Brothers, who made a reputation with their hard-hitting films on contr

"This is the Youthbloom Soap Company.
What brand of soap are you using?"

COLLIER'S

MISCHA RICHTER

gains it has made or will it insist that cuts be made everywhere else first? Will the stars come docilely forward and ask that their stipends be sliced or will they cast a glowering eye on the upholstered producers and ask when they are going to take the pauper's oath?

As if that weren't bad enough, they've been carrying on a jurisdictional strike in Hollywood for the past year that has torn the town apart. It is a complicated matter which we shall not attempt to unravel, but the carpenters, painters and set designers who originally went out on strike are still out and have been replaced by other workers. This has raised costs immensely.

"We needed a set for a picture," one producer told us, "which our old carpenters would have done in three days. The new ones took three weeks on it and then the painters did such an awful job that we couldn't shoot the scene. The set cost \$30,000 and we had to throw it away."

Nobody knows if the strike will ever be

A yellow box of Kodak Verichrome film, shown at an angle. The box features the 'Kodak' logo in red script and 'KODAK VERICHROME FILM' in black block letters. The bottom left corner indicates '2 1/4 x 3 1/2 in. 8 EX.' and 'V620'. The box is decorated with a red and black checkered border along the edges.

Kodak

"THE BOSS COMES TO DINNER" by John Falter. Number 8 in the series, "Home Life in America," by noted American illustrators.

Beer belongs...enjoy it

In this home-loving land of ours . . . in this America of kindness, of friendship, of good-humored tolerance . . . perhaps no beverages are more "at home" on more occasions than good American beer and ale.

For beer is the kind of beverage Americans like. It belongs—to pleasant living, to good fellowship, to sensible moderation. And our right to enjoy it, this too belongs—to our own American heritage of personal freedom.

AMERICA'S BEVERAGE OF MODERATION

al subjects, have rapidly retreated to themes. They seem to have full confidence that this will bring in the shekels because they have bought back 105,380 shares of their own stock since May and a little thing called Life With Father to dally with.

Frederic Schary at RKO has refused to be impeded, M-G-M took a whack at it in The Hucksters and there are a dozen anti-Semitic pictures in production, so perhaps a few ideas will be presented after all.

Censorship is not the only concern of artistic unions. They got their start during the depression when the studio bosses cut salaries 50 per cent but forgot to include their own.

The lesson has not been forgotten. Actors are as strongly organized and conservative as a bankers' association.

How Unions Feel About Reissues

Writers are aggressive union men. The directors are the most amazing. Their union is small and it condenses of men who think nothing of making a quarter of a million dollars a picture. There is a good possibility that these three organizations will make the studios think twice on the reissue. Since the showing of old films has cut down the number of new ones being made, the unions are going to demand additional payment for their work on the old ones.

The only solution for cheaper good pictures seems to be clearer thinking and better organization. Dmytryk brought fire in for RKO in twenty-four days shooting at a cost of \$560,000. John Welles is doing Macbeth in twenty-one days. He first tried the old-fashioned version of the play at Salt Lake City with the full cast. He then spent several weeks making a sound of the dialogue; then he started shooting.

The "Boy Wonder" can get away with it, he may be giving Hollywood another shot in the arm. Naturally the method won't work with large musicals or spectacles but there are serious directors who believe the ordinary movie can be made at half the present cost if proper preparation is made. Others are sure.

Look what you're faced with before the start," the latter say. "Your star cost you at least \$200,000. If you name director that's another \$150,000. Stories don't grow on vines and need a good writer and maybe two men to get a script in shape. You're

into five hundred thousand before you even nail up a slab of wood on a set."

On the face of things there would seem to be serious problems, but not all of Hollywood is worrying. We went in to see Mr. Goldwyn, who was happily chewing his gums as if the money wasted on The Bishop's Wife were mere lettuce.

"Bad times are when I do best," said Mr. Goldwyn. "When people start shopping around they want good pictures and that's the kind I make. I made the most money in my life during the depression."

Darryl Zanuck sent word that all was best in the best possible of worlds. All we needed to do was work hard and keep a stiff upper lip. At that time, however, Mr. Zanuck had not heard from Mr. Attlee.

On the other hand Enterprise Pictures shut up shop for the summer months, and most of the independents were treading water and waiting to see which way the tide turned. Liberty Films (Frank Capra, William Wyler and George Stevens) had thrown in the sponge, taken a few millions in profit and tied themselves up with Paramount as working stiff.

Other directors, however, are going ahead with independent production. John Ford has announced three pictures starting immediately with War Party. Lewis Milestone is finishing Red Pony. Howard Hawks has done Red River and will have another picture in production soon. Leo McCarey is starting Good Sam.

However, there was one symbolic scene when we were interviewing an important executive. The intercommunication thing buzzed, he listened attentively, cried yessir and leaped up. It seems that an even more important executive had suggested that he hop right down to the parking lot and meet him in his car. They were going to the races. We are informed that Mr. Attlee never goes to the races.

We got another impression of things while talking with Douglas Fairbanks, Jr., on the set of The Exile, a picture in which he was acting, directing and producing—the latter with much of his own dough. We asked him how he felt about things.

"Merely terrified," said Mr. Fairbanks grimly.

This, also, was before Mr. Attlee had spoken in a quiet, dull voice. There will be a moment's pause while we change reels. The last scene will be that of a Hollywood producer sitting with his head in his hands. All he is saying is "Oh . . . oh!"

THE END

"When we placed the order we said coupé.
Can that be changed now to a sedan?"

A WONDERFUL MIXER

BY DUNLEA HURLEY

Presenting an amiable citizen named George K. Marble, whose efficiency with a certain lovely creature—and with any conceivable combination of alcoholic beverages—was something to observe and remember

WE WERE seated at the choice table of a little place downtown which Sanders, a precise man, highly recommended for the precision of its cocktails; our lunch being delayed by the rush of business, we had sampled more than one. They were either the best cocktails I had ever had, or the woman I suddenly noticed among the standees at the entrance was the most beautiful woman in the world, or possibly both.

"It was about a year ago," said Sanders reminiscently and somewhat to my surprise since he was one of those serious, silent kind and we hadn't been conversing. "To be exact, eleven months, three weeks."

"Time flies," I said politely.

"It was during that strange interlude," Sanders went on, "when Precision Units, Incorporated, was trying to convert from bomber parts to a good snappy line of Mexican pottery or something."

"I know what you mean," I said. "Over at Acme we—"

"It was," said Sanders, firmly, "the day after a select executive group—only those, that is, who had two bucks and could wangle the evening out—incited a farewell riot for Pete Waters."

"Your Chief of Cost Accounting and Production Control, I believe," I put in, indicating that while my attention might seem to be focused else-

where, I distinctly heard at least a third of everything he said.

"Chief of Cost Accounting, Production Control and Inventory Procedure," Sanders amended. "Pete was being released, as the saying goes, and returning to his prewar career as assistant night cashier at the Snack Shack, Route 29."

"We had a Chief of Plant Co-ordination over at Acme," I offered, "and the very day after V-J Day—"

"On the morning of which I speak," Sanders continued unabated, "I had an early appointment with Old Man Hultz, the boss, so my wife gently roused me an hour later than usual."

"Why didn't you call me at seven-thirty?" I asked her churlishly.

"For one reason," she churled back, "you didn't get in till quarter of eight."

"Loath to prolong the argument, I arose with alacrity and shaved to the accompaniment of the Breakfast Concert on the radio, painfully wounding myself in the frenzy of the Danse Macabre. My horoscope in the morning paper warned, 'Don't do anything.' That was the day."

He paused and signaled the bar with

"George knew all the bloated plutocrats, but they made me feel like I was the cigarette girl in disguise"

PUZZLE: STATION SCENE, 1957. Find the man who is getting a steady income from U. S. Savings Bonds. He was smart enough to start buying, back in 1947.

Of all the ways of saving up a tidy sum of money, one of the *easiest* and *safest* ways is to invest your money in U. S. Bonds.

You can buy Bonds either through the Payroll Savings Plan at your place of business—or if the Payroll Plan is not available to you, but you *do* have a checking account, through the

Bond-a-Month Plan at your local bank.

Both ways repay you \$4 for every \$3 you save, by the time your Bonds mature. Choose the sum you can afford—from the chart on the right—and start saving today!

Ten years from now, you'll be mighty, mighty glad you did!

SAVE EACH WEEK	AND YOU WILL HAVE

fingers. Embracing this opportunity I inject a bit of adrenalin into the conversation. I nodded toward the vision up at the top of the stairs.

"What would you say a wonderful time like that was doing in a place like this unescorted? True to somebody's army of occupation? Stood up?"

"Neither," said Sanders with certainty. "You know her?"

"What the devil do you think I've been thinking about for the last five minutes?" he demanded.

Two new drinks were placed before him. He studied them reverently.

"Behind that bar," said Sanders, "and the leader of his profession, the best chemist of his kind in the world," directly held my tongue. Sanders disapproved and continued his story.

I prappled with the mail at the office that morning (Sanders said) a peculiar sense of frustration came over me. I felt left-handed and all thumbs. I don't wonder if perhaps this atomic city wasn't already doing things to us. Suddenly, I realized that something had happened to my office, itself. The wall with the creeping cactus landing on the window sill appeared to pop where the front wall should have been and the front wall, with our loving for Neatest Floor of Any Department, 1939, was at the back. I was trying to figure out how the view beyond the cactus was still Gutzler Boulevard, I came upon the memo.

It was addressed, "To All Department Heads and Supervisors," and said: "Effective immediately all desks in the office shops shall be turned in the same direction from which they have been facing." It was signed, "George K. Hultz, Assistant to the President."

I had never before heard of the man. Furthermore couldn't see how Old Hultz, who doesn't do anything and is very good at it, could use assistance, but then, of course, I am Director of Personnel in Charge of the office.

How in heaven's name is George K. Hultz? I asked, turning to my beautiful

secretary, a feat which under the new desk arrangement put a severe strain on the sacroiliac.

"Just another genius," she said, emitting a beautiful sigh. "The Old Man picked him up at the shore. Washed up on the beach, I wouldn't be surprised."

"What's the dizzy idea turning the desks around?" I demanded.

"Mr. Marble feels it will give everybody a new perspective," she said. "Now, isn't that cute?"

So after burning out the best years of my life for old PU, as we happy co-workers affectionately refer to the grand old company, I wind up trading a southern exposure of my beautiful secretary, ash-blond Mary Murphy, who has just now attracted your attention at the door, for an uninterrupted view of the Screw Machine Department photographed in the sack race on their annual picnic to Dittweiler's Happyland Park.

"That does it," I said. I got up and after several futile stabs for my hat which for ten years had dangled behind my desk but now hung in front, located its whereabouts and put it on, backward. "It's been wonderful knowing you, Murphy," I said, simply. "If anybody ever asks, I retired to Texas and am happy among my pineapples."

The Chief Engineer, Chief Draftsman, Chief Messenger Boy and the rest of the chiefs were down the street at Rappy's Luncheonette, chiefting at the bit. I joined the powwow, a daring move for a personnel director considering the ugly frame of mind the boys had developed over our newest employee.

Silvers, the Safety Chief, while working that morning on his month's report which, if there was no accident by five P.M., would have set an all-time state record, scurried joyfully from the wrong side of his desk and was felled in his tracks by the wall. Hullerman, our near-sighted purchasing agent, was completely unstrung after consistently issuing orders to the water cooler and beckoning to the Ladies' Room when he wanted the office boy. Little things like that, but they mounted up.

I talked fast to assure the lads I knew

Better fabric... Better shirt

Prince Oxford fabric makes the kind of shirt that always looks good and feels good. That's because it is beautifully woven of long staple premium cotton and has the heft and body you expect from America's favorite oxford cloth. Equally correct for business or leisure, it comes in clear, clean, fast colors that won't ever fade. Sanforized* for permanent, comfortable fit. At good stores everywhere.

BARNEY TOBEY

Try this Tonight for Morning Freshness!

It's a plan that's bringing peppier, happier mornings to thousands! Here's all you do—just drink a cup of Ovaltine at bedtime each night.

Taken warm at bedtime, Ovaltine promotes sound sleep. It also supplies specially processed food elements to restore vigor and drive while you sleep. What's more, it furnishes extra amounts of vitamins and minerals most people should have—in a better, more natural way to get them.

So why not give Ovaltine a trial—you've a lot to gain, and nothing to lose but your sleepless nights and listless mornings!

OVALTINE

Oh! my aching back!

Ah! my Absorbine Jr.

For FAST RELIEF, help feed famished muscles with fresh blood!

When your back muscles feel as stiff as a board after unusual exertion, get busy! Rub on Absorbine Jr. and help those aching muscles limber up fast!

Tired muscles are often famished muscles. Your strenuous activity has burned up their nourishment. But rub on Absorbine Jr. and you help step up your local circulation. Fresh invigorating blood supplies fresh nourishment! Then tired back muscles relax, become supple again, the pain fairly floats away!

Ask your druggist today for Absorbine Jr.—50-year-famous formula of rare medicinal herbs and other scientifically chosen ingredients. A long-lasting bottle, \$1.25. W. F. Young, Inc., Springfield, Mass.

nothing more about George Marble than the obvious fact that he held a paid-up card in the pixies; I convinced them of the inadvisability of dropping him from some high place just at this time and returned to talk it over calmly with the boss—but Marble had canceled my date with the Old Man to take him golfing. . . .

I found Marble next day up on the third floor, embalmed in the beautiful mausoleum that had been originally laid out for an Army liaison officer long since gone back to the kohlrabi department of a supermarket in Lower Upcong, New Jersey. He looked virtually normal, aside from the super zoot, or jet propulsion, mode of his ensemble. He was a solid young man of medium height and innocent baby-blue eyes that gave him an air of hanging on your every word.

As we went along, however, I gathered an impression that he didn't hear half I said and arbitrarily disregarded the other half as sheer nonsense. He had an attitude of standing back, as if humoring the mad world in its foibles. He began to remind me of somebody or something that I was trying to place when I was struck by the unorthodox situation of his wastebasket. It was perched on top of his desk, perhaps two inches to the left of center.

"Handy, I suppose, when you get used to it," I suggested.

George plucked it off the desk and returned it to the floor.

"Just been studying the situation," he said. "What do you think of this idea? Call in half the wastebaskets. Reduce the company's over-all incentive to error by fifty per cent."

Before I could answer, he jumped happily on the interoffice phone and hurled the order down its throat. For this he was being remunerated in money.

Handing me one of the boss' special cigars, he himself put a light to a pipe which had no tobacco in it. At least, although he puffed in noisy satisfaction, no smoke appeared and the careful rings he blew from time to time were entirely invisible.

"Only way to beat the habit," he said. "Little trick I learned from J. P. Thorganheim. You know J. P.?"

I AM as close to J. P. Thorganheim as I am to Harry Truman. I voted for Dewey but have a cousin in Missouri. And I would have bet any one of Thorganheim's millions that George wasn't any closer.

"Great little old fella, J. P.," said George. "Haven't seen him around lately. Guess he's been laid up with that trick tummy. I tell J. P. if he'd cut out all the plum-stuffed duck and junk he'd be better off."

To hear George tell it, he was thicker than thieves with a cross section of the biggest big shots.

"By the way," he said, "what's your objection, if any, to employing a married woman for your secretary?"

"Some of my best friends are married," I told him, "but it just so happens I'm well satisfied with the secretary I have."

"That's the one I mean," said George.

"To the best of my knowledge," I said, "Miss Murphy is living in single bliss."

"A situation," he said, "which I mean to altar very shortly. That's a-l-t-a-r—get it?"

He admitted that while a man could scarcely be accused of trifling with a girl's affections if, having seen her for the first time in his life that morning, he hadn't got around to declaring his intentions by noon, still he knew almost as much about Mary Murphy as he ever would, he felt, and more than some husbands learned of their wives in a lifetime.

He was aware, for instance, that she liked historical novels and Ping-pong, had lost her appendix, took two years of Spanish in high school, quit her place of previous employment for self-advancement, owed allegiance to no foreign

power, had never been arrested for a felony and could be positively identified by a small mole three inches above her left knee. He had gleaned these and other statistics from a once-over of her application in the file.

As I left in a dazed state, George limped me to the door. He had a bad case of corns and had kicked his shoes off under his desk. He wore purple socks.

At the door, suddenly confidential, he dropped his voice and whispered hoarsely, "Keep punchin', kid. To hell with 'em all, and don't spread yourself too thin."

Somewhat self-consciously I returned to my beautiful secretary with the positive identification mark three inches above her left knee. I suppose at some time or another I must have glanced over her application, but I'd never really thought of her before in just that way.

She had both phones off the hook, a waiting room full of excited people and was beautifully distraught. It appeared, she informed me, that the Revolution had come; it was led by our Mr. Viznitski, whose subterfuge for opening hostilities was a ridiculous claim that wastebaskets were disappearing from the bookkeeping department.

And the mail room wanted to know if it would be permissible, since the desks were turned around, to use the outgoing desk for the incoming mail and the incoming mail, or rather, desk, for the outgoing—well, you see how it could get.

And the shop committee had been looking for me with that grievance glint in the collective eye. Early that morning George had found himself in the inspection division—lost, no doubt, on his way to the rest room—and had taken a

look at one of our arcometers. Somebody was fool enough to advise him he was holding it backward. "Only way to inspect them!" George said crisply and ordered all inspectors to follow suit from there on. He called it the uninhibited approach. The union called it un-American.

"The guy's a character all right," I told Murph.

"Character?" she steamed. "He's past grand international leprechaun."

GENTLY, I broke the news to her picturing her with a little leprechaun or two lipping its night prayers at her knee, the knee with the mole.

"Murph," I said, "Marble is really crazy about you."

"He's crazy period," she said. There she laughed. She laughed until I threatened to call First Aid for smelling salts. On second thought, the way things were stacking up, I called anyway, had a bottle delivered for my personal use in case of emergency, and bearded the boss in his den.

You've seen Old Man Hultz in our ads. He makes a nice trade-mark. The grandfatherly type. Silvery hair, a shy old-fashioned smile and a heart of sheer metal. He was busy catching cold in the draft that his reversed desk exposed him to, and chewing an unlighted cigar.

"Little trick of J. P. Thorganheim's," he explained confidentially. "Health and economical. Great little fella, J. P."

"Yeah," I said, "he ought to go far if he just watches out that plum-stuffed duck doesn't sneak up on him."

The boss, I found, had run afoul of George on annual guest day in the lobby of the Boat and Game Club, one of those big haunted beach houses smelling of

BING CROSBY shows BARRY FITZGERALD the modern way to shave in "WELCOME STRANGER" a Paramount picture

**From the song "Smile Right Back at the Sun" copyrighted 1947 by Burke and Van Heusen, Inc*

Waking up can be fun^{*} when you shave with a Remington

Start your day on a high note with a fast, clean Remington shave. No lather—no blades—no muss. Just run the business end of your Remington over your face and watch the whiskers vanish. The combination of Blue Streak *twin* heads—with their long-hair cutting edges—and the smooth, round heads is more than a match for any beard. For a penny's worth of electricity a year you can enjoy a Remington dry shave every morning, the comfortable kind of shave that helps you start off your day with a smile. There are three Remington models to choose from: The Five, the Foursome, and the Triple. See all three at leading stores or one of Remington's ninety-seven shaver headquarters. Remington Rand Inc., Electric Shaver Division, Bridgeport, Conn.

REMINGTON ELECTRIC SHAVERS

A product of *Remington Rand*

More Remingtons have been sold since 1940 than all other makes combined

The Remington Five (illustrated), \$21.50. Remington Foursome, \$19.50. Remington Triple, \$17.50. All Remingtons operate on AC or DC.

GOOD NEWS FOR REMINGTON OWNERS

Modernize your shaver with a **Blue Streak Head**—All new Remingtons are equipped with one or more of these sensational heads that have four long-hair cutting edges and two shaving surfaces. Any Remington shaver headquarters can install a Blue Streak on any Remington multiple-head shaver. Only \$3.50.

ARGUMENT

COLLIER'S

HANK KETCHAM

port for work next Friday afternoon on the top floor, no matter what floor they belong on. I take our visitors to the top floor and they witness that mob scene. Then I bring our visitors down in the slow elevator to the next floor and who do they see?"

"Nobody," I said. "Everybody is on the top floor."

"A little co-operation for Pete's sake," George pleaded. "Don't make it complicated. When I leave the top-floor shop with my guests I stall them out in the hall, aided by the lousy elevator service. Meanwhile, all employees move by the back stairway to the floor below, so when our visitors get to the shop on the floor below it's the mob scene again, but who knows it's the same mob, except a couple of hundred co-workers in on the secret? Can a stranger tell one dirty-faced mob from another? Well, then we proceed down to the next floor. Get it?"

I got it but I couldn't believe it.

"George," I said, "you can't get away with this."

"Let me worry about that. Just slow up those elevators and get busy figuring out how we'll handle all that subcontracting we're going to get."

"George," I said, "you'll wreck us. We'll be the laughingstock of the industry when this gets out."

"Relax," said George, "you're spreading yourself too thin. Now we want this mob scene busy, you understand."

"Busy," I cried in my delirium, "doing what?"

"Banging," said George. "Loud."

BACK in my cell I went into a huddle with Mary Murphy. Something, as the ancient proverb goes, had to be done. No use advising the boss we were headed for a crack-up. George had him hypnotized and could do no wrong. There was only one way to snap the Old Man out of it. Put the finger on George positively as a phony.

"It's up to you, Murph," I said. "Give George that date. Insist upon going to the shore, specifically the Boat and Game Club. All I want is your eyewitness testimony that any day but guest day George couldn't get past the doorman with a steam roller running his interference, and couldn't call on Thorganheim or anyone else to pass him through, because there isn't a Boat and Game member who ever dreamed of George's existence in his wildest nightmares."

"It's a dirty trick," she mused, "but I'm doing it for the wives and kiddies of the happy co-workers. Let's look at it like that."

She made the date for Wednesday night. I was there in the office ahead of her when she arrived Thursday morning. She took one look at the bouquet on her desk and swept it into what would have been the wastebasket before our wastebasket quota was reduced.

"Big shot!" she said.

"Hey," I said, "that set me back a fin."

"You?" she said. "Oh, excuse it." She retrieved the flowers, murmuring, "Beautiful."

"So George couldn't get you into the Boat and Game Club with a search warrant," I said. "Now go on with the story."

"Oh, we got in all right," she said. "Through the door, too. And if you're anxious about J. P.—Mr. Thorganheim, that is—well, he's decided to take Georgie's advice and lay off the plum-stuffed duck for a while. Mrs. Thorganheim says there isn't a soul can do a thing with J. P. but Georgie."

I sat down hard where my desk chair had been before George rearranged the furniture.

"George really knows the plum-stuffed Thorganheims?" I said.

"And the Vanderfellers," she said. "And some more. Isn't that disgusting?"

"Frankly," I said, "it's a blow."

"A bunch of bloated plutocrats," she said, icily. "They made me feel like they

THE SPLIT HICKORY

Continued from page 26

a sickening and dying when I was a little old squirt. And me growing to be the spitting image of her. And having to look at me, remembering, probably wishing it was her sitting instead of only me.

eased' in on me, gradually, that was that was why he'd take the money in the china sugar bowl on the shelf to go over to the Newphers' every now and again and tote home a demijohn of mule. It came to me that if Pa I go ahead and pull up the stumps— all ones—why maybe the other ones ones plaguing him in the back of his —would root loose, too.

AT evening when we'd finished supper and Pa was tuning up his to play like he generally does after eaten, I said offhand, "When you ng for us to get at the stumps?" tightened one of the guitar strings. never I have me a breathing spell." id, "I reckon we ought to have us soon as the tobacco's in."

reckon," Pa said.

id, "It won't be any trick, once we started in on it. It don't take much how to haul up a stump."

s stumps," Pa said. "Not a stump. ain't the know-how, it's the time. time." He sounded the string with umb. "You been fighting again, ou?"

id, "Yes, sir."

u recollect I said you was to quit e said. "What was you fighting e wanted to know."

allowed. "Marty said . . . he said was a scroot," I lied, not looking Jinks heard his name and jumped off the sofa. He waggled over to ears scratched.

u think a heap of that dog, don't Pa said.

dded.

ll, it's a tomfool thing to fight on," d. "Because he is a scroot. Forty nt kinds of it." He plucked the strings, slow. "But that ain't his You lick Marty?"

ook my head.

xt time see to it you lick him," Pa d he launched in playing Shoo Fly It makes you feel laughing all over, ow, when Pa plays that way.

ng to bed, I said, "We'll get after mps soon as the tobacco's in—huh,

at's what I said," Pa said. He uned his galluses. "What's got into yhow?"

thing. I—I was just wondering ve were going to get around to it." get around to it when I get around Pa said. "Now hush up on it." . . . didn't get around to it, though. August, the August I was eleven, e August the hail got the tobacco before we were to cut it. It came big as pullet eggs and there wasn't we could do except stand there tch it hopping and bouncing, beat-living daylights out of the crop. counting on it so heavy.

vening there was a silence in him old, wet stone. He took his guitar and tuned it, and then he drew his cross the strings, so it made a y jangle, and he put it away and d off to bed without a word.

k the china sugar bowl and hid it made it worse, sneaking it like o, after a while, I took and put e shelf where it rightly belonged. following morning when we were breakfast he asked me how I'd go visit at my Aunt Harriet's.

ckon I wouldn't like it," I said, ot to glance at the sugar bowl. I ee in my mind Aunt Harriet's -in mouth, and her hair, skinned

tight over her skull, and her tight-feeling house with the furniture set just so with little starched lace doohickies on it.

"I like it how it is here," I said. "Besides there's Jinks."

"Jinks would keep until you got back." "I purely couldn't go," I said, "unless I had Jinks."

Jinks thumped his tail and cocked his head, puzzling at me and Pa.

"Not even if I asked you to?"

"No, sir," I said.

"What if I said you was going to do it?"

"You wouldn't do that," I said.

I looked straight at Pa, and Pa looked at me. I could see him thinking how much I resembled Ma. I put down my cup. "Pa," I said, "why don't we get after those stumps? We could—"

Pa whacked the table with the flat of his hand so the dishes rattled and the coffeepot lid opened and shut once, like a surprised mouth. "Plague take it!" he shouted. "Will you leave off pestering me about them stumps!" He ran his fingers, bunchy, across his forehead.

"Eat your victuals," he said.

I said, "I reckon I'm done."

"Run along then," Pa said. "I'll be out directly."

"I'll redd up the kitchen," I said.

"I said run along!"

So I went outside and up to the curing barn. Shortly I saw Pa stalking off down the road. After he'd gone a piece, I high-tailed it back to the house and lifted down the sugar bowl. The two-dollar bill and the three ones were gone. I knew for sure, then, and I whistled Jinks and we went up to the Split Hickory because I didn't admire to be home when Pa came back from Newphers'.

He stayed drunk that time for nigh on to three weeks. When he got over it, he looked the same as if he'd had a long sick spell.

"You should've gone to your Aunt Harriet's, like I wanted you to," he said, sitting on the edge of the bed with his hands hanging between his knees. After a minute, he said, "I'm sorry, Tod. I'm powerful sorry. There's something gets in to me."

"Sure, Pa," I said. "I know how it is."

"I'll get them stumps up for certain, come spring," he said.

"Sure," I said. "Sure we will. Spring's a better time anyway."

IT WAS a cold winter and a cold, wet spring. The ground squished underfoot and the gully run red. Scrooched in bed at night with the rain pounding on the roof, and driving against the windows, I'd catch myself waiting for it to get in. Sometimes it'd slacken and stop and in the morning when I went to school I could hear the whole world dripping. The ditches on either side of the pike rushed with water, and the creek tumbled white under the covered bridge. Gray, ragged clouds went streaming across the heavy sky—so close I could've hit them with a rock. And then it'd head in raining again. That's how it was all spring until pretty near the middle of May.

I went out one May morning and saw a patch of blue sky the size of a Dutchman's shirttail, and wind ripples on the puddles. And there was a quickening everywhere. And within a week things were fairly busting out every which way.

And Pa sobered up and began plowing.

That summer, after school let out, was the best ever was. There never was a summer like that summer. Seemed as if no matter what I saw or did, it was extra special. You take, for example, just fishing up the creek. Me and Jinks. I remember how flabbergasted I was one day, when I saw a snake fly. Really saw it. How it was a pretty sight to see, I mean. And another day it came to me the creek went

Are YOU a MITTY?

somewhere besides just to Summit Falls. Maybe somewhere important even. Notions such as that. I don't know.

That's how that summer was. It wasn't all fishing, or berrying, or squirreling, or Jinks and me racing with the wind just to be doing. There was the regular chores, besides helping Pa with the tobacco and all. But, studying back on it, that whole summer sums up purely wonderful.

The crop that August was almost as good as any crop around. When it began turning, it was a proud thing to see.

"Well, by Harry," Pa'd say, "we don't eat sowbelly and beans *this* winter!" And, "Come fall, I'm aiming to clear me that stumpland for sure and next year I ought to get on the road to being paid out." That was the August I was twelve.

It happened two weeks after my birthday. Jinks and me came home with a mess of catfish we'd got up early to catch while they were morning-hungry, and there was Pa sitting on the back steps pulling a tobacco leaf through his fingers. He didn't answer when I howdy-hollered at him; he didn't look up or anything. When I got closer I saw the expression on his face and I thought: *Oh, goddlemighty. Good goddlemighty!*

I think I knew what it was before I reached him and he handed me the leaf and I saw the wildfire spots on it. It was as though, underneath, I'd known all along that it was due to happen. As though I'd been storing up through the summer for this very minute when I put down my pole and bait can and the catfish, and took the leaf from him.

Wildfire is worse than sore shank and hornworm, and green-bellied suck fly all rolled in one. It spreads as fast as what it was named on. Wild fire. Before you know it the small spots are big spots and they dry, or rot, and fall out, and your tobacco couldn't be any more of a ruination if an honest-to-John fire had swept through it.

Pa said, "I'm getting your things together. You're going to your Aunt Harriet's." He got up and went in the house.

IT SEEMED most a year I stood there. Then, someday, I was running. When I got to the first tobacco rows I commenced yanking and twisting and stamping—but it was like striking out at something that didn't stay hit, like Marty Shane. I tripped over a stalk and fell down. When I sat up, there was a heaviness in me that felt like a sack of wet meal getting ready to split wide open. I doubled up my fist and, someday, I was shaking it at the sky and shouting, "When's it going to quit? You hear? When's it going to quit?"

Jinks licked in my ear and I put my arm around him and burrowed my chin in his fur, to stop it from wobbling.

Pa was packing my stuff in the suitcase when I came in.

I said, "I'm not going." I moved to where he could see me. "You may as well make up your mind to it," I said. "I'm not going." I held out the tobacco leaves I'd brought in with me. "Lookit."

Pa said, "I saw it already."

"This here one only has a few, fair-to-middling spots that don't amount to breaking up sticks," I said. And I showed him. "This one is just beginning and you can't hardly tell it, if you squint at it. And this here one here isn't even touched yet! See? Hold it up to the light!"

"It's no use, Tod," he said. "First rain and the whole of it's done for."

"If we went ahead and picked it—"

Pa gave a knotty, squeezed-out laugh. "Sure," he said. "I'll cut it and rack it and have a pound party when it spoils on the stalks. Is this all the socks you've got?"

I said, "I didn't say cut it. I said pick it. Hand-pick it, leaf by leaf. Extra careful. It's not done for, actual, until it rains. It's got a head start but we can save what we can. If we get going."

Pa stood there holding my socks and

gazing at me as if I'd lost track of my senses.

"We can do it," I told him. "I know we can!"

He dribbled the socks into the suitcase and he took the healthy leaf in both hands and squinched his eyes at it.

"I know we can do it," I said.

He lowered the leaf and his eyes colared mine. "All right," he said. He drew a deep breath and let it out, slow. "All right, Tod," he said.

THE next three days were like a kind of dream, where a thing you can't see is chasing you and, to save your soul, you can't move hasty enough. Red-eyed and fumbled with sleep, we'd be up and off in the morning, soon as it lifted, and late at night after we'd finished stringing, and when there wasn't anything awake but the hoot owls and the bullbats and

JACK MARKOW

SPORTING ODDS

In a tennis match some years ago at Forest Hills, Merritt Cutler, former National Indoor Doubles champion, threw a ball up to serve, prepared to swing and discovered that the ball had vanished. As Cutler bewilderedly searched his court for the missing pellet, he heard chuckles from the next court and learned the solution: A wild shot from that court had collided with Cutler's ball in the air and knocked it several courts away—a chance considerably smaller than making a hole in one.

—Parke Cummings, Westport, Conn.

us, we'd fall across the bed stiff and aching and too worn out to care—asleep before we were undressed.

But we did it! All except the stand over the gully. And we'd have got that, if there hadn't blown up a rain.

The leaves in the curing barn were a mite too green, and they weren't anywhere near holding a good crease. And some, what we later had suspicions on, we took and burned, but—while it wasn't prime tobacco—it was tobacco. Maybe it didn't turn as rich a yellow color as it ought and, when we commenced firing, maybe it didn't deepen the way it generally does, but it was "selling" tobacco. And it was all leaf. What there was of it.

Pa didn't play his guitar any more an evening, though. But we didn't let of us let on. Just as we didn't mention clearing the stumpland after the tire in October that was—when Pa was enough aiming to get at it only loaned the heavy chain to Mr. New. He went over there to borrow it back he came home with it, all right, but Newphers had given him a jug of pling whisky. He honestly was pling on saving it until it had some age but the corncob cork didn't fit to suit and... well, once he got it out, he got it in again.

That was the October I knocked Mr. Shane's front teeth loose. I couldn't tell him say uncle, though. And it was October the Ladies Missionary gave a taffy pull after school one day I didn't find out till I'd already got and got my taffy, that it cost ten. And everybody looking. It was in the ber, too, that Mr. Thompson who the store at the crossroads began preying he was busy when I'd come in for meal or something, on account.

I sure was glad when that October was done with. Although November wasn't any improvement to brag on was gray and drizzly and pretty soon kids at school began talking Christmas and what they were liable to get.

DECEMBER turned off mild. A good tobacco-handling weather one late afternoon Pa and me commenced making it into hands ready for when the auction sales at the loose-leaf floors in Boonesboro.

"What you figure it'll draw?" I said.

"No telling," Pa said.

"Might be more than we expected."

Pa said, "Might be is a long road to do."

I said, "It don't take but fairly to do us."

Pa didn't say anything.

"I reckon we'll get by," I said. "matter what. Heck fire, I—"

"You'd better tighten that leaf around the end or the whole bunch come loose," Pa put in. So I saw he admire to talk on it and I shut up.

It was that evening Mr. and Mrs. brought Marty over about Marty's teeth. Mrs. Shane reminds you of hen with its feathers blowing. She Marty show his teeth to Pa—how were turning dark—and you'd thought, from the way she carried that losing your front teeth was something. Mr. Shane is a tall, jointed man who gets embarrassed kept saying, "Now, Mother, don't flustered."

Pa finally got a word in edgewise, "Why did Tod hit him?"

"Why, indeed!" Mrs. Shane said, rowing her eyes at me.

"Why did you hit him, Tod?" Pa said.

Marty knew I wouldn't tell. The a mean grin glimmering back in he couldn't anybody see but me. A gl like there'd been on his face that October at recess when he'd told kids Pa was "dirty-drunk" again.

"You heard me," Pa said.

"Why'd you hit him?"

"I don't rightly remember," I said.

"How about you, Marty?" Pa said.

"Do you recollect what it was?"

"I wouldn't let him copy off my raphy paper," Marty said.

After they'd left, Pa took his strap off the hook. He said, "Ben that chair, Tod."

I didn't believe him for a second. I saw he mad-meant it. In earnest.

"I warned you I was fixing to you if you didn't cut out this fight said. "Bend over that chair!"

So I bent over the chair. I coming and I made my hinder as I could, to take the sting. The hadn't any more than landed who was down off the sofa. He ran at

Golden Wedding

whining and getting in the way and, when the next one came whishing down, he didn't move fast enough. It caught him in the hindquarters. He gave a yip and before I realized what I was doing I'd wheeled on Pa and jerked that strap away from him. The two of us stood there, staring at each other.

Now here's a peculiar thing. I knew Pa didn't go to hit Jinks. Jinks knew it, too. I could tell. Yet it didn't make the slightest particle of difference. It was as if there was something boiling up in me. Something hot and crazy that I hadn't known was inside me at all. But it didn't spill over hot. When it spilt, it was stormy and hard.

I said things to Pa, cold out, it's a wonder they didn't shrivel him, and me, too—and I finished up by telling him he could daggone good and well go to Boonesburg by himself and not come back, for all of me. And I took and I threw that razor strap clear across the kitchen.

Pa went over and picked it up and hung it on the hook. He turned as if maybe he was going to say he was sorry. But he didn't.

And neither did I.

PA WENT to Boonesburg alone. The Saturday morning he left was more like middle-March than close to Christmas. The sky was still peppered thick with cold, greeny stars when he hitched up and pulled off with the load of tobacco. The lantern swinging from the tailboard made a little rosy circle behind. From up at the Split Hickory the pike looked white and like it was reeled off a spool and, in the hush, and farther and farther away, the wagon wheels said, "Bubble-and-squeak, bubble-and-squeak, here we go through the gap. Bubble-and-squeak."

I kept hearing them in my mind even after the east streaked with red and the red shaded off and the sun inched up like it was peeping over the edge of the world to make sure everything was in kilter before it went whole hog and committed itself. However, the longer that morning got, the less in kilter it was. There was too much of it and not enough to do with it, for one thing, and for another there was a weasly feeling I couldn't get rid of, spoiling in me. It was as if it was my fault it was Pa's fault he'd gone off without so much as glancing back to see was I anywhere around. By the same token, it was sort of his fault it was my fault.

Midmorning I moseyed off down the road toward the store just to be doing. At least that's what I told myself. But I

reckon I knew what I was aiming to do actual, because I made me a cold beer sandwich to take and I didn't whist Jinks from where he was investigatin something over in the stumpland. Ar when I heard a truck coming I didr waste any time stopping and sizing it u It was a load of Christmas trees whi meant it was bound for Boonesburg sui However, there was a sign on the win shield that said NO RIDERS. So I made if I was going to race it. The driv slowed down and gave his horn a toot f me to watch out and, when it went past hooked me a ride easy as skinning a c

Boonesburg is a filled-up kind of place. The houses are right smack dab next each other's yards and it seems f every tree there's a telephone pole, a everywhere there's a vacant space is billboard or a gas station or both. Ther people hurrying every which way, as they're all late for wherever it is they going, and there's streetcars clanging a dinging, and more automobiles scooti along than you can shake a stick at—behaving according to signals. When y cross Republic Street and look off tow where uptown is you can see these h signals twinkling on and off in a red a green string. Uptown is real exciting hopped off the truck at Republic a went up Ninth to the warehouse, thi ing how surprised Pa was going to when he caught sight of me. And plea maybe. Only he wasn't there.

I ran into Sid Newpher—he's the who has the seed warts—and, with letting on I didn't already know, I fou out Pa had sold and left and that the pi he'd got was slim pickings. If Sid c sidered it was slim, I knew it was mig slim. So, instead of hanging aroun beat it over four blocks to Hallen's liv stable to see was Pa there getting read start for home. Because, if he wasn well, heck fire, if he wasn't he was at bank probably. Or someplace.

Hallen's isn't a very high-grade ery stable. However, it only costs fift cents to hitch to the iron railing in back plot. Mr. Hallen don't run it, just owns it. There's generally alw somebody new running it.

Our team and wagon were there, in back plot, so I went inside to see wa in the office. At any rate it's wri OFFICE beneath the pointing hand on sign that's nailed by the door. It's not just part of the stable partitioned though, and there isn't but a dirt fl and a potbelly stove, and a dropl dangling from a twisty green wire, some chairs and a table where there's

ally men sitting around playing cards. The glass portion of the door is painted green but there's scratched places where the paint is off and you can look through.

I was fixing to take me a look when Joe opened the door. Joe's the colored fellow who's worked there ever since I can remember. You don't think about Joe being colored, though. Once, when Pa was liquored up, Joe stuck up for him in what would've been a ruckus sure enough, if Joe hadn't run the other man off the livery-stable premises. Anyhow, like I said, Joe opened the door and I said, "Hi, Joe," kind of sheepish, and fixed to walk in. By the stove, a black police dog raised its head and fastened its yellow eyes on me. It growled deep in its throat.

I stopped where I was. Then I saw it was muzzled. The men sitting around the table laughed. One of them, a big beef-faced man, said, "Since I put that muzzle on him it sure interferes with his meals." He jerked a thumb at me, and I could tell it was him who was running the stable this trip. "High Pockets there," he said, meaning me, "makes five he's been cheated out of so far today." They all laughed again.

"Six," the man across from him said. "Muley Bates is one. Woody Thacker, two. Rolly Atchinson was three—"

"I wasn't counting Rolly Atchinson," the big man said. "You'd have to stock and water him first to make a meal."

"You mean distill him, don't you?" somebody else said. And they all laughed.

Rolly Atchinson is Pa. I could feel my ears hottening and I opened my mouth to say something—I don't rightly know what—when Joe looked at me with those soft, Burley-colored eyes of his. Someway, for a minute, it was as though I was knee-deep in them.

He said, as if he was talking to himself, "Do more harm than good."

The big man said, "What's that, Joe?"

"Gators," Joe said. "What I mean alligators!"

The big man winked at me, as if he was letting me in on a secret joke. "Joe," he said, "if you could be anything you wanted to, besides an alligator wrestler, what'd you be?"

Joe's teeth flashed in a white grin. "A light-complected blond!" he said and, when the men laughed, he laughed. He made out as if he was expecting me.

"If you all'll excuse me," he said, "me and this young gentleman got business to attend to. I promised I'd learn him how to rattle them old swamp 'gators."

"You going to be an alligator wrestler, too?" the big man asked me, joshylike.

"Maybe," I said. And I went away from there. Joe caught up to me.

"Mister Tod," he said.

I stopped. "They haven't got any call to talk that way," I said. "I should've gone ahead and said my say!"

"They didn't know Mister Rolly was your daddy," Joe said. "Honest. They didn't mean no meanness. But if you'd blowed off and rubbed their fur the wrong ways why then they'd have been mean. What I mean, mean. You done best."

"I should've stood up to them," I said.

"It's like rassling 'gators," Joe said, as if I hadn't spoken. "Be a foolish thing to tackle unless you knowed exactly where you was at. You take Mister Burless, doing all the talking in there. You don't handle him just so, why, look out."

"If it was me," he went on, "I wouldn't let it rankle me what happened. Your daddy's got a taste for whisky. That's all they was really saying."

"They threw off on him," I said.

"They's always throwing off on somebody," Joe said. "Thing to remember is your daddy don't do it. You run along and come back later. A livery stable isn't no place to hang around. I'll tell Mister Rolly you was here. And, next time you're in here, I'll sure enough learn you to rattle alligators."

He gave me a wink copying the one that that Mr. Burless had given me and I

couldn't help smiling. But it was a smile that didn't go down deep. Deep down, where it counted, there was a spot like gets in potatoes. A black-rot spot. And it had that Mr. Burless' name on it.

Pa wasn't at the bank. Nor he wasn't at Tate's Feed and Harness Store where there's generally a bunch arguing, good-natured. Nor he wasn't gassing with anybody in the lobby of the Farmers and Traders Hotel. Nor in the barber-shop, there. Nor he wasn't in the bar, nor in any of the ones further on. And he wasn't at the courthouse square where people have a habit of congregating, because there's benches around the Confederate Statue which stands facing up Main as if it was expecting the Yankees any minute, and wasn't going to budge an inch—Sherman or no Sherman.

MAIN STREET was so crowded you could've taken a stick and stirred it. Hunting for somebody on Main Street is like hunting for a certain particular pebblestone in a creek bed. Christmas was everywhere you looked. There were Santa Clauses—some with red crepe-paper chimneys and some with kettles for people to drop their money in. There was mistletoe and holly and bunches of evergreens tied with ribbon bows; there was a Salvation Army band playing Christmas songs on a corner, and where the tall iron lamp usually is by the post-office steps there was a big Christmas tree all lighted up.

The store windows were decorated with cotton, and sparkly artificial snow, and silver tin-foil icicles, and clusters of bells. There was one that had a giant mechanical Santa Claus that worked! It sat on a throne and leaned forward and slapped its knee and laughed Ho, Ho, Ho, Ho, Ho, over and over.

The best one, though, was the store that had its window fixed up like a toy workshop at the North Pole. There was just about every kind of toy there is, I guess, in that window. You could look all day and never get looked out. And I pretty near did. When I came to, it was two-thirty by the clock on the courthouse, and I lit out from there in a hurry.

The team and wagon were still in the back plot. I simmered down to a walk and, of a sudden, I halted dead in my tracks. Laying there, patienting it out, was Jinks! He came high-tailing when he saw it was me, and the way he carried on you'd have thought I was the king of Egypt. He wasn't half as pooped as I was either. And all I'd done was window-wish. He'd covered thirty-eight miles!

I divvied my sandwich with him then I rubbed him good with a buck sack out of the wagon and I went in stable to see could I find him a drink.

There was a queer kind of a feel in the stable. I felt it as soon as I stepped inside. It was sort of like when there's a smell in the wind you can't place. It was uneasylike. Then I heard Pa's coming from the office. The door shut closed, so I couldn't make out he was saying but I knew right off something was wrong. I don't know what just knew it. I eased up to the door.

"Hell," I heard Pa say in the tones when he's being One of the Boys. It can be as big a sport as anybody. I don't see how this is a sporting position in any way, shape or form."

"It's not supposed to be," Mr. Burless said. "It's a scientific experiment. Furthermore, Joe wants to wrestle. Don't you, Joe?"

"Well, please, sir, Mister Burless," answered, "I can't say as I'm overly ious."

Through the scratches in the paint the glass I couldn't see anything but back but, someway, listening, I could hear Joe in my mind. He'd be grinning maybe rolling his eyeballs the way does to get a laugh. But nobody laughing. Nobody except Mr. Burless. I won who it was wanted to wrestle Joe. Joe didn't care to monkey with. I couldn't figure it out. When it was, I decided, must be an except good wrestler to make Joe back.

"You see, Atchinson," Mr. Burless said. "He's anxious to wrestle him overly anxious. But anxious. That's you said, Joe, wasn't it?"

"Um, um," Joe said. "I druther on specializing in 'gators."

"Tell you what," Mr. Burless said something sly and devilish crept in voice, "I'll give you ten, Atchinson, step aside from the door and Joe to get through it. Now that's a proposition ought to please every Eh, Joe?"

Something wet shoved itself in hand. It was Jinks' nose. I closed fingers over it, gentle, so he'd know quiet the same as if we were in the hole up the creek by the beaver dam.

"If that's the way it is, Mister Burless," Joe said, "that's the way it is."

"Suits him, Atchinson," Mr. Burless said. "And it suits me and the rest."

"I don't want to keep hanging c Pa said, "but—"

"But what?" Burless said, soft. "Well, it ain't funny for Joe he

Understand Rivalry and you understand America

There's a lot more to this picture than three little boys competing for a maiden's favor. Behind it is the spirit of rivalry that moves America ahead . . . the competitive spirit that makes us all eager to accept a challenge to show what we can do, and be judged by how well we do it.

Rivalry is second nature to Americans. We're raised on it. It helped us win a leadership the whole world envies. Competition is in our blood. We like it. We put it to good use.

Take the Petroleum Industry, with more than 34,000 individual firms of all sizes. In every phase of this business employing 1,250,000 people, companies work to outdo rivals; compete in oil production, compete in refining, compete in research for new uses, compete in

sales. That's why Americans get petroleum products at the lowest prices in the world. Taxes and prices vary of course, but gasoline in the U. S. is always the world's best bargain.

Nor does the race to make new products, better products . . . the race to produce more and more oil to meet record-breaking demand . . . stop with gasoline and lubricants. In a hundred different fields, petroleum and its countless by-products continue the competition.

The result—better health, a chance to go more places more easily, more comfort . . . more . . . *constantly* more, for you.

THERE'S A PLUS FOR YOU IN PETROLEUM'S PROGRESS

So, to speed relief from itching and pain of simple piles, get Pazo*. Your doctor can tell you about it. At all druggists' in tubes with perforated pile pipe for simple, thorough application—also tins and suppositories.

*Pile Ointment and Suppositories.

mean—well, hell, Burless, suppose it was the other way around. Put yourself in his shoes."

"But it ain't the other way around," Mr. Burless said, softer still. "You with him? Or us?"

"I'm not against nobody," Pa said. "I just don't—"

"Can't hang fire all day," Mr. Burless said. "You make up your mind while I'm counting. One... if you're with us just step aside before I get to ten... two..."

Pa's back inched over the least, least trifle and some of the scratches in the glass opened up. It was like looking into a peep show, only you had to keep moving your head to get a good view. And everything was sharp and clear, the way it is sometimes after a frost when you notice things you hadn't noted before. Little things. I saw Joe was grinning—but it was a sick grin that didn't have anything to do with the rest of his face. I saw Mr. Burless' eyes were like fish eyes and that the faces of the men sitting around the table—the ones I could see—were like faces they'd put on over their own faces to watch through. And I saw the police dog. It had smelt Jinks. Its yellow eyes were fastened on the door and its upper lip was curled back. Mr. Burless had it by the collar. But it sent shivers up you, anyway. Because it wasn't muzzled any more. A low rumbling came from its throat.

I quick clapped my hand over Jinks' mouth. I could feel him stiffening and his ears flattening, and an answering growl trembled against my fingers. But before he'd let it loose I'd whispered him quiet.

"Three..." Mr. Burless counted. "Four... five..."

"Mister Rolly," Joe said soft, pleady-like. "Ain't a bit a use in making it worse."

"Six..." Mr. Burless said. "They're only fooling," Joe said to Pa. "You do like he says. Lemme run for it. You'll see."

Mr. Burless smiled. "Joe," he said, "you slay me. Seven..."

And, all at once, I knew!

THEY say a drowning person's whole life flickers before him in a split second. I don't believe that's precisely true. I think what happens is they see certain things clear. Because, crouched there with my eye glued to a scratch in the glass on the door, it was like I was drowning and I saw certain things clear as could be. I saw maybe Joe was right. And maybe he wasn't. That maybe Mr. Burless was bluffing he was going to sick that dog on Joe. And maybe he wasn't. But, regardless, I saw how, if Pa crawled just to stay in good with Burless, it wasn't going to be the same between him and me. Ever again.

I saw it plain as if I was up at the Split Hickory gazing out and around and down at everything. It was all laid out flat. How it'd been, a long time ago, between Pa and me when I thought he knew everything. And how it'd changed, by degrees, to what it was now. And how it was going to be, if Pa chickened out. If he did, there wasn't going to be anything left but... stumps.

"Eight..." Mr. Burless said.

I took hold of the door handle—because where Pa's back had been, most of the scratches had opened up and I couldn't stand it any longer. I couldn't stand remembering the time Joe took up for Pa, or the feeling I had that Pa was remembering it, too, and was weighing it to see how much it was worth. I turned the knob and opened the door.

"Sick him, Jinks!" I said. "Sick 'im!"

The rest is a kind of a blur. Chairs were overturned, and the light got to swinging crazy so the walls looked as if they were chasing themselves. Everybody was shouting at once. And I saw Mr. Burless pick up the poker. I tried to yell, but I

couldn't. I might've got to him if Pa hadn't grabbed me.

Jinks never had a chance. The poker caught him in the head.

He never even had a chance.

But before the poker could come down on him again I'd clawed free of Pa and the last thing I remember is the surprised expression on Mr. Burless' face when he hit the floor with me straddling him.

Then the light went out.

WHEN I sat up, the whole room was revolving, slow and stately, and everything was in pairs—chairs, faces, the stove, the calendar on the wall. There were two slack-jawed, spraddle-legged Mr. Burlesses in a double corner. Both of Pa's noses were bloody. Joe was holding two pokers in four hands and was standing over something. I concentrated and it swam into focus. It was something that had been a police dog.

Somebody said, "Take it easy, boy."

Pa bent over me. "You all right, Tod?" he said. He laid his hand on my shoulder. I shook it off and got to my feet. The room tilted and the walls swayed.

"I think it's wonderful that Jackie asked us to wire him fifty dollars—it shows he's beginning to appreciate the value of money!"

COLLIER'S

BO BROWN

"Get him out of here, Joe," Pa said. "I'll be there directly."

Outside the sun was shining and there was a bird hopping sideways along the hitching rail. It seemed peculiar the sun was shining and there should be this little brown bird, hopping along. When it flew off I flew with it. We flew high above Main Street, just to be doing, and then we flew to the courthouse steeple to get our bearings and we took off from there and headed into the sun. Below us, Boonesburg got smaller and smaller and, presently, there was the pike no wider than a yellow ribbon dipping in and out. I could mark the creek by the willows and the old covered bridge, and Ballards' by their red roof, and Sims' by their green one, and Newphers' by the double row of honey locusts. The fields were like a big, lumpy bedquilt all pieced out crooked and, far away, there was a man plowing. I wondered who it was. And there was a lop-eared, spotted dog—

I called to it. "Jinks," I called.

"I'll fetch him," Joe said. "Take it easy, boy." He hesitated. "You okay?" I nodded.

Joe went away and the little brown bird came back and commenced hopping along sideways again.

Pa let Joe off at Elm where the colored people's houses begin. "What about you?" he asked Joe.

"I was quitting after Christmas," Joe said. "It don't matter." He moved around to where I was sitting in the

wagon bed holding Jinks. "I'm sorry he said. 'I'm awful sorry.'"

He stepped up on the curb and stood there, turning his cap in his hands and watching after us. I closed my eyes so I wouldn't see him any more...

It was crowding dusk when we got home. By the time I'd made a box and lined it with a piece of carpet it was dark night. I brushed Jinks until his coat shined in the lamplight. Then I put him in a box and fixed him as if he were sleeping. I nailed the lid on and the sound of hammer blows was like the sound of the things I'd kept inside me. The Split Hickory things. Pounding and pounding and pounding. I took the lantern and went up to the barn to get the shovel.

Pa was sitting there in the dark, stopped when I saw him. I'd thought he gone over to Newphers'. In the lantern rays his face looked strange and, of a sudden, I saw him as somebody named Rolly Atchinson I hadn't ever seen before. Somebody who didn't have any connection with Pa whatsoever.

"I've figured it out why you done," he said. "You was afraid I'd eat crabs. And maybe I would've. I don't know. He rubbed his chin so the bristles made a scratchy noise. "If there was something I could say, I'd say it," he said. "If there was some way I could make it to you."

He picked up a clod of dirt and crumbled it. "Your Aunt Harriet will do you proud," he said. "You'd be better off with her long ago. I'm mean to get straightened around, Tod. Can. There's something gets in to me now and again. But I'm meaning to it. If I can lick Burless, I can lick it. Licking Burless won't mean nothing to I do."

OF A sudden, I saw that was how it was with Marty and me. I saw plain as plain. It was as if I'd known it along and that was why I'd quit being I'd ever whipped him, actual. It was going to count until I'd owned up in myself I was fighting to save my face much as Pa's.

"I'm aiming to plant cone firs in the gully, the same as it says to do in the letins," Pa was saying. "And clover falfa, soybeans maybe. I don't know. But I'm through with just one cash crop. The tobacco don't ever draw enough price. What I got for it this year will be the interest at the bank and that's all. I'm figuring on hiring out for the of the winter and, thataway, I can get a new start, kind of."

He paused, as if maybe he was waiting for me to say something. But there was nothing in me to say.

"I bought a Christmas present," he went on, after a minute. "It's for you. And still it ain't. But I thought you like it anyway. It don't amount to much. But it was all I had to spend." He lowered. "You may as well have it now," he said, and he reached down behind him and picked up a dog collar.

It had goldy-looking knobs on it, a name plate. The name plate had "Jinks" engraved on it. I took it, slow. I could see Pa searching for something to say. Anything. To take up the slack.

"About them stumps," he said, aiming to get after them, soon as possible. Come spring, I figure we'll have a breathing spell and—" He broke because, somehow, the way he'd said it, a live thing between us. And then I saw something within him split and break like when the Hickory went, in a storm. His strange Rolly Atchinson crumpled and came to pieces, and he was it in his hands. The way he flew away, a bird. Like a little brown bird, looking down at a man plowing. And I saw it was.

It was me.

"Sure we will, Pa," I said. "Sure will. Spring's a better time anyway. THE END

YOUNG MAN OF FASHION

The story of Mr. Charlie James, who has not only a \$20,000 sleeve, but something up it

BY AMY PORTER

Price is no object, let's hope, to customers who view James' lush creations in his New York salon. Note the intricate drape of skirts

the handwork is the rule in the James workroom. Only seams are machine sewn

"It is the spirit of France," critics sighed at the champagne and candlelight fashion spectacle James put on in Paris. These gowns were hits

YOU wouldn't think anybody could spend \$20,000 on a sleeve—you know, a sleeve, something you put your arm into. But Charlie James did it. For him, it was a revolution. Charles James, dressmaker, makes clothes for women in a little upstairs place in New York. He made this sleeve there. Took him three years. It's not, he says, an ordinary sleeve. It's, he says, a revolutionary sleeve. It has one inch more than the usual amount of material in it. A woman can move her arm in this sleeve, he says. Or shrug her shoulders, he says. Or pitch a baseball. All without distorting her waistline, bunching at the

collar, or splitting a gusset. This, he says, is something definitely special in the way of sleeves.

James will make you up a pair of his new sleeves, if you like, with suit attached, for around \$800. Or, to put it more accurately, if *he* likes. Because he certainly won't make anything at all for you unless he wants to. If you irritate him in some way, he most probably will huff and puff and throw you out of the joint. Like the other day.

A woman made a small murmur, a sort of objection, about the way a skirt hung, and did he fix her! He made her to disappear quick. "Get out! Get out!" he screamed. He

chased her to the elevator, and as the creaky machinery carried her down and away, he yelled after her. "Don't you dare to come here again, you..." he said. He came back into his gilded salon with his feathers still ruffled. "Such a one! She should not be permitted to wear clothes—ever."

James' regular clients think his temper is cute, and his clothes—wonderful! He has a waiting list of women who beg him to dress them, please, at any price.

But James is not content. He is troubled about whither are we drifting, fashionwise. He is, in fact, furious, simply furious, at the entire

"I was over here every day after school, helping you around the corral," she said. "You could have told me." There was stubborn bewilderment in her voice. "You'd think you'd have to tell me."

He moved his head uncertainly. "Look, kid," he said. "A guy never knows. I would've told you if I'd known."

She smiled a little at that. "Well—" she said. "I'll be getting home."

"Oh, no you don't," he said. "You're staying for supper. I want you to meet Mady."

"No!" she said. Then more softly: "Ma wouldn't know where I was." She went sideways through the half-open door and started slowly out the gravel driveway. Then she stopped.

MADY was coming toward them from the house, her cotton skirt pressed to her thighs by the twilight wind. She had fine brown hair drawn loosely back from her forehead and held at the nape of her neck with a yellow bow. Her eyes were large, off-blue and her gaze was soft.

"Hello," she said easily. "I'm Tom's wife."

Then Ann stepped into the light and Mady saw her face and stopped. There was anger on the finely carved young features.

They stood there, watching each other. The trees dipped to the wind and a dry branch broke loose and skittered along the gravel.

There was a hollow slam behind them as Tom shut the garage. He came up and threw a great arm across Ann's shoulders and walked her to his wife.

"Mady, honey. I told you about Ann. Here she is." He rumbled the girl's straight blond hair. "She's the best man in the county."

"All I know you taught me," Ann said.

Mady was silent. She smiled again and held out her hand. The girl's palm in hers was cold and rough as a lizard's skin. "You live on the next ranch, don't you?" Mady asked gently. "We'll see a lot of you."

Ann's smile was jagged. "I'll be around."

"You better," Tom said. "You got my horses trained to you. She has a way with them," he told Mady. "Strangest thing you ever saw. She's a smart youngster, smarter than me. But she doesn't know that yet."

He put a large hand on Ann's head and smoothed the hair back from her temples thoughtfully. "She'll be a hell of a woman when she's grown. That hair, and when she fills out. They'll be no hope for the guy she sets her heart on getting. Wait and see."

"How old are you, Ann?" Mady asked softly.

"Fifteen."

"Another three years," Tom said. The women looked at each other.

Mady came to the door. "Hello," she said, "I'm Tom's wife." She stopped when she saw Ann's face and they both stood there, watching each other

When You Need a Laxative—

Do what millions do for pleasant, satisfying relief!

Constipation is bad enough. Why add to your troubles by taking a harsh, upsetting laxative? Next time you need relief, take pleasant, gentle Ex-Lax.

Ex-Lax gets results easily, comfortably. It isn't violent or upsetting like some laxatives are. When you take Ex-Lax, you hardly know you have used a laxative, except for the satisfying relief you get.

Yet, gentle as it is, you can depend on Ex-Lax for *thorough* relief. It is biologically tested for effective action. Many doctors use Ex-Lax in their practice.

And remember, Ex-Lax has a *delicious chocolate taste*. It's a real pleasure to take!

So take Ex-Lax and as a precaution use only as directed. Ex-Lax is America's most widely used laxative—the favorite of old and young alike. Still only 10¢. Economy size, 25¢.

When Nature "forgets"...remember

EX-LAX

THE CHOCOLATED LAXATIVE

YOUNG MAN OF FASHION

Continued from page 101

American fashion industry. "They help themselves to my ideas and do not pay," he says.

He has no trouble getting any price he names from his individual clients—but that, with him, is not the point.

"It is wrong, all wrong," he says. "My clients are the guinea pigs of fashion. They set the styles on which the industry depends. The industry should pay them to wear my clothes, and then pay me for the privilege of copying."

Among James' guinea pigs are the best-dressed Mrs. Harrison Williams, Mrs. Millicent Rogers, Mrs. Barbara Cushing Mortimer Paley, Mrs. Eleanor Holm Rose, Lady Diana Duff Cooper, Miss Paulette Goddard, Mrs. Vincent Astor and Miss Gypsy Rose Lee. Occasionally, also, two sacred names of fashion, Chanel and Schiaparelli, wear his clothes—a high compliment from two able competitors in the international clotheshorse business.

But Charlie is still in a swivet. If you listen close, you'll see that maybe he has cause to scream. You'll also see that his \$20,000 sleeve may figure in your life after all.

A smile of disbelief would be out of order at this point from any woman who is now letting out hems to conform to the long-skirt trend. Nobody asked you to vote on the length of skirts, did they? It was all accomplished behind your back, wasn't it? The first you knew of the calamity was when you read in the public prints: "Your skirts will be longer this fall." Just like that. Not "Would you like them longer?" They will be longer. Are you going to buck the trend? Haw, haw! You are helpless, and if "they" decide that "you will wear the James sleeve this season," you'll wear it all right, and no back talk, and it all costs you money. So be quiet, please, while your master speaks.

The Rise of a Fashion Master

James has earned his mastery, and his right to speak. He is—temper, sleeve and all—a figure of growing importance in the angry, churning world of feminine fashion. The machinations that precede the birth of a new style are as mysterious as the hidden prelude to war, but Charlie has been in at the birth many times. Ever since he sallied forth from Chicago 20 years ago, a small, dark, excitable teen-ager with a clothes mission, he has been in there pitching with the "they" who give you orders as to what you shall wear.

This summer he cinched his position and rose to even greater stature, with a bold, brave showing of his things in Paris. Not many American designers, as his friends point out, would dare to expose themselves to Parisian critics, "because the Paris designers would recognize their own ideas, shamelessly stolen by the Americans." That's how the talk always goes—intrigue rampant.

Anyway, James put on this Paris show, and it was a humdinger. Candlelight, champagne, harp music (more chic than piano, thought James), pretty little things to eat, and around 200 leaders of the *haut monde*—that being French for everybody who is anybody—were there.

You never saw anything like the way the French *élégants* and their friends went on over Charlie James and the 20 original designs he showed, representing his work during the past ten years.

"Here is a spirit which is in sympathy with the spirit of France," said Christian Bérard, an artist with a spectacular beard who is conceded to be the supreme arbiter of Parisian elegance. Designer Schiaparelli was there; Designers Christian Dior and Mad Carpentier loaned their

mannequins for the occasion, and Designer Paulette provided the hats. Altogether a quite remarkable expression of international good will, since the American James was an invader, as it were, into the bread and butter territory of France.

Someone recalled what the late master designer Paul Poiret said at an early pre-war show by the young James. He said, "I am an old man now. I am happy to see that I leave the *haute couture* in such good hands. I pass you my crown. Wear it well."

James' clothes have a deceptive simplicity—no gewgaws, very little dependence on buttons and embroidery and so on, but fine sculpturing, precise construction, magnificent coloring. There's no disagreement on this point: The James clothes are beautiful.

All gratifying—but, as James says, it won't pay the bills for his new sleeve. Fortunately this and other bills are being paid at present by a couple of Wall Street angels James has found to back him. In the old days, in his various shops

\$15 to \$25 a yard wholesale, and a half for overtime, money got spent very fast.

However, if the new sleeve pere through to mass production, it w as important to the four-billion-clothes industry as a new supercl or landing gear would be to the ai industry.

James contends he should be pa his research, as an industrial desig paid, and not just for the individua he may sell.

He contends, also, that the in cannot get along without this sort pensive designing, whether manu ers buy it here, or in Paris—"or wh as is too often the case, they ste Because change is the lifeblood of ion, and change cannot occur witho connivance of these structural-en designers and the style-setting v who wear their clothes.

But isn't this a lot of fuss about little, Mr. James? Couldn't just an say, "Okay, let's make skirts long year," or "Let's drop shoulder

"You have to watch these married vets. Half the time it's their baby's form"

in Chicago, Paris and London, he used to go broke with appalling frequency.

Now he thinks it's about time the burden of subsidizing American design, via James, was shifted to the industry—and to an extent this is happening, with one store, the Dayton Company of Minneapolis, Minnesota, buying his entire collection each season, and with one fabric company, American Bemberg, commissioning him to create an evening gown in their rayon.

But it will take a lot of subsidizing to pay for the luxurious James notion of true designing. He spends from \$1,000 to \$3,000 on research and experimentation for each model he brings out.

His sleeve, he says, posed an unusually difficult problem, and was therefore more costly. When he and his designing colleagues decided to get rid of football-size shoulder padding, they had to do something about the collapsed state of sleeves, and James made it the occasion for undertaking a complete structural reformation.

He worked first in muslin, then in wool, taffeta, satin, making and unmaking hundreds of sleeves. After a \$150-a-week tailor and two \$100-a-week seamstresses had done a week's hand-stitching on one of them, he would look, frown, and say, "It won't do. Rip it out. Start over." With materials costing from

No, says James. "Just anybody tried it and nobody listens and happens. Besides, any fund change requires reconstruction entire silhouette—a job only a t signer can do.

Is Mr. James trying to wrest leadership from Paris? No, he is to get fair treatment for all, de French, American or whatever, should be room for everybody. H there'll be a welcome in America 12 apprentices he is now trainin the G.I. Bill in his New York shop "But Paris is headquarters ag as before the war," says James, to laugh to hear Americans try to otherwise.

"If America wants a genuine center of its own, it will have to genuine originators, just as Fra ports her own through governm industry subsidy.

"The embarrassing thing is t Americans go to Paris now and buy, but come away with ideas in their business."

James, being a vocal young n stubborn, is making himself hea It would not be too surprisi got a law passed taxing all of u for the clothes of, say, Mrs. Williams.

WANTED: A MIRACLE IN GREECE

Continued from page 14

government—is the normal postwar political climate of Greece.

So far as I could see, the Greek government had no effective policy except to plead for foreign aid to keep itself in power, loudly citing Greece's wartime sacrifices and its own king-size anti-Communism as reasons for granting the foreign aid in unlimited quantities. It intends, in my judgment, to use foreign aid as a way of perpetuating the privileges of a small banking and commercial clique which constitutes the invisible power in Greece.

The reaction to President Truman's speech of March 12th, calling for aid to Greece, was characteristic. In January and February of 1946, desperation had produced a spate of good intentions and noble resolutions within the Greek government; but the instant effect of the assurance of American aid was not to stimulate the government to further efforts, but to give it the relaxed feeling that it was delivered from the necessity of having to do anything at all. So it declared a national holiday; there was dancing in the streets. And at the same time it shelved a plan for the immediate export of surplus olive oil—a plan which had stepped on the toes of some private traders.

Demetrios Maximos, the present Prime Minister, is a kindly, well-intentioned old man, with, I think, an earnest desire to help his suffering people. He is very small and frail, with a mustache and a goatee, carefully dressed and wearing old-fashioned button shoes. He speaks English with precision and is something of a scholar. But, though a man of good will, Maximos is a prisoner of the errors of his predecessors and of more forceful men in his own cabinet.

The Influential Tsaldaris

Pre-eminent among these is the Vice-Premier and Foreign Minister, Constantinos Tsaldaris. A Greek politician of long standing, Tsaldaris has avowedly embraced the principles of a generous amnesty policy toward the guerrillas, has constantly urged the fullest participation by the United Nations in Greece's border difficulties, and in general has been a persistent pleader abroad for the Greek cause. Yet his conduct of internal affairs when he was Prime Minister was not such as to advance Greek recovery significantly. His administration was characterized by the abandonment of measures of domestic economic policy which might have been of some real benefit to the masses of Greek people. But even Tsaldaris advocates another election in Greece when and if the border is stabilized. He professes to recognize that the Greek people are weary of the game of political musical chairs, where the same personalities merely shift their positions when a cabinet crisis develops. There have been seven changes in the Greek government since liberation, but Tsaldaris and his Populist (extreme right) cohorts remain dominant.

An even more controversial figure is General Napoleon Zervas, the Minister of Public Order. During the war Zervas ran a small "resistance" group around whose activities hangs the smell of Nazi collaboration. Today Zervas is foremost among those who want to exploit the present situation, not only to eliminate Communist-inspired aggression from across the borders, but apparently to rub out everyone in Greece who is critical of the present government. He is undoubtedly the figure behind the recent wave of arrests which took in not just Communists, but, according to informed observers in Athens, anti-Communist liberals as well.

I was told in Washington recently by a well-informed Greek friendly to the present regime that these after-dark roundups of Zervas' were not the repressive tactics of a police state, but only legitimate precautions of self-preservation. Of the 1,600 arrested in this last raid, more than 500 were subsequently released, he told me with great pride, because there was no basis for the charges against them.

Then, behind the government, is a small mercantile and banking cabal, headed by Pasmazoglou, governor of the National Bank of Greece and a shrewd and effective operator. This cabal is determined above all to protect its financial prerogatives, at whatever expense to the economic health of the country. Its members wish to retain a tax system rigged fantastically in their favor. They oppose exchange controls, because these might prevent them from salting away their profits in banks in Cairo or Argentina. They would never dream of investing these profits in their country's recovery.

The shipping interests are in a particularly scandalous position. Today the Greek merchant marine is enjoying a

liberal, and the Communists will help him by spurring on the civil war.

And another, more insidious, form of pressure will be brought against the members of the mission. The social lobby—the smart international set, with its headquarters at Cannes, St. Moritz and the Kolonaki Square of Athens—will begin to operate. Many of them charming people, speaking excellent English, who will be genuinely anxious to be of service to the American mission but who, above all, will seek to convert the mission into another means of safeguarding their own prerogatives.

I still remember one ornate dinner when a leading banker entertained me in his luxurious Athens apartment. There were three liveried butlers, several magnificent wines, astoundingly good food. One guest during dinner became ridiculous over the beauties of marine and the high sport of spear-fishing underwater with goggles. The contrast between the superb feast in the apartment and starving children in the streets simply too pat and cruel.

These are the obstacles which the American mission faces in Greece. We succeed in achieving our objectives

boom, and the shipowners are raking in the profits. But the bankrupt Greek government is benefiting almost not at all from this prosperity. Seamen's earnings continue to come into Greece, but owners' profits for the most part are locked away elsewhere.

Any enterprise should be expected to pay a fair amount of taxes to the government under whose protection it operates—and particularly in this case, where the Greek shipowners are making most of their profits out of Liberty ships sold to them by the U. S. Maritime Commission after the Greek government had guaranteed the mortgages. The yearly earnings of a Greek-owned Liberty ship will probably run between \$200,000 and \$250,000. Of this, only the ridiculously small amount of \$8,000 goes to the government in taxes. Foreign experts have urged the government to raise the tax requirements to about \$30,000. But the political strength of the shipowners has prevented any effective action.

It will be the job of our mission to get action out of this government. In their efforts, the members of the mission can expect that the book will be thrown at them. They will receive every conceivable excuse and will be held up by every conceivable form of bureaucratic obstructionism and incompetence. General Zervas will cry that the big thing is to fight the Communists by arresting every

Such a prophecy depends on how measure success, and will require a deal of elaboration of what really constitutes our objectives. We cannot make progress in Greece by usual Western standards. There will be no quick easy solution of the many social and economic maladjustments. My own experience in Greece convinces me the American people will be grateful if an atmosphere can be created and maintained wherein the Greek people have an opportunity in the future for free political choices.

This raises the delicate problem of intervention by one nation in the internal affairs of another. We must face that question frankly. British officials freely admitted to me that the British Economic Mission served no useful purpose because its function was merely advisory and it had no sanction with which to enforce its recommendations. "Our fatal error," said one of them, "was to condone incompetence because of political considerations." Yet obviously we cannot treat Greece as if it were a colonial possession or a con-

country. My own answer to that question is provisional and pragmatic. If we are to help the Greek state, in having requested assistance and supervision, is to that setting a limitation on its own

MURDER IN THE AIR!

The above tire was murdered by lack of air! Yet the life of the tire could have been saved, if it had proper air pressure at all times—for underinflation ruins tires quickly. Don't murder your tires. Own your own tire pressure gauge. Use it often. It tells the exact pressure any time, anywhere. It tells you how

much air your tires need, and when you need to stop at your dealers for more.

It pays to make sure, once the air is in the tire, that it stays in. The two Seals do the job. The valve core holds the air in the tire valve. The valve cap guarantees an air-tight valve.

To "Make Your Tires Last Longer," RIDE WITH BOTH SEALS, Buy them where you see this display.

Watch your Pressures, Keep a Schrader Tire Gauge in your car.

eighty. If we are to make a heavy investment in Greek recovery, it is common sense to suppose that this implies the means to make the recovery effective. These actualities have been recognized by the Greek government and embodied in the Greek note of June 15th to the United States and the U.S.-Greek aid agreement of June 20th.

The note and the agreement spell out specific objectives of reform and reconstruction. It will be the legitimate business of the American mission to take all the steps necessary to secure compliance with the terms of the contract. To get down to cases, if a Greek minister resists or obstructs measures necessary for Greek recovery, or perverts American aid to antidemocratic purposes, I cannot believe that our mission would stand by impotent.

"The mission should make sure that the Greek people are kept fully informed of American aims and efforts and of the nature of the difficulties encountered," one of the wisest of living Greeks said to me. "If the practice followed up to now is continued—that of shielding the incompetence and unwillingness to co-operate of Greek ministers behind a veil of secrecy—the mission may lose the initiative in Greece. The mission must establish direct contact with the Greek people from the very beginning and appeal to public opinion for active support. I see no other means of exerting pressure for necessary measures that are bound to be strongly resisted by the present Greek regime."

The first step, of course, is to bring an end to the present internal warfare and to refute the Soviet propaganda line that the U.S. is financing a civil war in Greece. The best available means of doing this is to have a real amnesty. The Maximos cabinet was finally prevailed upon to adopt an amnesty program which looked plausible on paper; but, as a member of the Greek cabinet told me, the appointment of General Zervas as Minister of Public Order completely destroyed anyone's inclination to take the programs seriously. The amnesty must have enough safeguards to bring out of the hills everyone who is not an outright Communist agent.

Then we must follow through on the program of economic reconstruction. The American mission will supervise closely the money spent for this.

Then, over a longer period, will come political democratization. A program of political reconstruction and reform cannot, in its nature, be put into effect overnight. It is dependent on the restoration of economic stability, and so must be a step-by-step process. Once the economic program begins to roll, we can do our best to foster and develop elements of the center and the non-Communist left.

There are democratic resources in Greece which have not yet been tapped. Damaskinos, the archbishop of Greece, a man with a massive, disinterested wisdom on political conditions, carries great moral force in all circles.

Sophoulis, the head of the Liberal party, though past the prime of his political life, also has great moral standing in the country. Varvaressos, the Greek representative in the International League, is a man of conspicuous ability; some of the younger politicians, Kanellopoulos and the younger Karamanlis, show promise.

These Elements Inspire Hope

There are forces of real democratic vitality in the country at large. The cultural co-operative movement seems to me an unusually robust and promising movement. The student movement has vigor; and, if Clinton Golden, formerly of the C.I.O. and now on Dwight D. Eisenhower's staff, can free the trade union movement from the grip, on the one hand, of government stooges, and on the other, of Communists, that may develop into a bulwark of democracy.

We are facing a situation unprecedented in our history, and we will have to develop a new and American means of coping with it. The British formula in such cases was always collaboration with the native ruling class—buying their support by confirming them in their power to exploit the masses and relying upon them to hold the people down with gendarmery and violence.

This formula is not only repugnant to American traditions. It is also impractical. No system would deliver the Greek people more speedily into the arms of the Russians. We must work out a formula for starting from the bottom and building up—not starting from the top and working down.

Russia is standing patiently by, but to get into Greece by a base on balance is confident that Greek incompetence and Greek reaction, combined with American inexperience and American gullibility, will doom the efforts of the American mission. We will soon be frustrated by inefficiency, vacillation, simple knavery, Russia hopes, that will grow disgusted and indifferent and finally walk out. Then guess who will walk in!

I think Americans have enough sourcefulness and perseverance to solve the problem. If we are defeated in Greece, it will be a crushing moral and strategic blow to our new international solar plexus. But, if we can get Greece in a state of economic and political health, we will have brought hope and new faith to freedom-loving people everywhere in the world.

THE END

What the *New* National Guard means to you...

Message from the President of the United States

OWE our existence as a nation to the tradition of service of our citizens. It was an citizen soldiers which George Washington victory in the American Revolution. At the end ar, the first Congress asked General Wash- give his views on what the military policy w nation should be. This was his answer:

every citizen who enjoys the protection free government, owes not only a propor- of his property but even of his personal ces to the defense of it."

he new National Guard gives every man an uity to give that personal service to his coun- at the same time to advance himself. In a Guard units all over the country thousands

of veterans and other ambitious young men are finding the opportunity to study and learn the things that help them advance in their civilian jobs. They are finding the fellowship that is part and parcel of America. They are participating in a sports and recreation program that keeps them fit. And they are receiving the training that helps keep America strong.

Because of the National Guard's importance to our national defense I have proclaimed September 16th as National Guard Day and have directed that a nationwide recruiting campaign be conducted to fill its ranks.

Harry Truman

ou'll find the few hours each week that you spend th your local National Guard unit pleasant and pfitable. Pay is based on new Army pay scale. terans can obtain same rank held upon discharge.

And now young men 17 years old may join the National Guard. For complete information about the National Guard in your community, contact officers of that unit or write the Adjutant General of your state.

Keep the Peace! Help the National Guard in your town reach its recruiting goal... now!

Here's how the National Guard Helps You

THE ABUNDANT MR. WALLACE

Continued from page 25

scribing a Thanksgiving dinner to a serving man.

As a man, Wallace is an enigma whom one pretends really to understand. In the words of President Roosevelt, he lacks "political oomph." Just as publicity men dream up bright sayings for columnists to attribute to their movie star employers, Wallace's friends fabricate stories designed to put him in a warm human light.

Recently the story was circulated about a beautiful woman, obviously on the make at a Hollywood party, who tried to charm Wallace into submission. Before she got well under way she found herself talking agricultural economics and wound up by ordering 100 prize toy chicks from the Wallace 4,000,000-year Hy-Line Hatchery in Des Moines. The story is a harmless fiction. When asked about it most politicians would have claimed it as truth. Wallace says it never happened.

Another story is how, as a young man confronted with a statistical relation-ship he couldn't work out, Wallace sat down with a book and taught himself calculus, a branch of higher mathematics, mere mention of which frightens college seniors. This isn't true either. He had a Drake University mathematics professor \$25 for calculus tutoring.

Warned that his political bedfellows were costing him the support of many liberals, he once said, "If I have to choose between the former New Dealers and the latter, I'll take the folks." Such idealism is inspiring reading. The fact is Wallace will take anybody he can get.

When Mr. Wallace indulges in flights of rhetorical fancy, he is sometimes tempted by his imagination to believe for a moment that what he wishes were true. His opponents are sometimes less pitiable in their estimate of his motivation. Said one of them, "If Henry means what he says he must be stupid. I give him credit for being a good liar."

Wallace can sneer or cheer, depending on what he thinks the audience wants. Speaking in Pittsburgh, Wallace has said, "Greater Pittsburgh . . . is a symbol of much of America's industrial greatness. . . . Pittsburgh has been the beating heart of America's vast development since 1860." Speaking in a very small community, struggling to build its industry, he has said, ". . . the true measure of our industrial greatness is found over the nation—and not just in those centers of concentrated corporate magnification typified by Pittsburgh and Detroit."

When he was fighting for confirmation in the Senate as Secretary of Commerce, Wallace compiled a series of excerpts from his speeches which were calculated

to show his sympathetic attitude toward business. In one of these he paid fulsome praise to "big businessmen," the overwhelming majority of whom, he said, "believe in clean aggressive competition. . . . They may fight Roosevelt on his domestic policies but in the main they do it fairly."

In another excerpt he added, "Such men are, in some ways, the hope of America and the world." But last May while rallying support on his tour, Wallace deplored as a penalty of war the fact that big business comes into key positions of controlling power. "I'm conceited enough to think," he added, "that the difference between me and some of these big boys is that I know more than they do."

He Likes Oft-Repeated Phrases

As a man who can match clichés with the best of them, Wallace's efforts, while in Commerce, to woo the wary businessman leaned heavily on oratorical references to "free enterprise." Once, speaking before the American Retail Federation, he used the phrase six times in two short paragraphs, a record which even the National Association of Manufacturers, which made the phrase popular, would have difficulty matching.

Wallace's repetitions (once he used "full employment" five times in twelve lines) are sometimes varied slightly. Before the National Citizens Political Action Committee—a group with an insatiable appetite for a horn of plenty—he found 17 ways of using a favored word, "abundance," in a ten-minute speech: "abundance for all," "lasting abundance," "abundant world," "abundance for all peoples," "long-term abundance," "achieving abundance," "problem of abundance," "peacetime abundance," "technological possibilities for abundance," "abundant spirit," "age of abundance," "triumph of abundance," "fact of abundance," "make abundance work," "peace of abundance," "call of abundance" and, of course, just plain "abundance."

It troubles him very little that some of his more analytical critics accuse him of intentional deceit. It may be a fact, as a senator remarked, that "Wallace is intellectually dishonest without knowing it." He wants "the people" to have "all the truth" but doesn't hesitate to quote partial statistics when it suits his purpose. He decries statements unfavorable to Russia as "Red baiting" but he is one of the most vociferous and ruthless "reactionary baiters" extant.

In order to have something to attack he frequently sets up straw men and

then lashes out at them. In 1944 he began his pamphlet, *Our Job in the Pacific*, with "To discuss our 'withdrawals' from the Far East is no longer realistic." No responsible person was at that time publicly advocating such withdrawal. Asked who such people were, Wallace told a reporter fumblingly that he would have to reread the context. He has lashed "military leaders" who want to A-bomb Russia, but he refuses to name them.

More than this, Wallace makes erroneous or false statements without subsequent correction. In his explosive letter to Truman criticizing our atomic bomb policy there were at least four major errors of fact. Cornered by Bernard Baruch, he agreed to a retraction of his assertions. Then he disappeared for three days. Finally he refused to sign the retraction and instead issued a statement reaffirming his original position.

Frustrated Hopes of Leadership

Wallace had hoped to become the leader of all U.S. liberals and especially of the survivors among those nurtured on the Roosevelt ideals, such as Rexford G. Tugwell, Paul A. Porter, Leon Henderson, Mark Ethridge, Robert Nathan, Elmer Davis, Herbert Lehman, Barry Bingham, Wilson Wyatt and Mrs. Franklin D. Roosevelt. But these and scores of others abandoned his leadership and joined the Americans for Democratic Action which disavows Communist membership.

This was a serious break in the liberal ranks but Wallace, whose chief political instrument is the Communist-supported Progressive Citizens of America, was anxious to smooth the troubled waters. He wrote that liberals were really 90 per cent in agreement, that he and Mrs. Roosevelt were not in warring camps; she had merely addressed one group and he another. "I am not a member or officer of the PCA, and Mrs. Roosevelt, to the best of my knowledge, is not a member or an officer of ADA." Wallace is indeed not a member of the PCA. But Mrs. Roosevelt is and has been a member of ADA. When she publicly rebuked Wallace for his failure to check the facts he made no public correction.

If Wallace is unaware of intellectual dishonesty, such avoidance of the honest truth is understandable. But even his friends have difficulty in explaining some of his contradictions regarding Russia. In 1947 he wrote that people shouldn't always be holding against Stalin the statement made by him 25 years ago that capitalism and Communism cannot live peacefully together in one world. Wallace would have us believe that Stalin doesn't feel that way any more.

"Russia," says Wallace, "can live with the capitalist countries in peace," and then asks, "Can't a man change his mind in 25 years? Why, 25 years ago I was a Republican!" But last September, Wallace apparently didn't know of Stalin's change of heart for then he wrote (but dropped it from a speech for fear of booing by left-wingers): "The Russians should stop teaching that their form of Communism must, by force if necessary, ultimately triumph over democratic capitalism."

Wallace's tolerance of reversals of opinion is understandable. He has changed his own mind about Russia. In 1935 he declared that he was opposed to both Communism and Fascism because "they are all materialistic and godless." But in 1947 he explained to a group of Methodist ministers that Communism is much closer to the Christian doctrine than Nazism. "Communism does not have in it any type of racism," he said. "It accepts the brotherhood of men... this is the fundamental difference which brings Communism much closer to the Christian approach than Nazism."

While Wallace goes about lightening

the burden of the common man, a small group of devotees are left to wrestle with the workaday details of his political strategy. His "man Farley" is corpulent, cigar-loving Harold Young, a Texas lawyer who directly or through government jobs, has been on his political pay roll for six years. Young recognizes two kinds of people—those who vote for you and those who vote against you.

Young operates Wallace's Washington headquarters, a converted apartment-office on Q Street. Wallace also listens to the political advice of Senator Claude Pepper (D., Fla.), ex-Senator Joseph F. Guffey (D., Pa.), Senator Glen H. Taylor (D., Ida.), Calvin Benham Baldwin, a former Agriculture Department aide, now director of the PCA, and Michael Straight, New Republic publisher.

Democrats are wondering hopefully, however, whether Henry will be permanently influenced by a statement by Senator Pepper, following a conference with President Truman: "I think Mr. Wallace can render his best service by continuing to be a private citizen who speaks his mind freely."

Several of these men face the difficult problems of putting Wallace over as a candidate. The biggest of these problems is Wallace himself. When talking with someone he has a habit of lounging at his desk, slumped into his chair, feet on wastebasket, his elbow propped on the chair arm, his head resting on his hand, his eyes half closed. He appears bored if not actually asleep. Even when he is sitting upright during a discussion Wallace yawns openly. Such attitudes do not win friends.

Few politicians invite trouble as Wallace does. He is probably the only major political figure in the world who would take up boomerang throwing. Newspaper cartoonists had a field day lampooning him. But they missed one good story which even Wallace doesn't know. Once he threw and broke the finest example of an Australian boomerang in the collection of the Smithsonian Institution. A habitual onlooker, watching him and Milo Perkins one morning, offered Wallace a boomerang to try. Wallace did and it hit a backstop and broke into several pieces. The bystander, a Smithsonian guard, had filched the boomerang to lend to Wallace. It's back there now, carefully mended.

New Theory of Party Allegiance

Another handicap Wallace brings to his campaign managers is his inclination to think out loud in public. Early in 1946 he was invited to speak before a small group of women. Planning to make only a "little talk" Wallace didn't prepare anything. But when he started talking he found himself developing what to him was a new and interesting subject: party responsibility.

After comparing the English and American systems, Wallace declared that a member of Congress should be read out of the party if he failed to follow party leadership on legislation promised the voters. As an offhand illustration Wallace named several Democrats who, on that basis, should have been read out of the party at that time. In the audience was a Washington Post women's department reporter who had attended the meeting to pick up a two-paragraph social note. Her story kept Wallace busy for sixty days trying to rebuild the fences knocked down by that "little talk."

When it comes to dealing with businessmen, Wallace is all thumbs. When Roosevelt gave him the Commerce Department as a reward for 1944 support, Wallace attacked the administrative problems with devastating energy. "I want to be as good in this job as Herbert Hoover," he told a friend.

Each week the Secretary of Commerce takes to the Cabinet meeting a statement on various aspects of business, known in

Department as the Cabinet Report. October, 1945, when General Motors threatened with a paralyzing wage strike. Department economists handed Wallace a paper as part of a report on the relationships between wages and prices in the automotive industry. Wallace took the meeting but didn't deliver it and hid it around with a stack of papers a week or so. About that time Blair of the Detroit News had a round interview with Wallace, and asked about wages and prices in the auto industry.

Wallace dipped into his papers, pulled the one he had received from the economists, and handed it to Moody. He wrote the first sentence: "Under the high operations which the automobile industry will experience over the next years, it can grant a substantial wage increase and make high profits."

Red-Letter Day for a Reporter

Moody stifled a whoop and asked if he might use it. "I don't see objection," said Wallace, "except it's labeled 'confidential.'" Moody told Wallace that, as boss, he could do what was or wasn't confidential. He gave him the green light.

The following day, as a good-will gesture the National Association of Manufacturers was giving Wallace a press conference. Just before it started, the first copy of the Detroit News, an afternoon paper, was on the street, and the industry was raging against Wallace for having issued a statement which seriously upheld the strikers' position before the luncheon was over, Wallace realized, as one newsman put it, "He unleashed a hot potato."

After developed that the article had been prepared by the Department of Commerce but had been submitted by a neoeconomist in OPA for publication in Department business magazine. It had no official standing what-so-ever when Wallace explained this, businessmen felt he was merely giving political palaver and that he was doing it very well.

Wallace as editor at \$15,000 a year has proved good business for the republic. From a moribund 35,000 circulation it has jumped to 100,000. Between November and July—despite advertisers' boycott—Wallace at \$175,000 in additional income. Most of a special promotion cam-

aign to inaugurate him as editor, including advertising and mailing 1,555,961 circulars, was around \$105,000, giving the New Republic a quick profit of \$70,000 on the deal.

Wallace's basic concept of a businessman is not of the capitalist nobly rising to the challenge of a new age, but of a person who conspires to make hay while the sun shines. He is making plenty of "hay" in his Pioneer Hi-bred Corn Company of Grimes, Iowa, in his Hy-Line Hatchery in Des Moines which grosses \$4,000,000 a year and on his 110-acre chicken farm at South Salem, New York. The man whom most businessmen regard as a visionary dreamer is worth close to a million dollars, including what has been salted away in his wife's name, and he will accumulate an additional fortune if his chicken-breeding experiments develop as he confidently expects they will. Financially he is indeed an uncommon man.

Wallace advocates what he calls "democratic free enterprise," which could mean anything but by which Wallace means regulated business, the amount of regulation to depend on conditions. Such an economic term is flexible enough to fit present Communism in Russia, Socialism in England or capitalism in the United States.

The enthusiasm of "people" for Wallace is sometimes great. Despite an unseasonable and heavy all-day snowstorm preceding an evening talk in Denver, Wallace filled the armory, though his speech was broadcast and no tickets had been sold in advance. When Wallace included the city of Austin in his speaking itinerary, Texas Congressman Lyndon B. Johnson declared that the people in the shadow of Northern cities might listen to Wallace but the "clear-eyed, stout-hearted people of Texas" would never do so. Wallace drew the largest indoor audience of his U.S. tour, a capacity house of 10,000.

When Wallace made the speech in Madison Square Garden for which he was fired, a few days later, as Secretary of Commerce, he received 10,000 letters of which 81 per cent are alleged to have approved of what he said.

But if he is to achieve his expanding political ambitions, he must hurry. Time is running out on him. In 1952 he will be sixty-four, and never since the Civil War has a President over sixty been inaugurated.

GLASS POCKETS FOR CONGRESSMEN

WHEN Congress gave up trying to cut taxes and went home at the end of July it left in one of its deepest and darkest pigeonholes a resolution by Republican Senator Morse of Oregon, that would require each senator to disclose once a year all sources of his income. Presumably if the resolution ever gets anywhere it will be amended to include members of the House, also. But this is one item of unfinished business our national legislators seemed unwilling to touch with even an eleven-foot pole. Up to now Senator Morse has not been given so much as a hearing on his resolution.

"I believe a legislator's viewpoint," says the Oregon senator, "may be influenced—no matter how honest he is—by his own personal interests. Therefore I believe the public has a right to know from whom and from where we get our money. My own actions show that I do not think it improper for a senator to receive money over and above his salary. I lecture and write for fees. Neither do I say or believe that sources from which my colleagues receive money are improper. That's not the point. The point is that the people have a right to know what influences the attitudes of their representatives. They need to know this in order to decide whether we truly represent them."

Morse's opposition protests: "It's another left-wing needling job, designed to create doubt and distrust of our government." . . . "A stink bomb." . . . "What does Morse think we are, a bunch of crooks?" . . . "I don't need watching." . . . "Will we be allowed to pull down our shades at night?" . . . "A good idea if the purpose is to run good men out of public life." . . . "Do you want our laws written by men who have not succeeded in private life?" . . . "A trick to handicap a well-to-do candidate."

Maybe this Morse resolution would result now and then in an embarrassing strip tease for somebody, but that possibility alone is no reason to bury

it in a committee graveyard without so much as a funeral service. Why not hold hearings on it when the Congress meets again, so that we and a lot of other Americans can size the thing up in the light of pro and con opinion?

When Herbert Hoover was in the White House he used to say that all men close to the President must have glass pockets and, if the story is correct, he called on those closest to him in official life to report to him their outside sources of income.

His glass-pockets idea has merit. If government always operated on the visible plan, respect for it might be considerably higher. And respect for government is something that must be maintained in this country if government in its present form is to be maintained.

The Morse resolution is something more than a hotfoot for his colleagues, even though some of them believe he has nothing higher than hotfoot intentions. But the proposal should be enlarged to include members of the House, of course, and policy-making officials in executive departments and agencies. In the form of regulations these officials write more laws than Congress does.

And while at the business of purification by sunlight, the practice of nepotism might be reported on annually. Putting relatives on government pay rolls in certain cases is justified by good results, but it is a practice that generally is held in low esteem by the paying public. The facts in this field could do us no harm at all. Just have each member of Congress list relatives who are working for Uncle Sam, their salaries and what they do.

Last year Congress had the good sense to vote its members big raises in pay, and a retirement system. Next year it should think of adding glass pockets to the appurtenances of office.

Faith in the ability of people to govern themselves implies that the more facts the people have, the wiser will be their decisions.

THE WORLD'S GREAT THINKERS

In Four Volumes - Boxed

Retail Price \$10⁰⁰

Given Free

TO NEW MEMBERS OF THE BOOK-OF-THE-MONTH CLUB

HERE are the philosophies men live by . . . from the works of PLATO and ARISTOTLE and CONFUCIUS to those of FREUD in our own day. These careful selections compiled by Saxe Commins and Robert N. Linscott offer a source of courage to meet today's problems. In them you will find wisdom and guidance from over forty of the world's greatest thinkers, in writings as vitally important today as they ever were.

Here . . . IN FOUR HANDSOME VOLUMES, BOXED . . . WITH INDIVIDUAL INTRODUCTIONS
ARE FORTY-THREE SELECTED MASTERPIECES OF THOUGHT THAT HAVE MADE AND INFLUENCED HISTORY
Over 2000 pages!

You buy many books-of-the-month ANYWAY—why not get them from the Club, PAY LESS, and share in the Club's book-dividends

YOU do not pay any fixed yearly sum as a member of the Book-of-the-Month Club. You simply pay for the particular books you decide to take, and you have a very free choice among the important books published in a year.

Not only do the Club's five judges, every month, choose outstanding book (sometimes a double selection) as book-of-the-month; in addition, the Club makes available "special members' editions" of many widely-discussed books—making a total of fifty to sixty books each from which you may choose.

If you buy as few as four of these books in any twelve-month period, you get the full privileges of Club membership, and since there are sure to be, among so many good books, at least four that you would buy anyway, the saving you is extraordinary.

You pay the regular retail price—frequently less—for book-of-the-month, whenever you decide to take it.

(A small charge is added to cover postage and other mailing expenses.) Then, with every two books you buy (from among the books-of-the-month and "special members' editions" made available) you receive—free—one of the Club's valuable book-dividends.

These are beautiful library volumes, sometimes highly popular best-sellers. Last year the retail value of the free books Club members received was in excess of \$16,000,000—books given to members, not sold! This year it will be more. Why not share in this distribution, particularly since you need never take any book you do not want, and actually pay less for many books.

Also, as a member, you are kept thoroughly informed about all the important new books, and insure yourself against missing the ones you are particularly anxious to read. These, briefly, are the sensible reasons why hundreds of thousands of book-reading families now belong to the Book-of-the-Month Club.

NOTE TO PRESENT MEMBERS: if you wish, you may obtain this set upon request in place of any two book-dividends.

BOOK-OF-THE-MONTH CLUB

385 Madison Avenue, New York 17, N. Y.

Metro-Goldwyn-Mayer presents

"THE UNFINISHED DANCE"

with

MARGARET O'BRIEN

CYD CHARISSE • KARIN BOOTH

And Introducing

DANNY THOMAS

A HENRY KOSTER Production

PHOTOGRAPHED IN TECHNICOLOR

Screen Play by MYLES CONNOLLY

Based on "La Mort Du Cygne" by PAUL MORAND

Directed by HENRY KOSTER

Produced by JOE PASTERNAK

We never cease to be amazed at Hollywood's constant quest and discovery of new stars, new stories, new excitements for the movie-loving millions.

Now, in "The Unfinished Dance"—a new and spectacular kind of Technicolor musical entertainment—M-G-M lifts the velvet curtain on a fascinating and hitherto little-known world: the back-stage of the ballet.

"The Unfinished Dance" presents talented Margaret O'Brien, in her most amazing performance, as a youthful dancing star.

"The Unfinished Dance" also presents at least two of tomorrow's most scintillating stars: Cyd Charisse and Karin Booth. With young Margaret and other exciting people, and breathtaking Technicolor settings, they reveal the joys and dreams and romances of a life you perhaps never knew existed.

This is the story of the most exquisite dancers in the world . . . and of a girl who wanted to become one of them. She had to decide between her idolatry of the reigning favorite and her hatred of the newcomer. With her hand on the switch of a hidden trap door, she had it in her power to end the brilliant career of a beautiful girl. Out of drama such as this, out of intrigue and romance and music, M-G-M has woven a really unusual film, brimming with emotion and beauty.

Director Henry Koster and Producer Joe Pasternak were entrusted with this production plum. We cry them "Bravo."

For a refreshingly and excitingly different kind of Technicolor musical, a combination of tense drama, exquisite spectacle and musical delight—see "The Unfinished Dance"!

THE WEEK'S MAIL

NO. 1 BIRTH

SIRS: In her letter to you (The Week's Mail, Aug. 9th) Myrtle L. Gillis' account of "Snorri," Thorfinn and Gudrid has no more historical basis than Gulliver's Travels. I have read translations of the Icelandic fables and can find no reason to place "Vinland" in North America.

As for the first whites born on this continent—at least the first on record—they were twin sons of Algoncakan na Cuille, who sailed from Galway with his wife, Margrad, one young son, Finghan, and four men companions on a fishing expedition beyond the Arran Isles. Overtaken by a storm, after five weeks they came in sight of a great stretch of coast line and found they were on a great river.

That river is the Merrimack and the landing place, now Newburyport. The date October, A.D. 778. Unfortunately they were met by unfriendly natives so they followed the stream as far as they could navigate and then leaving the ship, continued on foot up the valley to the Pawtucket Falls on the present site of Lowell. Here they were welcomed by a small friendly tribe called Wampscuttus with whom they lived as brothers and in less than a year the afore-mentioned twins were born, being named Phassa and Donghal. After a stay of fourteen years, Margrad had a longing for her native land, so persuaded her husband and two of the sons to go back. After great labor and suffering they arrived at Inisherone on Killala Bay in Sligo, A.D. 793, June 5th. Phassa had found a deep and lasting love for Chamusca, a native girl, and refused to leave her. From this union sprang the Passaconaway tribe of what was later to multiply and spread out into the great group of Indian nations known as Algonquin, after Phassa's father, Algoncakan.

Brian Borhme, Islands great ruler, who lost his life following his defeat of the Danes at Clontarf A.D. 1014, was descended through his mother from Phassa's eldest brother Finghan (tenth generation) who wrote the account of the whole expedition in old Erse.

I have the only known fragment of that ms. It shows in an attached note that it was once in possession of Dr. Keating who had it from the Duke of Ormond (I know not how), and would have included it in his History of Ireland could he "have obtained supporting evidence."

TIMOTHY E. HAYES, Long Beach, Cal.

A Pioneer in Pensions

Bell System Plan for Employee Pensions and Benefits has been in effect for thirty-four years.

Long before there was any thought of Social Security or of pensions by most companies, the Bell System instituted a Pension Plan for its employees. The plan went into effect in 1913.

The Bell System Pension Plan was not only one of the first pension plans but it

has continued to be one of the best for employees. The full cost is paid by the Company. The employee is not called upon to contribute anything.

16,967 Bell System employees (10,769 men and 6,198 women) were receiving pensions at the end of 1946.

The Pension Plan is part of a comprehensive Benefit Plan that also covers sickness, accident, disability and death payments. These were paid to more than 110,000 employees and their dependents

in 1946. During that year, one Bell System employee in every seven benefited directly from the sickness provisions alone.

All of this is in the interest of the public as well as telephone employees. Because for you to have good service we must have good people to give it to you.

These Pension and Benefit Plans are part of the Bell Telephone Company's responsibility as a good employer and a good citizen in every community in which it operates.

KEEP UP WITH THE WORLD

**BY FRELING
FOSTER**

GEORGE DE ZAYA

Despite man's age-old interest in his origin, no remains of prehistoric peoples were found until 1848 when a fossil skull was discovered at Gibraltar. Since then, skeletons—or parts of skeletons—of a score of unknown races, some estimated to have lived as long ago as 250,000 years, have been unearthed in various parts of the world.

The U.S. government had no law that specifically applied to persons involved in interstate flights of stolen aircraft until Sept. 24, 1945, when the National Motor Vehicle Theft Act was amended to cover such cases.

The machines that grind and polish plate glass in the Ford plant in Dearborn, Michigan, are constructed in a single line 600 feet in length—so long that, in order to produce glass of uniform thicknesses, their designers had to allow for the curvature of the earth, or the middle of the line would have been 1/4000th of an inch higher than the ends.

Unlike the United States and most other countries, Great Britain allows its national flag to be used in commercial advertisements.

Only three men have circled the globe in small sailing vessels single-handed. The first was Captain Joshua Slocum who, in his 36-foot sloop *Spray*, left Boston in April, 1895, and returned there in July, 1898, having covered 46,000 miles. The second was Harry Pidgeon who, in his 34-foot yawl *Islander*, left Los Angeles in November, 1921, and returned in October, 1925, having sailed about 38,000 miles. The third was Alain Gerbault who, in his 39-foot cutter *Firecrest*, left Cannes, France, in April, 1923, and arrived back at Le Havre in July, 1929, having traveled approximately 40,000 miles.

Guernsey Island in the English Channel still retains its ancient custom of black-listing alcoholics. To reform such a drinker, a member of his family applies to the court which issues an official order that no one is to sell him liquor thereafter. As a constant reminder to all concerned it also orders a police photo of the man pasted up in every bar.—By May Stening, Richmond, Va.

A recent investigation of boxing discloses that many pugilists, barred from fighting in one state as physically unfit, are able to enter three or four bouts a week in other states by using fictitious names.

As the Mormons believe that the dead are helped toward salvation by the proxy baptism of living kinsfolk they devote considerable time to genealogical research for ancestors for whom they may go through this religious ceremony. Hence, during the hundred-odd years that Mormonism has existed, millions of these vicarious baptisms have taken place.

On a summer's morning in 1909, a lone elephant was found wandering on the beach of Staten Island. As no one reported the animal missing its discovery became a front-page mystery in the N.Y. newspapers and even led to the speculation that the elephant might have swum the Atlantic from Africa. But after three days "Stella" was claimed by a man from a Coney Island show who later admitted he had secretly ferried her across the 17 miles and planted her there for publicity purposes.

to have
Safe Headlamps

SAFE driving at night begins with safe headlamps. They reduce eye-strain, lessen fatigue, prevent accidents.

Here's all that needs to be done. If your car is an older model, very likely the reflectors need polishing; dimmed-out bulbs or cracked lenses should be replaced, and loose or dirty wiring connections cleaned and tightened. If your car is a later model, with Sealed Beam lighting, a burned-out headlamp can be made "as good as new" with a Sealed Beam replacement unit.

Whatever the age of your car, headlamps should be checked for "aim" at regular intervals—and after any minor collision.

For headlamp service, and all kinds of automotive service, look for the familiar sign of United Motors Service. This nationwide service organization assures you of competent mechanics, modern service methods and original-equipment parts.

THE WEEK'S WORK

THE MORGENTHAU DIARIES

Franklin D. Roosevelt had a profound sense of history. He believed that those in public life owed to future generations the duty to make available the materials accumulated while in public office. He knew that the custom throughout American history has been for officials to take all their papers with them on departing office. His hope of preventing the dispersal of the personal records of his own administration was carried out by Congress in setting up the Franklin D. Roosevelt Library at Hyde Park.

He hoped that this Library, established under the Archives of the United States, would receive, not just his own papers, but the papers of other members of his administration.

Sharing his belief in the importance of preserving historical records, I kept a personal file consisting of private notes, memoranda, newspaper clippings, copies of letters and documents, and other materials. They were assembled daily with instructions that no official documents be included among them. Before I left office, I gave specific written instructions that my personal papers be reexamined to make sure that my previous orders had been fully complied with. These papers, known as the Morgenthau diaries, might be more accurately called the Morgenthau scrapbooks.

In 1941 I informed the Librarian of Congress that these papers would go to the Roosevelt Library and copies to the Library of Congress. I have never made and will not make any personal profit out of anything I have written in connection with my experience as a public servant. Any profit will go to a foundation for world peace of which Mrs. Franklin D. Roosevelt is President.

Henry Morgenthau Jr.

IN THIS issue, Collier's begins publication of the long-awaited diaries of Henry Morgenthau, Jr., Secretary of the Treasury under President Roosevelt. The comments of the Editors on the information drawn from the Morgenthau Diaries and other similar articles on the New Deal will be found on this week's editorial page. Above is reproduced a statement by Mr. Morgenthau touching on controversy that has arisen in Congress and elsewhere concerning his records of service in the Cabinet.

MORT GREEN (All Squared Away, p. 86), born in the State of Brooklyn ('19), calls his childhood a complete flop, frittered away with just being a child. He made up for this defection by becoming a high-school grad, truck driver, salesman, carpenter, playboy, credit investigator, loafer and soldier; and after the war, a chorus boy, then a radio writer.

Right now Mr. Green applies four days a week to laying his golden radio eggs; on the other five he fondly dabbles with both a book and a play, which he courageously hopes someone will buy. "If there seem to be too many days in my week," he explains, "this is only because I have many spares left-over from weeks I did absolutely nothing."

UP TO a point, Jungle Lord, p. 14, is gospel. Johan Fabricius was making a trip into the Java hinterland. He came eye to eye with an orangutan, ensconced safely in the cage. Something in that eye stirred him. Immediately he cast the orangutan for the yarn, letting his imagination sup-

ply what would happen if Old Ha made good an escape.

Fabricius always has drawn on adventuresome background for many chefs-d'oeuvre. Born in Batavia, Java, in '99, he boyhooded towns like Batavia and Surabaya. fifteen he started to learn painting the Academy of Arts in The Hague, Holland, often illustrating fairy whimsy stories which he wrote for that purpose. At seventeen he was an official war painter on the just-well-forgotten World War I Italian front. He later served in the Dutch army, adventured off to lead the forces of the Gaucho in Paraguay, between revolutions.

The last war caught him dallying with pen and palette in Capri. He almost had to fight his way singing handed to northern Europe, then England, where he spent the war years broadcasting to his native Holland. He covered the liberation and Japanese render in the Indies for the B.B.C. Right now he's in England, probably knocking out a novel or three about his recent years.

This week's cover: On the Exercise Bar: Jimmy Snyder snapped Olga Suarez in a Ballet Schoolgirl pose bending backward to please. The gorgeous, hip-chucking, many-tongued Olga, of French-Spanish blood, I danced with the American Ballet, with Van (The) Johnson, then an unknown in Broadway's Too Many Girls, I ballerinaed at New York's plush Copacabana Club, and will be dancing diseuse in the forthcoming musical Music in My Heart, based on the life of the song writer's pal, Tschaikovsky. . . . TED SHANLEY

SERVICE TO KAISER AND FRAZER OWNERS IS ONE OF OUR RESPONSIBILITIES

The K-F Willow Run Service School Constantly Graduates Factory-Trained Men

Henry J. Kaiser and Joseph W. Frazer know very well that *service* is a *factory* responsibility. They took early action to make sure that every Kaiser or Frazer owner would find first class service wherever he might drive. One of the finest service schools in the industry started at Willow Run the day the first cars came off the line!

Every week for sixteen months a class of factory-trained service men has graduated. And every week the school enrolls a new group of Kaiser-Frazer distributor and dealer service men from all parts of the country. These men are expert mechanics. They take the factory training to

familiarize themselves with every part and accessory and to learn the most efficient and economical way to make adjustments and repairs.

Right now, the tens of thousands of Kaiser and Frazer owners have at their service one of the *four largest dealer organizations in the world*. And every dealer has a factory-approved service garage, modern equipment, an available supply of genuine factory parts, and trained mechanics ready to serve you expertly. Visit your nearby K-F dealer today. Inspect his facilities. He sells 100% postwar motor cars *and* 100% postwar service under our approved K-F *Golden Rule Service Policy*.

KAISER-FRAZER CORPORATION • WILLOW RUN, MICHIGAN

THE MORGENTHAU DIARIES

11

1-THE FIGHT TO BALANCE THE BUDGET

**BY HENRY
MORGENTHAU, JR.**

Here begins a revealing story of the struggle within the Roosevelt Administration over execution of the historic spending policy, with its vast economic and political ramifications. The first of a series by the former Secretary of the Treasury

I had known Franklin Roosevelt some twenty years when he asked me in 1933 to come down to Washington as governor of the Farm Credit Administration. We had been neighbors in Dutchess County, but our most intimate acquaintance dated from Roosevelt's illness—in one sense so tragic, in another so decisive in producing his future greatness.

It has always seemed to me that his struggle for recovery from that illness developed those qualities of humanity and leadership which made Franklin Roosevelt the accepted champion of American and, later, of world democracy.

Roosevelt is an extraordinarily difficult person to describe. A man of many and varied drives, he was always about ten steps ahead of anyone around him. He thrived on contact with people, as only an ex-invalid can, and each new person brought out a different side of him. In reading through the many personal notes and records of my twelve years as Secretary of the Treasury, I have been struck anew by his unending variety. He appears weary as well as buoyant, frivolous as well as grave, evasive as well as frank—they show a man of bewildering complexity of moods and motives.

I make no pretensions to subtle psychological analysis or to literary craftsmanship in writing of Franklin Roosevelt. I can only report some of the many aspects of the man as I saw them at the time and noted them down shortly afterward.

Some of the things I say will be misinterpreted. A favorite indoor sport in certain circles is to snatch remarks of Franklin Roosevelt out of context—particularly if they are uttered in one of his characteristic gusts of high humor. But I am prepared to tell the whole story as far as my knowledge and my records allow—and to run the risk of misinterpretation whether by enemy or by friend. Roosevelt's place in history is sufficiently massive to survive the pinpricks of petty detractors.

DRAWING BY SAM BERMAN

This picture of the late President and Mr. Morgenthau was presented by F.D.R. to Mrs. Morgenthau following a visit to the Warm Springs Foundation in Georgia

The Morgenthau Diaries are not in the usual diary form. They comprise some 900 volumes of personal notes, records of conversations and conferences, miscellaneous memoranda and copies of official documents, as well as Mr. Morgenthau's account of daily events. This series of articles makes frequent reference to the author's diary, but recognizes the impossibility of presenting the data in regular diary form.—THE EDITORS.

(See The Week's Work, page 8)

Roosevelt gave people jobs instead of the dole during the depression years and thus the Works Progress Administration kept many destitute persons working

IT WAS hot afternoon on the last day of August, 1934, one and a half years after the day when Franklin Roosevelt said in his inaugural address that our country had nothing to fear but fear itself. I drove up the winding road to Roosevelt's house at Hyde Park and, at the door, was told the President would see me upstairs immediately. He was taking a bath.

The President told me that Lewis Douglas had been there the night before and resigned as Director of the Budget. He was at the time personally fond of Douglas and seemed terribly upset and hurt.

"Henry," he said, "I give you until midnight to get me a new Director of the Budget."

Douglas, who during the war was Director of War Shipping, who today is President Truman's ambassador to Britain, was the great advocate of a balanced budget. His resignation was no real surprise: Budget-balancing was all right but Lew had wanted to balance the budget immediately—at the expense of almost everything else, including the Administration's relief and recovery programs. Life was not that simple. A great deal was at stake.

The President looked at me sharply and said with great emphasis, "In the words of John Paul Jones, we have not yet begun to fight."

The background was this: When Roosevelt took office in 1933, the economy of the country had literally come to a standstill. But his vision and courage brought a scared and sullen country to life again. He gave people jobs instead of the dole, stopped mortgage foreclosures, dared to throw all the resources of the federal government into the battle to save bank deposits, homes, farms and individual self-respect. It was worth every penny it cost.

In those early days there was no

time for careful planning or for detailed co-ordination. We were in a race against hunger and revolution, and we had to act fast. Lew Douglas' rigidly orthodox ideas about the absolute indispensability of a balanced budget interfered with the Administration's program. The President and I felt that Douglas' policy involved too great a gamble with human lives; that we could not stop the essential spending necessary to keep people alive, to keep the farms producing, to keep the government functioning without doing irreparable harm to the recuperative forces of the country.

Yet we differed from Lew Douglas, not over whether a balanced budget was our ultimate goal, but over what sacrifices of relief and reform we were prepared to make in order to get it right away. Indeed, in the course of the year 1934, as the actual crisis had receded, I had begun to worry myself about the spending program. In the first place, I wanted all spending for relief and public works to be co-ordinated under a single head so as to avoid duplication and administrative confusion. In the second place, I wanted a scheduled tapering off of spending so that we could look forward to a balancing of the budget.

It was with these two objectives in mind that I asked the President whom he was considering as Douglas' successor.

He took my breath away by saying, "What do you think of Tom Corcoran as Director of the Budget?"

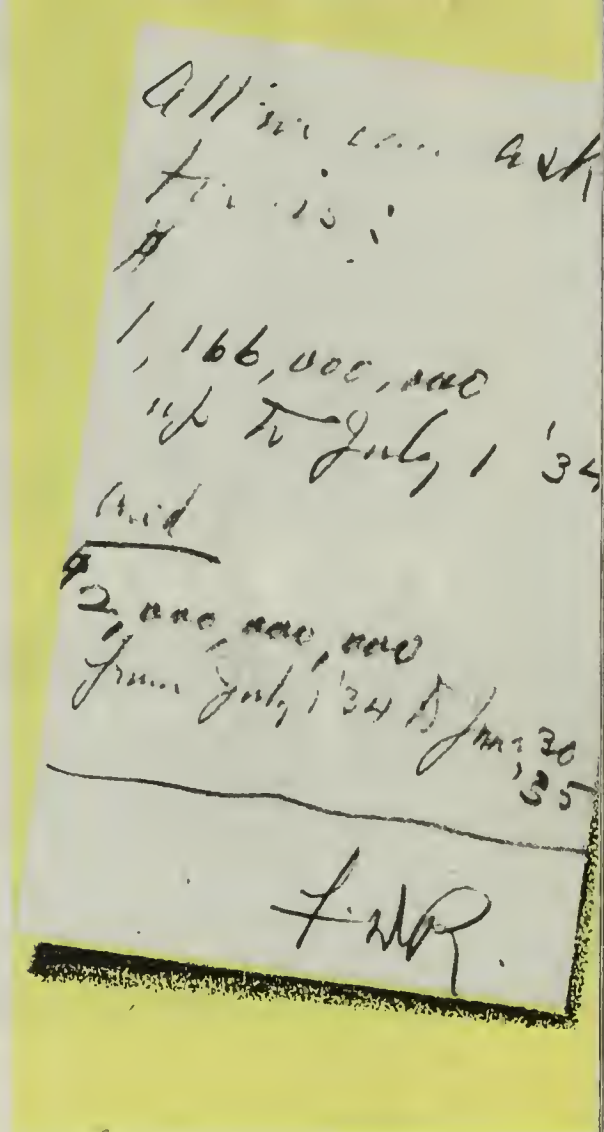

This seemed to me absolutely out of the question. Tom Corcoran was a first-class lawyer, a first-class political operator, a first-class accordion player. But I felt sure he knew very little about finance and could not be relied upon to keep a tight rein over the spending policies.

So I hastily suggested Daniel Bell, then my Commissioner of Accounts

Collier's for September 27, 1947

In 1933 President Roosevelt signed the Farm Relief Currency inflation bill. At right: Secretaries Morgenthau and Wallace

Birth of a budget. Memo to Morgenthau for 1934-1935 fiscal year appropriations

and Deposits in the Treasury Department, for the job. Fortunately Roosevelt liked the idea, and Bell was made Acting Director.

Bell and I immediately set out to ride herd over the spending programs. Let me say at the outset that I never objected to spending when the alternative would have been human suffering.

Indeed, once we had determined that the President had neglected to sign an appropriation of a million dollars for the United States Health Service, I fired Marvin McIntyre, one of Roosevelt's secretaries: "NOW LISTEN, MAC, THIS MILLION DOLLARS CAN DO MORE GOOD AND GET QUICKER RESULTS THAN ANY OTHER MILLION DOLLARS I KNOW OF BECAUSE WITH IT THE HEALTH SERVICE CAN GIVE EVERY MEMBER OF THE STOCK EXCHANGE A SHOT IN THE ARM. IT CAN TAKE THE GOLD OUT OF THE TEETH OF THE BANKERS AND REMOVE THE DECAY. FURTHERMORE WE WILL BE GLAD TO FURNISH FREE VETERINARY SERVICE TO THE WHOLE WHITE HOUSE STAFF AS LONG AS THE MILLION DOLLARS LAST."

Note. The President signed.

But I did feel that, in a capitalist economy, recovery had to depend basically upon private business. I wanted to see a free enterprise economy as flourishing as the twenties but operating more soundly and more equitably. It seemed vital to me that the government try sincerely to build a feeling of confidence in its financial operations so that businessmen could be encouraged to take over their proper role of invigorating the economy. I did not believe in the notion that a large, permanent deficit was necessary to "compensate" for

inadequacies of private investment or for deficiencies of private purchasing power. Nor, I think, did the President or any of his close advisers in 1933-34.

The men in charge of the various spending programs were Harry Hopkins, responsible for relief; Harold Ickes, responsible for public works and Henry Wallace, responsible for agricultural payments. I was in favor of having them spend all that was necessary to meet human needs but I knew that a future of unlimited spending would only demoralize the business community.

In September, following Douglas' resignation, there was deep concern among some Treasury experts at the direction—or perhaps I should say lack of direction—in which the spenders were going. My diary notes a conversation with my special assistant, the ever-critical Jacob Viner, former University of Chicago economist, who felt the President was getting "a lot of poor advice."

This situation prompted me, late in 1934, to get the President to call Ickes, Hopkins and me together for a series of meetings so I could have a co-ordinated estimate on which to base our financing for the coming year and on which to plan for a balanced budget in 1937 or 1938.

These meetings were not very successful. Whatever the President said, Ickes and Hopkins would yes him and Ickes made one remark that was a classic. He said he could not see that it made any difference whether the government spent five billion dollars or private capital spent an equal amount—although our whole purpose was to revive private business.

Our failure to work out a program reached a climax in December when we met at Warm Springs. Ickes had no detailed program but merely a lot of lump sum cost figures. The Presi-

dent was angry. When I telephoned him that evening to say I thought we could get a program once we had found a man to run it, he exclaimed: "I am going to get a program within 48 hours. I am going to get my program first and I will not settle on who is going to run it until I do get my program."

Finally, we were able to get a statement about ultimate balancing in the President's budget message for January, 1935. When Bell and I left following our last conference with Roosevelt on the subject, he called after us: "Well, my budget message is so Tory that I will have to put in all of my radical suggestions in my message to Congress."

Ickes was as prickly a customer to handle in those days as he is today. I remember the President's breaking the news to Harold that January that PWA was going to be cut. When I thought the President might be weakening a little bit, I made a stump speech about my fears of paper money inflation and the importance of balancing the budget for all items except relief. Between the President and me, Ickes was swept off his feet and left gurgling and murmuring to himself.

Spenders' Who's Who

Of all the spenders, Hopkins was the best from my point of view. He got money into circulation quickly, which was the economic objective of the pump-priming policy, and he gave destitute people work, which was the social objective. Wallace's whole theory of spending in order to reduce agricultural production always seemed nonsense to me.

As for Ickes, he was so anxious to keep graft and politics out of the public works program that he practically spent money through a medi-

cine dropper. Ickes' slowness in making decisions was sometimes a real handicap. The important thing was to alleviate unemployment crises but because of insufficient advance planning the public works projects were frequently slow in getting started and therefore expenditures for them were sometimes being made after instead of before the crises had passed their peaks.

It was this situation that prompted me on one occasion to telephone Ickes and ask, half in jest and half seriously: "Can you spend a billion dollars in a week?" Ickes' spending pace was not fast—nor was that of Federal Housing Administrator Nathan Straus. After one White House conference, I told the public-spirited Straus that they were counting on his spending 800 million dollars for housing to speed the pump-priming program.

"Wait a minute," he said. "Don't give it to me all at once. Give it to me with a teaspoon."

He said he was having trouble negotiating for bathtubs and that he wanted the Treasury Procurement Division to help.

"Well," I joked, "can't I resign and go into the bathtub business?"

"I wonder how good it is going to be," he mused. "Where are they going to store the damn things after they are finished? Well, that's the headache. But the Boss (Roosevelt) wants the order placed and we're trying to arrange it."

These were the sort of unorthodox but essential problems that daily plagued the executive branch but were so vital to success of the program as a whole.

Let no one forget either that there was quite as much pressure for spending from Congress as from the bureaucrats, including a good deal from people who were theoretically in favor

JUNGLE LORD

BY JOHAN FABRICIUS

"We chugged over the gleaming surface of the muddy brown Sumatra River"—Mauro L. Scali, of American Academy of Arts, Chicago, won a first with this

CONTROLLER VAN HOEVEN seated himself in a government motor launch, and held it steady while I got in. He was a fair, very typically Dutch-looking young fellow, full of enthusiasm for the tropics. He had given his adventurous young heart without reserve to the new country that was now his home, and especially to Sumatra with its still inaccessible mountains and jungle, its half-wild tribes around Lake Toba, its elephant herds, tigers, pythons.

He lived a good fifty miles inland and had urged me to come and see him; as an enticement he held out the prospect of a crocodile shoot. He knew their haunts along the river, and talked of big monsters ten and twelve feet long. With his service motor launch we would travel down the river almost to its mouth, where the native prince had a ramshackle bungalow called a country seat. There we would find a little native *prahu*, in which we could penetrate noiselessly into the smaller creeks.

So about nine o'clock that morning I had arrived at Van Hoeven's modest residence. He waved cheerfully to me from his veranda where he was hurriedly dealing with documents and giving instructions to his uniformed and saber-girt old native policeman.

"I'm ready—just got to tell Ahmad a few things he is sure to forget again directly," he said.

The old man tried to take it all in but it was visibly an effort for him. On top of that he felt bound to salute me with his brown veined hand revealing the apelike pale palm as he raised it to the upturned brim of his Transvaal hat.

The controller's young wife appeared in a blue morning kimono to serve us coffee. She smiled amiably, though she was shy and soon disappeared. Van Hoeven had not told me that she was going to have a baby.

"Do you think it wise to stay away the whole day?" I asked him, when she had left.

"Oh yes, it's quite safe. The doctor

called here only yesterday and was sure nothing would happen before next week. Besides, my wife wants me to have the trip. She isn't the sort to be scared," he added.

The old policeman saw us out to the launch and turned the handle of the motor, which started throbbing and hissing. "Ahmad knows how to handle it," Van Hoeven said. "I would have taken him with me but for the possibility of something happening to my wife after all. In that case he could easily follow me in the garrison doctor's little boat to let me know."

He made me smile with his youthful

lightheartedness, which was meant to prove to me how little the fact that he was about to become a father could shake him.

"Ahmad, take care of Njonja."

"Saja, Tuan Contrôleur." The old features lighted up in veneration.

As we chugged over the gleaming surface of the muddy brown Sumatra river, the sun burned down on us from almost directly overhead. We tried to move in the shadow of the trees where their tops overhung the water, but we scraped the greasy clay soil, or fouled our screw with weeds. Down the green gloom of the creeks

colored butterflies and sometimes a little honey-thief bird fluttered above the alluring white cups of the water lilies, which lay enthroned, motionless and dreamy in their crown of silent, rounded leaves. Now and then a quivering wing would be caught for a second in a shaft of sunlight, a gleam of magic fanned into life only to die away. Hot. Hot. We talked little now.

When the banks widened out again, the atmosphere became more bearable.

"We are practically there," Van Hoeven said, and round the bend the

"The animal hissed and growled"—a spirited illustration by Roy M. Schroeder, of Chouinard Art Institute

first-prize winner by Hugh S. Wiley, Pennsylvania Academy of Fine Arts

Van Hoeven said and tried the door to the inner gallery. It turned out to be locked.

"His Highness doesn't visit here often, I presume?"

"So far as I know, he has been here only once, at the solemn inauguration," said Samidin the *mandur*.

Then a shrill female voice called him to the kitchen. With a sigh he got up.

We also rose, drawn by the sharp roasting smell which penetrated from the kitchen. As we could not reach it through the house, we walked round the outside of it and saw that the building consisted only of one big room and a front and back veranda. But when we reached the back of the house and came in sight of the well, surrounded by bamboo bushes, and the modest annexes—kitchen, storeroom and the *mandur's* living quarters—we stopped. In a cage on wheels such as is used by a traveling circus, we perceived a big red hairy monster, a live, imprisoned orangutan.

IT WAS a formidable specimen, nearly as tall as a man, but much heavier, a dark somber titan. In his cage, where he could just manage to stand upright, he reared up—a tragic monument of antediluvian power in chains, his hirsute fists gripping the bars and his short shapeless legs sagging. His head, which rested neckless on massive shoulders, was in the shadow of the cage's heavy wooden roof. Out of the semidarkness his close-set, malignantly brooding eyes gleamed at us, suspicious new apparitions in his field of vision. His prison was too small to give him any freedom of movement. All he could do was to sink down onto his haunches and pull himself up again. And all around about him, eternally green and boundless, rose the virgin jungle, his world.

Samidin smiled when he saw us halt with a shock. "I caught him myself," he said with pride. "He was getting too bold; my wife was beginning to be afraid of him. At first he sat up there

in the trees, and then he came nearer and nearer to the garden. He had seen my papayas and bananas from the distance. And it was with them that I caught him. I put some down for him at the edge of the forest and then I pulled a big net over him that I had made from rattan. You should have seen him raging like a madman. I was afraid at first that he would escape me after all; he bit through rattans as thick as my thumbs! With a heavy iron bar we finally managed to beat him senseless. He had had seven blows on the head already without seeming to feel them! And then we tied him up."

After that Samidin had composed a respectful letter to the sultan, and His Highness had given orders to send him this cage. It had been quite a feat to drag the bound jungle giant across all those tree trunks into the garden. However, there he stood in his cage and still could not understand how he had got there. He spent most of his time sitting down and would not touch food. The fruit, which had formerly made his mouth water, now remained on the floor for days on end. He soiled it and would not give it a look.

Meanwhile we slowly drew near. The cage gave off a penetrating stench and the ruddy-haired colossus looked down on us disdainfully. He did not stir at our approach but his powerful head turned a little to follow us, all his life concentrated in the small, blood-shot eyes with the grandfatherly pouches under them. The powerful mouth with the flat fallow lips stood a little open and dribbling. His dark bald skull was bleeding from chafing against the top of the cage, or perhaps the iron bar had caused the wound there.

"How long has he been here?" asked Van Hoeven.

The native did not notice the repugnance and indignation in the white man's voice. He had to think first. "There was a new moon when I got him—a good three weeks ago."

(Continued on page 44)

lati bushes, bananas, papayas and *djambus*—to the front veranda which was in a sad state of neglect. It was overcrowded with European furniture bought at auctions which must have been held half a century ago: rattan rocking chairs, dumbwaiters, showcases, empty flower stands, all half eaten by white ants. The walls were exuberantly decorated with stuffy faded Japanese dolls and *swalls* and cuckoo clocks; and in one corner a cheap Chinese glass painting was paired off with the framed advertisement of a life-insurance company.

"You should have a look inside,"

This one, by Roy D. Erickson, of Chouinard Art Institute, took a second prize. The scene is the same as that chosen by Mr. Scali

illustrations for this story were entries in the second annual contest for art school students held by the Society of Illustrators. Magazines submitted stories for which illustrations were to be made: *Cosmopolitan*, *Good Housekeeping*, *American* and *Collier's*. Schools participated: Pratt Institute, New York, N. Y.; Art Students League, New York, N. Y.; Rhode Island School of Design, Providence, R. I.; Pennsylvania Academy of Fine Arts, Philadelphia, Pa.; American Academy of Art, Chicago, Ill.; California School of Art, San Francisco, Calif.; and Chouinard Art Institute, of Los Angeles. The jury was composed of four noted illustrators: Al Dorne, Alex Ross, John Holmgren and Rex Bensing, and the art directors of the participating magazines: Ed Witalis (*Cosmopolitan*), Budd Hemmick (*Good Housekeeping*), Dick Chenault (*American*) and Sam O. Chessman (*Collier's*).

CHIROPRACTOR
HOURS BY APPOINTMENT

OUT OF THIS WORLD

BY JOHN KORD LAGEMANN

In western New York State there is a town which has the largest population of disembodied spirits in the world. By and large they are friendly ghosts who'll advise you on 'most anything

Lily Dale residents keep up their spirits in small private seances. Miss Betty Possehl, considered to be an unusually fine medium, leads a circle gathering

While parents are busy with the spirits, Lily Dale children parade to the auditorium to display the "spiritualist truths" taught them during the week

LILY DALE is a parklike community of neat white cottages built along the shore of Upper Cassadaga Lake about 10 miles from Fredonia, in western New York State. A graceful little brick library, a big white auditorium, an old-fashioned hotel with wide verandas, a white frame assembly hall and an outdoor stage—all placed in a setting of spacious lawns and shady groves—give the place the atmosphere of a college town turned into a quiet summer resort. It is a family place, and young and old are neatly dressed, polite, and friendly—altogether as indistinguishable from the look and feel of respectable, middle-income America as are their cars parked under the elms.

There is a difference, however, as you will discover shortly after driving into the ground and out of this world. For Lily Dale is populated mainly by ghosts. With few exceptions, the people you see are here to hobnob with ghosts.

Until you have visited Lily Dale you are very likely to have a limited appreciation of the versatility and geniality of ghosts—and the ease of getting in touch with them. Far from the conventional spooks of the horror films, these ghosts are as folksy as Lily Dale's flesh-and-blood inhabitants and take an active part in all community activities.

Naturally, the ghosts' principal business is to attend the meetings and assemblies which fill every hour of the day, and to join in the circles and seances which take place every evening. Here they work hard—posing for snapshots (taken, naturally, without a camera), speaking through trumpets, rapping on walls, and moving some heavy articles of furniture.

But like everybody else, the ghosts

enjoy relaxation too; and if circumstances are right, you can take walks with them, converse, hold hands, go swimming or fishing, or even dance with them to the popular tunes which are played by a local band every night in the big auditorium. The hospitality isn't all one-sided, either. From Lily Dale, if your spirit "guide" invites you, you can take off on "soul flights" into the spirit world where you will have no end of adventures.

Some ghosts are young and giddy; others are old and wise. All of them you'll find, are behind you 100 per cent in all your earthly enterprises. Either directly, or through properly ordained mediums, they will advise you in problems of business, health and love. It's pretty flattering when you find great scientists, philosophers, and inventors taking a personal interest in your problems. Among the illustrious dead who appear fairly regularly for consultation are Benjamin Franklin, Dante, Isaac Newton, Thomas A. Edison, Julius Caesar and Calvin Coolidge.

No one has ever attempted to count what you might call the floating population of Lily Dale. On the physical plane, though, according to Ralph G. Pressing, editor and publisher of the official newspaper, the *Psychic Observer*, there are some 250 families, of whom about 60 stay the year around. They come from all over the country but principally from Ohio, Illinois, Indiana, Florida and New York.

The 67-acre grounds and all real property on it belong to the Lily Dale Assembly, Incorporated, founded 68 years ago for purposes of "free thought, free speech, free investigation." Cottages, most of them built by stockholders, are held in 100-year leases, and in some cases these have been handed down to descendants who have no truck with spiritualism

Robert Macdonald, vice-president of National Spiritualist Association, receives a report from Victoria Barnes, M.D., superintendent of N.S.A. education

Daisies will tell, and other flowers too, according to Albert Vaughn Strode, N.S.A. missionary and medium using flowers for contact with the spirit world

to enjoy the place merely as a summer resort.

In addition to the permanent residents, Lily Dale is host to thousands of visitors. These are welcome to participate in the seances, and, if they wish, stay at the two hotels or in spare rooms rented out by the cottagers. Besides the hotels, the assembly runs a cafeteria, grocery store, novelty shop, and a free picnic pavilion.

The Spiritualist Church, of which Lily Dale is a kind of summer capital, counts around 800,000 members, though Pressing thinks this is an understatement. He estimates the total American spiritualists, professed or not, at about 2,500,000.

A Class Is Conducted

Bells chime throughout the day at Lily Dale to announce the various meetings taking place on the grounds and a season program lists the time, place, and featured speakers of each. I went first to the Assembly Hall where Mr. Lee T. Evans, N.S.A. of Lily Dale and St. Petersburg, Florida, was scheduled to conduct a healing class. In the plain Assembly Hall, which smelled pleasantly of fresh-cut flowers and pine paneling, five women were seated on the front row of folding chairs. Mr. Evans, standing in front of the table on the small platform, had already begun the class. He was a tall man, thin and wiry as a cowboy, with sparse hair over a high forehead, a small mouth and thin lips. "No," he resumed his folksy chatter waving me to a chair in the front, "the life of a healer is not all sunshine and roses. But when you have the gift, well, you can't very well ignore God the busy signal, now can you?"

Near the American flag on the wall behind the platform, a large portrait

of George Washington, who never told a lie, regarded Mr. Evans sternly as he went on about a visit he'd had lately on a farm in Ohio with his Cousin Cordie, who just couldn't see why Mr. Evans had become a healer, and even made jokes about it. "I felt so sorry for that man I couldn't hardly hold back the tears," Mr. Evans told us. "The minute I laid eyes on him at the station, I knew Cordie was dying of kidney trouble. I could see 'em both, of course, as plain as I can see your faces and the left one was shot full of holes like a sieve!"

Mr. Evans broke the news to his cousin's wife in the kitchen one night—and before he left, Cordie had come around to spiritualism. 'Course they wondered how he knew about the kidneys, and he explained it was "X-ray clairvoyance"—simply one of the gifts a healer takes more or less for granted, same as "clair audience" or "soul projection" or anything else.

"Repeat after me," said Mr. Evans, "the Lord's Prayer and the Twenty-third Psalm." Between prayers he cast his eyes to the ceiling and it looked as though a trance was coming on. But abruptly, with all the charm of a schoolboy who has forgotten his recitation, he asked: "The first line, please?" Five voices murmured as one: "The Lord is my shepherd. . . ." This was followed by another prayer in which each phrase was repeated four or five times: "The Lord is the center of my being . . . I feel His great spirit filling my whole body . . . His power surges within me . . ."

Suddenly there was a noise in the room like startled pigeons taking flight. It was Mr. Evans rubbing his palms together briskly. He placed a chair in front of the class, rubbed his palms some more. Then, like a man

SWEET WATER

BY DICK PEARCE

CONTINUING A NOVEL OF BITTER CONFLICT IN THE OLD WEST

The Story:

The action takes place in America's Southwest at the time of the rapid expansion of the great network of railroads across the continent.

Arriving back in his home territory of New Mexico, engineer JIM LINEER is puzzled on learning that the railroad he has been hired to build through the dry Tularosa Valley will be bossed instead by impulsive TRACY THOMASON, with Lineer as second in command. Lineer soon learns that Thomason is engaged to BARBARA EDWARDS, the proud and lovely daughter of railroad magnate H. H. EDWARDS, who is on the scene in person together with his prospective son-in-law, his daughter and her traveling companion, young MOLLY RIORDAN.

The party taking the trip through the valley where the railroad is to be built includes the two big land barons of the area, bluff, hearty WILSON WARE and lean old JUBAL NYE. With Ware is his foreman, big JESS FOLSOM. And with Jubal Nye is his foreman, a little fighting cock named HARRY KECK. There has been a long-standing feud between Ware and Nye, but they have proclaimed an uneasy truce until the railroad is built. However, Lineer has already had to intervene in a fight between Keck and Folsom.

As the wagon train halts in the valley on the second night out, Lineer decides to ride up on a mountain to take a look at the flatlands across which the rails will be laid. Barbara Edwards says she wants to go, but her fiancé tells her not to. Barbara insists. Lineer slowly turns to a cow hand and tells him to saddle up two horses. Thomason turns away in silent anger as Lineer and the independent Barbara mount and ride off.

II

THEY followed the wagon road back up over the afternoon's route until it climbed out of the valley. Then Lineer led single file to the south into the thick juniper and piñon, holding as closely as possible to the crest of the ridge. He watched behind him until he was satisfied Barbara rode in the brush as well as she had seemed to on the road. She had an easy, slack seat.

When the ridge fell away they worked down it until they were in another small valley. It curved up to the southwest, narrowing at a distance into a steep wash. The wash was a white gash in the shoulder of the peak they were seeking.

Barbara rode up until they were abreast. She half stood in the stirrups, throwing out an arm. "This is fun!" she exclaimed. The willfulness was gone from her face, leaving it alive and eager, and Lineer was conscious of the red softness of her parted lips.

She settled back in her saddle, and when Lineer did not speak she studied his face, making no effort to hide her interest.

Presently she said, "You did not want to make this ride with me, did you?"

"No," he said.

"Why did you do it?"

He smiled. "Attack is better than defense, eh? Why did you do it?"

"Do what?"

"Force the issue. Pit me against Tracy."

"You could have refused me."

"And then what would have happened?"

"I would have hated you," she said promptly.

"Under the circumstances," he said dryly, "I probably would be better off with your dislike than Tracy's."

"I'm sorry."

"Why did you do it?" he repeated.

"I don't know." Unhappiness made an unexpected shape upon her mouth and then was gone. "It's—oh, I don't know."

"Was it because you quarreled with him over Ed Ware?"

"How did you know that?"

"Half the camp saw the ending of it."

"No, that wasn't the reason. That was nothing. It was because I—I just had to, that's all."

He pulled up his horse. Her own danced away and she brought him expertly back, watching Lineer's sober face. He said, "There are cross purposes here that I don't understand. If Tracy and I have to work together then we have to be friends, too. Or at least not enemies. You must not put me between you again as you did today."

"I won't," she said. "Please, let's don't talk about it any more."

THEY rode on at a fast walk. She gazed straight ahead, her lips drawn tightly together. Two days ago he had thought her mouth sulky. Now he wondered if it were not uncertainty that he saw. She confused him. He had expected a fight with her, and she had been almost meekly contrite.

He said, "How long have you known Tracy?"

"Since I was a child. Why?"

"No particular reason."

"I'm not so sure," she said. "I don't think you ask questions without a reason."

"All right," he grinned. "I was curious. I thought he was a man you met one day and got engaged to the next. I'm surprised that he is someone you have known all your life."

"That is not a very nice thing to say."

"No," he agreed. "It isn't."

"Is that the kind of woman you think I am?"

He said thoughtfully, "Yes, you are a woman. Until just now I had thought of you as a girl."

"You haven't answered my question," she said.

"Nor will I."

"Because I wouldn't like the answer?"

"No," he said. "If you had asked me ten minutes after I first met you there at your father's car, I would have given you a full answer. And an unflattering one."

She said, "How old are you, Jim?"

"Thirty."

"A year older than Tracy. In some ways you seem a great deal older."

"Now you're the one who is being unfair," chuckled Lineer. "But I don't know to which one, Tracy or me."

They laughed together, and for that moment they had found a basis for comradeship. The fact disturbed Lineer. There was a complexity to this girl he had not suspected. He had the feeling that in the same situation she had created this afternoon she might do the same thing again, despite her promise. But would it be an act of impulse or of deliberation?

She rode close to him, saying warmly, "You must not leave, Jim. You must stay and help Tracy."

He regarded her through a short silence. She did not know, then, that Tracy's presence and hers were ruining plans that meant much to him. To her the railroad belonged to the man she was going to

marry. He found himself wondering when they would marry. It must be soon, if she was to remain in the Tularosa country.

He replied in a voice half curt, "Tracy is a capable and self-sufficient man."

She looked at him wonderingly, put on guard by his tone.

"He is," she said firmly, "and I love him."

He said suddenly, surprising himself, "How does a woman know that she really loves a man?"

Barbara laughed, surprised, too, and showing a certain pleasure at the question. "There is no answer," she said. "A woman knows or she doesn't. She can't go beyond that."

"I never knew my mother," said Lineer thought-

homason reached for Barbara and brought her to him roughly. After a while she said softly, "I needed that, Tracy. Won't you remember to do it more often?"

illy. "My father always said that he and she crowded a lot of fun and trouble into their few years together. He said he carried her love somewhere in his body as confidently as he carried the lead on his shoulders, and used it every minute but never could use it up."

"Yes," exclaimed Barbara. "Yes, that's it!" She turned away from Lineer's puzzled glance and stared straight ahead, her eyes faraway and confused.

Lineer took the lead again as they clattered into the wash and began climbing steeply. It brought them out on the shoulder of the peak, with its bare side falling away precipitously to the left and a narrow ravine leading up on their right.

collier's for September 27, 1947

Barbara gave a little exclamation and pointed up thirty feet to her left.

"Yucca bloom," said Lineer.

It rose straight up from barren stones, a blossom mass of creamy white, soft and luscious. Below and all around it, its barrier of needle-tipped bayonet leaves pointed jealously outward.

He went on, recalling a bit of imagery that had come to him on one long-ago day, "Like a full-bodied woman guarded by swordsmen."

"An unhappy woman, then," laughed Barbara. She sent at him a glance that was speculative and again faintly surprised.

Lineer took the ravine to the right. It brought them out presently in a cleft, and they zigzagged

painfully up to the peak through the rocks and dismounted, feeling the coolness of the wind as it whipped at sweat-dampened clothes.

Lineer's first feeling was one of disappointment, for to the far south a haze like white smoke rose across the horizon and cut off much that he had expected to see. But the girl's cry of delight told him that, to one seeing this immensity for the first time, the ride had been worth while.

Their depth of horizon lay east and south. At their backs to the west, in the direction they had traveled since yesterday, a higher line of the Os-curos rose, curving around in a half circle to the north and falling away to the northeast into a broken plain. Beyond this (Continued on page 52)

INDONESIA— PROBLEM CHILD OF U.N.

When both sides agreed to call off the fighting in Java, the world organization scored a triumph. But the shooting still went on and the order to cease firing had to be repeated. Here is a vivid account of the situation by a Collier's foreign reporter

Sukarno, President of the Indonesian Republic, addresses a youth rally. But the fierce passion of Republican leaders for independence has not spread to the masses

PRESS ASSOCIATION, INC.

BY WELDON JAMES

CABLED FROM BATAVIA

A MACHINE gun stuttered a few hesitant bursts as though asking a question. The sounds came from the southwestern outskirts of this still smoldering Javanese town of 70,000, half destroyed by retreating Republicans. Then silence.

"Maybe snipers," said burly, tough-faced Lieutenant Colonel Baron Tets van Amerongen. He was climbing into an armored scout car beside thin, blond Lieutenant Johann Hofers. "Let's get started."

The colonel had a revolver, the lieutenant a Bren gun, but otherwise our ridiculously small convoy of a scout car and two jeeps was unarmed as it began a forty-mile winding tour through mountains, plains, rolling green hills, tea, rubber and rice plantations and dense forests to the palm-fringed blue waters of the Indian Ocean and Wijnkoops Bay—ideal terrain for the three thousand Republi-

can guerrillas operating in this area.

The fortnight's war between Dutch forces and the Republicans had long since officially ended. Both sides agreed to observe cease-fire orders at the first request of the Security Council, while negotiators wrangled over some form of mediation by the United States or the United Nations. But fighting continued on such a scale that a second order from the Council was necessary.

The colonel said that scattered bands had either not received or not believed news of the first cease-fire order. He thought this would not affect them anyway. Meanwhile, he was busy consolidating his position in his small empire. He speculated that the Dutch might find it necessary to take over all of Java, unless the Republican fighters showed more willingness to obey their own leaders.

He added that the only good guerrilla was a dead guerrilla, thus ex-

pressing the typical Dutch view that all guerrillas are gangsters who had terrorized their own people, the vast majority of whom welcomed the return of the Dutch.

There was some evidence of this welcome on the tour we took. I observed it elsewhere in jeeping from north to south across Java, both during and after the official war. But the pattern was checkered—in some villages and towns the warmth and sincerity of the welcome were most convincing; in others the people were morose and sullen, giving the "thumbs up" sign reluctantly or unsmilingly or simply ignoring the Dutchmen. Some villages were absolutely deserted. Native cottages, tile-roofed and tree-shaded, were shuttered and barred, giving us in the party an eerie feeling as we jeeped past them in the hot sunlight.

As the lieutenant said, "Such villages are even better ambush points than some of the hairpin roads in the forested mountains." We doubled speed in passing them.

In the fortnight's war, the Dutch reported only 74 killed among 90,000 troops involved—but in the weeks fol-

lowing the first cease-fire order, casualties increased and many more were killed.

However, the unimpressive showing of the Republican army of 300,000 and the fact that handfuls of Dutchmen were holding areas among millions of Indonesians is some indication that the idealistic Republican leaders have not infused their own passion for independence and their own hostility toward the Dutch among anything like all of their 50,000,000 people.

We visited a hidden valley ten miles southeast of Sukabumi, where the Dutch discovered twenty huge concrete galvanized-iron plants erected by the Japanese for manufacturing quinine, cocaine, and other chemicals. The natives said the plants had never been operated.

The Republicans, who had destroyed schools, hotels, numerous residences and most of the Chinese business sector in Sukabumi, failed here. Crude mines were still planted beneath the machinery in various buildings, but not one was set off, possibly because the nearest natives, according to the Dutch, were unwill-

Général Hubertus J. van Mook reflects on problem of Netherlands rule

PRESS ASSOCIATION, INC.

In the official war, a marine commander, holding map, directs Dutch advance at Probolinggo, former Republican port. Heavy fires in the background caused by severe Dutch air attacks and Republican scorched-earth tactics

ing to obey destruction orders. This is a phenomenon familiar elsewhere in Java, where in some areas the peasantry stuck bamboo poles in the ground to mark the location of mines planted by the Republicans.

Previously Dr. Hubertus J. van Mook, the Lieutenant Governor General of the Dutch East Indies, had told me a favorite story of an East Java village where a bulldozer removed a log road block. Next morning the same logs were across the road, whereupon the Dutch quizzed the village headman about possible infiltration. The headman finally admitted sheepishly that his own villagers had replaced the block during the night in order to see the fascinating bulldozer work again.

Introducing Johnny Senduk

The evidence seemed to indicate that millions of Javanese were either cordial or only apathetic toward the Dutch. Like millions elsewhere, they seemed more interested in peaceful farming and in earning a living than in the political struggle. It was not on these masses, but on a handful of men like Johnny Senduk that the Republic must count to win its fight. I talked to Johnny in Jokjakarta a short time before fighting broke out between the Dutch and the Indonesians. He is a short, slender, muscular young man with brooding brown eyes and a set conviction that Indonesia ought to be free. He is one of thousands of literate Indonesians who form the backbone of the Republican movement. Ninety per cent of the 72,000,000 Indonesians, scattered through an island empire fabulously rich in rubber, oil, tin, sugar, spices and other foodstuffs, cannot read or write. And of the literate 10 per cent, only a handful boast more than three years' schooling. Educated men like Johnny are important.

Born in Menado, in northern Celebes, 27 years ago, Johnny came to Jokjakarta, the horse-and-buggy capital of the Republic, by way of America and Australia. He had five years in a Dutch school (for which his farmer-father paid tuition) before settling down to rice crops and loafing for a spell. At seventeen he traveled across the sea to Balikpapan, in Borneo, to become an office boy for a Dutch oil company.

His salary of seven and a half guilders a month (less than \$3) was enough to buy rice with, and that, according to some old Dutch hands, was all any Indonesian ever cared about in the good old days before World War II. But Johnny liked coffee as well as rice, and he hated the necessity of having to count his pennies before he could order a second cup. He decided to go to sea, make more money, drink more coffee, and see more of the world.

When the war came, he was a cabin boy on the S. S. Tegelberg, quite satisfied with his quarters, his food, and his 21 guilders a month. But he lost his easygoing calm when he discovered there was one scale of war bonuses for Dutch members of the crew, another for the Indonesians.

"It was something like \$80 for a Dutchman, \$4 for a 'native,'" he said. "A torpedo would not know the difference, I figured, so in Buenos Aires I helped lead a strike for equal pay. We got it—but when we got to New York I was afraid the captain was going to jail me, or something, and I jumped ship."

The frightened youngster knew no

one in New York and nothing about the city. Indonesians on Forty-second Street promptly spotted him for "a yokel fresh from home," and took him in. They got him a job as a dishwasher on the East Side. Several jobs, in fact. He was fired four times before he learned that the Americans did not want every dish lovingly polished.

By the fifth job he'd got the idea that they wanted speed. He was making a fortune of \$12 a week, and getting his food besides. More important, there was a free public night school, and he, Johnny Senduk, was as free to go there and study as anyone else in New York.

"That was when I decided," he said, "that there must be something wonderful about democracy. I washed dishes by day and studied English and some history and government by night for eight months, and I never got over the wonder of it. This, I said, ought to happen in Indonesia."

In 1943, Johnny zoomed up in the world. He got a job with the Netherlands Information Service, writing and broadcasting propaganda for the Indies from San Francisco. He spent the rest of the war there and in Australia doing that. The Dutch paid him a handsome \$300 a month, and, for extra work on their programs, the British paid him another \$150. He was never so rich or so happy.

"I believed all the stuff we were putting out," he said. "Freedom, the Atlantic Charter, and all. But Indonesia claimed its freedom the moment the war ended, and it did not get it. When we came back with the Dutch in the spring of 1946, up from Australia, I went over to the Republic immediately." At the time of my interview with Johnny, there was still hope that war between Dutch and Indonesians could be avoided entirely. But he told me, "No one can guarantee your safety if war comes, not even the government. Every white man will very soon look like a Dutchman."

Crisis Followed Crisis

There was a crisis on that week end. There had been one the week before, when both Dutch and Indonesians had warned me not to go to Jokja, because "the war" might begin 48 or 72 or 96 hours later, and the two or three white-skinned foreigners in Jokja might look too Dutch to be safe. Beneath the surface quiet of sleepy Jokja there was the explosive threat of a revolution-in-pause.

We jogged down the main thoroughfare to a side street and approached the studios of Radio Jokjakarta, whence programs in six languages poured forth day and night (but never during the siesta hour), written, produced, and delivered by young civil servants like Johnny.

The program we viewed was in Indonesian or Malayan, the best "national" substitute for any of the 200 clashing dialects and distinct languages of the East Indies, and had little to do with politics. A schoolgirl trio was singing Malayan love songs, hauntingly sad, accompanied by an industrious cellist and a bored pianist, both full-time government employees.

The studio was the living room of the bungalow; the doors and the windows were open, and on the window sills wide-eyed, brown-skinned moppets sprawled, whispering loudly enough to horrify any Radio City director while others stared in from the green garden. In the glass-paneled

THOSE THINGS DON'T HAPPEN

BY MACK J.
MATTHEWS

He laughed when she told him there was a body in the cellar

HELEN should, by rights, have been darkly Irish and fey, with the look of a lovely witch. Then I'd never have married her—I'd simply have run as if the devil herself were after me. And then I wouldn't be sitting here, wondering, doubting, questioning, and getting myself a headache. Well, anyway, I did marry the woman.

For two years now we've shared those intimate screwball fancies of hers, and built a kind of private world of our own, warm and gay and full of happy nonsense. I don't want to talk about it even now coldly and sanely; it's like reading love letters in a courtroom. But things have reached the point where I don't know what might happen, and it's better to set the facts down clearly while I still can.

Our life together has been gone once over lightly with magic, so it's not simple to think rationally about it. It's colored with the way I feel about

Helen, which is something I won't try to put down on paper.

What happens is something like this: We'll be walking along the street, respectable and conservative enough for anybody, when some face in the passing crowd will attract her attention. She'll begin a long, fantastic characterization of him, rambling on in her pleasant voice as if she were merely talking about the groceries or the neighbors.

"That man," she'll say, "was frightened by a horse when he was only a wee child. How do I know? Just watch the way he keeps tossing his head, and now and then breaks into that sort of involuntary trot. Up to this time, he's kept it pretty well under control, but it's beginning to show. I'm not one to gossip, but they do say his wife left him because he neighs in his sleep."

She goes off like that once in a while, and it really isn't as silly as I

make it sound. Helen has a way of telling a story that makes it gay and amusing. It's partly her expression, very serious and intent, like that of a child reciting something, and afraid she'll start laughing before she gets to the end.

You might get something of the feeling I've had with her, if you saw New Yorkers unobtrusively setting little bowls of peanuts flanked by small flasks of gin, just outside their apartment doors each night, to placate the little people. Or if you found them shunning a certain block on Broadway, reputed to be the Roseland of the shee.

Some of Helen's people are entirely imaginary. There was Aunt Vannie—short for Evangeline—for instance. Of her Helen remarked once that the family had never figured out how she got up on the chandelier that time, but they had to call the fire department to get her down again.

It was Aunt Vannie who greeted a dinner guest at the house with the information that she'd been picketing his plant with the strikers and had had such a wonderful time with them. They had, she said, wanted to call the strike off at one time, but she'd talked them out of it and told them to stand up for their rights. It was after this incident that Aunt Vannie went out West to visit friends. I think Helen had to invent the friends for her to visit, too.

Then there was Lady Agatha, a movie serial heroine of Helen's. All I can remember now of her colorful career is a sequence in which she was saved from a raging forest fire by a sudden cloudburst and flood that nearly drowned her. Fortunately for the heroine, a cold wave swept the country, freezing the water that threatened her. All that prevented her freezing to death was the pack of wolves that came along and pursued her so

found Helen where she'd been when the lights went out. She was pointing a revolver at a man I didn't know

man should be able to relax and rest sometimes in his own home.

"You're not?" She gave me a look of reproach.

"No, dear, I'm not. While you were making the coffee I thought up some resolutions. I've decided to give up spending my days in the poolroom and my nights in the cellar. I'm going to forswear that revolting habit I have of pelting you with olive stones after dinner. I'm just going to play the phonograph. Aren't you glad?" This time I was beating her at her own game, I mused lazily.

"Well, that's all right then, because there's a man down there. I didn't want it to be too much of a surprise to you when you did go down there."

"Is he a nice man?"

"Don't be vulgar. What would an iceman be doing in the cellar, anyway?"

"I said n-i-c-e. And if you want to make an issue of it, what would any man be doing in the cellar?" We could go on bickering comfortably like this all evening, but I rather hoped we wouldn't.

"This one isn't doing anything. He's dead." Helen waited for a reaction. I yawned. "Didn't you read the paper this evening?"

"No. Did it say we had a dead man in our cellar? I declare, it's getting so you can't believe a thing you read in the papers these days."

"No, silly. There was a robbery," Helen explained, with a great show of patience. "Diamonds and things. Three men held up Lintner's Jewelry Store and took just about everything except the clerk. They got away just like that!" She snapped her fingers. "Except one of them was slightly shot."

"I get it now. It's those shoot-'em-up comic strips you've been reading. Want me to tell you the rest of it? It goes like this: The wounded bandit, separated from his comrades during the running battle with the cops, staggers to the holdup car and escapes."

"Weakened by the loss of blood, he stops in the suburbs before a small but pleasant house, and staggers some more, up to the door. Forcing an entry, he terrorizes the woman he finds alone in the house, and orders her to dress his wounds. She obliges, but while he's off guard she seizes his revolver and shoots him dead."

"The woman then snatches the jewels from the dead man, shoves the body down cellar, not wanting to leave the house in a mess, and dashes out of the house, with the two accomplices of the dead man grimly pursuing her. And next week I'll tell you what happened after that."

I SAT back complacently. If Helen could beat that, she'd have to go some. Maybe I didn't tell it with her charm and grace, but I had used plenty of imagination.

"That's good!" Helen said. "Except no really good housekeeper would shoot a man in her house and make a mess like that. The way it should be, he just comes in and looks around and then slumps down dead. And as for dashing out after she put the body in the cellar, she wouldn't do that, either. I'd never hear the last of it if you came home and found I was out gadding about, and didn't have dinner ready."

"Your version's all right," I told her patronizingly, "but mine has more action in it." I put the Mozart records on to play again. Helen was looking at me admiringly, the way a wife should look at her husband every now

and then. And at that point, the lights went out.

Swearing disgustedly, I stumbled to the kitchen for the flashlight. There's nothing I hate more than changing fuses. Other people can do it easily enough, but if I even walk near an empty light socket, I get a shock. And when there's a fuse to change, I go through the ordeal in unhappy anticipation of electrocution.

By way of minor miracle, the flashlight was where it should be in the kitchen drawer, and the batteries weren't burned out. I felt almost cheerful as I went to the hall, flashing the beam before me. I called out to Helen that I'd fix it right up, but there was no answer from the living room. I thought she hadn't heard me.

As I started down the stairs I thought with a kind of shivery feeling of the nonsense Helen and I had been talking only a few minutes before, about a dead man in the cellar. Speak of a cellar, and into it you go. I wondered gloomily why it was that fuses never blew in the daytime, when you could see what you were doing.

I went directly to the box on the wall, pulled the switch, fumbled for a good fuse, and found it. After a couple of false tries, I found the blown fuse and made an exchange. I felt pretty good, having come through without even a minor shock. The shock came, though, when I swung around to leave. The light had flashed across something lying on the floor, something that didn't belong there. I turned the light back to pick it up in the beam again.

It was so definitely a dead man on the floor. Not the dead man I'd been chattering about so glibly upstairs, either, that nice cartoon corpse without substance or reality. This man was horribly real and dead.

You don't expect to find a cadaver pitiful, like a broken doll. His tie was dangling outside his coat, across his outflung arm. It was a gaudy tie, and it lay gaily across the dark cloth of his coat sleeve.

I stopped feeling tender after a very short moment. I'd seen something else. A pair of feet that were not the dead man's feet, that were not sprawled lifelessly, but were standing, with the toes pointed toward me. I moved the beam of light up slowly, over gray trousered legs and on up to a waist. But it was the hands that interested me, rather than the torso. For one of the hands was holding a revolver pointed directly at me.

"Don't flash it in my face, bud, or the gun might go off," a man's voice said quietly in the darkness. "Just turn around slowly and start up the stairs."

Slowly I started turning. And then I got mad. I threw the flashlight as hard as I could at where his face should have been, leaped to one side and heard the roar of a shot. Regaining my balance I made a flying tackle at where I thought he would still be standing. It was a lucky try. I hit him hard and we both went to the floor. I was thinking only of getting the hand that held the gun.

The impact of my body crashing on the man had knocked his breath out, and it wasn't hard to pin his hands down. Neither held the gun. He was beginning to struggle when I found the gun where he'd let it fall. I brought it down hard against the side of his head, and felt his body go limp beneath me.

Weakly, still holding the gun, I got up, and stumbled blindly toward the light switch. It was only a dim light,

but I felt better when it came on. The second man was out, almost as cold as the first. I knelt beside him, took off his tie with one hand, holding the gun trained on him with the other. Then, after turning him over on his stomach with my foot, I knelt again and tied his hands behind his back. His feet I strapped together with his belt tight about the ankles, and went upstairs.

I phoned the police, who thought I was kidding them at first, until I got mad. Then they got excited and said to sit tight and they'd be right out. I felt more like sitting and getting tight, but I didn't bother to tell them that. And I was thinking up a few choice words to say to Helen.

She was on the chair where she'd been when the lights went out. And in her hand she was holding the mate to the revolver I was still carrying with me. She had it pointed at a man I didn't know, and he was sitting very meekly in a chair before her. I'd forgotten that there was another guy in the holdup team.

HELEN greeted me with a glance and smile. The phonograph had started playing when the lights came on, and it was near the end of the second movement of the Jupiter Symphony. Helen spoke without taking her eyes off the man before her.

"Darling, will you hold this pistol for a while? I'll go make some fresh coffee. And shouldn't we call the police or something? We can't just sit here all night with this man." She looked a little wan but still game. Sitting down beside her, I showed the revolver that I had, explaining what had gone on in the cellar.

She was very attentive and admiring, but still kept an eye on the man in the chair.

"Just like Humphrey Bogart!" she said when I'd finished, and then went into the kitchen to start the coffee. When the cops came, Helen let them in, being a very gracious hostess about the whole thing. There were a lot of explanations and questions and confusions before the police went away, taking our guests and their loot.

But the thing that gets me is the way Helen takes the whole business. Like casually making coffee while we were waiting for the police. I don't think the whole affair is any more real to her than the man turning into a horse, because I can sense that Helen is faintly critical of our gangster friends of that evening. If she'd invented them, they'd have been much more vivid and sinister.

She seems to be annoyed at the way the man in the cellar simply keeled over with the first tap I gave him, and the way the man upstairs let her capture and disarm him with his dead comrade's gun. I have the feeling that she's very, very disappointed in them all.

I also have the feeling that one of these nights we'll be sitting quietly at home, and there'll be a ring at the door. Helen will go and I'll hear her talking briefly to someone there. She'll come back with a telegram, and I know what the telegram will say. It will be something like this:

ARRIVING EIGHT THIRTY PM TUESDAY WITH COMMUNIST PARROTS. MAKE SUITABLE ARRANGEMENTS. LOVE. AUNT VANNIE.

And I just wanted to get down the cold facts of what really has happened before that comes, because by then I won't be in any condition to tell about it rationally. ★★★

TOUCHDOWNS ARE BIG BUSINESS

With his 24-piece all-girl band, the Musical Majorettes, Mickey McBride high-steps up and down the field to the tunes of their own stirring football marches.

ARTHUR McBRIDE, known as Mickey to nearly everybody in Cleveland, went into business when he was six years old, a small but prosperous operation involving the sale of newspapers on a Chicago street corner and a slightly illegal activity in streetcar transfers. That was fifty-one years ago, and except for three years when his parents made him waste his time going to school, Mickey has been working, mostly for himself, ever since.

And now look at him—one of the wealthiest residents of Cleveland, where he has lived for thirty-four years. Mickey wears \$200 suits and a \$600 topcoat, the killer-diller of his

wardrobe, all set off by expensive shirts and flashy bow ties. In a pocket, silk-lined, of course, he always carries a bank statement, which never lists less than a million dollars in assets.

Actually, this is only a drop in Mickey's bucket; he could probably cash in at around ten millions, and his fortune is increasing every day. His holdings include a radio station; a big orange grove in Florida; a professional football team, a championship outfit, naturally; lots and buildings in Chicago and Cleveland; a thousand parcels of real estate in Florida; a printing company; a \$50,000 winter home near Miami, and, in

partnership with Dan Sherby, taxicab companies in Cleveland, Akron and Canton. And who do you think owns the automobile agency through which these companies buy all their cabs?

Mickey has had the Midas touch for half a century, but his friends feared he had lost it some three years ago, when he ventured into the financial quicksands of professional football where many a hopeful promoter has been sunk without a trace. Until 1940 Mickey had never seen a football game and had no interest in it; about all he knew of the game was that on a Saturday or Sunday afternoon 22 men got out on a field and mauled one another while thousands

of spectators went crazy. Then his son, Arthur, now twenty-five, enrolled at Notre Dame, and Mickey was persuaded to journey down to South Bend and watch the Fighting Irish trample some luckless opponent.

He immediately became a football enthusiast, and for the next few years followed Notre Dame's footballers all over the country. But he always managed to get back to Cleveland for the Sunday games of the Cleveland Rams, of the old-established National Football League, who in general did not do so well against the powerful Chicago Bears and Green Bay Packers. In 1942, by that time a football fanatic, Mickey offered Dan

ED PRELL

y McBride banks the
and Coach Paul
runs it. It's a win-
combination for the
and Browns who ran
with the 1946 All-
ca Conference title

town. Ward had several talks with McBride, who is always on the lookout for a good speculative venture, and finally Mickey agreed to finance the conference team in Cleveland.

"I'll go in," he said, "but I got to have the best coach and the best players in the country. And," he added, "I got to have the best promotion, too."

The really hot man in football coaching circles then was Paul Brown—he's not so cold now, either, what with a championship in his first year in the big time. Brown had made an extraordinary record as coach at the Massillon, Ohio, High School, and had duplicated his performance at Ohio State University.

When Mickey went after him to coach the Cleveland team in the new league, Brown was a lieutenant (junior grade) in the Navy, on leave of absence from Ohio State, at the Great Lakes base near Chicago. Brown listened to Mickey's proposition, and then asked two questions: Was McBride really rich? Was he prepared to dig deep into his bank roll to put over the new team? McBride answered yes to both questions, displayed his bank statement, and gave Brown bank and other references in Cleveland. And much to everybody's surprise, Brown promptly went to Cleveland and investigated McBride.

Brown returned to Chicago satisfied that Mickey really had a lot of money and was willing to spend it. He had three conferences with McBride and Arch Ward before they could agree on terms.

Then Brown signed. His contract called for \$25,000 a year, the highest salary ever paid a football coach, and 15 per cent of the profits. He was also to receive \$1,000 a month until he got out of the Navy and actually took charge of the team. He was assured of complete control of the players, both on and off the field.

In February of 1946, \$14,000 richer, minus income tax, than when he had first met McBride, Brown got out of the Navy and came to Cleveland. McBride installed him in offices on the fourth floor of the Leader Building, where Mickey's other interests occupy the eighth and tenth floors. Brown found that McBride had already signed one player, Herbert Coleman, a center from Notre Dame. He promptly sold Coleman to the Chicago Rockets, and so started with a clean slate.

Goodby, Cleveland! Hello, California!

Meanwhile the Cleveland Rams of the National League had had a successful season in 1945, as far as actual play was concerned, winning the league championship in the play-off game. But financially it was the same old story: In four home games the Rams had played to only 73,000 spectators, and at the end of the season the team was more in the red than ever. Dan Reeves decided that eight losing seasons were enough, and in the fall of 1946 he abandoned Cleveland and moved the Rams to Los Angeles, where they did well.

The withdrawal of the Rams left McBride's team the only professional outfit in Cleveland, and also left him with no excuse if he failed to put the team over. Taking McBride at his word, Brown hired six assistant coaches and began signing up players at unheard-of salaries, raiding the draft lists of the National League to get outstanding stars.

Many of the best players were in the service, and Brown offered them contracts under which they received from \$100 to \$200 a month all the time they were in the Army or the Navy or the Air Force. In this manner he signed Otto Graham, the passing wizard from Northwestern University, who was on the draft list of the Detroit Lions. The Lions, following the example of other National League teams, had delayed negotiating with Graham until he was actually available for play.

While Brown was spending huge sums for players, McBride took over the promotion of the team. The first item on Mickey's agenda was to get a good name, and a contest was announced, with a \$1,000 bond as first prize. It was won by a sailor who suggested "Panthers." But Brown learned that once before Cleveland had had a football team called the Panthers, and that it had been a pretty dismal aggregation. He rejected the name. Previously he had refused to let the team be named in his honor, but now he relented and Mickey handed over another bond to a fan who had suggested the name "Cleveland Browns."

Before Mickey had finished his campaign, the Browns were the most terrifically promoted outfit in the history of sports. He (Continued on page 85)

The two who made the Cleveland Browns, Owner Mickey McBride and Coach Paul Brown, look the squad over during calisthenics

Marion Motley, Cleveland's star fullback, totes the ball in what Coach Paul Brown calls his "bread-and-butter trap" play

Reeves, owner of the Rams, \$105,000 a year for the team, but Reeves refused to sell. Two years later, his player was riddled by the calls of war. Reeves failed to field a team, and Mickey, with nothing to do on Sunday afternoons but listen to the radio, decided that he had been cheated.

It was about that time, in 1944, that Arch Ward, a Chicago sports writer, began to promote a new professional football league, the All-America Conference. Reeves' team, the Rams, had lost money every year, but Ward and his associates were convinced that with a good team and proper promotion Cleveland could be transformed into a good football

They sat at my bar and I could hear every word they said. Every no-good word. That's what got me

NOTHING OR NOBODY

BY GEORGE ZUCKERMAN

He had an hour to add up the facts of life

PUT the Book away, Father. I know it's holy and all that, but you can read it later—when they march me into the little room with the trick chair.

If you don't mind, I'd like to talk to you because—well, you look like you could be a good listener. See, I never had too many chances to talk. Maybe that's the trouble with my life. I listened most of the time. I wasn't a bad listener and I think I liked to listen to interesting things—and people—and radio programs. But I never had much of a chance to talk.

That's it, I think. And when I got

a chance to talk and make somebody listen—well, it didn't work. No, it didn't work at all. And that's why I'm here, Father, and I guess that's why you're here. Well, one thing I'm sorry about is that you had to get up so early in the morning. I really am. Me, I always hated to get up in the mornings. And don't forget I had four years of the Army. A funny thing, Father, I got the Good Conduct Medal twice. Once I got the Purple Heart. In France.

But the war had nothing to do with it. People like to think so. They like to think because I'm a veteran I got

bats in the belfry and all that. But it ain't so, Father. It ain't. Matter of fact, I look back now and think the best four years of my life were spent in the Army.

Is that funny, Father? Well, it's just this. I had a lot of buddies killed and wounded and sometimes I got sick of the chow. But I felt like I was doing something—something important. And—well, it's this, too. I felt a little bit important myself. Oh, I only got to be a corporal in the Infantry, but that was all right because I never got to be anything else that really counted in life.

Well, nobody in my family was ever really important. My old man was a subway guard. On the IRT. He was a hard-working guy and maybe he worked too damned hard. We couldn't ever say much when he was home. No noise around the house. He didn't want no noise around the house when he was home. We couldn't even play the radio. We'd eat supper without saying a word. Then the old man would take his collection of newspapers. That's right, a collection. About eight papers every day—papers he'd pick up in the subway cars. He'd read

Another New Champion

What makes a champion?

It's the ability to excel the best that competition offers.

That's precisely what you can expect . . . and what you get . . . from this new Dodge "Job-Rated" truck in the 1½-ton class.

This new truck is built like a champion to *carry* above-average loads. It's powered like a champion to *move* above-average loads.

Like any Dodge truck, it is "Job-Rated" throughout to fit its job, and to stay on the job . . . longer, steadier and with satisfactory economy.

If your loads require trucks of this capacity, see your Dodge dealer *now* for the finest truck investment you've ever made.

Remember ONLY DODGE BUILDS "Job-Rated" TRUCKS

YES...BUILT LIKE A CHAMPION

Capacity—15,000 pounds—chassis, body and payload allowance. 24,000 pounds—tractor, trailer and payload allowance.

Power—236½ cu.-in. 6-cylinder L-head engine developing 109 horsepower.

Front Axle—4,000 pounds capacity; high carbon, drop-forged steel.

Rear Axle—12,500 pounds capacity; full-floating; single or two-speed.

Frame—Hot-rolled, high carbon steel; reinforced with side plates.

Transmission—Heavy-duty four-speed.

Clutch—Heavy-duty 11-inch; permanently lubricated ball release bearing.

Brakes—Hydraulic internal-expanding type equipped with booster; cast-iron brake drums.

Tires—7.50 x 20—10 ply; dual rear tires. Optional (at extra cost) 8.25 x 20—10 ply.

Models—Standard Cab—4 wheelbases; Cab-Over-Engine, 3 wheelbases . . . all models available with single or two-speed rear axles.

A Brooklyn barkeeper seats his television patrons according to the price of the drinks they order

FIFTY-MILE BLEACHERS

BY EDWARD P. MORGAN

So you wanna see the game, huh? Okay, pull up a chair. Television is becoming Big Business, and in, of all places, the corner bar and grill where ardent sport fans, sipping a glass, can watch their baseball or ring star in action

THE other Sunday a loyal citizen of Brooklyn braved Manhattan's wilds to root for the Dodgers in a double-header against the New York Giants. He sat through six sweltering hours of baseball and went home only half happy. His Flock had won the opener but lost the nightcap. Furthermore he had missed the great play of the day, Second Sacker Ed Stanky's sensational twisting catch of Giant Willard Marshall's drive deep behind the base line. As Stanky stretched for the ball, some uncouth fan reared up in front of the visitor and totally eclipsed his vision.

Back in Flatbush later the citizen was bemoaning this unspeakable fact to another Dodger fan. "You mean you missed it?" the latter asked. "You mean you didn't get the look on Stanky's face when he nailed that one? I'll never forget that look."

"What look?" the citizen queried painfully. "Where wuz you sittin'?" "In a tavern 20 miles away," came the smug reply, "with a nice cool glass of beer in me hand."

In many sport-struck pubs a new generation of egomaniacs is being spawned by an invention called television. The sun is setting on the day when the opulent ringside fan can regale envious stay-at-homes with the high points of the fight, when the flamboyant masters of the spoken and written word can hide their oversights behind a verdant hedge of adjectives

over the microphone or in the morrow's column. "Whaddya mean it was a left hook that finished Eddie?" a habitué of Jeffries' Tavern demands with newly found authority. "When that there television camera panned down close on the ring you could see the sweat on Eddie's nose. It was Tony's right hook that did the business. You can't tell from nothin'. I seen it all."

There is a chance, albeit thin, that this year for the first time baseball bar fans may be able to see part of the World Series by television. The question of television broadcast rights is still up in the air at this writing, but there's been enough progress in network hookups to assure a whopping big potential audience in the East.

For instance, a game televised in New York could be rebroadcast (via radio relay and the wonders of a line called a coaxial cable capable of handling television's wide frequency band) in, say, Washington, Philadelphia and Schenectady, all of which have television stations. But there are no long-haul relays yet capable of letting New Yorkers see a game televised in St. Louis or vice versa. Television's normal direct range is limited to a radius of about 50 miles.

Whatever happens at the World Series, this television business has already started the goofiest boom the country has seen since some Florida speculator discovered that stucco and

subdivisions spelled money in the bank.

Television is the biggest thing that happened to the bar-and-tavern business since the free lunch. Often when a hot fight or a tight ball game is being televised, bewildered but beaming publicans have to lock their doors against late comers to keep their television-equipped establishments from bursting at the seams. Radio and the juke box have been standard equipment. Now comes a flickering screen to invade the vision as well as the hearing of the thirsty patron—and apparently, just in time.

The ready cash of the war years was beginning to evaporate from bars elsewhere; then, on top of that, came the regular summer slump. But proprietors with television sets noticed the slump was leveling off, even shifting into a sales spurt. The worried custodian of a corner saloon embellished with nothing more appealing than a radio, a 20-platter juke box, shuffleboard and a wall décor of lovely dames, wandered up the street in search of his missing customer. He found them, stacked three deep against the mahogany counter three doors away, watching the luminous image of Joe DiMaggio taking a cut at one of Bob Feller's specials. As to the merry obligato of a tinkling cash register.

In New York in June, a trade journal called Beverage Media has

TIME OUT FOR A TASTE TREAT...

Time to stop for a moment and sink your teeth into the luscious milk chocolate coating of a Milky Way candy bar. Just taste that thick, milk chocolate . . . the golden layer of smooth, creamy caramel . . . and soft chocolate nougat center, richly flavored with real malted milk.

All melt together, in each enjoyable mouthful, to give you that rare taste blend you will find only in a Milky Way.

When you crave good candy, eat a

THE ANDERSON COMPANY
Established 1918
GARY, INDIANA

pily announced that a survey of bars and grills with television revealed a 30 to 60 per cent increase in business. One inn-keeper headily estimated his trade had quintupled.

The rush was on. In all eight cities of the U.S. (New York, Schenectady, Philadelphia, Washington, Detroit, Chicago, St. Louis and Los Angeles) boasting television stations, and in their environs, bar-and-grill men besieged their radio dealers for receiving sets. (Baltimore and Boston stations hope to be on the air by Christmas if not before.) They wheedled, cajoled, bullied and threatened for priority on deliveries.

One Friday afternoon a tormented barman burst into a supply store in Queens, Long Island, and cornered the manager. "I've got to have a set now, today," he wailed, "or I'm ruined."

There are upward of 50,000 television sets in the country now. Production in June, according to the Radio Manufacturers Association, was 11,484 receivers, nearly twice as many as turned out in the entire year of 1946, but demand still heavily tops supply as television approaches its first anniversary of commercial broadcasting.

Bright signs pop up in pub windows: "See the Game Today." "Fights Here on Television Tonight." A man in Elizabeth, New Jersey, had to rip out fixtures and build wooden bleachers around the walls of his place to accommodate the crowds. An Italian restaurateur in the Bronx converted a deserted back room into a theater. The demand for extra waitresses and bartenders is bullish.

Installed "Television Suites"

Hollywood reported television bars were outdrawing night clubs. Night clubs ordered sets in self-defense as a jaundiced café society shouldered eagerly up to the twinkling screen. In his El Borracho in Manhattan's stylish East 50s, Proprietor Nicky Quattrocchi painted a notice on his set reading: "You're not transparent. People back of you can't see the screen. Please don't stand there! Thank you!"

In the Bowery where ten-cent slugs are the backbone of the undercarriage trade, one barkeep was threatened with a boycott unless he quit stalling and got a television machine.

Big hotels like New York's Pennsylvania and New Yorker have installed special "television suites" calculated to attract travelers from hinterlands still beyond television's range.

All over the U.S.A. the scramble has mounted for bigger and better contraptions. Inventive taproom tycoons used mirrors to enlarge the screen pictures and multiply the visible surfaces. In at least one bar a system of magnifying glasses was employed.

An upstart company, the United States Television Manufacturing Corporation, headed by an ex-Marine major named Hamilton Hoge, threatened to give the big manufacturers a run for their money with a giant projector-principle set sporting "the world's largest screen." (On most sets you see the image directly from a tube; the UST picture is enlarged to more than 3½ square feet by reflectors.) In September, 1946, UST's sales, which are mostly to bars, hotels and restaurants, totaled \$11,487.50. In June, 1947, they had soared more than 20 times to \$253,258.29.

The bonanza has had its blighted spots: Customers love to fiddle with the knobs on the sets, trying to get it into sharper focus or change the scene. This invites breakdowns. Some new models

conceal the dials behind sliding doors to discourage such fiddling.

Recently the Wall Street Journal viewed with alarm the fact that some financial-district bartenders were so hypnotized by the action on the screen that parched clients all but perished of thirst.

A new knothole brotherhood has sprung up, changing venue from the ball-park fence to the sidewalk outside a crowded cocktail lounge from where the membership peers through Venetian blinds and revolving doors at the televised drama inside. Barmen have been plagued by small boys attempting to gate-crash the sport features, but minors are conscientiously shooed away. And of course the inevitable happened—on the Eighth Avenue fringe of New York's Hell's Kitchen, a righteously wroth fan hurled a bottle at a screen in belligerent veto of an umpire's decision.

Some of the worst complications involve the deadhead or free-loading section of the public. "Have you noticed the new-type television bar-fly?" a reader wrote bitterly to the New York Daily News, the other day. "He hogs the bar,

inflated beer price, figuring, apparently that it's still a pretty cheap way to keep up with the Yanks or their favorite rin star. In a Third Avenue rendezvous just off Forty-second Street, they suspended sale of draft beer entirely while television shows were on, in favor of the bottles, but competition forced them to quit it.

Many members of the trade, however, bridle at such alleged profiteering, including big John Daly, ex-president of the New York State Restaurant and Liquor Dealers Association. "Cheate like that should be run out of business," Daly says with Irish temper. Himself a tavernkeeper for 40 years, he fears such abuses will play into the hands of the prohibitionists. He thinks television here to stay and has invested in it himself but he's warned his colleagues that it is no panacea for the bar business. "In a few years it will be as common as rad and we'll be right back where we started," he has observed.

Public eateries and drinkeries are by means the only places where television drawing crowds. Churches, schools and clubs are getting sets. Long Branch, New Jersey, businessmen purchased 10 receivers for youth centers so kids could have as good a look at ball games as their fathers get in bars. Fifty-five Philadelphia firehouses are installing sets for neighborhood children and, incidentally, for the firemen themselves between alarms. Receivers are boons to veterans and other shut-ins in hospitals who otherwise might never see an outside spectacle. Even several convents are now wired for sight well as sound.

Individual taxpayers, yearning for their own sets, have obviously been bucking stiff competition, but if they have been short on patience they have been long on ingenuity.

Sets Furnished

Several months ago a doctor called up one of RCA's television supply men in New York, a man named Conrad R. Odden, and appealed for a receiver for a patient who was confined to her hospital with a severe nervous disorder. When the doctor explained the strumment might get her mind her ills, Odden managed to send one out to the lady right away. Somehow the word got around and now Odden's mail is loaded with doctors' certificates for rheumatics, arthritics, women with child and a sprinkling of hastily self-convinced hypochondriacs all of whom emphasize that they need television as urgently as medicine, pun on compassionate grounds.

Odden, a 44-year-old ex-Norwegian aviator, who is so busy now with orders and repairs that he doesn't have time to get his hair cut, tries hard to give legitimate cases first call as fast as the equipment is available. A woman called him up one day and announced she had a complicated and confining pregnancy and would he deliver a receiver please. "Madam," Odden said politely, "I sure it would help you while away the time, but how do I know you are kidding me?"

"Send your men along," she replied "and let them see for themselves." She got the set.

Even discounting the novelty attraction of anything new, the boom in proved that television is shooting out short pants into a vigorous adolescence. Producers are still worried over the tremendous cost of studio productions. To be seen as well as heard, a soap opera would involve expenditures calculated to repel the most extravagant sponsor. 1

To insure ample perspiration and a perpetual thirst the heat was upped

one hand clutched around a glass of beer, never buying anything more expensive, and there he parks, through fights, ball games, etc., etc. while people who want to enjoy a few drinks and act like decent spenders have to occupy tables...

This problem has been attacked by various methods with varying success. A man in Orange, New Jersey, keeps his joint stoked to a temperature designed to insure ample perspiration and a perpetual thirst. In Brooklyn, an alert barkeeper placed chairs facing his television set in well-spaced rows. The front row is reserved for Scotch drinkers, the second row for the bourbon, rye and blend trade, third row for devotees of the grape, the last row and standing room for the ordinary or beer-drinking fares. At last reports he was doing nicely.

Another fellow in uptown Manhattan nailed a sign on the wall of his television salon setting a "\$2.00 minimum, per person," and jacked up the price of bottled beer from two bits to 35 cents. He doesn't attempt to enforce the minimum, but the sign discourages the insincere and the regulars haven't kicked much over the

sports and current events are, relatively, cheap to televise because they're there, ready-made and they will undoubtedly provide the main attractions of this new medium for a long time. Makers of razor blades, automobiles and breakfast foods are already subsidizing sports telecasts. In Chicago and St. Louis, a total of four breweries has won the hearts of tavern men by sponsoring on television everything from harness racing to wrestling.

"Sports will be to television what music was to radio," is the prediction of General John Reed Kilpatrick, president of Madison Square Garden. He looks forward with pardonable fervor to the day when Joe Louis and his successors, if any, will defend the heavyweight title before a "ringside" crowd of millions. They will view the bout on giant screens in special theaters all over the country, after such details as box-office percentages have been worked out with the promoters.

But what, in that event, will television do to sports? The question has ignited a major furor which most fans, busy with their beer and barside seats, have thus far overlooked.

Baseball Commissioner "Happy" Chandler's attitude has been to "wait and see" what television may mean to baseball. At least one broadcaster has approached him on the possibility of televising the coming World Series if one New York club is a contender, but, at this writing, no commitments had been made to anybody. If the classic develops into a subway siege between the Yanks and Brooklyn, all three New York television stations will press hard to get in on it.

The key to Chandler's consent in that event would be held, interestingly enough, by the Mutual Broadcasting System, which won't have a television outlet until sometime in 1948. Mutual and the Gillette Safety Razor Company have the radio-broadcasting rights to the Series through 1951, and Mutual has first refusal of television rights. Mutual officials have said in private they would definitely not object to the '47 Series being televised; if they were asked they would probably recommend the assignment go, in New York, not to CBS or NBC but to WABD, operated by the Allen B. Du Mont Laboratories, Incorporated, which makes television equipment.

New Source of Revenue

Baseball magnates are both intrigued and puzzled by the potentialities of television. They smell fresh revenue. A good major-league ball club now realizes upward of \$50,000 a season from radio and as television takes hold it will be another source of income although some of it will undoubtedly be at the expense of the radio account. "We probably can't expect to carry water on both shoulders," one National League official said. But what about gate receipts? It has been conjectured that fans prefer to watch a major-league game on television rather than a minor-league team on its home grounds and that this, in part, explains the box-office slump of the Newark Bears this season.

This might conceivably be classified as an invasion of a baseball club's "territorial rights" which are protected now in radio broadcasting by a complicated code. Under the rules, a Boston station, for instance, could not air a New York game without permission of the local Boston teams. There is no such code for television yet. President Ford Frick of the National League is chairman of a four-man committee studying the problem in that circuit and due to come up with recommendations in December. The American League is doing similar research through the major leagues' executive council.

Screwily enough, television may

eventually cause the disappearance of billboards from ball parks. Last fall when the Ford Motor Company bought the CBS telecast of the Dodgers pro football games from Brooklyn, the agency handling the account ordered the scoreboard kept off the screen—because it carried an ad for a watch competing with a timepiece made by another of the agency's clients. Herbert Bayard Swope, Jr., red-haired young director of CBS sports telecasts, got that one overruled. In this case it was the agency, not the sponsor, which betrayed the hypersensitivity, but wherever possible the television cameras now avoid backgrounds extolling goods rivaling the sponsor's products.

What might be called the "Gee whiz" and "Wish you were here, friends," schools of sports announcing—and writing—are bound to be toned down too, in future, because television fans will indeed be there in all but the flesh, to see for themselves.

Although television may affect the gate at an individual event, many experts think it will stimulate sports attendance in the long haul, just as radio has done. Some pugilists and promoters, whose livelihood is ordinarily geared to gate percentages, have been peeved over exclusion from the television kitty. Some fighters are said to object to changing the color of their trunks so they can be more readily identified. (Black and purple, standard shades for boxers, are indistinguishable over television.)

General Kilpatrick, whose Garden encourages the televising of every event possible from the circus to a dog show, reacts to these minority protests something like this: Television revenue permits payment of higher percentages than fighters would otherwise get, and if they're any good on the screen they'll

eventually attract a following to money seats anyway.

To pessimists, Harry Markson, promoter Mike Jacobs' press agent, likes tell the following stock but avowedly veracious story: "Friend of mine in Flushing, a real-estate dealer, used to kid pants off me, saying fights were no good that he'd never seen one in his life and never would. Then his old man bought a television set and this guy sees his fight. Since then, he's been to the Garden five times this summer."

Favorable Tax Ruling

Just as television bar-flies were beginning to hatch in potentially lucrative numbers some months ago, both the television industry and the bar-and-grill industry contracted heart disease over the threatened possibility that maintenance of receivers in public places rendered salable to the 20 per cent federal amusement tax. Late in March, however, after vigorous representations from the Television Broadcasters Association Incorporated, Joseph Nunan, commissioner of internal revenue, ruled that television sets were outside the amusement tax classification provided their use was not coupled with other entertainment. Undaunted by this decision the Pennsylvania Liquor Control Board recently ordered liquor licensees showing television to pay an annual fee of \$120, and the parlors were similarly assessed \$60.

The television boom continues on wings of science. If you haven't seen Hilda Chester, fanatical Dodgers fan, tertain at Ebbets Field with klay cowbells and sheet inscribed "HILDA IS HERE," be patient. National television hookups, and her appearance thereon, are only a matter of time.

THE END

who has hit his fingernail with a hammer, he made whipping motions with his forearms. This, I learned later, was to start the flow of healing power through his hands. He indicated with a nod that I was to take the first treatment and I moved to the chair in front of the class.

"Just relax," he said, continuing his preparations. "That's right... lean back. Folks wonder sometimes why we insist so much on relaxation... they forget what the healer has to go through with that flow of power. Backs up on me if you don't receive it—yes, sir, makes me feel like I'm going to explode with it! Faith, that's all we ask... the mind and body open to receive the great flow. And oh, the happiness of it..."

I felt no happiness as Mr. Evans stood beside my chair and placed his right palm against my forehead, the left palm against the back of my head. He stood there pressing gently for a full minute while I wondered what I was supposed to do. Then he said:

"Celia is here, standing beside us. Have you anyone in the spirit world by that name?" I said no. "The name is Cecile—Sister Cecile. She is a beautiful girl, a Catholic nun, and she says she knows you." I said I didn't remember ever having known her. "It will come to you," said Mr. Evans, removing his hands and snapping his fingers.

Suddenly he stood bent over me with one hand on my stomach and one hand on my spine. In this position, his forearms and elbows were pressed tightly against my chest and back. Perhaps I jumped a little for he interrupted his talk to the ladies to tell me: "There's always a slight jolt when the connection is made. Now do you feel it?" It took a while to think of an answer, but I said, "I feel something."

Using his hands like two electrodes, Mr. Evans had shifted their position several times to expose my insides thoroughly to the rays. Now Mr. Evans snapped his fingers harder than before and moved over to the platform table where he had left two small piles of folded paper napkins, one stack violet, the other stack pink. He began wiping his palms very carefully, like a boxer after a good warmup round. As I went back to my original seat, he threw away the crumpled pink napkin and completed the job of rubbing his hands with a purple one. This was repeated after each treatment.

The stout woman was next. While Mr.

Evans was treating her another lady asked him if treatments could be carried on at a distance. She explained she lived in Columbus, Ohio.

"Oh, my, yes," said Mr. Evans, who said his winter residence is in St. Petersburg, Florida. From there he treats patients all over the United States. After all, he laughed, distance meant nothing in the spirit realm where communication was direct and instantaneous. "I'll leave me your name and address, and I'll write me any time. If it's anything real serious, then, of course, I'll come to you astrally. We do this in all emergencies. Simply slip out of our physical bodies, wrap our mental bodies in an astral substance, and come directly to your bedside." Later I learned Mr. Evans was only one of many healers who make their astral rounds. Fees are generally paid as "love offerings" by the patient.

Each Got Same Treatment

All the ladies got the same general treatment plus special attention to their particular ailments, which included insomnia, lumbago, eye trouble, and stomach and heart conditions. The youngest and the youngest lady—about 35, I judged—had a stronger reaction than the others and went into what appeared to be a trance. Mr. Evans simply left her sitting there, handed down another chair from the platform and started the next treatment. The younger woman rose and went back to her seat, looking very pale.

Mr. Evans addressed the youngest woman with sympathetic understanding. "You've had mediumship, of course," he thought so. The lady said yes, several times, beginning only a few months ago. This time, she said, she heard voices and saw the spirits more distinctly than ever before. "Yes, I felt it coming on you," said Mr. Evans. Then he asked her to stand beside him while he continued the treatment of the other lady and waited for his hands.

"Describe, if you see it, the color of the rays coming out of my hands," he told her, leaving a gap of about two inches between his hand and the abdomen of the patient. There was silence for a few seconds. Then the woman said, "Yes, I see it. It is pale orchid. Now it is turned to light blue. Now it is green, a very light green." I was watching carefully but I saw no rays of any color.

"Thank you," Mr. Evans told her in dismissal, and she retired to her chair.

"Well, if he does grow up to be President, I, for one, certainly hope he does something about corporate invested security taxes"

COLLIER'S

JOHN NORMENT

Color is very important in this work," he told the others matter-of-factly. Green, as you may know, is the color of time—the lighter the green, the shorter the time." Then, addressing his patient: "This means a speedy recovery. You will sleep very well tonight."

The lady who sat beside me was the first to have her treatment, and when she returned to her seat, she whispered to me, "My eyes, oh, they're ever so much better. It's wonderful." The bell had rung the hour 10 minutes ago, and now a woman's voice called from the entrance. "Everybody's supposed to be out of here by two o'clock. That's to give you time to get to the auditorium at two-thirty."

Sister Cecile and the spirits which had appeared to one of Mr. Evans' patients were the first spirit manifestations I encountered at Lily Dale. But the rest of the day and evening were full of them. At the auditorium service, for instance, through the medium of Mr. Hubert O'Malley, at least 30 spirits managed to get their messages across to persons among the audience of about 500.

The first hour was similar to that of any Protestant church service—hymns, prayers, solos by a vocalist, and a sermon by a guest speaker, Miss Mabel Barnes, of Michigan. Mr. O'Malley followed Miss Barnes to the pulpit. He was a short, compact man with a large head and a graced, squirrel-like face. He spoke in a series of sharp, staccato utterances, punctuated by a hacking cough. "Today we shall hear from the living—not from the dead. It is we who are the dead ones..." The audience laughed appreciatively.

As if suddenly touched on the shoulder, Mr. O'Malley wheeled around, bobbed his head up and down several times and exchanged words with persons not visible to me. "They're always so impatient," he explained to the audience. No one laughed.

If you've ever watched monologists like the Cornelia Otis Skinner or Ruth Saper, you know how an accomplished actor, sitting alone on a straight-backed chair, can populate a bare stage with real flesh-and-blood characters. Mr. O'Malley's pantomime was not quite so successful in materializing the spirits present on the stage. Apart from this pantomime, Mr. O'Malley's performance differed little from the standard pattern followed by the dozen or so other mediums I watched after him. The delivery, always rapid-fire and intense, is more like the actioneer than the seer.

"I want to get in touch, in very close rapport, with you," the medium starts out, pointing out a member of the audience. "That's right... the lady in the

red hat. Will you listen very carefully, please, try to concentrate. . . . Mary is here. She is asking for you. She is a very lovely girl, and she is carrying a little baby in her arms. She calls the baby—what is it again? Dolly, is it? Yes, that's right. The baby's name is Dolly. Do you know Mary and the little baby girl she calls Dolly?"

The woman in the red hat fingers her handkerchief and says, "Mary was my young sister. She died soon after her baby..."

"Well, they're right here beside me now, and Mary wants me to say they are happy—very, very happy. She wants you to be happy too... and she tells me you have been worried lately... you have a problem... about your son, she says, your oldest boy. Is that right?"

"That's right," says the woman in the red hat.

"Well, Mary tells you not to worry about him. She says Tommy is young and he will grow out of it. Do you understand?"

This kind of spirit message, more specific than most but otherwise typical, can sound impressive until you consider the essential information it contains: The woman in the red hat is a woman who worries about her son; her younger sister died in childbirth. I heard no medium mention any details about a departed spirit that couldn't have been picked up by hearsay or rocking-chair acquaintance.

Settings of Majestic Beauty

The best place to study the mechanics of spirit reading is probably "the Stump Meetings" which take place every morning and late afternoon in a grassy clearing deep inside a forest of towering pines—a setting of majestic beauty. This, you soon gather, is a kind of training school or amateur hour for young and inexperienced mediums or those who still lack a particular following of their own.

The exception here during the afternoon session was Miss Betty Possehl, the chairman, master of ceremonies, and herself one of Lily Dale's youngest and prettiest mediums. Miss Possehl delivered her spirit messages with great animation and a fetching Scottish accent. But none of the others who trotted briskly up front as she called their names could match her.

One medium, an attractive Brooklyn girl in her early twenties, got stuck completely after seeing only two spirits named "Ann" and "Annie," respectively, neither of whom seemed to have any particular messages for anyone present. As she walked back to her seat, blushing

red, Miss Possehl called after her encouragingly, "It's all right, Alice. Your timing's fine. Just brush up the delivery, that's all."

The greatest attraction for visitors and the shrine of spiritualists everywhere is the Fox Cottage, a modest farmhouse which was moved to Lily Dale some 30 years ago from its original site in the village of Hydesville, 30 miles from Rochester. Here, just a hundred years ago come next March 31st, the youngest daughters of John and Margaret Fox—eight-year-old Margaret and Kate, six and a half—first translated the raps that were heard around the world and which led to the foundation of the Spiritualist Church. Unsympathetic historians since then have seldom failed to note that the birth of spiritualism coincides with All Fools' Day's eve.

The two girls set up what was accepted as communication with the ghost of a peddler who, local legend said, had been murdered in the house. The ghost, it seemed, answered questions by rapping on the wall—or somewhere—and once contact was established, it was easy to set up a code for messages. Shortly thereafter the Foxes pulled up stakes and Katie and Margaret were taken to Rochester to live with their married sister, Leah Fox Fish.

When the strong-willed, managerial Leah entered the picture, the children suddenly discovered they could converse with almost anyone, including friends and relatives of visitors who started pouring into the house for "sittings" at 50 cents a head. This was front-page news, and the press of the world broke out in a rash of articles about the "Rochester Rappings."

On to New York City

In due time Leah packed up her prize performers and moved off to New York City to ride the wave of popular interest that swept over the country. Not one to shoot her bolt on unseemly commercialism, Leah formed a spiritualistic society, studded it with many of the "big names" of the time, and introduced much of the religious atmosphere such as the singing of hymns and the reciting of familiar prayers, which are found in the present Spiritualist Church. The theology was developed later by Andrew Jackson Davis, a Poughkeepsie, New York, tailor.

"Will I get the new refrigerator my husband has promised me to order?" The woman in the gray tailored suit asked it in a low, earnest voice and hardly finished speaking before the answer was plainly audible—3 firm raps. In the Fox Cottage, that means "yes." The woman beamed. "My old one's so small," she explained happily to the host and medium, Miss Flo Cottrell of Holland, New York, who makes the Fox Cottage her summer home. "He was very definite about it too," said Miss Cottrell with a smile of sweet serenity that never once left her face during the hour I spent in the pleasant little house.

From 10 to 12 noon and from 4 to 6 p.m.—hours dictated by her spirit teacher—Miss Cottrell receives visitors, and you're welcome to inspect all the rooms except one occupied by her and her aged mother. After you've seen everything—some old guns, ironware, spirit paintings of Indians, and bric-a-brac—Miss Cottrell suggests you might rest a while, if you wish, on the folding chairs which occupy the center of the living room and ask any questions that occur to you.

One rap means "no," two, "don't know" or "uncertain," three, "yes," four, "ask questions," five, "greetings." Whenever a new visitor wandered in, the 5 raps sounded distinctly. Between questions, Miss Cottrell recounts briefly how the Fox sisters first discovered they could speak with the murdered peddler. The rapping you hear now is by Miss Cottrell's own spirit "teacher," who ap-

peared to her when she was nine. She was playing at table tipping just for fun with an aunt and uncle when he appeared to her, introduced himself as "Uncle Ike," and gave her the code they have followed ever since.

"Fred is here," Miss Cottrell announced in the same tone you might use to say, "Pass the salt." Her eyes swept calmly over the handful of guests and settled on a young woman who'd come in with her husband. They were a healthy young couple who looked as if they both worked much out of doors. The wife gave her husband a frightened, appealing look, and it seemed to me he blushed under his sunburn.

"Yes, I knew Fred," the young woman said. "He was—an old friend of ours."

Miss Cottrell went on smiling sweetly. "Well, he says he is very happy for you, and never to regret the way it turned out."

"Is Clara getting better or worse?" The woman who asked this sounded as if she'd been holding it in for a long time. There was no answering rap.

"Perhaps you'd better ask him the question another way," Miss Cottrell suggested.

The woman asked, "Will Clara get

spiritualism "from its very foundations. Margaret was interviewed later and quoted as backing her sister, saying, "Spiritualism is a humbug from beginning to end."

Then, to a capacity audience in the New York Academy of Music, Katherine demonstrated how the raps had been produced by snapping the joints of her big toe against a sounding board built into her shoes. She also produced rapping by moving the knee joints. But the first rappings in Fox Cottage, she said, came from another source.

"My sister Margaret and myself were very young children when this horrible deception began. We were very mischievous children and we wanted to terrify our dear mother, who was a very good woman and easily frightened. A night when we were in bed, we used to tie an apple to a string and move it up and down, causing the apple to bump on the floor..."

It was in Rochester, said Katherine, that they learned to snap their toe joint and Leah was aware of the deception.

The "confession" was good box office for a few months, then interest dried up and Katherine was again at the end of her rope. Presently she was back in bus-

well?" Two raps—meaning "Don't know" or "Uncertain"—sounded from wall or floor near Miss Cottrell. "Is she getting any good out of those treatments they're giving her at the hospital?" The answer was a single rap—"No."

Presently, Miss Cottrell moved to another chair near the stairway, and subsequent rap responses were heard from that part of the room. "They follow me everywhere," she said. Here, I thought, is a woman who has never had a moment's privacy since the age of nine.

But about the original rappings heard a hundred years ago in this same house, the Fox sisters themselves are perhaps the best authorities. After their first highly profitable demonstrations in New York and a triumphant tour of the country, the going got tough. Partly it was the scientific investigations, partly opposition from well-established churches, but mostly competition from a growing horde of mediums.

But forty years after they brought spiritualism into the world, the Fox sisters made headlines once more. Margaret, a widow, barely managed to support her two children by taking in "sitters." Katherine, who had given up spiritualism at seventeen to marry the arctic explorer, Dr. Elija Kent Kane, went back to it after his untimely death a few months later, and was having trouble making ends meet in London.

Returning to this country, Katherine told reporters she intended to expose

ness as a medium, retracting her confession and laying it to financial hardship and evil influences.

But by then nobody cared, least of all the other more successful mediums who discovered that the added publicity didn't hurt the movement a bit.

"Exposures" have been made time and again, but nobody does a more thorough job of it than the mediums themselves. The Psychic Observer is itself a travel on the movement with its fabulous "spirit news" columns and its advertisements "Love Healers," "Psychic Artists," and for the trade, of "baby-student-at professional-size aluminum trumpets," "luminous bands," and "lasting quality luminous paint."

To outsiders, almost everything claimed or promised for spiritualism sounds like a cruel burlesque of the followers' credulity. Yet it would be less than fair to accuse its proponents of deceiving anyone. They give only what is asked. And what their followers are apparently something they have not found elsewhere: relief from anxiety about life, from fear of death and about all from loneliness. To reduce the solace to a trick in the dark is like reducing the glow you feel on New Year's Eve to 5 or 10 ounces of grain alcohol.

Next week Jule Mannix will take you where Mr. Lagemann left off and tell you where you can buy a good inexpensive phantom. Read Ghosts for September 27, 19

When you  *step into a Fortune, sir...*

YOU "FEEL LIKE A MILLION"

FORTUNE'S "TOWNSTREET" SERIES

● Yes, that "million dollar" feeling is yours, and at a moderate price, when you step into a Fortune "Townstreeter"—the finer footwear for town and business. For whatever your walk of life, you'll breeze through more smoothly... confidently... in smart, authentic, comfortable "Townstreeters." This *maximum* satisfaction is yours for so *moderate* a price because Fortune selects plump, durable leathers in large, cost-saving quantities... because Fortune anticipates style trends so that production can be maintained without cost-consuming interruptions... and because, despite modern machine methods, Fortune's skilled craftsmen lend full attention to your comfort — assuring you a fit that makes a Fortune feel like it's made for *your* foot, alone. And, in addition, every step in the creation of every Fortune moves under the watchful eyes of Fortune's cost analysts — men trained to keep down the price to you because it's good business for us. But for the final proof, see your Fortune dealer today.

DRAWINGS BY ALWIN RIGG (DONALD DESKEY ASSOCIATES)

Two Sportshacks combine to make one house, using the shell of one to make a spacious living room (right). Masonry and connecting stairway are added to adapt to a hilly site

a natural material for panel construction."

Deskey did not stop just at plywood, however. Smooth panels of plywood, or any wallboard material for that matter, joined together to make a house, show the joinings. These joints are not pretty. If you conceal them with strips of wood, the strips have a way of making your house look like a packing case. So Deskey devised a system of taking fir plywood—the cheapest plywood—and scratching the soft, coarse grain out of it. The result is a striated wood with a pleasing textured look, that can withstand any number of further scratches gracefully. The ridges in the wood conceal joints, making a continuous wall surface possible.

This material has been used for the interior and exterior walls of his house, glued in four-foot by eight-foot panels to wooden frames. Inside, the plywood is a quarter of an inch thick and casein-bonded. Outside it is three eighths of an inch thick and resin-bonded to be weatherproof. Insulation is aluminum foil.

The heart of the Deskey house is perhaps prefabrication's most important accomplishment to date. It is a mechanical core, combining in one compact, portable, prefabricated unit the heating plant, kitchen and bathroom utilities, including all fixtures. This is an idea on which inventive minds have worked for years.

The Deskey Version

Two years ago Deskey was working on his own version of such a core, when he was called in as industrial design consultant by the Borg-Warner Corporation of Chicago. Borg-Warner were already well along with their own mechanical core which they called the Ingersoll Utility Unit after Roy C. Ingersoll of the corporation, who saw it on the design board of J. Fletcher Lankton, an Illinois architect, and convinced his company it would be a sound thing for them to manufacture. There was an immediate pooling of ideas, and Deskey's organization was employed to help perfect the design and engineering of the unit.

Convinced that such a mechanical core is not only a natural for prefabricated houses, but flexible enough not to hamper freedom of design even for custom-built houses, Deskey persuaded Ingersoll to commission some of the country's leading architects to design houses around the unit, to prove this point. The houses, of a

HOUSES READY-MADE

BY RUTH BUGBEE

Prefabrication, once off to a bad start, is beginning to find its rightful place in housing. Here are some pace-setting examples

MR. DONALD DESKEY, designer of the prefabricated houses pictured here, is not one to be easily daunted. "I think the marketability of prefabricated houses has been far overestimated," he says cheerfully, explaining why, in his opinion, prefabs are not blossoming overnight and by the tens of predicted thousands to solve the housing shortage. Nevertheless, he is convinced there is a sound and growing market for prefabricated houses of good design, that can be varied to meet individual need. That's why he is in the business.

Marketability is a specialty of Mr. Deskey's. He is an industrial designer.

As such, it is his job to develop and improve products to sell successfully against competition. In twenty years of industrial designing, he has worked in fifty different fields, putting the Midas touch on such diverse items as billiard tables, fountain pens, radios, lamps, pianos, boats, stoves, plumbing and heating equipment, for fifty-some companies, a list of whose names would read like a Who's Who of American industry. For ten of these years he has been concerned also with houses, and he is the first industrial designer to produce a prefabricated house. For this he is his own client, as president of Shelter Industries.

For years there have been going

concerns in this field. Many large corporations and research foundations have done extensive work on prefabrication. So have government agencies. Still no abundance of prefabs on the landscape.

None of this troubles Deskey. He is accustomed to competing with specialists on their own ground, and designing to sell. Assembling his own smart group of specialists, including architects, engineers, production-line experts and the like, he has put on the market to date two kinds of prefabricated houses. The first is a week-end house called Sportshack, designed in prewar years and to be produced again as soon as housing restrictions are off. The second is a G.I. version to suit last year's housing program. Now he has half a dozen variations of this house on his design boards.

He started first with the material of which a house should be made. "Steel and aluminum lend themselves well to mass production," he says, "but will the public accept them?" He thinks not yet. Also, steel houses have not previously been processed satisfactorily against rust. Some manufacturers are now trying enamel coatings. Deskey's own answer to the problem of materials is plywood.

"Wood itself," he says, "is an economical, flexible, durable material with character, and with popular appeal. Wooden houses have stood well for over two hundred years. The development of plywood has added to the desirability of wood as a structural material as well as one for enclosure. It is engineered wood, eliminating all danger of warping and shrinking. It is light, but strong. It is

GOSH, WHAT A DIFFERENCE IT MAKES!

by Berry

I'm givin' my all, shootin' a box office triumph for old Super-Colossal...

But they keep sendin' me gals with the talent of a corn field scare-crow...

I'm ready to tell the big boss to go get himself a brand new director...

When I get a starlet chock-full of talent... a gal with everything!

Check the Raw Material in your MOTOR OIL!

Q...How can you put quality in if it isn't there to begin with?

A...You can't!

So when the man says "Check your oil," you check his.

For safe, economical lubrication be sure it is 100% Pure Pennsylvania.

These oils are made from raw material which is in a class by itself—Pennsylvania Grade Crude. Oils from this crude are quality from the start...better oils from the ground up. They are known as "balanced" oils, a natural balance of all essentials. They do all the things an oil must do...all not just one or two.

You benefit, so does your car, by making sure that every quart and every refill is 100% Pure Pennsylvania of emblem* quality.

FRICION-FIGHTING FREE-FLOWING
SLUDGE-PREVENTING LONG-LASTING
HEAT-RESISTING MONEY-SAVING

PENNSYLVANIA GRADE CRUDE OIL ASSOCIATION
Oil City, Pennsylvania

dozen gratifyingly different designs, were built in Kalamazoo, Michigan. The resulting flood of attention from the press has made the Ingersoll Utility Unit known from coast to coast. Orders, which speak even louder, are coming in faster than they can be filled.

The plywood walls of the Deskey house are sound, accepted prefabrication practice, and the utility unit gives every indication of becoming accepted practice. With these, and the design skill of a staff of architects headed by Ralph Gulley, former dean of architecture at Rensselaer Polytechnic Institute, Deskey created a minimum, G.I. house that met with more than a fair share of public interest, even though none of the minimum houses allowed under last year's housing program could possibly approximate anyone's dream house. Bowing to FHA specifications, the interior of the Deskey house is similar in plan to any small house, with two or three smallish bedrooms, living room, kitchen and bath.

"However," says Mr. Gulley, "even though the small-house plan has been boiled down to a formula, we think we have added a few amenities."

He has. A sloping ceiling in living room and larger bedroom follows the pitch of the roof and makes the rooms seem larger. Horizontal ceilings in the other rooms create scale by contrast, and allow space above for warm-air heating ducts, which can be used in the summer for circulation of air, stirred by the fan of the heating unit. Then there's the pleasing wall finish of combed plywood, the compactness of the utility unit, a large picture window in the living room, an awning frame over the terrace, a wall to screen the terrace from the street, a canopy to shelter the main entrance and overhanging eaves that will cut off the summer sun, yet let in the slanting rays of the winter sun.

The town of Stamford, Connecticut, liked the Deskey house well enough that it purchased sixty of them for rental units. The houses were erected as a community.

The town of New Britain, Connecticut, has just ordered three hundred to be built on various city-owned sites throughout the town, for rental to veterans at about \$35 to \$50 a month. In deference to New England, these have had their façades revamped to look like Cape Cod cottages. But the important facts remain, that the houses are all prefabricated, are being delivered to the city erected at just under \$6,000 each, and are being accepted throughout a variety of neighborhoods.

Labor No Stumbling Block

But many times prefabricators meet local opposition due to building codes. Deskey, for one, is not going to bang his head against this wall. He ran into trouble in one Massachusetts town because his house does not require the use of conventional two-by-fours. Now his next house will have two-by-fours in it, even though smaller pieces of lumber could do the job. He also has a variation of the house that can be built with a cellar, since many codes demand cellars. He's out to sell houses, not buck the codes of the land, much as he thinks they need it.

Strangely enough, labor is not the stumbling block predicted. "We are using journeyman plumbers on the assembly line," reports Borg-Warner, "and the officials of the United Association of Journeyman Plumbers has publicized the fact that the Ingersoll Utility Unit is being produced strictly in keeping with agreements that have been reached with the United Association." On each unit, in harmonious company, are the labels of the various unions involved.

The Winner Manufacturing Company in New Jersey, first to fabricate the Deskey house, was not unionized when production started in the spring of '46, but is

now—associated with the A.F. of L.

What goes on at the site is another headache for prefabricators. Driving up in a truck of a bright morning, unloading a house, and whisking it up before night is a nice fairy tale. Actually, prefabricators have to beg local contractors to put up their houses.

But the worst thing is the site itself. Plunk any house down in the middle of a drab, barren piece of land, and it looks terrible. Put a prefab there, with all the extra-critical attention it will get as something new, and its goose is cooked.

Advice: Go to an Architect

"When you build your own house," says Architect Gulley, "if you do it right, you go to an architect even before you buy your land, and get his advice in selecting a good building site. He plans the house to fit the site. When you buy a factory fabricated house, you should also go to an architect, or a landscape architect, for advice in selecting a lot to suit this house. The charge for such a service is slight. But the service itself is invaluable because it means making the most of your biggest lifetime investment."

To be as adaptable as possible to any site and to any family needs the next Deskey house, no longer designed merely to a G.I. minimum, is being worked out with half a dozen different floor plans. You can have three bedrooms or two, a center or side living room, a rambling, ranch-house type of structure.

Any room is expandable in size, in four-foot units either way. You can build the house right-hand or left-hand to the plan, to catch the view or the right orientation—i.e., the sun in the right rooms at the right time of day. You can set it with its end to the street, or broadside on the lot—service and front entrances are both arranged for easy access either way. And you can have the roof almost flat, for the south, or any of varying pitches.

In his first venture with prefabrication, Deskey was able to circle around many of its problems. "It was in 1938 that I first decided to go into prefabrication," he says. "I studied the subject to see what was holding it back. I could see two things then: The unions and the lack at that time of FHA approval for prefabricated houses of modern design. So I decided to design a week-end house that could do without either. Week-end houses are built in the country, where unions don't operate. They are built by people with means to do without the FHA."

The result was the Sportshack, a light-hearted minimum house that allowed pleasure instead of grim necessity to rule its design. It had a fireplace fitted with grilles for year-round heating, plumbing, closets. It had only one tiny bedroom, but convertible couches could make four more bunks in a hurry. If more space were needed later, it could be added in four-foot lengths, or even another Sportshack could be connected.

The war put a stop to manufacturing plans. In January, 1946, Deskey started up again. Then Wyatt came along with his housing ideas, and Deskey switched to a G.I. minimum house. Some Sportshacks had already been produced, however. They were immediately grabbed up by lucky citizens who have been weathering the housing shortage very comfortably in them ever since. As housing restrictions ease up, Deskey will return Sportshacks to the production line.

Deskey is convinced that, somewhere between custom-built houses and the rigid, cheap little boxes that no one wants, there can be a great choice of well-designed, variable, pleasant houses, that bring the saving of mass production, practically painless erection, and the guarantee of a responsible manufacturer. He's betting his own money on that.

CHANGED TO BOSTITCH; DOUBLED PRODUCTION

ONE
OF
800

When this pointbrush manufacturer started Bostitching metal ferrules to wooden handles—replacing machine nailing—production rose from 425 dozen a day to about 900 dozen.

Bostitch makes savings for others, too: the furniture manufacturer who panels the backs of mirrors at 50% lower fastening cost... the luggage maker who reduced floor space 80% for the frame-tacking operation... the bicycle manufacturer who fastens shipping cartons, top, bottom and one side, in 1/3 the former time.

Whatever your combination of metal, plastics, wood, cloth, leather or paper, you can probably fasten it better and faster with one of the 800 Bostitch machines. 250 field men in 91 key cities, backed by skilled research engineers and 50 years' Bostitch experience, make it easy for you to get the right machine for any job.

Write for facts about representative models from the world's largest and most versatile line of stitchers, staplers, tackers and hammers. Use the coupon below... today.

JUNGLE LORD

Continued from page 15

"I shall speak to the sultan about it," Van Hoeven said to me. "He could send the creature to the zoo at Fort de Kock and have his name up as the donor. Even there it would starve, but this is unthinkable."

He fingered the lock. It had been patched together with native carelessness after being broken.

"I had to file it open when the cage arrived," Samidin explained. "They had forgotten to send the key with it."

He pulled the wire with which he had mended the filed ring of the padlock a little tighter. "He won't escape," he said. "He is not clever. If he were clever, I would never have succeeded in getting him into my net."

FROM the kitchen his wife watched, smiling shyly, a naked child clinging to her sarong.

"Is your wife no longer afraid of the orang?"

"No, sir. At first, yes, but not after a few days. Even my boy dares approach the cage now. *Eh, mari sini, jangan takut*," he called to the little fellow who was being pushed forward encouragingly by his mother. "Come on, let *Tuan Contrôleur* see that you are not afraid."

The orangutan began to show signs of restiveness. He turned his head after the little lad, and uttered a threatening growl. The boy did not heed it and silently picked up a small bamboo stick through which a nail had been driven.

"What's that?"

"That stick?" Samidin laughed. "He likes to tease the ape with it sometimes. Boys will be boys."

"Come on, let's have our lunch," Van Hoeven turned away. The *mandur* looked after him, not knowing whether he should encourage his little son now to show Mr. Controller how little he feared the big caged animal.

Samidin served the rice *tafel*, and we fell to.

"Aren't they strange, these natives?" pondered Van Hoeven. "You come to think they have no feeling whatever for animals. For sheer entertainment they'll sit in a circle to watch a fowl with a half-severed throat jump and flutter about for a quarter of an hour. It is simply not to miss that pleasure that they don't slaughter the creature properly. On the other hand, their fighting cock, their turtledove they nurse like a child. This fellow keeps one—did you notice the pole by the well? He pulls it up every morning to the top of the pole so that the bird will see the sun sooner than he does himself, and in the evening he never omits to cover the cage with a cloth against the night's chills..."

We jumped up, filled with apprehension when there came a piercing scream from the garden; the child began to howl violently. Then a door banged and the noise ceased. We reached the garden just as the orangutan was busy squeezing himself through the open cage door. He looked around in agitation and caught sight of the *mandur*. He advanced, hissing furiously, reeling drunkenly, toward the native. Samidin retreated hastily, and practically at the same moment all three of us were in the inner room and had bolted the door with the heavy iron bar which stood beside it.

"The windows!" I shouted. They appeared to be secured with solid trellis-work.

We had acted on a primitive impulse. As it soon turned out our precautions had been superfluous; the animal did not dare venture into the back veranda. He halted a few yards from the door. Stooping slightly, the knuckles of his bent fingers just touching the ground, he stared, still gasping, at the slammed door.

Van Hoeven turned on Samidin. "There you are, you damned fool! Didn't I tell you the lock was rubbish?"

The *mandur's* face was gray. "I ask you to pardon me, *Tuan Contrôleur*," he faltered.

Van Hoeven peered through the blinds of the back window, then turned to me and made an effort to see the humor of the situation. "It's a damned good joke. We're the ones in a cage now!"

"Presently he will return to the wood of his own accord."

"Let's hope so. If we had the rifles we could chase him away with a shot. Where did we leave them by the way?"

"Outside, near the front veranda."

"Can't we get at them through the front door?"

Samidin saw him walk up to it. "The front door is locked, *Tuan Contrôleur*."

"I know. But don't you have the key?"

"The key is in my room, I think—" He understood what the idea had been. "If *Tuan Contrôleur* wants me to, I shall try to fetch the rifles through the back door," he offered, with that mixture of fatalism and foolhardiness that sometimes directs the actions of the native.

"He'd be after you for sure; you're the one he wants," Van Hoeven said. "How long is he going to sit and wait there do you think?"

"He will go away eventually, *Tuan Contrôleur*."

"But when will 'eventually' be?"

"When it gets dark."

"Not before?"

"Perhaps even sooner," Samidin said hurriedly, frightened by the controller's impatience.

The young controller's thoughts went back to his home. "If we are late, my wife will begin to worry," he said to me.

"She does not worry easily, you told me."

"No, that's right, but this time she won't understand why it is, as I am not out on duty. If we stay away late, she may get ideas into her head about the *prahu* capsizing among the crocodiles, or I don't know what."

"Don't get impatient. That creature is bound to give up in a little while."

IT DID not give up. It was in no hurry. It stood always at the same spot, its hands just touching the ground. With its small narrow eyes it peered incessantly in the direction of the back door, its mouth open and its throat still swollen from grief—waiting until its enemy should come outside.

Van Hoeven began to get fed up. "Let's try to drive him off. I don't feel like sitting here for hours on end." He noticed a case of beer bottles. "Suppose I throw some of these at his head, with the sultan's compliments? It is safe to open the door again; he won't dare come into the house."

I opened the door, but kept the iron bar handy. Samidin looked uneasy when he saw what we were going to do. Van Hoeven picked up a bottle and slung it with all his force against the ape. He missed, and the animal did not stir from his place, only looked contemptuously at the projectile that whizzed past him.

"Another try," said the young controller and this time ventured a few steps into the back veranda. The orang watched closely, suspicious. Again the bottle missed; the first throw had been better.

Van Hoeven was disappointed. "You have a go, Samidin," he said, knowing how much better a native masters his hand.

Samidin came forward. He was flattered by the confidence. The orang reared himself up on his hind legs and his throat worked furiously when the

smaller and darker figure came out. Samidin took his time. The bottle flew straight at the animal, grazing the swiftly nodding skull. The orang bellowed coarsely and moved the upper part of its body frantically up and down.

Van Hoeven pressed a second bottle into the *mandur's* hand. "Have another, a little lower this time."

Samidin nodded silently and threw again. In this instant the ape became conscious of the fact that these dark shining objects which came flying out at him meant pain and danger. With an unexpected, effortless movement, his big hand caught the bottle in midair and hurled it back with rabid force. It broke to smithereens against one of the wooden pillars of the back veranda.

Past realizing the grotesqueness of this fight, both Van Hoeven and I snatched the remaining bottles and threw them with all our might at the big tawny form. The ape, when we ran out of bottles, we made short work of the smaller pieces of the inventory of the back veranda.

The ape for his part had lashed himself into a state of frenzy. He jumped up and down on hands and feet, and the jam framed his gaping mouth with the dangerous yellow teeth.

At last we realized that this was getting nowhere. The animal was provoked to the point of casting aside its caution. It approached so near to the steps leading to the back veranda that we felt it safe any longer to move about outside our door. We held council. Van Hoeven, no longer in control of his nerves, made a mad proposal.

"Let's risk it. Maybe he'll give us time to get at the rifles. And if not I'll keep him at a distance until you have managed to grab a gun."

"How would you keep him at a distance?"

"With that long iron bar."

"Don't be an idiot! He would tear it away from you in no time."

"If we let him be, he is sure to go away of his own accord later on," said Samidin soothingly, troubled by his conscience.

"Do you happen to have a pack of cards on you?" Van Hoeven asked me. "Something to distract my thoughts, or I shan't be able to stand it much longer." Suddenly his rage broke out anew. "Of the maddening experiences! Here I am—Civil Officer Colonial Service, next to the sultan the highest authority for miles around, and I am the prisoner of an orangutan!"

He was in too much of a fury to be able to see the humor of it.

After an hour, the ape was still sitting there, but a little farther away than where he had ventured for a moment in his anger. Time did not count for him; he waited patiently—perhaps for more projectiles to descend upon him, or to look once more into the eyes of the brown man against whom he had fostered wild hatred in weeks of suffering. This thought must have been at the back of his mind as he looked around him, now somewhat bored, and caught a fly from the air with his hand and put it in his mouth. From time to time he would suddenly fasten his gaze on the door when he heard anything. We kept still on purpose; we talked in low tones.

"If he is still there when darkness comes, I am getting out of here," Van Hoeven announced. "I am damned if I care what happens!"

"Come, come," I said, "wait until it gets dark. He must go sometime, mustn't he? It's simply inconceivable that he should besiege us here consciously! He has to get used to the thought that he can leave this garden and return to his wood. When darkness falls, his instinct will drive him there."

THE controller's instinct drove him home, where his wife was expecting her first child. He shrugged his shoulders nervously and irritably, and addressed himself to Samidin, "Do you think we could make ourselves heard by the fishermen, when they put to sea presently?"

"They won't put to sea today, *Tuan Contrôleur*—it is *hari Dyumahat*."

Van Hoeven swore. "We should have thought of that," he said to me.

"Of what? That the fishermen don't sail on a Friday?"

"That Friday is an ill-omened day for hunting."

In the sultry hours of noon there had been dead silence. Now birds began to sing with clear voices. "Takukurr," cooed the turtledove high on her pole.

The short dusk of the tropics crept nearer, by leaps it seemed. The outlines of the lesser buildings and of the young orange trees began to darken rapidly and became vague. The wall of the jungle behind the garden grew higher and stiflingly somber and threatening. The orang waddled sluggishly up and down for a little, and several times uttered a hoarse shout which echoed against the jungle beyond.

"That's what he does every evening,"

ispered Samidin. "Sometimes he gets answer from the woods."

This time there came an echo from the buildings. "Samidin!" came the plaintive call of the deserted woman, who had fled there with her child.

"*Djangan takut* . . . don't be afraid!" shouted the father, just as before, when he had encouraged his son to come and see the hairy, imprisoned monster. The other stopped sobbing to soothe the little one.

"Takukurrr," cooed the dove, wondering why she was not being brought down and covered up for the night.

VAN HOEVEN seemed to have given up his insane purpose of venturing outside in the dark, overcome by oppression that this darkness brought him.

"At least let us have a light," he said with an odd sound in his voice.

"Better on the veranda—not in here. It would draw more attention if something happened to come up the river. And we are bound to get enough mosquitoes here as it is."

Samidin appeared to have already understood; he took a box of matches from his belt.

"Do you dare to light the lamp on the veranda, Samidin?"

"If you would keep watch?"

"Let's pull in the easy chairs at the same time," I proposed.

We dragged the chairs inside, and Samidin clambered onto the dangerously shaking table and lighted the paraffin lamp, which hung from the ceiling. That he could not refrain from taking a flowerpot that we had left and throwing it at the dark gigantic specter in the back yard. The animal leaped aside and scowled and jabbered at the clods of earth and debris flew against its stomach.

Samidin, frightened by the furious reaction of the orang, fled in a panic to us doors.

And so came the night. The turtle-dove did not coo any more; it had probably nodded off to sleep on its perch. Against the dark shadow of the jungle flies were buzzing. Later on the moon became visible, climbing slowly against the skeleton of a bare dead *pohon jah*, "king tree," which rose above the sober mass of living treetops.

The fruit trees and the high, thick clus- of bamboo near the well threw long flows over the silver-lit ground, so the dark form of the orang, which seemed to increase in size and menace, sometimes lost for a while. But we were able to hear him. Once he emitted impatient yawning noise. He stretched his back against a trunk and going so pulled down a branch which he ate off. First he ate the fruit, then the branch to burrow about in his long hair.

Meanwhile, we were being tormented by the mosquitoes; only Samidin was not. Jungle mosquitoes, which never

before had tasted white man's blood, became maddened by its sweet savor. Thousands buzzed around us, and for each one we squashed on our cheeks, on our foreheads, our hands, there came new legions humming, murderous and fearless. We could not sit still in our chairs. The young controller thought incessantly of his wife at home. He got it into his head that the baby was going to be born that night. I reminded him of what the doctor had told him, but he sighed.

"The doctor can be mistaken. My wife was thinking it might be sooner."

"Then why the devil did you come?"

"Who was to know that I should not be home again by evening?"

"It must be a comfort to you that Ahmad is there."

"Oh yes, I can rely on him. But after all you never know what may happen! It's the first time. And if she should worry herself crazy over me . . ."

"What will Ahmad do if we don't turn up?"

"He may wait till midnight and then go in search of us. That is, if my wife will let him. She might try to prove to him, to me and to herself what a courageous official's wife she is."

It was now nine o'clock.

The bed that stood in the room had no mosquito netting; the frame from which it had once hung stuck out bare. The lamp on the back veranda began to smoke as the paraffin became low. It flickered a few times and went out. At the same time big dark clouds floated before the moon and utter darkness descended upon the world. We were not able to see the orang any more, but could hear him shuffle round the house, now here, now there.

It seemed as if by now he was wrenching off branches for sheer pleasure; incessantly wood crackled and leaves rustled. Then suddenly a tumult of cackling and fluttering broke out, followed by much banging and stamping. A riotous, unreasonable destroying power seemed to be at work out there, mysterious and invisible.

Samidin sighed, "*Bekin apa, dija*, now what is he doing?"

ONCE Van Hoeven's nerves got the better of him. He wanted to run to the motorboat, to his wife. I begged him to use his common sense, presently his policeman would come to the rescue. But he would not listen to reason; I had to hold him. He was strong, and I feared he would succeed in shaking me off.

"Samidin, do help me to prevent the Tuan from going," I called. Fortunately the *mandur* possessed sufficient courage and understanding for such an act of disrespect. He seized him by the arm that had just freed itself from my grasp, and clung to it like a burr.

"Now, *sudah*, let go," said Van Hoeven, panting, giving up the struggle at last. He sank down on a chair, his teeth chattering from excitement.

At long last fatigue overwhelmed us. We now surrendered without resistance to the mosquitoes. We had smoked all our cigarettes, including the pack of *serotos* which the *mandur* had dug up from his belt and offered us magnanimously.

Outside, the creaking and thudding had been going on without pause. Now, suddenly, there was silence. We lifted our heads and listened, tensely. From the outbuildings came dimly the faint sobbing of Samidin's wife. The *mandur* went nervously to the door.

"Perhaps he is gone. Shall I have a look?"

The same instant there was an anxious cooing and fluttering, and a whipping sound as of a bent pole suddenly released. "My pigeon!" stammered Samidin. Something hit the ground. More noise as of wings beating against a cage—then silence returned, pregnant with unseen danger.

Choking, deadly silence.

Toward morning we two must have slumbered for a little while after all. When we opened our eyes, a dusky sort of light was falling through the blinds. We looked at each other, confused. Samidin sat on his haunches near the door and stared before him. He had not slept.

"Is he still there?"

The *mandur* nodded. "Look at him."

THE orang was sitting a few steps from the veranda, his back toward us and his head sunk low between his shoulders so that we saw only the bald and bloody skull and the outstanding upper rim of his ears. He was a dark, devilish monster, sinister and motionless. And everywhere around him we saw the work of destruction that he had wrought during the long night. The branches of the fruit trees had been torn off, and strewn around the garden.

"*Itu dyahat! Bangsat! Anak sundal!*" abused Samidin in smothered tones as if he was addressing an evil human. The giant ape now half turned toward us; he had heard our voices. Fiercely, noiselessly, he opened his mouth wide. It was meant as a threat, but it looked like silent laughter.

Had it been from wrath that he had turned this well-cared-for garden into a wilderness? Or was the destruction his nature? After all, what does destruction mean in the jungle? For every torn-off branch, a thousand others will grow!

"Look what he has done to the pigeon," Samidin wailed. The pole had been pulled to the ground and the cage lay upside down somewhere in the bamboo coppice. The bird was probably still alive, though it was lying with spread wings, helpless and inanimate, beneath its cage.

Nobody had locked the chicken house and here, too, the hairy giant of the woods had played his wanton murder game. Amidst scattered feathers a number of lifeless corpses of birds lay on the ground. A few fowls that had managed

to escape his wild, snatching hands now at frightened and huddled together on the perch, and a young cock raised his voice to greet the morning with a wavering crow. Vaguely astonished, the ape looked in the direction of the chicken house, but he did not think it worth his while to go back there.

"This is purpose; this is revenge," I said to Van Hoeven. He made no answer. The enormous animal with the lumpy fleece that had been abused by Samidin as a criminal, as a scoundrel of dishonorable descent, was becoming even for us a being with a logically functioning, if blunt, human brain. He had it his tormentor in what was precious to him, his garden, his poultry, his pison. If the mother had not managed to drag her child indoors in time—

It was already half past five. When could Ahmad arrive? Surely he must be on his way here. Behind the clouds above the jungle the sky turned orange and gold, and out of the retreating night rose the shocking picture of devastation, completed by all we had thrown at the orang's head the evening before.

"There, listen!" Through the bright, deep birds' voices

Uncertain of this threat from outside, he moved in his reeling gait somewhat aimlessly up and down at first, beating his hands furiously against the ground. Then he advanced undecided on the old man, who unhurriedly but without wavering walked up from the jetty to the garden gate.

IN FRONT of the gate Ahmad came to a halt. He saw the now-motionless colossal orang at the bottom of the garden and he measured with his eye the distance to the rifles, which he had already noticed.

"Are they loaded, Tuan Contrôleur?" he asked.

"Yes, both of them!"

He opened the garden gate and stepped forward. He and the orang looked into each other's eyes, measured each other's courage. There was a strange similarity between man and animal. Ahmad had the same primeval, narrow-planted eyes, his old and wrinkled head also rested deep between the shoulders. But in the man of authority, grown gray in service, there was no doubt and no fear; he knew that he had the law and the right behind him.

When it reached the well, Samidin ran out of the house to the remaining rifle. He snatched it up and hastened with it after Ahmad.

"Stop that!" Van Hoeven shouted—neither of us wanted the big animal needlessly shot. But the young *mandur* would not listen, and it was only thanks to Ahmad—who in the nick of time succeeded in pushing the muzzle upward—that the shot thundered forth in vain, echoing against the wall of the jungle. The ape screamed and turned to throw himself on his enemy. The old policeman, however, stepped forward and the orang once more hesitated, then proceeded on his flight. Van Hoeven and I had run out of the house and succeeded in taking the gun away from the *mandur*. He wept with rage and shouted coarse, mean invectives after the animal.

"Shoot him! But shoot him, sir!" he begged.

"Whatever for? He's taken flight, hasn't he?"

"Yes, but he has destroyed my garden, bitten my fowls to death! He will come to kill my child, too! My wife won't be able to sleep any more, she will always be thinking: He is coming, he is coming! Have mercy, Tuan Contrôleur! Have mercy on my wife and child, if not on me!"

"Don't talk rot, he won't return, he's seen enough of this place for the rest of his life," Van Hoeven said, with a grim contempt for the native's wild imaginings. If the young *mandur* could not stand it here any longer, he would just have to move.

We were impressed and breathless at the sight of the giant ape regaining the jungle from which he had been lured with coveted fruit. Oh no, he would not show himself any more near here. He left the clearing behind him now and pulled his sluggish body up into the trees as if it weighed nothing. He still kept breaking branches off and throwing them about him.

HE CROSSED over to another tree, moving on the green mass of foliage as over solid ground. Sometimes he was completely submerged in it; a branch would break, cracking loudly under his enormous weight, but a little lower there would be another branch to catch him and he would turn up again. Once more—for the last time—he looked back and gave a hoarse and raucous roar. It was a barbaric battle cry, a cry of hate and derision for all four of us. Then the jungle swallowed him up.

The old policeman now thought of something and addressed himself to Van Hoeven. "Tuan Contrôleur—yesterday evening the doctor came and—"

"And what? Has the child been born? How is Njonja?"

"Everything is all right." While Van Hoeven closed his eyes for a moment, Ahmad went on, "The Njonja was worrying about you; but I told her it was the motorboat. Tuan Contrôleur does not know how to handle that motor, I said; the thing is old, same as Ahmad, and sometimes cannot get started. I shall go to meet the Tuan in a minute. However, I could not leave till morning, because the Njonja then felt that her hour was come, and I thought: The Tuan will want to know from Ahmad that she is all right. He will be angry if Ahmad is not able to tell him. And I thought, he will like to know as well if it is a boy or a girl."

The young controller had tears in his eyes. "Ahmad! I knew I could count on you! Tell me—which is it?"

Across Ahmad's brown sallow face with the old, close-set animal's eyes that had seen much of life and death, there spread a bright, childlike smile.

"Tuan Contrôleur will be glad and proud, and Ahmad wishes him happiness and good luck. It is a boy."

THE END

"Please, whoa!"

BARNEY TOBEY

from the jungle treetops, we dimly heard the chugging of a little motor. It sounded far away, but was approaching steadily. Then the orang became attentive; his gaze wandered to the river.

"We shall have to warn Ahmad," I said. "Is he likely to carry a gun?"

"He may have borrowed one from the military. But in any case we must tell him that ours are standing loaded against the house."

"There he is!"

THE little boat came against the tide, running in with a sweep against the jetty. The native policeman sat in the stern, his brown martial straw hat with the upturned brim pulled down over his eyes. With visible astonishment, he looked at our boat. Then he tied up.

"Ahmad! A-ti-ati! Ada orang-hutan dalam kebun!" Van Hoeven shouted. Ahmad seemed glad to hear his master's voice. "Baig, Tuan," he shouted back, peering with a sharp look into the garden.

The ape showed signs of nervousness.

STAGE DOOR GIRL

All Medora wanted was a private crooner—for her very own

●
**BY JOSEPHINE
PEARSON**

IT WAS one of those bleak autumn days that are cold as winter and there were many red noses in the crowd that pressed around a stage door in an alley off Broadway. Legs were red, too, all the way from bobby sox to skirt hems—which was quite a distance when the wind blew. However, the girls weren't complaining about the weather. They had their love to keep them warm. Every time the stage door opened, they squealed; and as someone other than their idol emerged, they groaned.

Medora Miles saw the show once a week. By painful privation in the matter of carfare and movies and school lunches, she was able to save enough money for standing room at Saturday's matinee. She found it necessary to resort to intrigue as well as privation, because there were two people from whom she kept her love a secret. One was her mother who had stated bluntly that she did not approve of young girls going downtown alone. The other was a youth with sandy hair and freckles who erroneously believed he owned Medora's heart.

This afternoon, Medora was pleased to think that she stood out a bit from the crowd that worshiped Ronnie Jones. She was wearing the best her own wardrobe had to offer, plus a hat that she hoped to return to her mother's closet before it was missed. She was convinced that Ronnie had noticed both it and her. Whenever he turned to the audience he had seemed to look straight into her eyes. The look was lovingly returned.

The stage door opened and shrieks rent the skies. They were followed by groans which shook the earth. Medora was growing uneasy, she really ought to go home, but she made no move in that direction, nor did anyone else whose love was true.

While the girls waited, they compared trophies. All of them had Ronnie's autograph and most of them corresponded with him. He wrote very nice notes thanking them for their devotion; these were read aloud with ecstatic sighs.

(Continued on page 88)

The stage door opened. There was a wild scream and a stampede as Ronnie made the distance to his waiting car

SWEET WATER

Continued from page 19

plain, other mountain ranges sprang up, the Jicarillas to the northeast, the Capitans almost dead east, and then the first spurs of mighty Sierra Blanca peak, highest point in all this country. And on the south of it their eyes picked up another range almost as high, a hazy blue line that faded away into the white smoke filling the southern sky. These were the Sacramentos.

Those ranges were the east wall of the Tularosa Valley. The west wall ran almost straight south from this peak on which they stood, but they could see only the summits of near mountains rising successively higher to the granite point of Salinas Peak, perhaps thirty miles south of them.

Of the vast desert basin lying between these mountain chains they could see, at the moment, far less than half. But that which brooded below in their vision was, from this mountaintop, an immensity of desolation, forbidding and yet impelling, stirring, as always, an old, old challenge in Lineer. No line of green, no gleam of water marked a south-flowing river anywhere below. Small streams ran down these mountain walls and raced onto the basin floor. But the dead earth sucked them down and they vanished before they could form a river.

No, it was a barren, mountain-locked fastness, seemingly waterless, seemingly lifeless. Yet men lived there below and even prospered, salting their lives with quarrels as huge and unforgiving as the land they struggled against.

BARBARA was watching the great white cloud stirring up from the valley floor, lifting in fluffy spirals until it mushroomed higher than the mountains.

"The white sands," said Lineer. "Purest white gypsum. Miles of the stuff. Even the mice in it are white."

He pointed his right arm straight south down the backbone of mountain ranges. "El Paso lies down there, perhaps a hundred and fifty miles." Standing thus, he raised his left arm and pointed it almost due east. "There's Baxter Mountain. White Oaks and its coal are there, in a high gulch. That's the whole railroad, one hundred and eighty miles of it, El Paso to White Oaks."

"Where did you live?" asked Barbara.

He shifted an arm southeast to the

point where the white cloud touched mountains. "The town of Tularosa there," he said. "I was born in the Sacramento foothills beyond it."

"On a ranch?"

He nodded.

"Why did you leave it?"

"My father used to say that what country needed was schoolteachers engineers. Then he would always add aim to furnish one of the engineers." did. He sent me East to school when I was sixteen."

"Does your father still live over there?"

"He died last year."

"Oh."

She took his arm and they scrambled closer to the eastern edge of the plain where the mountainside dropped abruptly away below them. She kept her arm in his as they stood there, looking up at him with her rising interest, shining in her unabashed way.

"When my father died," he said, "I came back to settle his affairs and sell the ranch. It was just before we started the road down in Sonora, and I was in a hurry to get away. But the place where a man is born has a hold on him. I stayed around, wandering up and down the valley and not knowing why."

"The railroad?" she asked.

He looked at her in mild surprise, and nodded. "This valley is a natural road. A small coal road will be self-sustaining now. But someday this will be part of a transcontinental line, and the coal will matter much. Railroad men know that. The road would have been built ten years ago if anybody could have figured out how to get enough good water. That's what I was looking for."

"And you found it?"

He nodded.

She said in a tone of discovery, "The railroad means a great deal to you, doesn't it?"

He slanted his head downward under a sober scrutiny, thinking that this had an intuitive quality and a knowledge for sharp observation. This too was expected. It was puzzling. Her stillness and her quiet eyes of this moment made her seem so different from the trouper maker of two hours ago.

"It does," he said.

"It means much to me, too, Jim."

That was as it should be. A woman wants her man to succeed. To

More and better aluminum products—today...with

Kaiser Aluminum

a Permanente Metals product

IMAGINE THE *convenience*, the downright *pleasure* you get from products like these . . .

Aluminum vacuum cleaners, bed springs — even furniture—so wonderfully *light* that you can move them around with a touch of your hand. Aluminum washing machines, cooking utensils, dish washers that do away with kill-joy hours of drudgery, and actually add new *beauty* to your home.

Add to this the *strength* of aluminum . . . the fact that it can't rust or corrode . . . that it lasts a life-

time . . . and it's clear why more and more people are demanding aluminum-made products.

And today you have a *right* to demand these products. Because Permanente Metals, led by Henry J. Kaiser, is speeding to manufacturers the wonder metal that makes them possible.

In but a single year of operation, Permanente Metals' huge processing plants produced 175 million pounds of plate, sheet, and strip aluminum. Almost as much as the entire industry produced

in the most productive year before the war!

That's why there are more and better aluminum products . . . *today* . . . with Kaiser Aluminum!

ZIPPO MANUFACTURING CO. DEPT. C. BRADFORD, PENNA.

GIVE A PERSONALIZED LIGHTER—three initials or facsimile of any signature engraved in color \$1.00 extra. (No. 350, initials only)

Thomason was no builder of railroads. But apparently he was going to try to become one. If he could build this railroad, with or without Lineer, it would add to his stature.

"Why?" he asked.

She looked away. "I can't tell you. But I think you will guess soon."

"I have made several guesses already," he said wryly. "And I find no pleasure in them. It is something in the relationship between you and Tracy and your father. But I can't get any farther than that. You see, I don't really know any of the three of you."

"No," she agreed, "you don't."

He moved restlessly, and she dropped her arm. She said, "What happened between you and Tracy in Sonora?"

"Tracy told you that something happened?"

She nodded.

"Then he must have also told you what happened."

"Yes."

"Why are you asking me, then?"

"I want your side of it."

"Don't you believe Tracy?"

"Of course," she said quickly.

"You think there are two sides?"

"Well, aren't there?"

"No."

She showed her puzzlement at the curt tone. "What do you mean?"

"If you love a man there is only one side in his quarrels. His side."

Her cheeks flamed with the sudden anger that he expected. He watched it detachedly, wondering what perversity had made him slash at her so deliberately. Yet he thought that he knew what he was doing, and he did not regret it.

But when she spoke it was with cool control: "I think I know my responsibility to Tracy without your teachings, Mr. Lineer."

"One of your responsibilities is to avoid making trouble for Tracy in whatever work he has to do. What happened in Sonora is behind us. We've shaken hands and forgotten it. Now you're trying to pry into an old wound."

"That's not true," she said hotly. "At least that's not why—"

He interrupted her, "Two hours ago you made trouble between us. An hour ago you promised you would not do it again. What am I to believe?"

For a moment more she met his gaze with her eyes blazing. Then, surprisingly, she dropped her head. When she raised it again her face was composed.

"I'm sorry," she said.

He knew with all the sureness of his reason that he had not been too brutal. If he and Thomason were to build this railroad, no one thing was more important than the establishment of a relationship based on trust and understanding. This girl must learn now not to meddle. Yet he wanted to apologize, and he had to fight down the impulse.

THEY climbed slowly back to the horses. He gave her a hand to mount, seeing the graceful swing of her hips and shoulders. She found her seat and looked down at him, her face abstracted.

"Jim," she said, "have you ever been in love?"

He laughed up at her. "You just must pry, mustn't you?" His eyes grew serious. "No," he said. "No, I don't think I have."

"If you did love a woman," she persisted, "would there really be only her side to her quarrels?"

"Only her side," he said gravely.

He mounted and they stood their horses a moment more, watching the slanting rays of the late sun pick out details of red stone and jagged crest on the wall across the valley. Barbara's eyes were drawn to a dark swatch twisting down the basin near this wall. It seemed to be part of the valley floor, an irregular, sinuous flow of darker earth lying on the valley like a cloud's shadow.

"Lava," said Lineer. "We call it the

malpais. Malpie. Malapize. Take your pick. Spanish for bad country."

"Just the lava is malpais?"

"Yes."

"The whole valley looks like bad country to me."

"It's not bad," said Lineer. "It is bad. Weak men don't like it. Or weak women."

She turned in the saddle, looking up Lineer so that the sun was in her face. It picked up little flecks of blue in the green iris of her eyes, and he saw with his growing interest that in this light they were not green but turquoise.

"I shall like it," she said slowly.

Dusk was thick about them when they pulled up to the roaring fire of the camp. Barbara climbed unaided from her horse and went straight to Thomason, clasping his hands in hers and smiling up at him. "It was wonderful, Tracy," she said. "I wished all the time you were with us."

JUBAL NYE had gone to his blank lines of exhaustion showing in his face but his long back birch-straight. One of the Easterners had followed. Now Wilse Ware was trading memories with Colonel Edwards, and making a contest of it as must with everything. Across the fire Barbara sat with her hand in Thomason's. Molly Riordan, Barbara's companion, gazed into the flames, her eyes large and still and faintly sad.

Presently Lineer caught Edwards' nose and followed the older man into the soft blackness beyond the firelight. They walked in silence along the slope, past the water tank, stopping at the dark line where the junipers began again.

"A good night," said Edwards.

"It is that," Lineer agreed.

Edwards sat down, and Lineer found a place beside him. At this distance from the fire even Ware's voice was only a murmur. Across the narrow valley the ridge reared its black bulk against the stars.

"A good many years ago I crossed this country," said Edwards. "A young fellow just out of West Point. We ran a survey through to California. Passed a couple of hundred miles north of here."

stirred slightly, the shifting of his body causing a small rustling in the darkness. When he continued his voice held a vagrant note of regret. "At my age a man likes to punish himself by looking back and debating the turns he made in the road. I sometimes think I would have been happier in the Army."

"In or out of the Army," said Lineer, "a man goes where he has to."

Edwards found a cigar and swiped a match across his boot sole. The small flame flared and grew small and flickered again as he drew at his cigar. Each flicker disclosed the clean decisiveness of face, the hooked nose and the deep-hooded eyes. A suggestion of weariness was there, but it was hard to place. Lineer thought that it must come from the voice. It was not physical weariness.

"Yes," said Edwards. "A man who knows that won't look back so often. He'll still look back."

Edwards worked leisurely at his cigar, giving its fragrance to the night. Far along the slope came the long, slobbering exhalation of a late-feeding horse. Lineer lay back on his elbows, loose and patently yet strongly curious because this dinner man was so slow at coming to the business that had brought them out here.

Presently Edwards asked, "What's Ware and Nye trouble about?"

Lineer shrugged. "Pick any dozen men in the valley and they'll give you a dozen different versions. And there will be some truth in all of them. In twenty years those two have found time and a way to fight over everything."

He stopped, thinking over his words and realizing they were no sort of answer. Yet it was no simple question. Probably not even Wilse Ware and Jubal Nye could agree on the origin and nature of their monumental hate.

He went on, "Wilse and old J

**\$41,000
in Prizes!**

Win a new Kitchen or \$5,000 cash!

-completely installed and equipped
-designed especially for your home!

You can have any of these wonderful General Electric items from the Grand Prize kitchen, plus the difference in cash up to \$5,000.

- Waffle Iron
- Electric Mixer
- Automatic Toaster
- Automatic Coffee Maker
- Sandwich Grill
- Double-Duty Iron (steam and dry)
- Kitchen Clock
- Radio

Now you can have the kitchen you've always wanted! Complete in every detail from floor to ceiling—including redecorating and special lighting—everything you need! All designed exclusively for your home and completely installed as soon as possible after close of contest. If you don't need complete new equipment, you can take any part thereof and cash difference up to \$5,000. Gas appliances furnished if requested.

BUT that's not all! There will be many winners in this sensational contest!

Plus a year's supply of Swift's Cleanser

Just Look! 1151 Prizes in all!

100 GE ELECTRIC MIXERS—**2nd** PRIZES

500 GE AUTOMATIC TOASTERS—**3rd** PRIZES

500 GE ELECTRIC STEAM IRONS—**4th** PRIZES

Read these easy rules

1. Print or write plainly your jingle line; the last word to rhyme with the word "too" in the jingle, on the entry blank or on the reverse side of a Swift's Cleanser wrapper.
2. Your entry must contain 2 Swift's Cleanser wrappers or reasonable facsimiles thereof. If you use the back of the wrapper to write your entry, accompany it with a second Swift's Cleanser wrapper. If you use the entry blank, attach two Swift's Cleanser wrappers. Print plainly your name and address. Mail your entry to Swift & Company, P.O. Box 1155, Chicago 90, Illinois. Send as many entries as you wish, but be sure to enclose two Swift's Cleanser wrappers with each entry; send no money.
3. Entries will be judged on originality, uniqueness and aptness of thought. The judges' decisions will be final. Duplicate prizes in case of ties. All entries become the property of Swift & Company.

4. Any person living in the United States, Canada and Hawaii may enter this contest—except employees of Swift & Company, its advertising agencies and members of their families. Contest subject to Federal and State regulations.
5. Contest opens September 21; closes October 25, 1947. All entries must be postmarked before midnight of the closing date, and received by October 31, 1947. Entries received before midnight September 27 will be entered in the first week's contest. Thereafter, entries will be entered in each week's contest as received. No entries will be returned and no correspondence entered into. You accept the conditions of these rules when you enter.
6. Winners of weekly prizes and the Grand Prize will be announced over Don McNeill's Breakfast Club radio program (consult your newspaper for time and station) shortly after each contest closes. Weekly prize winners are eligible for other prizes, including the Grand Prize. All winners will be

notified by mail. Complete lists of winners sent on request to anyone sending in a self-addressed stamped envelope.

Contest Clues

Here are facts about Swift's Cleanser that may help you to compose a prize-winning jingle. When you use Swift's Cleanser you will find many more reasons why it is America's finest. Swift's Cleanser is speedy and scratchless! It's the only cleanser that gives you both instant grease cutting and scratchless cleaning. Swift's Cleanser is clean-white in color. It is odorless. It leaves no sediment. Swift's Cleanser comes in a pretty polka dot package in your choice of three colors (red, green or blue) to match your home color scheme. Swift's Cleanser is so fine and smooth it actually polishes as it cleans. Swift's Cleanser was developed in the research laboratories of Swift & Company to be the modern cleanser for modern women to use in the home of today and tomorrow.

Big Weekly Bonus Prizes!

10 ELECTRIC REFRIGERATORS
(8 cubic feet maximum capacity)
EVERY WEEK FOR 5 WEEKS!
Listen to Don McNeill's Breakfast Club, week-day mornings on ABC for special announcements.

- 1st Weekly Contest starts September 21, ends midnight, September 27
- 2nd Weekly Contest starts September 28, ends midnight, October 4
- 3rd Weekly Contest starts October 5, ends midnight, October 11
- 4th Weekly Contest starts October 12, ends midnight, October 18
- 5th Weekly Contest starts October 19, ends midnight, October 25

dominate everything in the valley except each other. And both have to dominate. They can't beat each other down and they can't stop trying."

"Yes," said Edwards. "I can understand that." A dryness came into his voice. "Maybe I can understand it better than most men. The question arises: Will they stop trying long enough for us to build a railroad?"

"Tracy mentioned some sort of agreement with them."

"A clear-cut agreement to keep the peace," said Edwards. "Made by them together in his presence. But sometimes men find they've turned loose forces they can't control."

"They are men of their word," observed Lineer.

"So am I," said Edwards. "But men under me have broken my word and believed they were right in doing it."

Lineer stirred, feeling the first growth of restlessness. This was not the direction he had expected the conversation to take.

"If it happens," said Edwards slowly, "you are to let Tracy handle it. The peace agreement is his. Even in another situ-

"What has he asked for?"

"Nothing. That's the trouble."

"He'll profit from land, of course," said Lineer thoughtfully. "Land is his passion, you know. They say he used the first legal fee he ever earned in the Territory to buy a quarter section, and he's been buying ever since. Most of the south end of the valley belongs to him."

"But he has given options to Tracy on all of it we want. At a fair price, too. The value won't go up until the railroad is built. If we buy it now he doesn't profit."

"Ah," said Lineer. "Then I don't know."

"Two strong men," said Edwards, almost absently. "I confess I like both of them. They're tough in a way I appreciate. Each of them, for reasons of his own, wants this railroad so badly he is willing to give away a great deal to get it. You and I would like to find out why. But we are not going to try. We are going to leave that to Tracy."

Lineer sat up. "Go on," he said.

"I'm setting up a separate company," said Edwards. "Tracy has named it the El Paso and New Mexico. He will be

you were going to do this, didn't you?"

"Yes. I deliberately used you," Edwards admitted.

"Why?"

"I want them to know that Tracy has my complete support. I could tell them so, but it would not be the same. Now they will know that you two disagreed on the most fundamental issue here, and that I took Tracy's side."

"And why was that necessary?"

The older man's cigar glowed brightly for a moment. Then he took it from his mouth and rested his hands on his knees. He sat thus so long that the ash faded to a faint spark. At last he said softly, "Jim, I'm trying to be completely fair with three people—Tracy, my daughter and myself. And it's damned hard. Maybe I'm going too far. Maybe even I'm being unfair to myself as well as you. But this is the way it has to be."

"You don't tell a man much."

"No," agreed Edwards heavily. "You're a fair-minded man. But if you knew what I'm trying to do, your attitude would be colored one way or the other, whether you wished it or not. Take it as it is, Jim. Take it as just another job to do, forgetting the personalities. I say to you that you will never regret it."

"And if I cannot?"

"Then I will find another spot for you as good or better than this. I have no intention of losing you if I can help it. But I tell you frankly there is no other man in my organization fit for this job. And that is not because you know this valley, either."

Lineer said, "I don't understand."

"You are a man at peace with himself, Jim. And this job needs such a man."

"Perhaps I was," said Lineer dryly, "until tonight."

"You still are. I saw it in Sonora. I've watched you here. Men like you don't change much, thank God."

Lineer said suddenly, "Who is Tracy Thomason?"

"Who is he?"

"Yes. What's his background? Where did he come from? Your daughter said today she has known him all her life. If I'm going to work with him I want to know him too."

COLONEL EDWARDS delayed his answer a long moment. When finally he spoke an odd weariness again was in his voice: "Tracy's father was in the class ahead of me at West Point. We served together on the frontier. Tracy was a boy when his father was killed in the last Comanche uprising. His mother died a year later. I took him into my home and raised him."

"Why, then," said Lineer in surprise, "he's like a son."

"Yes," said the older man with a strange diffidence, "Tracy is like a son."

The silence fell again. Lineer found he was wishing that he could see the face of the man beside him. Too much was suggested here, and nothing explained. No man for forebodings, Lineer nevertheless felt the onrush of an old and cold and sealed-off passion working its way up through new fissures. He must live and work with this mystery. It would be best, then, that he make his own attitude as sharply clear as possible.

He said, "I learned to take orders before I learned to give them. But Tracy makes it hard for any man to take orders from him."

"Ahhh," cried Edwards. "You must not say that." He jumped to his feet.

Lineer rose too. "I'm sorry," he said. "There is no pleasure in saying it. But it is a fact I must reckon with."

"All right," said Edwards. "All right. Anything else?"

"Do I need to know anything about Molly Riordan?"

"Molly? Good Lord, no." Edwards' normally decisive voice returned. "Molly's father is my coachman. Her mother is our cook. Molly and Barbara

ation like that saloon fight the other night you must stand aside."

"You're way ahead of me," murmured Lineer. "Everyone but you has told me this railroad is going to be built. But I don't know it until you say it."

"That was settled before I left New York," said Edwards brusquely. He stopped short. When he continued, his voice held an odd urgency. "Be patient, Jim. I'm aware that I'm backing into this. Maybe it's a hell of a way to start a railroad. But I know exactly what I'm doing, and why. No one but me is making these decisions."

Lineer said, puzzled but relieved, "Fair enough."

"Now then. The deal Ware is offering on his coal is so good it's suspicious. Yet the engineers say the coal is there. What's in his mind?"

"At a guess," said Lineer, "it's the town. He raised White Oaks from a gulch camp. It belongs to him. He loves it the way a man loves his son. Maybe he figures the railroad will make the town."

"Not good," said Edwards. "Railroads and town pride seldom mix well. What does Jubal Nye want?"

president. His authority will be complete. So will his responsibility. I have made only one request of him: that he hire you as engineer in charge. And he wants you."

Lineer's fingers tightened around a rock. "How about water?" he asked.

Edwards repeated, "Tracy's authority will be complete." He continued in a different voice, "There is some argument on his side, you know. He is convinced he can get good water from really deep wells. He tells me that is backed up by Blake and Summers, the engineers he had with him. They are sound men. They point out that there are deep wells at El Paso and on the Jornada."

Lineer's fingers loosened on the rock. He held it in his open palm, rolling it there aimlessly, feeling that hot throb of anger in his blood stream, surrendering suddenly to it and hearing it crash and roar in his head. He flung his right arm back and then forward, and the rock hurtled into the darkness. He sat quite still then, hearing the tunk of the rock below.

He asked mildly, "When you committed me to the flume in the presence of Ware and Nye this afternoon, you knew

foul line pals

Footwork's half the battle with a tenpin. That's why seasoned bowlers go for the built-in arch supports that give them hours longer "tension-free" pin busting on sure-footed soles (for right or left-handed bowlers). Hyde-Crafted Good-year welt bowling shoes give you more accurate delivery on any foul line. (Smoke, brown, black, or white.) Ask your bowling proprietor or sporting goods dealer about Hyde-Crafted shoes for every sport or write direct for your catalog today.

grew up together right from the cradle. She is a wonderfully sweet girl. And she understands Barbara better than I do."

"One thing more. Will this railroad be finished come hell or high water?"

"The prospect of high water seems grossly improbable," said Edwards with a chuckle. "But this railroad is an important part of Great Western's plans for the future, all personal considerations aside. It will be finished."

"Then," said Lineer, "I'll leave you at the malpais tomorrow and head for El Paso. There are a good many things I can get started."

"Very well," Edwards agreed. "Talk it over with Tracy."

"As soon as Sonora is cleaned up I'll want two of your men there. Georgie Price for my second engineer. And a foreman named Tim McCarthy."

"They're yours," said Edwards. He added thoughtfully, "Tim McCarthy. Is that the man who whipped Tracy?"

"Yes. There's no feeling there now."

"Good," Edwards was quiet for a moment. Then he asked, "Any other reason why you want to leave the party so soon?"

"You saw what happened this afternoon."

"Yes. I guess you're right. Well, let's get to bed."

"I think I'll stay a while," said Lineer. "Good night, Jim."

BACK in the black night shadow of a juniper, Lineer lay watching the dim outline of Edwards' shoulders as he walked toward the fire.

Thoughts and questions crowded into Lineer's mind, and with them came doubts. He set himself against them stubbornly. He knew that on some lonely night when work had spent too much of his strength and a blackness of mood was upon him, he would look back to remember that a man had been promoted past him, and to curse himself for a weakling. But those were dark hours that came to all men, and perhaps less often to him than to those around him. Yes, he did live at peace with himself, although he had never thought of it that way. He had learned to accept the dictates of his judgment, and to avoid that barren pain that comes of roweling the soul with the reproaches of hindsight. The issue had been decided. The railroad would be built, and his hand would guide the construction. Gradually the doubts gave way against the coolness and the deep peace of the night.

The night's sounds penetrated to him one by one. The squeak overhead that was gone in an instant was a bat, racing its unerring way through the juniper crowns. The soft murmurs in the earth could be many things as he knew, for it was only the stranger to this inhospitable land who thought the little creatures of the earth could not exist here. Somewhere near the wagons below, a footstep came.

Then he heard Barbara Edwards' laugh and Tracy Thomason's strong voice. They were pacing toward him. He sat up and would have revealed himself, but at that moment he heard Thomason speak his name.

"That isn't so and I'm truly surprised at you, Tracy," he heard Barbara say. "You didn't act this way in New York."

"This isn't New York," said Thomason. There was exasperation in his tone, and something close to temper.

"Do you remember, Tracy, that you agreed with Dad we needed something like this together? It would give us a chance really to know each other."

They paused below Lineer. He lay still, resenting their presence, angry at them for this position they had put him in and yet admitting his curiosity.

"I'm learning about you all right," said Thomason. "I've learned that you will flirt with a man right before my eyes."

"If you're talking about Ed Ware," she

said, "that was a game that helped pass a long day. He and I knew it. You were the one who misunderstood. You were plain rude."

"All right, all right, I'm sorry," he said impatiently. "I'll apologize to Ware tomorrow. But that still doesn't excuse your running off with Lineer."

"Oh, Tracy," she said, "don't you see? I didn't really care about going. And he would have refused me if you hadn't interfered."

The uneven thrusting of a quick pride was in his reply. "Is that what you call it? We're going to be married. Is it interfering when I ask you not to do something?"

"No, Tracy," she said slowly. "But you must make it easier for me and for other people to do what you want."

"Easier?" he said bitterly. "I'm not unreasonable. Must I beg?"

"This isn't right," she said. "We mustn't stand here talking to each other like this. If we're going to—"

Her words were cut off suddenly as Thomason reached out and brought her to him roughly.

"Barbara! Barbara!" he said.

After a little while she pulled away. "I needed that, Tracy," she said softly. "Won't you remember to do it more often?"

"Every hour of every day."

There was a little silence before she spoke with a sober longing. "I wish we could marry now. I wish it very much."

"No," he said. His quick confidence, so strangely close to exaltation, was back in his voice. "We have made a bargain with your father. I'm more than ever convinced it is a good bargain."

When they were gone Lineer sought out his bedroll. He was tired. His mind was tranquil. He was asleep in a moment, a timeless moment in which green eyes that held a hot sweet passion turned to a cool turquoise and then faded slowly away to the darkness of oblivion.

WITH a last loud clang as of iron on iron, the caravan dropped through a cut and put the malpais behind it. Colonel Edwards looked back, searching north and south and not finding an end to this curse upon the land. It lay like some terrible river of dried and blackened blood, viscous, twisting, full of dark pits and fantastic, razor-edged little peaks.

He whistled. "Whew! I'd hate to build a railroad across that."

Lineer smiled. He felt the pleasant excitement of a home-coming. It was good to be back in the valley, to feel its remoteness from the world and its own secret kinship with sun and wind and wheeling night sky.

He pointed to rising ground a mile ahead. Beyond it Carrizo Peak, bare and brown, was quite near. "I leave you there," he said.

"Don't work too hard, Jim," said Tracy Thomason. "Leave some of it for me."

These three were riding in the last coach of the caravan so they could talk over the work Lineer would get under way. In the second coach young Ed Ware rode with Edwards' three financial associates. The two girls were in the lead coach with Wilse Ware and Jubal Nye.

Colonel Edwards raised a finger north toward the broken plains. "Can you get out of the valley to the north without topping a mountain range?"

"It's rough, dry country," Lineer said. "But no hard grades. And a natural route up to connect with one of those lines coming down across Kansas, if that's what is in your mind."

"So?" Edwards sat back, his eyes swinging up and down the valley, saying no more until the caravan stopped. They stepped out into the hard, bright sunshine. Up ahead the passengers were out of the coaches and stretching their legs. A Nye man was bringing up two horses for Lineer.

How to give TIRED EYES a quick rest

MAKE THIS SIMPLE TEST TODAY

Eyes tired? You can rest them quickly. Put two drops of safe, gentle Murine in each eye. Instantly your eyes will feel soothed, refreshed.

WHAT IS MURINE?
Murine is a safe, scientific blend of 7 important ingredients. It relieves discomfort of eye-fatigue immediately—makes you feel ready for work or play in just a few seconds. Gentle, soothing Murine helps thousands. Let it help you, too!

"I take it," said Edwards, "that we've entered the Ware domain."

"You're on a Ware ranch right now," said Lineer. "You'll stay on Ware land all the way to White Oaks. You'll sleep in a Ware hotel, eat food from a Ware general store, go to a Ware theater. Also you'll see a school and a church that Ware money built. He's proud of his town, and I guess he has a right to be."

"He's our man," said Thomason. "He'll be more useful to us than Jubal Nye."

Edwards squinted up toward the mountains to the northeast where White Oaks lay cradled in its high gulch. He turned back to the two younger men. And though he spoke to them both, his eyes were on Thomason. "If I had to go against either one," he said, "I'd hit the first blow and put every resource, every man and every dollar I had into it."

"Now, Colonel," laughed Thomason. "Don't go borrowing trouble for us."

Lineer mounted his horse, giving the small salute that was the custom of the country. "See you in El Paso," he said. He rode up the line of coaches, saying his farewells. He raised his hat to Barbara Edwards and she gave him a warm and friendly smile.

"I wish you weren't leaving us."

He smiled down at her, then raised his hand to Wilse Ware and Jubal Nye as he turned his horse away.

"Just a minute, Jim," said Ware.

He strode over, putting a hand on the cantle of Lineer's saddle, and walked beside the horse until they were a dozen yards from the group around the coach. Ware looked up then, his face affable.

"Jess Folsom has had his tongue-lashing," he said. "I'm sorry about the fight."

"Forget it, Wilse."

"Sure," said Ware. "You forget this one too, Jim. But you know this valley. You know me. I don't let my men take a licking from outsiders. I back 'em up, right or wrong."

He said it conversationally, with none of the friendliness gone from his tone. Yet the warning was there. And Lineer, looking down into his black eyes, thought that there was no reason for surprise. This was the nature of the man, and he hid his ways from no one. His world was all black and white, conquer or war endlessly, hunger or satiety. This was Wilson Ware the leader, ruthless and unforgiving with his enemies but loyal always to all who acknowledged his leadership in the valley.

Lineer let the silence run on, thinking of this and of the meaning of the warning. Ware could not take offense for the fight, for he was bound by the rules of hospitality and he observed them rigidly. Lineer had gone to the saloon as the guest of Ed Ware. No, the warning was meant for the future. Wilse Ware was telling him that none of the ways and rights of the Ware domain would be surrendered to this new force coming into the valley, however much Ware might want the railroad.

"All right, Wilse," Lineer said finally. "Let it cut both ways."

LINEER shrugged two months of office work from his shoulders and rode north beneath the July sun with Timothy McCarthy at his side. North by east out of El Paso, skirting the Organs. Then northward up the Tularosa Basin's burning emptiness. Northward toward the railroad survey to Tularosa and White Oaks. North toward the blinding white sands and north toward the black knives of the malpais.

Restlessness, and an odd eagerness, too, pushed Lineer. The restlessness he understood. It grew from two months chained to a desk back there in El Paso. Two months of paper work. Two months of labors to overcome the inertia of point zero, to force momentum into the construction of the railroad.

The eagerness puzzled him. There was no welcome for him or any man in this desert. It stretched away to its mountain barriers, lifeless, brooding, silent with its memories of old violence and its threat of violence to come. Yet the pull of it was upon him as always, and he shook it off now to bring his gaze to the man beside him. A lilt of humor lightened the remoteness of his gray eyes.

"Tim," he said, "you've been watching the ground for a mile. What the devil are you up to?"

Tim said elaborately, without looking up, "I'm lookin' for a horny toad and not findin' one. And if they can't live in this desert, how the hell do ye expect me to build ye a railroad across it?"

Lineer chuckled, then growled at him, "You'll build no railroads, toads or no toads. Georgie Price will build the railroad, and you'll sweat only from your strutting, you black Mick."

Big Tim's great laugh boomed out. Big Tim, whose right arm once smashed Tracy Thomason into unconsciousness with a single blow. A laughing giant of a man with blue eyes made deeper blue

by the bronze of his face, and a shock of ringleted hair black as midnight. This was Big Tim, up from Sonora with Georgie Price at Lineer's command. And little Georgie Price, the second engineer, had sworn mightily there in El Paso two days ago when Lineer threw the paper work at him.

Tim's laugh subsided. They let talk die again, riding with the slackness of deep weariness. The wheeling sun had drained its bounty of strength from men and horses. The need of water and night's coolness was a growing, insistent pulse through their bodies.

Presently Lineer raised his eyes to scan the distant mountain barriers.

"We'll sink our second well about here," he said.

Big Tim pursed chapped lips. He gazed about him at the harsh red hummocks, billowing and shimmering away endlessly in all directions. He looked at the low Jarillas, barren lumps erupting like great blisters of misshapen, molten earth from the desert floor.

"And if ye don't find water?" he asked. "Then," said Lineer, slowly, "there'll be hell to pay."

HIS eyes moved to the cool blue escarpment of the Sacramentos, towering above the heat distortion to the northeast. Sweet water gushed there from myriad springs. Water that could be flumed to the desert here. As he gazed he felt again a baffling sense of unreality surrounding the decision that denied him the flume, and he fought it down as he had so many times these last two months.

He shrugged then and turned his horse off the road, moving west into the mesquite.

"Tinker Well lies over here a mile," he explained. "A shallow well and short supply. Brackish but drinkable."

They came presently to a rise in the ground where they could see the gleam of the westering sun on an earthen tank of water. Beyond was a flat-roofed *choza* and, beyond that, the shapeless crisscross of holding corrals. A few lean cattle stood motionless in the mud of the tank overflow. This was Jubal Nye's water. The only water for twenty-five miles north or south, east or west.

They were two hundred yards from the tank, and tired horses were stretching and throwing their heads with thirst's sharp demands, when the rifle cracked.

They heard the passage of the bullet through the scrub at their close left. They saw in the next moment the bloom of black powder smoke from the hut's one paneless window. Beside Tim's horse a wand of ocotillo, gray and shriveled and cleanly severed by the bullet, slowly toppled. Tim's horse side-stepped nervously against Lineer's mount.

"Why, the blasted—" began Tim, and stopped. They sat their horses with suddenly tightened reins, not moving forward and not running, knowing that had been a warning shot. In this country a man would seldom miss at two hundred yards unless he intended to.

Lineer raised high in his stirrups then, sweeping his hat from his head so that the hidden rifleman could see his face. This was Jubal Nye's water. No enemy could be there.

The answer came instantly in the dark puff of a second shot, and before Lineer heard the report he felt a slight tug against his body and then the burn of pain along his left side.

"Down!" he shouted to Tim, throwing himself sideways from the saddle. He hit on his right shoulder and arm, feeling the sharp bite of mesquite on the back of his neck and grabbing quickly to recover lost reins. Through the legs of the horses he saw Tim tumble to the ground and roll to the safe slope of the nearest hummock. Tim's voice rose quickly, soothing the horse. The animal saw Lineer's horse standing quiet, and subsided.

"Lie still, Tim!" called Lineer. They

waited in the sudden, hot silence. The horses were exposed. If the rifleman wanted to kill the animals, nothing could be done to stop him. No shot came.

"We've got to lead our horses out of here," called Lineer now.

Tim rolled back, calling softly to his mount as he came. His hand found the reins.

Lineer rose slowly to his knees, keeping his head below the level of the mesquite, and threaded back through the hummocks. He kept going until he found a depression between hummocks deep enough to shield both horses and men.

Big Tim, coming up behind him, was laughing. "Jim, lad," he said, "ye didn't promise us fun with the work, but I'll not hold it against ye."

He saw the crimson on Lineer's shirt. His laugh died. "Now that skulkin' son of Satan—" He strode swiftly forward.

Lineer lifted the shirt. It was an ugly crimson streak along his side a hand's width below the armpit. A surface wound, not serious. But the bullet had passed just three inches from his heart.

Lineer knew then that the hidden marksman had tried to kill. He knew that shot had been fired in sudden anger when he lifted his hat and showed his face to the man there in the *choza*.

He stood with the raised shirt in his hand and his eyes on the bloody gash, slowly accepting the knowledge that someone in the Tularosa Valley hated or feared him enough to kill him. Not until then did he ask himself who had fired the shots.

He had been in the valley but once since Colonel Edwards had returned to New York. That once was a month ago, a quick trip to Tularosa. There had been no hint of trouble then. And Tracy Thomason had been in the valley most of the time, handling the cash grants from the towns and buying land for the railroad. Thomason had spoken no word of any conflict.

Yet here it was. Trouble at Jubal Nye's water. That meant that Wilse Ware was involved in some way. Had the truce been broken? If so, the railroad was beaten now before a rail was laid. No persuasion could induce workers to come into this basin if Wilse Ware and Jube Nye were at war again.

And in some mysterious and intensely personal way, the point of this violence was aimed directly at Jim Lineer.

WHEN the slow swelling of anger came then, it was directed not at the man in the *choza* but inward at himself. He had come back to the valley of his birth to build this railroad of his dreams. He had accepted conditions that tied his hands. Now he was going to pay the price for another man's ambition. A hard bleakness came into his face. Tim saw it. And Tim, with his memories of Sonora, was pleased.

Lineer dropped his shirt. He closed his eyes, bringing to his mind an image of the ground there before him at the moment the first shot was fired.

When he opened his eyes he said, "Those hummocks continue in close to the tank on the southeast. We can get within fifty yards of him."

Tim nodded.

"We've got to water the horses," Lineer continued. "We'll wait till dark."

He found his .45 in his saddle roll. Tim was rummaging for his own gun. Presently Tim raised his canteen and drained it.

"Now," he said with satisfaction, "with a dry ride ahead, there'll be no changing of the McCarthy mind."

They made their plan, talking back and forth with Tim posted at the crest of the hummock as lookout, then waited through the hot and breathless twilight. Lineer sat quietly debating as long shadows changed the shape of the desert without bringing coolness. They must have water tonight. He was confident

The question before the bar is...

which martini?

DRY MARTINI

1 part dry vermouth
2 parts Kinsey Gin
stir in cracked ice; strain,
serve with stuffed olive

PERFECT MARTINI

½ part dry vermouth
½ part sweet vermouth
2 parts Kinsey Gin
stir in cracked ice; strain,
serve with lemon peel

3 TO 1 MARTINI

1 part dry vermouth
3 parts Kinsey Gin
stir in cracked ice; strain,
serve with pearl onion

Let's face it: every martini-mixer thinks he has the best recipe in the world.

Confidentially, a good martini is a matter of taste. But whether you like 'em dry or sweet... with olive or without... with onion or lemon peel... you'll like 'em *better* with Kinsey Gin.

Kinsey, the *genial* gin... superbly smooth.
The *dry* gin... yes, dry as fine champagne.
And *94.4 proof*... brimming with flavor.

Maybe you're missing something by not trying a *new* martini recipe for a change. You're *certainly* missing something if you don't make your martinis with Kinsey Gin.

Try a smooth Kinsey martini... tonight!

KINSEY GIN

It's 94.4 PROOF
It's GENIAL
It's DRY

their plan would get them to the tank. Should they, afterward, go against the man in the *choza*? Assuming they could catch or kill him without wounds to themselves—and that was by no means certain—would such a course be wise?

Whatever new or old quarrel gripped his valley, there was a chance that it could be stopped. Killing the man would only aggravate it. Lineer turned troubled thoughts then to Colonel Edwards' strangely insistent demand: If war flamed between Ware and Nye, Lineer must stand aside. Thomason arranged the ruce. Thomason must enforce it.

The sky overhead was black when Lineer called softly, "Let's go."

Tim slid down from the hummock, took the reins of both horses, and followed Lineer. They came out presently at a point southeast of the tank. Beyond were the hummocks leveled away to flat ground right up to the mud flats of the tank. The black outline of the *choza* was faintly visible thirty yards beyond.

LEAVING Tim there, Lineer slipped away without a word. He was not counting on surprise. The rifleman knew they had not gone; he must at this moment be searching the night for them.

Lineer strode slowly and softly westward, hidden in the night's blackness. Presently the gray top log of a corral loomed directly before him. He slipped beneath it, turning toward the *choza*.

Now he lay at full length upon the ground and raised his pistol. Putting himself in the rifleman's place, he thought of what he would be doing at this moment. Staying close to the water. That was certain. But not in the hut. A man indoors could be trapped too easily, could be too limited in his horizon.

Lineer lifted his pistol higher than to the faint outline of the *choza's* roof. He fired, then rolled to his left. He came up on his elbows again, waiting. No bullet, no slightest stir, answered him.

He let what he judged to be a minute pass. He fired again at the roof, rolling hard to the right even as he fired.

Instantly flame spurted from the eastward corner of the roof. The bullet tumbled into the ground somewhere to Lineer's left as he rolled hard once more, inciting at the sudden pain when his hand scraped the hard earth.

He let a longer interval pass this time, working his body back slowly with bows and knees and moving leftward again. The dust stirred by his body in the oppressive stillness choked his lungs, and he fought down a cough. Two minutes. Three minutes. He fired and rolled, and again the rifle sought him out.

He came forward again, moving to his left front, so intent on the pattern of his movement that he was only dimly aware of fresh pain in scraped knees and elbows. He fired, rolling right.

This time the quick bark of three revolver shots answered him from the roof, flicking into the ground on both sides of him. So the man there had laid aside the rifle. If this enemy had fired all the shots of his pistol as well spaced as the three had been, one of them might have struck home.

Lineer moved steadily toward the corral fence to his right. How many minutes had passed? Eight? Ten? Tim could have had plenty of time.

Lineer slipped beneath the fence. He debated one more shot and decided against it, feeling now the deep bite of feariness and the pain of scraped skin and bruises that seemed to cover his whole body. He circled south of the tank. He paused to listen when suddenly Tim appeared at his side. For a big man, Tim could move very quietly.

"Both watered," whispered Tim. "Anteens full. Now we go after him."

"No," said Lineer. "Now we ride." They were back on the road, and swinging north, when Tim said, "And now, Jim lad, I'll ask ye why."

"Perhaps we could have killed him," said Lineer. "And perhaps one of us would have been killed in the doing of it. But that is not all the reason. We do no fighting we can prevent. Tracy Thomason keeps the peace in this valley."

"Ahhh, does he now? And would he be keeping the peace the way he did in Sonora? I'll be no friend to a man that makes ye turn away from a rascal that tried to kill ye. And by yere own word ye don't even know who the rascal might be."

"If there is fighting," repeated Lineer, "it's Thomason's business, not ours."

"Jim, lad," asked Tim in a troubled voice, "are ye still the man I worked for in Sonora?"

"I am, Tim."

"Then this much more I'll politely ask ye: If Thomason can't protect us, do we keep runnin'?"

"Thomason gets his chance. If he can't keep the peace, I will." . . .

The sun was again on their left cheeks when the tall cottonwoods of Tularosa rose out of the desert at the foot of the Sacramentos. They stopped at the end of the *acequia*, where its water marked the dramatic change from desert to green.

Their thirst satisfied, they moved into the red dust of Tularosa's streets. The dust was powder fine, yielding as a soft

carpet. Yet right beside it flowed the cold, clear waters of the *'cequia*, the sparkling life artery of this town. The yellow cottonwoods, close-planted along the canal, shaded the waters and gave to Tularosa a pleasant charm. Even the adobes, set back from the flowing stream, festooned with their strings of chili colorado, lost their harsh angularity in the soft splatter of light and tree shadow.

They stabled at Tyson's, just off the plaza. Lineer felt the need of a bath to cleanse the soreness and the aches from his body, but the mystery of last night pushed at his mind and would not let him wait. He left Tim to send their gear around to the hotel and stepped out on the street.

Molly Riordan was walking toward him. A basket swung under her arm. A blue sunbonnet covered her head against the desert sun and was drawn closely about her face. She walked hurriedly, watching her feet and casting little glances to both sides of her.

Lineer removed his hat and stepped in front of her. She saw his feet and legs first. When she raised her face he observed that her eyes were startled.

"Molly," he said, "you're looking uncommonly fine."

"The same to you, sir," she replied, showing her pleasure.

"Going anywhere in particular?"

"Just a bit of buying for Miss Barbara."

"Buy an extra bit and get me invited there for supper, will you?"

She laughed up at him, her blue eyes full of the merriment he remembered from the first time he ever saw her. "I will that. We're expecting Mr. Thomason too."

"How is Barbara?" he asked.

"Ah, you should see her," exclaimed Molly. "She and the help so busy the livelong day getting the house in order. Buying and planning and sewing—"

"Barbara sewing?"

She slanted a glance up at him, smiling yet reproachful. "Now don't you be getting ideas, Mr. Lineer. Miss Barbara can do anything she sets her mind to. She learned in a twinkling."

There was no mistaking the gentle reprimand in Molly's voice. It brought him again up against a confusing fact that he had wondered about idly during the days in El Paso: the close comradeship between this servant and the willful, capricious girl who was her mistress.

He spoke to her gently, "Molly, you were acting a moment ago as though you were afraid somebody was going to speak to you, perhaps hurt you. Why?"

She stared with quiet face down the street, past the last tree beside the *'cequia*, far out to where the white sands of the desert lay, hot and breathless and harshly a gleam.

"I am not afraid," she said. "Truly I'm not. But there is—something—out there. It's—I do not understand it, but there is sorrow in it."

"Sorrow?" He frowned down, puzzled. Then he chuckled. "Molly, you are Irish. You see it and feel it before you know it's there. And you're right. It's Pavlo Blanco."

"Pavlo Blanco?"

"The White Lady of the Sands. A Spanish legend of tragedy. Someday when the sands are blowing I'll tell it to you."

As he moved away a thought came to him and he turned back to ask, his eyes gay, "How is Harry Keck?"

The question caused Molly no embarrassment. "I have not seen him for many days," she said.

AT THAT moment Big Tim emerged from the stable. Lineer saw his eyes travel to Molly, and saw Molly's face lift and her gaze go forth to meet Tim. Tim was beside her in a quick stride, smiling down at her as Lineer spoke their names, and then Tim was saying, "Molly Riordan, is it? Jim, lad, ye spoke too little of this."

Lineer stayed but a minute more, and in that minute no word was spoken. Bold blue eyes looked into deep blue eyes, and all of the many things that were said were wordless. Lineer moved up the street. He looked back once, his face thoughtful with its wonderment, and saw Tim take the basket from Molly's arm.

Lineer entered the plaza and turned right. He tried the first door of a wide, one-story frame building, and found it locked. So Thomason was not here. This was the railroad's land office, used by both Thomason and Lineer when they were in Tularosa.

The shades were drawn next door, too, at the little private bank Ed Ware managed for his uncle.

He moved off the plaza and up the street, feeling as always the drowsing comfort of life beneath its big cottonwoods after the harshness of the desert. At the east edge of town he came to two large homes beside the *'cequia madre*. They were the only houses in all Tularosa built of stone and wood. They were the only houses that proclaimed their substance with a second story.

Old Jube Nye lived in the first. The second had been the home of Ed Ware until Wilse Ware offered it to Barbara Edwards. Now young Ware lived in the hotel on the plaza.

Lineer turned in at the first house, knocked, then opened the door when he heard Jube Nye's high, precise voice in-

vite him in. The old lawyer sat in his shirt sleeves in the living room that he used as an office. He rose slowly and painfully to his feet in his courteous way, his lined face showing his pleasure.

"Jim, boy. How's the empire builder?"

"Sun-scorched and dry as a visiting preacher," said Lincier. It felt good to drop on the worn leather sofa, stretch his legs and take the cool glass of lemonade from the hand of this man who had been his father's old friend. He hesitated, feeling the need of idle and uncomplicated talk, then said abruptly, "Somebody tried to kill me at Tinker Well yesterday."

Jubal Nye's face, trained by a half century of courtroom battles, shaped into an expression of courteous attention, not friendly, not hostile. "So?"

Lincier said, "Who was it?"

NYE let a minute pass. No slightest change showed in his face. But the very fact of his hesitation showed that a struggle was going on in his precise mind, and that it was no ordinary struggle. He said finally, "No."

"If there is trouble between you and Wilse Ware," Lincier persisted gently, "is it not the railroad's business?" He added dryly, "Perhaps not mine until the man at the well shoots straighter. But—Thomason's, say?"

The old lawyer nodded, faintly smiling. "I'll concede that, though Wilse Ware would not. If there is trouble."

"I'm moving a drilling rig up to the Jarillas soon," Lincier continued. "I'll have to borrow water from Tinker Well for the drilling crew."

Jubal Nye rose and paced the room. He opened the door and squinted out at the harsh sunlight, his spare and feeble body held stiffly straight by the iron spirit that guided his life. When he came back to Lincier he had made his decision.

"I've got Harry Keck staked out at that well," he said. "Wilse Ware is hunting him."

Lincier was silent, remembering the slim and handsome foreman whose quick pride had flared so dangerously that night at Steve's in San Antonio. So it was Harry Keck at the well. And Keck, holed up, would not let anybody of whom he was not sure approach the well.

"But Keck would not try to kill you," said Nye.

Lincier lifted his left arm, pointing to the bullet hole through his shirt. "Keck fired one safe warning shot," he said. "This was the second. It was fired after I raised my hat."

"At what distance?"

"Two hundred yards."

"Keck is one of the best shots in the country. He wouldn't miss at two hundred yards."

Lincier stirred irritably. He had sat a restless horse when that shot was fired. The best of riflemen could have been thrown off three inches. But that was not what disturbed him now. It was some memory of the man. Something that night at Steve's. Some unnatural light in the eyes of Keck when he braced Lincier after the fight. The man had a wild, hot pride. A pride that would brood and feed on itself, and flash out in time as an insane hate.

"Why," said Lincier with surprise and deep conviction, "the man is a killer."

Nye said sharply, "Do you think I could fight Wilse Ware with stable-boys?"

"Why is Ware hunting him?"

"The man was a fool," said Nye dryly. "Got in trouble at White Oaks over a poker game and a horse. Rode by night to get here. I sent him down to the choza to hole up until he hears from me."

"Is there a warrant out for him?"

"So I understand. Accuses him of stealing his own horse, as he tells it."

Lincier's voice was troubled, "What's being done to settle it?"

"It's settled," said Nye. "He's my man. He's minding his own business on my land. That's the end of it. Do you think he could ever get a fair trial up there before a Ware judge and jury?"

"I'm thinking of what it could lead to. Is there going to be bloodshed in this valley before we ever get a rail laid?"

"There is not. I'll go to any lengths to prevent it." A strange intensity came into Nye's voice. "Any lengths, do you understand?" After a moment he continued quietly, "But Wilse Ware boasts that he stands behind his men right or wrong. I'll do no less."

Lincier said, "Will you let Thomason mediate this?"

"Of course. I'll surrender Keck if Ware will agree to a trial in a neutral county."

Lincier rose, relieved. This could be stopped now without violence. He thought wryly that perhaps he was disobeying Colonel Edwards' strict injunction to stay at arm's length from this old quarrel.

"How are the deep wells coming?" asked Nye.

"The first one looks good," said Lincier. "The Jarilla well—" he shrugged. "Time will tell."

Nye asked in an absent voice, "Do you know that I own that watershed up in the Sacramentos?"

**ONLY BUICK
HAS ALL THESE
*Star Features***

AIRFOIL FENDERS — a sleek, car-length, tapering contour of distinctive beauty.

FIREBALL POWER — from valve-in-head straight-eight engines in two sizes.

ACCURITE CYLINDER BORING — smoothness from the start and an engine that "stays young."

SILENT ZONE BODY MOUNTINGS — scientifically placed for a firm and quiet ride.

FLITEWEIGHT PISTONS — for flashing action, swift response, reduced load on bearings.

BUICOIL SPRINGING — Buick-developed all-coil springing for perpetual smoothness and "panthergait" ride.

FULL-LENGTH TORQUE-TUBE DRIVE — protects moving parts, gives steadiness in traveling.

PERMI-FIRM STEERING — light but positive control with reduced need for adjustments.

BROADRIM WHEELS — for peak tire mileage, better car control, freedom from heel-over on curves.

STEPON PARKING BRAKE — sets with a touch, eliminates awkward hand set.

DEEPLUX SEAT CUSHIONS — giving comfort in all models, three-person on all seats.

CURL-AROUND BUMPERS — front and rear, originated by Buick to protect sheet metal. Built for bumper jack.

TEN SMART MODELS — in three series, touring Body by Fisher.

"LOOK," she said to us, politely but very firmly, "you are making me just a bit tired!"

"Tired?" we said, lifting a surprised brow. "You mean you don't find this Buick comfortable? That these big soft seats and gentle coil springing..."

"The seats are dreams of comfort," she interrupted, "and your all-coil springing, or whatever you call it, is everything you say it is and more.

"I mean you've just got the wrong slant on how *we women* look on this Buick!"

"Wrong slant?" We *were* astonished. "Why, its style—its smartness..."

"Fresh as a new bonnet," she quoted back at us. "And it surely does look like what cars will be in the future—I certainly hope.

"But do you think that's *all* we women are interested in? Don't you think *we* like power and steadiness and easy handling too?"

"You talk as though only a *man* likes to go zooming up a steep hill without having to shift all the time!

"You sound like you think a woman wants to be bounced around like a baby on his grandpa's knee because her car's too light to hold the road!

"To hear you talk, one might think we girls never park a car. Why, one of the things I like best about ours is the way I can slip it into a parking spot at the grocer's without wearing myself out tugging at the wheel.

"My point is a woman doesn't think about a car just as she does a new hat! *Of course* we want style—good style that will stay smart—like Buick's.

"But we like Buick because it *does* things for us.

"Because it's big and powerful and roomy and steady without being truck-heavy to handle. Because it holds the road and answers the wheel and stops quick and makes us feel safe and sure of ourselves when we drive!

"That's what *I* like about our Buick—and I'll bet lots of other women do too!"

To all of which we can say—the lady seems to have something. In fact—she makes a pretty good case, it seems to us, for your seeing your Buick dealer right now—and getting your order in.

Surely, you can't go wrong settling on a car that so completely sells itself to both sides of the family!

BLENDED SCOTS WHISKY 86.8 PROOF • RENFIELD IMPORTERS, LTD., NEW YORK

"No," said Lineer in surprise. "You didn't own it when I was up there last year running a flume line."

The old lawyer chuckled. "There isn't much goes on in this end of the valley that doesn't reach me. I knew you were up there and I knew what you were doing. After you left for Sonora I bought up the whole watershed."

Lineer asked curiously, "Why?"

"So that nobody could hold you up on price if you came back to build us a railroad. It's yours at what I paid for it—your deep wells don't come in."

Lineer's curiosity was strong and direct now. He said, "I don't understand you."

Jubal Nye's faded eyes searched Lineer's face slowly as though he were asking himself how much this younger man could understand.

Presently he said in his quiet, precise voice, "I know what I am. I'm a stubborn old man ruling half of a country that I have no right to rule. A country that should be ruling itself, but can't because Wilse Ware and I have never given it a chance. If Wilse Ware should die tomorrow, I would deed everything I own back to the Territory, then lie down and die too."

He paused. When he resumed there

of his cheekbones. She saw the scar slanting across his forehead, slashing a white line through his left eyebrow.

She saw the boldness go out of his eyes and wonder come into them. She looked down at the basket under her arm and she looked at an aged Mescalero Apache asleep against a cottonwood bole and she looked at Lineer striding up the street, and she knew that nothing really had changed.

Then she looked up again and his blue eyes still were on her, and she knew the whole world had changed.

Yet it was she, and not Tim, who set the world in motion again. She spoke to him, lapsing for the first time since childhood into the soft speech way of her father and never knowing it, "If ye'll take the basket, Mr. McCarthy, we'll be going now."

Tim's great hand at her elbow guided her up the street, and ever afterward Molly remembered the sensation of floating beneath the cottonwoods. Floating up and up in the bold blue and the merry blue of their own unbelieving eyes, floating on and on beneath the bright blue of the desert sky.

And when they reached the door of the big house beside the *cequia madre* a terrible thought came to Tim and he said

filled with a faint excitement. She had tanned evenly, defying the dryness that ruined most women's complexions in this driest of climates. It was a small thing, but it pointed up the surprising adaptability that this girl seemed to possess. Yet he thought that her green eyes held back something, and it set him to wondering.

She was inspecting him too, seeing the red dust that caked his clothes and the deeper stain of blood on his shirt. She said critically, "You could make yourself more presentable."

SHE led him to the back porch, filling a basin for him. He waited a moment, and when she showed no intention of leaving he stripped off his shirt. The cool water felt good on his face and his head and his forearms. He splashed noisily and contentedly with a man's fine disregard for the mess he was making. Yet he was conscious of her eyes making an unabashed examination of him.

Not until she handed him a towel did she point to the angry streak along his side with inquiring eyes.

He delayed his answer, thinking of Jubal Nye's disbelief. Nye was keeping Keck at the well, sending him word to let the drillers use the water. To insist now that Keck had tried to kill him could only cause more trouble.

"A warning shot that came too close," he said. He sketched part of the events at Tinker Well. As he did so it occurred suddenly to him that he had no doubts whatever of this girl's discreetness.

"Keck came here often to see Molly," she said thoughtfully. "I don't think Molly encouraged him, but he was very insistent." She added then, "Keep your shirt off a minute."

Barbara poured fresh water and wet a clean cloth. She stepped to him, and began washing the dried blood below the wound.

She smiled innocently up at him. The touch of her cool fingers and the nearness of her stirred a sharp awareness in his blood. He thought with sudden shock that here was the cause of the eagerness that held him on the road yesterday. Then he told himself that the intimate nearness of any pretty woman would have stirred this response in him. A wry conviction that this was deliberate came to him. This was her talent for dangerous mischief at play. Two months in the desert had not subdued it.

He said quizzically, "How is Tracy?"

She stepped back, glancing obliquely at his face. "Fine. He should be here soon. He went to White Oaks to see Wilse Ware—about a sawmill."

He was putting on his shirt when she seemed to complete some thought, for she said, "You know, Tracy is a strong and clever fighter. My father used to bring professionals up to our place on the river in the summer when he was having stag parties, and Tracy would fight them and beat them. I was only twelve the first time, and Tracy was just out of college. I peeked through a hedge to see the fight. Tracy was wonderful."

Lineer regarded her curiously. "What made you think of that?"

"Oh, I don't know. Just that you are about of a size."

"Were you two together much as children?" he asked.

She shook her head. "He was always away at school when I was small. Then later Dad sent him out on railroad jobs. I worshiped him from afar until he discovered me last winter."

She was smiling again as she continued, "Dad writes that he may come out again in the autumn. I think Tracy and I will marry then."

"That's good," he said.

She asked abruptly, "You and Tracy

"Let's just urge the people to buy it because we need the money"

COLLIER'S

HERB WILLIAMS

as a rising ring in his tone: "I've done more than one man's share for this country. I've fought Apaches and I've fought evil men. I've fought the sun and I've fought the desert. But I've also done more than one man's share of harm to this country. I've kept God-fearing, gentle people out of this valley because they know Wilse Ware and I have ruled with violence and may again." His voice dropped away to its old level precision. "A railroad will change everything. A railroad means stability. A railroad means new people. New farms in the foothills, new towns with churches in them. That's why I want this railroad more than anything I ever wanted in my life. That's why I'm going to stay alive until it is built."

THIS was the way of it with Molly Riordan and Timothy McCarthy, standing there on the plaza publica of Pularosa, standing beside the singing bow of the *cequia*, standing beneath the apple shade of the old cottonwoods as Lineer walked up the street, pausing once to look back in wonderment.

Molly stared wordlessly up at Tim, smiling because all power had left her. She saw the black ringlets that curled about his ears. She saw the strong, white teeth of him, and the laughter and the imper of him that lay upon his lips. She saw the deep burn of sun at the outthrust

fiercely, "Molly, there is no other man to answer to?"

"No, Tim," she said. "There is no other man."

That was the way of it with Timothy McCarthy and Molly Riordan, then and forever. Barbara Edwards was the first to know it. She saw it in Molly's radiant smile, and it made her look wonderingly at Big Tim. Without saying a word she slipped to Molly's side and embraced her.

And Lineer, arriving later from Jubal Nye's next door, saw it too. With the deep insight that was part of his nature he understood that these two, Molly and Tim, were this day chosen to dwell on that distant peak where the happiness of a man and a woman is sublime and their sorrow, if sorrow comes, is a dark and intolerable grief. And then he thought of little Georgie Price, who had been Tim's inseparable companion over half a continent, and he murmured, "Poor Georgie."

Tim and Molly had wandered to the big garden behind the house. Now Lineer was smiling down at Barbara, observing the complete graciousness of this girl in her role of mistress of the house. It was a side of her that he should have expected, considering her background, yet it seemed somehow inconsistent with the turbulent girl of two months ago.

Her face was pleased and friendly and

 Collier's to

"We haven't seen much of each other," said Lineer. "He's been here in the valley dealing with people. I've been in El Paso handling materials and engineering details."

She regarded him soberly, meeting his eyes. "That is not an answer," she said. "But then, I know now that you and Tracy could never be close friends."

"We have made a good start," said Lineer. "I have no complaints."

THEY were back in the living room when Tracy Thomason burst through the front door with a gay shout.

"Barbara!" he cried, seizing her in his arms. He lifted her, laughing, and whirled her. "Jim! The first well is in! Twenty-eight thousand gallons in the first test run. And moderately soft water!"

He set Barbara down, continuing exuberantly, "A messenger caught me down the street with the news. The miller is all ready to move the rig up for the Jarilla well."

Barbara kissed him warmly, then pulled away with a little laugh. Lineer said, "Congratulations, Tracy."

Thomason dropped his arms, not trying to pull Barbara back to him though he stood expectantly. He gave Lineer a brief, almost quizzical stare, searching for some overtone in Lineer's congratulations and not finding it. The glint of triumph made sharp bright points in the gleam of his gray eyes. The faint wrinkles on his forehead sank beneath the flush of his face. He strode once the length of the room, the deep drive and vitality of him reaching out to conquer.

"We're away, Jim!" he exclaimed. "Get your gangs organized. Get that first shipment of steel out here. We're going to start laying rails!" He paused in his riding to slap a fist into his palm, then continued with his strong laugh, "I had a hunch it would be this good. I just bought another sawmill from Wilse here. I'll have so many timbers and possibilities coming down to you they'll be ringing out your ears, Jim!"

Lineer said, "What about the Jarilla well?"

Thomason swung about challengingly. "What about it?"

Lineer said carefully, "I don't want to lay any rails until that well comes in. If we start construction we can't stop without losing a lot of money."

"And waiting will lose us another month," snapped Thomason. "Maybe two."

Lineer shrugged. "If we've reached that desert and the Jarilla well fails, we'll all suffer. Maybe lose some men."

"It won't fail!" Thomason said. "The water's there."

Lineer started to speak and changed his mind. He saw Barbara was watching Thomason, her face intent. Thomason strode to Lineer, his long jaw set, the sharp flare of anger in his eyes. He overreached Lineer with his greater height and he used it, seeming with the taut readiness of his body to thrust against Lineer, as though he could drive and push and beat Lineer down without touching him.

"The water's there," he repeated. "And if it isn't, we'll drive on through without it!"

Again Lineer was silent, and Thomason took the silence for opposition. The very wordlessness of it seemed to infuriate him.

"We'll force our way across," he barked. "If you're not man enough to do it, say so now."

"Tracy!" exclaimed Barbara.

He swung to her. "Keep out of this, Barbara. Lineer has been fighting against me on these wells since the first day. He wants them to fail so he can build his damned flume. Now he'll take orders or get out!"

"I'll take no orders from ye, and could be I'll give ye one if ye keep crowdin' a better man than ye'll ever be."

None of them had heard Big Tim come to the living-room door from the back of the house. He stood there now, poised and grinning but with a dark flame of wrath dancing in his eyes. Behind his shoulder stood Molly, startled and afraid.

Thomason stared for a moment in astonishment, then leaped toward Tim. "Get out of here, you black devil!"

Tim strode forward to meet him, then stopped suddenly. For Barbara Edwards stood in front of Thomason, her arms stiff at her sides but her eyes flashing.

"You'll order no one from my house, Tracy Thomason," she said coldly.

Thomason teetered then on the edge of blind fury, an entirely senseless rage that filmed his pale eyes. And Lineer, moving in swift strides to Big Tim's side, saw in those eyes the struggle between a temper that could tolerate no opposition and an ambition that drove this man relentlessly.

A long minute passed before Thomason's shoulders came down. He breathed like a spent runner. "I'm sorry," he said. He spoke only to Barbara. "I'm sorry," he said again. He met her eyes until she smiled, and then he smiled. He raised his head, looking over her.

"Hello, Tim," he said pleasantly.

Tim grinned. "And wan hello to ye, sor," he said.

Thomason reached out his hand to Lineer. "Forgive me, Jim. I know you weren't trying to rowel me. It's just that"—he smiled boyishly, and all of the charm of the man was back on his face—"it's just that this railroad means so damned much to me. And sometimes I forget how much it means to you too."

"All right, Tracy," said Lineer. "Let us understand each other clearly. It's my job to point out to you the risks we'll run. It's yours to make the decisions. You have gone against my judgment. I'm still with you. If that well fails we've got fifty miles of desert to cross. At the halfway point we'll be twenty-five miles from water. I'll cross it. But when I get across, we'll still need sweet water for engine boilers."

"The water is there," Thomason said once more. That unpredictable bubbling of exuberance was shaping his face again. He had triumphed. The march of rails would begin now. The deep, deep pleasure of command, of obedience exacted, made him altogether charming, altogether handsome. And if he had lost anything in victory, he did not know it. "By the time you reach the Jarillas, I'll have so much water I'll be floating cross-ties down to you."

HE SWUNG his long right arm around Barbara's waist. She hesitated, stiffening for one brief moment, then relaxed against him.

Smiling up, she said, "I'm proud of you, Tracy."

He said gaily, "Thank you, darling."

"I know it was no easy thing for you to apologize," she said.

Lineer observed the shadow of scornful half anger cross Thomason's face and he knew that Thomason had misunderstood, that Thomason had thought she was proud of his triumph over Lineer and the flume. The thought came to Lineer then that the struggle of wills which would shape the marriage of these two was not yet ended.

He said, "Tracy, there is trouble between Ware and Nye. Not serious yet. But it could be."

"Now what?"

"Jube Nye has a man in hiding. Ware is supposed to be looking for him. I've talked to Nye. He's willing for you to mediate."

"I'll see Nye in the morning," Thomason promised.

"Good. And Ware?"

"I've got to be back in White Oaks the latter part of next week," said Thomason carelessly. "I'll see Wilse then."

Lineer frowned. Thomason said briskly, "Stop worrying, Jim. They gave me their word."

Lineer and Tim were leaving for the hotel when Barbara told them, "Our new furnishings should be here in two or three weeks. We're planning a housewarming. Molly and I expect you two. And we'll accept no excuses."

She stood in the yellow light of the door, watching them go. They had reached the street before she turned back in, her eyes filled with a restless doubt.

(To be continued next week)

The phenomenon shown here through the window of a TWA Constellation is what meteorologists call a "glory." It appears when the shadow of a high-flying plane is projected against a cloud of minute liquid droplets fairly uniform in size.

Glory of the High Way

Over the TWA high way, you wing past sights unknown on earth—at speeds many times as swift as the fastest surface transportation—between this nation's principal cities or those overseas. Yet however much you marvel at such miracles of flight, we aim to please you, too, with everything we do to make each trip a completely joyous journey. With trans world seasoned airmanship. With hostesses to whom your comfort is a career. And with the courteous cooperation of those of us you deal with on the ground. For such things are what make flying the way to travel and TWA the way to fly—on the only airline that operates top-speed Constellations coast to coast.

INDONESIA—PROBLEM CHILD OF U.N.

Continued from page 21

control room Indonesian technicians sat, and from it, with great casualness, a young woman strolled from time to time to announce the next number.

"Ought to be a news program after 5, usually," said Johnny, grinning. "But today's Sunday. Of course you think that, because there's a crisis on, the government news agency would be hot on the story—but they never work on Sunday. The girls will probably sing some extra songs to fill in, unless someone's warmed over yesterday's news or some from the air."

"Informal, aren't we?" he asked, chuckling. "But it works. Like the public."

The Dutch, however, were not so optimistic. Shortly before hostilities began, I visited "the front." I talked with several of the Dutch G.I.s at one outpost and they all had the same line as the red-haired, freckle-faced lieutenant, twenty-three-year-old Johan van Hoogstraten of Utrecht. The lieutenant didn't like being in Java. But he was resigned to the fact, like many of his men, he was a volunteer.

"Many of you Americans had three or four years overseas," he said. "Now we must do our part. It is necessary because without the Indies Holland could not exist. Nor the Indies without us—they don't have enough doctors, lawyers, economists, financiers, enough educated men, to run the country alone."

Keeping an army 9,900 miles away from home is costing Holland over a million gold dollars a day, and meantime nobody is getting anything out of the Indies. The quicker we settle things the better for all—otherwise I'll have to spend another two or three years out here."

Lieutenant van Hoogstraten, and all the others I talked with, were anxious to then to shoot it out with the Republicans and have it over with. Most of the natives, they argued, wanted the Dutch back. There were only a few troublemakers and extremists on the other side of the line, and the Dutch army, if only properly ordered to, could quickly clean them up and restore law and order. The

natives would get self-rule under the Netherlands Union, Holland's interests (two thirds of foreign investments totaling a billion and a half dollars, and a whopping share of the trade) would be protected, and everybody would be happy. Better to do it by peaceful agreement, of course, but . . .

No one, therefore, was very much surprised when the "war" broke out. It was the natural culmination of a two-year stalemate which began August 17, 1945, two days after the Japanese capitulation, when the Republic of Indonesia was proclaimed. The proclaimer was Sukarno, now president of the republic.

Six weeks ensued before any Allied troops reached Java. By the time the British landed at Batavia, the republic was a tumultuous, revolutionary force.

Makes Plans to Negotiate

The Allied commander, Lieutenant General Sir Philip Christison, incurred the eternal wrath of colonial die-hards by announcing that his forces were not coming to restore the *status quo ante* but only to disarm and remove the Japanese and to rescue Allied prisoners of war. He promptly proceeded to negotiate with the Republicans, including one fanatical antiwhite group which was already busy looting, raping, and murdering the defenseless men, women and children in the remoter prisoner-of-war camps.

That, say some of the embittered colonial Dutch, was the first recognition of the Republic. And the one that counted.

But the British did help to negotiate a truce between the Dutch and the Indonesians.

It was initiated by both sides last October. And in March the Dutch and Republican negotiators signed the Linggadjati Pact: The Republic was given *de facto* recognition by the Netherlands, and they were going to work together to establish an interim government that would, by January 1, 1949, convert all the islands of the East Indies into a brave new United States of Indonesia. Sovereign, run by the Indonesians—but as an

You can see your tomorrow today with the new *Analagraph*

COLLIER'S

REMEMBER - I'M NOT FIREPROOF!

TWO THOUSAND CHILDREN—UNDER 5—WERE BURNED TO DEATH LAST YEAR! Many more will carry the disfiguring scars of fire through life.

Shock has followed shock over the nation—as one horrible fire disaster has followed another. And the rate of death and destruction continues to rise.

Can anything be done to stop it? The President of the United States thinks so. He has marshalled the nation's leading fire safety experts in an all-out war against this serious menace to our national well-being and economy.

Responsibility for improved laws and building codes, fire prevention education, modernized fire-fighting services, building

regulations, must be accepted by highest state and municipal officials.

The action and support must come from every citizen in local communities—from you, whose lives and welfare are in danger.

Remember—fire strikes with the force of

war. It must be feared and dealt with as a enemy with the power to kill and destroy.

★ — ★ — ★

TAKE THIS ACTION NOW! To help you protect yourself and your community, write today for a free copy of "The Action Program." Address: The President's Conference on Fire Prevention, Washington, D. C.

"**S**AFETY from fire should not be a topic for discussion one or two weeks of the year. It is definitely a year-round public responsibility. We in the Federal Government can give aid within the framework of existing agencies. The impetus must come from the states and from every community and every individual in the land."

Harry Truman

This statement is one of a series published by the member companies of The National Board of Fire Underwriters in support of The President's Conference on Fire Prevention.

equal partner, a member of the Netherlands Union of Holland, Indonesia, Surinam and Curaçao, all under the crown of good Queen Wilhelmina.

But there were a lot of jokers in this fancy package and the formal signing included an agreement to disagree. Both sides said, in effect, "Okay, you have your interpretation, and I have mine, but let's sign anyway, and then we can negotiate."

The negotiations began almost immediately, but they produced little more tangible than recurrent crises.

Late in May the Dutch negotiators, the Commission General, sent the Republic a virtual ultimatum, detailing the "final" Netherlands demands for prompt implementation of the Linggadjati Pact. The Indonesian reply was far from satisfactory to the Dutch.

A Willingness to Compromise

At this crucial point Sutan Sjahrir, then the Republican premier and now Indonesian envoy to the U.N., took to the radio to backtrack on an important Republican point: They would accept the sovereignty of the Netherlands crown over the interim government. And they were prepared to modify some Republican counterdemands, notably the demand for an immediate foreign service for the Republic even before the interim government was established.

Sjahrir's willingness to compromise cost him the premiership. In July, after six days of Republican wrangling, he was succeeded by a fellow socialist, Dr. Amir Sjarifudin, a Holland-educated Christian.

Dr. Sjarifudin agreed that it might have been possible to compromise on most of the Dutch demands. But there was one, he said, on which no compromise was possible: the idea of a joint gendarmerie or police force, half Dutch, half Indonesian.

"Not one of us could sell that idea to our people," he said. "To them it would look too much like the return of the Dutch on the old terms of colonial masters, and they would not stand for it. For nearly two years they have had their own police force, their own army, and for some five years millions of them have not seen a Dutchman. It would not work." It was on this issue that negotiations finally broke down and the war began.

I had left Java and was in India when hostilities began. I was standing beside Pandit Nehru, when, in a voice surcharged with anger, he extemporaneously denounced the Dutch and made his famous declaration that any European army on Asian soil was an insult to all of Asia.

A wave of anger flared across India. Newspapers campaigned for immediate armed aid for the Indonesians—a step which Nehru of course decried, since he was seeking settlement by the United Nations.

No such warlike sentiments were reflected by the Chinese, however. Indonesian bands were again massacring Chinese merchants and moneylenders in Java, as they did last year.

While the "war" was still official, I flew from India back to Java. As our old C-47 soared lazily westward across the Indonesian island, smoke billowed from dozens of points below us. Hardly 15 miles from Dutch-held Surabaya, the Republicans were putting the torch to villages and fields near the old demarcation lines set by the truce last October. "But only a few," pointed out tall, blond young naval Lieutenant Carel van Hoogstraten. "Farther inland, as you see, all is quiet. There are no fires until you reach the next lines near Dutch positions."

"Now as I was saying," he continued, "the way we took Probolinggo was like this. Sunday at 9 A.M. two destroyers

shelled the beaches eighty miles east of Probolinggo for ten minutes. Then two battalions of U.S.-trained Marines landed on the beaches. There was no opposition except a few sniper shots from inland. The Marines fanned out, and advance elements raced toward the city in armored cars and Bren gun carriers. There are seventeen bridges on the highway, but the Marines moved so rapidly and so surprised the Republicans that not a single bridge was blown up despite the fact that all were planted with aerial bombs. Late in the day the Marines paused near Probolinggo. They waited overnight, then entered the city, from which the Republican troops had withdrawn. There were a few snipers, a few houses destroyed by the Republicans, a few casualties—that's all there was to it."

Our unarmed plane hugged the coast line frequently as it covered hundreds of miles of Java, which was already split into four sections by Dutch thrusts. The lieutenant was right about the fires, and his Probolinggo story was fairly typical of the fortnight's war.

The common people have been the biggest losers during the two years since the Republic was proclaimed. One of the villages I visited was Kampong, where only six of 72 Indonesians were left alive after a mysterious plague had struck months earlier. The sole male survivor was the headman's chubby, fezzed son, Adom, who had lost his wife and his mother as well. He said the plague lasted five weeks, killing most of its victims in two to five days. He added that the Republican authorities had been unable to send doctors and medicine (the partial result possibly of the Dutch naval blockade, though the Dutch claim the Republicans ignored proffered medical supplies).

Other Javanese villages were a checkerboard pattern of plenty and poverty, with thousands of Indonesians visibly suffering from malnutrition, scabies, scurvy. Nearly all were clad in rags.

In rice-rich Sukabumi itself I visited a government orphanage in an old Japanese open-air barracks, where 185 forlorn, gaping tots with swollen stomachs, stick-thin arms and legs and old-man faces showed the effects of semistarvation, even though the Red Cross was then feeding them adequately. Indonesian caretakers, who had continued under the Dutch, said the Republic was unable to allow more than two cents a day per child, whereas sufficient food would cost six. But most other Sukabumians looked well-fed indeed.

Ways of Winning Friends

In Sukabumi, the Republicans recently kidnaped the Indonesian burgomaster who had remained on under the Dutch. Similar kidnappings doubtless awaited other "collaborators," and the Dutch would certainly retaliate. Meantime their propaganda tactics of rushing in food, medicine and UNRRA clothing (they distributed 35,000 units here) were certainly winning friends.

The war officially ended August 4th, but actually continued for weeks much as it had since the truce signed last October, with numerous clashes, mining of roads and sniping—only it spread over far larger areas. Both sides angrily listed violations of the cease-fire order—and just as angrily denied the charges.

The Dutch action has hopelessly alienated Republican leaders, who denounced the Linggadjati Pact and demanded complete immediate sovereignty. The old story of negotiate and stalemate was repeated all over again. Meanwhile, men like Johnny Senduk were distrustful of the Dutch. "I have been free too long," he told me, "to want to go back to the way things were before the war."

FASHION AT YOUR PRICE

BY RUTH CARSON

76

NO MAN who has ever complained about his wife's dress bills will believe it, but 80 per cent of the dresses women buy cost under \$20. Only rarely (a scant 5 per cent of the time) do we pay over \$25. That's today. Before the war, our big top was a mere \$15 for the mass-produced dress which has helped to make the American woman the best dressed in the world.

This low-cost number doesn't pretend to set the styles. Higher priced dresses, created by big-name designers, can do that. They can earn their price by being fashion leaders, and by providing such individual and costly detail as no budget dress could afford. But the budget numbers put over the show like a lively and well-trained chorus. They don't play second-fashion fiddle, either, on any major fashion points. Latest styles may start at \$100, but they hit \$10.95 so fast you hardly see them whiz by.

Mass production is the great fashion leveler. But though factories turn out dresses by the tens of thousands every day, their product is actually made to your order—in style, in fit, in price.

It takes its fashion cues from higher up the price line, and it employs some of the highest priced design talent in the world. (The famous Madame Lyolene of Paris is contributor to a Kansas City house-dress concern. The ex-Mrs. Leo Durocher designs fast-selling junior numbers for a St. Louis firm. The names of most designers aren't familiar to the public, trade names or firm names being played up instead.)

Chiefly, these designers pay attention to what you think. If that front-bow dress was a best seller last season, it will head the line this season. There will also be half a dozen variations of it—plain, print, short sleeves, long sleeves, button all the way down, button halfway down.

Such a dress can run for years, selling into the hundreds of thousands. It will vary from season to season, depending on the current fashion in hemlines and the like, and it may have new detail tricks, garnered from everywhere. Designers spare no travel expense, ranging through South America, tripping to Paris for ideas. But what they get in Paris—some lovely flower buttons and fabric print designs, perhaps—will be only a plus for the dresses you like. What you think comes first—that's where the sure sales lie.

To help along the personal appeal, many of these dresses bear trade names like Kay Dunhill, Martha Manning and such, creating the cozy feeling that What's-her-name has worked out this little garment especially for you. Each does, in fact, stand for a type—sports, dressy, cute, tailored and what-are-you? Women have developed their personal pets in trade-name dresses to the point that department stores find it increasingly profitable to have special departments featuring them.

Most of these trade-name characters are purely fictional, but a few have their counterparts in real life. One is Henry Rosenfeld, the current glamor boy of the department-store ad writers.

Starting his own business during the war, in 1942, he boosted it to a \$13,000,000 gross last year, talks breezily of \$100,000,000 within five years. Rumors of his falling flat on his face instead have called forth full-page statements of account in trade papers, directed at his competitors. He makes

California sport clothes in an ex-aircraft plant in California, misses' and junior clothes in New York, cutting them in his own workrooms and farming them out for finishing to twenty-two factories, scattered from Rhode Island to New Jersey.

His new showrooms lay on the swank so thick you're astonished, in a place where economy is supposed to be the keynote. In a round, yellow-draped room, you may view cosmetic samples, just another Rosenfeld extra on which he did a million-dollar business the first year. Like his clothes, they are nifty for what you pay.

Another trade-name character who is real is Nelly Don, short for Nell Donnelly, who was probably the first to mass-produce women's dresses. It was wartime when Nell Donnelly, a bride with a young husband liable to calling up, looked around for a job to do herself. This was not the day of lady riveters. It was 1917. Woman's place was still in the home. Working around the house, she could wear either a homemade dress or a sacklike number bought at the dry-goods store; practical, maybe, but hardly pretty.

So Nell Donnelly had an idea which also became her fortune. She would make house dresses. They would be in the fashion of the day, and they would fit—two unheard-of ideas. Heretofore, ready-made dresses, the few available, came medium, large and extra large. No one ever made a small one. "Of course," conceded Nell, "when you make a poorly fitted dress it has to be big, to allow for adjustment."

Selling Her First Order

She ran up two chambray and gingham samples of what she proposed, in the current empire mode, pink and blue, and took them downtown to a department-store buyer who promptly ordered ten dozen of one, eight dozen of the other. In a month, with the help of two women sewers at home, Nell delivered the goods. They sold at once.

"I got to making two dozen a day," she says. "Now our factory turns out almost that many a minute."

Sizing, which was such a revolutionary idea when Nell Donnelly (now Mrs. James A. Reed) started out, has now gotten down to so many fine points it's confusing. Though dresses at any price are built to size, the lower the price, the finer the lines, apparently. There are women's, misses, juniors, teens, briefs, half sizes and probably some more we don't remember. Among them they do a miraculous job of fitting all the assorted shapes and sizes in which the American female comes. The obvious differences of girth and height aren't all. It matters also whether you're long- or short-waisted, long- or short-legged, and whether you do or don't have a roll around your middle.

Designers consider everything. "This isn't a matter of fashion," one of them told us, "it's science. What looks well on a junior figure doesn't look well on half sizes. If we designed cute, full-skirted numbers for fat women, we'd be out of business."

What are half sizes?

"They started as cute juniors," she says, "but then spread out instead of growing tall. Half sizes, however, are not stylish stouts. They're the average woman. She is five feet four inches or under."

The big appeal of these dresses is, of course, their low cost. Keeping the price down while production costs

Collier's for September 27, 1947

If she weren't in such a hurry, this girl could pose to show you that her skirt is long enough to be in the current fashion; yet it doesn't hide too much—as you can see. Her two-piece dress of rayon gabardine is practical and pretty for travel, costs about \$13

mount is a job of maneuvering. During the war shoddy materials were used, for lack of anything else. Now good materials are available, and you are getting choosier. So, what to do when forty-one-cent rayons, for example, have shot to \$1.40 a yard, and cottons and woollens are also hitting the upward trail?

Some manufacturers, making dresses at three price levels, have cut out their lowest price line. Most are ready to shave profits before they raise prices, and not for reasons of altruism. "We'd be priced right out of the budget departments," one wholesaler pointed out to us. "We'd have to sell a whole new set of store buyers, meet competition from a whole new set of wholesalers."

The lower the price, the more important the assembly-line production. Electric cutting tools carve out the dress parts, up to 2,500 at a whack. Thirty women may work on one dress. "When you do nothing but put in sleeves," they point out, "you learn to do it well and in a hurry." The bigger factories turn out as many as 10,000 dresses a day each, do an 8- to 10-million-dollar business a year.

Extra quality touches for your money, like generous seams and hems, skimmed during the war, are getting common again now that the customer is right once more. And it's a matter of pride and fact that often the fabric in an under-\$20 dress is identical with that in a \$100 job. But the high-price man keeps his customers just the same, for fabric is only incidental in his cost. He spends his money on subtle details of cut and style, and what if they do take a lot of extra cutting and sewing time and skill? They're worth it, or he couldn't stay in business.

You're pretty sure, in your low-cost dress, to get a good fabric anyway, for the sound reason that nothing else would pay. When you are buying fabric by the millions of yards and cutting dresses by the tens of thousands, you can't take a chance on anything backfiring. Fabrics have to be washable or dry-cleanable, and color-fast. Buttons must stand up to the heat of an iron. Today they're all striving to give you your dollar's worth, even if it is an inflated dollar.

In spite of its quick reflection of current fashion, your low-cost dress can't afford to play on any but the conservative side, concentrating on classic, simple clothes that never change too drastically from year to year. Any flights into extremes would be too big a gamble.

With such mass production, what about the worry women used to have of meeting themselves coming and going? When a New York specialty store sells 6,000 of one polka-dotted number, isn't that something to stew about even in a big city? Mary Lewis, New York merchant, says not. Formerly vice-president of Best and Company, now for years head of her own Fifth Avenue shop, she has always specialized in the low-cost, a-lot-for-your-money dress. She's also watched you shop, and noticed what you've done with your purchases.

"Fashion is so diverse," she says, "that nothing stands out. Also women have learned so much about fashion that they trust their own judgment. Women aren't so absorbed in clothes for clothes' sake any more, either. They're getting the man's point of view, of being well-dressed but not absorbed in the subject. These basic, classic clothes at low cost make that possible." ★★★

Collier's for September 27, 1947

When dresses sell by the tens of thousands, you are bound to meet your double now and then. Most women don't care. These dresses are rayon crepe with jeweled stud buttons, cost around \$12 each. The girls had a choice of eight colors

Two-piece dress in fine wale green corduroy comes in enough sizes to fit most women (sizes 10 to 18 and 9 to 15), allows plenty of freedom for action. It costs around \$17

Both the outfits below are all wool and college girl favorites. Left, Tattersal check costs around \$15 in any of five colors. Blouse with skirt about \$18

THE WEEK'S MAIL

Continued from page 4

World Strikes Oil that boom towns are bringing up, gushers are dotting the sheep ranches, hundreds of thousands of prospectors are moving there, and even a tourist rush is on its way. There is no truth in this statement.

The subsurface of oil is owned by the government and the government does not permit anyone to secure a lease or to drill in Chile as all drilling is done by the government of Chile through its Corporation Fomento. M. GAVE, Santiago, Chile

DEPT. OF CORRECTION

DEAR SIR: There may be yellow acacia blossoms, though the acacia trees I've been used under had white ones. The yellow blossoms the artist, James Lewicki, has drawn to illustrate John Barrett's story, the Acacias (Aug. 9th), are very definitely mimosa blossoms.

I've carried them home by the armload over in Madrid, Spain. Let's have no more nonsense calling mimosa blossoms acacias vice versa the same.

KATHLEEN BLACK, Des Moines, Iowa

Perhaps Reader Black's lovely eyes were closed by the spell of the yellow moon, when she sat under the white acacia. Acacia wanna know, the white acacia is rare. Most acacias are yellow and members of the mimosa family.

GENTLE READER! O BRUTAL WE!

DEAR SIR: I have noticed in The Week's Mail you are subjected to criticism and correction. People will invariably glorify themselves as being correct, but that's just human nature.

I realize that these people are quite often nuisance. However, I am often depressed in the way in which they are answered. It seems that a great deal of sarcasm is used, and I feel sure that the people are somewhat hurt.

EDWARD W. CADE, Memphis, Tenn.

BRAIN TROUBLE

DEAR SIR: The Nation's Brain by Stanley Frank (Aug. 16th) is a very fine article. Too bad it came after Congress decided on budget, for it might have influenced their decision. Too bad, for the Library will never be the same again.

The cutting of the appropriation for this grandious place has meant the loss of valuable personnel and the curtailment of important services.

The Legislative Reference Service was so badly that Congress itself will suffer each. The Library of Congress had contacts in every part of the world and brought the world's knowledge to America. Not to secrete that knowledge in hidden vaults but to analyze it, catalogue it and place it where America could use it.

No one, except a congressman, ever had to be told what the Library of Congress was. Whoever you were talking to anywhere was immediately interested. "How wonderful it must be to work in a place like that," was their first remark.

(They didn't know how small the salaries were.)

It will be as though some vital part of our nation has been imprisoned. The whole nation will feel this blind action. It's hope Americans will understand this better than their representatives in Washington and let them know they don't like it.

WRITER'S NAME withheld on request

WHAT DO THEY KNOW OF ENGLAND WHO ONLY ENGLISH KNOW?

S.S.: It's been said to understand a nation, you must know the language. May I add "and the drinks"?

In the Edward P. Morgan article The Bomb's Invisible Offspring (Aug. 9th), the "stouthearted stoic Jenks is down at the pub having a pint of bitters." Is this "S" a slip, or do they fondly think in America

Collier's for September 27, 1947

that Jenks would waste his last night on "bitters" when he could have the English workman's favorite "bitter"?

ANN HANLEY, White Rock, Semiahmoo Bay, B. C., Canada

Morgan apologizes without bitterness.

... It was interesting to read that radio-activity from the atom bomb scrambled genes and brought about the birth of rats with claws on the ends of their noses. We may yet end up with a race of two-headed people.

Might be particularly effective if a two-headed Russian diplomat could be produced. That way, he'd have someone to argue with, and could leave the rest of the U.N. alone to work out world peace.

The information that the A-bomb may so devastate life that the penguins will rule the world is not a complete surprise. After two Byrd expeditions aimed at taking over the South Pole, it's only logical that the penguins should plan a Man expedition to take over the United States.

To many people, it was good news that lead is the most effective shield against radiation. Somehow, I'm not as sensitive as I used to be, when people yell, "Get the lead out of your pants!"

ED REYNOLDS, Jackson Heights, N. Y.

BALKAN FOLLIES

DEAR EDITOR: I enjoyed Mr. Courtney's The Balkan Follies (Aug. 9th) very much. He has made us realize that it is past time for us to do something about the Balkans and stop playing the generous "uncle" that hands out millions of dollars.

JOHN MARSHALL PURCELL, Cincinnati, Ohio

... How long is the government of the United States planning to put up with these insults and abuses? And why are they putting up with it?

E. S. LE MASTER, Bakersfield, Cal.

... Your article by W. B. Courtney on the Balkans was really a honey. Courtney finally let his hair down to blast the political, mental and economic nitwits who festered most of the wars in our history.

T. W. BALIN, Slayton, Minn.

ZZYDD CORP.

DEAR SIR: Your letter from Robert Q. Lewis (The Week's Mail, Aug. 16th) prompts me to seek a little publicity for my organization, Toos Company. Unlike Lewis and Bandel Linn, we aren't fussy about our phone listing for the factory is located in Weeks, Washington, and the phone service there is pretty sloppy.

Some of our best sellers are Gaily Decorated Boxes in various sizes for giving people a piece of your mind in; a Piggy Bank for depositing the 2 cents' worth your friends are forever butting in with; a Waterproof hat for the guy who insists, "This time the drinks are on me"; Heavy-duty Gloves (made of Doeskin), to be worn when passing the buck; Baskets with No Bottoms for rolling stones to gather no moss in; Set of instructions for putting two heads together; Stairs with no Bottom Step for people who always trip on it anyway; and Water Wings for people who go off the deep end. Our Research Dept. is at present working on a facecloth guaranteed to remove that dirty look.

EDWARD L. OGILVIE, JR., Chesterfield, N. H.

World's Most Wanted Car Heater

Heats Hot in 90 Seconds

For Quick Comfort

Mommy doesn't put me in my snow suit every time we go out. Our South Wind warms the car so quick!

HOT HEAT IN 90 SECONDS!

"Man, what comfort! Before I'm out of the driveway on my way to work, my South Wind is pouring hot heat into the car."

HOT HEAT IN 90 SECONDS!

"It's grand for old people! Our South Wind heats the car quick as scat. I can go riding in healthful comfort even on coldest days!"

Over 2,000,000 users recommend this famous heater that creates its own "drive-away" heat. No wait for engine warm-up. Burns fuel from the carburetor in a patented sealed metal chamber. Fumes go out the exhaust. Easy to install. Fits any car. Get your South Wind today. Sold with or without defroster at auto supply stores, car dealers, garages, service stations, coast to coast.

\$2975

plus small installation charge

South Wind
90-SECOND CAR HEATER

South Wind Division, Stewart-Warner Corporation • Indianapolis 7, Indiana

Now Ready! New South Wind "Custombuilt"

A luxury heating and ventilating system proved in aircraft, now ready for cars and motor transports. Automatically distributes heat evenly throughout car. Provides complete change of warmed fresh air every 60 seconds like the most modern home heating plant. \$99.50 plus installation. Ask your service dealer.

THE MORGENTHAU DIARIES

Continued from page 13

of economy. On the spending issue, many congressmen were like the Georgia politician who always voted dry but drank wet.

Robert Doughton, of North Carolina, as chairman of the House Ways and Means Committee, had to handle our tax programs. One day, when I was meeting with the committee, Bob got up and said he couldn't stay any longer. Then he shook an admonishing finger at me and said: "Young man, you're spending too much money."

"But, Mr. Chairman," I replied, "I wish you wouldn't go. We feel that this is a rather important bill."

"Sorry, but I must go," he said. "They're dedicating a WPA project in my district."

A more extreme example was the bonus bill which Congress passed in 1935. This bill would have socked the Treasury for nearly two and a quarter billion dollars. Vice-President Jack Garner, who feared the political strength of the bonus lobby, wanted the President to write a tongue-in-cheek veto which Congress would quickly override. But I wanted a really tough veto message that would stick.

I went over to the White House about 9:15 on the night of May 16, 1935. The President was in the Oval Room, dictating to Miss Lehend.

"I am in a very bad humor," Roosevelt said.

"What is the matter?" I asked.

He said, "Oh, my sinus hurts." But from the way he was looking at notes that had been prepared for him by Ray Moley and by General Hines of the Veterans Administration, the whole bonus problem was hurting more.

He made several stabs at dictation. Then I argued with him that he should make this a fight to the finish; that he should not acquiesce in having his veto overridden; that he ought to make a powerful speech to the country on the question. Finally his face lighted up in a great smile, he raised his two fists in the air and shook them, saying, "My God, if I win I would be on the crest of the wave."

Only when I saw that I had convinced him did I stop arguing. It was then five minutes after one in the morning. "Henry," he said, "you are without exception the most stubborn human being I know."

But the politicians descended on F.D.R. like a swarm of hornets the next day and

tried to tell him that it would be an insult to Congress to make the speech to the country. Meanwhile, I told newspapermen and others that the President's bonus message would deserve the strongest possible support.

On May 20th I lunched with Roosevelt and told him about my public-relations activity. He listened with notable coolness and said, "You know we may have to compromise on this bonus."

I had a sinking feeling and found myself gradually crumpling up inside. I said, "If you want me to go on, please do not talk that way to me because I am building a bonfire of support for you in your veto message."

He said rather quickly, with a smile, "Let's agree that I will not talk to you about any compromise if you will not talk to me about any bonfire. . . . In other words, never let your left hand know what your right is doing."

"Which hand am I, Mr. President?" I asked.

He laughed. "My right hand," he said, "but I keep my left hand under the table." This was a typical Rooseveltian quip. He was exaggerating; when he got into a fight he did not keep either hand under the table but waded in slugging with both hands.

Eventually the President vetoed the bill. The Senate sustained the veto, but in 1936 overrode another veto on the bonus bill.

Funds by "Squeeze Play"

The struggle to reduce expenditures continued in the Treasury but Harry Hopkins could always get money. If you argued that he had spent more than was necessary, as he sometimes had, his response always could be that you were arguing against the needy. At other times, he and his deputies would use what we called the "squeeze play" to get additional funds from the Treasury and Budget Bureau. They would wait until the last minute before letting Bell and me know they were overspending. Then they would appeal to our emotions by reminding us of the plight of the jobless.

A remarkable variation of this squeeze play occurred one time after Hopkins had assured me that no substantial increase in expenditure would be necessary in connection with a contemplated increase in relief rolls from 350,000 to 500,000 men, because he could make savings in the cost per man. Then Harry went

"Well, I'll try—but, honestly, it's been such a long time since I've touched a keyboard . . ."

to the Mayo Clinic at Rochester, Minne-
sota, for a critical operation.

A few days later his subordinates
began arguing for additional millions.
We resisted. Finally, I had a call from
Deputy WPA Administrator Aubrey
Williams. Hopkins was "going under
the knife within an hour," he said.
Wouldn't I find some more money for
WPA and thus make it possible for
Williams to telephone Harry and tell him
that the funds were available and to stop
worrying? Williams remarked that Hop-
kins might not survive the operation and
said he wanted him to be happy in what
might be the last moments of his life.
We got the President to release 100 mil-
lion dollars in reserve funds to WPA.

I knew Hopkins for a long time. I had
recommended him as head of the New
York State Temporary Emergency Re-
lief Administration. In 1933, when
Roosevelt invited me to assume charge
of all unemployment relief I demurred
and suggested Hopkins.

Hopkins was intense, hard-working,
keen-minded and loyal and he never
spared himself in the service of Franklin
Roosevelt. He did a tremendous job
with various relief agencies. He drove
his sick and fragile body until it could
stand no more strain: He was as true a
war casualty as the men who fell in battle
—as Roosevelt himself. Like Wallace,
Hopkins too rose to his true greatness
during the war, when a sense of the crisis
lifted him above the politicking which
sometimes characterized his operations
on the domestic front.

Hopkins' Practical Politics

For all his ability and selflessness,
Harry did have an undeniable appetite
for practical politics. He loved maneu-
vering, and he loved being in the know
when great plans were under way. More-
over, he had supreme confidence in his
own capacity for improvisation and
would often embark cheerfully on huge
programs without a full conception of
the expense and of the difficulties in-
volved.

Harry and I got along well basically
during our years in Washington, though
we had occasional sharp differences. One
such occasion was when he confused
need with politics.

During the 1936 Presidential cam-
paign, relief rolls increased. After the
election, Hopkins insisted that he could
drop 150,000 relief workers. The Presi-
dent was out of Washington at the time,
but I sent word to him that I thought the
cuts were too drastic. He replied that he
agreed. Soon afterward I met at the
White House with Hopkins, Bell and
William H. McReynolds, my executive
assistant. Marvin McIntyre of the White
House secretariat represented the Presi-
dent.

"If you can find 150,000 people now
on the relief rolls who you say are not in
need of relief," I asked Harry, "how are
you going to answer the charge that you
must have known, before the November
election, that these people were not in
need of relief? How can you explain in
the month of December, two weeks be-
fore Christmas, that you can find 150,000
not in need of relief when you could not
discover this excess on your rolls a
month earlier?"

"The President," Hopkins said, "does
not have to take the heat on this until
he gets back. . . . The place where the
budget is unbalanced is in my shop."

"There is no way you can take the
responsibility," McIntyre told him. "The
President will have to take it."

"What I wanted to do was to clear the
relief rolls as far as possible of all cases
not meriting relief," Hopkins explained,
"so that I can walk into this session of
Congress with a conviction in my own
mind that there is actual need in every
case of persons on the rolls."

"Your conviction and the actual con-

You can Pull more than you can Carry!

OLD DOBBIN of today is a
motor truck — a "MECHANICAL
horse." The modern wagon is a
Fruehauf Trailer. "Hitch" them together and you at least TRIPLE the
work your truck can do.

Loads go up tremendously when you adopt the Truck-Trailer method
with no increase in driver costs and with very little more expense
for fuel. Maintenance cost on a Fruehauf is negligible — and it will
outlast several motor trucks.

Most important, your truck and driver need never stand idle for
loading and unloading — the Trailer is quickly detachable.

There is a Fruehauf especially for your type of hauling . . .

Get the Trailer Story Before You Buy a Truck

IS THIS AN IDEA FOR YOUR BUSINESS?

Why operate three trucks when you can
do as much or more hauling with a
single truck and three Fruehauf Trailers —
and do it faster, at less cost? On a shuttle
basis, the truck pulls one Trailer while
the others are loading or unloading.
There's no idle stand-by time — power
units can work and earn constantly

"ENGINEERED TRANSPORTATION"

dition of the rolls are two different things," McIntyre retorted. "How can you defend the fact that you did not discover the padding of these rolls until after the election?"

The argument ended with Hopkins promising that no one in need would be dropped from the rolls.

I find in my diary that I was more friendly later toward Hopkins, who was trimming down his WPA expenses, than toward Wallace. The minutes of my staff meeting of April 15, 1937, for instance, show the situation. Let me quote:

HM, Jr.: We have been studying the situation—money for next year and the year after, trying to look forward to tapering off. For instance, Wallace, exclusive of ever-normal granary, expects to spend in 1937, \$1,267,000,000; in 1938, \$1,176,000,000, and in 1939, \$1,087,000,000. Bill Myers comes along with a study which shows that in government aid to Agriculture from 1934 to 1937, we have given away \$2,594,000,000—to Agriculture!

Mr. Bell: Does that include Good Roads?

HM, Jr.: No. AAA, Resettlement, Federal Surplus, Federal Emergency Relief—no, this is straight Agriculture. Their overhead is \$130,000,000. It costs \$130,000,000 for nine months to give away \$516,000,000.

When I told that to Henry Wallace, he said: "You don't understand what we are doing."

"Oh, yes, I do," I replied. "I understand it more every day. This is ten times worse than Hopkins. Hopkins is the only one that has cut down expenses in Washington and the one that costs us more than anybody else is Wallace. My hat is off to him—he is getting away with murder."

Wallace said: "Well, how about the farm organizations?"

And I said: "Henry, that's your cross. You bear it."

Business conditions had continued to improve in 1935 and 1936 and I had decided that the time had come to make an all-out attempt to get the budget balanced—to give business and agriculture a chance to create jobs on their own. I knew that the patient might scream a bit when taken off narcotics. But this was the moment, it seemed to me, to strip off the bandages, throw away the crutches and see if American private enterprise could stand on its own feet.

My basic feeling was that you could not ride two horses: one the capitalist system, the other a system of state control. The first thing you know, the horses will go in opposite directions. You will fall in the middle, and the horses will ride you down. As Secretary of the Treasury, I knew that if you were going to collect revenue you had to permit people to make a profit.

The President was with me. He watched the declining relief rolls and the rising production figures with enthusiasm. One day, when Joe Kennedy was griping about the budget, the President laughed and said, "Now, Joe, just go away and stop worrying. Henry and I have another white rabbit to pull out of our hats."

Joe shot back, "Mr. President, if you have got it, I am going to get drunk next Monday night."

During the spring and summer, the Treasury worked on a program which would show an actual cash balance for the next fiscal year. Danny Bell and I talked to Ickes, who said he was "anxious to balance the budget." We talked to Wallace, who said he would be careful. On October 11, 1937, the President called me over to the White House. He said he had a commitment from Hopkins that he would cut his expenses drastically for 1938, and that he had written Wallace telling him to plan the new farm program so that it would not "unbalance the budget."

"Henry," he said, "I want you to tell me that I was pretty good. I think I deserve a pat on the back."

I said, "You certainly do," and I shook hands with him and congratulated him.

Ways to Balance the Budget

The next day Roosevelt called in Bob Doughton and Representative Fred Vinson, chairman of the Taxation Subcommittee of the House Ways and Means Committee, now, of course, chief justice of the United States. He told them, with a real burr in his voice, that he expected to keep expenditures down so that he could balance the budget.

"If it's just a question of raising a few extra hundred million dollars next year to balance the budget," Fred Vinson said later, "you just watch us boys do it."

At that time, it seemed we were making progress. It made me think that we might at last be able to answer a question which Mrs. James Roosevelt, the President's mother, had addressed to Danny Bell several years earlier when he first visited Hyde Park.

"Oh, Mr. Bell, I'm so glad to meet you," the President's mother said. "So many of my friends ask me when Franklin is going to balance the budget. My dear Mr. Bell, when is Franklin going to balance the budget?"

Danny and I never had a chance to answer. Just when the goal seemed in sight, the bottom fell out of the stock market.

Next week Mr. Morgenthau recalls a conversation in which President Roosevelt suggested that, if his successor in 1940 economized, chaos would result and "after they have failed they will most likely send for us to come back and solve the problems."

It's the apple of our eye

OF course, Blatz Beer doesn't grow on trees . . . but like prime tree-ripened apples, it takes time and patience to bring it to the peak of flavor.

We see that Blatz gets plenty of both.

TOUCHDOWNS ARE BIG BUSINESS

Continued from page 25

erected 110 billboards in Cleveland and other Ohio cities at a cost of \$9,500. He spent \$19,500 for newspaper advertisements running in size up to half a page. He entertained lavishly everyone in Cleveland who might conceivably help the team, and had his publicity people constantly play up the team as a fine civic enterprise. He hired 20 girls as telephone saleswomen, and they made 2,500 calls at a cost of \$6,000 in tolls and wages.

Ticket agencies were set up throughout the state, and McBride himself bought \$1,800 worth of tickets, for which he paid cash. An all-girl swing band, the Musical Majorettes, was organized at a cost of \$50,000; it proved the most popular half-time attraction in the conference.

Lavish Advance Expenditures

All told, before the team took in a nickel McBride paid out \$280,000 of which about \$150,000 was for interim salaries to football prospects in service.

By July of 1946, when returns began to come in from the intensive ticket-selling campaign, Mickey decided that the project was in the bag. So he cut up the team into seven shares and started handing them out to a few relatives and friends. He kept 15 per cent for himself, and gave 15 per cent to each of his two sons. Similar proportions went to Dan Sherby, his associate in the taxicab business; to Ray T. Miller, former mayor of Cleveland, and to Robert H. Gries, an investment broker. The remaining 10 per cent went to Paddy Dunn, one of Mickey's old-time cronies.

Before he made this division McBride wrote off, paid out of his own pocket, all the promotion and other preliminary expenses, so that when the new co-owners got their shares the team didn't owe a nickel. And money by the barrel was coming in from ticket sales. Moreover, McBride has agreed that if the team ever has a losing season he will absorb the losses, but that all profits will be distributed among the shareholders and, of course, Brown, who gets his 15 per cent.

For such an ambitious and expensive enterprise, the All-America Conference of 1946 was moderately successful. One team, Miami, proved to be a poor drawing card both at home and on the road, and has surrendered its franchise. Its place will be taken in 1947 by Baltimore, where a group of local sportsmen have raised enough money to field a team. The conference played 56 games, which drew a total of 1,538,068 spectators, and the 14 in which the Cleveland Browns were involved attracted almost half the total, or 612,960.

The Cleveland team was the bright particular star of the conference season; the boys did everything that McBride and Brown had expected them to do. They played hard, flashy football, holding their opponents to a total of 146 points. They knocked off the Miami Seahawks in the opening game of the season by the lopsided score of 44-0, won 12 of their 14 conference games, and climaxed this sterling performance by defeating the New York Yankees 14 to 9 in the play-off for the league championship.

Cleveland drew the crowds and took in the money. For the opening game with Miami, 60,000 spectators crowded the stands at the Municipal Stadium, and the eight games which the team played in Cleveland, including the play-off with the Yankees, drew a total of 441,000 spectators. The take for the seven scheduled conference games in Cleveland—in the play-off most of the money goes to the players—was \$892,257. An exhibition game at Akron before the season opened was good for \$101,358, and the Browns' receipts on the road, in seven games,

amounted to \$121,975. The team's gross for the season was \$1,115,590, and the earnings, after deducting taxes, stadium rental, and visiting clubs' shares, amounted to \$752,385.

This is a nice sum, but it didn't look so large after McBride and his associates had taken a look at the other side of the ledger. Advertising and promotion, after Mickey had paid the cost of the original campaign, cost \$70,000. Salaries to players and coaches, and office expenses, amounted to \$300,000. Athletic equipment cost \$41,000. When the figures were finally totaled, the Browns had made a profit of \$10,553.89 for the season.

McBride says he is satisfied with this showing, although no one knows better than he that if the club had had to stand the heavy organizing and promotional expenses of \$280,000, it would have finished far to the red. He expects to

do better this year; he has shown Cleveland that he and Brown will give the town football as good as any city in the country can boast, and he believes Clevelanders will support the club. If they do they will again, Mickey thinks, prove the truth of his favorite saying, which he frequently repeats:

"When you're in business you always got to be a little bit better than the other fellow. If I owned only a peanut stand I would give my customers more and bigger peanuts."

Money in Streetcar Transfers

In a manner of speaking, this idea of giving the customers a bargain, or at least full value for their money, was the foundation of McBride's first business venture at the age of six. He paid half a cent each for the newspapers which were ostensibly his stock in trade, but he made a deal with his regular customers. All of them rode the streetcars, and all of them would ask for a transfer at Mickey's corner.

Instead of paying Mickey a penny for a paper, they'd give him an unused transfer, which Mickey promptly sold for two and one-half cents. Mickey thus made

two cents' profit on each transaction, the man who bought the paper got it for nothing, and the man who bought the transfer got the streetcar ride for half price. Everybody was happy except the streetcar company, which finally got a warrant and brought Mickey into court. But he was defended by Clarence Darrow, and Darrow painted such a horrendous picture of the great soulless corporation hounding a poor newsboy that the jury sobbed and found Mickey not guilty.

Mickey's success in disposing of his newspapers attracted the attention of Max Annenberg, circulation manager of the Chicago American, and the youngster was barely in his teens when Annenberg put him in charge of a string of newsstands. In 1908, when he was eighteen, Mickey was transferred to the American's South Side circulation branch, in the Englewood district, and a little later, when Annenberg went out to Los Angeles to work for the Hearst paper there, he took Mickey with him.

The pair also worked on circulation in San Francisco and Boston before they returned to Chicago, where the Chicago Tribune lured Annenberg away from Hearst. McBride went along, but he soon returned to the Hearst paper, the Examiner, now defunct.

Tackling Circulation Problems

In 1913, W. P. Leech and Harry Starkey, Hearst executives, took charge of the Cleveland News and the Cleveland Leader, both of which were sagging badly. They offered the job of circulation manager of the News, at \$10,000 a year, to young McBride, then in his twenty-third year, and so Mickey went to Cleveland.

"When I started on that job," says Mickey, "the News didn't take in \$100 on paper sales. They were really a little operation. I hand-picked my newsboys, and corrected a slipshod delivery system. The first year I was in Cleveland our circulation jumped to 70,000, and at the end of the second year the News was more than 100,000."

Basically, McBride's business today is real estate, although he always has his eyes open for anything else that might turn up. His sagacity has become a byword in Cleveland real-estate circles, and reports of a spectacular deal automatically bring the comment, "I'll bet Mickey was mixed up in that."

He has made only one deal, in recent years at least, that might from any viewpoint be termed a failure. For a long time Mickey and his family, consisting of his wife, two sons and daughter, lived in a modest home at Kamm's Corners, a middle-class West Side section in Cleveland. But five years ago, when his family was in Florida, Mickey planned a huge surprise for them. He bought a \$135,000 mansion on Edgewater Drive, in one of the swank residential sections of Cleveland.

Then he furnished it lavishly, locked up the old house at Kamm's Corners, and waited patiently for Mrs. McBride and the children to come home. When they did, they seemed thrilled, but Mickey soon noticed that almost every day they all hustled over to Kamm's Corners to visit their old friends. Two years later Mickey made a trip to Florida, and when he returned to Cleveland he found the Edgewater Drive house closed and locked.

There was a note in the mailbox, signed by Mrs. McBride, the sons and the daughter.

"We've moved back home," the note said.

"She didn't last six months with Mike. Wound up in a gutter . . . Had it comin' to her for taking up with that kind of guy"

ALL SQUARED AWAY

I STEPPED into the hole-in-the-wall with the sign outside that read: LOUIE'S GRILL AND SOCIAL CLUB, and took a seat at the counter. I seemed to be customer number one for this afternoon. I said, "Hi. I'll have a cup of coffee."

The man behind the counter was stocky, with a dark, expressive face. Deftly, he poured me a mug of coffee from the shiny urn behind him. "You're new around here, huh?" He flipped open a sugar bowl and slid it down the counter to me.

"Yeah," I said. "I'm staying with Doc Jensen."

"Nice guy, Doc. You a doc, too?"

"No. Writer. Having a little trouble with Chapter Two. Doc said this might be a good place to think about it."

The man mulled this around in his mind. He liked it and said, "As the owner of this dump I must admit that Louie's Grill and Social Club is a pretty good joint. We try to accentuate the quietude and eliminate the pistachio."

I said, "You're Louie?"

"I'm Sammy."

I have a one-track mind. "And Louie?"

"He used to own the place."

"You bought it from Louie?"

"I bought it from Mike."

I concentrated on my coffee. Sammy produced a cigarette from out of a crumpled pack, lighted it and allowed a thin ribbon of smoke to curl away from his lips.

Then he said, "Mike got it from Louie. He left the sign up as a monument to the deceased."

"Louie died?"

"A hero."

"In the war?"

"Nope. Back in the thirties. One day a hophead with a temper and an itchy trigger finger came in here and told Louie he needed protection. Louie begged to differ. They had words. The hophead's vocabulary was pretty limited so Louie was winning the verbal battle until the hood decided it was time for his target practice. Louie was the target. When they took him out of here he had

more slugs in him than a pay phone."

Sammy looked satisfied. He took a deep drag on his cigarette and continued: "Mike was the dishwasher. Louie left a will and no relatives. The beneficiary to the will was Mike. When I came to work here as the new dishwasher, I asked Mike about the sign, and he told me he was gonna leave it as a token of esteem. Besides, Mike figured it would cost too much to change it."

"A lucky guy, Mike. And smart, too," I said.

"Yeah," Sammy said, "Mike was lucky, smart and no good. He didn't really care for this place. I tried to buy the joint from him, but the minute he found I wanted it, he jacked the price up. Well, I kept throwin' a little something in the sock every once in a while. In a couple of years I looked in that sock one day and found five hundred smackers rattlin' around in it. So Mike gave me the surprise of my life and sold me the place."

"That sounds pretty reasonable," I said, looking over the fixtures to indicate that I realized they were worth more than five hundred dollars.

"Not when you throw in my girl," said Sammy coolly. "She didn't last six months with Mike. Wound up in a gutter."

I put down my empty cup and said, "I'm sorry."

"That's all right. She had it comin' to her, I guess, for takin' up with a guy like Mike." He stopped. "You want another cup of coffee?"

"Sure." It was good coffee.

He poured us two new mugs. "Mike did okay for a while. When the war came along, he got to be a small-time black-market operator. So small, that when things got organized the big boys squeezed him out of the racket."

"He lost everything?"

"Nope. Not quite. Sometime ago I hear he went to see a guy. It seems

he had a proposition to buy into a business, but he needed a thousand bucks and all he had was five hundred. So this guy shows him the way to get another five hundred. You see, this guy's got a hot thousand-dollar bill."

I said, "A hot thousand-dollar bill?" I felt a little stupid.

Sammy said, "Yeah. This is the war, kid. When you got a thousand-dollar bill that you didn't get strictly on the up and up, you got a hot thousand-dollar bill. You can't deposit it in a bank, because banks keep a record of incoming thousand-dollar bills. You go into a bank with one of them, and before you know it, you have the income-tax boys swarmin' all over you wantin' to know where you got it. Get the pitch now?"

"I'm right with you."

"Okay. So this guy with the big bill dreams up a gimmick. He sells the bill to Mike for five hundred bucks. Then, according to this guy, all Mike has to do is make out like he found the bill, and bring it over to the precinct. The cops hold it for thirty days, waiting for somebody to claim it. Nobody claims it. It belongs to Mike, and he don't have no ex-

plainin' to do. Smart, huh?" Sammy paused to take a long sip of coffee.

I whistled softly. "Terrific. And Mike got the bill?"

Sammy sighed. "Nope. Somebody claimed it."

I said, "Oh." Then I had a brain storm. "I got it. It was a double cross. The guy who sold him the bill went and claimed it."

Sammy wet his throat with more coffee. "Could be. But remember, only a dope would claim a hot bill."

Like I said, I'm a little stupid. For inspiration, I looked into my coffee cup as if there were something going on in it. There was something going on in it. The milk was curdling. I said, "Well, then, who claimed the hot thousand-dollar bill?"

"I ain't sayin' this is the way it happened, but here's how I figure it. Supposing this guy has an old score to settle with Mike, and sees a chance to get even. Supposing he don't have no hot thousand-dollar bill at all, but instead, he goes to his bank where he has enough cash on deposit to withdraw a thousand-dollar bill, all nice and legal-like. He tells them he's thinking of buying some new fixtures maybe, and they say, sure, here's the bill, be careful, so he asks them to record the serial number, just for safety's sake. From the bank, he hops right over to the precinct and tells them he just lost a thousand-dollar bill, in case anybody should happen to report finding it. Then he sells the bill to Mike, who thinks it's hot, and goes through with the plan according to schedule. After that this guy rushes down to the precinct and claims the bill. The cops check the serial number with the bank, the whole thing adds up, and this guy gets his bill back and Mike's five hundred besides. Get it?" Sammy paused. "As far as who the guy was, your guess is as good as mine."

I'm not that stupid. I said, "If the guy happened to be you, you and Mike would be pretty much all squared away. Right?"

Sammy's face was blank. "Not if the guy was me. Mike would still owe me something for that girl. He'd have to go through some special kind of hell for that before he evened things up with me."

I said, "Oh, I forgot about that. But as a writer—I kind of wish it had been you."

"Don't talk foolish. I felt sorry for Mike. I even got him a job. You want another cup of coffee for the road?"

I said, "No, thanks. I better go back and finish Chapter Two." I threw a dime on the counter.

Sammy smiled and said, "Thanks. Good luck to you. Come in again."

He turned toward the rear and yelled, "Hey, Mike, get the lead out. I got some dirty cups out here for you to wash."

I got up and went back to Doc Jensen's.

Medora's sophisticated headpiece excited some comment but not so much as a fox jacket which another girl had purloined. Medora considered mentioning that Ronnie had looked into her eyes, until she learned that others had the same belief. They were informed by the young lady in the fox jacket that actors can't see anyone in the audience. As her mother's cousin was married to a producer, she certainly thought she ought to know.

A girl with a round face and round eyes displayed a locket which, she announced tremulously, contained three hairs. Her father, a newspaperman, had solemnly sworn when he gave them to her that they were snipped from Ronnie's head by a barber he knew. She pressed the locket to what would one day be a bosom and vowed she'd wear it to her grave.

It wasn't only for the hairs that she was envied. An understanding parent was a rare treasure too. "You mean your father actually knows how you feel about Ronnie, and where you go Saturdays?" The luckless young lady who asked was the daughter of a clergyman who preached in a large church uptown. "Why, certainly. He writes us fans up for his paper."

Well, some people were luckier than others. That was life.

THE triumph of the afternoon was enjoyed by a brunette with braces on her teeth and a nice feeling for drama. She had waited until a late moment to reveal that she had actually met Ronnie Jones.

No one believed her. It was the holy truth, she vowed, and she had a witness standing by her side. The brunette had interviewed him for her school paper and taken along a friend to help out. Sad to say the meeting had thrown them both into a speechless panic, but it was memorable all the same. While they were in his dressing room, Ronnie had changed his clothes behind a screen.

"You're lying."

"I hope to die if I am."

The witness crossed her heart and an awed hush fell over the alley. Then the great moment arrived. The stage door opened. There was a scream and a stampede.

Ronnie Jones had to cover only a short distance to reach his large new limousine. He was surrounded by a flying wedge of solid policemen, yet it was marvelous that he got there in possession of his hat and coat and arms and legs, to say nothing of his well-shaped nose and a set of devastating eyelashes.

Two policemen wrenched open the car door and four shoved him inside. The car crept toward Times Square, virtually drawing with it its circle of squealers. Medora picked up her mother's hat from the street, knocked the dust off it and ran for the subway, with only her memories to comfort her for another week.

There was no one home when she got there, and a few minutes later she was soaking in a hot tub. Other things were soaking too. She had neglected to allow for a law of physics to the effect that when a body lowers itself into a brimming tub a good deal of water will be displaced onto the floor. She was indifferent to her miscalculation, because she had some heavy thinking to do. Her problem was Freddy Wheeler, who didn't know she was in love with Ronnie Jones—and she hoped he wouldn't find out.

When there was no basketball practice, Freddy walked home from school with Medora and stayed, playing records and gossiping until his mother phoned or her mother put him out. Immediately after dinner, on school nights, Freddy called

STAGE DOOR GIRL

Continued from page 50

up and they chattered until bedtime or until a parent of one of them threatened to tear the phone from the wall. Friday, Saturday and Sunday evenings, Freddy came over.

It was a routine with which Medora had been blissfully satisfied before she knew of the existence of Ronnie Jones. She'd first heard him singing on the radio and the ardent voice had quickened her breathing and heartbeats. Then she'd furtively attended a matinee and seen his charms and talents with her own eyes. He sang and played love scenes with a fervor that had caused some of his admirers to swoon. Medora wasn't the swooning kind herself, but after that first matinee her love was dedicated to a man who didn't know she was alive. Freddy Wheeler was only a very young friend who played basketball, not love scenes, and did nothing to her heartbeats at all.

However, there were advantages to having a beau she was actually acquainted with. She did think a girl ought to lead a normal life.

It was a pity that the basketball games were usually played on Saturday afternoon when Medora couldn't be on hand. Freddy was the kind of boy who expected his friends to be there admiring him when he pranced around the gym. He resented her absences and was suspicious of her excuses, which hadn't been very good. This afternoon, for instance, she'd asked her mother to tell Freddy, when he phoned, that she had gone to the library to study. That was going to make trouble, for sure. But at least Freddy would never be able to accuse her of making

dates with other men—unless by some wild chance she met Ronnie Jones.

The doorknob rattled, indicating her mother was home and Medora called, "Come in."

Mrs. Miles was a writer of detective fiction and sometimes very caustic in conversation, like the characters in her books. She picked her way daintily over the wet floor, remarking that if she'd known the conditions, she would have worn a diving bell. What she did wear was her best black afternoon dress and she said she'd been to a tea.

"Tea?" Medora sniffed.

"All right, a cocktail party. Now suppose you come clean yourself and tell me why I couldn't find the hat I wanted to wear and why it's back in my closet now, looking like a floor rag?"

It hurt Medora to lie to her mother but she didn't spare herself. A girl who isn't allowed to go downtown alone would be foolish to say where she had been. "It blew off when I was coming home from the library."

"Am I supposed to believe you stole my best hat to do your homework in?"

Medora thought ruefully that a mother who fancied herself to be a detective was not all that a mother might be.

"Freddy called up, of course, and really, I wish you'd relay these lame excuses yourself. He didn't find the library story any more convincing than I do."

"What did he say?"

"Nothing. Not a word. It was the most scornful silence I've heard for quite a while." Mrs. Miles frowned thoughtfully at the steamed body of her daughter.

SALO ROTH

SPORTING ODDS

Shortly after Bernie Masterson, now head coach at the University of Nebraska, joined the Chicago Bears some years ago, Coach George Halas sent him in as quarterback with the instructions, "Run the first play through right tackle, the second around left end, and then kick."

The first play started from Chicago's own 20-yard line. The Bears went through right tackle for a neat 30 yards. First down on the 50-yard line. The second play picked up 35 yards around left end. Another first down, on the opponents' 15-yard line. Then—Bernie kicked.

You have a stake in the Railroads

Why

Even if you never ride on a train—never ship a package by railroad freight—the whole pattern of our daily life is interwoven with the railroads. Most of the food you eat is carried to market by rail. And railroads—as the nation's major carriers of raw materials and finished products—have a part in the production of practically everything you use. So it's important that the railroads continue to improve the service upon which you depend—service at the lowest cost for comparable transportation in all the world.

To keep on doing that, railroads need new engines, new cars, new rail, new equipment and facilities of all sorts. These improvements depend in turn on adequate railroad earnings.

"And what," you ask, "is an adequate return?"

Most people think 6 per cent would be no more than fair.

Yet during the past 25 years—and that includes the war years—the railroads averaged a return on their net investment of only $3\frac{2}{3}$ per cent.

And in 1947, with a record-breaking peace-

time traffic—railroads are expected to earn even less than that! Such a return is only about half what the railroads need to keep on providing you with the kind of equipment and service you want.

Because this need for adequate railroad earnings directly concerns you, and every other American, the railroads want you to know the facts.

er. "You're losing weight. Do you always eat a good lunch at school? I invited Freddy to dinner. He made it quite clear he considered himself my guest, not yours."

Mrs. Miles stepped over a puddle and opened the door. Then she turned back with a gentler expression. "You know, boots, you're going to lose that boy. Are you sure you don't care?"

The door closed and Medora sighed. The truth was she didn't care at all in the way Freddy would wish her to care. It was merely her social life which would suffer. A girl would be pretty lonely if she never went out at all. If only she could have dates with Ronnie Jones!

FREDDY WHEELER was dressed properly to dine with two ladies. His suit was pressed with sharp creases, his sandy curls were wet and sleekly brushed, his freckled face shone with health and basketball. However, the conspicuous thing about him was a formal and austere manner and he addressed himself exclusively to his elder hostess. He told Mrs. Miles, with his usual lack of

he was searching for an example—"well, like the fans of Ronnie Jones."

It occurred to Medora that a mutual friend of hers and Freddy's might have seen her in the alley and told him. But he looked smug, as if he inspired writers every day and enjoyed doing it, and she decided it was a coincidence that he'd spoken of Ronnie, who was probably being discussed in many homes tonight.

Mrs. Miles, who was contentedly gnawing a chicken wing, said casually, "Tell me about the fans, Freddy. I'm curious about those girls who have to be policed by the riot squad. What kind of homes do they come from?"

Freddy's shrug implied that he neither knew nor cared. It was a different question that puzzled him. "What they see in Ronnie I can't imagine. I know a hundred guys who are better-looking—an athletic chest was expanded—"and better built."

"He sings and dances."

"Listen, Mrs. Miles, I could dance if I took dancing lessons—I'd like to see myself—and I can sing just as good as Ronnie if I hold my nose."

inclined to talk to a girl who hadn't cared to be present when he saved the game. But more than his silence was shattered when he dropped a plate. "Gosh!" He stooped down to pick up the pieces.

"Does Viola go to our school?"

"Sure."

"It's funny I don't know her. You'd think, being a famous man's sister, everybody'd know who she was." Medora decided Viola must be unusually shy.

"It's a big school and she hasn't been there very long."

"Who does she go around with?"

"Not me," Freddy said pointedly. "Do you think I run around with other women behind your back?"

Medora was pleased to think that Viola, being shy, probably hadn't made many friends yet. "Does she look like her brother?"

Freddy blushed. "She isn't built like her brother. Viola's kind of fat."

Medora saw a touching picture of a girl who was shy, friendless and overweight. She remarked sympathetically, "Freddy, I think old students ought to help new students to make friends. Why don't you help Viola?"

"I don't know her very well myself." He gave Medora a long, searching look as if the evidence of charity in her nature were food for thought. Then, being Freddy, he bragged, "But I could get better acquainted with her, any day."

"That would be a very nice thing to do for a new girl," said Medora virtuously, "and I tell you what—if I knew her, I'd be glad to help too." She finished the dishes with an energy to which neither they nor she was accustomed.

MEDORA thought that Freddy played his part in the intrigue unwittingly. He told her after classes on Monday that Viola had sat next to him in the cafeteria and they'd exchanged a few words.

"Did you make a date with her?" asked Medora hopefully.

"Sort of. I said I'd see her Saturday at the game. By the way, I can't walk home with you today. I've got to go to the gym."

She walked home alone, aflutter with ecstasy and anxiety. Now that she was so close to meeting Ronnie, she had worries as well as thrills. For one thing, what was she going to say to him? Wouldn't it be awful if she were stricken dumb like that girl with braces on her teeth? And what could she wear? It was her belief that she was old enough to make certain improvements in her appearance and when she got home she had a tense argument with her mother about lipstick and nail polish and high-heeled shoes.

The next day she splurged and went to the cafeteria herself. It seemed like unnecessary economy to save lunch money now. As soon as she'd met the Joneses she could probably go to the show for nothing any time she chose. And sit in a seat, too.

Carrying her tray to a table near the one where Freddy usually sat, she looked around. There was only one girl in sight whom she couldn't name, a stagey blonde who was new in school but certainly not friendless. Medora had seen her with many different boys. And she wasn't fat, either. She was what Medora called developed, and she thought critically: If it was me, I wouldn't wear a sweater.

The blonde was eating quietly but she came to life when the basketball team arrived and swarmed around the table which tradition reserved for them. Then really it was embarrassing to watch her toss her yellow hair and try to attract attention. Who did she think she was—a movie star? What she did next was a shock to Medora. She carried her tray to the boys' table and after some noisy banter, sat down between two of them who pushed their chairs together. One of the two was Freddy. . . .

When Medora saw him after classes,

"As a matter of fact, it works out we're giving you the car free. You're just paying for the accessories"

COLLIER'S

CHARLES PEARSON

modesty, that the game had been saved in the last thirty seconds of play and that he'd shot the winning basket himself. "Freddy, I'm proud to know you."

Mrs. Miles served a hero's helping of white meat and dark. "Do many girls go to the games?"

"Girls?" Freddy had to stop and think at the word meant. "Why, yes, quite a few girls go. I wish they wouldn't. The way they screech makes my head ache."

Mrs. Miles looked sidewise at her daughter who was looking at her plate. For Freddy. He was so transparent when he lied.

With the insouciance of a habitual derouter, he turned the conversation from himself. "How's murder these days, Mrs. Miles?"

"At a standstill. I've got to start a new book soon and I can't make up my mind. Freddy, I hope you won't be offended if I ask, but if you were a homicidal maniac what kind of people would you rub out? Millionaires, politicians, schoolteachers—?"

He had a surprisingly ready answer. "I'll kill actors."

Medora looked at him suspiciously. He was helping himself to chicken gravy and his face displayed no sign of guile.

"Actors? Really? Why?"

"Well, look at the way people make fools of themselves about actors. Like"—

FALSE TEETH WEARERS famous for their looks

Hollywood performers say:

CALL FOR PHILIP MORRIS

he asked, "Who was that girl who practically sat on your lap?"

The memory was pleasant, it seemed. Freddy smiled. "Would you like to meet her?"

"I certainly would not."

"What would you think if I had a date with her?"

She was surprised at the vigor with which she replied. "You know perfectly well what I think of girls who run after boys!"

It was a beaming Freddy who patted her on the shoulder and said he had to go along.

"By the way," he added, "I won't be seeing you much this week. The coach working us hard."

He left her with two mysteries—one, the whereabouts of Viola, and two, the identity of a blonde. And it wasn't until late in the week that she learned that there was only one girl who was baffling her; that the blonde with whom she saw Freddy so often in the corridors and cafeteria was Viola Jones. . . .

The revelation occurred Friday evening about eight o'clock. Medora was standing by a stage door in the alley, feeling rather depressed. Not, she told herself, because Freddy hadn't asked for his

take the hairbrush to you if we were home."

It sounded to Medora as if a kid sister were being berated and she crept closer to the car, thinking it would be remarkable if she met Viola and her brother, without any help from Freddy at all. A blond head appeared at the window and at last it dawned on Medora that the girl she'd begged Freddy to get acquainted with and the one she hated to see him with were the same.

Viola giggled. "Look, Ronnie, one of your admirers. She's brought you a flower."

Ronnie whirled around and right there in the alley where he usually made each of his fans feel that he loved her, he asked coldly, "What's the idea, hanging around a stage door at this hour? Hasn't anyone told you to stay off the streets at night? Haven't you got a home?"

Viola was convulsed.

Now, in the scene that Medora had rehearsed while she waited, she had pressed the carnation into Ronnie's hands, told him how much she admired him and that she never allowed a week to pass without seeing the show. That scene couldn't be played with an actor who addressed her as if she were a de-

made a mistake. You see how it is, I'm always stumbling over girls in places where they shouldn't be, and maybe it's none of my business, but it worries me." He winked at Freddy. "If you want to take your girl to the show some time, let me know. I'm afraid we're sold out tonight."

He went into the theater. The limousine was driven away. Medora was left alone with the young man who had saved her face and her feelings. She tried to thank him.

"Skip it." He'd done his good deed for the day and now he looked grim. "It wasn't my idea, hunting you up. Your mother phoned; she's having a fit." Clamping a hard hand on Medora's arm he marched her over to Broadway and into the nearest drugstore, where he entered a telephone booth.

"Hello, Mrs. Miles, I found her, right where I thought she'd be." His call was answered so quickly that Medora guessed her mother had been sitting anxiously by the phone.

Freddy said, "Nothing happened to her except she got a very fine bawling out. Ronnie Jones practically took her head off." Freddy frowned. "Say, Mrs. Miles, I'm thinking about that idea I gave you for a book. You know, killing actors? Maybe it wasn't so hot. Ronnie's okay."

Medora thought with a pang, he'd probably say nice things about Ronnie's sister too, if anyone asked him.

"Well, don't be discouraged, Mrs. Miles. I'll probably get another idea before long."

Some people might have thought Freddy conceited, but Medora felt that he spoke with a confidence to which he was entitled. She looked with awe on this youth who inspired writers and acted before actors and wondered how far his friendship with Viola had gone.

WHEN he left the phone, he hailed a taxi, but Medora wasn't flattered. It was clear from his expression that he wanted to get rid of his charge the quickest way possible, no matter what it cost. For a while she didn't dare speak to him, his manner was so forbidding, but there were questions she simply had to ask. "How did you know where I was?"

He snorted. "Everybody in school knows about your crush. I've had to take a lot of kidding."

"I haven't got a crush any more." She looked quickly to see how he reacted. His expression was unchanged.

It hadn't occurred to her before that the word crush described the overwhelming passion which had driven her to a life of intrigue and deceit. She'd thought of a crush as a minor disturbance without consequences. Now she wondered fearfully how dire those consequences were going to be.

She asked the vital question in a roundabout way. "I guess you won't be kidded about me now you're a friend of Viola's. Have you had a date with her yet?"

"What if I have? It was your idea."

That ended the questions. And hope.

When the taxi driver had been paid, Medora thanked Freddy formally for bringing her home and said good night. He seemed to expect something more of her so she told him she'd be at the game and wished him luck.

He looked surprised. "Say, what's the matter now? Don't you want me to come in?"

Medora stared, speechless.

"Listen, get this straight," Freddy's voice was harsh, "I haven't had a date with Viola and I'm not going to have any. When I want another woman, I'll pick her out myself."

Maybe it wasn't a love scene, so far as words were concerned, but no one could doubt that Freddy was looking into her eyes and hers alone. Medora's breathing quickened and her heart throbbed happily as they went inside.

THE END

"This new model won't do. We must have something new, dynamic, revolutionary. Something the radio comedians can kid us about"

COLLIER'S

A. JOHN KAUNUS

ual date, but because she felt conspicuous, almost silly, standing there alone. Evidently Ronnie's other fans hadn't thought of the strategy of being at the theater when he arrived. Or perhaps they wouldn't get away with it. She wasn't sure she had herself. She'd stolen out of the apartment without saying a word and hoped to have a good excuse for her mother when she got back.

It was a warm evening, more like summer than fall and though it was dark in the alley, there was still a gleam of light in the sky. Medora was holding a carnation, a small token of her affection that she'd bought at a flower stand in Times Square. The members of the cast, hurrying into the theater, looked at her strangely. The old doorman peered outside and shook his head, disapprovingly; but she stood her ground. Surely that dressed feeling would leave her when she'd seen Ronnie and given him the carnation for his buttonhole.

Finally the limousine arrived and Ronnie jumped out, still talking to someone in the car. Talking sternly too, like a Dutch uncle, and telling that someone that she lacked the manners of refinement, that her behavior in public pained him and that she ought to realize she was only a schoolgirl and not, as she seemed to think, Helen Hayes Cornell.

A silvery laugh rang through the alley. "Don't give me that stage laugh. I'd

linquent, while his sister laughed. She didn't even want to play it. This man who unexpectedly revealed a personality that was a cross between a policeman's and a parent's was not the man she loved. Most disillusioning of all was the knowledge that he was that blonde's brother. She'd have given the remainder of her life to make them believe that her business in the alley had nothing to do with the tribe of Jones.

And just then a miracle occurred. A sandy-haired young man stepped out of the darkness, where he might have overheard what had happened, and said, "Hello, Medora. Am I late?"

Ronnie asked sharply, "Do you know this girl?"

"I sure do. I've got a date with her."

"Is it your custom to ask girls to meet you in dark alleys?"

Freddy looked him straight in the eye. "She made a mistake," Freddy explained. "She should have waited at the other door, in the lobby."

It couldn't be Freddy Wheeler, Medora thought. It must be a dream. Freddy would never have thought of taking that hateful carnation from her hand and saying, "Is this for me? Gee, thanks." She could scarcely believe her ears when she heard Viola say, "Freddy! Freddy Wheeler, aren't you going to speak to me?"

Then Ronnie apologized. "Sorry, I

NOTHING OR NOBODY

Continued from page 26

'em all and then go to bed. No, I couldn't blame the old man. I think he really had noises in the head. Subway noises.

When I got outa the Army, the old man was still the same way. So I said goodbye to Bay Ridge and Brooklyn and my home for good. Me and a buddy, Jimmy Hawkins, we shared a room downtown. In Manhattan.

That's how I got to be a bartender. Jimmy was one and he sold me on the idea of joining the union and working those swanky parties with him. I used to ask Jimmy why he never took a steady job in some bar, and Jimmy'd always say it wasn't for him. Jimmy always said he liked to look at them society people and all them fancy good-lookers.

Me, I didn't feel one way or the other. I was just interested in the dough. And the dough was good. We could work three times a week and have enough dough for good times. Oh, Jimmy and me had some good times, and whenever we'd be sitting around some bar Jimmy'd say how much better it was to be drinking drinks instead of serving 'em. In bars, he meant.

I NEVER had no trouble with them society people, Father. Not till that night when it all started. I never stole a bottle of booze or nothing. Jimmy would, but I wouldn't. But then I'd help him finish the bottle when we got home. I guess that's just as bad, ain't it, Father?

The trouble is sometimes I ain't sure what's good and what's bad. All those times, before the trouble began, I used to think all those society people were good. I used to think they were good, because they were better-looking and better dressed and spoke better and all that.

Before the trouble I used to think just that, but I don't no more. No, no more.

Me, I was working the bar in the game room that night. Jimmy was working the bar in the reception room. It was a wedding anniversary party. The Helmses' tenth anniversary. And it was the first time we worked the Helmses' house. We'd been at lots of other big houses on the North Shore but never the Helmses' house.

Everything was going fine. No trouble at all. One college kid kept bothering me to make some crazy drinks I never heard

of, but I fixed him up and there was no trouble.

Not till about midnight. Not till Mrs. Helms and Mack Jennings sat down on those soft stools in front of my bar. They were the only two at the bar. Oh, there were about six or seven other people around the game room, lounging around and drinking and talking and making passes.

This Mack Jennings was a good-looking guy. Close to forty I think. Looked a little like Ronald Colman, but not as good. A little heavier, too. He ordered the drinks. A Scotch highball for himself, a Manhattan for Mrs. Helms.

I think they had a lot to drink upstairs before they came over to my bar. Jimmy told me they did. But you couldn't see it much on 'em. I think they held it all right on the outside, but not so good on the inside. On the inside it musta been different because you can tell what people are like on the inside by the way they talk.

Father, I thought it was me who was drunk, not them. I kept saying to myself—Pat Dawson, you're drunk. You're good and drunk. But I wasn't. I didn't touch a drop. Not a drop.

I just stood there behind the bar. It was a small bar. Made in a half circle and there wasn't room for me to move. I stood there with just a little smile on my face, trying to look like I liked the job and liked fixing drinks and all that.

This Mrs. Helms—Fern, Mack Jennings called her. She looked like Jean Harlow used to look. A little like her. Mrs. Helms was smaller, I think.

She and him sat close together and when they talked I could hear every word they said. Every word, Father. Every no-good word. That's what got me. There I was, right in front of them. If they were blind they coulda seen me.

I kept listening to them because you can't stop yourself from listening. I kept looking right at 'em, trying to tell 'em with my eyes that they weren't alone, that I—that Pat Dawson—was looking at 'em and hearing every word they said.

I dropped a glass, Father. I did it on purpose. The glass bounced on the floor, it didn't break. And when I picked it up they were still talking, the same way they were talking before.

And you know where they were look-

IS PSORIASIS A SKIN DISEASE?

After years of research, many noted medical scientists have reached the opinion that Psoriasis results from certain internal disorders. A number of physicians have for the last five years been reporting satisfactory treatment of this malady with a new formula called LIPAN—taken internally, Lipan, a combination of glandular substances and vitamins, attacks what is now believed to be the internal cause of Psoriasis, and tends to aid in the digestion and assimilation of foods. Lipan is harmless, non-habit forming, and can be taken with confidence by both young and old. Physician inquiries are invited. Ask your druggist for Lipan or write us direct for free booklet. Or, order a month's supply of Lipan—bottle containing 180 tablets—at once, enclosing check or money order for \$8.50.

Miss Mabel Millot says:
I was afflicted with Psoriasis for 9 years on face and back. Two and one-half months after I began to take Lipan, my skin was completely clear.

GARRETT PRICE

ing when they were talking? Right at me. Right at me. Only they didn't see me. I coulda cut my throat right there and I don't think they'd have seen me.

Did you know what I was thinking all this time? I was thinking this, Father. I'm nothing. I'm not Pat Dawson. I'm nothing. I'm not an American citizen. I'm not a war veteran. I'm not a bartender. Not even a human being.

I was thinking, Father, I was just something that adds up to a drink of booze. Sure, I got eyes, ears, a nose, a face, a body, a mouth and all that. But you can look on the label of a bottle of booze and maybe see a picture of all those things and all those things don't hear nothing or see nothing or say nothing.

I was sick, Father. I was never so sick in all my life. Not even during the Battle of the Bulge did I get so sick. And so scared.

I was scared about—about being nothing, about being taken for nothing.

AND they meant every word they said. Every word of it because you know what happened. Every no-good word.

Mrs. Helms she said she hated her husband. Only she just didn't call him her husband. She used some words I wouldn't repeat to you. But she kept telling this Mack Jennings how much she hated her husband, how much she loved Mack Jennings, how much she wanted to get rid of her husband.

Mack Jennings kept trying to tell her to take it easy, to be patient, and to remember this was an anniversary party. Do you know what she said, Father? She said she hoped she could begin celebrating the anniversary of his death. That's what she said. Because I heard her. Every—every word of it.

Mack Jennings kept patting her hands and telling her they would do something, and Mrs. Helms kept telling him they had to do something soon, real soon.

Then Mack Jennings ordered two more drinks. I fixed 'em and they took the drinks and walked away. I saw them talking to another man and woman, talking and laughing and having a wonderful time. And then they went upstairs. And I didn't see 'em no more that night.

You know what happened, Father. A week later Howard Helms—Mrs. Helms husband—he was killed. They said he was drunk and he fell down the stairs and cracked his head in the cellar. They said it was an accident. That's what they said. And I saw it in the papers.

I was sitting in a bar on Forty-seventh Street with Jimmy—and two girls—when I read about it. You know what I did? I got up and left. I said I was sick and that

I was sorry but I had to go. Jimmy got sore, but I didn't care. I got the—I got outa there and went back to the room.

I was sick all right. I went to bed sick, wanting to sleep and to forget everything and all that. But I couldn't sleep a bit. I kept thinking over and over again about that Helms party and listening to Mrs. Helms and Mack Jennings.

About four in the morning Jimmy came in and seeing as I wasn't sleeping he started to ask me what was the big idea walking out on the dames and him. I told him I was sick and he asked me what kind of sickness and I couldn't tell him. I couldn't tell him nothing except that I thought I was going crazy. So Jimmy said don't go crazy tonight and he gave me a bottle of booze and I finished it and got tangled in maybe a hundred nightmares.

Know what the nightmares were, Father? I kept seeing Mrs. Helms and Mack Jennings pushing Howard Helms down the stairs and then telling me to fix some more drinks. That's what I kept seeing, only in the nightmares I was smiling like I was happy to be there and happy to be serving drinks to nice people who push people down stairs when they don't like them, especially somebody's husband.

The next day I didn't get outa bed. Not at all. Jimmy brought me a hamburger and he brought me another bottle of booze and I drank all of it.

I couldn't get outa bed, Father. I couldn't. I kept telling myself if I was nothing I could stay in bed and drink myself to death. But if I was something or somebody I was part of a murder. If I was something or somebody I was to blame because a man was killed. I coulda gone to Mr. Helms and told him what was up and then maybe—maybe—

But I didn't because I was nothing. And I stayed in bed and got drunk.

Then the day after that Jimmy told me we had another job—another big party on Long Island. And when I told him I wasn't going, Jimmy hit the roof. I kept telling him I didn't want to work no more parties on Long Island or any other fancy place. Well, Jimmy tried to argue with me but it did him no good. He tried to find out what the—what the matter was but I wouldn't tell him nothing.

I didn't tell nobody nothing. Not until I went to see Mrs. Helms.

That was a little more than a week after Mr. Helms fell down the stairs—after he was pushed and all that. I'll tell you why I went there, Father. Maybe you weren't in court and maybe you didn't read it in the papers, so I'll tell you.

Well, I went to see Mrs. Helms because I was fighting with myself. I was telling myself that I was down and out and that they would count me as nothing.

Start making EXTRA INCOME for Christmas—now!

Right now is the time to start making extra money for Christmas shopping, new clothes, or just to meet the high cost of living.

To increase your income you simply take care of new and renewal subscriptions for COLLIER'S and all popular publications. It's easy to make a success because Collier's is so popular with so many people. We will help you get started with sales material and expert instruction.

The sooner you get started the more time you will have to take advantage of the profitable Christmas season. Many of your friends are already subscribing—their renewals will pay you the same generous profits as new subscriptions.

This profitable plan has helped hundreds of men and women meet the high cost of living. Now you can balance your budget and have money to spare. Even if you have only a little spare time, you can add a substantial sum to your income. *Your earnings start with your first order.*

Collier's for September 27, 1947

ing if I didn't get up. So I got up. I got up and took some more booze and then I took a cab all the way out to the North Shore.

The butler remembered my face when I told him I once worked the bar there. But he wouldn't let me in. He let me in only after I shoved him out the way. Mrs. Helms heard the racket and she came downstairs.

She was wearing a black dress trying to look like she was in mourning and all that. But you know, Father, she was wearing lipstick and powder and perfume and she didn't look so unhappy to me. Well, she didn't look unhappy till I told her who I was and why I was there.

Then she called Mack Jennings. He was outside in the sun smoking a pipe and playing with the fancy dogs and looking like everything was just jake.

This is what I said—to both of 'em. I said my name was Pat Dawson and I wanted to know one thing. I said I wanted to know if they killed Mr. Helms. I wanted to hear 'em say no. I wanted to believe 'em if they did, and then maybe I would forget what I heard, and then maybe if I stopped working fancy parties I could begin to think I was something or somebody.

Mrs. Helms didn't say nothing at first. She asked me if I wanted a drink and when I said I did she gave me the best booze in the house. While I was sopping it up, Mack Jennings began to ask me questions. What did I hear? When did I hear it? Did I tell anybody else?

Oh, I told 'em everything and I told 'em off because by then I was sure they killed Mr. Helms. Then I said can you see me? Can you hear me?

Then this Mack Jennings said it, Father. He should never have said it at all and the way he did. Father, can you understand me? I was fighting. I was fighting to get up, to be something or somebody, and I couldn't take what he said. It was too much to take. Then this Mack Jennings walks out the room and leaves Mrs. Helms there and she starts talking and making worse than nothing or nobody outa me.

Know what she said, Father? She looked straight at me and said I'll give you what you want. I asked her if she knew what I wanted and she said money. I laughed, but she didn't know why I was laughing because she kept raising the ante. She was sure I showed up for only one thing. Blackmail.

Then Mack Jennings came running back into the room—with a gun in his hand. He just kept pointing the gun at me and saying nothing and listening to Mrs. Helms going crazy and saying what was worse than nothing or nobody

because I didn't want no money from 'em.

Then Mrs. Helms she turned to Mack Jennings and started yelling for him to shoot me dead. He got scared for a little minute, Father. That was his trouble. He kept looking at me and looking scared, and then kept turning to Mrs. Helms to see how crazy she was.

I didn't wait for him to look at me again. I just dived at him and knocked him off his feet. I knocked the gun outa his hand and I kept slugging away at him till Mrs. Helms went for the gun. Then I got up and I kicked her away. I got the gun and I squeezed the trigger just as Mack Jennings tried to jump me. I hit him right, Father. I hit him right in the heart and he fell down dead.

Mrs. Helms, she got down on the floor with Mack Jennings, holding him in her arms and trying to bring him back to life. Me, I sat down and had a few more drinks and waited for the police. I finished the bottle before they came.

THEN the trial. I was somebody at the trial all right. I really was. They had my name and pictures in all the papers. It was a big bang all right, but all the bangs hit me. Father, I didn't stand a chance.

Mrs. Helms she fixed me with a couple of fancy lies. And they believed her—maybe because they couldn't believe my story about hearing 'em talk about murder at the bar. She fixed me all right but I think she fixed herself, too. I think she fixed it so it'll be no good for her for all times. Maybe she won't never get the electric chair, but I don't think she sleeps so good. No, Father, I don't think so.

When I was sure I was going to die in the electric chair, I kept telling myself it mighta happened in the Bulge. It mighta, too. Many times.

Father, I wish it had. But the way things worked out I'm sorry about a lotta things, but most of all I'm sorry for what I did to my family. Oh, I didn't love 'em too much I guess, but I never wanted to hurt 'em any. And I did, Father, I did. I hurt 'em plenty.

Thanks, Father, thanks for letting me talk to you. I tried not to use no swear words and all that.

One more thing, Father. There's one more thing I forgot. Well, there was one time I wished, one time I really wished I was nothing or nobody. That was during the trial—when they put my picture and all that in the papers.

Know why, Father? Because my old man stopped reading all those newspapers, and I know what it meant to him to sit down and read all those papers when his head was full of those subway noises and he wanted peace and quiet.

THE END

ALFRED

by FOSTER HUMFREVILLE

"You're being very unreasonable, Alfred. It's not my fault if the cards say I'm going to meet a tall handsome man"

F. D. ROOSEVELT:

THE FULL PICTURE

COLLIER'S now has had the pleasure of printing two series of "Franklin D. Roosevelt As I Knew Him" articles, and two more are in the works.

The first of these came from the pen—and the heart—of Frances Perkins, who served as Secretary of Labor from Mr. Roosevelt's first Inauguration Day, March 4, 1933, until shortly after his death in the spring of 1945.

Miss Perkins' memoirs were written in a worshipful mood, since she felt that F.D.R. was about as nearly perfect as mortal man can be. For all that, her reminiscences were intelligent, interesting and informative. Her book containing the Collier's articles justifiably became a best seller.

The second of these series of Roosevelt recollections was by James A. Farley. To put it mildly, it was a horse of quite another color than the Perkins production.

The former Roosevelt campaign manager and Postmaster General wrote under the title *Why I Broke With Roosevelt*. He pulled no detectable punches in telling precisely that story.

"General" Farley, always the practical politician, never was overcome by the coruscations of the Roosevelt personality. But he knew a born winner when he saw one. He handled the 1932 and 1936 campaigns with the enthusiasm which a trainer brings to a fine race horse.

Between 1936 and 1940, Mr. Farley came to regard his chief as a snob and an autocrat. In his Collier's pieces, Farley cited chapter and verse to show how and why he arrived at this estimate of Mr. Roosevelt; and both he and the magazine drew some memorable brickbats on that account from some of the same people who had applauded the Perkins series.

We are now printing a selection of Henry Morgenthau's memories of the Roosevelt he knew. Mr. Morgenthau, affectionately called Henry the Morgue by "the Boss," was Secretary of the Treasury from January, 1934, until President Truman eased him out in July, 1945. He was an intimate of Mr. Roosevelt's and he also was the most industrious diary keeper since Samuel Pepys.

Collier's takes pleasure in presenting the cream of Mr. Morgenthau's Rooseveltian impressions to its readers—and in welcoming the brickbats fired by people whose admiration for Morgenthau and his late leader can hardly be called intense.

To cap this particular group of memoirs, we expect soon to print a series gleaned from the notes and records of Harry L. Hopkins by Robert E. Sherwood. Mr. Hopkins, of course, was Mr. Roosevelt's closest confidant. His report should be fully as interesting as those of Miss Perkins and Messrs. Farley and Morgenthau—and fully as useful to future historians and biographers.

It is this historical aspect of the whole matter that we have considered from the start.

In Franklin Delano Roosevelt the United States had one of the most picturesque, dramatic and controversial characters in its history.

People either loved or hated this man. There was no middle ground for calm feelings concerning him. He had a genius for making friends, and an equal genius for making enemies, and he made plenty of both.

The complete verdict of history on him is not in as yet, and cannot be rendered for years to come.

Was he a true lover of the people; or did he love them only at a distance, finding their aroma just a trifle too earthy? Mr. Farley has one answer to that question; others have other answers.

Did Roosevelt strive incessantly and honestly to prevent the European war which exploded in 1939, and did he really try thereafter to keep the United States out of that war? Or did he want a war from the time of the 1937 "quarantine" speech in Chicago?

What was his true and complete role in the Pearl Harbor disaster?

Did he give away too much at Yalta to Joseph Stalin; or did he actually drive as shrewd and tough a bargain as was possible at that time?

In accepting nominations for a third and a fourth term, was Mr. Roosevelt moved by a selfless love of his country and a consuming desire to see it safely through a time of troubles? Or was he, as some suspected, a dictator at heart, with a fierce ambition to overturn the American republican system of government and steer the United States into a sort of repetition of the history of ancient Rome from the time of Julius Caesar?

These are only a few of the many questions which are still unanswered in full concerning the New Deal and World War II Chief Executive and the man who succeeded in breaking the George Washington no-third term tradition.

These and all the other pertinent questions must be answered in full and authoritatively before Franklin D. Roosevelt can be assigned his correct rank in the history of the United States and of the world.

Every shred of evidence that can contribute to the definite answer to every question about Roosevelt should be gathered up and put on record somewhere, and as promptly as may be.

We don't see how there can be any better sources of such evidence than the members of the Roosevelt inner circle during the years when he was the central figure in official Washington.

That is the chief reason why we are printing the Perkins, Farley, Morgenthau and Hopkins recollections—and why we do not anticipate that these will be the last of such documents we shall print.

In the course of time, by means of these contributions and of other evidence from other sources, the American people and the world should have the full, true and three-dimensional picture of F. D. Roosevelt as he actually was.

It is a picture which is urgently needed for many reasons, and we take the greatest satisfaction in helping to build it up, regardless of any objections from anybody anywhere.
